

# APPLIED BEHAVIOR ANALYSIS

---

## Learning Outcomes

1. Develop a comprehensive and scientifically rigorous single-case design research study that conforms to the standards of the discipline.
2. Critically evaluate research and clinical practice and apply the ethical guidelines and practice standards outlined by the Behavior Analysis Certification Board.
3. Describe the influence and relation of EAB and behaviorism to ABA and clinical practice/research.
4. Critically evaluate and apply basic and complex principles of behavior analysis.
5. Conduct a comprehensive functional behavior assessment. The assessment should conform to discipline standards.
6. Develop a comprehensive treatment plan. The treatment plan should conform to discipline standards.
7. Critically evaluate basic, applied, and translational research, and identify the implications for research and clinical practice.
