Course examines measurement and mathematical modeling techniques for predicting and determining energy use of whole buildings and important subsystems. Building systems use more primary energy utilization and generate more emissions than either the U.S. transportation or industrial manufacturing sectors. Due to the significance of the building sector on national energy used and emissions profiles, the development of quantitatively predictive energy and performance simulation of buildings is a rapidly advancing technical field. The Architecture and Architectural Engineering communities are pursuing aggressive programs to establish a data-based, protocol methodologies and computer based modeling tools that enable accurate predictions of the expected energy utilization and indoor environment performance of alternative building designs. The developing modeling tools are to be integrated with on-site performance measurements and protocol based energy auditing of facilities. Expected performance characteristics predicted by the modeling tools are compared with the measured values. The building design community is evolving to design simulation methodologies used by the transportation and manufacturing sectors. In this course, the means of measuring and monitoring of the energy use associated with a building system, both on whole building and significant subsystems - lighting, heating ventilation and air conditioning, occupant operated equipment - are reviewed. Inverse modeling techniques of using the data with associated significant independent variables, such as ambient weather parameters and occupant density, to establish, empirical expected building energy use models, as well as document energy efficiency renovation impacts are detailed. Industry established building performance rating scales which use such data are discussed. Fundamental heat transfer and thermal capacitance relationships as used by the engineering design community are discussed along with linearization approximations and Fourier series techniques used to simplify the resulting complex, coupled partial differential equations that result from energy balancing model equations. Analytical and numerical approaches to solving the equations to arrive at predicted thermal loads developed by a building system are reviewed. Readily available, building simulation software packages commonly used in the building design community to determined energy used by equipment configurations to meet predicted loads are discussed. Students are required to exercise one of the standard software tools to model a specific building facility.

Prerequisite: A E 310, A E 454

AE 454: Advanced Heating, Ventilating, and Air Conditioning

3 Credits

Engineering design and performance analysis procedures for complex commercial building systems, including energy conservation techniques, design project.

Prerequisite: A E 310

AE 455: Advanced Heating, Ventilating, and Air Conditioning System Design

3 Credits

Design of several different systems for a course project building; control strategy, economic comparisons using life-cycle cost techniques.
Prerequisite: A E 454

AE 456: Solar Energy Building System Design

3 Credits

Solar radiation, collectors, and thermal storage; design and analysis of a heating system using system-simulation computer program.

Prerequisite: seventh-semester standing in Engineering

AE 457: HVAC Control Systems

3 Credits

Theory of automatic control. HVAC control applications. Control system components, control loops, development and documentation of control logic, control commissioning. AE 457 HVAC Control Systems (3) The objective of the course is to develop the knowledge and skills necessary to understand, design, document, and diagnose problems in HVAC control systems. The course builds on knowledge of HVAC system function and design obtained in prior courses in the curriculum and prepares students for advanced design courses and the capstone project. The course begins with an introduction to concepts and terminology of automatic control, followed by detailed study of control system components: sensors, controlled devices, and controllers. Understanding of these fundamentals is then applied to the development and documentation of controls for common HVAC systems and the commissioning of control systems. Relevant standard and guideline documents are referenced as necessary.

Prerequisite: A E 454

AE 458: Advanced Architectural Acoustics and Noise Control

3 Credits

Advanced consideration of noise control in buildings; ventilating system noise and vibration; acoustic design variables.

Prerequisite: A E 309

AE 461: Architectural Illumination Systems & Design

3 Credits

Lighting units photometry; lighting equipment; design criteria, calculation methods; the design process; energy codes. AE 461 Architectural Illumination Systems Design (3) This course will prepare students to design basic lighting systems by providing them with background information and experience to do the following: 1. Develop their knowledge of lamp, luminaire, and control types and evaluate their applicability to a particular design situation. 2. Establish fundamental design criteria for a variety of lighting applications. 3. Conduct appropriate and accurate analyses of lighting systems to assess system performance and evaluate its ability to meet design criteria. 4. Implement a completed design by specifying all of the components of the system and providing an appropriate system layout. This is the first full-semester lighting course that students receive in the Architectural Engineering Department's Lighting/Electrical Option.

Prerequisite: A E 311

AE 463: Daylight Analysis of Roman Architecture

3 Credits

Solar geometry, building orientation and form, daylight design methods, characterization of interior and exterior lighting conditions. Offered in Rome. Analysis of Roman architecture from the perspective of daylight. Topics include solar geometry; building orientation and form; daylight design methods including toplighting and sidelighting strategies; illuminance meters; characterization of interior and exterior lighting conditions; site visits. Course includes development of a software tool to compute solar geometry and daylight availability for any location on the globe and for clear, overcast, and cloudy sky conditions. The software tool will also run in reverse, providing time of day and year when the sun is in a desired position for any latitude and longitude. Offered on location in Rome.

Prerequisite: ARCH 130A, ARCH 202

AE 464: Advanced Architectural Illumination Systems & Design

3 Credits

Flux transfer theory; advanced lighting and control systems; emergency lighting; daylighting; visual performance issues; psychological aspects of lighting. AE 464 Advanced Architectural Illumination Systems Design (3) This is the final undergraduate architectural lighting course in the Lighting/Electrical Systems Option. The course focuses on advanced topics related to lighting design such as luminous flux transfer and its application to lighting analysis procedures, advanced issues in photometry, advanced control systems, and advanced topics in lighting design. The light design topics include the psychological aspects of lighting, and design for complex spaces such as museums, stores, and video conferencing. The course includes a weekly hands-on practicum experience, homework, exams and a design project.

Prerequisite: A E 461

AE 466: Computer Aided Lighting Design

3 Credits

Design and analysis for outdoor area; floodlighting; and interior applications, including design criteria; economic analysis; modeling algorithms; and visualization. AE 466 Computer Aided Lighting Design (3) The goal of this course is to cultivate an understanding of good lighting design practice through a series of design and analysis problems. Course topics include design criteria, design practice, and the application of lighting hardware and analysis procedures for outdoor area lighting, economic analysis of lighting systems, interior lighting design and lighting system visualization. Commercially available computer software is applied to approximately seven design projects, which students present in either PowerPoint or submit in a short report format. Students, faculty and outside professionals critique the project solutions. The critiques enhance the learning experience for all students through the evaluation of different lighting solutions applied to the same design problem.

Prerequisite: A E 444, A E 461
AE 467: Advanced Building Electrical System Design
3 Credits
Design of electrical systems for commercial and industrial facilities emphasizing design practice and integration with codes and standards.
Prerequisite: AE 311, E E 211

AE 468: Advanced Building Electrical and Communication Systems
3 Credits
Special Building Electrical and Communication Systems is an elective course within the architectural engineering program. It addresses specialized components and analysis of building electrical systems, cost and availability of electrical energy, and power quality. Students will also develop an in-depth understanding of alternative electrical sources, the National Electric Code, advanced design issues of electrical systems, as well as other electrical and building communication issues. In addition, part of the course will focus on the fundamentals of special systems typically included within the electrical discipline scope of work such as fire alarm, access control, surveillance, voice, video and data systems. Upon completion of this course, students will be able to explain the fundamentals of special electrical and communication systems within a building.
Prerequisite: AE 467

AE 469: Photovoltaic Systems Design and Construction
3 Credits
Criteria and analysis methods pertaining to the design and construction of photovoltaic (PV) systems and their integration with buildings. AE 469 Photovoltaic Systems Design and Construction (3) This course provides students with a working understanding of the design and construction of photovoltaic (PV) systems and their applications in buildings, and is intended for students in Engineering and Energy Engineering. The course provides an overview of PV systems and common applications in residential and commercial buildings including the determination of solar irradiance and insolation based on latitude and climate as well as site survey and assessment methods for the positioning of PV systems. Technical topics include solar module components, DC-AC power inversion, energy storage systems, and system sizing and design. The integration of PV systems with building electrical and mechanical systems, including discussions of the pertinent building codes, utility interconnection, and the economic analysis of PV systems, is also included in this course. Upon the completion of the course, students will be able to calculate and account for the factors affecting the performance of PV systems in various climates and conditions, distinguish the features and performance variables of solar modules and inverters in the design of PV systems, calculate string sizing and inverter matching variables in the design of PV systems, communicate the critical design features of safe and efficient PV system integration with buildings and utilities, evaluate and quantify the factors affecting the successful installation and performance of PV systems in variable settings, and will develop inquiry skills needed to assess new products entering the solar energy marketplace. In addition to understanding the key issues with system design, students will be able to utilize this understanding to choose components properly and to design a basic grid-tied system for a chosen building. Students will also be able to conduct an economic analysis of PV systems in the context of residential and commercial building construction.
Prerequisite: E E 210 or E E 211

AE 470: Residential Building Design and Construction
3 Credits
Managerial aspects; architectural and code considerations; cost estimating, design, and construction of structural, plumbing, HVAC, and electrical systems.
Prerequisite: AE 372 or C E 332; seventh-semester standing in Architectural Engineering or Civil Engineering

AE 471: Construction Management of Residential Building Projects
3 Credits/Maximum of 3
Understanding residential project planning, management, contracts, budget, administration, and execution; discussion of the life cycle of a residential construction business. AE 471 Construction Management of Residential Building Projects (3) The course Construction Management of Residential Building Projects is designed to introduce the students to a general understanding of the construction industry, basic principles of project planning and management, contracts, budget and project administration, and execution as applied to residential building construction. The content of the course is intended to provide the student with the knowledge, tools, and understanding of processes and tasks necessary to manage residential building projects to completion successfully and within the framework of quality control, code compliance, and safety, while minimizing risks. The scope of the residential construction considered in this course is primarily focused on single-family dwellings and multi-family dwellings. Furthermore, most of the topics covered can be applicable to new construction, remodeling, as well as repair projects.
Prerequisite: 6th semester standing

AE 472: Building Construction Planning and Management
3 Credits
The objective of AE 472 is to introduce students in the construction management option of the Architectural Engineering program to the process in which building construction contractors acquire building projects, and the range of services typically provided on these projects. Upon completion of this course, students will have a working understanding of the preconstruction process and methods of acquiring negotiated work in building construction. They will be capable of assembling estimates, schedules, cash-flow curves, and site plans for building projects, and will have a working knowledge of competitive presentation strategies and develop professional presentation skills. The content of the course centers upon the process in which companies plan for and acquire projects as construction managers and general contractors. Specific topics include schematic estimating and scheduling, design coordination of structural, architectural, and mechanical systems, value engineering processes, and site planning. The financial aspects of construction work are also presented, including project financing, cash flow, and accounting. A significant portion of the course is also devoted to the development of strategic and competitive business presentation, including risk assessment, fee structure, team dynamics, and technical presentation skills. The class relies heavily upon the application of all content by students in the context of a team project. The project involves the distribution of a Request for Proposal for which students prepare a competitive proposal for an actual building.
construction project planned on the Penn State University Campus. Class activities include the presentation of key issues followed by in-class or independent exercises to reinforce themes and strategies to be applied in the project proposal. Students are assessed on their performance on discussion quizzes, independent exercises, class participation, a team presentation, and exams.

**Prerequisite:** AE 475

AE 473: Building Construction Management and Control

3 Credits

Building construction project planning; construction cost, schedule, quality and safety control systems; project cost accounting; change management; construction company management. AE 473 Building Construction Management and Control (3) The goals of this course are for students to learn how to perform detailed construction planning, identify potential problems during construction, and manage changes throughout a construction project. By completing this course, students will better understand the role of the general contractor/construction manager in analyzing the construction aspects of a building project and designing the construction engineering and management systems to effectively execute the project. The main course objectives include learning how to perform and implement detailed planning for a construction project together with monitoring the project progress and performance including detailed cost control. Other course objectives emphasize gaining knowledge of the key decisions that construction executives make when managing a construction company and identifying potential projects to pursue. Students will also be introduced to the management of changes which occur throughout a project and how to negotiate changes. Finally, ethical standards for a professional engineer and their impact on decisions within the construction industry are important course learning objectives. The course is taught via a combination of teaching methods that rely on problem based learning through both in and out of class activities, lectures by faculty and industry experts; project case studies; student presentations; and team and individual assignments. Completion of AE 472 is a prerequisite for this course.

**Prerequisite:** A E 472

AE 474: Building Construction Estimating

3 Credits

Construction estimating and cost engineering fundamentals; quantity take off; pricing, bid preparation; estimating, cost accounting by computer.

**Prerequisite:** A E 372

AE 475: Building Construction Engineering I

3 Credits

Project planning, supervision, inspection of architectural and structural operations in major buildings; mobilization, coordination of trades; offsite testing and fabrication.

**Prerequisite:** A E 372

AE 476: Building Construction Engineering II

3 Credits

Construction of mechanical and electrical systems in major buildings; fire protection, sound control, elevating; trade coordination; manufacturers' developments; computer application.

**Prerequisite:** A E 309, A E 475

AE 481: Comprehensive Architectural Engineering Senior Project I

4 Credits

Building project selection and preparation of overall plan; preliminary investigation of building design and construction issues; creation of individual Capstone Project Electronic Portfolio (CPEP) and project proposal required. AE 481 Comprehensive Architectural Engineering Senior Project I (4) The course sequence of AE 481 and AE 482 comprises the capstone engineering design program for Architectural Engineering students. AE 481 is taken by all undergraduate architectural engineering (A E) students and also serves as the writing intensive course requirement in A E. Based on an actual building project model, students will investigate the building, perform technical analysis, develop project criteria and prepare a written proposal for more detailed work to be accomplished in AE 482. Evaluation methods include but are not limited to written reports, verbal and written presentations, faculty consultations and development of a capstone project electronic portfolio (CPEP).

**Prerequisite:** ARCH 441, fifth-year architectural engineering standing in major area of emphasis

Writing Across the Curriculum

AE 481M: Comprehensive Architectural Engineering Senior Project I

4 Credits

Building project selection and preparation of overall plan; preliminary investigation of building design and construction issues; creation of individual Capstone Project Electronic Portfolio (CPEP) and project proposal required.

Honors

Writing Across the Curriculum

AE 482: Comprehensive Architectural Engineering Senior Project II

4 Credits

Continuation of AE 481 Engineering analysis of building systems; emphasis on analysis and design of building structural, mechanical, lighting/electrical, and construction related systems. Final written report, web-based project portfolio and verbal presentation are required. AE 482 Comprehensive Architectural Engineering Senior Project II (4) AE 482 is the second half of the capstone engineering design project for Architectural Engineering students. The course is taken by all undergraduate architectural engineering and serves as a direct follow up to AE 481. Students perform detailed option specific work in conjunction with individual proposals written in AE 481. Students are also required to demonstrate work in the breadth areas of architectural engineering. Evaluation methods include but are not limited to written reports, verbal and written assignments, faculty consultations, maintaining their capstone project electronic portfolio, a final comprehensive written report and a verbal presentation to a faculty jury.
**Prerequisite:** A E 481W

AE 486: Professional Engineering Practice

3 Credits

A study of the influences which affect the practice of architectural engineering, particularly codes, ethics, legal considerations, and contract documents.

**Prerequisite:** seventh-semester standing

AE 494M: Senior Honors Thesis

4 Credits

Comprehensive Architectural Engineering Senior Project development and planning with an honors thesis focus. In this course, an honors student in architectural engineering will work on a real-world building project which the student has selected and for which the student has obtained drawings and specifications, as well as the owner’s permission to use this project as their undergraduate thesis project. Students enrolling in this course are required to complete the following: - Develop and initiate a plan for their undergraduate senior project in Architectural Engineering which will also serve as their Schreyer Honors College thesis. Through this thesis, the student demonstrates a command of relevant scholastic work and a personal contribution to that scholarship. - Secure an honors thesis adviser and meet with that person to select an in-depth and/or integration focus for their Honors Thesis work. The student then develops a formal proposal describing the focus area for the undergraduate senior project and honors thesis, outlining the analyses, investigations, and design elements of this work and the tools that will be employed. - Summarize the existing conditions present in this building project as it relates to their AE option, systems integration, and the honors thesis topic. - Conduct a thorough review of the relevant literature that has been published in the area that is the focus of the honors thesis, including details on the relevant building, construction, and energy codes that govern this work. - Commence work on the investigation, analysis, and design portion of the thesis, together with the general activities required of all AE students in their undergraduate capstone projects.

**Prerequisite:** ARCH 441, fifth-year architectural engineering standing in major area of emphasis

Honors Writing Across the Curriculum

AE 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

AE 496F: **SPECIAL TOPICS**

2-3 Credits

AE 496G: **SPECIAL TOPICS**

3 Credits

AE 496H: Independent Studies

1-18 Credits/Maximum of 18

Honors

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

AE 496K: **SPECIAL TOPICS**

3 Credits

AE 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

AE 497A: **SPECIAL TOPICS**

1-9 Credits/Maximum of 9

AE 498: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in-depth, a comparatively narrow subject which may be topical or of special interest.

AE 498F: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in-depth, a comparatively narrow subject which may be topical or of special interest.

**Architectural Engineering Technology (AET)**

AET 101: Building Materials

3 Credits

Structural and architectural use of building materials and construction assemblies.

AET 102: Methods of Construction

3 Credits

Materials and methods of construction used in buildings, as expressed in drawings.

**Prerequisite:** AE T 101, EG T 101, EG T 102
AET 103: Plumbing and Fire Protection
3 Credits
Layout of plumbing and fire protection in buildings to meet code and usage requirements.

Prerequisite: or concurrent: AE T 102

AET 113: Site Planning
2 Credits
Energy conservation through optimum site utilization, contours, cut and fill calculations, storm drainage, spot grading, and finish grading.

AET 121: Introduction to Building Environmental Systems
2 Credits
Introduction to building environmental systems technology terminology, concepts, and the design process.

AET 204: Heating, Ventilating, and Air Conditioning Layout
3 Credits
Fundamental calculations and layout of systems in buildings.

Prerequisite: AE T 103 . Prerequisite or concurrent: AE T 102

AET 206: Architectural Presentation
2 Credits
Visual communication through architectural presentation drawings. Line, value, color, and composition.

Prerequisite: E G 001 or E G 003

AET 207: Advanced Construction Methods
3 Credits
Integration of materials and systems in working drawings.

Prerequisite: fourth-semester standing

AET 210: Architectural Engineering Office Practice Using Writing Skills
3 Credits
Concepts, procedures, and writing-intensive activities to properly prepare site observation reports, cost estimates, contractual conditions, and outline and technical specification.

Prerequisite: fourth-semester standing

Writing Across the Curriculum

AET 212: Building Lighting and Electrical Layout
3 Credits
Layout of lighting and electrical distribution in buildings.

AET 214: Steel Construction
3 Credits
Strength of materials as applied to the design of simple steel structures.

Prerequisite: AE T 102 , MCH T111

AET 215: Concrete Construction
3 Credits
Fundamentals of design and construction of reinforced concrete structures.

Prerequisite: AE T 102 , MCH T111

AET 227: Liquid Heating and Cooling Systems
3 Credits
Water, steam, and refrigerant systems and components; pumps and piping; heat exchangers; fluid and component selection; power and controls.

Prerequisite: AE T 121 , MET 281

AET 228: Air Heating, Cooling, and Ventilating Systems
3 Credits
Air systems and distribution components; fans and ductwork; heat exchange coils; dampers and controls; residential fired equipment operation.

Concurrent: AE T 227

AET 229: Analysis of Building Environmental Systems
3 Credits
Comprehensive analysis and application of building environmental systems with focus on selected areas; calculation and layout; computer modeling of systems.

Prerequisite: fourth-semester standing

AET 296: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

AET 297: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.
ARCH 100: Architecture and Ideas

3 Credits

General introduction to world architecture, emphasizing the relationship between concepts, philosophies, values and ideologies in shaping the built environment. ARCH 100 Architecture and Ideas (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. This course introduces architecture and urbanism for a general audience. It presents key concepts that have shaped the built environment, and provides an ongoing framework for evaluations of what makes a good building or city. The material discussed is taken from prehistory to the present, and encompasses both major works of architecture and consideration of common building types and contexts. Although monuments and philosophies from the Western tradition predominate, it brings in issues and examples of global scope as well. The course is structured around a set of themes. These include: how architecture embodies spiritual beliefs; affects private and community life; evolving definitions of the architect; and how ideas about aesthetics, technology, tradition, and other cultural forces shape buildings and influence diverse, often conflicting notions of what constitutes "good" architecture. The topics discussed will demonstrate multiple ways of understanding buildings and cities. Lectures and assigned readings explore significant illustrative structures, design theories, and the cultural and intellectual contexts in which they emerge. Through the lectures and readings students will become familiar with an extensive set of architectural works, as well as a wide range of influential architectural concepts, authors, and texts. ARCH 100 will ultimately help students analyze and judge buildings and the arguments about them critically, and better understand buildings and cities as ideologically charged artifacts that influentially structure human experience.

General Education: Arts (GA)

ARCH 121: Visual Communications I

2 Credits

Development of two and three-dimensional graphic communications skills and techniques required for the practice of architecture. ARCH 121 Visual Communications I (2) The course is designed to introduce two and three-dimensional graphic communication skills. Assignments will develop the student’s understanding and skills associated with the hand-drawing techniques used in the practice of architecture. Exercises provide exposure to the variety of representational techniques available to architects for the visual communication of design ideas and design documentation. Visual Communications I is organized as an interactive studio environment which combines lectures and demonstrations with individual instruction. The basic concepts and theories of documenting, representing, and presenting architecture will be introduced through a series of lectures, seminars, and examples. In studio, skills will be developed through project workshops. Instruction includes working sessions, individual desk reviews, software and hardware demonstrations, and group discussions.

Prerequisite: Students must earn a C or better in: ARCH 131S and ARCH 121; Concurrent: ARCH 132

ARCH 130A: Basic Design and Research I

3-6 Credits/Maximum of 6

Multidimensional design and perceptual development. Formulation of abstracted concepts and logical visual models.

Prerequisite: Architectural Engineering majors only

ARCH 131: Basic Design Studio I

4 Credits

An introduction to the basic concepts, methods, and skills of architectural design in a project-based, active learning, studio environment. ARCH 131 Basic Design Studio I (4) This course is an introduction to the basic concepts, methods, and skills of architectural design. As a “studio” it is a project-based, active learning course where the development and evaluation of the work is driven by a critical dialogue with the instructor and one’s classmates. This course is the first in a series of design studios that serve as the central thread throughout the curricula of the Architecture program. In ARCH 131, students gain knowledge about the discipline of design, develop skills of design and communication, and foster a capacity for judgment - the ability to make appropriate choices and decisions regarding design questions. As a laboratory, the design studio provides the opportunity to apply and explore the knowledge and experience gained in other courses. ARCH 131 is an intensive course that encourages creativity and industry on the part of the students. Its design projects are open-ended; there are no single “right answers.” It demands energy, creativity, the willingness to take risks, and introspection. Each student is expected to be open to a diverse range of ideas, values and solutions. The student is invited to view the studio experience as an opportunity to explore, discover, and invent. The studio is divided into separate sections, each led by one studio instructor. All sections are assigned a series of common projects and exercises; however, each section instructor will establish particular and unique assignments, and criteria for each project. This introduces students to the rich variety of possibilities in architectural communication and design. The primary form of evaluation and grading for this class is the “review and critique”
During which students present their work to the class and then receive comments and recommendations for improvement. When assessing the student work, the instructors will consider the students performance in the following areas: 1. Conceptual Strength: The intentions and ideas that inspire the work. 2. Design Development: The energy, effort, and growth demonstrated throughout the course of the project. 3. Product: The tangible quality of the final product as a demonstration of the student's level of craftsmanship and mastery of the skills introduced in class. 4. Student Preparedness: At desk critiques, pin-ups, and reviews. 5. Student Participation: Students are expected to actively participate and be constructively engaged in class discussions, critiques, and reviews.

**Prerequisite:** or concurrent ARCH 121

**ARCH 132: Basic Design Studio II**

*4 Credits*

Continuation of ARCH 131 which further explores basic concepts, methods, and skills of architectural design with an emphasis on craftsmanship. ARCH 132 Basic Design Studio II (4) This course is a continuation of ARCH 131 and shares the same goals, methods, and means of evaluation. However, it builds upon the foundation of fundamental knowledge and skills delivered in the previous course and demands that the students expand their ability to tackle more difficult and complex problems of architectural design. The focus of this course is on "craftsmanship" and the methods and techniques of "making and building." Students are expected to thoroughly consider the implications of materials, construction, and detailing as they relate to their overall design intentions. ARCH 132 is an intensive course that encourages creativity and industry on the part of the students. Its design projects are open-ended; there are no single "right answers." It demands energy, creativity, the willingness to take risks, and introspection. Each student is expected to be open to a diverse range of ideas, values and solutions. The student is invited to view the studio experience as an opportunity to explore, discover, and invent. The studio is divided into separate sections, each led by one studio instructor. Each section instructor will establish particular and unique assignments, and criteria for each project. This introduces students to the rich variety of possibilities in architectural communication and design. When assessing the student work, the instructors will consider the students performance in the following areas: 1. Conceptual Strength: The intentions and ideas that inspire the work. 2. Design Development: The energy, effort, and growth demonstrated throughout the course of the project. 3. Product: The tangible quality of the final product as a demonstration of the student's level of craftsmanship and mastery of the skills introduced in class. 4. Student Preparedness: At desk critiques, pin-ups, and review. 5. Student Participation: Students are expected to actively participate and be constructively engaged in class discussions, critiques, and reviews.

**Prerequisite:** Students must earn a C or better in: ARCH 131S and ARCH 121; Concurrent: ARCH 122

**ARCH 198: Special Topics**

*1-15 Credits/Maximum of 15*

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**ARCH 199: Foreign Studies–Architecture**

*1-15 Credits/Maximum of 15*

Individual or group instruction conducted in a foreign country.

**International Cultures (IL)**

**ARCH 203: Materials and Building Construction I**

*3 Credits*

Instruction in the design and construction of buildings utilizing wood and steel. ARCH 203 Materials and Building Construction I (3) This course serves as an introduction to common architectural building materials and associated methods of construction. It is the first part of a two-semester sequence to be followed by ARCH 204 in the spring semester. Lectures, readings, and in-class discussions introduce students to the historical development and conventional use of architectural materials and construction technologies, while select hands-on projects offer students experience in materials application and use. The class covers a wide variety of building methodologies that includes developed and developing cultures, building systems that are technologically sophisticated, as well as traditions considered primitive/vernacular. The primary objective of the course is to make BARCH students familiar with the materials and methods employed in making architecture, so that the results of that familiarity begin to inform the student’s studio work/production. In addition to materials and construction methods, the course will also touch on issues related to craft/craftsmanship, sustainable practices and ethical use of resources, and the significant role that evolving technologies play in the process and economy of building-making.

**Prerequisite:** Students must earn a C or better in: A E 210; Concurrent: ARCH 231, and A E 421

**ARCH 204: Materials and Building Construction II**

*3 Credits*

This course will continue the presentations of ARCH 203, with a focus on concrete and masonry materials. ARCH 204 Materials and Building Construction II (3) The course is the second part of a two-semester sequence, following ARCH 203. ARCH 204 is an introductory course in building materials and construction. It is intended for BARCH majors and is designed to prepare students for the professional practice of architecture. The learning objectives for the course can be divided into two categories: 1. developing a sense of materials and construction methods as the media for architecture, and then learning to use these media in creative and appropriate ways; 2. developing basic knowledge of the conventions of current building materials and construction techniques. Particular emphasis is placed on the use of drawings and models to accurately depict construction systems, assemblies and details. The course combines lectures and field trips with design projects, hands-on construction experiences, required readings, drawing and modeling.

**Prerequisite:** Students must earn a C or better in: ARCH 203; Concurrent: ARCH 232, and A E 422

**ARCH 210: Introduction to Architecture and Planning Theories**

*3 Credits*

The course introduces architectural and urban theory by presenting and exploring key concepts through major texts from the Western
ARCH 210H: Contemporary Design and Planning Theories I
3 Credits

Central concepts, fundamental values, philosophy, and processes leading to the design and planning of buildings and man-made environments.

General Education: Arts (GA)
Honors

ARCH 211: Contemporary Design and Planning Theories II
3 Credits

Continuation of ARCH 210, with an in-depth analysis and study of significant and current environmental constructs and issues.

Prerequisite: ARCH 210
Bachelor of Arts: Arts
General Education: Arts (GA)

ARCH 231: Architectural Design I
6 Credits

Design of limited environments within defined constraints. ARCH 231 Architectural Design I (6) The second-year design curriculum introduces the student to the complexity of the architectural whole. The curriculum bridges the abstract design principles taught in the first year and the ability to put together a large building, the focus in the third-year. The objectives are to create an understanding of architectural elements and develop a sensitivity and awareness required for valid interpretations as well as to develop a reflective and critical design process with emphasis on the individual ability to articulate ideas. The major means of accomplishing development is through the design of smaller buildings/environments. To introduce the pragmatic and expressive aspects of architectural design and integrate visual communication with the design process. The emphasis is on developing comprehensive architectural thought, on the foundations of skill and knowledge essential for designing more "complex" buildings in later years, and making the students aware of the multiplicity of factors involved in the design process and their civic responsibility in making informed choices. Thus, the pervasive issue of meaning in architecture is given a high priority and is interwoven in all stages of design exploration.

Prerequisite: Students must earn a C or better in: ARCH 132 and ARCH 122; Concurrent: ARCH 203, and A E 421

ARCH 232: Architectural Design II
6 Credits

Design of limited environments within defined constraints. ARCH 232 Architectural Design II (6) The second-year design curriculum emphasis is on introducing the student to the complexity of the architectural whole. The curriculum bridges the abstract design principles taught in the first year and the ability to put together a large building, the focus in the third-year. The objectives are to create an understanding of architectural elements and develop a sensitivity and awareness required for valid interpretations as well as to develop a reflective and critical design process with emphasis on the individual ability to articulate ideas. The major means of accomplishing the design process is through the design of smaller buildings/environments. To introduce the pragmatic and expressive aspects of architectural design and integrate visual communication with the design process. The emphasis is on developing comprehensive architectural thought, on the foundations of skill and knowledge essential for designing more "complex" buildings in later years, and on making the students aware of the multiplicity of factors involved in the design process and their civic responsibility in making informed choices. Thus, the pervasive issue of meaning in architecture is given a high priority and is interwoven in all stages of design exploration.

Prerequisite: Students must earn a C or better in: ARCH 231, and ARCH 203, and A E 421; Concurrent: ARCH 204, and A E 422

ARCH 296: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.
ARCH 297: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ARCH 299: Foreign Studies--Architecture
1-15 Credits/Maximum of 15

Individual or group instruction conducted in a foreign country.

International Cultures (IL)

ARCH 311: Architectural and Planning Theories
3 Credits

Architectural theory course with a strong focus on the reading and writing of essays about architecture and related fields. ARCH 311 Architectural and Planning Theories (3) ARCH 311 is a required course in the BARCH curriculum. The central goal of this course is to foster critical-thinking skills, in conjunction with the ability to develop and articulate theoretical positions related to the design, practice, and historical evolution of architecture, both verbally and in writing. ARCH 311 is a writing intensive seminar course fulfilling the University's Writing Across the Curriculum (WAC) requirement. Students will be introduced to various topics pertaining to advanced architectural theory. Students will critically read, then discuss significant works with the instructor. Lectures by the instructor will also be presented, discussed and analyzed. Writing assignments are utilized as instruments for learning the subject matter, methods of inquiry, and the types of writing typical of the discipline of architecture. The course format will also involve lectures by the instructor as well as presentations by the students related to past, present, and speculative architectural theories of importance to the field. In addition, students will complete writing assignments that demonstrate the development of a critical stance or idea, proficiency in critical analysis, and the use of established research techniques, citation of sources, and writing formats.

Prerequisite: ENGL 015 or ENGL 030; Students must also earn a C or better in: ARCH 210 and ART H201 and ART H202

Writing Across the Curriculum

ARCH 312: Critical Postcolonial and Contemporary Perspectives in South Asian Architecture
3 Credits

This course will examine critical postcolonial and contemporary architectural issues in South Asia in the context of cultural globalization today. ARCH 312 Critical Postcolonial and Contemporary Perspectives in South Asian Architecture (3) This course will examine the evolution of the cultures and architectures of South Asia through their encounters with colonialism and the postcolonial analysis of architectural development in the region. It will provide an introduction to precolonial architecture and urbanism in South Asia using methodologies of cultural studies via an examination of Buddhist, Hindu, Islamic (Mughal), and Western influences. The course will introduce students to the significant variety of South Asia's architectural accomplishments and encourage them to discuss broader theoretical issues in the context of cultural globalization and their implications for contemporary architectural thought and practice. References to indigenous architecture and techniques will be an integral part of the course, as will be examples of colonial architecture, especially the works of Edwin Lutyens. In the context of globalization during the post-colonial period, three important planning and building design projects undertaken by Western architects in South Asia will become the means to segue into contemporary architectural issues and the impact of Modernist thinking on South Asian architecture: Le Corbusier's master plan and building designs for Chandigarh - the Kahn's design for the monumental second capital complex in Dhaka, Bangladesh, and the master plan for Islamabad, the capital of Pakistan, by Constantinos Doxiades. In addition, the works of such South Asian architects such as Charles Correa, Balkrishna Doshi, Raj Rewal, Geoggrey Bawa, Maxharul Islam, and Nyyar Dada, will be included in the lectures and discussions. The overall methodology will not be strictly chronological; rather, broad themes will be addressed during the course of the semester. This approach will enable a clear and substantive illustration of relationships between theory and practice in South Asia. It will also help students recognize the inevitable partiality and incompleteness of such theoretical descriptions - compelling as they may be - with regard to actual historical phenomena.

ARCH 316: Analysis of Human Settlements: Cities
3 Credits

Analysis of the interrelated factors which determined and shaped the various types of early cities through the nineteenth century.

Bachelor of Arts: Arts
General Education: Arts (GA)

ARCH 317: Theory of Modern Japanese Architecture
3 Credits

Introduction to the development of modern Japanese architecture from the Meiji Restoration of 1868 to the present day. ARCH 317 Theory of Modern Japanese Architecture (3) ARCH 317 outlines a lineage of ideology in Japanese architectural discourse in order to examine reciprocal interactions between Japan and the West in the development of modern Japanese architecture from the Meiji Period (1868-1912), through the Metabolism of the 60's, to the present day. The concept of "tradition" itself is an invention of the Meiji (modern) era. Through this notion, the course will introduce students to crucial moments in the development of Japanese architecture, while making parallel references to the key developments in the West. Inversely, examples of traditional Japanese architecture will be introduced as counterpoint for the modern. Several topics such as the evolution of Japanese symbolic and spatial traditions in art, architecture, and landscape architecture (gardens) will be discussed. While discussing the evolution of Japanese culture, aesthetics and religions, the influences of China and Korea will be introduced, thus increasing students' familiarity to the East. A brief examination of Western architects paralleling the course content will also be presented. The key figures to be discussed during the class include Kenzo Tange, Kisho Kurokawa, Arata Iozzaki, Fumihiko Maki, Tadao Ando, Shin Takamatsu, Toyo Ito, Kazuyo Sejima and Shigeru Ban. Key Western architects, including Bruno Taut, Walter Gropius, Frank Lloyd Wright, and Le Corbusier, will also be discussed. In addition, several broad themes such as geography, climate culture, and symbolic and spatial traditions in art will be introduced. Eastern values and ethics very incongruent from those of the West and their impact on architecture will be presented and discussed. Specific globalization, the resultant reciprocal and transformative cross-cultural interactions in the development of modern Japanese architecture, and the unique process of "Japanization", in which ideas from the West are adapted, refined, and absorbed into Japanese
architecture through specific buildings and architects. Students in this course will be expected to become more familiar with Eastern culture; comprehend basic principles behind Japanese architecture and gardens; understand relevant terminology associated with Japanese culture, art, gardens, and architecture; and become more aware of the reciprocal and transformative cross-cultural interactions in architecture.

ARCH 331: Architectural Design III

6 Credits

Development of the design process through organizational methodologies, based on physical, functional, and social-behavioral determinants. ARCH 331 Architectural Design II (6) Development of the design process through organizational methodologies, based on physical, functional, and social-behavioral determinants. Emphasis is placed on "The Building Thoroughly Considered." The third-year design studio course is a continuation of the rigorous development of the architectural process started in the second year studio. Students will strive to develop an architectural totality, search for thoughtful decisions and sound judgments. Students continue the process of integrating the abstraction of the basics with the pragmatics of the built world. The student at the completion of this year should understand what a building is and how it responds to human needs in terms of cultural meaning, physical reality, operational prerequisites and construction.

Prerequisite: Students must earn a C or better in: ARCH 232 and ARCH 204 and A E 422; Concurrent: A E 211

ARCH 332: Architectural Design IV

6 Credits

Development of the design process through organizational methodologies, based on physical, functional, and social-behavioral determinants. ARCH 332 Architectural Design IV (6) Development of the design process through organizational methodologies, based on physical, functional, and social-behavioral determinants. Emphasis is placed on "The Building Thoroughly Considered." The second semester of the third-year design studio course is a continuation of the rigorous development of the architectural process started in the third year, first semester studio. ARCH 332 extends and deepens the understanding of the "thoroughly considered" building begun in ARCH 331. Students will strive to develop an architectural totality, search for thoughtful decisions and sound judgments. Students continue the process of integrating the abstraction of the basics with the pragmatics of the built world. The student at the completion of this year should understand what a building is and how it responds to human needs in terms of cultural meaning, physical reality, operational prerequisites and construction.

Prerequisite: Students must earn a C or better in: ARCH 331 and A E 211; Concurrent: A E 424

ARCH 410: Building Material Reclamation & Reuse

3 Credits

This course is a very hands-on, project-based seminar focusing on the theory and practice of building material salvage and recycling. Through active and applied learning, students will gain experience in handling, preserving and adding value to salvaged building materials. The course will consist of a variety of small-scale design-build projects, where students will learn and practice the methods and techniques of reclamation and explore the design possibilities of reused material. In addition to being a practical hands-on seminar, this course is also intended to explore and examine the broader historical and theoretical context for the activity of building material reclamation and reuse. Since the literal fall of the Roman Empire, reclaimed building materials have been creatively used in the design and construction of new buildings, yet we lack a thoughtful theoretical (and poetic) construct that supports reclamation activity other than the simple and obvious ethics of sustainability. Themes to be explored: ruins, spoglia, palimpsests, weathering, memory and the mnemonic function of architecture.

Prerequisite: 5th Semester standing

ARCH 412: Integrative Energy and Environmental Design

3 Credits

Concepts and strategies for the environmentally conscious design of the built environment.

ARCH 417: The Language of Boundaries in Architecture and the Landscape

3 Credits

This course examines the development and significance of boundaries in the construction of human space and time. Students who have taken other courses from Architecture Visual Arts, Geography, or Philosophy that treat some aspect of spatial perception, conception, construction, or visualization, or who have completed equivalent study independently, may enroll with the permission of the program. ARCH 417 The Language of Boundaries in Architecture and the Landscape (3) This course is composed of eight chronologically arranged units of study that examine the major developments in the human use of boundaries in the creation of architecture and landscapes - those actually constructed as well as those created through literature, myth, art, and film. Human boundary behavior is complex. While we tend to describe space and time as "transitive" (rational), our actual experience of them is intransitive. Because descriptive systems tend to disregard the role of time, they favor a constructed descriptive objectivity over subjective accuracy. Conflicts between representations and experiences reflect psychological and cultural conflicts expressed as symptoms and dysfunctions. Both the lectures and supplemental films are directed at helping students understand, reflect upon, and critically think about the trans-cultural and ubiquitous quality of boundary behavior. The thrust of the course is historical and critical rather than professional, and the intent of the course is to provide students with a comprehensive overview of the issues that surround the human use of boundaries. Because boundary issues are the result of humans' mental apprehension of the world, psychology, philosophy, critical studies, literature, and other humanities are intrinsically involved. But, because boundaries are a part of a way of conceiving the world mathematically, ideas from topology, number theory, and circuit logic are also key. Each unit of study will be accompanied by
understanding fundamental ordering principles of cities and towns, the course includes approximately 12 important films for required study.

Prerequisite: Students should have taken at least one of the following courses: ARCH 210, ARCH 130A, ARCH 131S, LARCH 060, LARCH 065, GEOG 020, or INART 003 or permission of program.

ARCH 431: Architectural Design V

6 Credits

Continuation of ARCH 331 and ARCH 332, with design and research in program option areas. ARCH 431 Architectural Design V (6) The fourth-year architecture studio emphasizes the development of skills in research, documentation, analysis and presentation of project-related physical and cultural information. The studio will investigate the implications of a rigorous predesign process in the design of architecture. The studio curriculum seeks to investigate the role of the architect in urban design, especially the design relationship between individual buildings, groups of buildings, exterior spaces, streets and streetscapes. Students will explore the synthesis of individual landmark buildings, building groups, urban landscape and service systems. The studio explores the difference between the roles and responsibilities of public and private clients. In particular the implications of establishing levels of control within the built environments, such as design guidelines, circulation systems and utility networks. Emphasis will be placed on the development of the following design skills: collaboration and communication in research and design, understanding the implications of existing patterns on subsequent design, understanding attitudes toward contexts: cultural, physical, economic, personal, political, organizational (bureaucratic). Integration of scale: Development of logics (orders) for the use of the site and continuity of logic across scales of building. Developing culturally meaningful relationships between the ordering of land-use and space throughout related buildings. Design of exterior space using architectural relationships between multiple buildings. Investigation of the implications of design controls on the single building.

Prerequisite: Students must earn a C or better in: ARCH 332 and A E 424

ARCH 432: Architectural Design VI

6 Credits

A continuation of ARCH 431, this course explores in greater depth urban planning and architectural design in an urban context. ARCH 432 Architectural Design VI (6) ARCH 432 is a continuation of ARCH 431 with a focus on architecture in urban environments and urban/community planning issues of greater complexity. The class will collaborate in the research and documentation of the existing conditions of an urban site and the forces that influence it. This will include the study of precedents. The class will prepare a pre-design presentation, individual architecture projects, base models, and a book of the semester’s work. Based on the pre-design information, small student groups will develop a master plan for a large program. This exercise will include the preparation of the plan, supported by concept diagrams and models, land use diagrams, open space diagrams, landscape plans, pedestrian and vehicular circulation/ parking/servicing diagrams, written and graphic site and building design guidelines, and a utilities diagram. The architectural component of the master plan will be selected for development as the studio architectural design project. Each student will prepare an architectural project based on the general logic and concepts of the group plan. Major topics addressed in the course include working collaboratively in teams, understanding fundamental ordering principles of cities and towns, understanding urban contexts, urban plans, land-use controls, and economic plans, the design of urban spaces, and the design of a single building or complex of buildings in an urban environment.

Prerequisite: Students must earn a C or better in: ARCH 431

ARCH 433: Architectural Design Analysis

3 Credits

Studies in principles and elements of design; planning for human use; the relationship of space to physical and social environment. Architectural Engineering majors only. ARCH 441 Architectural Design Analysis (3) Continuation of ARCH 431, with emphasis on functional relationship of space, form, function, and building groups. The objective of this course is to explore various approaches to architectural design and to reinforce the concept that there is no "right" or "wrong" answer to a design problem. "Design" is decision-making in itself -- the key to a successful project lies not only in the final product, but in the process leading up to it as well. In order to be successful, design solutions must respond to both formal ideas as well as human, environmental and technical realities. Thus, the interaction between art and technology becomes imperative.

Prerequisite: ARCH 130A

ARCH 441: Architectural Design Analysis Inspection Trip

1 Credits

Faculty guided trip to metropolitan areas to investigate noteworthy architecture and building construction and to visit professional offices.

Prerequisite: fourth-year architectural engineering majors first priority, others by faculty approval

ARCH 451: Architectural Professional Practice

3 Credits

A study of architectural practice in today's society: education, registration, office practice, codes, standards, construction industry, contracts, and legal documents. ARCH 451 Architectural Professional Practice (3) ARCH 451 is a required course in the BARCH curriculum. It is intended to prepare students for the professional practice of architecture. The course explores the historical influences and current trends that shape the relationship between the architect, client and builder in
of contemporary society. This course provides an overview of the changing roles of the architect through history as well as a detailed examination of the architectural profession in today’s rapidly changing world. ARCH 451 reviews internship, architectural licensing procedures and requirements, professional development (life-long learning), architectural practice including office organizational structures, the architect’s administrative role, construction cost control, professional organizations, the architect’s professional, legal and ethical responsibilities (including life-safety and accessibility), leadership in the profession and the community as well as alternative architectural / design related careers.

Concurrent: ARCH 491

ARCH 480: Technical Systems Integration

3 Credits

Presentations of buildings’ analyses from a multiplicity of viewpoints: architectural, spatial, environmental, mechanical, construction assembly. ARCH 480 Technical Systems Integration (3) This course is a synthesis of topics previously introduced in the AE sequence - such as structural, mechanical, electrical, and other systems related to a building’s technical performance. Students will practice the purposeful integration of all technical aspects of a buildings design, providing them with a working knowledge of matters related to energy efficiency, sustainability, lighting, and acoustics. The focus of the course lies in questioning how technical requirements and design intentions should be integrated during the design process, so as to enhance the aesthetic and performance qualities of an architectural project. This course combines lectures, field trips, and technical assignments, along with analysis and implementation of energy, day lighting, electrical lighting, and acoustical concepts in the student’s design efforts. In addition to the synthesis of building design and technical systems, this course will further develop the student’s knowledge of active/passive techniques for sustainable architecture. A focus on the collaborative workings/environment of the architectural practice helps students to translate systems integration strategies into graphic/digital representation, and reinforces the interdisciplinary nature of designing and constructing successful works of architecture.

Prerequisite: ARCH 203, ARCH 204, ARCH 332, A E 422, and A E 424 with a grade of C or better in each; Concurrent: ARCH 431

ARCH 481: Digital Design Media

3 Credits

Advanced course in digital modeling, rendering, animation and non-linear video for architectural investigations.

Prerequisite: approval by instructor

ARCH 491: Architectural Design Studio

6-12 Credits/Maximum of 12

Problems in architectural planning and design; and/or programming, implementation methodologies and applications for various environmental design scales. ARCH 491 Architectural Design VII-Thesis (6) It is the goal of this program that, upon completion of the fifth year, each student will have the ability to pursue an architectural idea in a rigorous, in-depth manner and be able to express the knowledge of and implication of that idea through the completion and presentation of a "thoroughly considered building design project." It is the intent of the fifth-year component of the Bachelor of Architecture program to foster the spirit of in-depth design inquiry and research, and to build upon and reiterate design awareness, skills, and methods introduced in previous years; and to introduce, discover and develop new ones. To these ends the primary educational vehicle is the use of a propositional thesis as a way of directing the study toward the linking of theory and building in a meaningful manner.

Prerequisite: Students must earn a C or better in: ARCH 431, ARCH 499A, and ARCH 311W; Concurrent: ARCH 451

ARCH 492: Architectural Design Studio

6 Credits

Continuation of select ARCH 491 sections with concentration and specialization options.

Prerequisite: Students must earn a C or better in: ARCH 491; Concurrent: ARCH 490 Honors

ARCH 492H: Architectural Design Studio

6 Credits

Continuation of select ARCH 491 sections with concentration and specialization options.

Prerequisite: Students must earn a C or better in: ARCH 491; Concurrent: ARCH 490 Honors

ARCH 495: Advanced Architectural and Related Design/Construction Work Experience II

1-3 Credits/Maximum of 6

Supervised off-campus, nongroup instruction including field experiences, practica, or architectural and related design/construction work experience. ARCH 495 Advanced Architectural and Related Design/Construction Work Experience II (1-3 per semester/maximum of 6) Supervised off-campus, non-group instruction including field experiences, practica, or architectural and related design/construction work experience. A final presentation of activities will be evaluated by a faculty member in the Department of Architecture. Number of credits will be determined based on the total number of hours of approved work experience under the direct supervision of a registered architect or other approved professional:1 credit: 75-149 hours 2 credits: 150-239 hours 3 credits: 240+ hours

Prerequisite: Grade of C or higher in: ARCH 332; instructor approval of work experience proposal including employment agreement with an approved supervisor.

ARCH 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

ARCH 496H: Independent Study - Honors

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.
Honors
ARCH 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively
narrow subject which may be topical or of special interest.
ARCH 497A: **SPECIAL TOPICS**
3 Credits
Cross-Listed
ARCH 497B: **SPECIAL TOPICS**
1-3 Credits
ARCH 497C: **SPECIAL TOPICS**
3 Credits
ARCH 497D: **SPECIAL TOPICS**
3 Credits
ARCH 498: Special Topics
1-15 Credits/Maximum of 15
Formal courses given infrequently to explore, in depth, a comparatively
narrow subject which may be topical or of special interest.

**Army (ARMY)**

ARMY 101: U.S. Army Organization and Functions
2 Credits
Introduction to U.S. Army and ROTC: their organization, missions and
functions; customs and traditions; leadership laboratory.

ARMY 102: The Military Profession: Leadership and Management Theory
2 Credits
Introduction to leadership techniques and basic management skills;
leadership laboratory.

ARMY 203: Army Operations: Tactics and the Principles of War
2 Credits
Organization and operation of Army units; fundamentals of unit tactics;
leadership laboratory.

ARMY 204: Land Navigation: Topographic Maps and Orienteering
2 Credits
Military and topographic maps; methods of orienteering and land
navigation; leadership laboratory.

ARMY 301: Advanced Principles of Leadership and Management
3 Credits
Principles of military leadership; military skills development; land
navigation; physical fitness; leadership laboratory.

ARMY 302: Advanced Principles of Military Leadership and Combat
Operations
3 Credits
Leadership in the field; principles of offense, defense, and patrolling;
physical fitness, leadership laboratory.

**Prerequisite:** ARMY 301

ARMY 401: Organizational Behaviors: Interrelationships of Directing
Staffs and Staff Functions
3 Credits
Leadership; command and staff functions; ethics and professionalism;
military writing; leadership laboratory.

**Prerequisite:** ARMY 302

ARMY 402: Army Personnel Management and Logistics
3 Credits
Leadership; army personnel management; logistics system; personnel
counseling; military justice; Soviet military; personal affairs; training
management; army life; leadership laboratory.

**Prerequisite:** ARMY 302

ARMY 496: Independent Studies
1-9 Credits/Maximum of 9
Creative projects, including research and design, which are supervised on
an individual basis and which fall outside the scope of formal courses.

**Art (ART)**

ART 1: Introduction to the Visual Arts
3 Credits
Introduction to the media, elements, function, making, and meaning
of visual arts today and in diverse historical and cultural contexts.

ART 1 Introduction to the Visual Arts (3) (GA)(BA) This course meets
the Bachelor of Arts degree requirements. ART 1 is an introduction
to the visual arts and is designed to meet the General Education Arts
requirement. The course is offered every semester at University Park,
for example, with an enrollment of 330. There are no prerequisites, and
students are assumed to have little or no background in studying or
making art. As a result of taking the course, students are able to look
more closely and find ways to say what they see in the visual arts.
They become familiar with a broad range of subject matter, style and
medium, with the principles of design that organize works of art, and with
changing historical and cultural contexts in which the arts have been
made and understood. They also experience the challenge of making art
themselves, and develop a more informed critical point of view. Because
of the large number of students that may enroll, ART 001 is primarily a
ART 3: Visual Images on the Web

3 Credits

Introduce students to using visual images for communication on the World Wide Web. ART 3 Visual Images on the Web (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. This course is constructed to introduce students to doing art work on-line, preparing visual, verbal and other media for presentation on the Internet with special emphasis placed on the aesthetics of image making and good Web design. Working both individually and in groups is included. Each student is assigned to a working group, which makes collaboration and communication possible. All the projects emphasis art making of different kinds - still and animated, bit-map and vector - as well as different formats - HTML, Flash format and Portable Document format. The grasping of the different kinds of images each makes available, aesthetic qualities of each and they can be used in communication at the center of the course. The student’s work will be evaluated on the basis of how well they grasped the problem, worked with others, when required, to solve it and the effectiveness of the final result. The students may do the work for the course on their personal computers or in the University labs on any of the available platforms - Windows, Mac or UNIX. The course will be offered in the spring and the fall and have an enrollment of 200 students.

Bachelor of Arts: Arts
General Education: Arts (GA)

ART 10: Introduction to Visual Studies

3 Credits

INTRODUCTION TO VISUAL STUDIES; PICTORIAL SPACE AND THE PRINCIPLES OF VISUAL ORGANIZATION. ART 10 Introduction to Visual Studies (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. ART 10 is intended as a general survey course for non-majors consisting of images, ideas, and processes used in art making. As a studio offering, emphasis is placed on hands-on activities, which promote literacy and sensitivity to both two-dimensional and three-dimensional conventions in the visual arts. Students will experience the contextual influences of art, the visual languages and organizational systems of art, and the various studio processes of art. As well, slide presentations, studio visits and museum critiques will augment studio exercises to facilitate a greater awareness of the cultural context in which the visual arts function. As a general appreciation offering, emphasis is placed on active learning processes that involve students in basic studio materials and techniques. Students enrolled in this course will be required to participate in the following active learning components: 1. Studio Assignments: a) Contextual influences of history and contemporary culture b) Visual languages and organizational systems related to the visual arts c) Studio processes with materials and techniques. 2. Creating a social and historical context for sculpture making through slide presentations, studio visits, and museum critiques: a) Slide presentations: students will be asked to consider the concepts of their creative projects in relationship to works by historical and contemporary artists in order to understand the ways in which visual arts convey meaning. b) Studio visits: Students will visit the personal studios of local artists to learn how professional artists develop best practices as related to the three kinds of studio-based assignments outlined above. Additionally, they will explore and discuss with these artists the concepts and meanings expressed in their creative works. c) Museum critiques: Museum visits will enable students to learn how to engage and respond to actual works.
of art as compared with those that they experience as slide and printed representations. The role of museums and galleries in contemporary art practice will also be discussed. Grading and evaluation: Students' art projects will be evaluated according to the following criteria: 1) the uniqueness of the visual concepts developed in their studio assignments; 2) the strength of their visual compositions-their ability to communicate concepts clearly; 3) the quality of their craftsmanship—an effective use of materials and procedures and commitment to the studio assignments-the effort expended on each project; 4) Their willingness to participate in critique sessions—a thoughtful and informed interpretation of visual ideas in art works produced by them in class as well as those discussed during slide presentations, studio visits, and museum critiques. Since the School of Visual Arts now requires a portfolio review for Visual Arts majors to enroll in studio courses, ART 17 provides an opportunity for non-art majors to do studio work in conjunction with an exploration of art concepts.

Bachelor of Arts: Arts
General Education: Arts (GA)

ART 11: First-Year Seminar—School of Visual Arts

1 Credits/Maximum of 1

Facilitate adjustment to high expectations, demanding workload, increased academic liberties, and other aspects of college life in the arts. The First-Year Seminar will help facilitate students' adjustment to the high expectations, demanding workload, increased academic liberties, and other aspects of the transition to college life and introduce them to their responsibilities as members of both the School of Visual Arts (SoVA) and University community. In addition, the First-Year Seminar is designed to engage students, acquaint them with the learning tools and resources available at Penn State and orient them to the SoVA community from the outset of their undergraduate studies in a way that will bridge to later experiences in their chosen program of study. The first-year seminar will serve as a broad introduction to SoVA's programs of study in Studio Art, Art Education, and Interdisciplinary Digital Studio (IDS) as well to Penn State's academic policies and procedures. Topics to be covered: Introduction to SoVA's areas of study (Studio Art, Art Education, and Interdisciplinary Digital Studio) University wide Web based academic resources, academic policies and procedures Introduction to Penn State's Student Affairs Offices (e.g., Career Services, Center for Women Students, Multicultural Resource Center, and Student Activities)

First-Year Seminar

ART 17: Introduction to Metal Arts

3 Credits

Introduction for non-art majors to fundamental jewelry making and small-scale metalsmithing processes including fabrication, surface treatment, and finishing of metalwork. ART 17 Introduction to Metal Arts (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. ART 17 is intended as a general survey of metal arts for non-majors. As a studio offering, emphasis is placed on hands-on studio activities, which promote visual literacy and a sensitivity to the various metal arts conventions. Students are given the opportunity to briefly explore many of the traditional materials and processes of metalsmithing including those that are used in cold joining, surface texture, and fabrication. As well, slide presentations, studio visits and museum critiques will augment studio exercises to facilitate a greater awareness of the cultural context in which the metal arts function. As a general appreciation offering, emphasis is placed on active learning processes that involve students in basic studio materials and techniques. Since the School of Visual Arts now requires a portfolio review for visual arts majors to enroll in studio courses, ART 17 provides an opportunity for non-art majors to do studio work in conjunction with an exploration of art concepts.

Bachelor of Arts: Arts
General Education: Arts (GA)

ART 20: Introduction to Drawing

3 Credits

Introductory experience in making of art through drawing media; designed for non-majors seeking general overview of studio practice. ART 20 Introduction to Drawing (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. ART 20 is intended as a general survey of the art of drawing for non-majors. As a studio offering, emphasis is placed on hands-on studio activities, which promote visual literacy and on the various conventions used in drawing. Students will be given the opportunity to briefly explore many of the traditional materials of drawing, including pencil, charcoal, conte, ink and ink wash, pastel, as well as experimental tools. As well, slide presentations, studio visits and museum critiques will augment studio exercises to facilitate a greater awareness of the cultural context in which drawing functions. As a general appreciation offering, emphasis is placed on active learning processes that involve students in basic studio materials and techniques. Since the School of Visual Arts now requires a portfolio review for Visual Arts majors to enroll in studio courses, ART 20 provides an opportunity for non-art majors to do studio work in conjunction with an exploration of art concepts.

Bachelor of Arts: Arts
General Education: Arts (GA)

ART 20H: Introduction to Drawing

3 Credits

Introductory experience in making of art through drawing media; designed for nonmajors seeking general overview of studio practice.

General Education: Arts (GA)
Honors

ART 30: Introduction to Sculpture

3 Credits

Introduction to sculpture for non-art majors consisting of lectures/basic studio work coordinated to cover broad range of processes. ART 30 Introduction to Sculpture (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. ART 30 is intended as a general survey of the art of sculpture for non-majors. As a studio offering, emphasis is placed on hands-on studio activities, which promote visual literacy and sensitivity to the various sculptural conventions. Students are given the opportunity to briefly explore many of the traditional materials of sculpture including those that are used in modeling and replication, subtractive processes, and fabrication. As well, slide presentations, studio visits and museum critiques will augment studio exercises to facilitate a greater awareness of the cultural context in which the art of sculpture functions. Students enrolled in this course will be required to participate in the following active learning components: 1. Studio
Assignments: a) Modeling and Replication b) Subtractive Processes c) Fabrication Assignment2. Creating a social and historical context for sculpture making through slide presentations, studio visits and museum critiques: a) Slide presentations: students will be asked to consider the concepts of their creative projects in relationship to the sculptural works of historical and contemporary artists in order to understand the ways in which the three dimensional aspects of sculpture convey meaning. b) Studio visits: Students will visit the personal studios of local artists to learn how professional artists develop best practices as related to the three basic approaches to rendering sculptural form outlined above. Additionally, they will explore and discuss with these artists the concepts expressed in their sculptural works. c) Museum critiques: Museum visits will enable students to learn how to engage and respond to actual works of art as compared with those that they experience as slide and printed reproductions. The role of museums and galleries in contemporary art practice will also be discussed. Grading and evaluation: Students’ sculptural projects will be evaluated according to the following criteria: 1) the uniqueness of the visual concepts developed in their studio assignments; 2) the strength of their visual compositions-their ability to communicate concepts clearly; 3) the quality of their craftsmanship-an effective use of materials and procedures and commitment to the studio assignments-the effort expended on each project; 4) Their willingness to participate in critique sessions-a thoughtful and informed interpretation of visual ideas in sculptural works produced by them in class as well as those discussed during slide presentations, studio visits, and museum critiques.

Bachelor of Arts: Arts
General Education: Arts (GA)

ART 40: Introduction to Printmaking

3 Credits

Instruction and practice in elementary printmaking and papermaking processes. ART 40 Introduction to Printmaking (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. ART 40 is intended as a general survey of the art of printmaking for non-majors. As a studio offering, emphasis is placed on hands-on studio activities, which promote visual literacy and sensitivity to the various printmaking conventions. Students are given the opportunity to briefly explore the various approaches to printmaking, which may utilize some or all of the following: screenprinting, relief, intaglio, lithography, and others. As well, slide presentations, studio visits and museum critiques will augment studio exercises to facilitate a greater awareness of the cultural context in which the art of printmaking functions. Students enrolled in this course will be required to participate in the following active learning components: 1) Studio Printmaking Assignments: a) Screenprinting b) Relief c) Intaglio d) Lithography e) Others (collagraph, monotype, electrostatic, artists books) 2) Creating a social and historical context for printmaking through slide presentations, studio visits and museum critiques: a) Slide presentations: students will be asked to consider the concepts of their creative projects in relationship to prints of historical and contemporary artists in order to understand the ways in which the two-dimensional aspects and various processes of printmaking convey meaning. b) Studio visits: Students will visit the personal studios of local printmakers to learn how professional artists develop best practices as related to the basic approaches to printmaking outlined above. Additionally, they will explore and discuss with these artists the concepts expressed in their printed images. c) Museum critiques: Museum visits will enable students to learn how to engage and respond to actual prints as compared with those that they experience as slide and book/journal reproductions. The role of museums and galleries in exhibiting prints will also be discussed. Grading and evaluation: Students’ printmaking projects will be evaluated according to the following criteria: 1) the uniqueness of the visual concepts developed in their studio assignments; 2) the strength of their visual compositions-their ability to communicate concepts clearly; 3) the quality of their craftsmanship-an effective use of materials and procedures and commitment to the studio assignments-the effort expended on each project; 4) Their willingness to participate in critique sessions-a thoughtful and informed interpretation of visual ideas in prints produced by them in class as well as those discussed during slide presentations, studio visits, and museum critiques.

Bachelor of Arts: Arts
General Education: Arts (GA)

ART 50: Introduction to Painting

3 Credits

Introductory experience in making of art through painting media; designed for non-majors seeking a general overview of studio practice. ART 50 Introduction to Painting (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. ART 50 is intended as a general survey of the art of painting for non-majors. As a studio offering, emphasis is placed on hands-on studio activities, which promote visual literacy and sensitivity to the various conventions used in the discipline of painting. Students are given the opportunity to briefly explore the various approaches to creating visual images by applying various painting materials, techniques, and concepts. As well, slide presentations, studio visits and museum critiques will augment studio exercises to facilitate a greater awareness of the cultural context in which the art of painting functions. Students enrolled in this course will be required to participate in the following active learning components: 1) Studio Painting Assignments: a) Visual concept development: students will be introduced to the various ways that artists create meanings through painting. b) Materials development: through a process of exploration and experimentation, students will learn how to apply various painterly media and tools in creating visual images. c) Technique development: through a process of exploration, experimentation, and skill development students will learn how to render and model painterly images that range between abstract and realistic representations. 2) Creating a social and historical context for painting through slide presentations, studio visits and museum critiques: a) Slide presentations: students will be asked to consider the concepts of their creative projects in relationship to paintings by historical and contemporary artists in order to understand the ways in which the two-dimensional aspects and various processes of painting convey meaning. b) Studio visits: Students will visit the personal studios of local painters to learn how professional artists develop best practices as related to the basic approaches to painting outlined above. Additionally, they will explore and discuss with these artists the concepts expressed in their painted images. c) Museum critiques: Museum visits will enable students to learn how to engage and respond to actual paintings as compared with those that they experience as slide and book/journal reproductions. The role of museums and galleries in exhibiting paintings will also be discussed. Grading and evaluation: Students’ painting projects will be evaluated according to the following criteria: 1) the uniqueness of the visual concepts developed in their studio assignments; 2) the strength of their visual compositions-their ability to communicate concepts clearly; 3) the quality of their craftsmanship-an effective use of materials and procedures and commitment to the studio assignments-the effort expended on each project; 4) Their willingness to participate in critique sessions-a thoughtful and informed interpretation of visual ideas in paintings produced by them in class as well as those discussed during slide presentations, studio visits, and museum critiques.
interpretation of visual ideas in paintings produced by them in class as well as those discussed during slide presentations, studio visits, and museum critiques.

Bachelor of Arts: Arts
General Education: Arts (GA)

ART 80: Introduction to Ceramics
3 Credits

Introduction to the concepts and techniques fundamental to the making of pottery and ceramic sculpture. ART 80 Introduction to Ceramics (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. ART 080 is intended as a general survey of the art of ceramics for non-majors. As a studio offering, emphasis is placed on hands-on activities, which promote visual literacy and sensitivity to the various conventions in ceramics. Students are given the opportunity to briefly explore many of the traditional approaches to ceramics including those that are used in hand building, wheel throwing, glazing, and kiln firing. As well, slide presentations, studio visits and museum critiques will augment studio exercises to facilitate a greater awareness of the cultural context in which the art of ceramics functions. As a general appreciation offering, emphasis is placed on active learning processes that involve students in basic studio materials and techniques. Since the School of Visual Arts now requires a portfolio review for visual arts majors to enroll in studio courses, ART 80 provides an opportunity for non-art majors to do studio work in conjunction with an exploration of art concepts.

Bachelor of Arts: Arts
General Education: Arts (GA)

ART 97: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

ART 98: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Bachelor of Arts: Arts

ART 100: Concepts and Creation in the Visual Arts
3 Credits

A study of the personal and cultural foundations of artistic creation and practice of creative production in the art studio. ART 100 Concepts and Creation in the Visual Arts (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. ART 100 is intended as an introduction to the concepts underpinning artistic creation. Through lectures and studio work, students will explore relationships between artistic processes and in daily life. The objective of the course is to develop in the student both an appreciation and understanding of contemporary art through an examination of art and contemporary social, cultural, and political issues surrounding artistic practice. Students will respond to the ideas presented in the lectures by completing a series of artworks intended to reflect the issues and concepts that have been presented. The intended, though not exclusive, audience for the course is non-art majors. While the focus of the course is a critical examination of both the artworks studied and the artworks created by the students, the critique will be derived from the various backgrounds and academic experiences of the students and not necessarily from their knowledge of art. In this manner, the course can become a relevant complement to all of their studies. In short, the goal of the course is to understand art as a means to critically engage and begin to understand our surroundings and not simply as an end product. Evaluation of student achievement will be done in both the classroom and studio portions of the course. Since it is not expected that students have a background in art, content knowledge assessment will primarily be based on the students’ active participation in class discussions as well as objective tests in the form of written responses to the issues and concepts examined. In the studio, their work will be judged on how well students have responded to the concepts and issues explored as well as on their ability to articulate their own ideas in relation to those of other students and other aesthetic and cultural ideas to which they have been exposed. In the studio, this process will primarily be done in the form of individual conversation and group critique. Since the School of Visual Arts now requires a portfolio review for visual arts majors to enroll in studio courses, ART 50 provides an opportunity for non-art majors to do studio work in conjunction with an exploration of art concepts.

Bachelor of Arts: Arts
General Education: Arts (GA)

ART 101: Introduction to Web Design
3 Credits

A beginning level course in Web Design, with emphasis on designing with standards to assure accessibility and effective communication. ART 101 Introduction to Web Design (3) (GA) (BA) This course meets the Bachelor of Arts degree requirements. ART 101 is a beginning level web design course that is concerned with the designing and creating of web sites using XHTML and recommended government standards. This emphasis is central so that the work the students do will reach the broadest audience, including people with disabilities, through the use of a broad range of software and hardware. This course will teach students how to meet the present government standards for accessibility by the disabled and the technical and accessibility standards recommended by the World Wide Web Consortium (W3C). This course will also place an emphasis on the uses of art-images to present information along with the presentation of text and typography for communication and how these elements can make projects on the web more effective. The course will introduce topics such as: clarity of art and design, ease of use (navigability), and in creating art and graphics for web delivery (optimization). There will also be discussion on the dynamics of networked communications, along with issues pertaining to the authoring and publishing of content and media on the internet.

Bachelor of Arts: Arts
General Education: Arts (GA)

ART 102: Beginning Computer Aided Design for Artists
3 Credits

ART 102 explores the computer as artistic media. Student creations are realized through 3D printing, vinyl cutting, and laser engraving. ART 102 Beginning Computer Aided Design for Artists (3) (GA) Students are
introduced to the exciting realm of digital 3D design. The class explores
the computer as an artistic media as students learn a CAD application.
Projects will address the themes of form, function and the aesthetics
design while also gaining an introduction to contemporary sculpture
and computer mediated design happening in the art world now. Students
are guided through the creation of a variety of objects from chess pieces
to cars. Objects created during the class, in a computer application,
are then realized tangibly through various output systems including 3D
printing, vinyl cutting, and laser engraving. While no prior CAD experience
is required students should be aware that all of the art created in class
is done on a computer. Students in all areas of study, especially those
interested in any aspect of art or engineering, are encouraged to register.

General Education: Arts (GA)

ART 110: Ideas as Visual Images
3 Credits
Introduction to the ideational relationships among subject, form, and
content in visual images.

ART 111: Ideas as Objects
3 Credits/Maximum of 3
An introduction to the relationship between ideas and the creation of
three-dimensional objects. In this course, students will learn concepts,
methods, and vocabulary relative to the production of three-dimensional
objects. Through slide lectures, discussions, critiques, and assigned
projects, participants will investigate how to make, analyze, and critique
sculptural objects within the context of contemporary art and visual
culture. Students are expected to be inquisitive about the discipline
and willing to immerse themselves in it. Students are expected to ask
questions, explore new ideas, and engage in the course material.

Bachelor of Arts: Arts

ART 122: Commentary on Art
3 Credits
An introduction to verbal commentary, both oral and written, about art.
The development of critical and expressive skills given emphasis.

Bachelor of Arts: Arts
United States Cultures (US)
Writing Across the Curriculum

ART 165: Artistic Concepts of Space
3 Credits
A studio course that utilizes lecture and varied media experiences to
investigate space as artistic expression. ART 165 Artistic Concepts
of Space (3) ART 165 Artistic Concepts of Space is a hands-on studio
course supplemented by lecture. It utilizes various media experiences
to investigate notions of space in artistic expression. Explorations will
include traditional ways of depicting and constructing space as well as
contemporary approaches. Both 2-D and 3-D studio investigations will
be employed. A lecture component will provide a historical and cultural
backdrop upon which students may better understand the role of special
depiction in artistic expression.

General Education: Arts (GA)

ART 166: Artistic Concepts of Form
3 Credits
A studio course that utilizes lecture and varied media experiences
to investigate form in artistic expression. ART 166 Artistic Concepts
of Form (3) ART 166 Artistic Concepts of Form is a hands-on studio
course supplemented by lecture. It utilizes various media experiences
to investigate notions of form in artistic expression. Explorations will
include traditional ways of depicting and constructing form as well as
contemporary approaches. Both 2-D and 3-D studio investigations will
be employed. A lecture component will provide a historical and cultural
backdrop upon which students may better understand the role of special
depiction in artistic expression.

General Education: Arts (GA)

ART 168: The Digital Medium
3 Credits
A studio course where the computer is introduced as an artistic media.
ART 168 The Digital Medium (3) This course will provide a much needed
introductory technological/digital component wherein computing will
be discussed as a media, rather than a tool. Students will be engaged
in the creation of artistic manifestations of individual interpretations
surrounding themes and concepts introduced in class. Each unit of the
course will build upon the next resulting in a knowledge base of the
possibilities of what the digital medium includes. Students will be asked
to demonstrate their knowledge of the medium with a culminating final
project that uses at least four of the techniques demonstrated in class.
The final project will be determined by the student, manifestations may
include a web site, short film, installation, projects, or performance.

General Education: Arts (GA)

ART 197: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively
narrow subject that may be topical or of special interest.

ART 198: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively
narrow subject that may be topical or of special interest.

Bachelor of Arts: Arts

ART 199: Foreign Studies--Art
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Arts
International Cultures (IL)
ART 200: Scripting Fundamentals for Visual Artists and Designers
3 Credits/Maximum of 3
This course introduces object-oriented programming fundamentals for the production of expressive interactive experiences such as animations, interfaces and games. ART 200 SCRIPTING FUNDAMENTALS FOR VISUAL ARTISTS AND DESIGNERS introduces object-oriented programming fundamentals for the production of expressive interactive experiences such as animations, interfaces and games. This course focuses on creative work that is exploratory and experimental and engages students in research methods to advance their skills and critical competence in new media. Students apply computation concepts based on readings and discussions of key texts about interactive design, media art, and game design to the creation of original interactive projects. The course offers a series of scripting exercises in which students learn to develop applications using both a top-down and bottom-up design process. Students also develop a series of more ambitious computational projects using an iterative design process. They produce detailed design treatments and working prototypes before turning in final applications developed using an object-oriented programming language.

ART 201: Intro to Digital Arts: Computer Graphics
3 Credits
Art 201 is a course introducing digital art, design, and new media concepts using graphic applications on the computer. ART 201 Intro to Digital Arts: Computer Graphics (3) This is a course in which the students work with raster graphic, vector graphics and text layout programs. The purpose of the course is to give an introduction to how computer hardware and software can be used to produce works of art and design, which can be exhibited electronically, and also in print. It provides the first step for students interested in realizing their artwork using computers to develop and realize it.

Bachelor of Arts: Arts
ART 202: Computer 3-Dimensional Modeling and Rendering
3 Credits
ART 202 is a studio course introducing the student to 3-D computer modeling and rendering applications on the Macintosh computer.

Bachelor of Arts: Arts
ART 203: The Art of Web Design
3 Credits
This course will focus on utilizing graphic formats ideal for web-based work and designing with web standards. ART 203 The Art of Web Design (3)(BA) This course meets the Bachelor of Arts degree requirements. ART 203 is a 200-level course for the New Media area of concentration in the School of Visual Arts, and will focus on working with different graphic formats, both bitmap and vector based, which work on the web and on designing with web standards to assure accessibility and effective communication of information in a variety of forms. This course will teach how to meet the present government standards for accessibility by the disabled and the technical and accessibility standards recommended by the World Wide Web Consortium (W3C). The web as a global communication medium will be discussed, with special consideration given to the presentation of sites using languages other than English. The course will also emphasize the various uses of images to present information in different ways, in a variety of formats - gif, jpg, png, swf and svg - to learn which is the most effective for the particular information being presented. The use of text and typography for communication and how these can make artwork on the web more effective will also be examined. Clarity and flexibility of art and design, ease of use and creating web-optimized files that download quickly will be other subjects of concern. There will also be examples and discussion of artists and designers currently using the web, how communication on the web can work well, how it can work badly and how it can be abused.

Bachelor of Arts: Arts
ART 204: Animation Fundamentals
3 Credits
This course provides foundational knowledge for creating animated works that communicate ideas, enhance user interaction, and inspire critical reflection. ART 204: Animation Fundamentals focuses on creative work that is grounded in fundamentals and engages students in research methods to advance their skills and critical competence in time-based media. Students are introduced to core skills and knowledge necessary for producing animated works that communicate ideas, enhance user interface and interaction, and inspire critical reflection. Through a series of animation exercises students apply visual digital concepts in the creation of original animated projects that are further enhanced by critical responses to screenings and discussions of key texts about animation. Initial exercises cover animation principles and tools, creating assets, production planning, layout and composition, keyframes, transformation and deformation, and interpolation. Character animation design and development, rigging, asset preparation, camera are covered, along with various forms of interface prototypes such as interaction design, wireframes, interface elements. Students are also introduced to typography, sound design and Foley, motion design, color, masking, post effects, and color grading. Later in the course, students also develop a series of more ambitious animation projects using an iterative design process that further develops their digital competencies and creative and critical capabilities in time-based media.

ART 211: Introduction to Digital Art and Design Criticism
3 Credits/Maximum of 3
An introduction to the language, aesthetics and cultural impacts of digital art and design in contemporary society. ART 211 Introduction to Digital Art and Design Criticism (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. ART 211 examines 1) the conventions, language, practices, and aesthetics used by digital artists and designers and 2) the social and cultural implications that they and their works have for society with regard for the contexts of politics, philosophy, economics, race, gender, and technological development. Critical and creative thinking and expression are given primary emphasis in class activities and assignments. The course meets twice weekly and topics are explored through lectures, discussions, readings, presentations by visiting speakers, and out-of-class trips. Course assignments are writing and project based and require students to respond to ideas and concepts presented in class and to develop critiques of digital works through a variety of formats. Assignments include informal in-class projects, media reviews, a course journal, and a final project. Students build writing skills through analyzing assigned readings and developing research- and reflection-based projects about digital art and design. Speaking and listening skills are developed through discussions and collaborative activities. Course topics explore the: social contexts of digital art/design, significance of the computer interface to digital
art and design; practices used by digital artists and designers and their impact on audiences; and professional issues, concerns, and controversies affecting digital art/design, artists/designers, and their audiences. Students are required to have access to the Internet and to their University e-mail account. ART 211 will enroll 25 students and will be offered spring semester.

Bachelor of Arts: Arts
United States Cultures (US)

ART 211Y: Introduction to Digital Art and Design Criticism
3 Credits
An introduction to the language, aesthetics, and cultural impacts of digital art and design in contemporary society.

Bachelor of Arts: Arts
Writing Across the Curriculum

ART 220: Figure Drawing
3 Credits
Drawing from life. Emphasis on developing the ability to comprehend and record the human figure. ART 220 Figure Drawing (3) This course is intended to further investigate the art of figure drawing for art majors. As a studio offering, emphasis is placed on hands-on studio activities, which promote visual literacy and sensitivity to the various conventions used in figure drawing. Students will be given the opportunity to explore many of the traditional materials of drawing, including pencil, charcoal, conté, ink and ink wash, pastel, as well as experimental tools. As well, slide presentations, studio visits and museum critiques will augment studio exercises to facilitate a greater awareness of the cultural context in which figure drawing functions. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of completed artworks.

Prerequisite: ART 110S, ART 111, and enrollment in the School of Visual Arts or successful completion of an admissions portfolio review
Bachelor of Arts: Arts

ART 220: Figure Drawing
3 Credits
An introduction to sculpture consisting of lectures, demonstrations, and basic studio work coordinated to cover a broad range of processes. ART 230 Beginning Sculpture (3) This course is intended to investigate the art of sculpture for art majors. As a studio offering, emphasis is placed on hands-on studio activities, which promote visual literacy and sensitivity to the various conventions used in sculpture. Students will be given the opportunity to explore many of the traditional materials and processes of sculpture, including additive and subtractive processes, plaster-working, wood fabrication, metal fabrication, and mixed-media usage, as well as experimental tools and processes. Slide presentations, studio visits and museum critiques will augment studio exercises to facilitate a greater awareness of the cultural context in which sculpture functions. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of completed artworks.

Prerequisite: ART 110S, ART 111, and enrollment in the School of Visual Arts or successful completion of an admissions portfolio review
Bachelor of Arts: Arts

ART 223: Drawing: Techniques, Materials, and Tools
3 Credits
Drawing with an emphasis on organization and the development of drawing skills through a variety of techniques, materials, and tools. ART 223 Drawing: Techniques, Materials, and Tools (3) This course is intended to further investigate the art of drawing for art majors. As a studio offering, emphasis is placed on hands-on studio activities, which promote visual literacy and sensitivity to the various conventions used in drawing. Students will be given the opportunity to explore many of the traditional materials of drawing, including pencil, charcoal, conté, ink and ink wash, pastel, as well as experimental tools. As well, slide presentations, studio visits and museum critiques will augment studio exercises to facilitate a greater awareness of the cultural context in which drawing functions. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of completed artworks.

Prerequisite: ART 110S, ART 111, and enrollment in the School of Visual Arts or successful completion of an admissions portfolio review
Bachelor of Arts: Arts

ART 230: Beginning Sculpture
3 Credits
The materials and techniques of painting in oil and their uses in creative painting on panels and canvas. ART 250 Beginning Oil Painting (3) This course is designed to teach beginning students the basic fundamentals of painting and introduce them to the visual arts as a vehicle for personal expression. It is divided into technical categories for organizational purposes. The unique process of each discipline structures the course and allows for individual expression from a diversity of students.
with different skills and interests. The basic skills are introduced and studied through the creative process, from conception of an idea, preliminary sketches, variations, and final painting. Emphasis is placed on understanding the goals for each student and focusing on his or her shortcomings and strengths. While a basic mastery of mimetic painting is aimed at, a diverse range of aesthetic styles is presented. Thus the purpose of this course is to increase the appreciation of the visual arts through studio processes and the development of meaningful critical facility. We hope to educate students who will understand the fundamentals of painting and who will become part of an educated audience for the arts. Hopefully, they will be more imaginative and creative people. The studio emphasis on individual growth allows for flexibility in course structure to accommodate the general education objectives as well as for future painting majors. Creative and visual thinking are innately part of all students and these basic studio courses encourage and nurture them.

**Prerequisite:** ART 110S, ART 111, and enrollment in the School of Visual Arts or successful completion of an admissions portfolio review Bachelor of Arts: Arts

**ART 250H: Beginning Oil Painting**

3 Credits

The materials and techniques of painting in oil and their uses in creative painting on panels and canvas.

Honors  

**ART 260: Water Media**

3 Credits/Maximum of 6

This course develops artistic expression in water-based painting media while developing skills with watercolor, ink, acrylic, and natural pigments. ART 260 Water Media introduces techniques and concepts relevant to the creation of artworks using water-based painting media, materials and techniques, including watercolor, ink, acrylic, and natural pigments, as well as different grounds and surfaces. Basic techniques are introduced and skills are developed while experimentation and innovation are encouraged. Water-based painting media such as watercolor, ink, acrylic, and natural pigments, are covered. Examples from historical and contemporary water media painting practice will be presented and discussed. Particular emphasis will be placed upon the development of individual expression and a critical awareness concerning processes, composition, and content. Students apply their emerging skills and expressive preferences in developing a concentrated body of work. A goal is that the work demonstrates technical competence and conceptual awareness through the pursuit and refinement of an evolving personal vision. Students are introduced to the process of critique, which is central to the critical learning skills that are core experiences to the studio experience. This course gives students the requisite technical and conceptual skills to take more advanced painting and drawing courses such as ART 320 ADVANCED DRAWING and ART 350 INTERMEDIATE PAINTING among others. ART 260 will be offered once a year in the Spring semester.

**ART 265: Artistic Concepts of Color**

3 Credits

A studio course that utilizes lecture and various media to investigate color as artistic expression. ART 265 Artistic Concepts of Color (3) ART 265 Artistic Concepts of Color is a hands-on studio course supplemented by lecture. It utilizes various media experiences to investigate notions of color in artistic expression. Explorations will include traditional ways of investigating and creating color as well as contemporary approaches. Both 2-D and 3-D studio investigations will be employed. A lecture component will provide a historical and cultural backdrop upon which students may better understand the role of special depiction in artistic expression.

**Prerequisite:** ART 165, ART 166

**ART 266: Artistic Concepts of Light**

3 Credits

A studio course that utilizes lecture and varied media experiences to investigate light as artistic expression. ART 266 Artistic Concepts of Light (3) ART 266 Artistic Concepts of Light provides students with necessary concepts about light. Both 2-D and 3-D studio investigations will be employed. A lecture component will provide a historical and cultural backdrop upon which students may better understand the role of special depiction in artistic expression.

**Prerequisite:** ART 165, ART 166

**ART 269: Methods and Materials I**

3 Credits

A studio course that focuses on specific media or techniques reflecting varied faculty expertise. ART 269 Methods and Materials I (3) This course provides students with the opportunity to experience particular areas of visual art in which

**Prerequisite:** ART 165, ART 166

**ART 280: Beginning Ceramics**

3 Credits

The fundamentals of ceramics, throwing, hand-building, and glazing; acquainting the student with ceramic materials, techniques, and philosophy. ART 280 Beginning Ceramics (3) This course is intended to further investigate the art of ceramics for art majors. As a studio offering, emphasis is placed on hands-on studio activities, which promote visual literacy and sensitivity to the various conventions used in ceramics. Students will be given the opportunity to explore many of the traditional materials of ceramics, including functional and nonfunctional applications, stoneware, and high fire glazes. As well, slide presentations, studio visits and museum critiques will augment studio exercises to facilitate a greater awareness of the cultural context in which the field of ceramics functions. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of completed artworks.

**Prerequisite:** ART 110S, ART 111, and enrollment in the School of Visual Arts or successful completion of an admissions portfolio review Bachelor of Arts: Arts

**ART 290: Beginning Photography**

3 Credits

Fundamental techniques and approaches to the art of photography utilizing digital photographic technologies; digital camera required.
ART 290: Beginning Photography (3)(BA) This course meets the Bachelor of Arts degree requirements. ART 290 is the first course for students who desire to pursue a concentration in photography. It will focus on the process of making photographs and the development of a critical understanding of photographic images and their evaluation. In ART 290 students will develop the habit of taking photographs on a regular basis. Each week, students will be expected to turn in 24 pictures on one of five assignments for review and critique by both instructors and members of the class. Each assignment will be covered over a three-week period. The topics of the five assignments will vary, but each will focus on important aspects of photography. They may include: portraits, self-portraits, nature photographs, travel photographs, documentary series, experimental images, action assignments, etc. The final assignment will be a self-defined topic that allows the student to explore and work in an area of personal interest. Each topic will be selected to acquaint the student with important aesthetic principals in photography and at the same time advance their technical skill in the process of making photographic images. As part of the five assignments in ART 290, students will also gain background on the history of photography and the critical evaluation of photographs. For each assignment there will be an accompanying gallery of work by other photographers (professionals, amateurs, and students) on the assigned topic area. Each photograph in the gallery will be accompanied by an "artist's statement" - a written critical statement where the photographer describes his or her work and methods. Students will be required to complete each of the five assigned topics by submitting a final "gallery" of four photographs with a written "artist's statement" that speaks to the intent, process, and result of their work. Final submissions will help students develop skills in not only making photographs but critically evaluating their own work and articulating their personal means, methods, and objectives as photographers. Grading will be based on (1) the completion of weekly submissions, (2) the quality of photographs in final submissions for each assignment, (3) attendance, and (4) participation in critiques. A digital camera is required. ART 290 will be offered fall and spring semesters.

Bachelor of Arts: Arts

ART 296: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Arts

ART 297: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Arts

ART 299: Foreign Study–Art
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Arts

International Cultures (IL)

ART 290. Beginning Photography (3)(BA) This course meets the Bachelor of Arts degree requirements. ART 290 is the first course for students who desire to pursue a concentration in photography. It will focus on the process of making photographs and the development of a critical understanding of photographic images and their evaluation. In ART 290 students will develop the habit of taking photographs on a regular basis. Each week, students will be expected to turn in 24 pictures on one of five assignments for review and critique by both instructors and members of the class. Each assignment will be covered over a three-week period. The topics of the five assignments will vary, but each will focus on important aspects of photography. They may include: portraits, self-portraits, nature photographs, travel photographs, documentary series, experimental images, action assignments, etc. The final assignment will be a self-defined topic that allows the student to explore and work in an area of personal interest. Each topic will be selected to acquaint the student with important aesthetic principals in photography and at the same time advance their technical skill in the process of making photographic images. As part of the five assignments in ART 290, students will also gain background on the history of photography and the critical evaluation of photographs. ART 302: Digital Portfolio Elements
3 Credits
The creation of more involved digital projects that may ultimately be included in the students' digital portfolio. ART 302 Digital Portfolio Elements (3) ART 302 DIGITAL PORTFOLIO ELEMENTS (3) This course utilizes relevant digital tools for the completion of more involved projects that may ultimately be included in the students' digital portfolio. Through completion of the course, students will gain increased ability and independence in the application of relevant digital tools. The structure of the assignments and overall course will prepare and guide the students towards increased professionalism.

Prerequisite: ART 201 or ART 203

ART 314: Computer 3-D: Modeling, Rendering, and Animation
4 Credits/Maximum of 12
A studio course introducing 3-D computer generated artwork and content creation using modeling, rendering, and animation applications on the computer. ART 314 Computer 3-D: Modeling, Rendering, and Animation (4 per semester/maximum of 12) This is a studio course introducing 3-D computer generated artwork and content creation using modeling, rendering, and animation applications on the computer. This course will provide students with an in-depth understanding of 3-D techniques and production strategies for the visual and new media artist through technical exercises and creative exploration of the medium. The course will seek to introduce students to a wide range of digitally generated 3-D based creative work and concentrate on producing and integrating 3-D modeled, rendered, and/or animated work into new media and studio art practice. This course will explore the nature and potential of digitally generated 3-D artworks through lectures, readings, demonstrations, studio practice, and critiques. Assignments will cover a range of applications used in 3-D studio production. This course will culminate in the creation of a series of original 3-D generated artworks.

Prerequisite: ART 201 and enrollment in the ART BA, ART BFA, Art Education, Interdisciplinary Digital Studio (IDS) or Integrative Arts degree program

Bachelor of Arts: Arts

ART 315: New Media Art: New Media Studio
4 Credits
A studio course concentrating on digital art and new media authoring practices. ART 315 New Media Art: New Media Studio (4)(BA) This course meets the Bachelor of Arts degree requirements. This is a studio art class that focuses on creating, authoring, exhibiting, and critically evaluating interactive multimedia artworks. The course explores experimental uses of new media in the visual arts with emphasis on integrating digital media with current studio practices in two-, three-, and four-dimensional art. In addition to the actual creation of new media artworks, the course will engage students in research methods to advance their skills in new media and help them to develop an understanding of the critical evaluation and assessment of new media artworks. This course will explore the nature and potential of digital art through lectures, readings, demonstrations, studio practice, and critiques. Assignments will cover a range of digital multimedia applications in sound, image, motion, interactivity, interface design, and media authoring. The course will culminate in a final multimedia authored project for presentation on the Web, CD-ROM, DVD, or tape.
ART 316: Video Art and Time-Based Media
4 Credits/Maximum of 8

A studio course concentrating on video art, new media, and experimental time-based work. ART 316 Video Art and Time-Based Media (4 per semester/maximum of 8) This course meets the Bachelor of Arts degree requirements. ART 316 is a studio art class that focuses on creating, authoring, exhibiting, and critically evaluating video and time-based arts. This new media course explores experimental uses of video by visual artists with an emphasis on integrating digital video into current studio practice (i.e., new media digital arts, mixed media, installation, and performance). The course will engage students in research methods to advance their skills in time-based media and to help them develop an understanding of the critical evaluation and assessment of video and time-based artworks. This course will explore the nature and potential of digital video art making through lectures, readings, demonstrations, studio practice, and critiques. Assignments will cover a range of digital video authoring applications central to video and time-based arts production. The course will culminate in a video art screening/exhibition of student work.

Prerequisite: ART 315
Bachelor of Arts: Arts

ART 318: New Media Art: Game Art
4 Credits/Maximum of 8

A studio course concentrating on game art and new media authoring practices. ART 318 New Media Art: Game Art (4 per semester/maximum of 8) This course will concentrate on creating, authoring, exhibiting, and critically evaluating interactive games as creative vehicle for self-expression. This course will focus on creative work that is exploratory and experimental and engage students in research methods to advance their skills and critical competence in new media. This course will explore the nature and potential of digital art through lectures, readings, demonstrations, studio practice, and critiques. Assignments will cover a range of digital multimedia applications in sound, image, motion, interactivity, interface design, and media authoring. The course will culminate a final interactive game authored project for presentation on the Web, CD-ROM, or DVD.

Prerequisite: ART 314, ART 315

ART 319: Physical Computing
4 Credits/Maximum of 8

A studio course concentrating on interactive physical systems using software/sensors that can sense and respond to the analog world. ART 319 Physical Computing (4 per semester/maximum of 8) This is a course that looks at alternative techniques for engaging an audience with computer-based art, aside from the familiar monitor-mouse dialog. The course introduces students to haptic systems, interactive environments, dynamic control systems, procedural video/audio and the creation of work that is exploratory and experimental. Through readings, discussions, design of individual and collaborative projects, students are expected to develop an articulate, theoretical basis for conceptualizing and discussing works presented in class as well as their own creative projects. Assignments will cover both a technical introduction to basic electronics, analog circuit design, and microcontrollers as well as design concepts and philosophies for building interactive art objects.

Prerequisite: ART 201, and enrollment in the ART BA, ART BFA, Art Education, Interdisciplinary Digital Studio or Integrative Arts degree programs

ART 320: Advanced Drawing
4 Credits/Maximum of 8

Drawing for art majors; emphasis on sustained individual approaches based on figurative and nonfigurative sources. ART 320 Advanced Drawing (4 per semester/maximum of 8) This course is for students who have a firm commitment in the arts, who have adequate background in the use of techniques and materials, and who have experimented with a variety of approaches to subject matter. This course is designed to focus and develop personal approaches to subject matter and to encourage a sustained interest in work. Portfolios will be graded and midterm and at the end of the semester. In addition to the portfolio requirements, each student will give a presentation on a contemporary artist whose work has in some way influenced your own current body of work. Critiques will be regularly scheduled. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of completed artworks.

Prerequisite: ART 220, ART H111, ART H112, and enrollment in the ART BA, ART BFA, Art Education, or Integrative Arts degree program
Bachelor of Arts: Arts

ART 330: Intermediate Sculpture: Metal Fabrication and Mixed-media
4 Credits/Maximum of 8

Development of technical and conceptual skills through metal fabrication, welding, and mixed-media processes. ART 330 Intermediate Sculpture: Metal Fabrication and Mixed-media (4 per semester/maximum of 8) This course is for students who have a firm commitment in the arts, who have adequate background in the use of techniques and materials, and who have experimented with a variety of approaches to subject matter. This course is designed to focus and develop personal approaches to subject matter and to encourage a sustained interest in work. Readings, lectures, movies, and demonstrations will introduce students to the materials and techniques used in the various sculpture processes. Projects will be assigned throughout the semester and group critiques will be scheduled at regular intervals. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of completed artworks.

Prerequisite: ART 230, ART H111, ART H112, and enrollment in the ART BA, ART BFA, Art Education, or Integrative Arts degree program
Bachelor of Arts: Arts

ART 331: Intermediate Sculpture: Metal Casting and Mold-Making
4 Credits/Maximum of 8

Development of technical and conceptual skills through metal casting and mold-making processes. ART 331 Intermediate Sculpture: Metal Casting and Mold-Making (4 per semester/maximum of 12) This course is
for students who have a firm commitment in the arts, who have adequate background in the use of techniques and materials, and who have experienced with a variety of approaches to subject matter. This course is designed to focus and develop personal approaches to subject matter and to encourage a sustained interest in work through the development of technical and conceptual skills through metal casting and mold-making. Students will learn both traditional and non-traditional ways of making sculptural objects that use these skills as primary means of artistic communication. Readings, lectures, movies, and demonstrations will introduce students to the materials and techniques used in the various sculpture processes. Projects will be assigned throughout the semester and group critiques will be scheduled at regular intervals. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of completed artworks.

**Prerequisite:** ART 230, ART H111, ART H112, and enrollment in the ART BA, ART BFA, Art Education, or Integrative Arts degree program. Bachelor of Arts: Arts

**ART 338: The Body: Issues and Objects**

4 Credits/Maximum of 8

Creating representations of the human body and related objects as a means of sculptural expression. ART 338 The Body: Issues and Objects (4 per semester/maximum of 8) This course is for students who have a firm commitment in the arts, who have adequate background in the use of techniques and materials, and who have experimented with a variety of approaches to subject matter. This course is designed to focus and develop personal approaches to subject matter and to encourage a sustained interest in work through the exploration of both historical and contemporary artmaking practice concerning the representation of the human body and objects related to the body. Students will learn both traditional and non-traditional ways of making sculptural objects that use the body as a primary means of artistic communication. Readings, lectures, movies, and demonstrations will introduce students to the materials and techniques used in the various sculpture processes. Projects will be assigned throughout the semester and group critiques will be scheduled at regular intervals. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of completed artworks.

**Prerequisite:** ART 230, ART H111, ART H112, and enrollment in the ART BA, ART BFA, Art Education, or Integrative Arts degree program. Bachelor of Arts: Arts

**ART 340: Printmaking**

4 Credits/Maximum of 8

Development of technical and expressive skills through selected problems in one or more of the print processes. ART 340 Printmaking (4 per semester/maximum of 8) This course is for students who have a firm commitment in the arts, who have adequate background in the use of techniques and materials, and who have experimented with a variety of approaches to subject matter. This course is designed to focus and develop personal approaches to subject matter and to encourage a sustained interest in work. Readings, lectures, movies, and demonstrations will introduce students to the materials and techniques used in the various printmaking processes. Projects will be assigned throughout the semester and group critiques will be scheduled at regular intervals. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of completed artworks.

**Prerequisite:** ART 240, ART H111, ART H112, and enrollment in the ART BA, ART BFA, Art Education, or Integrative Arts degree program. Bachelor of Arts: Arts

**ART 341: Intermediate Printmaking: Intaglio/Relief**

4 Credits

Instruction and practice in the fundamentals of intaglio and relief printmaking processes in their relation to the fine arts. ART 341 Intermediate Printmaking: Intaglio/Relief (4) This course is designed for the student who is interested in expanding her/his image making vocabulary through intaglio and relief printmaking processes. It will expose students to the history and practice of these processes, and will prepare students to competently produce original works. Readings, lectures, and demonstrations will introduce students to the materials and techniques used in the various intaglio and relief processes. Projects will be assigned throughout the semester and group critiques will be scheduled at regular intervals. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of complete artworks.

**Prerequisite:** ART 240, ART H111, ART H112, and enrollment in the ART BA, ART BFA, Art Education, or Integrative Arts degree program. Bachelor of Arts: Arts

**ART 342: Intermediate Printmaking: Lithography/Serigraphy**

4 Credits

Instruction and practice in the fundamentals of the lithographic and serigraphic processes and their relationship to the meaning of the print. ART 342 Intermediate Printmaking: Lithography/Serigraphy (4) This course is designed for the student who is interested in expanding her/his image making vocabulary through lithographic and serigraphic printmaking processes. It will expose students to the history and practice of these processes, and will prepare students to competently produce original works. Readings, lectures, and demonstrations will introduce students to the materials and techniques used in the various lithographic and serigraphic processes. Projects will be assigned throughout the semester and group critiques will be scheduled at regular intervals. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of completed artworks.

**Prerequisite:** ART 240, ART H111, ART H112, and enrollment in the ART BA, ART BFA, Art Education, or Integrative Arts degree program. Bachelor of Arts: Arts
ART 343: New Media Printmaking  
4 Credits/Maximum of 8

A studio course concentrating on the integration of new media and traditional printmaking processes. ART 343 New Media Printmaking (4 per semester/maximum of 8) ART 343 is a studio art class that focuses on creating and critically evaluating printed media. Problem solving with new and traditional print technologies will allow the student to use both the computer and the printing press as a means to a creative end. Students will acquire the skills to critically participate in our technology driven culture, while at the same time they will develop an appreciation for the aesthetics of the handmade. This course will explore the nature and potential of printed media through lectures, readings, demonstrations, studio practice, and critiques. Various conceptually driven assignments will cover a range of graphic computer programs (Adobe Photoshop and Adobe Illustrator) and specific print outputs (digital, photo litho, photo etching and serigraphy) These assignments will engage students in research methods to advance their skills in printed media and help them to develop an understanding of the critical evaluation and assessment of Art.

Prerequisite: ART 201 or ART 240 , ART H111 , ART H112 , and enrollment in the ART BA, ART BFA, Art Education, or Integrative Arts degree program Bachelor of Arts: Arts

ART 350: Intermediate Painting  
4 Credits/Maximum of 8

A variable offering in painting; course conditions defined on a rotating basis according to needs of individuals and groups. ART 350 Intermediate Painting (4 per semester/maximum of 8) This course is will further develop painting techniques, using the genres of landscape, still life, and painting from the model, collage, abstraction, and some digital applications. Examples from past and contemporary painting practice will be presented and discussed. Particular emphasis will be placed upon the development of a critical awareness concerning processes and content. Readings and discussions will focus on contemporary cultural and political issues. Projects will be assigned throughout the semester and group critiques will be scheduled at regular intervals. This labor-intensive studio relies upon cumulative learning experience through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their creative use and application is essential to the success of completed artworks.

Prerequisite: ART 250 , ART H111 , ART H112 , and enrollment in the ART BA, ART BFA, Art Education, or Integrative Arts degree program Bachelor of Arts: Arts

ART 350H: Intermediate Painting  
4 Credits/Maximum of 8

A variable offering in painting; course conditions defined on a rotating basis according to needs of individuals and groups.

Bachelor of Arts: Arts

Honors

ART 365: Themes and Issues I  
3 Credits

An advanced studio course that emphasizes individual approach to theme oriented problem solving through traditional and non-traditional multi-media explorations. ART 365 Themes and Issues I (3) ART 365 contains a common course theme wherein students will be asked to build a series of three completed works in diverse materials and techniques. Students will work to build clear concepts that are communicated through objects and images. Beginning with a thorough investigation of how artists of all fields (music, architecture, design, writing, theatre etc.) have interpreted the theme students will be guided through research, brainstorming, and concept development activities. During this they will be asked to keep a journal which documents their process through written descriptions and comments but also image based resources, sketches, diagrams, and in progress photographs. Students will be urged to complete pieces that are conceptually linked so as to begin working in series. At the completion of each piece, students and faculty will conduct group critiques.

Prerequisite: ART 165 , ART 166 , ART 265 , ART 266

ART 366: Themes and Issues II  
3 Credits

An advanced studio course that emphasizes individual approach to theme oriented problem solving through traditional and non-traditional multi-media explorations. ART 366 Themes and Issues II (3) ART 366 contains a common course theme wherein students will be asked to build a series of three completed works in diverse materials and techniques. Students will work to build clear concepts that are communicated through objects and images. Beginning with a thorough investigation of how artists of all fields (music, architecture, design, writing, theatre etc.) have interpreted the theme students will be guided through research, brainstorming, and concept development activities. During this they will be asked to keep a journal which documents their process through written descriptions and comments but also image based resources, sketches, diagrams, and in progress photographs. Students will be urged to complete pieces that are conceptually linked so as to begin working in series. At the completion of each piece students and faculty will conduct group critiques and each student will mount a smale-scale individual exhibition at one of the many available areas for exhibition on campus.

Prerequisite: ART 165 , ART 166 , ART 265 , ART 266 , ART 365

ART 380: Intermediate Throwing  
4 Credits/Maximum of 12

Intermediate ceramics course with focus on using wheel and throwing skills leading to personal expression in form, glazing, and firing. ART 380 Intermediate Throwing (4 per semester/maximum of 12) The purpose of this course is to explore the use of the wheel. Various types of forms will be addressed such as bowls, covered jars, and vases. Technical skills will be learned with the goal to use them to create a personal means of expression via the wheel. Both traditional and nontraditional vessels will be created. Forming, trimming and glazing techniques will be covered. There will be both group and individual critiques along with slide presentations and demonstrations. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of completed artworks.

Prerequisite: ART 280 , ART H111 , ART H112 , and enrollment in the ART BA, ART BFA, Art Education, or Integrative Arts degree program Bachelor of Arts: Arts
ART 381: Intermediate Handbuilding

4 Credits/Maximum of 12

An intermediate ceramics course with a focus on handbuilding techniques, leading to personal expression in forming, glazing, and firing. ART 381 Intermediate Handbuilding (4 per semester/maximum of 12) The purpose of this course is to explore different means of expression with the techniques of handbuilding. Clay is unlike any other material in that it can be transformed into virtually anything. Some of the forming methods which be addressed are coil, slab, carving, modeling and slump/press molds. The course will have assignments that are technically challenging, but will call on creative and artistic abilities. Slide presentations and group and individual critiques will be part of the curriculum. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of completed artworks.

Prerequisite: ART 280, ART H111, ART H112, and enrollment in the ART BA, ART BFA, ART Education, or Integrative Arts degree program.

Bachelor of Arts: Arts

ART 390: Introduction to Photochemical Photography

4 Credits

Introduction to the fundamentals of black and white photochemical photography. ART 390 Introduction to Photochemical Photography (4)(BA) This course meets the Bachelor of Arts degree requirements. ART 390 will explore the art and science of 35mm black and white photography. It will introduce students to chemically based photography as a process and continue to advance their skill and background as photographers. In the course, students will learn about film cameras and their operation, basic film types, film developing and processing, and basic photochemical printing practices. Students will also develop skills through experience in making, developing, printing, and presenting photographs created through photochemical processes. Each student will be required to turn in 20 contact sheets (36 exposures each) during the semester on required weekly assignments and develop a final project containing 25 mounted 8 x 10 black and white prints. 40% of the semester grade will be based on the final project, 40% on weekly assignments, and 20% on quizzes. A 35mm film camera with adjustable shutter speeds and aperture settings and a light meter (hand-held or built into the camera) is required. In addition, materials (film, photo paper, developing tanks, photo thermometer, etc.) will cost around $300 to $350. ART 390 will be offered fall and spring semesters.

Prerequisite: ART 110S, ART 111, ART 290, and successful portfolio review

Bachelor of Arts: Arts

ART 397C: **SPECIAL TOPICS**

1-6 Credits/Maximum of 6

Bachelor of Arts: Arts

ART 399: Foreign Study--Art

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Arts

International Cultures (IL)

ART 402: Portfolio Design and Professional Practices

3 Credits

This course emphasizes the development of presentation skills for digital artists in audience/client interactions. ART 402 Portfolio Design and Professional Practices (3) ART 402 PORTFOLIO DESIGN AND PROFESSIONAL PRACTICES (3) is the concluding experience for all students enrolled in the Digital Arts Certificate (DAC) program. The course provides opportunities for students to learn about the practical application of professional practices and portfolio development tools specific to careers that require knowledge of digital art and design principles and culminates in the development of a professional-quality creative portfolio. The course prepares the DAC student with the skills, knowledge, and ability to 1) communicate a critical understanding of his/her work through the articulation of goals, critique, and self-assessment; 2) identify, assess, and evaluate tools and information necessary to maintaining current and effective techniques for written and visual self-presentation; and 3) prepare and present online a professional-quality creative portfolio of digital art/design works and appropriate supporting documentation. The course is taught fully online and comprises coursework supported by online presentations and guest talks, assigned readings, and other resources and reference materials relevant to the professional development of digital artists and designers. Course topics include: 1) the role of the portfolio, 2) selecting portfolio ingredients and how to adapt them for different audiences, 3) selecting/composing supporting documentation for the creative portfolio, 4) developing a professional-level online presentation of the digital portfolio, 5) locating and evaluating resources for the digital arts/design professional and 6) identifying professional practices relevant for individuals working in digital art and design. Students engage in both individual and team-based projects and interactions via activities such as asynchronous group discussions and guest talks delivered by streaming media. Assessment is based on the quality of the student's work and participation in individual and team-based projects and activities that include online discussions, peer-reviews, collaborative research, and the development of an online presentation for the creative portfolio. Students receive regular individual and group feedback throughout the course in the form of instructor and peer reviews and critiques. Formal assessment occurs at regular intervals in a manner that evaluates both individual and group components of assigned tasks and activities. Students are expected to positively contribute to the course through active engagement in online discussions, team-based work and activities, and peer reviews. Course assignments include creative and written components and provide multiple ways for students to engage in various forms of professional development, self-evaluation, and critique. Students are required to have access to the Internet.

Prerequisite: ART 302
ART 404: Art and Life: Where They Intersect

4 Credits

This course addresses where art and life meet; how life influences what artists make, and how art influences our lives. "Art and Life: Where They Intersect" focuses on interdisciplinary areas that address notions of creativity, critical thinking, and studio practice as well as how these perspectives can influence what an artist creates. The essence of the course examines how life influences what an artist makes, and conversely how what we create influences how we live. Themes and ideas draw from interdisciplinary perspectives such as contextual approaches to creativity that are linked to themes in sociology, material theories of art as related to distributed views of cognition, expressive aesthetics that are connected to introspective perspectives of psychoanalytic theories, and other forms of creative agency found in the human sciences. The content of the course includes both studio practice and critical studies. This combination of experiential learning and critical theory is designed to give students a greater understanding and comprehension of the creative process from the point of view of individual interests and a variety of cultural contexts. The course includes students writing autobiographies in relation to their artwork. This reflective analysis is referenced to seminal essays that focus on different disciplinary perspectives on creativity. Creative studio projects will be undertaken to complement textual analysis and seminar discussion. By integrating studio practices with critical studies the creative process is more fully understood. The course curriculum relies on active student participation in class discussions and a willingness to share and take risks in the spirit of contributing to a collaborative learning experience. Art is by nature multidisciplinary and increasingly teaching art means teaching about life. The course is designed for students with a desire to acquire a deeper understanding of their creative research in the context of contemporary culture.

Prerequisite: fifth semester standing or higher

ART 409: Museum Studies

3 Credits

An introduction to the professional activities that occur in art museums. ART 409 / ARTH 409 Museum Studies (3)(BA) This course meets the Bachelor of Arts degree requirements. This course introduces students to the broad field of art museum work, specifically museum administration, education, curatorial work, registration, and exhibition design. Readings by authors in each field provide current theoretical and philosophical frameworks for all areas, which are then followed by discussions and practical experiences with professional museum practitioners, including the staff of a museum, for example, the Palmer Museum of Art, and invited guests. Museum Studies is open to students who have complete six credits in art, art education, or art history. This course is especially beneficial for majors in art, art education, and art history who are considering a career in an art museum or who want to become more aware about how an art museum functions. In addition to providing an in-depth introduction to art museum work, the course encourages students to build the critical thinking and response skills that are crucial to success in the real-world environment of a museum. The readings provide a solid foundation for later reference or further study in the student's chosen field. Offered every spring, this course will have a maximum enrollment of 20 students. Grades are based on class participation, four out-of-class projects, and a final project. Extra credit is offered for an off-campus visit to a museum, among other options.

Prerequisite: 6 credits of ART H, ART and/or A ED
that defines performance art. The paper should be typewritten, doublespaced, and three pages in length. In addition, it should contain a page for references that indicates at least five sources that have been used from the course reading list to support arguments.

**Prerequisite:** 4 credits of 300-level art, or graduate level status, or permission of instructor
Bachelor of Arts: Arts

ART 415: Integrating Media: Convergence in Practice

4 Credits/Maximum of 12

A studio course concentrating on the integration of new media technologies in contemporary art practice. ART 415 Integrating Media: Convergence in Practice (4) (BA) This course meets the Bachelor of Arts degree requirements. This course will concentrate on the integration of technologies into contemporary studio art practice. Emphasis will be placed on the convergence of digital, interactive, and time-based experiences within current studio practice. Assignments will cover a range of digital multimedia applications in sound, image, motion, interactivity, interface design, and media authoring. The course will culminate in a final large-scale collaborative media project, group show, installation, video screening, and/or class web presentation. This course will be offered fall and spring semesters.

**Prerequisite:** ART 315
Bachelor of Arts: Arts

ART 416: Advanced Web and Net Art: Multimedia Publishing

4 Credits/Maximum of 12

A studio course concentrating on multimedia online "net art" practice and Web publishing. ART 416 Advanced Web and Net Art: Multimedia Publishing (4 per semester/maximum of 12) (BA) This course meets the Bachelor of Arts degree requirements. This is a studio art class that focuses on creating, authoring, exhibiting, and discussion online art practice. "Net Art" has become an important form of new media art creation and exhibition. The course explores experimental uses of new media in the visual arts with emphasis on integrating net art and design practice in cyberspace with current studio practices in two, three, and four (time based) dimensional art. In addition to the actual creation of new media artworks, the course will engage students in research methods to advance their skills in new media art and design and help them to develop an understanding of the critical evaluation and assessment of new media artworks created specifically for the web. The course will also explore various methods and strategies for exhibiting and publishing artworks on the web and creating online portfolios. The course will examine and explore the potentials of net-based art through lectures, readings, demonstrations, creative practice in studio, critiques, and actual web-published exhibitions. Assignments will cover a range of digital multimedia applications in sound, image, motion, interactivity, interface design, and media authoring. The course will culminate in an online exhibition and personal portfolio sites published on the web.

**Prerequisite:** ART 203, ART 315, and 8 credits of 300-level new media Bachelor of Arts: Arts

ART 419: Advanced New Media: Capstone

4 Credits/Maximum of 8

A new media and digital arts capstone course concentrating on the integration of art and technology in advanced thesis projects. ART 419 Advanced New Media: Capstone (4 per semester/maximum of 8) This is an advanced senior level capstone experience for new media. The course concentrates on advanced media theory and discourse, the integration of new media technologies into contemporary studio art and design practice, and on the creation and documenting of senior thesis projects. The course will focus on the final preparation of professional portfolios. The course will follow a studio/seminar model. Student thesis projects may cover a range of digital multimedia applications in sound, image, motion, interactivity, interface design, 2D, 3D, 4D media authoring, etc. in relation to their focus in new media art and design practice.

**Prerequisite:** ART 315, ART 203 or ART 416, and 12 credits of 300/400-level new media, senior or graduate standing

ART 421: Drawing

4 Credits/Maximum of 12

Drawing for advanced students, with total emphasis on sustained individual approaches.

**Prerequisite:** ART 320
Bachelor of Arts: Arts

ART 422: Advanced Figure Drawing

4 Credits/Maximum of 8

Concentrated work in recording and understanding the human figure.

**Prerequisite:** ART 220, 8 credits of 300-level art courses
Bachelor of Arts: Arts

ART 430: Advanced Sculpture

4 Credits/Maximum of 12

Advanced work in sculpture, with an emphasis on individual development.

**Prerequisite:** ART 330, ART 331, 12 credits of 300-level sculpture
Bachelor of Arts: Arts

ART 431: Installation Art

4 Credits

Study and production of original visual statements through installation work as an art form.

**Prerequisite:** 4 credits of 300-level art, or graduate level status
Bachelor of Arts: Arts

ART 432: Flexible Molds: Parting Seams and Sculptural Concepts

4 Credits/Maximum of 8

ART 432 FLEXIBLE MOLDS: PARTING SEAMS SCULPTURAL CONCEPTS introduces the relevancy of producing material specific multiples in a contemporary sculptural practice. It will offer students a broad understanding of the conceptual ramifications of molding an object and referencing a "mass-produced" look verses casting in an organic "fused form" way. Technical information on how to make one, two and three (+) part flexible molds in urethane compounds to be cast in concept relevant materials is emphasized. While the technical mold making and casting applications learned will be consistent for all members of the class, the results of the skills learned are expected to fold into each individual's artistic strengths differently. These technical skills are folded into three
projects. The intent of these is to refine the students’ craftsmanship in relation to constructing a mold and see construction precision as a portal to an expansive approach to casting. These multiple types of casting processes are expected to fold into projects that incorporate multiple genres. The course prerequisites, ART 230 or ART 280 allow for beginning level students to take the course while its 400 level welcomes both undergraduate and graduate students. If a student may repeat the class, the content of the class customizes to match the students increased technical skill. With repeating students, a more advanced approach to realizing individually proposed project ideas is expected.

**Prerequisite:** ART 230 or ART 280 or permission of instructor

**ART 438: The Body: Issues and Objects**

4 Credits/Maximum of 8

Creating representations of the human body and related objects as a means of sculptural expression. ART 338 The Body: Issues and Objects (4 per semester/maximum of 8) This course is for students who have a firm commitment in the arts, who have adequate background in the use of techniques and materials, and who have experimented with a variety of approaches to subject matter. This course is designed to focus and develop personal approaches to subject matter and to encourage a sustained interest in work through the exploration of both historical and contemporary artmaking practice concerning the representation of the human body and objects related to the body. Students will learn both traditional and non-traditional ways of making sculptural objects that use the body as a primary means of artistic communication. Readings, lectures, movies, and demonstrations will introduce students to the materials and techniques used in the various sculpture processes. Projects will be assigned throughout the semester and group critiques will be scheduled at regular intervals. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of completed artworks.

**Prerequisite:** ART 230, ART H111, ART H112, and enrollment in the ART BA, ART BFA, Art Education, or Integrative Arts degree program.

Bachelor of Arts: Arts

**ART 440: Advanced Printmaking**

4 Credits/Maximum of 12

Individual projects in one or more of the printmaking processes. Emphasis is on developing a portfolio of prints.

**Prerequisite:** 4 credits of 300-level printmaking courses, 8 credits total of 300-level art courses

Bachelor of Arts: Arts

**ART 446: Artists Books**

4 Credits

Study and production of original visual statements through the book as an art form. ART 446 ART 446 Artists Books (4) This course will consist of lectures, demonstrations, and studio practice in production of artists books. Lectures and demonstrations will include hand papermaking, signature binding, book design, new and alternative book forms, and container construction. Each student will produce six either unique or editioned books during the semester; each book will have a mock up, title, colophon page, and will be signed. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of completed artworks.

**Prerequisite:** ART 110S, ART 111, ART H111, ART H112, and enrollment in the ART BA, ART BFA, Art Education, or Integrative Arts degree program.

Bachelor of Arts: Arts

**ART 447: Photo Based Printmaking**

4 Credits

Study and production of original visual statements through photographic based printmaking as an art form. ART 447 ART 447 Photo Based Printmaking (4)(BA) This course meets the Bachelor of Arts degree requirements. This course will consist of lectures, demonstrations, and studio practice in production of graphically based art prints. Each student will produce original prints in each of the printing techniques presented. Specific lectures, demonstrations, and projects will include photo based prints through: 1) Serigraphy, 2) Intaglio, 3) Gum Bichromate, 4) Cyanotype, 5) Van Dyke Brown, 6) Adobe Photoshop. A particular emphasis will be placed upon the use of the computer as a tool in the production of images. The digital negatives produced during the computer instruction in this course will be employed in all of the other printing processes.

**Prerequisite:** ART 240, 4 credits of 300-level Art courses, or graduate level status

Bachelor of Arts: Arts

**ART 450: Advanced Painting**

4 Credits/Maximum of 12

Development of the artist through a series of commitments; each semester serves as a contractual agreement along professional lines.

**Prerequisite:** ART 350

Bachelor of Arts: Arts

**ART 450H: Advanced Painting**

4 Credits/Maximum of 12

Development of the artist through a series of commitments; each semester serves as a contractual agreement along professional lines.

Honors

**ART 455: Advanced Painting Critique**

4 Credits/Maximum of 8

The painter in relation to his peers and his profession.

**Prerequisite:** senior or graduate standing

Bachelor of Arts: Arts

**ART 465: Individual Approaches I**

3 Credits

An advanced studio where students are expected to explore personal themes and individual concepts in their art work. ART 465 ART 465 Individual Approaches I (3) ART 465 is an advanced studio course concentrating on creating art within a series. Students will be asked to
complete 4-6 pieces that stem from an individual idea. Medium is open and can be traditional or non-traditional. Students will be required to document and maintain a journal outlining the steps needed to complete each piece. Weekly formal and/or informal critiques will allow students constant feedback of their progress.

**Prerequisite:** ART 165 , ART 166 , ART 265 , ART 266 , ART 365 , ART 366

ART 466: Individual Approaches II

6 Credits

An advance studio/lecture addressing the preparation for potential employment and/or entrance into graduate studies. ART 466W ART 466W Individual Approaches II (6)(BA) This course meets the Bachelor of Arts degree requirements. ART 466W is the Visual Art Studies capstone experience where students are given the opportunity to experience the professional aspects of a practicing artist. In addition to completing the last 2-4 pieces toward their exit portfolio students will address vital activities surrounding applying for employment and graduate school. Students will create "packets" including resumes, cover letters, post cards, slides, and portfolio CDs that can be used directly out of school for various calls and job listings. In addition topics that will be addressed in depth are photo-documentation, and inventory of work through database maintenance. All of these issues will culminate with small group exhibitions which will be curated, installed, and promoted by the students.

**Prerequisite:** ART 165 , ART 166 , ART 265 , ART 266 , ART 365 , ART 366 , ART 465

Bachelor of Arts: Arts

Writing Across the Curriculum

ART 467: Matter, Materiality and Mediums: An Interdisciplinary Approach to Artistic Stuff

3 Credits

Considers the physical challenges and long traditions of use of artistic media from both studio and historical points of view. ART (ART H) 467 Matter, Materiality and Mediums: An Interdisciplinary Approach to Artistic (3) Art and Art History are disciplines famously preoccupied with stuff: its malleability and its endurance, its sensuous properties and formal possibilities, its economic value and its mythic or even supernatural power. As an introduction to art through its materiality, this class will focus its attention upon a different material every week. With two class meetings per week, classes will alternate between ldquo;practicumrdquo; sections (demonstrations of selected materials with visits to metal foundries, studios and laboratories) and ldquo;historicalrdquo; sections (lectures and discussions of those materials as they have worked in different historical and cultural contexts). The class will also introduce students to humanistic discussions of ldquo;matter,rdquo; as well as attend to the cultural work involved in western art historyrsquo;s preoccupation with the differences between ldquo;matter,rdquo; and artistic ldquo;medium,rdquo; as well as attend to the cultural work involved in western art historyrsquo;s preoccupation with the differences between ldquo;matter,rdquo; and artistic ldquo;medium,rdquo;

**Prerequisite:** 3 credits in ART or 3 credits in ART H

ART 468: The Intermediate Digital Medium

3 Credits

An advanced studio course using the computer as an artistic media. ART 468 ART 468 The Intermediate Digital Medium (3) This course will provide the much needed advanced technological/digital component wherein computing will be discussed as a media, rather than a tool. Students will be engaged in the creation of graphic/moving/threedimensional imagery and sound that explores themes and concepts introduced in class. While most of the course will center around the use of industry standard computers there will be some forays into hardware associated with production, sound, and projection of images.

**Prerequisite:** ART 165 , ART 166 , ART 168

ART 469: Methods and Materials II

3 Credits/Maximum of 9

A studio course that focuses on specific media or techniques reflecting varied faculty expertise. ART 469 ART 469 Methods and Materials II (3) This course provides students the opportunity to experience particular areas of visual art in which

**Prerequisite:** ART 165 , ART 166 , ART 265 , ART 269

ART 475: Contemporary Women Artists

3 Credits

An interdisciplinary course that investigates women artists who were integral to the production of contemporary art primarily in the Americas, Europe, and Asia.

**Prerequisite:** fifth-semester standing, ART H111 , ART H112 , and enrollment in the ART BA, ART BFA, Art Education, or Integrative Arts degree program.

Cross-listed with: ARTH 475

Bachelor of Arts: Arts

United States Cultures (US)

ART 476: History and Theory of Digital Art

3 Credits

History and theories of contemporary digital art emphasizing humanistic approaches to technology. ART 476 / ARTH 476 History and Theory of Digital Art (3)(BA) This course meets the Bachelor of Arts degree requirements. Approaches to Digital Art is a survey class that will offer the web designer, cyberspace architect, MUD traffic controller or enthusiastic surfer an opportunity to examine the humanistic aspects of contemporary digital art. Through readings and direct interaction with digital media and digital artists, the class will develop an appreciation of the ways in which the interface between human beings and technology has been historically constructed and is subject to critical investigation. The goal of the class is to prepare each student so that she or he may engage with digital media in a way that is every more historically and socially self aware. Students will address the ways in which digital technologies transform artistic practices such as museum display, the writing of art criticism, the definition of works of art, changing role of the artist and the changing space of the art studio. More important, however, by engaging with digital works of art students will learn to think critically about technology and its engagement with culture at large. They will be encouraged to think about the political, economic and social impact of digital technologies. This humanistic approach to technology would make this course particularly useful to students of art history, philosophy, comparative literature, art education, and the visual/plastic arts. A significant portion of the course will be devoted to the ways in which art on the internet and digital art in general challenge the integrity of categories such as race and national identity. For example, students will have an opportunity to engage with African American artists such
as Keith Obadike, whose on-line performances include an attempt to put his “blackness” up for sale on ebay.com in August of 2001. Students may also look at the ways in which net.art (Art made to be viewed on the internet) can critique commercial cooption of global culture: etoy.com, for example, is an international and collaborative artist’s group that satirizes global capital by camouflaging itself as a multinational corporation. This class will depend largely upon written responses and class discussion, rather than upon tests. Thus, students will learn how to approach difficult theoretical sources that have been assigned to them, and they will learn how to ask the kinds of questions that will help them understand such sources. This course will emphasize critical thinking rather than memorization, so students will develop analytical skills that will be useful in many other contexts. Because students will be given weekly writing assignments, they will be able to improve their skills in composition.

**Prerequisite:** ART H100 or ART H112 or ART H307 or ART H325 or ART H326 or ART 211
Cross-listed with: ARTH 476
Bachelor of Arts: Arts

**ART 480: Advanced Ceramic Arts**

4 Credits/Maximum of 12

Individual exploration of ceramic materials and construction leading to graduate study or career development as a professional potter.

**Prerequisite:** ART 380
Bachelor of Arts: Arts

**ART 490: View Camera Photography**

4 Credits

Experience with diverse camera formats and applications; particular emphasis on view camera. ART 490 ART 490 View Camera Photography (4)(BA) This course meets the Bachelor of Arts degree requirements. ART 490 will provide students with experience in diverse camera formats and application with particular emphasis on view camera and its creative applications. The course will give students background in the history of large format photography and understanding of its application in specialized fields such as architectural photography, portraiture, and landscape photography. Students will gain experience in view camera operation and the creation of large format photographs in a variety of different applications. Grading will be based on a minimum of five projects that will account for 80% of the semester grade. The remaining 20% of the semester grade will be based on participation in class critiques. The final course grade will be dropped one full grade for each absence or late submission beginning with the second late submission or absence. ART 490 will be offered in the fall semester each year.

**Prerequisite:** ART 390
Bachelor of Arts: Arts

**ART 494: Research Projects Courses**

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Honors

**ART 495: Internship**

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

**Prerequisite:** prior approval of proposed assignment by instructor
Bachelor of Arts: Arts

**ART 496: Independent Studies**

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Arts

**ART 496H: Independent Studies**

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Arts

**ART 497: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Arts

**Art Education (AED)**

**AED 99: Foreign Studies**

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

**AED 101S: Introduction to Art Education**

3 Credits

This course introduces students to issues, concepts, and ideas in Art Education. AED 101S Introduction to Art Education (3) The objective of the course is to introduce students to basic ideas, areas of inquiry, and experiences in art education. This will be a required course that serves as the first of a sequence of courses in the Art Education major and will provide a beginning point for the rest of the courses in the major. The Art Education Program has two emphases. The first leads to public school teacher certification and the second to an understanding of arts education in settings such as museums and community arts organizations. This introductory course will be broadly based and the content and will be applicable to students in both emphases. This course will be conducted in a seminar format. Evaluation methods for the course will include, for example, critical response papers to readings, observation reports of early field experiences, tests, and portfolio assessment.
First-Year Seminar

AED 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

AED 201W: History and Philosophy of Art Education in Schools and Cultural Institutions

3 Credits

Introduction to historical, philosophical, and sociological foundations art education in schools and cultural institutions, museums, and community organizations. A ED 201W A ED 201W History and Philosophy of Art Education in Schools and Cultural Institutions (3)Art education is not an isolated phenomenon; art teaching and learning has always occurred in the context of broader cultural changes and a range of social factors, including technological developments and population diversity. This course examines the historical, philosophical, and sociological foundations of art education in the United States. Art education can be found in a variety of formal and informal settings, including schools, community arts organizations and museums. Students will examine questions such as, what was the purpose of teaching art in the past? Was art study a means to improving social status, to attaining technical literacy, or to vocational training? Did education in art promote a democratic way of life? Or did it help reproduce existing divisions of race, gender, class, and ethnicity in American society? This course examines past and present developments in art education, paying special attention to the relation of art teaching and learning in contexts of art worlds, schooling, cultural institutions, and changing demographics. While the course will focus on art education in the United States, art education in a global context will be addressed as appropriate.

Writing Across the Curriculum

AED 211: Interpreting Art Experience: Social and Behavioral Perspectives

3 Credits

Examination of psychological, cultural, aesthetic, philosophical and educational perspectives on creation and response to art in children, adolescents and adults. A ED 211 Interpreting Art Experience: Social and Behavioral Perspectives (3) (GA;BA) This course meets the Bachelor of Arts degree requirements. This course will examine the shared human experience of making and responding to visual images and artifacts from the broadest possible range of perspectives, encouraging students to develop an understanding of the role of art experience in their own lives and in the lives of others. How art is learned within specific cultures and subcultures, how understanding and appreciation of particular images and objects evolves, and how experience and learning interacts with fundamental processes of perception, cognition, and interpretation are central themes. Students will draw upon their own personal and cultural histories and consult accounts written by others to explore the role of visual art in contemporary life. Classic and contemporary studies of artistic development and aesthetic response will be reviewed through well-illustrated lectures and amplified through students' active involvement in small scale, collaborative research studies based upon methods commonly used to study the art experience of children, adolescents, and adults without professional expertise in the visual arts; these activities will include close observation, interviews, and the design of preference and drawing studies. As a final course project, each student will construct a case study of a child, adolescent, or adult which describes in detail one perspective on that individual's experience of art in the home, school, museum, and/or other cultural institutions and settings.

Bachelor of Arts: Arts

General Education: Arts (GA)

AED 212: Interpreting Art Experience: Educational Implications

1 Credits

In-depth study of the educational implications of the information on art making and response introduced in A ED 211. A ED 212 Interpreting Art Experience: Educational Implications (1) A special discussion section attached to A ED 211 and required of students majoring in art education. A ED 212 focuses on the educational implications of the perspectives on art experience presented in A ED 211. This segment of the course will attend specifically to issues related to learners and learning in the visual arts, including characteristics of learners at various stages of development and the ways in which curriculum and instruction can and should be shaped by these considerations.

Prerequisite: A ED 101S , A ED 201W; Concurrent: A ED 211

AED 225: Diversity, Pedagogy, and Visual Culture

3 Credits

Issues of diversity in art, education, visual culture, and pedagogy. A ED 225 Diversity, Pedagogy, and Visual Culture (3) (GA;US)(BA) This course meets the Bachelor of Arts degree requirements. This interdisciplinary course will serve to introduce students to critical understandings of issues of diversity, as they arise in contexts such as the art world, cultural institutions (such as museums and community arts organizations), schools, visual culture, and the culture, educational texts (such as curricula), and history, while developing a theoretical base from educational and cultural theory. By the end of the course, students will understand diversity as broadly defined in relation to visual culture and be able to critically explore the complex dynamics of race, gender, sex, and class, and the pedagogical issues posed by diversity.

Bachelor of Arts: Arts

United States Cultures (US)

General Education: Arts (GA)

AED 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

AED 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)
AED 303: The Visual Arts in the Elementary School
3 Credits
Basic concepts of current art education theory and practice for the elementary teacher.

AED 322: Visual Culture and Educational Technologies
3 Credits
The course provides a foundation for innovative integration of digital technologies in art making, viewing, and teaching. A ED 322 Visual Culture and Educational Technologies (3) The purpose of the course is to develop skills, questioning attitudes, and uses for technology in art and art education; and to engage in electronic mediated communication and new media artmaking. This course is for both undergraduate Art Education degree options: (1) Schools, and (2) Museums Cultural Institutions. The focus is on students’ constructing a critical understanding of technology as a cultural interface in contemporary art, visual culture, and art education. This course addresses issues, practices, and potentials of instructional technology for art education. Course participants explore the pedagogical implications of intertextual Webs, hypertext hypermedia, blogs, simulations, virtual reality, threaded dialogue, WebQuests, online games, media communities, collaborations, adaptive and assistive technologies, and media-rich "student papers."
This course emphasizes the importance of sharing perspectives in an educational context, and on how e-learning course tools, along with specific teaching strategies, can facilitate shared perspectives.

Prerequisite: A ED majors only

AED 323: Visual Culture and Art Education
3 Credits
The study and creation of contemporary art forms as visual culture critiques provide curricular and pedagogical approaches to art education. A ED 323 Visual Culture and Art Education (3)This course is for Art Education majors in the Schools option. Students will: * Read, critically examine, and discuss postmodern "texts" in relation to the ways in which the works and the critical writing that surrounds them participate in, among other issues, the construction of race and gender, and the creation of power and control. * Reflect critically on contemporary writings that address the nature of art, visual culture, artmaking, exhibition, and interpretation as pedagogical processes for making meaning through art. * Create installations, videos, and performances or any combination of the three forms, individually and/or in groups. The purpose of this course is: 1. To assist students to insightfully interpret and create artworks through both writing and artistic media. 2. To provide students with the bases for understanding, interpreting, and critically analyzing contemporary visual culture, which can provide the content of curriculum outlines and unit and lesson plans that students develop in the course for use during internships, student teaching, and as art educators. 3. To provide students with opportunities to develop connections between artworks and their own lives, the lives of their prospective students, and the societies in which they will live. 4. To encourage students to consider race, class, sexual identity, age, and gender issues in art, art education, cultural production, exhibition venues, and career opportunities. TEXTS include popular arts, film, television, video/computer games, music, theatre, fashion, museums, contemporary art, and new media.

Prerequisite: A ED majors only

AED 397: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

AED 399: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

AED 401: Curricula, Pedagogy, and Assessment in Art Education
3 Credits
Preparation of curricula, pedagogical, and assessment strategies for elementary/secondary school and museum art education programs.

Prerequisite: A ED 101S , A ED 201W , A ED 211 , A ED 212 , A ED 225 , A ED 322 , A ED 323

AED 488: Cultural Institutions Practicum
1-3 Credits/Maximum of 3
Supervised field experience in a museum or other cultural institution, including planning, implementation, and evaluation of an educational project.

Prerequisite: ANTH 100 or 3 credits of art history courses from department list; A ED 401; Concurrent: A ED 490

AED 489: Advanced Practicum
3 Credits
Supervised observation, unit planning, and teaching in Saturday Morning Arts School: analysis of creative expressions and art programs for learners.

Prerequisite: A ED 401; Concurrent: A ED 490

AED 490: Capstone Course in Art Education
3 Credits/Maximum of 3
Synthesis of preservice art education coursework; introduction to professional practices and standards; completion of teaching and learning portfolio. AED 490 Capstone Course in Art Education (2) The capstone course has four major objectives for student learning. Each student will synthesize the experiences and understandings developed through prior courses in the undergraduate art education program. Students will become aware of emerging trends in art education and reflect on implications of those trends for their future teaching and learning. Each student will complete, and publicly present, a teaching and learning portfolio that includes evidence of professional preparation, biographical information, samples of artwork and writings on art/visual culture, and reflective statements explaining the selection and significance of specific items. Students will gain understanding of the importance of professional standards and practices in art education. Student learning will be evaluated through assessment of the preprofessional teaching portfolio, and through a combination of written assignments, individual and small group oral presentations, and active
participation in class discussions. Students will collaborate on a final installation, performance or exhibition demonstrating their readiness for the final internship. Since this is the final course in the major prior to student teaching or the internship, attendance is very important and will count toward part of the final grade. Students need access to a computer lab. The capstone course in the art education major should be taken in the final semester before student teaching or a final internship. Since one goal of the course is helping students synthesize what they have learned in their prior courses, successful completion of all of the required courses in the major is prerequisite to enrollment in the capstone course. Students will have been introduced to the teaching and learning portfolio in their introductory art education course and should have developed pieces for their pre-professional teaching portfolios in most of their earlier art education courses. Much of the work of the capstone course will, therefore, focus on reflection, refinement, and synthesis.

**Prerequisite:** admission to Teacher Preparation Program and successful completion of all required courses in the major except Student Teaching or final internship. Prerequisite or concurrent: A ED 488 for majors in the Museums and Cultural Instit

AED 494: Schools and Museums

3 Credits

Museum education: issues, theories of aesthetic education and practices in schools, museums, and community art centers.

**Prerequisite:** 12 credits in art education, art, art history, or education

AED 494H: Schools and Museums

3 Credits

Museum education: issues, theories of aesthetic education and practices in schools, museums, and community art centers.

**Prerequisite:** 12 credits in art education, art, art history, or education Honors

AED 495: Internship in Art Experiences

15 Credits

Comprehensive instruction in craft, health, cultural, museum, studio, gallery or social agency. Students supervised by University personnel and arts personnel.

**Prerequisite:** A ED 440; seventh- or eighth-semester standing

AED 495A: Art Education Student Teaching Practicum

7 Credits

A ED 495A A ED 495A Art Education Student Teaching Practicum (7) The Pittsburgh-based elementary or middle-level field experience fulfills the student teaching requirement for Pennsylvania certification to teach art in elementary and secondary schools. It is offered each semester, and student teachers are placed through the School District University Collaborative in Pittsburgh Public Schools. An on-site Art Education faculty Supervisor supervises students. Assignments, required seminars, and professional development activities meet the teaching prerequisites outlined by NCATE (National Council for Accreditation of Teacher Education) and the Standards for Pre-Service Teachers in Urban Education. Experiences and assignments provide evidence in each of the four domains for teacher preparation: Domain A - Planning and Preparing for Student Learning, Domain B - Teaching, Domain C - Analyzing Student Learning and Inquiring into Teaching, and Domain D - Fulfilling Professional Responsibilities. The work completed in this course (a digital and/or paper-based portfolio, and documented performance-based assessment of teaching as assessed by the university supervisor and mentor teachers/clinical instructors) will demonstrate fulfillment of the teaching/domain standards. The outcome of this work is to produce multiple experiences that support professional and personal development while preparing students for upcoming positions teaching art in multiple public and private contexts at both elementary and secondary levels. At the culmination of the student teaching semester, students will have both practical and theoretical understandings in addition to materials for application within the classroom.

**Prerequisite:** A ED 489; eighth- or ninth-semester standing; Concurrent: A ED 495B

AED 495B: Art Education Student Teaching Practicum

8 Credits

A ED 495B A ED 495B Art Education Student Teaching Practicum (8) The Pittsburgh-based middle-level or secondary field experience fulfills the student teaching requirement for Pennsylvania certification to teach art in elementary and secondary schools. It is offered each semester, and student teachers are placed through the School District University Collaborative in Pittsburgh Public Schools. An on-site Art Education faculty Supervisor supervises students. Assignments, required seminars, and professional development activities meet the teaching prerequisites outlined by NCATE (National Council for Accreditation of Teacher Education) and the Standards for Pre-Service Teachers in Urban Education. Experiences and assignments provide evidence in each of the four domains for teacher preparation: Domain A - Planning and Preparation for Student Learning, Domain B - Teaching, Domain C - Analyzing Student Learning and Inquiring into Teaching, and Domain D - Fulfilling Professional Responsibilities. The work complete in this course (a digital and/or paper-based portfolio, and documented performance-based assessment of teaching as assessed by the university supervisor and mentor teachers/clinical instructors) will demonstrate fulfillment of the teaching/domain standards. The outcome of this work is to produce multiple experiences that support professional and personal development while preparing students for upcoming positions teaching art in multiple public and private contexts at both elementary and secondary levels. At the culmination of the student teaching semester, students will have both practical and theoretical understandings in addition to materials for application within the classroom.

**Prerequisite:** A ED 489; eighth- or ninth-semester standing; Concurrent: A ED 495A

**AED 495E: Internship in Museums and Cultural Institutions**

15 Credits

S ED 495E A ED 495E Internship in Museums and Cultural Institutions (15) The internship at a museum or other cultural institution completes the requirements for the Museums and Cultural Institutions option for the BS in Art Education. It is generally scheduled full-time for a period of 12 consecutive weeks during a double summer session, although it may also be taken during the fall or spring semester. The internship enables interns to meet their own educational objectives through participation in a supervised experience that moves them out of the classroom into the workplace. Prospective interns are encouraged to select internship sites that offer educational experiences relevant to their professional goals and desired careers. The internship incorporates guidelines consistent with the Standards and Guidelines for Museum Internships prepared by the New England Museum Association and published by the American Association of Museums (1993, 2000). A formal written internship agreement signed by the intern supervisor at the sponsoring museum or cultural institution, and by the prospective intern and university supervisor outlines the objectives of the internship, the intern’s duties and responsibilities, the responsibilities of the museum and university supervisors, and the means by which the intern’s work will be evaluated. Interns are integrated into the ongoing work and education programs of the museum and treated as staff members. They assume professional responsibilities and are expected to complete a project or some discrete portion of a major project that is being undertaken by the education department of the museum. Interns become acquainted with functions, programs and departments of the museum in addition to those to which they have been assigned in order to understand the relationship of their educational work to that of the museum, to the community, and to the museum field in general. Interns may participate in any workshops, lectures, professional courses, and staff training seminars that may occur at the museum during period of internship. They are also encouraged to seek professional employment after completion of the internship, and reasonable accommodation is made to allow them time to look for positions, prepare application materials, and attend interviews. Interns submit a weekly journal of activities and reflections to the university supervisor, as well as a summary report at the end. The museum supervisor submits an evaluation documenting the intern’s actual working/learning experiences and critically assessing these experiences. The final evaluation is based on this assessment, on the intern’s weekly journal and final report, and on the university supervisors’ onsite observations and interviews.

**Prerequisite:** A ED 440, seventh- or eighth-semester standing.

**AED 496: Independent Studies**

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

**AED 497: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**Art History (ARTH)**

**ARTH 1: First-Year Seminar**

3 Credits

An introduction to the field of art history, through an examination of a selected issue in a seminar setting. ART H 001S First-Year Seminar (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. This First-Year Seminar is open to all majors and to those who have yet to decide upon a major. It is also a 3-credit General Education in the Arts course (GA). The course will introduce entering university students to the field of art history through a case study on a selected topic. Each
semester the topic will be different, potentially covering such diverse subjects as the purpose and function of Ancient Egyptian architecture to the role of sculpture in Renaissance Florence to the development of abstract painting in the early 20th century. Some semesters, the seminar may also focus upon a single exhibition at the Palmer Museum of Art. Such a focus upon a single topic will allow the class to look at a particular issue in the field from many different perspectives. The course will not be a broad survey of the history of art, but it will introduce students to the breadth of methods and approaches of art history. The seminar approach of the course will emphasize how to tackle an issue in art history, how to critically read selected texts, how to discuss in a small group the various dimensions of a problem, how to do art historical research in the library and on the internet, and how to present your own research and perspectives through public speaking and writing.

General Education: Arts (GA)

ARTH 100: Introduction to Art

3 Credits

An approach to the understanding of art through a critical analysis of selected works of architecture, painting, and sculpture. Students who have passed ARTH 110 may not schedule this course. ART H 100 Introduction to Art (3) (GA;IL)(BA) This course meets the Bachelor of Arts degree requirements. Art History 100 provides an introduction to the history of art from prehistory to the present, through selected topics, rather than a comprehensive survey. Areas covered usually include prehistoric art, art of the Near East and Egypt, ancient Greek and Roman art, medieval art culminating with the Gothic, Renaissance art both in Italy and northern Europe, Baroque and Rococo art, and modern developments often highlighting Romanticism, Impressionism, Cubism, Dada, Surrealism, Abstract Expressionism, Pop, Feminist, and contemporary art. The course also introduces selected artistic traditions in Africa, Asia and the Americas. The course is designed to meet two principal goals. The first is to increase students' powers of visual analysis and to help them build a critical vocabulary for discussing an art object's medium, composition, style, and iconography. The second is to foster an understanding of the deep implication of the visual arts in their social and cultural contexts, both historical and contemporary. The course therefore involves significant material relating to political, economic and religious issues. It investigates problems in patronage, function, reception and censorship. It considers such intra- and cross-cultural issues as representations of gender and the incorporation of non-European art forms into the Western tradition. Requirements typically include examinations combining short answer and essay questions, and one paper based library research or intensive examination of an actual work of art. As a general education course in the arts, this course provides an introduction to selected themes in the broad history of art for students in any major. It has no prerequisite and presumes no prior exposure to fine art. This course may not be scheduled by students who have passed Art H. 110 may not schedule this course.

General Education: Arts (GA)

ARTH 106: Pictures and Power

3 Credits

An introduction to strategies for analyzing the political effects, uses and interpretation of popular imagery. ART H 105 Pictures and Power (3) (GA) In an era in which information is increasingly visual, and in an age in which our environment is ever more packed with imagery, students need powerful tools with which to interpret, compare, use and challenge images. Art History as a discipline, with its rigorous and ever more diverse arsenal of analytical strategies for interrogating images, provides students an excellent opportunity to think critically about the pictures that surround them every day. This class is therefore about the ways in which popular imagery pleases, informs, persuades, and otherwise exerts power. More important, this class will equip students with interpretive techniques by which they can examine and critique the power worked by pictures. The class will conduct analytical explorations of contemporary popular imagery and the influence they exert in daily life, from selfies to magic eye posters, fashion spreads to anatomical models, corporate logos to product labels. At the same time, the course will ground these explorations within historical contexts, examining the ways in which these visual cultures have come into being over time; students may learn how, for example, current political campaign imagery inherits codes of visual presentation first developed in ancient Roman portrait sculpture. The class will also acquaint students with works of art that have informed, attempted to draw upon or even contested the power of popular imagery. Particular emphasis will be placed on the interrelatedness of imagery; just as religious paintings of the Renaissance often exerted their force their meaning by virtue of their companionship with architectural sites, music and ritual practices, contemporary popular imagery (from newspaper journalism to family albums) depends upon the larger constellation of events and artifacts in which they are nestled.

ARTH 107N: Rocks, Minerals, and the History of Art

3 Credits

This online course investigates select rocks and minerals used in the production of art between the Prehistoric Era and the Early Modern period. Topics covered include chemical and physical properties, occurrence in nature, the processes by which natural materials are acquired and worked, their symbolic and monetary value, and specific works of art in which they are found. Each material (ochre, garnet, lapis lazuli, rock crystal [quartz], igneous rocks [basalt, diorite and porphyry], alabaster and marble) is addressed in a 2-week unit. The seven units are split equally between scientific analysis of the materials and art historical case studies. A final project integrates Geosciences and Art History topics to investigate the use of a chosen natural material in a specific work of art. Each material addressed in the course plays a crucial role in the history of art, and each one was particularly prized for its physical and material properties (color, hardness, etc.). Ochre was the first known pigment, and was in use by early humans for bodily adornment and for drawing and painting in caves and shelters as early as 100,000 years ago for bodily adornment and 40,000 years ago in cave art. Its availability worldwide and in multiple strong colors made it a desirable choice. Lapis lazuli, by contrast, was difficult to obtain, and difficult to refine as a pigment. It was first used to make small sculptures and cylinder seals in the Ancient world, and was prized for its brilliant blue color. The difficulty in grinding and purifying blue pigment from lapis lazuli made it one of the most expensive pigments in the Medieval and Renaissance world—it was worth its weight in silver! Pure blue lapis pigment, when found in a painting, is always a sign of great expense and importance. Rock crystal was valued for its clarity and purity, and its extreme brittleness meant that works made from it were valued for their intricacy and fragility. Nero reportedly destroyed two elaborate crystal goblets in a rage, and in so doing, deprived future generations of masterpieces of the sculptor’s art. In the Ancient Near East and Ancient Egypt, rock crystal was frequently used for amulets and other magical objects, while in the Medieval world, its purity was seen as a metaphor for the Virgin Mary. Garnet had a similar symbolic value in the Middle Ages: its red color was related to the blood of Christ, and it was thus used frequently in liturgical vessels. In the Ancient world, the rich red tone of garnets was prized in jewelry and in small-scale relief carvings. Igneous stones like porphyry, basalt and diorite were particularly prized for their extreme hardness and permanence, and thus the Law Code of Hammurabi was inscribed on basalt to ensure its permanence. Other Ancient Near Eastern rulers had images of themselves made from basalt and diorite in order to ensure that those works would survive for centuries. Imperial porphyry, an igneous stone with a rich red-purple color, came from a single remote quarry in the Egyptian mountains. Its use was reserved just for the Imperial family in Rome, and it was used for carved sarcophagi, for columns, for colored veeners on floors and walls, etc., as a sign of Imperial authority. Marble is of course one of the most familiar of all art materials, used frequently for sculpture from the very beginnings of art production. The Greeks and Romans in particular took great pains to obtain different types of marbles with specific colors, veining patterns, etc., for use in both sculpture and architecture. Finally, alabaster is one of the easiest of all stones to work: it is so soft that one can make a mark simply with a fingernail! Its intricate banding and translucency made it a favorite material for thin-walled bowls and vases in the Ancient Near East, Ancient Egypt, and in the Classical world. Later, in Early Christian and Medieval Italy, it was used for windows instead of glass—sun shining through alabaster casts a golden glow into a church interior. By the Late Gothic period, alabaster was being exploited as an easily sculpted material throughout Europe, with major quarries and workshops in England (Nottingham), France, and Northern Spain.

General Education: Arts (GA)

ARTH 111: Ancient to Medieval Art

3 Credits

Survey of Ancient Egyptian, Greek, Roman, Byzantine, Early Medieval, Romanesque, and Gothic art, with an emphasis on sculpture and painting. ART H 111 ART H 111 Ancient to Medieval Art (3) (GA;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course is an introduction to Western art before the Renaissance, from ca. 25,000 BCE to AD 1423. The topics covered in this course include prehistoric art in Europe; art of the Near East and Egypt; Aegean art; Greek and Roman art; Early Christian, Jewish, Islamic and Byzantine art; and Medieval art including Romanesque and Gothic developments. The course is designed to meet two principal goals. The first is to increase students' powers of visual analysis and to help them build a critical vocabulary for discussing an art object's medium, composition, style, and iconography. The second is to foster an understanding of the deep implication of the visual arts in their social and cultural contexts. The course therefore involves significant material relating to political, economic and religious issues. It investigates problems in patronage, function, reception and censorship. It considers such intra- and cross-cultural issues as representations of gender and the incorporation of non-European art forms into the Western tradition. Typical requirements include exams and a paper. As a general education course in the arts, this course provides an introduction to Ancient through Medieval art to a student of any major. This course has no prerequisite and presumes no prior exposure to art history. As a course in the Art History major, it teaches students both the common vocabulary of the field and the outlines of the field that form the foundation for future study. Art History 111 serves as a companion course to Art History 112, which deals with art from the Renaissance
to Modern Times. Art History 111 also complements Art History 201, "Ancient to Medieval Architecture."

ARTH 112: Renaissance to Modern Art

3 Credits
Survey of Renaissance, Baroque, Rococo, Romantic, Modern, and Contemporary art, with an emphasis on painting, sculpture, and graphic arts. ART H 112ART H 112 Renaissance to Modern Art (3) (GA;IL)(BA)
This course meets the Bachelor of Arts degree requirements. Art History 112 provides an introduction to the history of art in the European tradition from the early Renaissance (ca. 1300) to the present. Areas covered include Early and High Renaissance Italian art; Northern Renaissance art; Baroque art of Italy, Spain, France and the Netherlands; and subsequent artistic movements emphasizing the Rococo, Neo-Classicism, Realism, Impressionism and Modernist movements from Fauvism through Abstract Expressionism to Contemporary. The course is designed to meet two principal goals. The first is to increase students' powers of visual analysis and to help them build a critical vocabulary for discussing an art object's medium, composition, style, and iconography. The second is to foster an understanding of the deep implication of the visual arts in their social and cultural contexts, both historical and contemporary. The course therefore involves significant material relating to political, economic and religious issues. It investigates problems in patronage, function, reception and censorship. It considers such intra- and cross-cultural issues as representations of gender and the incorporation of non-European art forms into the Western tradition. Requirements typically include examinations combining short answer and essay questions, and at least one writing assignment. As a general education course in the arts, this course provides an introduction to Renaissance through modern art for a student in any major. It has no prerequisite and presumes no prior exposure to art history. It will teach students majoring in Art History both the common vocabulary of the field and the outlines of the field that form the foundation for future study. Art History 112 serves a companion course to Art History 111, which examines Western art from Antiquity through the Middle Ages. Art History 112 also complements Art History 202, "Renaissance to Modern Architecture."

ARTH 120: Asian Art and Architecture

3 Credits
A selective overview of the art and architecture of India, Southeast Asia, China, Korea, and Japan. ART H 120ART H 120 Asian Art and Architecture (3) (GA;IL)(BA) This course meets the Bachelor of Arts degree requirements. Art History 120 provides an introduction to the art and architecture of Asia, with an emphasis upon south, southeast, and east Asia. Selected monuments from these regions will be considered within their original cultural and historical context. Particular emphasis will be placed on the art associated with Hinduism and Buddhism. The course begins with India, from the early Indus Valley Civilization up through the Taj Mahal. Angkor Wat and other developments in southeast Asia are examined. Selected themes in Chinese art and architecture are explored from the early Bronze Age up through the Forbidden City in Beijing. The unique contribution of Korean art is included. The course concludes with a discussion of Japanese art and architecture, from early Shinto shrines to Japanese prints, gardens, and the tea ceremony. The course is designed to meet two principal goals. The first is to develop skills of visual analysis and a critical vocabulary for discussing the media, technologies, styles, and iconographies of various Asian artistic traditions. The second is to foster an understanding of art—and visual culture in general—according to social, economic, political, and religious contexts. Key topics include: patronage, issues of reception and aesthetics, the function of visual imagery in religious practices, the ritual use of objects, the organization and use of sacred space, depictions of gender, and relationships between the art of various regions and cultures. Requirements include essay exams and a paper. As a general education course, this class provides an introduction to Asian art for students of any major. The course has no prerequisites, and presumes no prior exposure to art history. Art History majors will learn vocabulary, methodology, and theory that is not only basic to the field, but which will also broaden their knowledge of the discipline as a whole.

ARTH 130: Art of Africa, Oceania, and the Americas

3 Credits

A selective overview of the indigenous art of Africa, Oceania and the Americas. ART H 130ART H 130 African, Oceanic, and Native American Art (3) (GA;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. Art History 130 provides a selective introduction to major developments and issues in African and Oceanic art. The beginning of this course will concentrate upon the art and architecture of selected regions of Africa, during the pre-colonial, colonial, and post-colonial periods. This will be followed by a discussion of the traditional arts of Oceania in Polynesia, Micronesia, Melanesia, and Australia. The course will conclude with an introduction to the Pre-Columbian art and architecture of the Americas and art from the Eastern Woodlands, Great Plains, and the Southwest and Pacific Northwest of North America. Art will be examined within its cultural and social contexts. Special attention will be given to the role that art serves in a culture’s religion, rituals, ceremonies, political structure, gender roles, and ethnic identity. The impact of the West upon the art of these regions, both in colonial and post-colonial contexts, will be a reoccurring issue in this course. The actual time devoted to each topic and the sequence of topics will vary from instructor to instructor. The objective of the course is to introduce students to diversity in art. In so doing, negative stereotypes associated with traditional notions of the “primitive” will be challenged. Also, the course emphasizes visual analysis and critical thinking. The course requirements will consist of exams and a paper. As a general education course, this class provides an introduction to African and Oceanic art for students of any major. The course has no prerequisites, and presumes no prior exposure to art history. On the other hand, students majoring in Art History will learn vocabulary, methodology, and theory that is not only basic to the field, but which will also broaden their knowledge of the discipline as a whole.

ARTH 140: Introduction to the Art and Architecture of the Mayas, Aztecs, and Incas

3 Credits

This course examines the artistic and architectural production of Pre-Columbian Mesoamerica and the Andes. ART H 140 Introduction to the Art and Architecture of the Mayas, Aztecs, and Incas (3)(BA) This course meets the Bachelor of Arts degree requirements. This course examines the art and architecture created by the Pre-Columbian indigenous cultures of Mesoamerica and South America, geographical regions today defined by the nations of Mexico, Guatemala, Belize, Honduras, Ecuador, Peru, Chile, and Argentina. Its content spans a deep expanse of history, in Mesoamerica ranging from the Pre-Classic period (1200 BCE) through the Post-Classic period (CE 1521) and in South America, from the Early Horizon (1200 BCE) through the Late Horizon (1532). Culturally, we will pay particular attention to the Maya, Aztecs and Inca, but the precursors of these societies, the Olmec, Teotihuacan, Chavin de Huantar, the Moche, will also be studied. This introductory course approaches the material both thematically and chronologically, addressing how different cultures of the Pre-Columbian world utilized art, architecture, and their production in the cultural arenas of urbanism, public ritual, politics, myth-history and intercultural exchange. In addition to lectures, the course’s required reading and class discussion will aid students in acquiring a basic knowledge of Pre-Columbian cultural practices.

ARTH 201: Ancient to Medieval Architecture

3 Credits

A survey of Prehistoric, Ancient Near Eastern Egyptian, Greek, Roman, Early Christian, Byzantine, Early Medieval, Romanesque, and Gothic architecture. ART H 201 Ancient to Medieval Architecture (3) (GA;IL) (BA) This course meets the Bachelor of Arts degree requirements. This course is an introduction to Western architecture before the Renaissance, roughly before A.D. 1400. Some of the topics covered in this course include prehistoric architecture in Europe and the Mediterranean, architecture of the ancient Near East, Egyptian architecture, Minoan and Mycenaean architecture, the classical architecture of ancient Greece, ancient Roman architecture throughout the empire, the Early Christian architecture of western Europe and Byzantium, early medieval architecture, Middle Byzantine architecture, Islamic architecture, and the Romanesque and Gothic architecture of Western Europe. Selected major individual buildings and architectural complexes will be emphasized and will include types of buildings/complexes such as the sanctuary, temple, tomb, forum, basilica, cathedral, monastery, and castle. Architecture will be analyzed with regard to materials’ construction, engineering and design, and in the contexts of culture, society, and urban or rural setting. Political, economic, religious, ethnic and gender-related issues will be presented as they are part of the dynamics contributing to many of these structures. The students’ understanding and ability to articulate the conceptual themes of the course will be tested through essay examinations. There will also be a short paper. This course will provide an introduction to ancient to medieval architecture to students of any major. The course has no prerequisite. This course also serves as an introductory foundation course for students in the arts, particularly architecture and landscape architecture. The companion course to Art History 201 is Art History 202, “Renaissance to Modern Architecture,” which examines Western architecture after A.D. 1400. Art History 201 is a required course for the Major in Art History and the Interdisciplinary Minor in Architectural History.

Bachelor of Arts: Arts
International Cultures (IL)
General Education: Arts (GA)

ARTH 202: Renaissance to Modern Architecture
3 Credits
A survey of Renaissance, Baroque, Rococo, Romantic, Victorian, Modern, Post-Modern, and Contemporary architecture in Europe and America. ART H 202 Renaissance to Modern Architecture (3) (GA;US;IL)(BA)
This course meets the Bachelor of Arts degree requirements. This course is an introduction to Western architecture from approximately A.D. 1400 to the present. Some of the topics covered in this course include the Italian Renaissance, the rebuilding of St. Peter’s in Rome, Mannerism, the villas of Palladio, Italian Baroque churches, Spanish Colonial architecture in the Americas, royal French architecture from Francis I to Louis XVI, Late Baroque and Rococo architecture from Bavaria to Russia, Elizabethan to Georgian architecture in England and America, the Industrial Revolution, Neoclassicism from Schinkel to Jefferson, Romanticism and the Gothic Revival, Ecole des Beaux-Arts, Second Empire Paris, Victorian architecture, the Arts Crafts Movement, Richardsonian Romanesque, the Chicago School, Frank Lloyd Wright, the City Beautiful Movement, Art Nouveau to Futurism, Art Deco skyscrapers, the International Style, the Bauhaus, Le Corbusier, Louis I. Kahn, PostModernism, Deconstructionism, and contemporary architecture.
Selected major architects, theories, buildings, and urban developments will be emphasized. Architecture will be considered within the contexts of religion, politics, philosophy, culture, economics, race, gender, society, engineering, and landscape architecture. The students’ understanding of the basic factual information concerning selected buildings will be tested through quizzes. The students’ understanding and ability to articulate the conceptual themes of the course will be tested through essay examinations. There will also be a short paper. This course will provide an introduction to Renaissance to contemporary architecture to students of any major. The course has no prerequisite. This course also serves as an introductory foundation course for students in the arts, particularly architecture and landscape architecture. The companion course to Art History 202 is Art History 201, “Ancient to Medieval Architecture,” which examines Western architecture before A.D. 1400. Art History 202 is a required course for the Major in Art History and the Interdisciplinary Minor in Architectural History.

ARTH 225: Sexuality and Modern Visual Culture
3 Credits
An examination of the visual expression of gender and sexual identities in English-speaking cultures since the late nineteenth century. ENGL (ART H/WMNST) 225 Sexuality and Modern Visual Culture (3) (GA;GH) The terms "feminist" and "homosexual" were invented by the Victorians and reflect profound shifts in conceptions of identity. Another invention of the nineteenth century was the idea of the literary and artistic "avant-garde," a minority contingent with politically and/or aesthetically advanced views. These ideas of minority culture were deeply enmeshed with one another, and have exerted profound influence ever since. This course explores that history with the objective of developing a more sophisticated understanding of how the history of ideas affects our sense of who we are and how we read both texts and images. The course will be relevant to students of American and English studies, art, art history, and women’s and sexuality studies.

ARTH 226: The Comic Book: A History of Sequential Art
3 Credits
An overview and examination of the history of sequential art with a focus on comic books and graphic novels. ART H 226 The Comic Book: A History of Sequential Art (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. Art History 226 will lead students on a journey through one of the world’s most interesting and yet most misunderstood art forms. In this class, students will familiarize themselves with various styles, terminology, and major examples of sequential art beginning with the cave paintings of Lascaux and ending with the more popular and critically acclaimed comic books of recent years. Students will not only learn a bout and appreciate sequential art, but they will also understand how deeply and significantly these works have melded into various aspects of our culture and society.

ARTH 250: A Chronological Survey of Photography
3 Credits
A survey of photography's place and influence in a social, cultural, and historical context. ART H 250 A Chronological Survey of Photography (3) This course explores the role played by photography over time in providing understanding and insight in a social, cultural, and historical context of the impact of the development of the photographic medium and its effect on social, political, cultural and technological events. Emphasis will be given to understanding the context that surrounds the scientific and aesthetic development of photography. This is a survey of the chronology of events in western culture that transpires from the inception of photography until the year 2000. It includes the influences and outcomes of photographers and those associated with the medium on our culture. Emphasis will be placed on the influence of photography on the world around it, and significant events and individuals in the development of the medium as a vital art form. The structure of the course will consist of research and discussion of events and individuals that characterized years selected for examination. Each week one or two decades of western culture will be highlighted. Although the thrust of research will relate to photographic subject matter, the events studied will span the culture. We will explore the development of art, literature, music, and photography, as well as, historic landmarks, and the events that have shaped present society. Each week a selection of visual material will be presented highlighting selected events, students will read literature from the period of discussion, significant pieces of music will be introduced, and accounts of periodic events will be surveyed. Each week, a group of students will be assigned to research at least one decade. Each student will gather information about a significant figure or event that occurred in the course of a given period. The student will be expected to prepare a short paper and give a five-minute oral presentation about his/her assigned year, historical figure or event. As each student presents, the chronology of events becomes clear and the multiple threads of history weave a brilliant tapestry of our culture. For the final presentation the student will prepare a ten-page research paper about a historical
figure or event. Students will be graded on the quality of the weekly oral presentations and the demonstrated level of commitment to research. Another significant part of their grade will be derived from the length of committed scholarship given to the ten-page term paper. Students must exhibit a level of originality, clarity, and insight. The student must demonstrate the capacity for the assimilation of facts and events relative to their subject and demonstrate how their subject relates to other events that occurred around the same time of their event. Toward this end students will be encouraged to work together to illustrate the interconnection of the chronology.

ARTH 301: Egyptian and Mesopotamian Art
3 Credits

Art of the Ancient Near East, including Egypt, Mesopotamia, and neighboring civilizations. ART H 301 ART H 301 Egyptian and Mesopotamian Art (3) (GA;IL)(BA) This course meets the Bachelor of Arts degree requirements. Art history 301 provides an introduction to the arts of the Ancient Near East including those of Egypt and Mesopotamia. The class is dealt with chronologically. Works studied in class include papyri, seals, fabric, codices as well as sculpture, architecture, and painting. Additional readings of primary sources focused on mythology, and religion will form a key element in the structure of the class. The course is designed to meet two principal goals. The first is to increase students' powers of visual analysis and help them build a critical vocabulary for discussing an art object's medium, composition, style, and iconography. The second is to foster an understanding of the deep implication of the visual arts in their social and cultural contexts. The course therefore involves significant material relating to political, economic and religious issues. It investigates problems in patronage, function, reception and censorship. It considers such intra- and cross-cultural issues as representations of gender. Requirements include essay exams and at least one paper. As a general education course in the arts, this course provides an introduction to Ancient Near Eastern and Egyptian art to a student of any major. This course has no prerequisite, and presumes no prior exposure to fine art. Students majoring in Art History will learn in it both the common vocabulary of the field and the outlines of the field that form the foundation for future study.

ARTH 302: Art of the Early Middle Ages
3 Credits

A survey of the art of Western Europe from the Early Christian era through the Ottonian Empire, c.300-1050 A.D. ART H 302 ART H 302 Art of the Early Middle Ages (3) (GA;IL)(BA) This course meets the Bachelor of Arts degree requirements. Art History 302 concentrates on the art of northern Europe between A.D. 600 and 1050, from the years which saw the art and culture of the migration period in Europe meet and merge with the Greco-Roman traditions of the Mediterranean, to the beginnings of Romanesque art. Works studied include architecture, manuscript painting, ivory carving and goldsmithwork, most of which were produced by or for members of the clergy, royalty or the lay aristocracy. The basic structure of the course is chronological. The course is designed to meet two principal goals. The first is to increase students' powers of visual analysis and help them build a critical vocabulary for discussing an art object's medium, composition, style, and iconography. The second is to foster an understanding of the deep implication of the visual arts in their social and cultural contexts. The course therefore involves significant material relating to political, economic and religious issues. It investigates problems in patronage, function, reception and censorship. It considers such intra- and cross-cultural issues as representations of gender. Requirements include essay exams and at least one paper. As a general education course in the arts, this course provides an introduction to early Medieval art to a student of any major. This course has no prerequisite, and presumes no prior exposure to art. Students majoring in Art History will learn in it both the common vocabulary of the field and the outlines of the field that form the foundation for future study.

ARTH 303: Italian Renaissance Art
3 Credits

The major arts in Italy from the thirteenth century A.D. through the Renaissance; emphasis on sculpture and painting. ART H 303 ART H 303 Italian Renaissance Art (3) (GA;IL)(BA) This course meets the Bachelor of Arts degree requirements. Art History 303 provides an introduction to the art of the early and "high" Renaissance in Italy, conceived in chronological terms as the period from c. 1300 to c. 1530, and embracing developments from the emergence of the Mendicant orders on the later 13th century to the rise of Mannerism in the 16th century. Monuments form all parts of the Italian peninsula will be considered, with emphasis on the major centers of Florence, Siena, Venice, Rome, Milan, and Naples, as well as Mantua, Ferrara and Urbino. The basic structure of the course is chronological, and divided into three sections corresponding to the three centuries delimited by Giorgio Vasari in his Lives of the Artists. In each section, an attempt will be made to present the careers and major works of the most significant artists in relation to their historical and
cultural context. The course is designed to meet two principal goals. The first is to increase students’ powers of visual analysis and help them build a critical vocabulary for discussing an art object’s medium, composition, style, and iconography. The second is to foster an understanding of the deep implication of the visual arts in their social and cultural contexts. The course therefore involves significant material relating to political, economic and religious issues. It investigates problems in patronage, function, reception and censorship. It considers such intra- and cross-cultural issues as representations of gender. Requirements include essay exams and at least one paper. As a general education course in the arts, this course provides an introduction to Italian Renaissance art to a student of any major. This course has no prerequisite, and presumes no prior exposure to art. ARTH 304: Italian, Spanish, and Spanish Colonial Baroque Art and Architecture
3 Credits

A survey of painting, sculpture, and architecture in Italy, Spain, and the Spanish Americas from 1600-1750. ARTH 304 Southern Baroque Painting (3)(GA;IL)(BA) This course meets the Bachelor of Arts degree requirements. Art History 304 concentrates on the art of Italy, Spain, and the Spanish Colonial from 1600-1750. Discussion will concentrate on what constitutes the baroque and its interpretation in each geographic area as well as issues such as patronage, primary sources, iconography, and historical context. The class will begin with the indications of the new Baroque in Italy during the 1580’s and proceed to Spain and the Spanish Colonial World. The course is designed to meet two principal goals. The first is to increase students’ powers of visual analysis and help them build a critical vocabulary for discussing an art object’s medium, composition, style, and iconography. The second is to foster an understanding of the deep implication of the visual arts in their social and cultural contexts. The course therefore involves significant material relating to political, economic and religious issues. It investigates problems in patronage, function, reception and censorship. It considers such intra- and cross-cultural issues as representations of gender. Requirements include essay exams and at least one paper. As a general education course in the arts, this course provides an introduction to European art, 1780-1860, to a student of any major. This course has no prerequisite and presumes no prior exposure to fine art. Students majoring in Art History will learn both the common vocabulary of the field and the outlines of the field that form the foundation for future study.

ARTH 305: American Art
3 Credits

History of art in the English colonies and the United States from the seventeenth century to the present. AMST 307 / ARTH 307 American Art (3) (GA;US)(BA) This course meets the Bachelor of Arts degree requirements. American art, from the colonial period to the present, is examined through paintings, sculpture, buildings, prints and photographs, as well as exhibitions and national/world fairs. The class places special emphasis upon the predicament of national identity by examining the ways in which the very notion of the “American” has historically been highly contested. Special points of emphasis include: negotiations between indigenous, colonial and European artistic styles, representations of and by displaced populations (colonial subjects, Native Americans, African Americans), myths of the American landscape, the cult of domesticity and the gendering of American citizenry, later transatlantic experiences of expatriate artists, conflicts between urban and rural conceptualizations of the “typical” American experience, the role of the American avant-garde after World War II, and debates over federal funding for the arts. The course is designed to meet two principal goals. The first is to increase students’ powers of visual analysis and help them build a critical vocabulary for discussing an art object’s medium, composition, style, and iconography. The second is to foster an understanding of the deep implication of the visual arts in their social and cultural contexts. The course therefore involves significant material relating to political, economic and religious issues. It investigates problems in patronage, function, reception and censorship. It considers
such intra- and cross-cultural issues as representations of gender. Requirements include essay exams and at least one paper. ARTH 308: American Architecture

3 Credits

History of the architecture of the United States, as well as its Native American and colonial antecedents. AMST 308 / ARTH 308 American Architecture (3) (GA;US)(BA) This course meets the Bachelor of Arts degree requirements. This Art History course (cross-listed with American Studies) will cover the history of American architecture and will examine such topics as the architecture of: Native Americans, Spanish Colonial missions, 17th-century Virginia, Puritan New England, Georgian America, Southern Plantations and Slave Cabins, Thomas Jefferson, the new federal city of Washington, D.C., the Greek Revival, the industrial revolution, utopian religious communities such as the Shakers, Gothic Revival cottages and villas, Victorian Philadelphia, Henry Hobson Richardson, Newport mansions, the birth of the skyscraper in New York and Chicago, the City Beautiful Movement, Frank Lloyd Wright, Arts Crafts California, Henry Ford's Michigan, Art Deco New York, Mies van der Rohe, Levittown, Disneyland, Louis I. Kahn, Post-Modernism, Frank Gehry, and Green Buildings. Selected major buildings, architects, ideas, and urban developments will be emphasized. Architecture will be considered within the contexts of religion, politics, philosophy, culture, economics, gender, race, society, technology, engineering, landscape architecture, urban planning and interior design. This introductory survey has no prerequisite and is intended for both students of architecture/art and students unfamiliar with the field.

ARTH 313: Northern Renaissance Art

3 Credits

Art in northern Europe in the fifteenth and sixteenth centuries, emphasizing painters such as Van Eyck, Durer, and Bruegel. ART H 313ART H 313 Northern Renaissance Art (3) (GA;IL)(BA) This course meets the Bachelor of Arts degree requirements. Art History 313 explores the relationship of the visual arts to power structures, political events, and social and religious issues in the Netherlands and Germany, c. 1380-1585. Topics include the forms and functions of religious art, the place of visual representation in the governing strategies of the cra's rulers, the rising status of the artist, the new technology of printing, the complex role of visual culture in bringing about the Protestant Reformation, and the wave of destruction and censorship known as the
Great Iconoclasm of 1566. Particular attention is paid to the works and
careers of Jan van Eyck, Hieronymus Bosch, Albrecht Dürer and Pieter
Bruegel. The course is designed to meet two principal goals. The first
is to increase students’ powers of visual analysis and help them build a
critical vocabulary for discussing an art object’s medium, composition,
style, and iconography. The second is to foster an understanding of the
depth of the visual arts in their social and cultural contexts. The
course therefore involves significant material relating to political,
economic and religious issues. It investigates problems in patronage,
function, reception and censorship. It considers such intra- and cross-
cultural issues as representations of gender. Requirements include essay
exams and at least one paper. As a general education course in the arts,
this course provides an introduction to Northern Renaissance art to a
student of any major. This course has no prerequisite, and presumes no
prior exposure to fine art. Students majoring in Art History will learn in it

ARTH 314: Art in the Age of Rembrandt

3 Credits

Dutch and Flemish painting in the seventeenth century. ART H 314 ART
H 314 Art in the Age of Rembrandt (3) (GA;IL)(BA) This course meets
the Bachelor of Arts degree requirements. Art History 314 explores
the relationship of the visual arts to power structures, political events,
and social and religious issues in the Netherlands and Flanders, c.
1585-1672. Topics include the function of art in constructing national
and urban identities, social distinctions and gender roles, the contrasting
needs burgher and court patrons, the effect of the open market on
both the production of and the look of artwork, the impact of foreign
investment and exploration on visual imagery, and the processes of
artistic collaboration and competition. Particular attention is paid to
the works and careers of Hendrick Goltzius, Frans Hals, Clara Peeters,
Hendrik Terbrugghen, Rembrandt van Rijn, Peter Rubens and Jan
Vermeer. The course is designed to meet two principal goals. The first
is to increase students’ powers of visual analysis and help them build a
critical vocabulary for discussing an art object’s medium, composition,
style, and iconography. The second is to foster an understanding of the
depth of the visual arts in their social and cultural contexts. The
course therefore involves significant material relating to political,

ARTH 315: Architecture and Art of South and Southeast Asia

3 Credits

Survey of the architecture/art of South/Southeast Asia (emphasis
on India) from the Bronze Age to a globalizing present. ARTH 315 /
ASIA 315 Architecture and Art of South and Southeast Asia (3) (GA;IL)
(BA) This course meets the Bachelor of Arts degree requirements. This
course has a focus on the architecture and art of South Asia (India,
Pakistan, and Bangladesh) and Southeast Asia (particularly Thailand,
Cambodia, and Indonesia). Topics will span a time period that begins
with Bronze age urbanization in South Asia and concludes with the
emergence of globalized architecture in the context of modern nation
states. The course will be an opportunity for students to engage with
artistic traditions and patronage systems that have adapted to cross-
cultural currents, including the more recent forces of colonialism and
globalization. Early Buddhist and Hindu architecture and sculpture, the
medieval Hindu temple, the advent and adoption of Islam and its artistic
forms, the emergence of an early modern empire under the Mughals and
their patronage of architecture and painting, British colonial architecture
and contemporary interpretations of Modernist architecture and art, are
some of the topics that will be covered. Besides paying attention to the
formal aspects of buildings, cities and objects, lectures will incorporate
information on the emergence of Art History as a discipline in South and
Southeast Asia. Lectures, exams and reading assignments will aid in
providing students with an intensive introduction to the region’s cultural
and artistic diversity.

ARTH 320: Chinese Art

3 Credits

A general survey of the great periods of Chinese art from the Shang
dynasty until the modern period. ART H 320 ART H 320 Chinese Art (3)
(GA;IL)(BA) This course meets the Bachelor of Arts degree requirements.
Art History 320 provides an introduction to the art of China from the
Neolithic period through the twentieth century. Emphasis will be placed
on the major dynastic periods (Shang, Zhou, Qin, Han, Tang, Song,
Ming, Yuan, and Qing); however, regional developments throughout
China are examined as well. Students are introduced to a variety
of artistic traditions and media, including jades, bronzes, ceramics,
sculpture, painting, and architecture. The course is designed to meet
two principal goals. The first is to develop skills of visual analysis and
a critical vocabulary for discussing the media, technologies, styles,
compositions and iconographies of Chinese art. The second is to foster
an understanding of art—and visual culture in general—according to social,
economic, political, and religious contexts. Key topics include: the ritual
use of objects, patronage, issues of reception and aesthetics, Buddhist
art, the organization and use of sacred space, depictions of gender, and
regional developments/interactions. Requirements include essay exams
and at least one paper. As a general education course, this class provides
an introduction to Chinese art for students of any major. This course has
no prerequisites and presumes no prior exposure to art history or the
history of China. Students majoring in Art History will learn vocabulary,
methodology, and theory that is not only basic to the field, but which
will also broaden their knowledge of the discipline as a whole. Because
China (currently the world's most populous nation) has one of the longest recorded and continuous artistic traditions, the course also contributes to a broader understanding of important global issues.

ARTH 325: Impressionism to Surrealism

3 Credits

A survey of European painting and sculpture from ca. 1850 to ca. 1940. ART H 325 ART H 325 Impressionism to Surrealism (3) (GA;IL) (BA) This course meets the Bachelor of Arts degree requirements.

Art History 325 is a survey of European painting and sculpture from approximately 1860 to the Nazi occupation of Paris in 1940. This course will provide an introduction to Impressionism (Manet, Monet, Renoir, Morisot), Post-Impressionism (Seurat, Czanne, van Gogh, Gauguin), Symbolism, the Nabis, Edvard Munch, Rodin, Fauvism (Matisse), Cubism (Braque, Picasso), Italian Futurism (Boccioni), Expressionism (Kirchner, Kandinsky), Dada (Duchamp), De Stijl (Mondrian), Suprematism (Malevich), Russian Constructivism (Tatlin), the Bauhaus, Paul Klee, Marc Chagall, and Surrealism (Ernst, Miro, Dalí). The course will close with the Nazi's "Degenerate Art" exhibition of 1937 and the Second World War. The course is designed to meet two principal goals. The first is to increase students’ powers of visual analysis and help them build a critical vocabulary for discussing an art object’s medium, composition, style, and iconography. The second is to foster an understanding of the deep implication of the visual arts in their social and cultural contexts. The course therefore involves significant material relating to political, economic and religious issues. It investigates problems in patronage, function, reception and censorship. It considers such intra- and cross-cultural issues as representations of gender. Requirements include essay exams and at least one paper. As a general education course, this class provides an introduction to European art to a student of any major. This course has no prerequisite, and presumes no prior exposure to fine art. ARTH 326: Art Since 1940

3 Credits

An international survey of painting, sculpture, photography and other media since 1940. ART H 326 Art Since 1940 (3) (BA) This course meets the Bachelor of Arts degree requirements. This course offers a survey of art objects and practices after 1940. The class is international in scope, exploring the ways in which artists of different countries have responded to each other’s work, and to international cultural and political events. Though the class will develop chronologically, lectures will be thematic in their emphasis. Topics to be covered include Abstract Expressionism, Pop Art and other forms of art relying upon methods of appropriation, Minimalism, Conceptualism, Fluxus and Performance Art, Land Art and Site-Specificity, and Art in protest movements (such as the Civil Rights movement). The course will also address such larger issues as: 1) the means by which art works engage in critiques of racial, sexual and national identity; 2) the political uses to which contemporary art has been put (often by figures other than the artists); 3) the dominant critical paradigms through which art has been filtered; 4) the relationship of art works to commodity culture and late capitalism; 5) and the ways in which contemporary art works challenge notions of exhibition, patronage, and ownership of art. This course should be of interest to students of Art History as well as to students interested in post-war history, literature and intellectual culture. It should also be of use to those enrolled in studio art, architecture and other practicum areas.

ARTH 330: Islamic Architecture and Art

3 Credits

Survey of the art and architecture of Islamic lands from the late seventh century until the eighteenth century. ART H 330 ART H 330 Islamic Architecture and Art (3) (GA;IL)(BA) This course meets the Bachelor of Arts degree requirements. Art History 340 provides an introduction to the arts of Islam from its birth and early formation in the seventh-eighth centuries to the eighteenth century through the examination of architecture, painting and calligraphy, and the decorative arts (metalworking, ceramics, glassware, ivory carving). The focus is on the traditional Islamic areas including Spain, North Africa, the Middle East, and South Asia, although the spread of Islam to other regions (e.g., Southeast Asia and especially Indonesia, the world's most populous Islamic country) may also be included. Each of the major traditions of Islamic art will be examined in a generally chronological sequence; these include the Abbasids, the Umayyads of Spain, the Fatimids of Egypt, the Seljuqs, the Ilkhanids (Mongols), the Timurids, the Mamluks of Egypt, the Safavids of Persia, the Ottoman Turks, and the Mughals of India. The course will conclude with a discussion of "Orientalism" and more recent developments in Islamic art and architecture. The course is designed to meet two principal goals. The first is to develop skills of visual analysis and a critical vocabulary for discussing the media, technologies, styles, and composition of Islamic art. The second is to foster an understanding of art and visual culture in general—according to social, economic, political, and religious contexts. Key topics include: patronage, issues of reception and aesthetics, the important link between art and text in the Islamic tradition, the organization and use of sacred space, gender issues, relationships between the art of various regions and cultures, and the western interpretation of Islam as part of the discourse on "Orientalism." Requirements include essay exams and at least one paper. As a general education course, this class provides an introduction to Islamic art and architecture for students of any major. It has no prerequisites, and presumes no prior exposure to art history. Students majoring in Art History will learn vocabulary, methodology, and
ARTH 335: African Art

3 Credits

Introduction to the visual arts of Africa, including contemporary African art and the influence of African art outside Africa. ARTH 335 / AFR 335 African Art (3)(GA;IL)(BA) This course meets the Bachelor of Arts degree requirements. The course will examine the arts of various African peoples in historical, religious, sociological and geographic contexts, providing an introduction to the many visual art forms of Africa including masquerade, costume, and indigenous architecture. While many of the arts in this field of study are from west and central Africa, the course will also include materials from southern and eastern Africa. Contemporary African art, African Diaspora arts, and the influence of African art on European art are important topics that may be included. In addition to the traditional format of a geographic organization of the material, students will explore thematic approaches. Each of the assignments requires completion of essays which draw upon the multiple course texts and readings. Exams include image identification and short essays.

Bachelor of Arts: Arts

ARTH 399: Foreign Study--Art History

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Prerequisite: ART H100 or ART H110 or ART H111 or ART H112
Bachelor of Arts: Arts
International Cultures (IL)

ARTH 401: Greek Art and Architecture

3-9 Credits/Maximum of 9

Developments in Greek art and architecture, tenth century B.C. to first century B.C.; emphasis on the importance of Greek sanctuaries.

Prerequisite: ART H100, ART H111, ART H201, or ART H311
Bachelor of Arts: Arts
International Cultures (IL)

ARTH 402: The Illuminated Manuscript

3 Credits

Specific stylistic periods in manuscript painting from A.D. 500-1500 in Western Europe and Byzantium.

Prerequisite: ART H100, ART H111, ART H302, or ART H312
Bachelor of Arts: Arts
International Cultures (IL)

ARTH 405: Pioneers of Modern Architecture

3-6 Credits/Maximum of 6

Selected period or theme in the development of modern architecture during the nineteenth and/or early twentieth centuries.

Prerequisite: ART H100, ART H112, ART H202, or ART H307
Bachelor of Arts: Arts
International Cultures (IL)
United States Cultures (US)

ARTH 409: Museum Studies

3 Credits

An introduction to the professional activities that occur in art museums. ART 409 / ARTH 409 Museum Studies (3)(BA) This course meets the Bachelor of Arts degree requirements. This course introduces students to the broad field of art museum work, specifically museum administration, education, curatorial work, registration, and exhibition design. Readings by authors in each field provide current theoretical and philosophical frameworks for all areas, which are then followed by discussions and practical experiences with professional museum practitioners, including the staff of a museum, for example, the Palmer Museum of Art, and invited guests. Museum Studies is open to students who have complete six credits in art, art education, or art history. This course is especially beneficial for majors in art, art education, and art history who are considering a career in an art museum or who want to become more aware about how an art museum functions. In addition to providing an in-depth introduction to art museum work, the course encourages students to build the critical thinking and response skills that are crucial to success in the real-world environment of a museum. The readings provide a solid foundation for later reference or further study in the student’s chosen field. Offered every spring, this course will have a maximum enrollment of 20 students. Grades are based on class participation, four out-of-class projects, and a final project. Extra credit is offered for an off-campus visit to a museum, among other options.

Prerequisite: 6 credits of ART H, ART and/or A ED
Cross-listed with: ART 409
Bachelor of Arts: Arts
ARTH 410: Taste and Criticism in Art
3 Credits
History and literature of art criticism demonstrating the varied
philosophic, cultural, iconographic, technical, and visual approaches.
Prerequisite: 6 credits of art history
Bachelor of Arts: Arts

ARTH 411: Roman Art
3-9 Credits/Maximum of 9
Roman sculpture and painting from Augustus to Constantine.
Prerequisite: ART H100, ART H111, ART H201, or ART H311
Bachelor of Arts: Arts
International Cultures (IL)

ARTH 412: The Gothic Cathedral
3 Credits
Specific aspects of Romanesque and Gothic church architecture of
western Europe, especially France and England, between 1000-1500.
Prerequisite: ART H100, ART H111, ART H201, ART H302, or ART H312
Bachelor of Arts: Arts
International Cultures (IL)

ARTH 413: Architecture of the Medieval Monastery
3 Credits
This course will examine design, construction, function and symbolism in
the monastic architecture of Western Europe during the Middle Ages.
Prerequisite: 3 credits of Art History

ARTH 415: The Skyscraper
3 Credits
Origin and evolution of the skyscraper as seen against the background of
cultural conditions and technological factors.
Prerequisite: ART H100, ART H112, ART H202, or ART H307
Bachelor of Arts: Arts
United States Cultures (US)

ARTH 425: Topics in Northern Renaissance Art
3 Credits/Maximum of 6
Focuses on a topic of interest in Netherlandish and/or German art
between 1300 and 1600.
Prerequisite: 3 credits of Art History
International Cultures (IL)

ARTH 426: Iconoclasm: Powerful Images and their Destruction
3 Credits
Iconoclasm: exploring the political, religious, and social motivations
behind the destruction of powerful imagery throughout history. ART H
426 Iconoclasm: Powerful Images and their Destruction (3) (US;IL) (BA)
This course meets the Bachelor of Arts degree requirements.Images
have been granted extraordinary powers in many human societies, and
their purposeful destruction has been a recurrent feature of political,
religious and social strife around the world. This course explores how and
why humans have granted such power to images, and the subsequent
reactions that have resulted in periodic outbreaks of iconoclasm. Topics
include the historical specificity of image destruction, the role of art
and its detractors in precipitating the Protestant Reformation, and the
manipulation of iconoclasm in modern mass media. Victimized images
covered may include the bronze bust of Sargon (3rd millennium BCE)
and early Renaissance altarpieces through the statues of Saddam
Hussein and beyond. We will read primary and secondary materials
ranging from Biblical texts to letters to the editor in the New York Times.
Through careful consideration of iconoclasts’ historical contexts, we
will explore art's ability to function as a societal lightning rod. This course has two major objectives: to introduce students to a subject matter that holds great relevance for our time, and to train them in the methods and ethics of scholarly research. This course fulfills elective and 400-level requirements in Art History and General Education (US and IL), but it is intended also to complement concentrations in History, Visual Studies, Religion, and Communications. It would be offered every two to three years. Evaluative criteria include analytical reading and discussion, written components such as critical essays and a research projects, and analysis of relevant current events and their media coverage. Requires a classroom with digital audio-visual capability. Course may include museum visits or field trips where appropriate.

**Prerequisite:** 3 credits of Art History in any area
Bachelor of Arts: Arts
International Cultures (IL)
United States Cultures (US)

**ARTH 427: Topics in Global Artistic Communication**

3 Credits/Maximum of 6

Explores a specific time period in art history cross-culturally in Europe, Asia, Africa, and/or the Americas. ART H 427 Topics in Global Artistic Communication (3 per semester/maximum of 6) (IL) This course explores specific time periods and/or issues in global artistic exchange among several diverse cultures. The course may be taken up to two times, if the topics are different. One semester the topic might be "Ca. 1800: Arts and their Global Colonial Contexts." Another semester the topic might be "Global Modernisms ca. 1930" or "Ca. 1600: Global Artistic Exchange in an Era of Increased Contact." Each offering will include theoretical discussion of the goals and challenges of such intercultural study. It will then explore the artistic traditions and responses to foreign contact of diverse cultures. The course will consist of lectures, discussions, and, in many cases, visits to the Palmer Museum of Art for the study of objects in its collection. Through critical reading, listening and looking students will develop an appreciation for the range and diversity of cultural production, and the historical specificity of responses to contact with the unfamiliar. Themes touched upon may include ethnic or religious identity, gender, cultural resistance, rejection or embrace. Learning evaluation may depend upon a combination of class participation, analytical reading, essays or research papers, and examinations.

**Prerequisite:** 3 credits in Art History
International Cultures (IL)

**ARTH 429: Studies in Baroque Art**

3 Credits

Selected topics in the painting, sculpture, and architecture of seventeenth-century Italy, France, Flanders, Holland, and Spain. ART H 429 Studies in Baroque Art (3) (IL)This course addresses aspects of European art of the seventeenth century, a rich and complex period in which illusionism and powerful visual effects in the arts reached maturity. Baroque painters went beyond the realism of their Renaissance predecessors to explore both the sensuous aspects of the medium of oil painting and their own increasingly subjective vision. In all the visual arts Baroque masters explored space, mass, and form with a heretofore unheard of freedom and drama. Lectures and discussion in the course may focus on painting, sculpture and/or architecture, in Italy, Flanders, France, Holland, and/or Spain. The course may include selected artists such as Bernini, Borromini, Caravaggio, A. Gentileschi, Poussin, Rembrandt, Rubens, Velazquez, and/or Vermeer. The style and meaning of Baroque art may be studied within its political and cultural setting. For example, new approaches in the visual arts in Italy, and particularly in Rome, may be explored in relation to the rise of the counter reformation. The Spanish war in the Netherlands, and the Dutch struggle for freedom, may be connected with the art of Flanders and Holland. Attendant developments in other fields such as natural philosophy (science) and literature may be related to the visual arts. For example, the use of the camera obscura may be discussed with the art of Jan Vermeer and the poetry of Giambattista Marino may be related to the art of Nicolas Poussin. Aesthetic, critical, interpretive, and theoretical ideas of major artists and writers of the seventeenth century as well as of today's art and cultural historians may be considered. The emergence of new genres such as landscape and still-life may be examined, as well as the continuing themes of mythology, portraiture, and religion. Course objectives may include students' understanding of the national and regional development of styles and schools within seventeenth-century art, the particular approaches to style and meaning by major artists of the period, the analysis of symbolism and meaning within art works of the period; the interrelationship between the art of the period and other disciplines such as natural philosophy and literature, and particular ways in which seventeenth-century art relates to the politics of particular countries, regions, and patrons. This course may serve as an elective for undergraduate students interested in the visual arts and art history, and for graduate students seeking a deeper exposure to art history. Evaluation may be accomplished through a combination of exams, quizzes, term papers, special projects, and participation in class discussion. Special facilities include a darkened room with dimmable spot lighting, computer, computer projector, and a large projection screen.

**Prerequisite:** 6 credits in art history (ARTH)
International Cultures (IL)

**ARTH 435: Studies in Modern Art**

3-6 Credits/Maximum of 6

Lectures focusing on a selected movement of nineteenth- or twentieth-century art.

**Prerequisite:** ART H100 , ART H112 , ART H305 , ART H307 , or ART H325
Bachelor of Arts: Arts
International Cultures (IL)

**ARTH 440: Monuments of Asia**

3-9 Credits/Maximum of 9

An exploration of major Asian sites and monuments through a focus on their historical and cultural significance. ART H (ASIA) 440 Monuments of Asia(IL)(BA) This course meets the Bachelor of Arts degree requirements. In this course, major Asian monuments are introduced in their physical, historical and cultural contexts. Students are also exposed to various theoretical approaches through which these monuments will be studied. Some of the themes around which the course is structured include patronage, religious practice, cultural meaning, political relevance and the shifting meanings of monuments over time. Students will learn to understand and discuss ways of defining monuments, their formal character and lineage, historical and cultural contexts and their representation across space and time. Each semester monumental sites will be organized around a common theme such as, Idquo;Hindu and Buddhist Sites across Asia: Historical Significance and Contemporary Relevance,rdquo; Idquo;Patronage and Religion,rdquo; Idquo;Islam across Asia: Global Ideas and Local Contexts,rdquo; Idquo;Political and Symbolic Centers in Asia: Between Early Modernity and the Nation Staterdquo;
Alternately, these topics will be incorporated within a multi-themed structure. The objective of the course is to expose students to the histories and cultures of Asia in a globalizing world. Another objective is to equip students with the methodological tools of art history as a discipline, even as they learn about specific monuments. The course will build on the foundation laid by survey courses in Art History, Architectural History and Asian Studies. Weekly readings will be assigned and discussed in class. The development of analytical and writing skills will be stressed, and grades will be based partly on essay exams and short response papers. In addition, students will write a research paper, to be completed by the end of semester.

**Prerequisite:** ART H100 or ART H120 or ART H315 or ART H320 or ART H330

Cross-listed with: ASIA 440
Bachelor of Arts: Arts
Bachelor of Arts: Other Cultures
International Cultures (IL)

ARTH 442: Late Antique and Early Christian Art
3 Credits

Survey of the architecture, painting, and minor arts of Christian society from the beginning to the middle-sixth century.

**Prerequisite:** ART H100 , ART H111 , ART H201 , or ART H302
Bachelor of Arts: Arts
International Cultures (IL)

ARTH 445: Oceanic Art
3 Credits

Survey of the arts of Oceania (Polynesia, Micronesia, Melanesia), including masks, sculpture, textiles, architecture and other art forms.

**Prerequisite:** 3 credits of Art History
Bachelor of Arts: Arts
Bachelor of Arts: Other Cultures
International Cultures (IL)

ARTH 446: Topics in African Art
3 Credits/Maximum of 9

Topics vary from "Arts of Eastern and Southern Africa" to "Art of West Africa."

**Prerequisite:** 3 credits of Art History
Cross-listed with: AFR 446
Bachelor of Arts: Arts
Bachelor of Arts: Other Cultures
International Cultures (IL)

ARTH 447: Topics in the Art of the African Diaspora
3 Credits/Maximum of 6

Selected topics in arts of the African Diaspora (South America, Caribbean, USA) including masquerades, textiles, architecture and other art forms.

**Prerequisite:** 3 credits of Art History
Cross-listed with: AFR 447
Bachelor of Arts: Arts
Bachelor of Arts: Other Cultures
International Cultures (IL)

ARTH 450: The History of Photography
3 Credits

The history of photography from 1839, with particular emphasis on the relationship with the plastic arts.

**Prerequisite:** ART H100 , ART H112 , ART H305 , ART H307 , or ART H325
Bachelor of Arts: Arts
International Cultures (IL)
United States Cultures (US)

ARTH 452: Byzantine Art
3 Credits

Monumental and minor arts of Byzantium and related areas from the reign of Justinian to the Turkish conquest of Constantinople.

**Prerequisite:** ART H100 , ART H111 , ART H201 , or ART H302
Bachelor of Arts: Arts
International Cultures (IL)

ARTH 456: Renaissance and Baroque Palaces
3 Credits

This course examines palace architecture and decoration in Italy, France, England, and Germany from 1450-1700.

**Prerequisite:** ART H100 , or ART H112 , or ART H202 , or ART H303 , or ART H304
Bachelor of Arts: Arts
International Cultures (IL)

ARTH 458: The City 1600-1800
3 Credits

This course examines the architecture and urbanism of cities from 1600-1800. This course will examine what transformed the cities into centers of power, culture, and learning. We will look at new building...
types, the creation of civic institutions, and changes in the urban plan. The course will therefore provide an overview of the architecture and urbanism of the period and also explore the political and social contexts that made them possible. Topics include capitals of great political importance such as Paris, Beijing, and London as well as smaller centers like Turin and Lisbon that underwent major urban and architectural transformations. The social function of buildings that mark these capitals, from poor houses to opera houses, will also be explored. Primary and secondary reading, ranging from Pepys’s Diary to Habermas’ examination of the public sphere will offer period accounts as well as conceptual frameworks for understanding the capital. The objective is to challenge students to think deeply about our urban environment and its debts to this earlier era. This course fulfills elective and 400-level requirements in Art History and General Education (IL), but it is also designed to complement concentrations in History, Music, and Architecture.

**Prerequisite:** ARTH 202; ARTH 304; ARTH 100; ARTH 112; ARTH 314; ARTH 120; ARTH 140; ARTH 315
Bachelor of Arts: Arts
International Cultures (IL)

ARTH 460: Art and Empire: Aztec, Inca and Spanish

3 Credits

This course is a comparative study of the artistic production used in Aztec, Inca and Spanish empires. ART H 460 Art and Empire: Aztec, Inca and Spanish (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course compares the diverse visual culture of the pre-Columbian worlds; two most powerful empires, the Aztec and Inca, to ascertain how art, architecture and public ritual functioned as tools of hegemony. In the aftermath of the Spanish physical and 'spiritual' conquests of the sixteenth century, colonists continued to exploit the central role played by Aztec and Inca imagery as a means to assert and maintain colonial control, co-opting preexisting channels of training and also imposing foreign sign systems. This course queries, how did the visual arts effectively communicate competing imperial ideologies, how was art production appropriated as a site of indigenous resistance, and how do these artifacts continue to construct communal identities, both past and present?

**Prerequisite:** 3 credits of ART H
Bachelor of Arts: Arts
Bachelor of Arts: Other Cultures
International Cultures (IL)

ARTH 462: Studies in Latin American Art

3 Credits/Maximum of 6

Specific studies of the visual and material culture created in Latin America from the colonial through the modern era. ART H 462 Studies in Latin American Art (3 per semester/maximum of 6) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course analyzes the art and architecture created in Latin America from the first moments of European contact (1492) until the modern era. Each time it is taught, the class will refine its focus to study the artistic production of a specific time period (such as the early colonial period, the nineteenth century, or the modern period), a specific geographic expanse (such as the modern nation state of Mexico), or perhaps a distinct cultural group (indigenous artists). Core to this course is the study of the interaction of seemingly divergent social groups and the ways in which artistic production both reflects and reinforces the resulting cultural systems.

**Prerequisite:** 3 credits of Art History
Bachelor of Arts: Arts
Bachelor of Arts: Other Cultures
International Cultures (IL)

ARTH 464: French Art and Architecture, 1589

3 Credits

This course examines painting, sculpture, and architecture in France from the Wars of Religion through the French Revolution. Over the course of a dynamic two centuries architects and patrons shaped, refined, and innovated upon distinctly French classical styles. Through an examination of some of the leading figures, such as François Mansart and Jules Hardouin-Mansart, Claude Perrault, Claude-Nicolas Ledoux, and Étienne-Louis Boullée, the course will introduce not only a wide range of key buildings, but also a distinct idea about the status of the architect in French society. Classes will also be devoted to specific themes, such as the role of academies in standardizing training, and the influence of public opinion on specific works. We will also examine the urban transformation of Paris into the capital of a centralized French state. This course examines painting, sculpture, and architecture in France from the Wars of Religion through the French Revolution, from the close of the sixteenth century through the end of the eighteenth. In the seventeenth century with the art of Poussin, French painting can be seen to have come into its own, as Poussin broke with his contemporaries in establishing a particularly French mode of classicism in Rome. We see the efflorescence of classicism in history and landscape painting in the work of Poussin and Claude Lorrain, monumental realism in the work of the Le Nain brothers, and the development of complex allegories of power in the work of Peter Paul Rubens in France. We examine the Rococo style in terms of its eroticism, its artisanal ethic, and the new patterns of aristocratic patronage that emerge in the eighteenth century. We will also consider the rise of the public sphere and its impact on artists such as Jean-Baptiste Greuze, Jacques-Louis David, and David’s pupils. With regard to sculpture, we will look at a range of styles from the baroque to the neoclassical.

**Prerequisite:** 3 credits in ART H
Bachelor of Arts: Arts
International Cultures (IL)

ARTH 470: Contemporary Art

3 Credits/Maximum of 9

A focused investigation of a special topic relating to art made after 1940.

**Prerequisite:** 3 credits of ART H
Bachelor of Arts: Arts
Bachelor of Arts: Other Cultures
International Cultures (IL)

ARTH 470H: American Painting and Sculpture Since 1940

3 Credits

Painting and sculpture in the United States from the origins of Abstract Expressionism through the present.

Bachelor of Arts: Arts
United States Cultures (US)
Honors
ARTH 475: Contemporary Women Artists

3 Credits

An interdisciplinary course that investigates women artists who were integral to the production of contemporary art primarily in the Americas, Europe, and Asia.

**Prerequisite:** fifth-semester standing, ART H111, ART H112, and enrollment in the ART BA, ART BFA, Art Education, or Integrative Arts degree program.

Cross-listed with: ART 475

Bachelor of Arts: Arts
United States Cultures (US)

ARTH 476: History and Theory of Digital Art

3 Credits

History and theories of contemporary digital art emphasizing humanistic approaches to technology. ART 476 / ARTH 476 History and Theory of Digital Art (3)(BA) This course meets the Bachelor of Arts degree requirements. Approaches to Digital Art is a survey class that will offer the web designer, cyberspace architect, MUD traffic controller or enthusiastic surfer an opportunity to examine the humanistic aspects of contemporary digital art. Through readings and direct interaction with digital media and digital artists, the class will develop an appreciation of the ways in which the interface between human beings and technology has been historically constructed and is subject to critical investigation. The goal of the class is to prepare each student so that she or he may engage with digital media in a way that is every more historically and socially self aware. Students will address the ways in which digital technologies transform artistic practices such as museum display, the writing of art criticism, the definition of works of art, changing role of the artist and the changing space of the art studio. More important, however, by engaging with digital works of art students will learn to think critically about technology and its engagement with culture at large. They will be encouraged to think about the political, economic and social impact of digital technologies. This humanistic approach to technology would make this course particularly useful to students of art history, philosophy, comparative literature, art education, and the visual/plastic arts. A significant portion of the course will be devoted to the ways in which art on the internet and digital art in general challenge the integrity of categories such as race and national identity. For example, students will have an opportunity to engage with African American artists such as Keith Obadike, whose on-line performances include an attempt to put his "blackness" up for sale on ebay.com in August of 2001. Students may also look at the ways in which net.art (Art made to be viewed on the internet) can critique commercial cooptation of global culture: etoy.com, for example, is an international and collaborative artist's group that satirizes global capital by camouflaging itself as a multinational corporation. This class will depend largely upon written responses and class discussion, rather than upon tests. Thus, students will learn how to approach difficult theoretical sources that have been assigned to them, and they will learn how to ask the kinds of questions that will help them understand such sources. This course will emphasize critical thinking rather than memorization, so students will develop analytical skills that will be useful in many other contexts. Because students will be given weekly writing assignments, they will be able to improve their skills in composition.

**Prerequisite:** ART H100 or ART H112 or ART H307 or ART H325 or ART H326 or ART 211

Cross-listed with: ART 476

Bachelor of Arts: Arts

ARTH 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written or oral critique of activity required.

ARTH 495H: Internship

1-18 Credits/Maximum of 999

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written or oral critique of activity required.

Honors

ARTH 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Arts

ARTH 496H: Independent Studies - Honors

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Arts
Honors

ARTH 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Arts

**Arts Administration (ARTSA)**

ARTSA 301: Introduction to Arts Administration

3 Credits

This course provides students with a survey of the major concepts and practices of arts administration.

ARTSA 401: Arts Event Planning and Project Management

3 Credits

Planning and managing an event for an arts organization.

**Prerequisite:** ARTSA301, ARTSA495A, MKTG 301

ARTSA 402: Strategic Management and Planning for the Arts

3 Credits

Study of strategic planning for commercial and non-profit arts organizations.
ARTSA 495B: On Campus Internship in Arts Administration
3 Credits/Maximum of 3
On Campus Internship in Arts Administration (3) An internship with an on-campus arts organization or program.

Prerequisite: ARTSA301, ARTSA401, ARTSA495A

Arts and Architecture (AA)

AA 99: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

AA 100: Introduction to International Arts
3 Credits
An interdisciplinary, multicultural introduction to the arts of the world. AA 100 Introduction to International Arts (3) (GA;IL)(BA) This course meets the Bachelor of Arts degree requirements. The arts of the world can be simultaneously universal and unique. By conveying qualities of the human condition (mortality, love, lust, virtues, vices, etc.) the arts can be universal. However, the arts communicating these qualities can be as unique as the cultures that produced them. Consequently, the arts are representative of the commonality and diversity of the peoples of the world. AA 100 will use the arts to consider similarities and differences among cultures. The primary objective of this course is to develop each student's ability to appreciate the arts from a variety of cultures. By equipping students with the skills to analyze works of art from other countries, the course will make them more receptive to the unfamiliar. The scope of this course will be open to all arts from all cultures but it cannot be comprehensive given how large a field of study this represents. The course will concentrate on but will not be limited to the visual arts, architecture, designed environments, theatre and music. It will not include all arts from all countries. Instead, case studies will be used to provide students with in depth examination of specific examples. Individual case studies will be selected based on qualities indicative of the culture of origin. Care will be given to selecting case studies representative of a wide variety of cultures. Effort will be made to include examples from Asia, Africa, Australia, South America and Europe. Case studies will be presented by guest lecturers and chosen from other resources on campus. Members of the College of Arts and Architecture faculty, international graduate students and visiting scholars will be invited to present examples from their expertise. Objects in the Palmer Museum Of Art, events at the Center for the Performing Arts and audio/visual/internet resources will also be used as sources for other case studies. Because the arts are central to this course, visual and audio experiences will be a major component. AA 100 is the foundations course required by the International Arts Minor, but will also be available to other students not pursuing the minor as a General Education Arts (GA) and United States Cultures and International Cultures (US;IL) course.

Bachelor of Arts: Arts
Bachelor of Arts: Other Cultures
International Cultures (IL)
General Education: Arts (GA)
AA 105: Interdisciplinary Digital Studio (IDS) Seminar I

3 Credits

This course will consist of 5 modules that will introduce students to emerging technologies that are applicable to interdisciplinary electronic design study. AA 105 Interdisciplinary Digital Studio (IDS) Seminar I (3) This foundational course will consist of five three-week modules during which students will be introduced to digital design process and applications that are necessary for IDS design research and creative production. What students learn in this first of two preliminary courses during the first of year in the IDS major will have direct application in digital design problems that will be introduced in the beginning, intermediate, and advanced courses in the IDS Program. Accomplished digital artists and designers consisting of faculty in the School of Visual Arts, the School of Music, the Department of Architecture, and the Department of Landscape Architecture will teach the modules. Content of the five modules will include two and three-dimensional modeling, animation; sound, and game design concepts and processes.

Prerequisite: School of Visual Arts Admissions Portfolio

AA 106: Interdisciplinary Digital Studio (IDS) Seminar II

3 Credits

This course will consist of 5 modules that will introduce students to emerging technologies that are applicable to interdisciplinary electronic design study. AA 106 Interdisciplinary Digital Studio (IDS) Seminar II (3) This second foundational course will consist of five three-week modules during which students will be introduced to further study in digital design process and applications that are necessary for IDS design research and creative production. What students learn in this first of two preliminary courses during the first of year in the IDS major will have direct application in digital design problems that will be introduced in the beginning, intermediate, and advanced courses in the IDS Program. Accomplished digital artists and designers consisting of faculty in the School of Visual Arts, the School of Music, the Department of Architecture, and the Department of Landscape Architecture will teach the modules. Content of the five modules will include two and three-dimensional modeling, animation; sound, and game design concepts and processes.

Prerequisite: School of Visual Arts Admissions Portfolio and completion of A&A 105

AA 110: Interdisciplinary Digital Media Studio I

3 Credits

Provides arts and design students an interdisciplinary studio-based exploration of critical, theoretical, and historical understandings of digital media. AA 110 Interdisciplinary Digital Media Studio I (3) This course is the first of a series of required courses for the Interdisciplinary Digital Studio (IDS) degree. Students in AA 110 will gain an interdisciplinary and collaborative foundation through the studio-based exploration of digital media arts and design processes. This course will foster interdisciplinary awareness and diverse perspectives and provide students with a common language with which they can communicate and collaborate with other students in the arts and design disciplines. The course will integrate a variety of methodologies and approaches rather than discipline-specific subject matter and be especially significant to such areas as learning to think critically, learning to engage in critical dialogue, and development of research skills. It will provide an introduction to, and discussion of, the processes of historical thinking and methodology as these pertain to the work and experience of historical and living digital media artists and designers. Through the completion of studio-based projects encompassing a wide range of digital media, including image production and manipulation, basic interactivity/hypermedia, interface design, 3D modeling, animation, digital fabrication, audio, and video, students will create a portfolio of work that will enable them to make informed and guided choices as to the further focusing of their studies in the digital arts and design. Students will be introduced to various collaborative situations and approaches to be utilized as necessary based on the needs of the project. In the following year, students will build upon the explorations of this course through more focused and rigorous studio work in AA 210 as well as other relevant courses to the degree.

AA 121: Design Thinking and Creativity

3 Credits

An introductory and multidisciplinary exploration of the theory, process, methods, and artifacts of design, achieved through an examination of ideas, examples, and applications. AA 121 Design Thinking Creativity (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. This course is an introductory, general education level course based on the premise that design is a fundamental human activity that everyone engages in one way or another. Design encompasses both the ability to imagine that which does not yet exist and to make it appear in concrete form. Design is a form of deliberate, considered action that seeks solutions to problems and creates useful and purposeful artifacts. Design is simultaneously used as a noun and a verb, and to describe a discipline and many fields of practice. Yet design remains essentially a black box; to most people it is a black box; its methods, processes, and components are mysterious, magical, and opaque. This course will turn the black box into a glass box. The course focuses on the relationship between ideas, tools, and artifacts in order to connect theory, practice, and outcomes. Using theory, practice, and artifacts from a range of design fields (including architecture, landscape architecture, product design, engineering, graphic design, environmental design, and design theory itself), the course will empower students to understand design from the perspective most useful to them and their work - ideas, application, and the things they encounter in the world. The course focuses on the kinds of problems, situations, and processes of thinking that are critical for designers, business professionals, engineers, humanists, social scientists and natural scientists. The course is divided into eight distinct units, allowing a thematic and comparative analysis of a breadth of design topics: What is Design?, Design Artifacts; Design Problems; Creativity; Design Thinking; Models of the Design Process; Design Action; and, Design Tools and Methods. By the end of the course, students will be equipped with the necessary knowledge and skills to understand, analyze, and synthesize design in the world. The course will focus on the kinds of problems, situations, and processes of thinking that are critical for designers, business professionals, engineers, humanists, social scientists, and natural scientists. The course is divided into eight distinct units, allowing a thematic and comparative analysis of a breadth of design topics: What is Design?, Design Artifacts; Design Problems; Creativity; Design Thinking; Models of the Design Process; Design Action; and, Design Tools and Methods. By the end of the course, students will be equipped with the necessary knowledge and skills to understand and analyze the role of design in the world and to take action themselves, including: the breadth of design in the world; the power and responsibility of design; a range of design artifacts; how designers think and work; what creativity is and what it entails; understandings of design, design thinking, and creativity across a breadth of disciplines; the PART of design problems; how the design process can be described; strategies and methods applicable to the stages of the design process. There are no prerequisites for this course. The course will serve as an introduction to fundamental ideas of design and complement design-focused courses in
other departments/programs across the university. The course satisfies general education requirements for Arts (GA) requirements.

Bachelor of Arts: Arts
General Education: Arts (GA)

AA 122: Introduction to Graphic Storytelling

3 Credits

Introduction to Graphic Storytelling is a studio exploring the visual language of comics and graphic novels. Assignments will include writing and drawing exercises, and short and long-form comics projects. Students will study the formal concerns of visual sequence and storytelling, layout and lettering, and traditional drawing materials. Subjects of study and discussion will include contemporary comics and graphic novels, comprehensive critical response, creative ideation and development, and the history and theory of sequential art. Through exercises, projects, readings, discussion, and communal feedback, students will become develop their own visual and narrative process for producing graphic narratives.

AA 193N: The Craft of Comics

3 Credits

This course combines the literary analysis of comics and graphic novels with the creative practice of making comics. Students will learn through an integrated and ongoing process of interpreting select comics texts and also making their own work in that same medium. Students will gain a technical vocabulary for discussing and assessing comics, which they will then apply to formal analysis of compositional and narrative elements in select assigned texts. This analysis will occur first in class discussion, facilitated by the instructors, and then through a sequence of individual written assignments. At the same time, students will receive formal instruction in making comics as they create their own work over the course of the semester, workshopping with peers and instructors as a way of gaining further insight into the creative and technical processes of the studied texts. Formal analysis and creative work will be coordinated and progressive across the course of the semester. The culmination of this collaborative learning would be an integrated understanding and appreciation of comics art.

General Education: Arts (GA)
General Education: Humanities (GH)
General Education - Integrative: Interdomain
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

AA 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

AA 210: Focused Realization Studio

3 Credits

Provides students the opportunity for the realization of more focused interdisciplinary studio explorations in the digital arts and design disciplines. AA 210 Focused Realization Studio (3) Building upon the material introduced in AA 110: Interdisciplinary Digital Media Studio I as well as other relevant courses, such as ART 211W, students in AA 210 will create team-based and individual studio work that investigates, from a variety of disciplinary understandings, more advanced issues and problems in the digital arts and design disciplines. This rigorous and focused exploration will result in a portfolio of completed and fully realized studio-based projects. This final portfolio will be made available online by the student, both to reach as broad an audience as possible as well as encourage the growth of a critically focused community of similarly interested practitioners in the digital arts and design disciplines. The primary purpose of the course is to bring together students engaged in a wide range of studio explorations and create a synergistic group dynamic that will inform and advance the work of all participants; hence, personal initiative and strong self-learning skills are a given expectation. The studio format is the fundamental model for education within the arts and design disciplines in the University. Ways of learning about the arts and design through projects and assignments that incorporate various technologies will be included in the course. This course also will give students knowledge of the digital arts and design disciplines, develop skills of art, design and communication, and foster a capacity for judgment. There will be an emphasis on both product and process necessitating a high level of self-motivation and initiative. Each student will be encouraged to be open to a diverse range of ideas, values and solutions.

Prerequisite: A&A 110

AA 295: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internship. Written and oral critique of activity required.

AA 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

AA 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

AA 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

AA 310: Creative Collaboration Studio

3 Credits

Provides students with an advanced studio exploration of interdisciplinary collaborative projects in the digital arts and design disciplines. AA 310 Creative Collaboration Studio (3) This course is the third required studio course for students in the Interdisciplinary Digital Studio (IDS) degree program. Students in AA 310 will create advanced studio work that investigates, from a variety of disciplinary
understandings, increasingly complex issues and problems in the arts and design disciplines. The course will emphasize collaborative and team-based projects, exploring the creative potential within the group dynamic as well as in relation to a client. This rigorous and focused exploration will result in a portfolio of completed and fully realized studio-based projects. This final portfolio will be made available online by the student, both to reach as broad an audience as possible as well as encourage the growth of a critically focused community of similarly interested practitioners in the digital arts and design disciplines. The primary purpose of the course is to bring together students engaged in a wide range of studio explorations and create a synergistic group dynamic that will inform and advance the work of all participants; hence, personal initiative and strong self-learning skills are a given expectation. The studio format is the fundamental model for education within the arts and design disciplines in the University. Ways of learning about the arts and design through projects and assignments that incorporate various technologies will be included in the course. This course also will give students knowledge of the digital arts and design disciplines, develop skills of art, design, and communication, and foster a capacity for judgment. There will be an emphasis on both product and process necessitating high level of self-motivation and initiative. Each student will be encouraged to be open to a diverse range of ideas, values and solutions.

**Prerequisite:** A&A 210, ART 211W

AA 322: Arts Marketing

3 Credits

Topics include: arts markets, consumptions models, targeted development of aesthetic products, analysis of websites and other marketing materials that communicate artistic value. AA 322 Arts Marketing (3)(BA) This course meets the Bachelor of Arts degree requirements. This course will introduce and outline the role, purpose, and perception of “art” in various marketplaces and contexts for the emerging arts entrepreneur. Topics include: issues in marketing aesthetic products, consumer identification through art, models of consumer behavior, art and technology, targeted development of arts products/services, and the analysis of websites and other marketing materials that communicate artistic value to appropriate market(s).

**Prerequisite:** third-semester standing

Bachelor of Arts: Arts

AA 323: Arts Enterprise Development

3 Credits

Course outlines the cultural and economic environment of the arts in the United States. Topics include: feasibility study and start-up of for- and non-profit arts ventures, the role of geography, demand and infrastructure considerations in entrepreneurial decision-making. AA 323 Arts Enterprise Development (3)(BA) This course meets the Bachelor of Arts degree requirements. This course will introduce and outline the cultural and economic environment of the arts in the United States. Topics include: feasibility study and start-up of for- and non-profit arts ventures, economic and social impact of art and artists in communities, public and private arts support, non-profit culture and basic grantsmanship, arts policy, creative economy efforts, the role of geography, demand and infrastructure considerations in entrepreneurial decision-making, and competition analysis.

**Prerequisite:** third-semester standing

AA 324: Arts Entrepreneurship and the Law

1 Credits/Maximum of 1

Course surveys general legal considerations in the arts and pertinent issues for monetizing creative work. Course surveys general legal considerations in the arts and pertinent issues for monetizing creative work. Class meetings consist of arts and law faculty collaboratively leading discussions and/or workshops that identify and define areas of legal concern from the perspectives of artistic persons and art implicated organizations. Students will learn how to navigate the U.S. legal system and gain an understanding of intellectual property implications pertaining to the arts. Additionally, students will begin to think, speak, and act in an informed manner when dealing with legal matters, thus enabling them to better identify potential legal issues, recognize when to seek professional legal advice, and be successful artists operating within the domains of business and the law. Topics include: navigating the legal system, intellectual property, contracts, business organization and start-up, taxation, etc.

**Prerequisite:** 4th semester standing

AA 325: Arts Entrepreneurship & Professional Photography

1 Credits

AA 325 Arts Entrepreneurship and Professional Photography is an entrepreneurially oriented course, which introduces students to basic ethical professional business practices in photography. Students will learn the foundational knowledge necessary to understand key issues and to remain current as they pursue a professional career in photography or related fields. The course closely follows the best industry practices defined by the principal respected professional photographic organizations such as the American Society of Media Photographers. Professional photographers commonly work as freelance artists and technicians. Such freelance work is by nature entrepreneurial, which presents substantial challenges for creatively motivated students after graduation. This course will augment the creative focus of their arts education with the business realities they will inevitably face in their working life. It links industry best practices with the ethical behaviors necessary to establish and preserve professional reputations.

AA 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

AA 401: International Arts Minor Final Project

1-3 Credits

The final project required for the International Arts Minor. AA 401AA 401 International Arts Minor Final Project (1-3) The requirements for the International Arts Minor specify that the course applied toward the minor reflect a coherent course of study constructed around a geographic, chronological, or thematic concentration. Also required for the minor is a culminating project that relates to the chosen concentration. The final project is intended to capitalize on the knowledge and experience gained from the prerequisite components of the minor. The topic of the project will be chosen by the student in consultation with the person in charge of the minor. Work toward completion of the project will be overseen by
the person in charge of the minor with advice or assistance from other member(s) of the faculty as appropriate. For the purpose of the minor, the arts are very broadly defined to include topics such as the visual arts, architecture, design environments, theatre, music, and literature so most any creative endeavor may be considered for the subject of the final project. The project may result in formats such as a written paper, a work of art, an exhibition, a recital, or a musical composition as long as it conforms to the intent of the requirement for the minor. It is anticipated that the subject of most projects will be cross-cultural or multicultural in nature. For example, a research paper might be thematic such as an intercultural comparison of adaptations of a Greek myth. A studio project might be technical, such as the wood firing techniques employed by Japanese ceramists. The requirements for the International Arts Minor specifies a project of at least one (1) credit. AA 401 International Arts Minor Final Project will be offered for one (1) to three (3) credits to accommodate students who may been more than one (1) credit to complete the minor and for those who may propose a project worth more than one (1) credit. AA 401 may not be repeated.

**Prerequisite:** A&A 100 and completion of at least 12 credits toward the International Arts Minor

**Bachelor of Arts: Arts**

**AA 410: Interdisciplinary Digital Studio Capstone I**

4 Credits

Provides arts and design students an opportunity to conceptualize a digital art and design undergraduate thesis. AA 410 Interdisciplinary Digital Studio Capstone I (4) This course is the first part of a two-course undergraduate digital arts and design thesis. The course will integrate particular methodologies and approaches rather than discipline-specific subject matter. Each student will have the opportunity to identify the primary issue of theoretical concern based on his/her personal interest, and pursue research in a rigorous, in-depth manner. The preparation and initiation of the digital arts and design undergraduate thesis will occur within a collaborative team-based studio environment. Students in AA 410 will begin to research and synthesize interdisciplinary understandings through the exploration of critical, theoretical, and historical perspectives of digital media. This understanding will foster the spirit of in-depth arts and design inquiry and research, and will build upon arts and design awareness, skills, and methods introduced in previous courses. These explorations are supported by the advanced theoretical topics and ideas being presented in ART H/ART 476: History and Theory of Digital Art, which students will have already completed or will be taking concurrently. The student will integrate studio and theory while creating a significant work of digital art or design. The student will work with a faculty adviser in addition to the instructor of record for the course. The adviser will participate in the public critiques of the student’s work.

**Prerequisite:** A&A 410

**AA 424: Arts Entrepreneurship Capstone Research Project**

3 Credits

Mentored research on an arts venture idea equips students for immediate, informed, individually specific action upon completion of the program. AA 424 Arts Entrepreneurship Capstone Research Project (3) This course functions as the impetus for students to bring their specific venture idea(s) into being, by researching the geographic region where they want to operate, using the actual infrastructure necessary to their specific project. By incorporating the acquired knowledge gleaned from previous courses as applied knowledge towards their chosen venture, the students will be operating literally as the CEO, while being mentored and guided through the process. This course is a mechanism for integrating and implementing the feasibility and marketing strategies developed in the previous courses, thus equipping the students for immediate, informed, individually specific action upon completion of the program.

**Prerequisite:** A&A 322 and A&A 323

**AA 494: Research Project Courses**

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

**AA 494H: Research Project Courses**

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

**Honors**

**AA 495: Internship**

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

**AA 496: Independent Studies**

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.
AA 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

AA 497B: Special Topics
1 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Arts and Architecture Administrative (AAADM)

AAADM 122: Introduction to Graphic Storytelling
3 Credits
Introduction to Graphic Storytelling is a studio exploring the visual language of comics and graphic novels. Assignments will include writing and drawing exercises, and short and long-form comics projects. Students will study the formal concerns of visual sequence and storytelling, layout and lettering, and traditional drawing materials. Subjects of study and discussion will include contemporary comics and graphic novels, comprehensive critical response, creative ideation and development, and the history and theory of sequential art. Through exercises, projects, readings, discussion, and communal feedback, students will become develop their own visual and narrative process for producing graphic narratives.

Asian American Studies (AAS)

AAS 100: Introduction to Asian American Studies
3 Credits
An introduction to the history, literature, and culture of Asian America.

Cross-listed with: AMST 160
Bachelor of Arts: Humanities
United States Cultures (US)
General Education: Humanities (GH)

AAS 428: Asian American Literatures
3 Credits/Maximum of 6
A seminar on the literatures and cultures of Asian America, with attention to forms of geographic, historical, and ethnic diversity.

Cross-listed with: ENGL 428
Bachelor of Arts: Humanities
United States Cultures (US)

Asian Studies (ASIA)

ASIA 3: Introduction to the Religions of the East
3 Credits
Religious experience, thought, patterns of worship, morals, and institutions in relation to culture in Eastern religions. RLST 3 / ASIA 3 Introduction to the Religions of the East (3) (GH;IL;BA) This course meets the Bachelor of Arts degree requirements. This course will explore the foundations, development, and diversity of religious traditions in Asia, focusing mostly on Hinduism, Buddhism, Confucianism, Daoism, and Shinto. It is organized according to two sections: Foundations and Developments. The Foundations section provides an introduction to the worldviews and practices of Eastern teachings. We will also discuss the structure of society, the social expectations on individuals based on gender and class, and rituals, which expose us to rich mythologies or intricate ceremonies. The second section, Developments, traces the evolution of religious doctrine and practice through history. Here, we learn to distinguish among large and small-scale movements and schools, and to familiarize ourselves with the geographical scope of each religion in South, Southeast, and East Asia. An abiding emphasis in this course will be on how to read and interpret the varied scriptures and primary texts of these religions.

Cross-listed with: RLST 3

General Education: Humanities (GH)
GenEd Learning Objective: Global Learning
GenEd Learning Objective: Integrative Thinking

ASIA 4: Introduction to Asian Literatures
3 Credits
Comparative interpretations of narrative, drama, lyric, and other writings from East Asia and other regions, viewed as world literature.

Cross-listed with: CMLIT 4
Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures
International Cultures (IL)
General Education: Humanities (GH)

ASIA 83S: Asian Studies First Year Seminar
3 Credits
The meaning and advantages of a Liberal Arts education in context of a specific discipline. ASIA 083S Asian Studies First Year Seminar (3) (GH;IL;BA) This course meets the Bachelor of Arts degree requirements. This course provides an introduction to the meaning and advantages of a liberal arts education in the context of Asian Studies. Through reading, discussion, research, and writing, students in this course will develop many of the basic skills central to a liberal arts education. The specific topic will vary by instructor, but will address one or more countries of Asia. Materials may include works of fiction and literary criticism, historical documents and analysis, or other scholarship and primary materials related to the specific discipline of the instructor. Through reading, discussing, and further exploring such materials, students will
build their skills of critical analysis, research, and argumentation, as well as enhancing their intercultural and international perspectives. The course fulfills the first-year seminar requirement as well as a general education or a Bachelor of Arts humanities requirement.

Bachelor of Arts: Humanities
International Cultures (IL)
First-Year Seminar

GenEd Learning Objective: Global Learning

ASIA 100: What is Asia?
3 Credits

An introduction to the history, literatures, politics, and cultures of Asia.

Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures
International Cultures (IL)
General Education: Humanities (GH)

ASIA 101N: Sports in Asia
3 Credits

The history and contemporary practice of athletics in Asia shows that sports are much more than just games. Taking a multi-disciplinary approach to the study of sports in Asia, this course will examine what meanings have been attached to the participation in and planning of athletic events and institutions by Asian peoples and nations. The course will begin with a historical perspective, examining the place of traditional athletic practices, then tracing the introduction of Western-style athletics to various Asian countries in the 19th and 20th centuries and their incorporation into programs of national development. The second part of the course will focus on the international relations of sports mega-events like the Olympic Games and the FIFA World Cup. The third part will focus on the sociology of sports: what meanings do athletic activities and competitions hold in Asian societies, how does that shape people’s behavior, and how does it compare to Western societies? Finally, the course will include an anthropological component that seeks to understand Asian societies in new ways by focusing on specific athletic activities, such as Japanese baseball and the Beijing Olympics, and by tracing the changing meanings of Asian sports like judo and karate as they spread to other parts of the world. The aim of this course is not only to build understanding of distant places and disparate peoples, but also to gain new perspectives on our own society through the shared activity of sports.

ASIA 102: Asian Popular Culture
3 Credits

An exploration of popular culture in Asia. ASIA 102 Asian Popular Culture (3) (GH;IL)(BA) Asian popular culture encompasses a broad array of cultural practices and forms that shed light on the politics and societies of Asia. This course examines "low" or non-elite cultures that allow us insight into the day-to-day lives of the people who created or enjoyed them. Along the way, we will consider how popular culture intersects with issues such as politics, economy, and society, whether on a local, national, regional, or even global scale. Through examining the contested meanings and presentations of popular culture symbols and forms, students will be introduced to the diverse media through which popular culture has been disseminated and consumed. Themes and topics will vary depending on the instructor, but may include cities and urban culture, commercial cultures, television and theater dramas, film, anime, digital video, mass literature, comics, game shows, video games, youth cultures, gender and its representations, martial arts, popular religion, food, and net cultures and social media.

General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Global Learning
GenEd Learning Objective: Key Literacies

ASIA 103: Introduction to Hinduism
3 Credits

Historical overview of the development of ideas that forms the basis of the south Asian religious culture. ASIA 103 / RLST 103 Introduction to Hinduism (3) (GH;IL)(BA). This course meets the Bachelor of Arts degree requirements. We begin with a discussion of the pre-Vedic Indus Valley civilization reflecting upon its influence on later south Asian cultures. The course then traces how the Vedic ritual tradition, and the Vedantic philosophy gave rise to the concepts of Karma (individual action and its underlying motives), Samsara (the cyclical view of life), and the Atman (nature of the individual). Moreover, we pause here to explore the relationship between the emerging idea of civic responsibility (Dharma) and its relationship to the Vedic and Vedantic thought. Next we examine how the Vedantic philosophical tradition may have incorporated a diversity of philosophical views including both Brahmanical as well as non-Brahmanical traditions of Buddhism, Jainism, Lokayata, etc. The class will read excerpts from the religious literature of the era. The first part of the course concludes with selected readings from the Bhagavadgita, Mahabharata, as well as some Buddhist and Jaina texts. All of these readings will be in English. Class discussions focus on how the classical Hindu worldview may have emerged from the philosophical foundation of the Vedantas, and later built the groundwork for the Hindu Bhakti (devotion) movements. The second part of the course focuses on the various regional Bhakti traditions from the middle ages onwards, analyzing how the regional cultures may have related with the great classical Brahmanic tradition. The course concludes with a discussion of how Hinduism in the post 1800s responded to the forces of colonization, exploring how the different religious and cultural traditions of south Asia may have interacted with other religious cultures (both indigenous and foreign) like Buddhism, Jainism, Islam, and Christianity. We shall read excerpts from noteworthy thinkers and writers of nineteenth and twentieth century to understand the very interesting dynamics between
religion and civil society of more recent times. This course concludes with a discussion of how Hinduism in the post 1800s responded to the forces of colonization, exploring how the different religious and cultural traditions of historical south Asia may have interacted with other religious cultures (both indigenous and foreign) like Buddhism, Jainism, Islam, and Christianity. We shall read excerpts from noteworthy thinkers and writers of nineteenth and twentieth century to understand the very interesting dynamics between religion and civil society of more recent times.

ASIA 104: Introduction to Buddhism

3 Credits

A general survey of the basic doctrine, practice, and historical development of Hinayana and Mahayana Buddhism. RLST 104 / ASIA 104 Introduction to Buddhism (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course is a general survey of the historical development, basic doctrines, and practices of Hinayana, Mahayana, and Vajrayana Buddhism. The course is structured around the "Three Jewels" of Buddhism: Buddha, Dharma, and Sangha. That is to say, we will learn about the Buddha as a historical figure and spirit; we will come to understand the basic elements of his doctrinal teachings; and we will examine the community of followers who have practiced his teachings. Special attention will be paid to the various "geographies" of Buddhism as expressed through different cultures in ancient India, Southeast Asia, and East Asia. At the conclusion of the course, we will encounter Buddhism as a relatively new cultural force in America. The course revolves around discussion of key issues in the philosophy, ethics, and theology of various forms of Buddhism.

ASIA 105: War and Memory in Asia: Twentieth Century and beyond

3 Credits

The history and memory of the Hiroshima and Nagasaki, Nanking massacre, the Cambodian genocide and other forms of mass violence are often taught separately in different disciplines within Asian Studies and beyond. This course will examine them together through the various ways different Asian societies dealt with, experienced and understood them. Using the extensive literature on the history of genocide, this course further suggests the mutual impact of these entangled tragic events. Specific content will vary according to individual instructor, but topics may include victim cultures, ethnic cleansing, trauma, human rights, dark tourism, memorials, and architecture, as well as the general impact of these tragedies on Asian and global politics.

ASIA 106N: Asian Traditions of Health, Medicine, and the Body

3 Credits

This course provides an introduction to historical and contemporary traditions of health, medicine, and the body from various parts of Asia. Potentially including such diverse topics as Ayurveda, yoga, acupuncture, taiji, qigong, Tibetan medicine, and other systems of practice, the course emphasizes comparative and multi-disciplinary frameworks. The semester finishes with sections on the modernization and globalization of Asian traditions, including their practice in the US. Throughout, the class will approach all Asian ideas and practices on their own terms, encouraging comparison among the various traditions as well as with contemporary American ideas about health and wellness.

ASIA 120: South Asia: A Literary History

3 Credits

The course traces the cultural history of South Asia by studying its literary tradition from ancient to modern times. ASIA 120Y South Asia: A Literary History (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. Asian 120Y provides undergraduate students a taste of the inherent pluralism of South Asian culture and the readings emphasizing the broad idea of plurality. The readings and discussions may include, but not necessarily remain confined to a) architectural b) literacy c) musical etc. traditions, depending on the research interests of the individual faculty members teaching the course. Asian Studies undergraduates should be able to recognize both the richness of diversity, as well as the nature of the continuity of the cultural tradition in South Asia that has fascinated outsiders for centuries.

Bachelor of Arts: Other Cultures
International Cultures (IL)
General Education: Humanities (GH)

ASIA 176: Survey of Indian History
3 Credits
Survey of cultural, institutional, and political history from ancient times to the present. HIST 176 Survey of Indian History (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course surveys the history and civilization of India or South Asia from the earliest times to the modern period. The goal of the course is to enable students to form a comprehensive conception of the various facets of Indian or, South Asian civilization in a historical context. This course is an excellent foundation for the history of modern India and also complements a variety of existing courses on the history of the non-western world. In addition to satisfying the GI requirement, HIST 175 satisfies the general credit requirements for the history major or minor, including the "non-western" component of the major. Non-majors may use this course to satisfy a general education humanities selection. Typically, students will be evaluated on in-class quizzes, written exams, participation in class discussions of assigned readings and critical reviews of books. This course is offered once every year and has an enrollment of 50 students.
Cross-listed with: HIST 176
Bachelor of Arts: Humanities

ASIA 177: The Rise of Modern Southeast Asia
3 Credits
Study of Southeast Asia from the rise of early empires to the present.
Cross-listed with: HIST 177
International Cultures (IL)
General Education: Humanities (GH)

ASIA 181: Introduction to the Religions of China and Japan
3 Credits
A survey of the history, philosophy, and cultural impact of the major Far Eastern religions: Confucianism, Taoism, Buddhism, and Shinto.
ASIA 181 / RLST 181 Introduction to the Religions of China and Japan (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. This is an introductory survey of the historical, philosophical, and cultural dimensions of the major religious traditions in China and Japan. The course delineates and highlights the organic view of the universe and the hierarchical ordering of society in East Asia. It traces the evolution of the major traditions (Confucianism, Daoism, Buddhism in China, as well as Shinto, Buddhism and Confucianism in Japan) by examining their
ideas of humanity and nature, morality and society, and metaphysics and ethics. It also reveals the interaction and interrelational between ideology, politics and society, and their impact on the development of the major religious traditions in history. A major focus is the relation between the popular and folk practices and beliefs of esoteric Daoism, devotional Buddhism, and fertility-cult Shinto and the elite and literate doctrines and precepts of Confucianism, philosophical Daoism, and monastic Buddhism. The course also devotes some attention to the influence of religion on various facets of culture, such as medicine, science, literature, art and food. The objectives of the course are first to acquaint students with the religious beliefs, values, and practices of China and Japan by looking at their historical formations and contemporary manifestations, and second, to locate them in a global and comparative context.

ASIA 182: Asian Trade: Economy, Industrialization and Capitalism in Asia
3 Credits

An historical overview of economy, industrialization, globalization and capitalism in Asia from the 16th century to present. ASIA (HIST) 182 Asian Trade: Economy, Industrialization and Capitalism in Asia (3) (GH,IL) (BA) This course meets the Bachelor of Arts degree requirements. Asian economies have experienced spectacular growth in the second half of the 20th century. But this growth is part of a longer story of Asian commerce and trade and its relationship to and integration with (and, in some cases, isolation from) global patterns of exchange. Moreover, these exchanges are best understood alongside the politics, society, and culture—sometimes local, sometimes regional—that shaped trade and business in entrepots, capitals, and hinterlands throughout Asia. This course begins with a historical exploration of the economic development and social change and ends by asking what lies in store for one of the world’s fastest growing economic regions. By offering a historical frame for Asian economic experience, students will gain insight into the strengths and weaknesses of prevailing theories that tend to overstate the importance of society and culture in the Pacific War’s causes, contexts, realities, and aftermath. This course examines the role of society and culture in the Pacific War’s causes, contexts, realities, and aftermath.

ASIA 184: Society and Culture in the Pacific War
3 Credits

A survey of the Silk Roads and maritime routes connecting premodern Europe and Asia, and the cultures that flourished along them. What were their "information highways" that connected people and cultures across the premodern world? Taking crosscultural communication and connectivity as its central themes, this course explores the central role that the Silk Roads and Indian Ocean maritime routes have played throughout Eurasian history. It provides a historical survey of the land and sea trade networks connecting Europe and Asia, and the cultures that have flourished along them. The course explores connections between China, Rome, Byzantium, Persia, the Mongol Empire, Southeast Asia, and Central Asia. It covers exchanges of art, religion, cultural, technological, and economic goods. It also includes discussion of ethnic conflict and cultural identity in Central Asia, the importance of global trade routes in shaping the modern world, and the representation of the Silk Roads in contemporary popular culture. The focus of the course is to provide students with an appreciation of the interconnectivity of the premodern world, as well as the vital role of the trade system in the development of the major civilizations of Eurasia.

International Cultures (IL)

ASIA 187: Global Taiwan
3 Credits/Maximum of 3

This course examines the historical, cultural, and ethnic dimensions of Taiwan over several centuries to the present day. Taiwan’s rich history and important economic role in contemporary East Asia clashes with
its exclusion from international organizations like the UN and WHO and resultant international isolation. This class will examine the history and culture of Taiwan to better understand how it got here and where it might go. Topics covered will include the Dutch incursions in "Formosa," Japanese colonization, years of military dictatorship and cross-strait tension, rebirth as one of the four "Asian Tiger" economies, and its current rowdy democracy and warming ties with the People's Republic of China. We will also explore the literature, film, and culture of this multi-ethnic, multi-lingual, and multi-cultural island.

ASIA 189: Illicit Asia: An Alternative Introduction to Asia
3 Credits

A historical introduction to unlawful, illegitimate and forbidden ideas, goods, people and places in modern Asia. ASIA (HIST) 189 Illicit Asia: An Alternative Introduction to Asia (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course examines patterns of illicit ideas, goods, peoples and places of modern Asia. Traditional introductions to Asia emphasize a history of the powerful, of the center, of the victors. This course seeks to invert the customary narrative by telling the tale of Asia's early modern and modern past from the perspective of those working against the interest of the elite, popular and mainstream. At the same time, traditional introductions to Asia often risk perpetuating stereotypes of a mysterious, sinister Orient. In fact, dominant discourses both cross-culturally (such as Orientalism) and within a given society (such as elite nationalism) have tended to criminalize or pathologize all kinds of countercultures, alternate economies, non-normative sexual practices, and so forth. But attitudes to orthodoxy and legality may depend on one's relationship to the dominant system, and the dominant narrative. This class seeks to reveal those phenomena in a different light, according to their own contextual logic. Often omitted or ignored, understanding why illegal activity occurs, how it occurs and who the relevant actors are can offer an extremely potent introduction to the roles traditional boundaries of political, cultural and societal activity played in the shaping of Modern Asia. Specific content and regional focus will vary according to individual instructor; but the course will be divided into four general sections that focus on forbidden ideas, goods, places and peoples. Topics may unpack heterodox beliefs like secret societies or anarchist movements; trace the production and distribution of illegal goods like opium or counterfeit items; map out notorious places like the Golden Triangle or the internal workings of human traffickers; or examine the practices and scope of criminal elements like pirates or brigands. The objectives of the course are not only to learn about the illicit activities across modern Asia, but are also organized to encourage us to rethink the way we understand standard interpretations of the past and the factors that go into those perceptions. Students will also consider the changing justifications for and definitions of what is legal, normal and orthodox.

ASIA 200: What Are Asian Languages?
3 Credits

Introduction to the interrelated notions of language, interaction, and culture centering on regions and languages covered in Asian Studies. The purpose of the course is to introduce the interrelated concepts of language, interaction, communication, and culture. The focus is on Asian languages (Korean, Japanese, Chinese, Persian, Hindi, Punjabi, and Urdu) spanning the regions addressed by the Department of Asian Studies. Students explore which concepts in language and culture are universal (e.g., basic reference, time, space) and which are language-culture specific. The course examines what constitutes human language and how human language differs from other forms of communication, e.g., animal communication, artificial languages, and computer-related languages. At issue is the concept of meaning, gradations of meaning, nuances of meaning, literal meaning, implied and inferred meaning, and so forth. The course provides an overview of the essential branches of linguistics (phonetics, phonology, morphology, semantics, syntax, and pragmatics) initially using English examples to illustrate these areas of linguistic focus. English is also used to illustrate the classical notions of parts of speech. The course provides an overview of the geographic regions in which each of the seven languages are spoken, as well as an overview of writing systems, the notions of standard languages, official languages, government oversight of language purity, and dialects. The course examines pragmatics, including basic theories of politeness. Students will gain an in-depth understanding of some of the socio-political underpinnings of the notions of "standard" language, deviant language, and dialects. Students will gain a basic understanding of the types of concepts in language and culture that are universal (e.g., basic reference, time, space) and those that are language-culture specific. Students will be expected to discern the multitudes of ways that meaning is created in language and interaction. This course is open to any students interested in learning about the language-culture interface as it applies to languages offered in Asian Studies (plus Persian). Students of any proficiency level of any of the target languages are welcome, from absolute beginners to heritage and/or native speakers.

**ASIA 402: Language, Culture and Cognition in East Asian Context**

**3 Credits**

This course is a linguistic introduction to the relationship between language, culture, and cognition with a focus on Chinese, Japanese, and Korean. In this course, we study the cognitive linguistic view that human cognition is fundamentally embodied and shaped by various figurative processes such as metaphor and metonymy grounded in our bodily and cultural experiences, and that human thought and language are fundamentally metaphorical in nature. We examine how we think and speak figuratively and conceptualize our experience metaphorically in everyday life, and compare the languages in terms of cognitive universals and cultural variations. The objectives of this course are threefold: (1) to lead language students to a linguistic approach to language analysis so that they learn about how individual linguistic expressions fit into a coherent linguistic system; (2) to enable them to see how linguistic structures reflect underlying cognitive, conceptual structures which are derived from the interplay between human embodiment and cultural environment; and (3) to provide them with a broad perspective on similarities and differences among Chinese, Japanese, and Korean as components that form a coherent category known as "East Asian".

Class work will include some lecture but will emphasize guided discussions, literature review writings, student presentations, and research papers. This interactive approach is intended to encourage students participation, involvement, and cooperation in learning, to help them understand the relationship between language, culture, and cognition, and to assist them in developing both analytic and expressive abilities. This course is designed to count as a BA "Other Cultures" and International Culture. Students can take this course as long as they have expertise of the instructing professor. (Potential topics might include, for instance, an examination of human rights policy in Asia, an exploration of maritime empires in the premodern period, an historical archeology of the Islamicization of western Asia, a literary investigation of vernacular literatures, or an art historical examination of urbanization and the built environment in major Asian cities.) Regardless of focus, extensive topic-specific readings will be required, and the goal of the course will be to help students develop and polish advanced research skills in Asian Studies.

ASIA 414: Chinese Language, Culture and Society
3 Credits/Maximum of 3

The study of Chinese language and culture and a perspective on the way of life in contemporary Chinese society. Through this course, the students are introduced to a cognitive approach to the study of Chinese language and culture and a broad perspective on the way of life in contemporary Chinese society. In particular, we will study how the interaction between Chinese language and culture frames the worldview of Chinese speakers, how the usage of the Chinese language manifests the underlying conceptual structure, which in turn is shaped by the physical (including bodily) and cultural experience of its speakers, and how conventional usage of linguistic expressions of Chinese reflects, and possibly influences, the ways in which Chinese speakers see or conceptualize the world. We will focus on conventionalized expressions, which include compound words, idiomatic phrases, and proverbial sayings, in the Chinese language, and study the Chinese conventional ways of talking about reality, both external and internal, as windows into Chinese culture and cognition. More generally, we will try to understand the embodied nature of human cognition as we see how abstract thought is grounded in bodily experience in and with the physical and cultural world. We will also look at various domains of life in contemporary China in order to gain a better understanding of Chinese society. The objectives of this course are threefold: (1) to lead Chinese language students to a linguistic approach to language analysis so that they learn about how individual linguistic expressions fit into a coherent linguistic system; (2) to enable them to see how linguistic structures reflect underlying cognitive, conceptual structures which are derived from the interplay between human embodiment and cultural environment; and (3) to provide them with a broad perspective on contemporary Chinese society.

ASIA 415: China Beyond China
3 Credits

Study of modern and contemporary Chinese culture in its diversity and its intercultural contexts. CHNS 415 China Beyond China (3) (IL)
In order to begin to understand Chinese culture, we cannot treat it as a monolithic, unified whole. This course will give an introduction to modern and contemporary Chinese culture (focusing on the 20th and 21st centuries) by paying special attention to China's inner diversity, as well as the continuous shaping of Chinese culture in contact, dialogue, and tension with other cultures. Through the study of literary texts, films, and other cultural material - as well as a small number of theoretical essays - this course will focus on: 1) Chinese culture in its variety by focusing on Chinese cultural spheres beyond the People's Republic (Taiwan, Hong Kong), the Chinese diaspora, as well as other ethnicities and cultures within Mainland China; and 2) the ways in which Chinese modernity was impacted by intercultural impulses, as well as the recent self-representation of China in the context of globalization. Course Objectives include: 1. Understand modern and contemporary China in its cultural diversity, as well as shaped by intercultural and global processes. 2. Critically analyze processes of cultural contact and the representations of cultural differences. 3. Think critically about globalization with its impact on such categories as the local and the national. 4. Question your assumptions about the world, re-examine your own points of view, and understand cultures and value systems that may different from (or be shared with) your own.

ASIA 416: Gender and Sexuality in China
3 Credits

Study of gender roles and the imaginary of sexuality in the literary, filmic, and artistic production of modern China. CHNS 416 Gender and Sexuality in China (3) (IL) This course explores gender roles and the imaginary of sexuality in the literary, filmic, and artistic production of modern China (from the end of the 19th century up to today), paying attention also to developments in Chinese cultural spheres beyond the People's Republic, such as Taiwan, Hong Kong, and the Chinese diaspora. This course will use the representation of gender, sex, and sexuality as a lens through which modern and contemporary Chinese culture can be understood in its historical, social, and aesthetic changes. The analysis of representations of gender and sexuality throughout the class will focus on literary and filmic texts, as well as art, rather than on theoretical work on gender and sexuality (in China or in general). Course Objectives include: 1. Critically assess the complex construction of gender roles and sexuality in modern and contemporary Chinese literature and film. 2. Reflect critically on different ways of understanding and representing gender difference. 3. Critically assess the connections between gender and sexuality and changing political, historical, and cultural contexts. 4. Question your assumptions about gender and sexualities in the context of cultural difference, understand cultures and value systems that may be different from (or be shared with) your own.

ASIA 417: The Warrior, the Courtesan and the Ghost in Classical Chinese Novels
3 Credits

This course provides an introduction to major classical Chinese novels by focusing on three character types: the warrior, the courtesan, and the ghost. CHNS 423 417 The Warrior, the Courtesan and the Ghost in Classical Chinese Novels (3) (IL) A narrowly defined notion of modern literature is a relatively recent phenomenon that dates back only to the early twentieth century in the Chinese context. There is, however, a long tradition of the vernacular novel that remains influential till today, in spite of its marginalization by the Western-influenced Chinese Enlightenment project. This course provides an introduction to major classical Chinese novels by focusing on three character types: the warrior, the courtesan, and the ghost. The warrior is commonly found in historical romances, tales about errant knights and assassins, and martial arts fiction. Although the typical setting for the courtesan is in novels about prostitution (Xia Xie Xiaoshuo), this course will relate this...
figure to other female types in various domestic space, thereby tracing the genealogical connections between the domestic fiction and the courtesan fiction. The ghost can be found in Accounts of the Strange (Zhi Guai) and Tales of the Miraculous (Chuan Qi). This course will relate this figure in these narrative genres with other types of the supernatural being, such as Gods and Demons. Most readings will be drawn from the Mind-Qing period (14th - 20th c) but modern and contemporary literature as well as visual or media culture that consciously continue or rewrite these narrative traditions will be considered as well. All readings and class discussions will be in English. Knowledge of Chinese or Chinese literature is not assumed or required. From year to year the content we cover might change, but this course will always explore: 1) Major classical Chinese narrative traditions that are radically different from the Western-influenced narrative modes of the twentieth century. 2) Pre-modern practices of literary reading and criticism and pre-modern notions of literacy, literature, and modes of circulation. Course Objectives include: 1) Critically analyze major texts and genres of the classical Chinese novel. 2) Understand pre-modern practices of story-telling, literary circulation, reading, and criticism. 3) Think critically about pre-modern societies and their connections with the contemporary world.

ASIA 418: Confucius and the Great Books of China

3 Credits

This course familiarizes students with the critical texts and intellectual cultures of Warring States and early imperial China. CHNS 418 / ASIA 418 / HIST 482 Confucius and the Great Books of China (3). This course exposes students to the key texts, thinkers, and ideas that form the foundation of the Chinese classics and classical period, providing an integral foundation for the study of Chinese history, culture, or literature. While the emphasis is on the texts and their main themes, the course will encourage historical engagement with the texts by placing them into a context of competing cultural, social, political trends. Readings may be grouped around categories of teachings such as Confucianism, Buddhism, and Daoism, or around thinkers such as “(Confucian) ritualists,” “statesmen,” “military strategists,” “rebels,” ”recluses,” and “spiritual leaders.” Students will learn how each of these types of teachings and thinkers related to each other, as well as how they responded to the emergent, centralized political order of the day. This will help students better understand many of the recurrent intellectual, political, and religious themes that arise in later Chinese history as well.

ASIA 419: The Chinese Rhetorical Tradition

3 Credits/Maximum of 6

Study of the rhetorical works in ancient China as well as multiple facets of modern Chinese rhetoric. CHNS 419 The Chinese Rhetorical Tradition (3 per semester/maximum of 6) (IL) (BA) This course meets the Bachelor of Arts degree requirements. This course surveys the Chinese rhetorical tradition dating back two and a half millennia. Rhetoric is defined here as the study and practice of artful means of communication, including poetic, expository, and argumentative modes. The class will first delve into the works of competing intellectual schools in pre-imperial China (pre-221 BCE), which set a corner stone for thoughts and practice of communication in the imperial period (221 BCE - 1918). These schools, including the Daoist, the Confucian, and the Legalist, developed their rhetorical notions through engaging with the political, intellectual, and ethnic Other. From here the class will examine the multiple facets of modern Chinese rhetoric, which has undergone a continual contact and conflation with other rhetorical traditions in the global contact zone. The class will focus on topics such as feminist discourse, Chinese-American rhetoric, and the teaching of writing, which bear direct implications on our contemporary social life.

ASIA 424: Transnational Korean Literature

3 Credits

Exploration of seminal Korean texts, including poetry, fiction, autobiography, and criticism, from the early twentieth century to the contemporary era. This course provides a comprehensive overview of modern Korean literature within a transnational context. As we learn how to critically analyze seminal Korean texts, we will locate them in the social, political, economic, and cultural conditions under which they were produced and received. In grappling with some of the fundamental issues they raise; including colonialism, migration, national division, war, gender relations, developmentalism, urbanization, democratization, and contemporary consumer culture; we will also seek to situate these writings in the Korean vernacular within the larger context of global modernity. Rather than take Korean literature and global modernity as given or apart from each other, we will attend to their intersections by raising such questions as: How did modern experiences, constructed through the interface with unfamiliar Others, change preexisting ways of writing and reading? How did foreign occupations affect the formation of a national literature? In what ways do Korean writers’ representations of the inter/national events and phenomena on and beyond the Korean peninsula at once enrich and complicate empirical investigations into modern histories of Korea, East Asia, and the world? In an increasingly borderless world, can we draw a boundary around what is called “Korean” literature? In parallel with these questions, we will further discuss why and how to engage in literary practices in the current age of digital reproduction. Instruction and all materials will be in English. No preliminary knowledge of Korean history or language is required for taking this course.

ASIA 425: Global Korean Cinema

3 Credits

Exploration of Korean cinema from the early twentieth century to the present, with an emphasis on its global/local dynamics. This course offers an introductory overview of Korean cinema. As we trace its history from the colonial period to the current "Korean wave," we will also engage with film criticism, the trans/national contexts of film productions, the particular aesthetics of selected auteurs/genres, and local/global receptions of Korean cinema. Our discussion of formal elements and key issues featured in these films, modernity, colonialism, division, nation, class, gender, identity, tradition, ideology, desire, violence, and migration, among others, will be informed by readings of secondary sources and theoretical works, as well as literary materials produced during the same period. Throughout our analyses, we will seek to contextualize the cinematic texts within moments of major shifts not only in modern Korean history but also in the transnational film industry and screen culture. In pursuing a broad and detailed perspective of Korean cinema, this course will ultimately enrich, and simultaneously complicate, our understanding of Korea, cinema, and the world. Instruction and all materials will be in English. No preliminary knowledge of Korean history or language is required for taking this course.

ASIA 431: Courtly Japan

3 Credits

Focused study of aristocratic society and culture of Heian period Japan. JAPNS 431 (ASIA 431) Courtly Japan (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. The Heian period of Japanese history saw the apex of a refined court culture. Through readings of primary and secondary sources, this seminar-style course will explore the activities, norms, and structures of courtly society in Japan, from the centralization of imperial power in the 8th century through the court's political marginalization in the late 12th century. We will pay particular attention to religion, the arts, politics and governments, gender, and the gradual rise of samurai power in the shadows of the court. This course is intended to provide an introduction to the political, social, economic, and cultural life of the Heian court of ancient Japan. The goals of the class are not only to gain an understanding of a time and place far removed from our own, but also to develop the skill of building such an understanding through primary and secondary sources, both written and visual. Students in this class will take on the role of historian or literary critic themselves, thinking critically about assigned texts and making their own interpretations of their meanings. Through reading, discussions, and writing, students will enhance their ability to think critically and to express their ideas clearly in both speech and writing. The course is intended to deepen student's appreciation of the cultural production of ancient Japan, to help them understand value systems that may differ from those predominant in western cultures, and to assist students in developing both analytic and expressive abilities. The course is designed to be suitable for all students generally interested in Japan or in various fields of humanistic study.

ASIA 432: War and the Warrior in Japan

3 Credits

Survey of the role of warfare and the warrior in Japan, with attention to changing cultural settings. Taught in English. JAPNS 432 (ASIA 432) War and the Warrior in Japan (3) (IL) This course is intended to provide an introduction to the social and historical roles of warfare, and the changing cultural figure of the warrior, in Japan. Some prior study of Japan (JAPNS 120 or JAPNS 121 or HIST 172) is required. All materials will be available in English. Students will learn about subjects like the causes of violence, culturally acceptable ways of resolving conflict, obligations of victor toward vanquished, expectations regarding the memory of the war dead, the ideal of the warrior as a cultural figure, and historical roles that Japanese warriors have played in ages of peace. Readings and screenings will cover several genres, such as film, historiography, history, documentary, classical epic, modern novel, and excerpts from Japanese history textbooks (in translation). The course, or individual units within the course, will be structured so that students develop an historical perspective, allowing them to understand the cultural contexts that have generated attitudes toward war and the warrior in Japan. In addition, students will learn to think critically about various media's techniques and aesthetics of representation, and will become more engaged, critical investigators of literature and related media. Readings and in-class discussion will focus on the image of the warrior as a cultural icon, exploring the many ways in which popular understandings of the warrior have changed over time, for instance, as popularized dramatics began to idealize warriors as moral exemplars in the late medieval period, and then as historical realities made the position of the warrior itself redundant in the early modern era. Class work includes some lecture but emphasizes guided discussions, group work, writing exercises, and some student presentations. This participatory approach is intended to deepen students' appreciation of the works, to help them understand value systems that may differ from those predominant in western cultures, and to assist students in developing both analytical and expressive abilities. Through critical
reading, group discussion and interpretive writing, students will hone skills for evaluating modes of cultural production and consumption in premodern and modern Japan. Evaluation will be through means such as in-class presentations, short writing assignments, midterms or quizzes, one analytic paper (3-7 pages), and in-class/on-line participation and discussion. The course is designed to be suitable for all students generally interested in Japan, or interested in various fields of humanistic study.

**Prerequisites:** ASIA 4; ASIA 100; ASIA 101; ASIA 102; ASIA 104; ASIA 172; ASIA 174; ASIA 175; ASIA 185; CMLIT 4; HIST 172; HIST 174; HIST 175; HIST 185; JAPNS 120; JAPNS 121; RLST 104; 5th Semester standing

**ASIA 433: Traveling Voices**

3 Credits

Transnational Writings of Japan: from Modern to Contemporary Eras .

JAPNS 433 (ASIA 433) Traveling Voices (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. Through literary and visual texts from modern to contemporary eras, this seminar-style course will explore a wide range of narrative voices of Japan, created by writers who are physically or figuratively dispersed in many directions within, towards, and away from Japan, and who therefore problematize "Japanese-ness" by dealing with cultural situations (e.g. identities, marginality) in their writings. Some Prior Study of Japan (JAPNS 120, JAPNS 121, or HIST 172) is required. Students will explore the rich cultural diversity in Japan and the Japan diaspora, and develop a further understanding of historical border crossings between Japan/East Asia and Americas/the West. They will become more aware of the reciprocal and transformative cross-cultural interactions in languages, literature, religions, economics, ideas, or political formations. They will learn how to think critically, in speech and writing, and develop writing analytic skills appropriate to their final paper project. Evaluation will depend on specific instructor practice, but will certainly emphasize guided discussions, some student presentations (alone or/and group), and writing exercises (especially final research project). A sample guideline might look like this: Class Participation/discussion, Response papers, Informal Presentation (pair or group up to three), Mid-term exam, Final paper presentation, Final Project

**Prerequisites:** ASIA 4; ASIA 100; ASIA 101; ASIA 102; ASIA 104; ASIA 172; ASIA 174; ASIA 175; CMLIT 4; HIST 172; HIST 174; HIST 175; JAPNS 120; JAPNS 121; RLST 104; 5th Semester standing

**ASIA 434: Beyond Anime**

3 Credits

The visual, tactile, and literary arts play key roles in how modern nation-states make sense of themselves and how they make sense of other nations. Japan provides one key example through which to observe the use and function of art to create not only the image and identity of a nation and national culture, but also the image and identity of other national cultures. In recent years, Japanese popular culture has been reborn around the world. A global generation has grown up watching anime and reading manga in Spanish, Chinese, Russian, and English. Beyond Anime is designed to contextualize the recent appropriation and dissemination of Japanese popular culture through the cyclical history of such appropriations through the modern period. In this way, the course will explore the precursors, antecedents, and contexts to our present cultural moment. Through film, photography, posters, matchbook-labels, textiles, industrial design, novels, and myriad other popular media, this seminar-style study of Japanese popular visual culture will help students see Japanese visual arts in terms that are local to Japanese aesthetics and through those that transcend local cultures. Drawing on the long history of illustrated narrative from scrolls to chapbooks, through film and photo essay, this course confronts the exoticist notion that Japan's arts have always placed a disproportionately heavy emphasis on the visual. Through comparative readings of cultural and visual material from Japan, this course will raise questions of aesthetic, cultural, and national difference. Specific topics will vary with instructor, but may include: the rendering of three dimensional space through perspective, the use of pictures in the service of narrative versus the use of pictures as narrative, and how notions of negative space promise deep insight and risk crass stereotypes.

**Prerequisite:** ASIA 4; ASIA 100; ASIA 101; ASIA 102; ASIA 104; ASIA 172; ASIA 174; ASIA 175; CMLIT 4; HIST 172; HIST 174; HIST 175; JAPNS 120; JAPNS 121; RLST 104; 5th Semester standing

**ASIA 440: Monuments of Asia**

3-9 Credits/Maximum of 9

An exploration of major Asian sites and monuments through a focus on their historical and cultural significance. ART H (ASIA) 440 Monuments of Asia(IL)(BA) This course meets the Bachelor of Arts degree requirements. In this course, major Asian monuments are introduced in their physical, historical and cultural contexts. Students are also exposed to various theoretical approaches through which these monuments will be studied. Some of the themes around which the course is structured include patronage, religious practice, cultural meaning, political relevance and the shifting meanings of monuments over time. Students will learn to understand and discuss ways of defining monuments, their formal character and lineage, historical and cultural contexts and their representation across space and time. Each semester monumental sites will be organized around a common theme such as, ldquo;Hindu and Buddhist Sites across Asia: Historical Significance and Contemporary Relevance,rdquo; ldquo;Idquo;Patronage and Religion,rdquo; Idquo;islam across Asia: Global Ideas and Local Contexts,rdquo; ldquo;Idquo;Political and Symbolic Centers in Asia: Between Early Modernity and the Nation State,rdquo; or ldquo;Early Modern Asia: Empire and the Built Environment,rdquo; Alternately, these topics will be incorporated within a multi-themed structure. The objective of the course is to expose students to the histories and cultures of Asia in a globalizing world. Another objective is to equip students with the methodological tools of art history as a discipline, even as they learn about specific monuments. The course will build on the foundation laid by survey courses in Art History, Architectural History and Asian Studies. Weekly readings will be assigned and discussed in class. The development of analytical and writing skills will be stressed, and grades will be based partly on essay exams and short response papers. In addition, students will write a research paper, to be completed by the end of the semester.

ASIA 457: Hiroshima & the Holocaust in History and Memory

3 Credits

The history and memory of the Holocaust and Hiroshima and Nagasaki are often taught separately in different disciplines. This course will examine them together through the various ways different societies remembered, understood and commemorated these. Using the extensive literature on the history of memory, this course further suggests ways in which these memories and histories affected and were entangled by each other. Specific content will vary according to individual instructor, but topics may include victim cultures, cold war nuclear history, trauma, human rights, dark tourism, memorials, architecture as well as the general impact of these tragedies on the fraught politics of memory in East Asia and the Middle East, or the way the memories of the tragedies were entangled with the civil rights and other struggles in American and global history.

ASIA 465: Democratization in Asia

3 Credits

A course which identifies components of democracy, such as definitions, measures, datasets, and the democratization process. ASIA (PL SC) 465Y Democratization in Asia (3) (IL) This class is an upper-level seminar on democratization in Asia. How do countries move from having an authoritarian regime to a democratic government? Why are some democratic governments stable while others are not? In this class, we will focus on democratization theory and how it applies to countries in Asia. This course is organized into two parts. In the first part of the course, we will discuss democracy and democratization theory. We will cover such components as: definitions, measures, datasets, and the different stages of the democratization process. In the second part of the course, we will apply these concepts and measures to specific Asian countries. Course topics will be explored through readings from textbooks, articles, datasets, and media sources. By the end of the course, students will have a deep knowledge about a wide range of Asian countries. Students will develop the skills to compare countries, will understand the democratization process within Asia, and will be able to generalize from their knowledge to evaluate democratization events around the world. Finally, students will gain a deeper understanding of what is democracy and how easy or difficult it is to install and maintain. This course fulfills the distribution requirement for comparative politics, as well as the advanced and related course requirements for Political Science majors. In addition, the course fulfills the supporting course requirement for International Politics majors and the related areas requirement for Asian Studies majors. Finally, the course fulfills the requirements for writing across the curriculum and other cultures.

ASIA 469: Government and Politics of South Asia

3 Credits

This course offers an overview of the politics of modern South Asia with specific focus on Afghanistan, India and Pakistan. ASIA (PL SC) 469 Government and Politics of South Asia (3) (IL) This course provides an overview of the politics of modern South Asia with particular attention to the experiences of Afghanistan, India and Pakistan. It examines theories of political and economic development and ethnic politics, the impact of the British colonial experience on South Asia, the rise of nationalism, and the emergence of independent nation states in the region. Three important themes are explored throughout the course: (1) the state of economic development in the three countries; (2) the relationship between identity politics and violence; and (3) the international relations of these countries, with particular attention to terrorism and nuclear policy. Course topics will be explored through readings from textbooks and assigned articles, articles from current news sources and, documentary films from the three countries. By the end of the course, students will have knowledge of the politics of Afghanistan, India and Pakistan and the political factors that have shaped their development over the past century. Students will acquire the tools necessary to evaluate critically the impact of war, the legacy of colonialism, and the challenge in building durable democratic institutions. This course fulfills the distribution requirement for comparative politics, as well as the advanced and related course requirements for Political Science majors. The course also fulfills the supporting course requirement for International Politics majors and the related areas requirement for Asian Studies majors.

ASIA 474: Early Modern Japan

3 Credits

Japanese history from 1580-1880. ASIA 474 (HIST 474, JAPNS 426) Early Modern Japan (3) Japan’s Tokugawa period can be difficult to grasp. It resembles a modern society in many respects but operated according to a logic of social organization different from that of most modern states. There was a collective sense of national identity, but its characteristics differed significantly from modern forms of Japanese identity. Moreover, modern ideologies have contributed to the characterization of early modern Japan as a rigid society and of the country as a whole having been isolated from the rest of the world. The main purpose of this course is to afford students the opportunity to study early modern Japan in detail and, insofar as possible, on its own terms. Through readings in primary and secondary sources, and through the evaluation of visual images, this seminar-style course will deepen students’ knowledge of Japan and serve as baseline for comparative study of other early modern societies. Although the course investigates classic areas of historical study such as institutional development and foreign relations, the emphasis is on social and environmental history. The course encourages students to think about a range of approaches to
the past and to think about the ways our contemporary biases influence the ways we understand the past.

**Prerequisite:** HIST 172, HIST 174, JAPNS120 or JAPNS121
Cross-listed with: HIST 474, JAPNS 426

**ASIA 475Y: The Making and Emergence of Modern India**

3 Credits

India’s transition to social, economic, and political modernity through the experience of British colonial rule and the nationalist struggle. ASIA (HIST) 475Y The Making and Emergence of Modern India (3) (IL) (BA) This course meets the Bachelor of Arts degree requirements. This course covers India’s transition to social, economic, and political modernity through the experience of British colonial rule and the nationalist struggle. It begins during the early modern period, when European travelers encountered the flourishing Mughal Empire, and moves into the dynamic moment following, when the East India Company was one of various competing forces, both locally and globally. It then examines the rise of British power, and the various responses to it from collaboration to mutiny; the multiple development of nationalisms and anticolonialisms, including secular, socialist, Hindu and Muslim variations; the accompanying social reform visions, including caste abolition and feminism; the turbulent paths toward partition and independence, resulting in the postcolonial states of India, Pakistan, Bangladesh, Nepal, Sri Lanka, and Afghanistan. It then follows the continuing trajectories of these countries after independence, from the Nehruvian years to the neoliberal shift, with attention to emerging social movements and issues including caste and gender relations; religious and separatist politics; struggles around land and development; urbanization, and labor migration. This course raises important questions about the nature of modernity and its relationship to global interconnectedness, the rise of capitalism and colonialism, industry and technology; while emphasizing South Asian social and cultural contributions and responses to these global shifts. By filling in the context of this part of the world to that global story, the course enables students to grapple with some of the major economic and geopolitical trends of the early 21st century.

**Prerequisite:** HIST 010, HIST 011, HIST 172, HIST 175, HIST 176, HIST 181, or HIST 191

**Writing Across the Curriculum**

ASIA 481: Modern Japan Since 1800

3 Credits

The transformation of Japan from a relatively isolated, agricultural nation into a highly industrialized world power. ASIA (HIST) 481 Modern Japan Since 1800 (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. In the late 19th century, Japan emerged from relative isolation and grew, within the period of a few decades, into one of the world’s major powers. Japan’s remarkable transformation into an imperialist power ended suddenly with defeat by the Allied powers in August 1945. But the history of prewar and wartime Japanese nation-building and economic growth set the stage for postwar rebuilding. This course examines Japan’s resurgence as a powerful modern state, imperialist aggressor, defeated nation, economic powerhouse, and pop culture super-power. Specific content will vary according to individual instructor, but may include the structures of state and society in the early 19th century, the creation of the Meiji state (1868-1912), the successes and costs of the Meiji government’s program of rapid modernization and Westernization, imperialist expansion, the road to war and defeat in World War II, the postwar U.S. occupation of Japan (1945-1952), Japan’s resurgence as a global power, and some of the major challenges facing the Japanese state and society today. The goals of the class are not only to gain an understanding of the history of another country, but also to develop the skill of building such an understanding through primary and secondary sources, both written and visual. Students in this class will take on the role of historian themselves, thinking critically about assigned texts and making their own interpretations of their meanings. Through readings, discussions, and written work, students will enhance their ability to think critically and to express their ideas clearly in both speech and writing.

**Prerequisite:** HIST 172, HIST 174, or HIST 175
Cross-listed with: HIST 481
Bachelor of Arts: Humanities
International Cultures (IL)

**ASIA 483: Middle China**

3 Credits

The social, political, and cultural issues and developments from the 8th to 16th century. ASIA (HIST) 483 Middle China (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This advanced discussion-based course covers the social, political, and cultural issues and developments in Chinese history from roughly the eighth century through the sixteenth century. Specific content will vary according to instructor. Students will gain a strong foundation in Chinese history and culture and experience analyzing historical texts.

**Prerequisite:** HIST 174
Cross-listed with: HIST 483
Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures
International Cultures (IL)

**ASIA 484: History of Chinese Thought**

3 Credits

A study of the dynamic historical development of Chinese thought with its diverse expressions from antiquity to the present. ASIA (HIST) 484Y History of Chinese Thought (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course examines the historical developments of Chinese thought and its multifarious expressions from ancient times to the eighteenth century. It explores the unique Chinese ways and means of making sense of the world and the human condition by probing Chinarsquo;s philosophical and religious traditions. It reveals the conscious life of the Chinese in matters moral, ethical, aesthetic and metaphysical. Moreover, by showing the unity, diversity, continuity and discontinuity in Chinese thought throughout the ages, this course debunks the popular Idquo;Orientalistandroquo; myth that Chinese culture had been a hermetically sealed and stagnant monolith until the modern era when Western influences became dominant.

**Prerequisite:** HIST 174 or HIST 175
Cross-listed with: HIST 484
Bachelor of Arts: Humanities
International Cultures (IL)

**Writing Across the Curriculum**
ASIA 485: China’s Last Empire: The Qing Dynasty, 1644-1911

3 Credits

China from 1644 founding of Qing dynasty to 1911 fall; Chinese society and institutions, imperialism and China’s internal diversity. ASIA (HIST) 485Y China’s Last Empire: The Qing Dynasty, 1644-1911 (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course will examine the Qing dynasty, the last imperial dynasty to rule China, from the seventeenth to early twentieth centuries. More than doubling the size of the previous Ming dynasty, the empire also included people such as Tibetans, Muslims and Mongols who had never before considered themselves as Chinese; but were now Qing subjects. The course will examine how Manchu ruling family, a non-Chinese people, outnumbered by the Chinese by about three hundred and fifty to one managed to conquer and rule China for nearly three hundred years. Tracing the political, social and cultural development of China starting with the foundation and consolidation of the Qing in 1644 and concluding with the collapse of the dynamic system in 1911, this course examines the role of the imperial system, internal rebellions, and the impact of Western colonialism on China. Considerable time will also be focused on Chinas’s; ethnic, religious and cultural differences in order to allow a deeper understanding of major issues and themes in late imperial Chinese history. Finally, the theme of Chinas’s; international relations in Asia and the world and China’s shifting place in the world will be a prominent thread of the course. Through a blend of primary and secondary sources, students in this class will need to think critically, read broadly and express their ideas clearly regarding the evolving challenges facing Chinas’s last empire.

Prerequisite: HIST 175 or HIST 300H

Cross-listed with: HIST 485

ASIA 494: Research Project

1-12 Credits/Maximum of 999

Supervised student activities on research projects identified on an individual or small-group basis.

Honors

ASIA 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

ASIA 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Astronomy and Astrophysics (ASTRO)

ASTRO 1: Astronomical Universe

3 Credits

The development of modern understanding of the astronomical universe from planets and stars to galaxies and cosmology. Students who have passed ASTRO 005, ASTRO 006, or ASTRO 010 may not take this course for credit. ASTRO 001 Astronomical Universe (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. ASTRO 001 is an introductory course for non-science majors. It provides a broad introduction to Astronomy including the historical development of the subject, basic physics of gravity, light, and atoms; telescopes; planets, moons, and other objects in our solar system; exosolar planets; the Sun and other stars; the evolution of stars; the Milky Way galaxy and other galaxies; distant quasars and other active galaxies; the expanding universe; cosmology based on the Big Bang theory; and life in the universe. The goal of this course is to cover most of the areas of modern astronomy at a level which requires only basic mathematics.

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

ASTRO 1H: Astronomical Universe

3 Credits

The development of modern understanding of the astronomical universe from planets and stars to galaxies and cosmology. Students who have passed ASTRO 005, ASTRO 006, or ASTRO 010 may not take this course for credit. ASTRO 001H Astronomical Universe (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. ASTRO 001H is an introductory course for non-science majors. It provides a broad introduction to Astronomy including the historical development of the subject, basic physics of gravity, light, and atoms; telescopes; planets,
moons, and other objects in our solar system; exosolar planets; the Sun and other stars; the evolution of stars; the Milky Way galaxy and other galaxies; distant quasars and other active galaxies; the expanding universe; cosmology based on the Big Bang theory; and life in the universe. The goal of this course is to cover most of the areas of modern astronomy at a level which requires only basic mathematics.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)
Honors

ASTRO 5: The Sky and Planets

3 Credits

The development of our modern understanding of the visible sky and planetary systems. Students who have passed ASTRO 001 or ASTRO 010 may not take this course for credit. ASTRO 005 The Sky and Planets (3) (GN)ASTRO 005 will introduce students to the wonders of the universe and help them to understand how the universe works through the laws of physics. During the semester, they will learn about the different observed motions of objects in our sky, how astronomical objects influence our concepts of time, the nature of light and spectra, how planetary systems are formed and comparative details about our solar system and other planetary systems. Many colorful images and movies of the solar system have been collected by un-manned satellite missions like Voyagers I II, the Magellan mission to Venus, the Mars Rovers and Pathfinders, the Galileo mission to Jupiter, the Cassini and Huygens missions to Saturn, and the New Horizons mission which is now on its way to study Pluto. These images will be used to convey the excitement of discovery to our students.

Prerequisite: Students who have passed ASTRO 001 or ASTRO 010 may not take this course.
General Education: Natural Sciences (GN)

ASTRO 6: Stars, Galaxies, and the Universe

3 Credits

The development of our modern understanding of stars, galaxies, and the astronomical universe. Students who have passed ASTRO 001 or ASTRO 010 may not take this course for credit. ASTRO 006 Stars, Galaxies, and the Universe (3) (GN)ASTRO 006 will introduce students to the laws of nature as they apply to the study of stars, galaxies and the universe. During the semester, they will learn about gravitational forces, the nature of light and spectra, the different telescopes and instruments used to study the universe, new discoveries about our Sun and other stars, the births and deaths of stars, the structure of our own Milky Way galaxy, types of galaxies, how other nearby galaxies affect the Milky Way, the origin of our universe and the techniques that we have used to learn about our universe. These topics will be enhanced by numerous images and movies of our Sun and other astronomical objects that were collected with telescopes like the Hubble Space Telescope, the Swift gamma ray burst explorer, the Chandra X-ray telescope, the Solar and Heliospheric Observatory (SDHO), as well as other state-of-the-art instruments.

Prerequisite: Students who have passed ASTRO 001 and ASTRO 010 may not take this course.
General Education: Natural Sciences (GN)

ASTRO 10: Elementary Astronomy

2 Credits

Introductory survey of modern astronomy from planets and stars to galaxies and the universe. Students who have passed ASTRO 001, ASTRO 005, or ASTRO 006 may not take this course for credit. Students may not receive General Education credit for ASTRO 010 unless they also take ASTRO 011. ASTRO 010 Elementary Astronomy (2) (GN) (BA) This course meets the Bachelor of Arts degree requirements. ASTRO 010 provides the 2 credit lecture component of a one-semester overview of modern astronomy. The class covers a wide range of topics in planetary, stellar, galactic, and extragalactic astronomy and cosmology. The level is appropriate for students with no university-level science background. The instructor makes frequent use of dramatic images of astronomical objects, demonstrations, and computer simulations. Profound themes underlie the content of the course: how the physical structure and evolution of the universe appears to be ruled by deterministic mathematical laws; how our understanding of the universe progresses by the intricate interplay between theory and observations; how we, as living organisms on a well-placed planet, appear to be both an intimate part of yet an unusual occurrence within the universe. The student will gain perspective on his or her place in a vast and stunningly beautiful universe.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

ASTRO 11: Elementary Astronomy Laboratory

1 Credits

Selected experiments and explorations to illustrate major astronomical principles and techniques. Telescopes observations of planets, stars and nebulae. ASTRO 011 Elementary Astronomy Laboratory (1) (GN)(BA) This course meets the Bachelor of Arts degree requirements. ASTRO 011 is the 1 credit laboratory component of this overview of astronomy. It covers material similar to the lecture component, but the selected topics are covered in more depth and are focussed on active learning components. Weekly two-hour labs include discussion of the search for extraterrestrial intelligence, an activity to illustrate the phases of the moon, analysis of the colorful spectra of different chemical elements, and exploration of the deepest image of space ever obtained. In addition, students will complete a semester nighttime observing project that typically involves learning some constellations, tracing phases of the moon, and sketching images seen through our well-equipped rooftop student observatory. While most laboratory sections meet in the evening, daytime sections concentrate on classroom, computer-based and solar observing activities.

Prerequisite: or concurrent: ASTRO001 or ASTRO0010
Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

ASTRO 19N: Being in the Universe

3 Credits

Being in the Universe considers three fundamental questions of human existence from both humanistic and scientific perspectives: (1) What is the nature of our universe, and to what extent are creatures like ourselves a predictable consequence of it? (2) What is the nature of time, and
what does it mean to be a conscious being living our lives through time? (3) What would it mean for humans to be alone in the Galaxy or the universe, or alternatively, not alone? "Being in the Universe" is an integrative GH+GN GenEd course. The course’s three major units cover the following topics: (1) We discuss cosmology and religion as human enterprises, as well as the history of science; (2) We study the basic scientific theory of the Big Bang universe, and consider its implications for human life; (3) We address contemporary theories of the multiverse from scientific, philosophical, and literary perspectives; (4) We consider the thermodynamic and relativistic theories of time, and the basic philosophical approaches to time, and discuss the implications of these for our ordinary human experience of the past, present, and future; (5) We discuss the history of life in the universe, the possibility of life on other planets, and the social, religious, and imaginative reactions to those possibilities in literature and film.

ASTRO 20: First-Year Astronomy Seminar

2 Credits

Introduction to the study of modern astronomy through discussions, activities, and writing.

First-Year Seminar

ASTRO 21: Introduction to Research in Astronomy

2 Credits

The course is designed to provide first year undergraduate students in both the ASTRO and PASTR majors with necessary tools and techniques to perform research. Students will practice a variety of techniques on authentic astronomical data, which might include light curves from the Kepler mission, galaxy and stellar spectra from the Sloan Digital Sky Survey, or pulsar data from the Green Bank or Arecibo telescopes. An emphasis will be placed on using common tools for observational astronomy, such as viewing astronomical FITS images in SAOimage. Students will be introduced to the common programming languages and environments used by astronomers at the time the course is offered, which currently includes Python and IDL. Students will be given experience in calculating statistical information about a set of astronomical data using the R programming language and its built-in tools. Students will make plots to illustrate a pattern in their data using the tools in Python, IDL, or R, for example.

ASTRO 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ASTRO 116: Introduction to Astronomy for Educators

3 Credits

This course is designed to engage students with the big ideas of astronomy in ways that will help them understand both the content of astronomy, as well as the practices of science as carried out by astronomers. The course is designed for prospective elementary and middle school teachers (PK-4 and 4-8 majors), although it is available to other non-science majors. Throughout the course, students engage in a series of investigations that lead towards the development of evidence-based explanations for patterns observed in the current Solar System. Investigations will include computer-based simulations, night-sky observations, and use of simple laboratory equipment. These investigations lead students towards an understanding of how observations of the current Solar System can be explained by the model of its formation. The course is designed to build from students’ own personal observations of the day and night sky towards developing increasingly sophisticated explanations for those phenomena and beyond. Conducting these astronomy investigations will help students understand fundamental aspects of physics, thus broadly preparing them for future science teaching in these domains. The course models evidence-based pedagogy, thus helping to prepare students for future teaching careers as they learn effective strategies for teaching science.

Cross-listed with: SCIED 116

ASTRO 120: The Big Bang Universe

3 Credits

Exploration of Cosmology, Birth, and Ultimate Fate of the Universe; Origin of Galaxies, Quasars, and Dark Matter. For non-science majors ASTRO 120 The Big Bang Universe (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. Astronomical observations made during the last 70 years, combined with mathematical physical theory (Einstein’s General Relativity), has led to a dramatic new view of the history of the Universe. Ten to twenty billion years ago, all the material that is now contained in stars, planets, and galaxies was then compressed into a region, smaller than a pinhead, and so hot that atoms could not survive. This fiery cauldron cooled and expanded, forming hydrogen and helium, and eventually all the materials and structures that we know today. This course will discuss the evidence, theories and controversies of this new scientific cosmology, commonly known as ‘the Big Bang’. This class is designed for the non-science students who, after learning the fundamentals of astronomy in ASTRO 1(GN), ASTRO 5 (GN) or ASTRO 10 (GN), want to pursue further the questions of cosmology. The great success of the Big Bang theory in explaining the expansion of the Universe, the synthesis of the chemical elements, and the relic radiation leftover from the first moments are reviewed. Some of the questions discussed are still debated in the scientific community. For example: Why do some galaxies have stunning spiral structures, while others are relatively featureless ellipticals? What is the “dark matter” that may have emerged from the Big Bang, and seems to make a larger contribution to the mass of the universe than all of the material we are familiar with? What can the most distant and oldest objects we know of, the quasars, tell us about how galaxies formed? In presenting the development of this subject, the empirical and conceptual methods of modern physical science are conveyed. Students are assigned problems that exercise the use of elementary mathematics and physics to address real issues, and will confront discussions of interpretation and meaning in essays. A final project allows them to explore individual interests.
Prerequisite: ASTRO001, ASTRO006, or ASTRO010
Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

ASTRO 130: Black Holes in the Universe
3 Credits

The predicted properties of black holes and the astronomical evidence for their existence are investigated in the context of modern ideas about space, time, and gravity. ASTRO 130/ASTRO 130 Black Holes in the Universe (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. Black Holes in the Universe introduces students to the predicted properties of black holes and the astronomical evidence for their existence. Modern ideas about the nature of space, time, and gravity are also covered. The key topics discussed in the course include Newton's and Einstein's theories of gravity, predicted properties of black holes, stars and their fates, how to detect a black hole, gamma-ray bursts, supermassive black holes in galactic nuclei, active galaxies, black hole spin, gravitational waves, Hawking radiation, singularities, and black hole child universes. The course is intended to be an attractive choice for students who are interested in enriching and broadening their understanding of modern physical science. The course is intended for students who have completed and enjoyed the one-semester survey of modern astronomy, ASTRO 001 or 010. It has an interdisciplinary flavor, combining basic physical concepts, astronomical observations, and philosophical ideas to present a complete picture of the current understanding of black holes. Students use mathematics at the level of high school algebra.

Prerequisite: ASTRO001, ASTRO006, or ASTRO010
Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

ASTRO 140: Life in the Universe
3 Credits

The problem of the existence of life beyond Earth is investigated, drawing from recent research in astronomy and other fields. For non-science majors. ASTRO 140 Life in the Universe (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. The possibility of life beyond Earth is one of the great unsolved puzzles of human thought and has been debated for millennia. An answer would fundamentally change the relationship between the human race to the rest of the Universe. Advances in modern physics and astrophysics have dramatically changed and enriched the understanding of our cosmic surroundings, but have not yet produced an unambiguous evidence concerning the extraterrestrial life. Yet, significant progress has been made on certain aspects of the problem. Recent observations of protoplanetary disks around young stars, planets around solar-type stars and a rapidly spinning pulsar (a Penn State discovery), and pervasive organic molecules throughout the Galaxy give tantalizing albeit indirect, hints in favor of the existence of nonterrestrial life. "Life in the Universe" is envisioned to be an attractive choice for students who are interested in enriching and broadening their understanding of modern science. The course is highly interdisciplinary, combining evidence from several fields of science to describe our chances to encounter life beyond Earth and the Solar System. Selecting this course would be a logical choice for students who completed and enjoyed ASTRO 1 (GN), ASTRO 5 (GN), ASTRO 10 (GN). The students are expected to reach the following goals from this course: - learn to appreciate limitations of human experience and a role of the interdisciplinary approach in solving scientific problems - gain understanding of a relationship between the physical Earth, its biosphere, and the rest of the observable Universe - examine in some detail a contemporary problem of scientific investigation: the astrophysical evidence for planets around stars other than the Sun - assess the scientific significance of searches for extraterrestrial life including technological civilizations. The course material is conveyed, analyzed and discussed through lectures, invited talks, reading, essay writing, homework assignments and oral presentations. Lectures systematically cover the topics listed in the course outline at a level appropriate for non-science students, although Science and Engineering majors do take the course and perform at a higher technical level. While general understanding of astronomy from the prerequisite course is expected, the necessary physical and astrophysical concepts are reintroduced to assure a logical and coherent flow of information throughout the course. Videos are used to illustrate a number of topics, such as the search for extraterrestrial intelligence, physical conditions on planets of the Solar System, the detection of planets around a neutron star, and to evaluate the scientific content of science fiction movies. Invited talks by faculty from other departments enrich the course material with in-depth presentations of subjects such as habitable zones around stars, the basics and perspectives of space flight and the foundations of biological evolution. There has been some experimentation with activity and assessment strategies for the course. Some of the work involves quantitative analysis while other work requires qualitative synthesis of classroom experience with readings. Group presentations give students a chance to study selected, often controversial topics and present them to the class in a disciplined, scientific manner.

Prerequisite: ASTRO001, ASTRO005, or ASTRO010
Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

ASTRO 199: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.
International Cultures (IL)

ASTRO 291: Astronomical Methods and the Solar System
3 Credits

Physical processes and observational techniques in astronomical systems, characteristics of the sun, planets, and moons. ASTRO 291/ASTRO 291 Astronomical Methods and the Solar System (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. ASTRO 291/292 is a two-semester overview of our current knowledge of astronomy. They are designed for students with a solid grounding in math and physics who wish to obtain a more quantitative understanding of the universe than that presented in ASTRO 001 or the 100-level ASTRO series. These courses are required for students majoring in astronomy, generally taken in the sophomore year. ASTRO 291 starts with the appearance of the sky to the naked eye and the historical development of European astronomy. It then turns to an introduction to physical processes relevant to the interpretation of astronomical findings: Newtonian gravity and its applications in celestial mechanics, electromagnetic radiation, and a simplified understanding of atoms. The principal tools of astronomy telescopes are then described. The course proceeds with the survey of astronomy with the constituents of the solar system: sun, planets, natural satellites, planetary rings, asteroids, and
comets. Physical processes are integrated with empirical findings to provide a profound and quantitative understanding of the phenomena; e.g. the role of angular momentum and tidal forces in establishing the orbits and spins of solar system bodies. The class then tackles the challenging development of models of the formation and evolution of the solar system.

**Prerequisite:** PHYS 211
Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

ASTRO 292: Astronomy of the Distant Universe

3 Credits

Observed properties and astrophysical understanding of stars, stellar evolution, galaxies, the large-scale universe, and cosmology. ASTRO 292/ASTRO 293 Astronomy of the Distant Universe (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. ASTRO 291/292 is a two-semester overview of our current knowledge of astronomy. They are designed for students with a solid grounding in math and physics who wish to obtain a more quantitative understanding of the universe than that presented in ASTRO 001 or the 100-level ASTRO series. These courses are required for students majoring in astronomy, generally taken in the sophomore year. ASTRO 292 continues the survey started in ASTRO 291. The first half of the course is devoted to stellar astronomy and astrophysics. The class follows the successful application of physics to astronomical data in the 19th -20th centuries to understand distances, masses and energy sources of stars. The formation, structure and evolution of stars is treated in the context of physical processes developed in ASTRO 291. The class studies the death of stars, including spectacular phenomena such as supernova explosions, pulsars and black holes, solutions to difficult problem of establishing distance scales (stellar, galactic, intergalactic) are presented. In the second half of the course, the students examine the Universe on progressive larger scales: our Milky Way galaxy, other galaxies, and massive black holes in galactic cores (e.g. quasars). Exotic phenomena such as gravitational lenses, gamma-ray bursts and cosmic rays are investigated. Finally, the class delves into the remarkable findings of modern cosmology. Hubble's discovery of the expansion of the Universe, the discovery of the cosmic microwave background and consequent dominance of Big Bang cosmology in the context of Newtonian and Einsteinian theories of gravity. Cosmological evolution is studied; e.g. formation of light elements during the first few minutes, and the growth of large-scale structure that continues to the present. Unsolved problems faced by today's scientists are emphasized.

**Prerequisite:** ASTRO291
Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

ASTRO 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

ASTRO 296H: Independent Studies

2 Credits

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Honors

ASTRO 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ASTRO 320: Observational Astronomy Laboratory

3 Credits

Basic observational astronomy techniques introduced through observational exercises, lab experiments, and lectures on relevant statistical techniques. ASTRO 320 Observational Astronomy Laboratory (3) (GN) ASTRO 320 will provide students with practical experience in basic observational and laboratory aspects of astronomical data collection and analysis, including an introduction to associated statistical concepts. Observational techniques will be introduced through an observing project using a telescope with a CCS imaging camera. Lectures will introduce fundamental principles including Poisson and Gaussian statistics, measurement precision, propagation of errors, and systematic uncertainties. These principles will be put into practice in the observing project and with laboratory experiments investigating the properties of light and cosmic rays. Experiments include: a cosmic ray telescope; a Michelson interferometer; a photodiode and monochromator; laser interference, diffraction and refraction; fluorescent gases; and a diffraction grating spectrometer.

**Prerequisite:** ASTRO291
General Education: Natural Sciences (GN)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think

ASTRO 401: Fundamentals of Planetary Science and Astronomy

4 Credits

Overview of the techniques used and results from studies of the Solar System, stars, and galaxies. ASTRO 401 Fundamentals of Planetary Science and Astronomy (3) This course will focus in core content areas in planetary science and astronomy. Students will explore the fundamentals in robotic exploration of the Solar System, how astronomers map and navigate the night sky, our understanding of the nature and evolution of stars, and the nature and evolution of galaxies. Students will engage with real data from Solar System missions as well as ground-based and space-based telescopes. Through the use of many databases and data archives from missions and observatories, the students will become familiar with the census of astronomical objects in various categories. A particular emphasis will be placed on examples of qualitative and quantitative problem solving in these content areas. In addition, students will explore how scientists communicate their results to the public, and they will get hands-on experience, such as planning and executing a planetarium show.
Prerequisite: ASTRO001, ASTRO005, ASTRO006 or ASTRO010; MATH 140

ASTRO 402: Astronomical Telescopes, Techniques, and Data Analysis
3 Credits

Properties and use of optical telescopes, imaging and spectroscopy, multi-wavelength techniques, data analysis and statistics, practical research methods. ASTRO 402 Astronomical Telescopes, Techniques, and Data Analysis (3) This course will provide practical experience and understanding of the telescopes and techniques by which astronomers obtain data and conduct research. The study of telescopes will include optical, infrared, radio, ultraviolet, X-ray, and gamma ray observations, and students will learn to set up and use optical telescopes. In-depth coverage of the instruments used for imaging and spectroscopic observations of a variety of astronomical objects will be provided. Applications will include topics in planets, stars, galaxies, and cosmology. Detailed examples of data analysis will be given, including the relevant statistical techniques. Finally, the process by which research in astronomy is conducted will be reviewed, from proposing observations, to obtaining them, to analyzing and interpreting them, to writing up the results. This course is a requirement for students in the Planetary Science and Astronomy major and minor. It may be taken by any students with the needed pre-requisites, but cannot be counted towards the required 400 level courses for the Astronomy and Astrophysics major or minor.

Writing Across the Curriculum

ASTRO 410: Computational Astrophysics
3 Credits

Applications of numerical methods and computer programming to astrophysics, including stellar physics and cosmology.

Prerequisite: CMPSC201 or CMPSC121; PHYS 212, PHYS 213, and PHYS 214

ASTRO 414: Stellar Structure and Evolution
3 Credits

Theory of Stellar structure and evolution including energy generation and transport and an examination of stellar models. ASTRO 414 Stellar Structure and Evolution (3) ASTRO 414 covers the theory of stellar structure and evolution at an introductory level. It includes the basic physical processes that influence the structure of a star, such as energy generation in stellar cores, the transport of energy to the surface via photon diffusion and convection, equilibrium conditions, etc. It examines realistic stellar models as they apply to stars of different masses, for example, polytropes and other approximations. The treatment of stellar evolution includes gravitational collapse, stable stellar configurations on the main sequence, and the fast-paced late stages of evolution, leading up to the formation of compact objects. Realistic stellar models will be employed to illustrate the structures of different types of stars and the influence of various physical processes on these models.

Prerequisite: ASTRO292, MATH 230, PHYS 212, PHYS 213, PHYS 214, PHYS 237

ASTRO 420: Planets and Planetary System Formation
3 Credits

Solar system properties, star formation, protoplanetary disks and planet formation, solar system model, extrasolar planets, and astrobiology. ASTRO 420W Planets and Planetary System Formation (3) The course explores the wide variety of physical and chemical processes that govern the motions and properties of planets. Observations of the planets, moons, asteroids, comets and planetary rings in our Solar System are described. The properties of extrasolar planets are also emphasized. The process of planetary formation is discussed in the context of the solar system and in the context of extrasolar planets. The prospects of life and the effect of life on such planets will also be discussed. It will be taken by roughly half of the juniors and seniors majoring in Astronomy and Astrophysics (about 10 people). The course will include writing papers on current issues of debate in the areas of solar system and extrasolar planets and will satisfy the "Writing Across the Curriculum" requirement.

Prerequisite: ASTRO292
Writing Across the Curriculum

ASTRO 440: Introduction to Astrophysics
3 Credits

Theoretical investigation of physical processes in astronomical objects and systems; modern physical interpretation of astronomical phenomena.

Prerequisite: MATH 230, PHYS 237

ASTRO 451: Astronomical Techniques
3 Credits

Practical methods of modern observational astronomy, detectors, filters, instrumentation for both ground-based and space observations, and data analysis. ASTRO 451 Astronomical Techniques (3) ASTRO 451 will introduce students to the techniques and technologies for modern observational astronomy, emphasizing the development of practical skills as well as understanding through computer-based investigations integrated with traditional lecture content. Beginning with a summary of probability theory, the students will be introduced to standard techniques of statistical analysis including hypothesis testing and the characterization of uncertainties. Subsequent lectures and computer exercises will discuss the physics and design of astronomical detectors, the principles of telescope and spectroscopic design, and the data analysis methods used in processing astronomical datasets. Significant emphasis will be placed on estimation of signal-to-noise ratios for various observing scenarios. The effects of the Earth’s atmosphere, interstellar matter, and the expanding Universe on the propagation of astronomical signals will also be discussed.

Prerequisite: PHYS 212, PHYS 213, PHYS 214

ASTRO 475: Stars and Galaxies
3 Credits

Astronomical studies concerning the distribution and evolution of stars and gas in our and other galaxies.

Prerequisite: ASTRO292
Writing Across the Curriculum
ASTRO 480: Nebulae, Galaxies, and Cosmology
3 Credits
Emission-line spectroscopy, structure and evolution of galaxies, physics of galactic nuclei and quasars, observational cosmology.
Prerequisite: ASTRO292, PHYS 212, PHYS 213, PHYS 214

ASTRO 485: Introduction to High-Energy Astronomy
3 Credits
The study of black holes, neutron stars, white dwarfs, supernova remnants, and extragalactic objects through x-ray and gamma ray observations.
Prerequisite: PHYS 237

ASTRO 494H: Honors Thesis
1-6 Credits/Maximum of 6
Investigation of an original research problem, including a literature search. Preparation of a formal thesis is optional
Prerequisite: 5th Semester standing in the Schreyer Honors College and permission of an honors advisor in the program

ASTRO 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

ASTRO 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Behavioral Sciences - CA (BESC)

BESC 370: Community Psychology
3 Credits
Introduction to concepts and terminology of community psychology with discussion of historical development. Community mental health issues will be analyzed.

BESC 376: Introduction to Human Service Organizations
3 Credits
A course designed to acquaint the student with the role of various social agencies.

BESC 395: Behavioral Science Internship
3-12 Credits/Maximum of 12
Internship in human service organizations providing for application of academic knowledge, reading, and discussion.
Prerequisite: 90 credits with at least 16 credits in the major

BESC 407: Small Groups Counseling
3 Credits
Intensive survey of research and theory on behavior in small groups, with emphasis on interdependence, cooperation, and attitude change.
Prerequisite: general psychology, general sociology, or general behavioral science

BESC 408: Group Facilitation and Leadership Skills
3 Credits
Skill training in group facilitation and leadership based on analyses of roles and interpersonal dynamics plus differences among impact population.
Prerequisite: general psychology, general sociology, or general behavioral science

BESC 459: Basic Counseling Skills
3 Credits
Behavioral, cognitive, and expressive methods of assessing and enhancing life-coping skills.
Prerequisite: general psychology, general sociology, or general behavioral science

BESC 464: Feminine/Masculine
3 Credits
Study of sex role learning; investigating feminine/masculine labeling; implications for contemporary society. BE SC 464 BE SC (WMNST) 464 Feminine and Masculine (3) (US) This course provides a critical examination of the concepts of masculinity and femininity through a consideration of how these have shifted and changed historically and cross-culturally. It considers a variety of theories of gender difference. It investigates how gender is socially constructed and practiced. Thus, it examines how gender is enacted in interpersonal relationships and defined, reinforced, and challenged through processes of socialization as well as through the various institutional spheres of social life. The course addresses the diversity of masculinities and femininities within a single society. Thus, attention is given to race and class-based differences as well as to trans-genderism and homosexuality.
Prerequisite: general psychology or general sociology

BESC 494: Senior Thesis
3-9 Credits/Maximum of 9
Problem formulation, literature search, research design, data collection, analysis of results, and final write-up of a substantial research project.
Prerequisite: permission of program
BESC 494H: Senior Thesis
3-9 Credits/Maximum of 9
Problem formulation, literature search, research design, data collection, analysis of results, and final write-up of a substantial research project.
Prerequisite: permission of program

Biobehavioral Health (BBH)

BBH 19: Health and Disease
1 Credits
Essentials of communicable and chronic disease control.
First-Year Seminar

BBH 48: Values and Health Behavior
1.5 Credits
Examination of issues that impact the social, emotional, and physical well-being of college students through a values and decision-making process. BBH 048 Values and Health Behavior (1) (GHA) This is a 1 credit course designed for non-BB H majors who want a greater understanding of concepts related to health and health promotion and who want to learn practical skills related to optimizing health and improving lifestyle behaviors. General health topics that are relevant to students as they adjust to the transition into—and through—college are introduced through a values and decision-making approach to learning. The course is designed to give students a broader understanding of both short-term and long-term wellness and how it is affected by behavior. Concepts regarding personal health and development are introduced using individual and group activities. To impact behavior, a model for decision-making that includes facts, risks, and consequences is utilized within an experiential learning approach. Students will work individually to perform self-assessment of health-related activities (e.g., nutrition, alcohol and drug-related knowledge and risk behaviors) and in small groups to further assess and describe the effects of health behaviors on short-term and long-term wellness. The course will be evaluated through completion of several short reaction papers to reading assignments and internet research, a group project on health promotion, completion of a health-related journal, and completion of a personal behavior change plan.
General Education: Health and Wellness (GHW)

BBH 101H: Introduction to Biobehavioral Health
3 Credits
Introduction to interdisciplinary study of health, examining the interaction of biological processes and behavior on health.
General Education: Health and Wellness (GHW)
Honors

BBH 119: Behavior, Health, and Disease
3 Credits
Principles of health promotion, disease prevention, and treatment of acute and chronic illness. This course is designed for non-BB H majors.
BBH 119 Behavior, Health, and Disease (3) (GHA) This course is designed for non-BB H majors who want a fundamental understanding of disease processes, disease states, and principles of disease prevention and health promotion. This course should help students in the biological and behavioral sciences better understand practical applications of theoretical approaches to health issues. The course will provide a broad understanding of the major human diseases underlying morbidity and mortality in America. The course will cover most major diseases using a variety of organizational schema including: (1) diseases according to organ systems, (2) diseases according to developmental and age-related processes, and (3) diseases according to causal factors including behavioral (lifestyle), environmental, and genetic factors. The course content is organized to encourage promotion of a healthy lifestyle, prevention of disease and understanding the causes and management of acute and chronic illness. The course includes information and assignments to allow the student to appropriately assess one’s own health, estimate health trajectories, access and use the health care systems on campus and in their home communities, and develop a long-term health promotion plan. The student will also learn specific skills to find and evaluate traditional and non-traditional treatment processes when they or family members become sick with an acute illness or chronic disease, and to better engage with health care professionals and the health care system for management of illnesses that they or their family may have or develop. Students will also learn practical skills in being able to access a variety of sources to update knowledge about disease causality and treatment and to critically appraise these sources. Students intending to major in Biobehavioral Health should take BBH 101—Introduction to Biobehavioral Health.
General Education: Health and Wellness (GHW)

BBH 130: Strategies for Addressing the Obesity and Diabetes Epidemics
3 Credits
Strategies for understanding and modifying the factors underlying weight, health, and the current U.S. and worldwide obesity/diabetes epidemics.
General Education: Health and Wellness (GHW)

BBH 143: Drugs, Behavior, and Health
3 Credits
Health aspects of use and abuse of licit and illicit drugs; related social problems and prevention. Designed for non-BB H majors. BBH 143
Drugs, Behavior, and Health (3) (GHA) This course is designed for non-BB H majors who want a fundamental understanding of health and social issues relating to drug and alcohol use and abuse. This course should help students in the biological and behavioral sciences better understand practical applications of theoretical knowledge relating to drug physiology, drug-related health effects, health promotion and disease prevention, issues related to social and psychological effects of drug use and abuse, and drug control policies. The course will cover a broad array of drugs including licit drugs (e.g., therapeutic drugs, tobacco, caffeine, alcohol, etc.), and illicit drugs (amphetamines, marijuana, hallucinogens, etc.) with additional focus on drugs liable for addiction and the progression from occasional use to addiction. The course will cover the basics of drug pharmacology, including pharmacokinetics and pharmacodynamics. Special attention will be given to toxicology and addiction physiology. The course is broad in scope, covering subjects such as alcohol and drug use and misuse in specific populations (youth college students, etc.), toxicity and threats to children and adults posed by common therapeutic drugs (aspirin, prescription drugs, etc.), and prevention and treatment strategies for overdoses (e.g., emergency treatment, use of poison control centers, etc.). The course will involve student and faculty discussion of laws concerning the manufacture, distribution and use of drugs, including alcohol and tobacco, and drug development. Students will engage in activities to learn the most efficacious strategies for prevention, intervention and treatment for drug-misuse-related disorders, including community-based programs to pharmacological intervention, and detoxification. Students will engage in a number of activities that involve self-assessment of personal drug use and potential health trajectories. A significant portion of the course will involve accessing drug-related websites to complete specified exercises in data gathering, synthesis, and critical evaluation of issues relating to drug use and abuse and drug control. These exercises will involve both written reports and oral discussions and applications to contemporary society and community. Students will learn practical skills in being able to access a variety of sources to update knowledge about causality and treatment of addictions and to critically appraise these sources. Students intending to major in Biobehavioral Health should take BB H 451–Pharmacological Influences on Health.

General Education: Health and Wellness (GHW)

BBH 146: Introduction to Health and Human Sexuality
3 Credits
An examination of human sexuality as it relates to health.

General Education: Health and Wellness (GHW)

BBH 148: Coping with College: A First Year Transition Seminar
2 Credits
Exploration of effective learning strategies, university resources, academic requirements and planning, career development issues in discussion-centered environment.

First-Year Seminar

BBH 150N: Safe and Sound: The Intersection of Criminal Justice and Public Health
3 Credits
This course will consider the overlapping responsibilities and epistemologies of criminal justice and public health. Both fields concerned with the promotion of population welfare, the public health and criminal justice systems nevertheless confront the same social problems from different ethical perspectives, research methodologies, and knowledge bases. Each may further mobilize different institutional actors driven by divergent political agendas. While we will discuss the productive collaboration between public health and public safety agencies, we will also consider ongoing ownership struggles over certain issues, behaviors, and even populations. Given its practical relevance to many ongoing social issues and controversies of general importance, this course is motivated by a commitment to community-engaged scholarship, and thus will include topics, readings, assignments, speakers, and field trips of local and state importance. At the same time, specific topics will be framed in terms of their national and international importance, and students will be encouraged to link micro-level problems to macro-level processes.

General Education: Health and Wellness (GHW)
General Education: Social and Behavioral Scienc (GS)
General Education - Integrative: Interdomain
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

BBH 197: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

BBH 199: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

BBH 203: Neurological Bases of Human Behavior
3 Credits
An introduction to biopsychology, emphasizing the structure and function of the human brain. BB H (PSYCH 260) 203 Neurological Bases of Human Behavior (3) The nervous system provides the biological underpinning of behavior, and several scientific fields are concerned with the relationship between the nervous system and behavior. The goal of this course is to introduce the principle methods, findings, and theories of these scientific fields. Topics include (a) the anatomy and physiology of the nervous system, (b) how the nervous system gives rise to perception, action, language, memory, emotion and reproductive behavior, and (c) how drugs and mental illnesses affect the nervous system and alter normal perceptual, cognitive, and emotional behavior. The course prepares students for a number of more advanced courses in Psychology and Biobehavioral Health that address specialized topics in neuroscience, and may satisfy a requirement of these majors.
Cross-listed with: PSYCH 260

BBH 251: Straight Talks I: Advanced Sexual Orientation/Gender Identity Peer Education

3 Credits

Exploration of social justice issues, diversity leadership, and group facilitation skills related to lesbian, gay, bisexual, transgender, and ally issues. BB H 251 Straight Talks I: Advanced Sexual Orientation/Gender Identity Peer Education (3) (US) Straight Talks I provides students an opportunity to explore various lesbian, gay, bisexual, transgender and allies (LGBTQA) issues from an educational perspective. Students will be exposed to theories, terminology, and various speakers who will approach topics such as LGBTA history and multicultural issues. The course projects are designed to enhance both oral and written skills, and provide students an opportunity to work together. Finally, the course challenges students to think critically about the social, economic, and political cultures around them and how these cultures affect sexual and gender orientation issues. Course Objectives: Philosophical 1. To think critically about your spiritual, social, economic, political and cultural existences and their relationship to your understanding of sexual and gender orientation issues. 2. To develop a critical consciousness that will bring awareness of the ways custom, ritual and tradition helped shape and continue to shape our daily lives. 3. To develop a fuller understanding of the way gender and sexual orientation are conceived of by other people and the ways in which these conceptions link with other elements of identity including ethnicity, class, gender, ability, etc. 4. To challenge you to consider the following questions: a) What does it mean to provide educational programming? b) What does it mean to be a peer educator? c) How do I influence others by my involvement in this program? d) How did I what to influence others by my involvement in this program? e) How do I change the world so that it is a better place when I leave it? Praxis 1. Develop facilitation and presentation skills. 2. Obtain knowledge about LGBTQA history and current issues and concerns. 3. Conceive of and articulate what it means to ‘come out’. 4. Acquire information on sexual orientation, identity development and queer history. 5. Refine your ability to provide programming activities in the form of facilitation, discussion, skits, and exercises. 6. Develop a sense of community and rapport with other panelists through class discussions and projects.

United States Cultures (US)

BBH 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

BBH 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

BBH 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

BBH 301: Values and Ethics in Biobehavioral Health Research and Practice

3 Credits/Maximum of 3

Examines bases for choices among values in personal and professional relations in human development processes and supporting services. This class is meant to give students both background knowledge of and practice in the process of ethical decision making. Students will learn the historical, philosophical, and psychological concepts underlying the study of morality and ethics. Course content will include the history and rationale for regulations regarding the ethical practice of research, medicine, and public health.

Prerequisite: BB H 101

Writing Across the Curriculum

BBH 302: Diversity and Health

3 Credits

Exam the relationship of diverse personal and sociocultural factors to health, like socioeconomic class, race-ethnicity, gender, age, and sexual orientation. BBH 302 / AFAM 302 Diversity and Health (3) (US) is an introduction to an interdisciplinary study of the impact of diversity on health in America and across nations. The course is designed to provide an understanding of the complex interaction between concepts of diversity including but not limited to race, ethnicity, culture, gender, age, socioeconomic status, and sexual orientation. The course will also consider and critique the methods used in the study of these concepts and issues related to the measurement of health among diverse groups. The ultimate goal of this examination is to assist students in developing an appreciation of the current diversity and the impact diversity has on assessments and study of health, health status, and health promotion in America and other nations. The course is also designed to integrate different sources of information about diversity by utilizing critical thinking skills for the consumption of health information. The educational objectives will be to enable students to: 1) Consider the implications of race, ethnicity, gender, age, socioeconomic status and sexual orientation on health/social policies in light of research findings, 2) Understand the legacies and historical events that have impacted our view, the status, and treatment of diverse populations, 3) Appreciate the importance of understanding the origins of different health behaviors that impact biological processes, as well as the impact of biological processes in the context of social, environmental, and cultural influences when examining health issues. To achieve these objectives, the course will involve open class discussions, small break-out group discussions, written assignments, and a presentation (e.g., poster or other media presentation) requiring the acquisition and utilization of information/research from library and internet resources.

Prerequisite: PSYCH 100 or SOC 001

Cross-listed with: AFAM 302

United States Cultures (US)

BBH 302H: Diversity and Health

3 Credits

Exam the relationship of diverse personal and sociocultural factors to health, like socioeconomic class, race-ethnicity, gender, age, and sexual orientation.

BBH 305: Introduction to Global Health Issues

3 Credits

Course will develop awareness of contemporary issues in global health. BB H 305 Introduction to Global Health Issues (3) This course is an introduction to health and related issues in the global context. It is intended to be an overview of fundamental perspectives about the historical, current, and future public health challenges facing developing and industrialized countries. The course will explore the interrelationships among social structure, culture, demography, health promotion/disease prevention, biology, ecology and health policy of various countries and international health organizations. This course will 1. present key issues related to the history, conceptual frameworks, economic conditions, and policy affecting public health in the global context, 2. examine reports and studies pertaining to major global health issues and comparative research, 3. discuss the role of social structure, culture, gender roles, government policies, and the increasing numbers of the elderly in preventive health behaviors and health promotion in the global context, and 4. critique theories and models used to inform health and development programs in non-Western nations.

Prerequisite: BB H 101

International Cultures (IL)

BBH 310: Research Strategies for Studying Biobehavioral Health

3 Credits

Surveys the various research methodologies used in biomedical research, including case, epidemiological, quasiexperimental and experimental approaches.

Prerequisite: BB H 101, STAT 200

BBH 311: Interdisciplinary Integration in Biobehavioral Health

3 Credits

A review of literature relevant to the concepts and findings of different scientific domains as they apply to biobehavioral health.

Prerequisite: BB H 101, BIOL 110, PSYCH100

BBH 311H: Interdisciplinary Integration in Biobehavioral Health

3 Credits

A review of literature relevant to the concepts and findings of different scientific domains as they apply to biobehavioral health.

Honors

BBH 315: Gender and Biobehavioral Health

3 Credits

Interdisciplinary study of gender, examining the interaction of biological, behavioral, and sociocultural factors on health differentials throughout the lifespan. BB H 315 Gender and Biobehavioral Health (3) (US) BB H 315 is an interdisciplinary study of the impact of gender differences (and similarities) in health in the United States and the world, examining the interaction of biological, behavioral, and sociocultural factors on health, morbidity, and mortality. The course will also consider and critique the methods used in the study of gender and concepts and issues related to the measurement of health in men and women. The ultimate goal of this course is to assist students in developing an appreciation of the diversity concept of gender, and the impact of this concept on assessments and study of health, health status, and health promotion in America and other nations. The course is also designed to integrate different sources of information about gender by utilizing critical thinking skills for the consumption of health information. The educational objectives will be to enable students to: 1) define the concepts of sex, gender, gender roles, and gender identity and how they contribute to differentials in morbidity and mortality at various life stages, based on epidemiological data and other research, in the United States and other countries; 2) describe biological (e.g., genetic and hormonal) factors that contribute to gender differences and similarities in health at different life stages; 3) describe behavioral factors, such as acquired risks, self-protective behavior, and stress, that contribute to gender differences and similarities in health at various life stages; 4) describe sociocultural factors, such as gender roles, class, race/ethnicity, and educational level that contribute to gender differences and similarities in health at various life stages; 5) describe and design gender-sensitive strategies for health research and health promotion; 6) examine gender differences in a specific illness, disease, or health issue experienced by women and/or men in this country and others, and the contributing factors (e.g., sociocultural) to the differences that may exist; and 7) critique gender research on particular health issues. To achieve these objectives, the course will involve open class discussions, small break-out group discussions with written assignments, short quizzes, a paper requiring the acquisition, utilization, and critical analysis of information/research from library and internet resources, and a group presentation that requires collaborative work.

Prerequisite: BB H 101

United States Cultures (US)

BBH 315H: Gender and Biobehavioral Health

3 Credits

Interdisciplinary study of gender, examining the interaction of biological, behavioral, and sociocultural factors on health differentials throughout the lifespan.

Honors

BBH 316: Foundations and Principles of Health Promotion

3 Credits

Basic exposure and skills development in theory and practice in health promotion. BB H 316 Foundations and Principles of Health Promotion (3) BB H 316, Foundations and Principles of Health Promotion, is a 3-credit course required of all BB H majors and available to other students interested in developing a basic knowledge in health promotion interventions. The course is designed to provide students with the conceptual foundation necessary to develop health promotion programs and interventions. It will involve information on both theory and practice. The educational objectives are that students will be able to: 1) define the concepts and levels of health, health promotion, and prevention; 2) describe the variety of settings in which health promotion and preventive services exist 3) identify levels of intervention in planning health education and health promotion programs; 4) describe a rationale for health promotion programs; 5) address the role of culture, environment, and policy in health behavior; 6) explain why different levels of health promotion interventions should be planned using theoretical frameworks. Students fulfill the educational requirement of the course by attending
class, completing reading and class assignments and small group project, viewing video tapes, and participating in class discussions.

Prerequisite: BB H 101

BBH 316H: Foundations and Principles of Health Promotion
3 Credits
Basic exposure and skills development in theory and practice in health promotion.
Honors
BBH 324: HealthWorks Peer Education Training
3 Credits
Designed to train new HealthWorks peer educators, this course addresses behavior theories, promotion strategies, and college health issues. BB H 324 HealthWorks Peer Education Training (3) HealthWorks is a peer education/outreach group that aims to promote health among Penn State students. The mission of HealthWorks is to: increase awareness and knowledge of health issues, such as sexual health, nutrition and fitness, wellness, alcohol, tobacco and other drugs, and body image and eating disorders, promote healthy lifestyle choices, provide health education programs, information, and materials to students, and advocate for a healthy Penn State community. BB H 324 is designed to train students who have been accepted into University Health Services' HealthWorks program every fall semester. The course will address the topics of health behavior theories, health promotion strategies, and health issues relevant to college populations (i.e., alcohol, nutrition, physical activity, sexual health, sleep, stress, and tobacco). To ensure that new HealthWorks members are trained to effectively promote health, students will gain both knowledge and practical experience in this course. Students will learn about health behavior theories, health promotion strategies, and health topics relevant to college students through formal classroom lectures and examinations. Classroom technology will be utilized to examine campus and national health campaigns and messages, illustrating the theories and strategies discussed in class. To garner practical experience and application-based learning, students will assist with current HealthWorks programming. Members of this class will additionally apply and integrate their new understanding of class topics through a semester project. The small-group project will ask students to propose a future HealthWorks program focused on one or more health topics that is built upon at least one health behavior theory and utilizes evidence-based strategies. By the conclusion of this course, HealthWorks members will possess the knowledge and skills to effectively provide health-related outreach, advocacy, community development, and education opportunities to students on the Penn State campus.

BBH 325: Health Promotion Services Training
3 Credits
This course will provide students with the knowledge and professional skills to deliver peer-based individual health promotion services for the college population. The course will cover a variety of health issues that are relevant to college students, including nutrition, physical activity, sexual health, sleep, and stress (including mindfulness and time management). Students will be taught about each of the health topics over the course of two class sessions. Students will be taught information about how each health topic specifically relates to the college population. Current data about each topic will be included.

These issues will be discussed in the context of health promotion principles and applicable health promotion theories. The class will provide an overview of the ecological perspective, but the focus will be on intrapersonal and interpersonal level theories, such as the Stages of Change (Transtheoretical) and Health Belief Models, as well as Social Cognitive Theory. Students will be taught the constructs for each model/theory. Students will be taught about how the theories/models apply to delivering individual health promotion interventions. Students will receive extensive training in motivational interviewing, an evidence-based strategy for promoting health behavior change. The content is designed to help students develop an understanding of the core concepts of motivational interviewing. Students will practice motivational interviewing techniques during class time. The students will deliver individual interventions during class time. Additionally, students will be given course assignments that require them to practice delivering the interventions. Students will learn about professionalism and ethics within the context of delivering individual interventions to college students.

Prerequisite: PSYCH 100 OR CAS 100

BBH 368: Neuroanatomy, Behavior, and Health
3 Credits
The neuroanatomical bases of behavior, health, and disease. BB H 368 Neuroanatomy, Behavior, and Health (3) BBH 368 will examine, in detail and in depth, the relationships between the multitudinous structures of the human nervous system and their roles in monitoring and controlling all functions of the body, in behavior and in health and disease. Because of the complexity of the anatomy of the nervous system, of necessity there will be an emphasis on each student developing a three-dimensional understanding of the brain’s structures and their geographic relationships to each other. For students majoring in BBH, this course provides a foundation and preparation for BBH 469 470, the two semester Neurobiology/Integrative Neuroscience course sequence, which assumes that the student has a basic, but detailed knowledge of the nervous system. This course will count toward fulfilling the BBH major requirement, “Take 15 credits in Biobehavioral Health.” It will also count toward fulfilling the requirement of 9 credits of additional courses in the Neuroscience Minor. Upon successful completion of the course, the student should be able to: a) identify on gross specimens and in slides of sections of the human nervous system the important nuclei, tracts and supporting structures. b) Describe the important pathways and circuits between the different components and nuclei of the human nervous system. c)Describe the role of each nucleus, tract, and circuit in controlling functions and behavior. d) Describe the expected deficits in function and behavior resulting from injury or disruption of each nucleus and tract.

Prerequisite: BB H 101 ; BI SC004 , or BIOL 141 , or PSYCH260

BBH 390A: Preparation for Global Health Field Experience
3 Credits
Designed to help students prepare for the required field experience in the Global Health minor. BB H 390A Preparation for Global Health Field Experience (3) This purpose of this course is to train students admitted to the Global Health (GLBH) Minor to plan and prepare for the required field experience in a global health setting. Students in the minor must take both this course, BB H 390A, and the subsequent field experience course, BB H 390B. This course includes an examination of both practical and academic issues related to successfully completing an appropriate field placement. Focus is given to encouraging students to become
reflective global health practitioners who are able to adapt to and work through personally and professionally complex situations. Interactive class lectures, readings, case studies, discussions, assignments and projects/presentations will help students gain an awareness of the socio-cultural, economic, and political context of various kinds of global health professional settings, and to be sensitive to the constraints under which health professionals work in different parts of the world. To broaden their understanding of the realities of engaging in the field of global health, students will have opportunities to meet with individuals who have health work experience in a variety of low and middle-income settings.

**Prerequisite:** BB H 305, BB H 440 or H P A440, and admission to the Global Health minor

**BBH 390B: Global Health Field Experience**

6 Credits

Field experience in a global health setting. BB H 390B Global Health Field Experience (6) The purpose of this course is to provide a supervised field experience in a global health setting for the students who have been admitted to the Global Health Minor (GLBHL). Students in this minor must take BBH 390A "Preparation for Global Health Field Experience" before scheduling this course. Students will spend 6 weeks in the summer working in one of several pre-approved international or domestic health care or public health settings under professional supervision.

**Prerequisite:** BB H 390A and admission to the Global Health minor

**BBH 397: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

**BBH 399: Foreign Studies**

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

**BBH 402: African Health & Development**

3 Credits

Course will address African health and development strategies in the context of health promotion programs. BB H 402 African Health Development (3) (IL)This course is designed to address African health and development strategies in the context of health promotion programs. Students will analyze the cultural, educational, social, economic, political and environmental impact of health and development in Africa. Emphasis will be on development of health promotion strategies that locate program implementation and evaluation within their cultural contexts. The objectives are to prepare students to: 1. discuss and debate the roles of culture, social contexts, gender, and political economic impact on health behaviors in Africa; 2. critique some of the theory and models used to inform public health programs in Africa; 3. examine the role of historical, spiritual, linguistic, and political impacts on health projects in different countries in Africa; and 4. analyze health priorities in Africa and their impacts on such global initiatives as the Millennium Development Goals; 5. discuss issues related to human rights, population identities in the world and examine their impact on health in Africa. Attendance is required. Students will be expected to participate actively by critically reviewing assigned readings, engaging in class discussions, and preparing and delivering in-class presentations. Grading is based on attendance, participation, presentations, exams and a final research paper.

**Prerequisite:** BB H 305

International Cultures (IL)

**BBH 407: Global Health Equity**

3 Credits

Health, social disparities, and equity in the global environment. BB H 407 Global Health Equity (3) (IL) This course focuses on issues related to health, social disparities, and equity in the global environment. It examines the theories of health disparities and equity from the vantage point of Western and non-Western countries. It explores epidemiologic data and the relationships between social structure, culture, demography, health promotion/disease prevention, and health policy of various countries and international health organizations. The course objectives are to: 1. discuss and critique the history, conceptual frameworks, and policy implications of global health disparities and equity; 2. examine epidemiologic data and studies pertaining to major global health issues and cross-national and comparative research; 3. discuss the role of social structure, culture, gender roles, and government policies in preventive health behaviors and health promotion in the global context; 4. critique theories and models used to inform health and development programs in non-Western nations.

**Prerequisite:** BB H 101 or 3 credits of SOC

International Cultures (IL)

**BBH 410: Developmental and Health Genetics**

3 Credits

Discussion of genetic influences on development and the interrelationships between genetics and health.

**Prerequisite:** BIOL 133 or BIOL 222; STAT 200, or STAT 250

**BBH 411: Research and Applications in Biobehavioral Health**

3 Credits

Research methods, multi-level analyses, and applications in biobehavioral health. BB H 411W Research and Applications in Biobehavioral Health (3)This is an upper-division course on research and applications in Biobehavioral Health and is the designated writing intensive (W) course for the major. The primary goals of this course are to provide the student the ability to effectively: 1) find, organize, integrate, and critique existing knowledge and research in biobehavioral health; 2) generate and analyze new data related to a specific domain though the conduct of original research; 3) interpret, evaluate, and communicate; to both scientific and lay audiences—the results of the original research; and 4) integrate these findings—with due concern for strengths and limitations of the research—back into the body of knowledge on the biobehavioral health topic. In this course the instructor will first introduce the student into a body of knowledge related to a domain involving health and health-related behaviors. Example domains may include areas such as, stress and health, drug/alcohol addictions and health, hormonal impacts on health, smoking cessation programs, obesity and health, sexual behaviors and health, etc. Students will go through the steps involved in original research (e.g., Introduction, Methods and Procedures, Results, Discussion, Summary, Abstract, Bibliography) and written assignments...
will be involved for each step. Depending on the instructor, the original research may involve laboratory work, collection of survey data, analyses of publicly available data, or existing data sets based on faculty's research program. Students will learn how to use available tools to descriptively summarize and analyze data using computer-assisted software. This is a required course in the Biobehavioral Health major. The course is designed to give skills to acquire, integrate, and critique health-related information and to communicate to professional and non-professional audiences. The course is appropriate for students intending to obtain positions in health promotion and disease prevention and to students seeking to advance to post-baccalaureate graduate and professional programs in medicine, public health, health policy and planning, and other health-related careers.

**Prerequisite:** BB H 101, BB H 310, STAT 200

**Writing Across the Curriculum**

**BB H 416: Health Promotion II: Planning, Implementation, and Evaluation**

3 Credits

Planning, implementation, and evaluation of health promotion, prevention, and intervention programs; emphasizing evaluation.

**Prerequisite:** BB H 310, BB H 316

**Cross-Listed**

**BB H 417: Advanced Applications in Health Promotion**

3 Credits

Advanced learning experience in health promotion applications in which students will actively participate in planning, implementing, evaluating health programs.

**Prerequisite:** BB H 416

**BB H 420: Developing Stress Management Programs**

3 Credits

Planning, developing, and implementing strategies for stress management programs for health education professionals in school, community, and corporate settings.

**Cross-Listed**

**BB H 432: Biobehavioral Aspects of Stress**

3 Credits

Comprehensive discussion on the mechanisms of stress-induced diseases.

**Prerequisite:** BB H 101, BIOL 141

**BB H 432H: Biobehavioral Aspects of Stress**

3 Credits

Comprehensive discussion on the mechanisms of stress-induced diseases.

**Honors**
safety, and drug effectiveness. 2. To provide a descriptive representation of the breadth of topics relating to behavioral and biological influences of psychoactive (i.e., therapeutic, recreational) drugs on human health and disease. 3. To provide exposure to and enhance critical thinking skills in current research related to the biobehavioral effects of psychoactive (i.e., therapeutic, recreational) drugs, including: psychoactive drug use and abuse, therapeutic drug use, and drug addiction treatments.

**Prerequisite:** BB H 101, BIOL 141, PSYCH 100

BBH 451H: Pharmacological Influences on Health

3 Credits

Biological and behavioral aspects of therapeutic and recreational drug use and misuse, and their relationships to health.

Honors

BBH 452: Women's Health Issues

3 Credits

Recommended Preparations: BIOL 141, PSYCH 100, WMNST 100

N452 examines major health issues concerning women today. The topics covered include, but are not limited to: developing a healthy lifestyle—nutrition and exercise; family planning—birth control methods; violence against women—relationship rights and signs of a batterer; eating disorders—anorexia, bulimia, and binge eating; sexual wellness; substance abuse—alcohol, prescription drugs; menopause signs and symptoms, treatments; and medical conditions affecting women today such as cancer, arthritis, multiple sclerosis and heart disease. The course emphasizes that women's lives are influenced by social, economic, political, and cultural conditions.

**Recommended Preparation:** BIOL 141 or PSYCH 100 or WMNST 100

Cross-listed with: NURS 452, WMNST 452

United States Cultures (US)

BBH 458: Critical Issues in Reproduction

3 Credits

Examination and analysis of the new reproductive technologies from the standpoint of medical ethics, feminism, and sociocultural influences.

**Prerequisite:** BIOL 141 or PSYCH 100 or WMNST 100

Cross-listed with: WMNST 452

General Education: Social and Behavioral Sciences (GS)

BBH 468: Neuroanatomical Bases for Disorders of Behavior and Health

3 Credits

An examination of the anatomical/cellular/molecular bases for human central nervous system disorders and their impacts on victims/families/caregivers. BB H 468 Neuroanatomical Bases for Disorders of Behavior and Health (3) This course will examine in detail and in depth the neuroanatomical and cellular/molecular/genetic bases for selected disorders of the human central nervous system (e.g., Parkinson's, Alzheimer's, stroke, etc.) and their impacts on the victim, his/her daily life and his/her family and care givers. Damage to, or malfunctions of, any part of the central nervous system causes specific and characteristic disruptions of normal processes, which manifest as abnormal and/or absent behaviors. Current research on the anatomical, cellular, molecular, and genetic bases for the disorders and the current/future trends in prevention/treatment of the disorders will be studied. Upon successful completion of the course, the student should be able to: a) describe the physical signs, symptoms, causes, effects on the patient and his/her family care givers, prognoses, treatments, and support systems available to these patients, of the neurological disorders covered in this course; b) describe the neuroanatomical, cellular, and molecular bases for these conditions; c) describe the current research on these disorders and the new prevention/treatment approaches being developed. The evaluation of students' performances in the course will be typically based on multiple choice examinations and a library research paper. This course will count toward fulfilling the BB H major requirement, "Take 15 credits in Biobehavioral Health."

**Prerequisite:** BB H 368, BB H 469 or PSYCH 260

BBH 469: Neurobiology

3 Credits

Comprehensive examination of neuroanatomy and physiology designed to integrate the principles of neurochemistry, neuroendocrinology and molecular biology.

**Prerequisite:** BIOL 240W

Cross-listed with: BIOL 469

BBH 470: Functional and Integrative Neuroscience

3 Credits

Neurobiological function in motivated behaviors, motor and sensory function, learning and memory, development, sexual differentiation, and pathology.

**Prerequisite:** BIOL 469

Cross-listed with: BIOL 470

BBH 490: Introduction to Internship Experience

3 Credits

Provide an integrative learning experience to develop professional skills encountered in an internship experience and future careers in biobehavioral health. BB H 490 Introduction to Internship Experience (3) This course is a prerequisite for BB H 495, Internship Experience in Biobehavioral Health. This course will provide students with the professional and academic skills necessary to develop an internship, be successful in an internship and equip students with the tools necessary to launch a career within the field of BBH or enable students to prepare more competitive applications for entry into post baccalaureate programs in medical fields or graduate school. The primary goal of the course is to provide integrative learning experiences preparing students to be successful in their internship endeavor, while learning practical skills necessary to flourish in future career choices. Course topics include: professional self-assessment and critical reflection, experiential learning, person/environment fit, resume creation and professional writing criteria, practical skills related to securing an internship consistent with professional goals, interviewing skills, professionalism and ethics within the BBH field, effective communication and internship agreement guidelines. Through this practical application, students will gain the necessary proficiencies and awareness of career settings, protocols and contexts under which BBH specialists work and/or prepare for future educational opportunities.
Prerequisite: at least 9 credits from 300-level BB H
BBH 494: Research Project
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.
BBH 494H: Senior Honors Thesis
1-6 Credits/Maximum of 6
Independent study related to a student’s interests directed by a faculty supervisor and culminating in the production of a thesis.
Prerequisite: approval of honors thesis advisor
Honors
BBH 495: Internship Experience in Biobehavioral Health
6-12 Credits
This course provides experiential learning in the field. Internship Supervision and support will be provided by site and university personnel.
Prerequisite: BB H 490
BBH 495A: **SPECIAL TOPICS**
12 Credits
BBH 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.
BBH 496H: Independent Honors Study in BB H
1-3 Credits/Maximum of 6
For non-thesis independent study/research by Schreyer Honors College scholars.
Honors
BBH 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Biochemistry and Molecular Biology (BMB)

BMB 1: Understanding the Bases of Human Disease
3 Credits
A broad survey of the molecular and cellular factors that contribute to an understanding of selected human diseases. B M B 001 Understanding the Bases of Human Disease (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. B M B 001, Understanding the Bases of Human Disease, is a survey of the most common diseases of humans. In addition to discussing various diseases, symptoms, outcomes, prevention and treatment options, we also study disease processes by describing events at the cellular or DNA level. We will come to appreciate that various cellular, metabolic or genetic problems can give rise to disorders that carry a common name - anemia, for example. One form, Sickle Cell anemia, also provides a good example of another theme of the course: how a small genetically-based problem in one function of one cell type can lead to a cascade of malfunctions with ramifications system wide. Knowing disease mechanisms and the life cycle of the infectious agent can suggest strategies for treatment of the disease. Another focus of this unit will include discussion of emerging and re-emerging diseases.

Prerequisite: approval of honors thesis advisor
Honors
BBH 495: Internship Experience in Biobehavioral Health
6-12 Credits
This course provides experiential learning in the field. Internship Supervision and support will be provided by site and university personnel.
Prerequisite: BB H 490
BBH 495A: **SPECIAL TOPICS**
12 Credits
BBH 496: Independent Studies
1-18 Credits/Maximum of 18

BBH 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.
BBH 496H: Independent Honors Study in BB H
1-3 Credits/Maximum of 6
For non-thesis independent study/research by Schreyer Honors College scholars.
Honors
BBH 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.
B M B 221 Applied Biochemistry (2)In B M B 221, students will build on their knowledge from Elementary Biochemistry (B M B 211). Emphasis is on the application of biochemical principles to specific problems in medicine, agriculture, pharmaceuticals and biotechnology. Students review fundamental principles and learn how biochemical methods, techniques and theory are applied. Class presentations are computer based in some cases. The course may also include class discussions. Evaluation and grading varies with the instructor, but possible methods of evaluation include multiple choice examinations, essay-short answer questions, and in-class contributions. Students will have completed at least three semesters of chemistry before B M B 221, because Elementary Biochemistry (B M B 211) is a prerequisite, and inorganic chemistry (CHEM 012) and organic chemistry (CHEM 034 or CHEM 038) are prerequisites for B M B 221. Knowledge of organic chemistry and basic biochemistry is essential so that the course can focus on applications rather than introductory material. B M B 221 is a requirement for those Biotechnology majors who choose not to take the 400-level series of introductory biochemistry courses. It is also required of students enrolled in the science option of the Dairy and Animal Science major. It serves as an elective for all other majors. It is not approved as a general education course.

Prerequisite: B M B 221

B M B 221: Applied Biochemistry

2 Credits

Application and correlation of biochemical events to physiological-nutritional processes in specialized cells, fluids, and whole animals. Students may not receive credit for both B M B 221 and 401. B M B 221
nucleus, energy conversion. B M B 251H Molecular and Cell Biology I (3) This course is an introduction to the fundamental principles of molecular and cellular biology, with a primary focus on eukaryotic cells. Topics covered will include elementary biochemistry; structure and function of biological macromolecules, the cell and its organelles; the role of biological membranes in bioenergetics and sub-cellular compartments. There will be a particular emphasis on the molecular mechanism of heredity; the organization and expression of genetic information; experimental methods used in the analysis of gene expression and the relationship between gene/protein structure and function. A key feature of the Honors section is the use of review papers and peer-reviewed journal articles as integral components of the course. The objectives of this component of the Honors section are to: 1) introduce students to the scientific method (the formulation of hypotheses based on observation and the processes underpinning the rigorous test of such hypotheses); and 2) provide the intellectual framework for a critical evaluation of the literature. Students are expected to engage in classroom discussion and will be evaluated by a combination of classroom presentations, multiple choice and short essay exams. Students are expected to develop a "big picture" view of how the various cellular processes are related to each other and also attain a thorough understanding of the molecular details of the individual processes (e.g. the order and molecular details of events leading from transcription to protein localization within a cell). This course is a prerequisite for B M B 252H.

Prerequisite: CHEM 112 Honors

BMB 252: Molecular and Cell Biology II

3 Credits

MICRB 252 / BMB 252 is a continuation of BMB 251 / MICRB 251; cytoskeleton, cell growth, division, adhesion, signalling, germ cells, differentiation, immune system, nervous system, plant cells. MICRB 252 / BMB 252 Molecular and Cell Biology II (3) This section focuses on the internal organization on eukaryotic cells and their organization in multi-cellular organisms. Topics covered include cell communication, the cytoskeleton, cell cycle, fertilization and development of multi-cellular organisms, genesis of tissues, and the molecular mechanisms of cancer and immunity. There will be a particular emphasis on how the basic principles and experimental approaches presented in 251H are employed to address questions related to the topics that will be covered in 252H. As in 251H, a key feature of the Honors section will be the use of review papers and peer-reviewed journal articles as integral components of the course. The objectives of this component of the Honors section are to: 1) introduce students to the scientific method (the formulation of hypotheses based on observation and the processes underpinning the rigorous test of such hypotheses); and 2) provide the intellectual framework for a critical evaluation of the literature. Students are expected to engage in classroom discussion and will be evaluated by a combination of classroom presentations, multiple choice and short essay exams.

Prerequisite: B M B251H

Honors

BMB 398: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

BMB 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

BMB 400: Molecular Biology of the Gene

2-3 Credits

Biochemistry of genetic phenomena, including the structure, replication and dynamics of genes and chromosomes, their expression and regulation. B M B 400 Molecular Biology of the Gene (2-3) Molecular Biology of the Gene examines the flow of information in living things at the molecular level. Topics such as the following are included: 1) DNA replication, repair and recombination, 2) RNA transcription and modification, and 3) protein translation, folding and modification. This class is designed as a one-semester course having the objectives of understanding concepts in molecular biology and gene regulation, and exploring research materials and methods used in the laboratory. Course materials are prepared not only from the textbook but also from the primary literature. Therefore, students who want to take this course should have some familiarity with reading research articles. B M B 400 is for advanced undergraduates who have already taken introductory molecular biology and biochemistry. Knowledge of molecular biology is essential background for pursuit of a career in the life sciences, including academia, medicine, industry, forensic science and science policy.

Prerequisite: BIOL 222 or BIOL 322; BIOL 230W or B M B251; CHEM 212

BMB 401: General Biochemistry

3 Credits

Principles of the structure and function of biological molecules, including carbohydrates, lipids, membranes, proteins, and enzymes. Students may not receive credit for both CHEM 476 and B M B 401. B M B 401 General Biochemistry (3) BM B 401 is the first course of the honors general biochemistry series, a sequence designed to prepare students for careers
and graduate study in the life sciences. Overall, biochemistry describes, in chemical and molecular terms, the structures, mechanisms, and chemical processes at work in all living things, and abstracts organizing principles that underlie life in all its diverse forms. Building upon concepts introduced in molecular and cellular biology and in organic chemistry, students in B M B 401 synthesize and apply this knowledge toward understanding the structure and function of the major classes of cellular constituents: water, and the various macromolecules — amino acids and proteins, sugars, and polysaccharides, nucleotides and nucleic acids, fatty acids and lipids, and membranes and various membrane proteins. These molecules interact to comprise the next level of multi- and mixed molecular structures and organelles that enable a cell to carry out its many metabolic functions. Students also learn about the technologies used to study cellular components and processes, and current advances in biotechnology that have accelerated the pace of discovery in the field. Having gained familiarity with the molecules found in a cell, students are well-equipped to take on more advanced topics in the exciting, rapidly-evolving fields of the life sciences. An overriding theme in biochemistry is that polymers of living systems, though structurally large and functionally complex, are highly ordered chemical entities, with specific sequences of monomeric subunits giving rise to discrete structures and functions. The course begins with an introduction to proteomics, covering the structural basis of protein functions and then moves on to enzyme kinetics and mechanisms. Next, students explore simple and complex carbohydrates and topics in glycomics that include energy storage, framework skeleton, and specific molecular recognition. Various classes of lipids, including phospholipids, complex lipids, membrane biology and transport systems, are covered next. Following is an analysis of the biochemical basis of signal transduction describing how specific signals regulate biomolecular activity within a cell, and between cells to keep an organism in homeostasis. Lastly, as a transition to intermediary metabolism in B M B 402H, an introduction to bioenergetic principles is included to provide a framework for understanding pathways of energy metabolism, using glycolytic reactions as an example.

**Prerequisite:** CHEM 212; B M B251 or BIOL 230

**BMB 401H: General Biochemistry**

3 Credits

Principles of the structure and function of biological molecules, including carbohydrates, lipids, membranes, proteins, and enzymes. Students may not receive credit for both CHEM 476 and B M B 401H. B M B 401H General Biochemistry (3) BM B 401H is the first course of the honors general biochemistry series, a sequence designed to prepare students for careers and graduate study in the life sciences. Overall, biochemistry describes, in chemical and molecular terms, the structures, mechanisms, and chemical processes at work in all living things, and abstracts organizing principles that underlie life in all its diverse forms. Building upon concepts introduced in molecular and cellular biology and in organic chemistry, students in B M B 401 synthesize and apply this knowledge toward understanding the structure and function of the major classes of cellular constituents: water, and the various macromolecules — amino acids and proteins, sugars, and polysaccharides, nucleotides and nucleic acids, fatty acids and lipids, and membranes and various membrane proteins. **Prerequisite:** CHEM 212; B M B251 or BIOL 230W Honors

**BMB 402: General Biochemistry**

3 Credits

Comprehensive survey of the pathways and regulation of intermediary metabolism. B M B 402 General Biochemistry (3) Most, if not all, of the students taking B M B 402 intend to pursue a Ph.D., M.D. or M.D./Ph.D. degree after graduation. Since biochemistry is an important discipline for advanced studies in life and medical sciences, a major goal of B M B 402 is to prepare students well for their future challenges in graduate or medical school. The textbook used is more advanced than that used in B M B 402, and it is what is typically used in biochemistry courses taught at premier medical schools and graduate schools. The major topics covered include glucose metabolism, TCA cycle, and associated processes of nitrogen metabolism. This course includes a transition to intermediary metabolism and bioenergetics. The course may be taken as a challenging level to provide students with the opportunity to treat topics in greater depth and to explore current development more...
Biochemistry and Molecular Biology (BMB) 402: Biochemistry and Molecular Biology

The major topics covered include glycolysis, TCA cycle, metabolism of fatty acids, lipids (phospholipids, cholesterol and sphingolipids), amino acids and nucleotides, signal transduction, and human genetic diseases. Since biochemistry is a very rapidly progressing discipline, any new developments not covered by the textbook are introduced in the lectures or via discussion of current scientific papers at an appropriate level. BMB 402H exams consist of entirely essay and problem-solving type questions, whereas BMB 402 exams typically contain all multiple-choice questions. BMB 402H exams require that students understand all aspects of a particular metabolic pathway under study, including the sequential steps of the pathway, chemical structures of all intermediates, the mechanisms of all key reactions, regulation of the pathway, and the relationships with other pathways. In addition, students must be able to integrate information learned from different but related material. These exams typically take students three hours to complete.

Prerequisite: BMB 401H

Honors

BMB 403: Biochemistry Laboratory

1 Credits

An introduction to techniques of experimental biochemistry, illustrating principles covered in BMB 402.

Prerequisite: or concurrent: BMB 402

BMB 406: Molecular Biology

3 Credits

A discussion of current aspects of cell molecular biology with a laboratory emphasizing current biotechnology techniques.

Prerequisite: BIOL 222 or BIOL 322; BIOL 230W or BMB 251; CHEM 212

BMB 408: Instructional Practice

1-2 Credits/Maximum of 2

Participation in the instruction of undergraduate laboratory and lecture courses, including classroom preparation; discussion of principles and objectives of each exercise. BMB 408 Instructional Practice (1-2) Students in this course will gain experience in science teaching by participating in either lecture courses (as Learning Assistants) or laboratory courses (as Teaching Assistants) with the goal of making students in this course more effective as teachers and communicators in their future careers in science. Participation in instruction of selected departmental lecture and laboratory courses will include preparation of class materials, and facilitating discussion and presentation of course principles and learning objectives of each topic or exercise.

Prerequisite: 10 credits in biochemistry and molecular biology and permission of the department

BMB 411: Survey of Biochemistry and Molecular Biology Literature

1 Credits

An introduction to readings and oral presentations in biochemistry and molecular biology.

Prerequisite: BMB 401; BMB 400 or BMB 402

BMB 428: Physical Chemistry with Biological Applications

3 Credits

Chemical thermodynamics and kinetics with applications to biological problems.

Prerequisite: CHEM 203 or CHEM 212; PHYS 203 or PHYS 251; 3 credits in cell biology

BMB 428H: Physical Chemistry with Biological Applications

3 Credits

Chemical thermodynamics and kinetics with applications to biological problems.

Honors

BMB 430: Developmental Biology

3 Credits

Molecular and genetic analyses of mechanisms involved in differentiation and determination in biological systems.

Prerequisite: BIOL 222; BMB 252 or BIOL 230

Cross-listed with: BIOL 430

BMB 432: Advanced Immunology: Signaling in the Immune System

3 Credits

The study of signaling pathways that regulate the immune response. BMB 432 BMB (MICRB/VSC) 432 Advanced Immunology: Signaling in the Immune System (3) This course will use the immune system as a model in which to study how cells communicate in order to coordinate an immune response. We will focus on signaling mechanisms that regulate such immune responses as T cell activation, Th1/Th2 differentiation, macrophage activation, and migration of immune cells to sites of inflammation. All lectures are based on recent reviews by key investigators in each field, as well as primary articles to present students with the most recent advances, techniques, and approaches used. The goal of the course will be to convey a basic understanding of intracellular signaling mechanisms that will pertain to all areas of biology, an appreciation for current questions and future directions in the field, and an in depth understanding of the signals that govern immune responses. The material presented will build on the basic concepts learned in BMB 400 and MICRB 410, and will lay the foundation for more advanced courses at the graduate level.

Prerequisite: BMB 400, MICRB 410

Cross-listed with: MICRB 432, VBSC 432

BMB 433: Molecular and Cellular Toxicology

3 Credits

In-depth coverage of processes by which drugs/chemicals interact with biological systems and the experimental approaches used to study these interactions.

Prerequisite: BMB 401

Cross-listed with: VBSC 433
BMB 435: Viral Pathogenesis

3 Credits

A study of the molecular and pathological aspects of both human and zoonotic viruses that contribute significantly to human disease. Viral Pathogenesis provides students with a general knowledge of medically relevant viruses, with a specific focus on important human viral pathogens. The course is meant to help students understand how viruses cause disease in humans and animals. Lectures and in-class discussions will focus both on the fundamentals of infection and disease mechanisms, and on contemporary virology-related topics in the scientific literature.

Separation of a mixture of phycobiliproteins using ion-exchange column chromatography is a major experiment that the students will perform to learn protein purification methods. In this experiment they will learn how to pour a column, apply sample, elute it with salt gradient and collect fractions using automated fraction collector. Ammonium sulfate precipitation and dialysis will be part of protein purification procedures. Characterization of the separated proteins will be performed by determining the absorption spectra with a Genesys-5 spectrophotometer and by determining the molecular weights of the subunits of the phycobiliproteins by SDS-polyacrylamide gel electrophoresis.

Prerequisite: B M B251, B M B442, or MICRB201; CHEM202 or equivalent; prerequisite for concurrent: B M B211 or B M B401

BMB 437: Physiological Biochemistry

2 Credits

Physiological aspects of biochemistry, with emphasis on mammalian metabolism, specialized tissue and fluid functions, detoxification mechanisms, energetics, and physiological interrelationships.

Prerequisite: B M B402

BMB 442: Laboratory in Proteins, Nucleic Acids, and Molecular Cloning

3 Credits

Laboratory in enzyme purifications and assay techniques; nucleic acid isolation and characterization, including plasmid preparation. B M B (MICRB) 442 Laboratory in Proteins, Nucleic Acids, and Molecular Cloning (3)The DNA portion of B M B/MICRB 442 serves as an introduction to fundamental techniques of recombinant DNA technology and as a reinforcement of principles of Molecular Genetics from lecture courses. The central experiment entails all basic procedures necessary to clone a gene, i.e. to make a recombinant molecule comprised of DNA from two sources. Students use restriction enzymes to cut two distinct DNA molecules into smaller fragments. The fragments are mixed and treated with the enzyme Ligase, which randomly combines small fragments into large recombinant DNA molecules in new combinations different in composition from either original molecule. The recombinant molecules, which include genes that confer drug resistance, are transformed into E. coli cells that initially have no drug resistance. Cells that acquire recombinant DNA molecules are identified by selective plating on growth media containing drugs. From the transformed cells, recombinant DNA is isolated and analyzed by agarose gel electrophoresis, completing the array of basic gene cloning techniques. In addition to this central, multi-session experiment, students also do PCR and an investigation of the lac operon, a classic molecular genetic model system. The proteins portion of B M B/MICRB 442 is designed to introduce students to protein biochemistry topics and laboratory techniques typically encountered in academic and commercial settings. Students will learn about buffers, spectroscopy, enzyme purification and characterization methods. Specifically, the experiments include preparation of buffers and performing kinetic studies to determine Km and Vmax values.

Separation of a mixture of phycobiliproteins using ion-exchange column chromatography is a major experiment that the students will perform to learn protein purification methods. In this experiment they will learn how to pour a column, apply sample, elute it with salt gradient and collect fractions using automated fraction collector. Ammonium sulfate precipitation and dialysis will be part of protein purification procedures. Characterization of the separated proteins will be performed by determining the absorption spectra with a Genesys-5 spectrophotometer and by determining the molecular weights of the subunits of the phycobiliproteins by SDS-polyacrylamide gel electrophoresis.

Prerequisite: B M B251, B M B442, or MICRB201; CHEM202 or equivalent; prerequisite for concurrent: B M B211 or B M B401

BMB 445W: Laboratory in Molecular Genetics I

2 Credits

Laboratory in molecular techniques in gene analysis and microbial genetics, emphasizing in vitro methodologies. B M B 445W Laboratory in Molecular Genetics I (2) The objectives of B M B 445W are to provide advanced Biochemistry and Microbiology students with instruction in (1) techniques commonly used in modern research and clinical laboratories in this field, (2) evaluation of the quality of experimental data, including appropriate analysis, and (3) presentation of results of laboratory work in written form. Experiments are focused on key techniques and procedures such as DNA isolation, polymerase chain reaction, Southern hybridization analysis, and DNA sequencing. Students are evaluated via (1) written lab reports organized in the format found in most primary research journals in the field and (2) written examinations that assess the understanding of principles and methodology. B M B 445W is an extension of the nucleic acid section of B M B 342, which is a prerequisite for B M B 445W. The in vitro techniques presented in B M B 445W complement the in vivo techniques in B M B 446, though neither course is prerequisite for the other. B M B 445W is a requirement for the B M B major, and is an elective for other students, most notably Microbiology majors and graduate students in other areas of the life sciences. B M B 445W is taught in a standard biochemistry teaching laboratory facility that houses the required equipment necessary for analysis of DNA (electrophoresis units, centrifuges, thermocyclers, cold room, spectrophotometers).

Prerequisite: B M B442, B M B401

Writing Across the Curriculum

BMB 448: Model Systems and Approaches in Cell Biology Inquiry

2 Credits

Advanced laboratory that uses inquiry-based approaches to the analysis of organelles, genetic mechanisms, and metabolic processes in eukaryotic organisms.

Prerequisite: MICRB202, B M B442 or MICRB442, and B M B251 or MICRB251 or B IOL 230
BMB 450: Microbial/Molecular Genetics

2 Credits

Genetic phenomena, with emphasis on molecular mechanisms: gene transfer, recombination, gene conversion, gene fusion, suppression, transposons.

Prerequisite: BIOL 222 or BIOL 322, MICRB201
Cross-listed with: MICRB 450

BMB 460: Cell Growth and Differentiation

3 Credits

Mechanisms and regulation of protein trafficking, organelle biosynthesis, cell development, signaling and cell cycle control. Emphasizes experimental design and analysis. B M B 460 B M B (MICRB) 460 Cell Growth and Differentiation (3) Cell Growth and Differentiation is a unique course that uses the primary literature to teach significant content in advanced cell biology while simultaneously exposing students to the scientific craft of experimental design and analysis. In addition to exploring historical and current cell biology research articles, students will develop two vital scientific skills: critical thinking as applied to experimental data and creative thinking about solving unresolved questions in cell biology. There is no course textbook. As an alternative, we read from journals to explore questions about cell biology and how cell biologists decipher cell functions. Instead of a general survey of cell biology, we delve into specific issues, often looking at "classic" papers describing how a specific phenomenon was first investigated to place current questions in context before progressing to the latest publications exploring how innovative techniques have been applied to deciphering cell function. The course is divided into four units, each of which emphasizes content in a different area. Actual content may vary from year to year as the course is updated to reflect progress in a field of research. We have previously explored the general areas of cell membrane dynamics, intracellular protein trafficking, cell cycle regulation, cell signaling pathways and cancer cell biology. Finally, the course ends with a unit on stem cells and therapeutic cloning technology. A portion of the final unit is also devoted to discussing the ethical implications of stem cell research with an emphasis on how to make personal decisions about how our society should approach these issues. Reading guides are provided for each assignment to help students find and understand important points in reading assignments. Class periods are devoted to explanations and instructor-led discussions about the readings with an emphasis on understanding the questions, the methods used to approach the questions, the experimental results and the interpretations of the results. Furthermore, periodic class periods are dedicated to experimental approach exercises where students work in groups to practice posing new questions as suggested by our readings and proposing experiments to answer these questions. These skills are vital part of what cell biologists do daily, and these exercises provide practice in thinking like a scientist. Students have previously reported that by taking this course they acquired the ability to read and understand the primary literature and have gained an in-depth understanding about how to use various experimental techniques.

Prerequisite: B M B252
Cross-listed with: MICRB 460

BMB 460H: Cell Growth and Differentiation

2 Credits

Mechanisms and regulation of protein trafficking and organelle biosynthesis, cell signaling, cell cycle control, and cell development.

Cross-Listed
Honors

BMB 464: Molecular Medicine

3 Credits

An exploration of the impact of advances in molecular biology on understanding disease mechanisms, medical diagnosis, and therapeutics.

Prerequisite: B M B251

BMB 464H: Molecular Medicine

Honors

BMB 465: Protein Structure and Function

3 Credits

A study of the relationship between structure and function of proteins; internet analysis to predict structure and function is included.

Prerequisite: BIOL 230W

BMB 474: Analytical Biochemistry

3 Credits

Physical/chemical theory and techniques that emphasize purification and characterization of biological macromolecules, including proteins, lipids and nucleic acids. B M B 474 Analytical Biochemistry (3) This three-credit course deals with acquiring knowledge of laboratory skills required for success in experimental biochemistry and molecular biology. It is particularly suited for students intending a career as a research scientist in the areas of biochemistry, biotechnology, bioengineering, microbiology, or molecular biology. Course content focuses on the detection, purification and identification of biological macromolecules such as practice of separation science with emphasis on diffusion, gel permeation chromatography, ion-exchange chromatography, affinity chromatography, sedimentation velocity ultracentrifugation, sedimentation equilibrium ultracentrifugation, density gradient ultracentrifugation, agarose gel electrophoresis, SDS gel electrophoresis, isoelectrofocusing, membrane filtration and dialysis (including Donnan equilibrium), ligand binding, high performance gas chromatography, high performance liquid chromatography, mass spectrometry, and immunological methods of macromolecules. The second unit includes the theory and practice of biological spectroscopy with emphasis on visible, infrared, circular dichroism, optical rotary dispersion, Raman, resonance Raman, nuclear magnetic resonance, electron paramagnetic resonance, Mossbauer, surface plasmon resonance, electron-nuclear double resonance, and electron spin echo spectroscopy of macromolecules. The lectures are designed to introduce a particular
topic, to derive relevant equations, to supplement reading material with practical examples, and to clarify points in assigned problem sets. Two guest lectures by experts in the field will provide up-to-date information on mass spectroscopy and Mossbauer spectroscopy, and two site-visits, one to the mass spectrometry core facility and the other to the magnetic resonance core facility, will provide hands-on experience. Problem sets are not collected or graded; rather, answers are handed out in the following class period. This method provides the ability to collaborate with others on solving problems and to self-check work.

Prerequisite: Prerequisite or concurrent: B M B428 or CHEM 450

BMB 480: Tumor Viruses and Oncogenes

3 Credits

Oncogenes, DNA and RNA tumor viruses, and relevant experimental techniques with emphasis on molecular basis of carcinogenesis and gene regulation.

Prerequisite: or concurrent: MICRB415, MICRB435, or MICRB460
Cross-listed with: MICRB 480

BMB 484: Functional Genomics

3 Credits

Biochemical, genetic and evolutionary approaches to comprehensive discovery of functional DNA segments in genomes, including genes and regulatory sequences. B M B 484 Functional Genomics (3) What in your genomic DNA makes you different from chimpanzees, mice or flies? What sequences in your DNA make it more or less likely that you will develop diabetes or cancer? These are questions of widespread interest, answers to which could play major roles in personalized medicine and in understanding our place in the biosphere. Modern genomic analysis uses powerful technologies and generates massive amounts of data, which are yielding exciting insights into answering these questions. One hallmark of genomic research is that data are released rapidly along with tools for browsing and analyzing it. Thus not only can you learn the major results by reading papers, but you can examine the underlying data and do your own analyses. Discovery is no longer the exclusive domain of the data producers ndash; you can join in! This course will introduce students to ongoing research aimed at identifying functional regions in genomes and encourage them to use web-based bioinformatics tools for exploring the genomic and epigenetic data. Students will develop creative projects that address issues in functional genomics of high interest to them. The course has two phases, the first on the basics of genomics (sequencing, alignment, assembly, resources), and the second on the search for functional elements in genomes. The course will explore ways to find:- Protein-coding genes within genomes- Transcribed regions: How much of the genome is transcribed? Which transcribed regions do not code for proteins? What roles do they play in the cell (regulatory and enzymatic)?- Evolutionary signatures of function: How can you use genome comparisons between species to estimate the amount of functional sequence ndash; and to identify it?- Non-genic functional sequences: How do you map epigenetic features associated with gene regulation, such as histone modifications, DNase hypersensitive sites, and transcription factor occupancy?- Function by phenotype: Given the ability of genetic association to find loci that contribute to complex traits, such as disease susceptibility, how does functional genomics aid in finding basis of these traits?

Prerequisite: B M B251 or BIOL 230W, BIOL 222 or BIOL 322

BMB 485: Human Genomics and Biomedical Informatics

3 Credits

This course covers the basics of measuring genomic variation and exploring how variation in DNA is related to common, complex disease.

Prerequisite: BIOL 322, B M B400, STAT 301 or STAT 401

BMB 488: Communities of Practice in Biochemistry and Molecular Biology

2 Credits/Maximum of 16

The course combines laboratory research in a community of practice and a seminar on topics in science, ethics, and society.

Prerequisite: MICRB202

BMB 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

BMB 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**Biological Engineering (BE)**

BE 1: Growing Your Future--First-Year Seminar

1 Credits

First-year seminar to introduce students to the breadth of the agricultural and biological engineering profession, including bioprocessing, machinery, and natural resources. B E 001S Growing Your Future--First-Year Seminar (1) This first-year seminar introduces students to the university in general and to the breadth of the agricultural and biological engineering profession. Students participate in hands-on lab activities in the focus areas of the profession, including machinery systems, food and biological processing, and natural resource engineering. Through these lab activities and a group project, students learn how the profession is critical to providing a growing world population with food, fiber, fuel, and water under increasing environmental constraints. In addition to being introduced to Penn State as an academic community, students also become familiar with the resources, tools, and opportunities available to them. Through the lab activities and in-class discussions on research, internship, and international opportunities, students meet and establish relationships with faculty, graduate students, and undergraduate students affiliated with the Biological Engineering and BioRenewable Systems programs.

First-Year Seminar

BE 301: Mathematical Modeling of Biological and Physical Systems

3 Credits

The ability to quantify relationships into mathematical models, and implement the models into the computer to find solutions, is essential for engineering analysis and design. This course provides the
student with tools for modeling biological and physical systems. Upon completion of this course, the student will be able to: identify a process/system and represent that process/system mathematically; solve the mathematically-represented system using computer-based modeling tools, such as Excel and MATLAB; describe the emphasis areas offered in the Biological Engineering major; and be able to develop a systems model related to each area. The course includes engineering economics, matrix operations, curve fitting, numerical integration and differentiation, linear and non-linear systems of equations, and applications of these methods to biological and agricultural systems.

Prerequisite: MATH 251

BE 302: Heat and Mass Transfer in Biological Systems

4 Credits

Engineering applications of the fundamentals of heat and mass transfer to natural and engineered biological systems. B E 302 Heat and Mass Transfer in Biological Systems (4) This course applies the principles of heat and mass transfer to the engineering of biological systems, ranging from soil/water ecosystems to animal, plant, and microbial production systems. Heat transfer mechanisms (conduction, convection, and radiation) are covered, as well as analysis techniques for steady state and transient cases. Mass transfer mechanisms (diffusion, dispersion, and convection) are also covered followed by simultaneous heat and mass transfer, including psychrometrics, ventilation, and drying. Applications of heat and mass transfer to agricultural and biological engineering are interwoven throughout the course. These applications may include heat exchangers for hydraulic systems, flow through porous media, soil freezing and thawing, bioreactor design, post-harvest product storage, animal housing, and greenhouses.

Prerequisite: MATH 231, MATH 251, B E 301, M E 300. Prerequisite or concurrent: C E 360 or M E 320; Concurrent: C E 3600 or M E 320

BE 303: Structural Systems in Agriculture

3 Credits

Engineering analysis and design of structural systems in agriculture; topics: loads, connectors, analysis and design of structural members and systems. B E 303 Structural Systems in Agriculture (3) The objective of this course is to provide the student with the essential skills necessary to engage in practical agricultural structure analysis and design. Topics include a review of shear, moment and deflection concepts; loading in agricultural structures including earth loads, grain loads and livestock loads; methods for the analysis of determinate and indeterminate beams, trusses and frames; the material properties of wood including impact of species, grain orientation, degree of hydration, etc., on member adequacy. The nano and molecular structure of wood is also discussed and how it impacts material properties. A lecture is also presented including ethics in the workplace including issues related to new materials technologies. Lectures are focused on the practical application of basic engineering principles with examples. The lab period contains a substantial design analysis project where a student team analyzes an industrially designed structure (typically a post-frame building containing a truss roof system), which has been designed for a specific area. The team then redesigns the structure for a different location with different snow and wind loadings as well as intended usage, and optimizes the structure for efficient design of the structural members. The design and analysis uses a common industrial software package. There are also field trips near the end of the class to tie everything together. The course will serve as a prerequisite for senior-level structural design courses.

Prerequisite: M ECH210 or M ECH213

BE 304: Engineering Properties of Food and Biological Materials

3 Credits

Engineering properties play a crucial role during the analysis, design, and synthesis phases of problem solving. The accurate knowledge of properties is essential to the precise determination of the overall system and component responses. Due to the time-dependent and environmentally-sensitive nature of properties of the agricultural, food, and biological materials, the theory and measurement systems are different from those used for conventional engineering materials and their systems. Therefore, the focus of this course is to provide the students with sound bases of the theory and measurement methods that are used to quantify physical, mechanical, thermal, biological, and chemical properties of products and their systems. In addition, the significance and importance of the inherent variation in the property values of agricultural, food, and biological materials is emphasized.

Prerequisite: (EMCH 210; EMCH 213), MATH 251 CONCURRENT: BE 301, (CE 360; ME 320)

BE 305: Agricultural Measurements and Control Systems

3 Credits

Principles of measurements, instruments, controls, and data acquisition systems, with emphasis on agricultural applications. B E 305 Agricultural Measurements and Control Systems (3) Engineers and scientists are routinely required to measure or control parameters of physical systems. Frequently, these parameters are quantified electronically. This course prepares the student to solve fundamental engineering instrumentation and control problems with emphasis on agricultural and biological systems. Upon completion of this course, the student will be able to: select and apply electronic devices to solve basic engineering measurement and control problems; apply interference (noise) reduction techniques using sound engineering principles; demonstrate correct use of common electronic measurement tools including multimeters, oscilloscopes and others; demonstrate electrical construction techniques including cable preparation, soldering, crimping, circuit board fabrication, and others; explain simple measurement and control circuits represented by schematics or ladder diagrams; demonstrate the application of dataloggers, microcontrollers, programmable logic controllers, and computer software to collect data and/or control basic processes; explain the function of common circuit components such as resistors, capacitors, inductors, diodes, transistors, op-amps, and transformers in simple circuits. Students are evaluated on homework and lab worksheets, quizzes, an oral presentation, and a final project.

Prerequisite: PHYS 212

BE 306: Machines for Agricultural and Biological Processing

3 Credits

Application of machine systems to agricultural production and biological processing machinery. Functional design and analysis of equipment. B E 306 Machines for Agricultural and Biological Processing (3) This course is designed to provide a broad foundation for understanding machine system design for biological engineering students. In addition, this course serves as a foundation for those wishing to develop a more
focused understanding of agricultural and general machine systems, and is a prerequisite for B E 400 level courses. Machine systems are an integral part of many agricultural operations from field production to post-harvest processing, storage, transportation, and bio-based processing. Biomass feedstock logistics and bioenergy production systems are heavily relying on machine systems. Biological engineers will likely encounter a wide range of powered and automated equipment in their careers. This course consists of lectures, labs, and open-ended design projects. The lab activities will focus on testing and evaluating of machine performance using prototype machines and instruments. Lab activities and design projects will be completed in the format of small groups. This course equips the students to: (1) describe operating characteristics of engines and motors and properly select models for different applications; (2) design machine elements and mechanical power transmission systems to accomplish a machine task; (3) apply basic physics and engineering principles in a variety of machine-product interaction situations; and (4) practice technical report writing and oral presentation.

**Prerequisite:** E MCH212; E MCH210 or E MCH213

**BE 307: Principles of Soil and Water Engineering**

3 Credits

Utilization and engineering of soil-water resources; including rainfall-runoff, soil-water movement, erosion/sediment transport and flow processes. B E 307 Principles of Soil and Water Engineering (3) The two 50-minute class periods will focus on exploration of the underlying principles, equations, and importance of each of the topics to be covered. The two-period lab sessions will be used to explore each topic in a practical and experiential mode, with class participants sharing in discussions, lab activities, and explanations/presentations of project items. Weekly quizzes and periodic exams (somewhat evenly distributed during the semester) will be given during the lab period at appropriate stages of the course (likely after each major topic). The lab activities will focus on using representative soil profiles, cropping-management systems, and watershed-scale settings common to the immediate Centre County region as the basis for the experiential learning. Lab activities will sequentially build from one lab period to the next, showing how each stage of soil and water engineering is used to develop a more complete watershed-type project. Labs will involve in-class activities and field trips including map use, problem formulation, team problem solving, discussions, and reports/presentations by class participants. Participants will be expected to gather information and conduct some analyses outside of the class meeting times so as to complete the required lab projects. As appropriate, field trips will be scheduled so as to show course participants the practical settings in which basic soil and water engineering principles can be applied. The course will serve as a course preceding the senior-level soil and water engineering design courses in the Natural Resources Engineering Option of the Biological Engineering (B E) major.

**Prerequisite:** C E 360 or M E 320; Concurrent: C E 360 or M E 320

**BE 308: Engineering Elements of Biochemistry and Microbiology**

3 Credits

Introduction to basic biochemistry and microbiology as well as industrial and environmental applications. B E 308 Engineering Elements of Biochemistry and Microbiology (3) B E 308 provides an introduction to microbiology, biochemistry, and major organic compounds found in living systems such as carbohydrates, lipids, proteins, and vitamins, as a package to engineering students. Energy calculations in microbial bioenergetics will be covered. Examples of industrial and environmental applications that build on the basic principles will be presented.

**Prerequisite:** CHEM 110

**BE 391: Contextual Integration of Communication Skills for the Technical Workplace**

2 Credits

To develop corporate communication skills in technically focused students in a contextual manner. A S M (A B E) 391 Contextual Integration of Communication Skills for the Technical Workplace (2) A B E/A S M 391 is the first half of a two-semester capstone experience in corporate focused leadership and communication skills training. The sequence is formatted into two 2-credit courses (second semester Junior for A B E/A S M 391 and first semester senior for the companion A B E/A S M 392 course). A key facet of this training is the contextual approach taken. All course modules are focused around the needs of industry and corresponding technical course content mdash; a complete contextual approach. To meet the needs of the student, the course will reflect clear understanding of leadership and communication but also appreciate critical aspects of the technical content of students’ work and of the industries within which the students will ultimately work. The primary focus for 391 is communication skills (oral and written) with a secondary focus on leadership and career skills. The course provides the student with interaction with individuals from industry (company visitors, industry trips, and recruiting opportunities). Students will be evaluated through writing and speaking projects, professional presentations, written worksheets in class and out, creation of portfolios and reports, in class group and individual exercises, computer graphics presentation assignments, library assignments, interaction with industry executives (reports), and leadership journals.

**Prerequisite:** Junior level standing in B E or BRS

Cross-listed with: BRS 391

General Education: Writing/Speaking (GWS)

**BE 392: Contextual Integration of Leadership Skills for the Technical Workplace**

2 Credits

B E/BRS 392 is the second half of a two-semester experience in corporate-focused leadership and communication skills training. The sequence is formatted into two 2-credit courses (second semester junior for B E/BRS 391 and first semester senior for the B E/BRS 392 course). A key facet of this training is the contextual approach taken. All course modules focus on leadership and communication needs of industry within its corresponding technical content thereby representing a complete contextual approach. To meet the needs of the student, the course will reflect clear understanding of leadership and communication but also appreciate critical aspects of the technical content of students’ work and of the industries within which the students will ultimately work. The primary focus of B E/BRS 392 is on leadership, with communication, ethics, sustainability and career issues the secondary focus. The course provides students with interactions with individuals from industry (company visitors, industry trips, and recruiting opportunities). Topics developed for B E/BRS 392 include personal development, ethical decision-making, corporate social responsibility, strategic group management, facilitation, and diversity. Students may be evaluated
through writing and speaking projects, professional presentations, written worksheets in class and out, creation of portfolios and reports, in-class group and individual exercises, interaction with industry executives (reports), and leadership journals.

**Prerequisite:** BRS 391, junior level standing in B E or BRS
Cross-listed with: BRS 392
General Education: Writing/Speaking (GWS)

BE 460: Biological Engineering Design I

2 Credits

BE 460 is part one of a two course sequence that provides a culminating design experience for students in the Biological Engineering major. Students will develop skills and techniques for managing and executing engineering design projects in the following fields: agricultural engineering, food and biological processing engineering, and/or natural resource engineering. Projects are sponsored by faculty, industry, or community initiatives and are structured to span two semesters. In the Fall semester, the emphasis is on classroom lectures, preliminary analyses, and project proposal development. In the Spring semester, the emphasis is on hands-on laboratory activities, project execution, and report preparation. Project teams perform all facets of the design process. This includes problem identification, planning of the project, formulation of design specifications, development and evaluation of alternative conceptual designs, development of detailed designs, consideration of safety and design optimization, design implementation, design testing, and analysis and documentation of results. Students improve their writing skills through preparation and refinement of various documents including a design notebook, proposal, statement of work, design specification report, status reports, and a final report. Students also present their results in other formats, including poster and oral presentations for both technical and non-technical audiences.

**Prerequisite:** B E 301 ; B E 391 ; 7th semester standing
Writing Across the Curriculum

BE 461: Design of Fluid Power Systems

3 Credits

Hydraulic systems, hydrostatic transmissions, electro-hydraulic systems in application to agricultural production and processing systems. B E 461 Design of Fluid Power Systems (3)This course is designed to provide a solid foundation for understanding hydraulic and pneumatic systems for power transmission and motion control. Applications include mobile and stationary equipment. Biological Systems Engineers (and other engineers as well) will likely encounter a wide range of powered and automated equipment in their careers. This course equips the students to: (1) understand the key operating characteristics of most fluid power system components including compressors, pumps, valves, cylinders, and motors, (2) design fluid power circuits, (3) mathematically model the steady state operation of fluid power systems, and (4) have sufficient knowledge to obtain the Hydraulic Specialist Certification offered by the Fluid Power Society. The course includes a hands-on laboratory offering the chance for students to construct circuits, see component cutaways, experience component and system performance demonstrations, and work with electronic control of hydraulic systems. Prerequisite knowledge includes fluid mechanics and familiarity with mechanical power transmission systems. The course grade is based on homework assignments, laboratory reports, a design project, and exams.

**Prerequisite:** B E 306 or M E 360 ; C E 360 or M E 320
BE 462: Design of Wood Structures

3 Credits

Structural properties of wood; design of wood structural elements; design of wood structural systems; design of post-frame buildings. B E 462 Design of Wood Structures (3)This course begins by defining the structural loads applicable to wood framed building systems. The course then introduces students to the unique physical and structural characteristics of solid lumber and other wood products, such as plywood and other panel products and structural composite lumber, including laminated veneer lumber, parallel strand lumber and composite wood I-joists. The engineering principles and specifications for designing wood structural members, including tension members, beams, columns, and beam-columns are presented in detail using the National Design Specification for Wood Design. Design specifications for designing wood structural connections using dowels, such as nails, bolts and lag-screws, are presented. Design procedures for designing selected wood-frame systems, such as floors, trusses, structural diaphragms and shear walls, are also presented. Students are introduced to a computer program which is an invaluable aid for analyzing and designing wood framed structural systems. At the conclusion of the course students will be able to specify structural loads for wood framing systems and analyze and design wood beams, columns, beam-columns, typical wood diaphragms and shear walls, simple wood structural systems, and a range of wood structural connections. The course builds on engineering students’ prior knowledge from strength of materials and elementary structural analysis. Students are evaluated based on homework assignments, exams and a semester project.

**Prerequisite:** B E 303 , A E 308 , or C E 340
BE 464: Bioenergy Systems Engineering

3 Credits

Fundamental theories and applied technologies for production and conversion of biomass into energy and co-products. Students may take only one course from B E 464 and A B E 884 for credit. B E 464 Bioenergy Systems Engineering (3)In the coming decades biomass will play an increasing role in satisfying society’s energy and material needs, providing a renewable alternative to fossil fuels. This course will cover the fundamental theories and applied technologies used in production and conversion of biomass into transportation fuels, heat, power, electricity, chemicals and other value-added products. Production strategies focus on sustainable cropping systems, harvest, storage, and pretreatment for diverse biomass feedstocks. Conversion technologies covered include ethanol fermentation, biodiesel catalysis, combustion, pyrolysis, gasification, anaerobic digestion, and emerging processes. System analysis will address worker safety and health, environmental impacts, policy, and economics. The course is recommended for students in engineering and science majors with a background in thermodynamics, chemistry, and biochemistry or microbiology. Evaluation will be based on class participation, homework, quizzes, exams, and a team design project.

**Prerequisite:** EME 301 or M E 201 or M E 300 or CH E 220 ; Prerequisite or concurrent: B E 308 or CH E 340 or C E 479
BE 465: Food and Biological Process Engineering

3 Credits

Reactor design, kinetics, fluid flow, thermal processes, and other topics applied to the design of systems for the food and biological process industry. B E 465 Food and Biological Process Engineering (3)Learning objectives. At the end of this course students will be able to: 1. Use and convert units and dimensions applicable to food processing 2. Apply laws of conservation of mass and energy 3. Evaluate time and temperature profiles for food pasteurization and sterilization 4. Design an aseptic processing system 5. Describe operation of mechanical refrigeration systems 6. Calculate freezing times 7. Compute the energy requirements in single and multiple effect evaporators 8. Use the psychrometric chart in relation to drying processes Engineering principles of reactors, fluid flow, thermal processes and other topics will be applied to the design of systems for the food and biological process industry. The examples used will be applicable to bioreactor production, food processing, pharmaceutical manufacture, etc.

Prerequisite: B E 302

BE 466: Biological Engineering Design II

2 Credits

BE 466 is part two of a two course sequence that provides a culminating design experience for students in the Biological Engineering major. Students will develop skills and techniques for managing and executing engineering design projects in the following fields: agricultural engineering, food and biological processing engineering, and/or natural resource engineering. Projects are sponsored by faculty, industry, or community initiatives and are structured to span two semesters. In the Fall semester, the emphasis is on classroom lectures, preliminary analyses, and project proposal development. In the Spring semester, the emphasis is on hands-on laboratory activities, project execution, and report preparation. Project teams perform all facets of the design process. This includes problem identification, planning of the project, formulation of design specifications, development and evaluation of alternative conceptual designs, development of detailed designs, consideration of safety and design optimization, design implementation, design testing, and analysis and documentation of results. Students improve their writing skills through preparation and refinement of various documents including a design notebook, proposal, statement of work, design specification report, status reports, and a final report. Students also present their results in other formats, including poster and oral presentations for both technical and non-technical audiences.

Prerequisite: BE 460

BE 467: Design of Stormwater and Erosion Control Facilities

3 Credits

Design of best management practices for stormwater management, erosion and sediment control as applied to the agriculture-urban interface. BE 467 Design of Stormwater and Erosion Control Facilities (3)This course equips seniors agricultural and biological engineers with the ability to design sediment and stormwater impoundments and erosion control structures used in agriculture and the development of the agricultural-urban interface. Predictive hydrology is presented along with an introduction to several hydrology-based models used in the land-development industry. Basins are presented as fundamental structures used to attenuate stormwater peaks as well as holding ponds to facilitate gravitational sediment removal from stormwater runoff. Various sediment traps are also included. Flood routing is developed so students understand and can design for flood peak attenuation. Low Impact Development (LID) practices such as green roofs, bioretention areas and vegetated filter strips are presented as infiltration-based alternatives to traditional stormwater management. Open channel design procedures including maximum permissible velocity and tractive force are reviewed. The Revised Universal Soil Loss Equation (RUSLE) is introduced and the latest version of the RUSLE software package is available for student use. Stream corridor restoration procedures, especially many of the structural practices, are introduced. The course includes a major design project executed in groups of 3 to 5 students. Students are assigned a land parcel and the proposed development. Students are expected to develop a Stormwater Management Plan, including several LID, and an Erosion and Sedimentation Control Plan, including a sediment basin. Students must present their final designs in oral and written format to their peers and a lay audience. This project makes up about 30% of their course grade. The remainder of the grade is from two take-home exams and daily homework. The majority of those taking this course are A B E seniors or graduate students. Civil and Environmental Engineers often elect this course.

Prerequisite: B E 307 or C E 461

BE 468: Microbiological Engineering

3 Credits

Application of basic engineering principles and designs in biochemical and biological processes. B E 468 Microbiological Engineering (3) Microbial engineering is a combination of biochemistry and microbiology applied to engineering. The purpose of this course is to provide an understanding of conversions of raw agricultural materials into value-added products via microbial fermentation. This course presents all steps in this type of bioprocessing such as mutagenesis, genetic modification for microbial manipulation, enzyme and microbial kinetics, aeration, agitation for bioreactor design, and scale-up strategies, as well as various recovery methods for downstream processing.

Prerequisite: B E 308 or both MICR8201 and B M B211; Concurrent: B E 302

BE 477: Land-Based Waste Disposal

3 Credits

Analysis, design, and management of land-based systems for recycling and disposal of municipal, industrial, and agricultural wastes. B E 477 Land-Based Waste Disposal (3)The course focuses on exploration of the fundamental principles and processes that determine the fate of nutrients and pollutants in liquid and semi-solid wastes that are applied to the soil for recycling and disposal. These principles then serve as the basis for design of systems for application of livestock manures, biosolids, septage, wastewater effluents, and other residual materials. Relevant state and federal regulations will be covered to illustrate the impact of regulations and policies on engineering practice. The course culminates in a project for which students design a system to dispose of municipal, agricultural, or industrial byproduct or wastewater. Principles will be reinforced with several homework sets. Field trips will expose students to land-based waste disposal processes and systems. The course will serve as a senior-level engineering science/design course in Agricultural and Biological Engineering (A B E).
Prerequisite: B E 307 or C E 370 or A S M 327
BE 487: Watershed Modeling for Water Quality Design
3 Credits
Application of common watershed models used to investigate design alternatives for flow and quality effects. B E 487 Watershed Modeling for Water Quality Design (3) This course will explore the use of several commonly-available watershed simulation models for investigating water quality (WQ) and water quantity issues. The models will serve as a base from which students can investigate the effects of different management design scenarios on watershed system responses. Spring Creek Watershed in Centre County, and subwatersheds within Spring Creek, will serve as case study watersheds to be investigated for all modeling applications. The ArcView Generalized Watershed Loading Function (AVGWLF) model will be used as an initial exploration of modeling for the entire watershed and to show the hydrologic and WQ responses for various subwatersheds (agriculturally dominated vs. urban dominated). The StormWater Management Model (SWMM) model will be used to explore more in-depth modeling for an urban watershed, with the Fox Hollow Watershed serving as the primary case study. Extensive flow and WQ monitoring data are available and will serve to assist in parameterizing and calibrating the model. The Soil Water Assessment Tool (SWAT) model will be used to explore flow and constituent response from a more agriculturally-dominated Cedar Run watershed, also located within Spring Creek. The potential impact of urban low impact design (LID) practices and agricultural best management practices (BMPs) will be investigated for urban and rural watersheds, respectively.

Prerequisite: B E 307 or C E 461
BE 494: Senior Thesis
1-9 Credits/Maximum of 9
Students must have approval of a thesis adviser before scheduling this course.

BE 494H: Senior Honors Thesis
1-6 Credits/Maximum of 999
Senior honors thesis.

Prerequisite: junior or senior status in the University Scholar's program Honors
BE 495: Agricultural Engineering Internship
1-6 Credits/Maximum of 6
Independent study and supervised cooperative education experience related to the student's career objective.

BE 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Biological Science (BISC)

BISC 1: Structure and Function of Organisms
3 Credits
An exploration of how cellular structures and processes contribute to life and how life displays unity even in its diversity. Students who have passed BIOL 027, 110, or 141 may not schedule this course.
Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

BISC 2: Genetics, Ecology, and Evolution
3 Credits
The study of how living organisms inherit their traits, how plants and animals evolved, and how they now interact. Students who have passed BIOL 033, 133, 110, 220W, or 222 may not schedule this course.
Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

BISC 3: Environmental Science
3 Credits
Kinds of environments; past and present uses and abuses of natural resources; disposal of human wastes; prospects for the future. Students who have passed BIOL 220 or any other upper-level ecology course in biology may not schedule this course. BISC 3 Environmental Science (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. BISC 3 will help the student to prepare for living in current and future society's mixture of technology and mythology by presenting ideas and concepts about living systems and their environments. Policy makers and citizens are urgently needed who can act with an understanding of ecological principles when exercising community responsibilities to handle the environmental problems of our times, such as water use, solid waste management, global warming, energy use, conservation of irreplaceable natural resources, overpopulation, and the preservation of biodiversity. An understanding of biological and ecological principles and their application towards environmental challenges should give the student the confidence to be a trustworthy and active citizen, a conscientious steward of nature, and an agent of change for making a healthy, sustainable community and society. Regardless of the students' field of study, as a citizen of both local and global communities some environmental issues will impact their lives. The course objectives are to enable students to: * Develop a basic understanding of how ecosystems and biological systems work, learn how economic systems depend on natural capital, biological/chemical processes, and the function of ecosystems * Develop a fundamental understanding of sustainability * Understand the scientific basis of specific environmental problems * Understand the significance of environmental legislation and the impact of increased citizen awareness on improving the quality of life we enjoy today * Further develop the ability to evaluate their contributions to shared environmental problems, identify ways to minimize their impact on the environment, and contribute to the development and maintenance of a sustainable future.
Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)
BISC 4: Human Body: Form and Function

3 Credits

A general survey of structure and function–from conception, through growth and reproduction, to death. Students who have passed BIOL 129 and 141 may not schedule this course. BISC 004 Human Body: Form and Function (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. This course introduces students to biological principles fundamental to understanding human life. Cell structure, biochemistry and metabolism, the structure and function of major organ systems, and human genetics are explored in the course. Special emphasis on the relationship of the functioning of the human body to human disease is also stressed. Students will be able to describe the basic biochemical, structural and functional characteristics of cells. They will learn the roles of carbohydrates, lipids, proteins and nucleic acids in cells and in the body as a whole. They will understand how these molecules are used in building cell and body structures, in energy-releasing metabolism and in the copying and use of genetic information. Students will also be able to explain how different organ systems enable the body to meet the need for support structures, oxygen, nutrients, waste elimination, internal communication, defense against infectious disease and cancer, coordination of internal activity, and reproduction. This will be accomplished through the study of the skeletal and muscular systems, the circulatory, respiratory, digestive and nervous systems as well as the endocrine and reproductive systems. The course provides support for majors such as Nursing, Psychology, Nutrition and others that touch on various aspects of human biology. However, students from any major will benefit from this course for the obvious reason that everyone should understand how their lives depend on a properly developed and functioning body.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

BISC 4H: Human Body: Form and Function

3 Credits

A general survey of structure and function–from conception, through growth and reproduction, to death. Students who have passed BIOL 129 and 141 may not schedule this course.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

Honors

Biology (BIOL)

BIOL 1: Preparation Skills for Success in Biology and Life Sciences

1 Credits

A foundation course that emphasizes study skills and reviews basic biological, chemistry and mathematical principles. BIOL 001 Biology of Success (1) This course is designed to facilitate success in the required science courses for allied health majors. Many students are challenged by their lack of basic skills and knowledge in one or more of the following areas: biology, chemistry, mathematics, and study skills. Thus, this course addresses these issues and positions the student for success. During the semester equal time is given to the following topics: study skills, which includes learning styles, goals, test taking strategies and organizational skills; terminology, which includes practice with prefixes, roots, and suffixes; basic math skills, which includes the metric system and practice with work problems; chemistry, which covers atoms, ions, and basic anabolic and catabolic reactions; cell structure and functioning; and body basics, which is an overview of the anatomy and functioning of body systems. Students are given a diversity of assignments and projects relevant to the various topics that will allow them to review and develop a basic level of competency in these areas in preparation for required science courses.

Prerequisite: Enrollment in the course requires permission of the program

BIOL 3: Peer Learning in Biology

1 Credits

Group and learning skills to facilitate the understanding of complex biological processes. BIOL 003 BIOL 003 Peer Learning in Biology (1) The study of Biology is complicated by the myriad pathways and processes that must be mastered in a way that their interrelationship becomes apparent. A major stumbling block in a student's progress is learning how best to organize one's study so that both the details of these processes can be learned, along with how these processes fit together (i.e. integration). The second hurdle is learning how to use this information in a way that can solve real-life problems and to communicate this process to others. This course is designed for students who would like to improve their ability to organize their learning strategies in order to maximize their understanding of the complexities of life's processes. The course will be organized using peer learning groups which are posited on the assertion that every student can improve their performance with the proper environment and direction. Group leaders (enrolled in BIOL 251) will play an integral role in the program in that they are the connection between participant and course instructors. The group leaders will learn how to pass their skills on to other students in such a way as to encourage ownership of their education. Through regular meetings, the students enrolled in BIOL 003 will learn about time management and study skills, test taking strategies, exam writing, working with others that have divergent learning styles, and how to be multiculturally competent such that they are able to work with a diverse population.

Prerequisite: Concurrent enrollment in biology or life science course and permission of program.

BIOL 11: Introductory Biology I

3 Credits

An introduction to fundamental biological topics (including cells, energy transduction, genetics, evolution, organismal structure/function, ecology) for non-majors biology-related fields. BIOL 011 Introductory Biology I (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. The twelve primary topic areas within Biology 11 are: An introduction to major themes within the course, defining life, and how natural selection operates through differential reproduction. All organisms are composed of matter and must obey the laws of chemistry - a review of basic chemical principles, the study of water and carbon-based macromolecules, the building blocks of organisms. The cell is the fundamental unit of life - a detailed study of the structure and function of eukaryotic cells. Organisms require energy to maintain organization - an exploration of the processes of photosynthesis, the conversion of light energy into chemical bond energy, and cellular respiration, the production of ATP. All cells arise from previously existing cells - a discussion of mitosis and meiosis. Genes carry information between generations - an examination of the principles of Mendelian genetics.
and their application to human disorders. The structure of DNA, how it codes for information in proteins, and the effect of mutations are explored. This history of life on earth, a discussion of the role of natural selection in populations and speciation. Plants are the only multicellular eukaryotes that photosynthesize - an inquiry into their evolution, function, structure, reproduction and response to the environment. Animals are multicellular eukaryotes that must acquire their energy/nutrients from other organisms - an exploration of the basics of the animal body plan and two human organ systems. Organisms must interact with their environment - a discussion of energy flows and nutrient cycling in ecosystems, as well as ecosystem distributions. Interactions among communities of species can be complex and these relationships will be investigated. Humans have an increasing impact on the environment, affecting all aspects of the world in which we live - an examination of human activities and solutions to environmental damage we have caused. The target audience is students who are majoring in biology-related fields, such as some of Agriculture (not biology majors). This serves as a foundation course for students who require a solid grounding in the fundamentals of biology before taking more advanced courses in their major. The course will serve as breadth course in biology for non-science majors, fulfilling a three-credit GN requirement. Evaluation of course performance is done through five in-class tests, in-class ALE activities (10 required during the semester), and an ecological footprint. Bachelor of Arts: Natural Sciences General Education: Natural Sciences (GN)

BIOL 12: Introductory Biology II

1 Credits

Laboratory exercises demonstrating principles of biology.

Prerequisite: or concurrent: BIOL 011
Bachelor of Arts: Natural Sciences General Education: Natural Sciences (GN)

BIOL 110: Biology: Basic Concepts and Biodiversity

4 Credits

A study of the evolution of the major groups of organisms including the fundamental concepts of biology. BIOL 110H BIOL 110H Honors Biology: Basic Concepts and Biodiversity (4) (GN)(BA) This course meets the Bachelor of Arts degree requirements. This is the first biology course taken by students who intend to major in biology. It provides a foundation for the basic concepts that govern life. In addition, these concepts are used to explain the processes of evolution which contribute to the biodiversity that we observe today. The course objectives have remained unchanged and seek to provide students with a fundamental understanding of: 1) features of life; 2) how basic genetic processes provide continuity between generations; 3) how genetic variation arises and contributes to evolutionary processes; 4) how structure relates to function; 5) how the diversity life is studied and explained by evolution.

Bachelor of Arts: Natural Sciences General Education: Natural Sciences (GN)

Honors

4 Credits

A study of the evolution of the major groups of organisms including the fundamental concepts of biology. This course also fulfills the First-Year Seminar requirements. BIOL 110S Biology: Basic Concepts and Biodiversity (3) (GN;FYS)(BA) This course meets the Bachelor of Arts degree requirements. This is the first biology course taken by students who intend to major in biology. It provides a foundation for the basic concepts that govern life. In addition, these concepts are used to explain the processes of evolution which contribute to the biodiversity that we observe today. The course objectives have remained unchanged and seek to provide students with a fundamental understanding of: 1) features of life; 2) how basic genetic processes provide continuity between generations; 3) how genetic variation arises and contributes to evolutionary processes; 4) how structure relates to function; 5) how the diversity life is studied and explained by evolution.

Bachelor of Arts: Natural Sciences First-Year Seminar General Education: Natural Sciences (GN)

BIOL 120N: Plants, Places, and People

3 Credits

Students learn about plants from the perspective of sustainability, agriculture, food, genetics, textiles, and medicine, across history and around the globe, after spending a few weeks learning about basic plant biology. Students engage with a group project in collaboration with other students to deepen their understanding and appreciation of plant biological and historical connections with human civilization. Students share these projects with the class in a peer-teaching and learning exercise in the final weeks of class.

Bachelor of Arts: Humanities Bachelor of Arts: Natural Sciences International Cultures (IL) United States Cultures (US) General Education: Humanities (GH)
Anatomy of a mammal, with special reference to that of man. Students who have passed BIOL 421 may not schedule this course.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

BIOL 129: Mammalian Anatomy
4 Credits

Anatomy of a mammal, with special reference to that of man. Students who have passed BIOL 421 may not schedule this course. BIOL 129 Mammalian Anatomy (4) (GN)(BA) This course meets the Bachelor of Arts degree requirements. Biology 129 is a 4 credit lecture and laboratory course specifically designed to cover the fundamentals of mammalian anatomy, with emphasis on human systems, for students in a variety of life science related majors including Nursing, Kinesiology, Athletic Training, and Science. Successful completion of this course will give the student working knowledge of mammalian anatomy body plan, systems, and nomenclature with the intent on applying this information to future clinical situations they may encounter in nursing, physical therapy, athletic training, dentistry, and medical settings. The course utilizes lecture descriptions and discussions, along with laboratory specimen dissection, identification and nomenclature to give a thorough overview of anatomy. Small group collaboration is emphasized in laboratory. Course Objectives: The principle objective of the course is for every student to obtain a working knowledge and understanding of basic mammalian anatomy, emphasizing a body system approach, and where possible, relate this to the human anatomical body plan. The lecture portion of the course will stress the construction, function, and relationships between anatomical systems. The laboratory portion of the course will emphasize structure identification and nomenclature of anatomical systems and will utilize human skeletal samples, cat specimen dissections, and anatomical models. Where possible, anatomical relationships that are important in clinical situations and common medical conditions will be emphasized. The end point of both objectives is to obtain a practical understanding of anatomy that demonstrates the relationships between anatomical form and function. Students will leave the course being able to relate this knowledge and nomenclature to future clinical or personal health situations. Relationship to Courses and Programs of Study. This majority of students enrolled in this course are from the College of Health and Human Development in Nursing, Biobehavioral Health, Kinesiology, and Nutrition majors, although some students are from other colleges including the Eberly College of Science, Liberal Arts, and Agriculture. Because the majority of these students will utilize course information in future clinical settings, anatomy and its nomenclature as it relates to humans is emphasized and important clinical considerations are discussed.

Bachelor of Arts: Natural Sciences
in this course are from the College of Health and Human Development
in Nursing, Biobehavioral Health, Kinesiology, and Nutrition majors,
although some students are from other colleges including the Eberly
College of Science, Liberal Arts, and Agriculture. Because the majority of
these students will utilize course information in future clinical settings,
human physiology as it relates to clinical problems is emphasized.
Many students will take Biology 141 along with our partnered 1 credit
laboratory course, Biology 142, Physiology Laboratory. Additionally,
many students enrolled in Biology 141 will also take our related course in
anatomy, Biology 129, as a result of course program prerequisites within
their major.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

BIOL 142: Physiology Laboratory
1 Credits

Experiments demonstrating basic physiological principles, with special
reference to man.

Prerequisite: or concurrent: BIOL 141

BIOL 155: Introduction to the Biology of Aging
3 Credits

Examination of human aging from a biological perspective. Population
demographics, physiological and pathological changes, and healthy
lifestyles are discussed. Students who have passed BIOL 409 may not
schedule this course.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

BIOL 160N: Fitness with Exercise Physiology
3 Credits/Maximum of 3

Biology of Exercise is an integrative exercise physiology course that
combines performing physical activity (Kinesiology) and applying
biological principles (Biology). This course will explain the benefits,
changes, and processes the body exhibits while exercising. Students
will gain knowledge and comprehension through both a lecture (or
online) setting (approximately half of the class meetings) as well as
an activity component (approximately half of the class meetings) in
which students will demonstrate their health related components of
fitness. This includes, but is not limited to, muscular strength, muscular
endurance, flexibility, power, cardiorespiratory endurance, and body
composition. In the lecture component, students will describe biological
principles including homeostasis, nutrition, the structure and function
of musculoskeletal, cardiovascular, and respiratory systems. At the
completion of this course, students will be able to argue for the lifelong
significance of exercise including why it is important, benefits related to
organ systems, and disease prevention.

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

BIOL 177: Biology of Sex
3 Credits

Basic structure and function of the human reproductive system.
Physiology of gametogenesis, fertilization, contraception, gestation,
parturition, lactation, and sexual behavior. BIOL 177 Biology of Sex (3)
(GN)(BA) This course meets the Bachelor of Arts degree requirements.
This course presents a thorough background on the basic structure and
function of the human reproductive system, to provide the student with
sufficient scientific knowledge to understand and discuss sex-related
topics and make informed personal decisions. Through lecture format
presentations, multimedia presentations, small group activities, and
guest presentation, students will be exposed to information that will
clarify their understanding of the ways that their own body functions in
sexual behavior and reproduction. In-class demonstrations and activities
will be used to illustrate practical aspects of anatomical, health and
contraception issues. Large class discussions, facilitated small group
activities, and written assignments will encourage students to think
critically and practically about the application of biological information
to personal decision-making and to reducing their own risk of disease.
Importantly, students will examine the roles of reproductive physiology
and sexuality in a historical, cultural and social context, with particular
emphasis on cultural and gender differences in anatomical forms,
sexual expression, and disease susceptibility. Guest presentations
from community groups will present current information about local
reproductive and sex-related concerns and services. The course will
present ongoing research on human sex and reproduction, and explore
the biology behind current issues in human sexuality and medicine.
Student evaluation is based on participation in activities, written
assignments, and performance on four examinations. The course is
divided into four units: Reproductive Anatomy and Physiology provides
students with a thorough background in human reproductive anatomy
and function. This unit sets the tone for the course, providing students
with correct terminology and creating a nonjudgmental atmosphere
that encourages active exploration of topics. Cross-cultural and gender
comparisons are incorporated, and anatomical models provide clear,
3-dimensional interactive illustrations. Reproduction explains the
biological issues surrounding fertilization, pregnancy, childbirth, and
abortion. Following these topics are several class sessions focused on
contraception, using anatomical models. Small-group activities and guest
presentations to allow students to practice appropriate communication
skills. Sexual Identity addresses issues of variations in anatomy, sexual
identity, and sexual orientation both within and between cultures. The
biological causes and physiological consequences of various physical
and lifestyle manifestations are explored. Sexual Behavior examines
the physiological basis of sexual response, and explores the variations
and problems that are associated with human sexual behavior. Sexually
transmissible infections are discussed, emphasizing their mode of
transmission, identification, and treatment. Students are encouraged to
apply the knowledge and skills they acquired through the semester to
their decision-making and communication needs.

International Cultures (IL)

BIOL 200: Introduction to Pharmacological Concepts

3 Credits

Presents basic concepts of pharmacology; includes major drug classifications, pharmaceutical preparations, and biological implications relevant to these therapeutic agents.

BIOL 220: Plants, Places, and People

3 Credits/Maximum of 3

Useful and dangerous plants; historical (archaeological), cultural (ethnological), and economic (anthropocentric) aspects including structural and chemical characteristics of botanical importance.

Writing Across the Curriculum

BIOL 220M: Honors Biology: Populations and Communities

4 Credits

Honors study of the major physical, chemical, and biological factors constituting environment and their dynamic interaction with organisms forming ecosystems. BIOL 220M Honors Biology: Populations and Communities (4) (GN)(BA) This course meets the Bachelor of Arts degree requirements. BIOL 220M is an introductory course in ecology. It introduces students to the fundamental ecological principles, concepts, patterns, and processes regarding populations, communities, and ecosystems. This course provides students with a foundation of ecological science, as well demonstrating linkages between ecology, population genetics, and evolution. The course objectives are the same as those described in the parent course proposal and are to provide students with a fundamental understanding of: 1) genetic processes within populations of living things; 2) evolutionary processes involved in speciation; 3) dynamic interactions of organisms within and among populations, especially pertaining to energy cycles, various biogeochemical cycles, predator-prey interactions, and the like, and; 4) distribution patterns of living organisms and the need to conserve the resources of the earth. Evaluation methods in the lecture part of the course include two to three "mid-term" exams and a comprehensive final exam. Evaluation methods in the lab portion of the course include in-class quizzes, one or more formal lab reports on experiments or data analysis conducted in lab sessions, and short write-ups of existing data sets or relevant ecological issues. Points earned on lecture exams comprise between 65 - 75% of the total points, whereas points earned in lab comprise about 25 - 35% of the total points earned in the course.

Prerequisite: BIOL 110

Bachelor of Arts: Natural Sciences

Writing Across the Curriculum

BIOL 222: Genetics

3 Credits

Variation and heredity in plants and animals, including man; relationships of genetical knowledge to evolution and breeding practices.

Prerequisite: 3 credits in biological sciences

BIOL 222H: Genetics

3 Credits

Variation and heredity in plants and animals, including man; relationships of genetical knowledge to evolution and breeding practices.

Honors
BIOL 223: Laboratory in Genetics

1 Credits

Principles of genetics illustrated with Drosophila breeding experiments and with demonstrations of plant and animal materials.

Prerequisite: BIOL 133 or BIOL 222

BIOL 230M: Honors Biology: Molecules and Cells

4 Credits

Honors study of cellular phenomena including molecular genetics and metabolic interactions. BIOL 230M Honors Biology: Molecules and Cells (4) (GN) (BA) This course meets the Bachelor of Arts degree requirements. BIOL 230M is a four credit course with lecture and laboratory components. The goal of this course is to provide an understanding of the major unifying principles of life as they apply to the study of the molecular mechanisms underpinning the function of living organisms. Through the lab, students are expected to become proficient in the interpretation and presentation of experimental results through written and oral reports. Taken together with the other honors core courses in the biology curriculum (BIOL 110H, BIOL 220M, BIOL 240M), BIOL 230M will help students to integrate concepts ranging from molecular and cellular events through principles governing entire populations and ecosystems. Further, BIOL 230M provides the foundation on which students further their study of molecular genetics - a discipline integral to a number of the biological sciences. Through this class, and the other core course, students will develop a number of the skills outlined in the General Education mission. Offered every fall, BIOL 230W serves from a number of majors and colleges and typically enrolls 500 students at University Park and an equal number at campuses throughout the Penn State system. Given the large size of the class, the facilities requirements are substantial. Currently room 100 Thomas is used for lectures, and provides an excellent opportunity to incorporate multimedia presentations in a relatively intimate format. The laboratory portion of the course requires several fully equipped laboratory rooms, as well as classrooms for recitation meetings. For this purpose, two wet lab rooms in Muller Lab (105 and 108) are designated and are shared with another currently offered core course (Biology 110). Finally, a designated preparatory facility (room 107 Mueller) is used exclusively in each of the core courses.

Prerequisite: BIOL 110, CHEM 110
Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)
Writing Across the Curriculum

BIOL 230W: Biology: Molecules and Cells

4 Credits

A study of cellular phenomena including molecular genetics and metabolic interactions. (BIOL 220W, BIOL 230W, and BIOL 240W each carry only 1 credit of "writing"; all three courses must be taken to meet the writing requirement.) BIOL 230W/Biology: Molecules and Cells (4) (GN)(BA) This course meets the Bachelor of Arts degree requirements. BIOL 230W is a four credit course with lecture and laboratory components. The goal of this course is to provide an understanding of the major unifying principles of life as they apply to the study of the molecular mechanisms underpinning the function of living organisms. Through the lab, students are expected to become proficient in the interpretation and presentation of experimental results through written and oral reports. Taken together with the other core courses in the biology curriculum (BIOL 110, BIOL 220W, BIOL 240W), BIOL 230W will help students to integrate concepts ranging from molecular and cellular events through principles governing entire populations and ecosystems. Further, BIOL 230W provides the foundation on which students further their study of molecular genetics - a discipline integral to a number of the biological sciences. Through this class, and the other core course, students will develop a number of the skills outlined in the General Education mission. Evaluation methods in the lecture part of the course include two to three "mid-term" exams and a comprehensive final exam. Evaluation methods in the lab portion of the course include in-class quizzes, one or more formal lab reports on experiments or data analysis conducted in lab
sessions, and short write-ups of existing data sets or relevant ecological issues. Points earned on lecture exams comprise between 65-75% of the total points, whereas points earned in lab comprise about 25-35% of the total points earned in the course. BIOL 240M serves from a number of majors and colleges. The Honor’s version of the course will differ in a number of ways from the parent BIOL 240W course. First, there are more opportunities to discuss current applications of the information. In addition, a unique project (either in lab and/or in lecture) will allow students to explore a specific area of the course in more detail (e.g., students choose a topic in the current literature and present a paper along with its significance to the class). Where appropriate, students will be exposed to current research in specific areas. The evaluation for the course will be modified from that of the parent course in accordance with the changes in assignments.

Writing Across the Curriculum

BIOL 251: Peer Leadership in Biology

1 Credits

Leadership training in guiding others to learn, communicate, and apply biological principles. BIOL 251 BIOL 251 Peer Leadership in Biology (1) The study of Biology is complicated by the myriad pathways and processes that must be mastered in a way that interrelationship become apparent. A major stumbling block in a student’s progress is learning how best to organize one's study so that both the details of these processes can be learned, along with how these processes fit together (i.e. integration). The second hurdle is learning how to use this information in a way that can solve real life problems and to communicate this process to others. This course is designed for students who have already mastered basic concepts in biology and who want to learn how to communicate their understanding to others who are learning these first principles. This course is unusual in that it has divergent goals. The students enrolled in this course will be trained to be more effective communicators. In the 21st century, it is critical that we train our students to be better at relating to the general population by using effective communication skills. In addition, the course will train the students to act as effective group leaders in peer learning programs so they become competent, comfortable, and confident in working with students of diverse background, learning styles and skill levels. The philosophy behind peer learning programs is that every student can improve their performance and with the help of a group leader, this goal can be realized. The group leaders play an integral role in the program that in that they are the connection between participant and course instructors. The group leaders will learn how to pass their skills on to other students in such a way as to encourage ownership of their education. Through workshops and biweekly meetings, the group leaders will learn about time management and study skills, test taking strategies, exam writing, working with students with divergent learning styles, and how to bemulticulturally competent such that they are able to work with a diverse student population. They will facilitate learning through group activities and practice their leadership skills in a small group setting. Group leaders will be monitored through review of their weekly journals as well as observation of their groups by supervising faculty. The student developed exercises will be implemented and reviewed for effectiveness.

Prerequisite: 8 credits in biology or life science courses and permission of program

BIOL 261: Reading Seminar in the Health Professions

1 Credits/Maximum of 2

Students will read and discuss 3 to 4 books of creative nonfiction that address issues in the health professions. These may include collections of reflective essays from health professionals, historical narratives of diseases or conditions, biographies, collections of case studies, exposé, memoirs, or other formats. Topics may include disease transmission, ethics, patience care, health care, diseases, historical events, or other relevant topics. In addition, students will read and discuss primary scientific literature and news articles on topics related to their book readings. Students must attend and participate in weekly discussion and complete online writing assignments.
Courses offered in foreign countries by individual or group instruction.

BIOL 400: Teaching in Biology
1-6 Credits/Maximum of 6
This course will train biology teaching assistants to teach in the
laboratory/ recitation setting with emphasis on critical thinking skills.
BIOL 400 BIOL 400 Teaching in Biology (1-3) This course provides
teaching assistants with the fundamentals they will need to be effective
in the laboratory and/or recitation classroom. Students will learn the
fundamental skills needed to: design lesson plans; facilitate class
discussions; write effective quizzes; communicate learning expectations;
grade fairly; and in the case of the laboratory setting, maintain a safe
learning environment. Students enrolled in this course will also be serving
as teaching assistants and consequently faculty who serve as course
instructors and/or lab coordinators in the relevant course will provide
the instruction. Through regular meetings the course instructors will help
teaching assistants adjust to their duties and solve common problems
that arise in the laboratory/recitation environment. Emphasis will be
placed on how teaching assistants can facilitate active learning and
help their students develop sound study skills. Students enrolled in
this course will be evaluated on regular attendance, organization in and
preparation for their teaching, and clarity in how they communicate with
their students.

Prerequisite: 5th semester standing

BIOL 402: Biological Experimental Design
3 Credits
Discussion of experimental design, analysis and presentation, with
a practicum providing for student design, analysis and presentation
of biological experiments. Students may not take this course if they
have taken BIOBD 350W. BIOL 402W Biological Experimental Design (3)
This course emphasizes written and oral communication of scientific
ideas. Students discuss papers from the literature, preparing written
critiques of two. Critiques are reviewed in writing by the instructor and
peers and may be revised twice. Peer reviews are graded in writing
and may be revised once. Written proposals for biological research are
required. Students must build arguments for methodological rationales,
justify statistical approaches, and place their proposed research into
a larger societal context. Proposals are reviewed by the instructor and
three peer reviewers. Peer reviewers must prepare written critiques and
present proposals to the class during an "NSF"-style panel review. Prior
to the presentation, the instructor provides written and oral feedback
to the author and the peer reviewer in a meeting at which strategies for
presenting the proposal are discussed. Subsequent to the presentation,
peer reviewers write summaries of the discussion and provide explicit
guidance to authors. Proposals may be revised twice. Peer reviews and
summaries are graded in writing and may be revised once. Thus, each
student writes 2 critiques, 1 proposal, 2 peer reviews of critiques, 1 peer
review of a proposal, and 1 summary of the panel discussion. Each
assignment is graded in writing and is subject to revision. Students also
are graded on their proposal presentations and on participation in panel
discussions. These activities constitute 75% of the final grade. Students
must demonstrate competence in the use of SAS, a statistics package.
Students must choose and apply appropriate statistical techniques to
biological data. In addition to the program and its output, students write
interpretations of the results. This activity constitutes 25% of the final
grade. Lectures are used to review statistics and "how tos" (e.g., proposal
preparation). Case histories are used to address ethics, statistical
decision-making, and design. Students are expected to challenge what
they learn, and the notion that scientists must acknowledge and guard against bias in their work is emphasized. Intellectual honesty and the ability to give and receive constructive criticism are demanded. This course is required in two of the six options in biology (ecology and general), and it can be taken by students in the other options. The course is required of students who have not fulfilled the WAC requirement at the 200-level (transfer students).

**Prerequisite:** at least two of the following three courses: BIOL 220W, BIOL 230W, BIOL 240W; STAT 250

**Writing Across the Curriculum**

**BIOL 404: Cellular Mechanisms in Vertebrate Physiology**

3 Credits

This course considers cellular mechanisms governing physiological aspects of vertebrate cell signaling and their adaptation to particular organismal functions.

**Prerequisite:** B M B251 or BIOL 230W

**BIOL 405: Molecular Evolution**

3 Credits

Introduction to concepts and techniques of analysis of molecular sequence data from an evolutionary point of view.

**Prerequisite:** BIOL 222 or BIOL 230W

**BIOL 406: Symbiosis**

3 Credits

This course covers a variety of different types of symbiotic relationships between unicellular symbionts and plants, fungi, or animals.

**Prerequisite:** BIOL 110; BIOL 220W, BIOL 230W, or BIOL 240W

**BIOL 407: Plant Developmental Anatomy**

3 Credits

This course will examine the development of basic vascular plant anatomical structures including leaves, stems, roots, and flowers. BIOL 407 BIOL 407 Plant Developmental Anatomy (3) The course will provide students with an understanding of the developmental anatomy of plant organs and tissues. More specifically, the course will focus on the structure and function of plant organs throughout their lifecycle, including embryogenesis, organ initiation, and the structures of leaves, roots, stems, and flowers in vascular plants. When appropriate, the course will discuss genes involved in the formation and function of these organs to provide illustrations of current scientific investigations in the field of plant developmental anatomy. Upon completing the class, students will have gained an appreciation of the structure/function relationships of plant tissues and organs in regards to their development and physiological roles.

**Prerequisite:** BIOL 240W

**BIOL 409: Biology of Aging**

3 Credits

Mechanisms of the aging process, with special reference to man. Unfavorable progressive changes in molecules, cells, systems, and organisms.

**Prerequisite:** 6 credits in biology

**BIOL 411: Medical Embryology**

3 Credits

Develops an understanding of human reproductive physiology, embryological processes, their time frames, and the development of major human body systems. The course emphasizes clinical correlations and the medical consequences of developmental abnormalities.

**Prerequisite:** 6 credits of biology

**BIOL 412: Ecology of Infectious Diseases**

3 Credits

This course examines how ecological processes impact upon the epidemiology of infectious diseases. Untitled Document

**BIOL 412 Ecology of Infectious Diseases (3)** The course will examine the population dynamics of disease and takes an ecological perspective on how pathogens and parasites flow through host populations to identify possible means of predicting and controlling pathogens. The approach is one of population dynamics, examining changes in disease patterns in time and space. We construct mathematical models to capture the patterns observed, make predictions and identify the means of reducing disease spread. This is an ecological approach, applying the techniques of population biology to an understanding of Parasitology to develop a different prospective on epidemiology. At the same time, the course brings aspects of evolutionary biology into the course and will examine some of the current issues in disease biology including disease emergence, bioterrorism, agro-terrorism and the role of humans as disease reservoirs for wildlife etc. Upon completion of this course, students will obtain insight into the dynamics of disease spread. They will understand how to construct models and how to apply generic models to specific disease systems and make predictions about controlling disease. They will grasp some major concepts in Parasitology and population dynamics including the role of the disease basic reproductive number (RO), when diseases show a density dependent patterns of transmission or a frequency dependent pattern, non-linear dynamics and the processes that generate heterogeneities in exposure and susceptibility. The course will provide an excellent course for pre-Med students, biologists and students interested in ecology.

**Prerequisite:** BIOL 220W or H P A440

**BIOL 413: Cell Signaling and Regulation**

3 Credits

Introduction to the themes of cellular signaling and regulation through critical review of primary literature.

**Prerequisite:** BIOL 240W
BIOL 414: Taxonomy of Seed Plants

3 Credits

Basic principles and procedures in the practice of angiosperm systematics.

**Prerequisite:** BIOL 240W

BIOL 415: Ecotoxicology

3 Credits

MAJOR CONCEPTS AND CONTROVERSIES IN THE INTERDISCIPLINARY FIELD OF ECOLOGICAL TOXICOLOGY; TOXICITY ANALYSIS, REMEDIATION, AND CASE STUDIES OF ENVIRONMENTAL POLLUTION.

**Prerequisite:** BIOL 110, BIOL 220W; FOR 308 or W F S209

Cross-Listed

BIOL 416: Biology of Cancer

3 Credits

This course intends to illustrate biological basis of cancer development, and discusses aspects on prevention, detection, and treatment of cancer.

**Prerequisite:** BIOL 222 or BIOL 230W

BIOL 417: Invertebrate Zoology

4 Credits

Function and form of major invertebrate phyla.

**Prerequisite:** BIOL 110

BIOL 419: Ecological and Environmental Problem Solving

3 Credits

Overview of processes involved in solving environmental problems. Provides students with toolkit for understanding ecological and environmental problems. BIOL 419 Ecological and Environmental Problem Solving (3) The course will provide a general overview of the process involved in studying a variety of ecological and environmental problems. It will provide a toolbox of techniques for understanding ecological and environmental problems, and discuss how they can be used to address questions and generate testable predictions. It will examine connections between individuals and populations and communities as well as between theory and data. The focus will be on theoretical and computer modeling approaches, while maintaining a strong link to data and real systems. After an introduction to modeling, students will learn to develop and use simple and stochastic optimization models for individual organisms, as well as applying basic game theory to interactions between individuals. Many of the class meetings will be held in computer laboratories where they will be actively engaged in working on applying these models. They will explore a sequence of population demographic models of increasing complexity, ranging from unlimited, unstructured population growth to density-dependent, structured population growth, in non-spatial and spatial contexts, culminating in individual-based models for population dynamics. The students will then apply these models to interacting species, learning about mutualistic, competitive and host-natural enemy interactions. Finally, we will explore theory for communities of species in space and time. Applied problems will be drawn from all areas of conservation, harvesting, pest control and epidemiology. This course will be one of several ecology courses that are available to students in the ecology and general option in the biology program along with the biology minor.

**Prerequisite:** BIOL 220W

BIOL 419H: Ecological and Environmental Problem Solving

3 Credits

Overview of processes involved in solving environmental problems. Provides students with toolkit for understanding ecological and environmental problems. BIOL 419 Ecological and Environmental Problem Solving (3) The course will provide a general overview of the process involved in studying a variety of ecological and environmental problems. It will provide a toolbox of techniques for understanding ecological and environmental problems, and discuss how they can be used to address questions and generate testable predictions. It will examine connections between individuals and populations and communities as well as between theory and data. The focus will be on theoretical and computer modeling approaches, while maintaining a strong link to data and real systems. After an introduction to modeling, students will learn to develop and use simple and stochastic optimization models for individual organisms, as well as applying basic game theory to interactions between individuals. Many of the class meetings will be held in computer laboratories where they will be actively engaged in working on applying these models. They will explore a sequence of population demographic models of increasing complexity, ranging from unlimited, unstructured population growth to density-dependent, structured population growth, in non-spatial and spatial contexts, culminating in individual-based models for population dynamics. The students will then apply these models to interacting species, learning about mutualistic, competitive and host-natural enemy interactions. Finally, we will explore theory for communities of species in space and time. Applied problems will be drawn from all areas of conservation, harvesting, pest control and epidemiology. This course will be one of several ecology courses that are available to students in the ecology and general option in the biology program along with the biology minor.

Honors

BIOL 420: Paleobotany

3 Credits

Classification, morphology, phylogeny, and stratigraphic occurrence of fossil plants; practicum includes field trips and study of paleobotanical techniques and specimens. GEOSC 420 BIOL (GEOSC) 420 Paleobotany (3) Land plants provide the oxygen, food, and forest structure that make our lives on land possible. They are sensitive indicators of global change in the past as well as today. This course will examine the history of green plants on the dynamic Earth from their beginnings in the Proterozoic oceans to today, with emphasis on central topics such as the colonization of land, the histories and relationships of major plant groups, the evolution of seeds and flowers, the evolution of plant-animal interactions, extinction and diversification, paleoclimates, and the origins of modern biomes such as rainforests and grasslands. This course is strongly recommended to graduate students and advanced undergraduates with interests in paleobiology and/or plant biology. Specimen observation and field trips will be important course components. Exams, assignments, and class participation will be the primary bases of evaluation.

**Prerequisite:** any 3 credit introductory course in historical geology or plant biology
Cross-listed with: GEOSC 420

BIOL 421: Comparative Anatomy of Vertebrates

4 Credits

The comparative anatomy of representative vertebrate animals discussed from a descriptive and an evolutionary viewpoint. BIOL 421 BIOL (VB SC) 421 Comparative Anatomy of Vertebrates (4) Upon completion of this course, students will understand the fundamentals of vertebrate anatomy and be able to employ comparisons between phylogenetically distinct vertebrate species to illustrate evolutionary adaptations and the relationship between structure and function. Unique adaptations such as those of ruminants and birds will be explored in addition to the more common fish, amphibians and mono-gastric mammals typically used to illustrate these principles. Laboratory activities utilizing specimens representative of higher and lower vertebrate species will emphasize structure identification and functional adaptations. Students will be evaluated by means of laboratory examinations which will focus on structure identification. Attendance in laboratory is mandatory and laboratory exercises to be completed at each laboratory period will be graded. Students that miss laboratory session due to an excused absence should arrange a make up assignment with the instructor. Unannounced quizzes will be presented in either lecture or laboratory sessions. Three lecture examinations and a comprehensive final examination will be given.

**Prerequisite:** BIOL 240W

Cross-listed with: VBSC 421

BIOL 421H: Comparative Anatomy of Vertebrates

4 Credits

The comparative anatomy of representative vertebrate animals.

Honors

BIOL 422: Advanced Genetics

3 Credits

Chromosomal mechanism of heredity; cytoplasmic and polygenic inheritance, chemical genetics, genomics, and experimental evolution. BIOL 422 Advanced Genetics (3)This course will examine the genetics of chromosomes and how changes in gene arrangements shape the structure and function of genes in genomes. This will include an examination of how chromosomes organize genetic information, how chromosomes are transmitted, how the evolutionary process shapes genetic variation in the genome of populations of organisms and between different species.

**Prerequisite:** one genetics or genetic based course including BIOL 133, BIOL 222, BIOL 322, or BIOL 230W

BIOL 424: Seeds of Change: The Uses of Plants

3 Credits

Interdisciplinary approach to the biology, chemistry, history, and culture of the interactions between plants and people.

**Prerequisite:** BIOL 110; BIOL 220W, BIOL 230W, or BIOL 240W

Cross-Listed

BIOL 425: Biology of Fungi

4 Credits

A survey of the biological diversity of fungi, stressing evolution, ecology, disease, morphology, life histories, and importance to human affairs. BIOL (PPATH) 425 Biology of Fungi (4) This course is a hands-on survey of fungal diversity, covering a wide variety of topics in fungal biology: phylogenetics, morphology, ecology, evolution, population biology, fungi as food, fungi as sources of toxins, ethnomycology, fungi as agents of plant and animal disease, fungi as sources of pharmaceuticals, and industrial uses. All fungi will be discussed, from mushrooms and other fleshy fungi to molds to slime molds. The laboratory portion of the course will center mostly around handling and manipulating freshly collected and living fungi, and microscopic analysis of their major features. There will be approximately 4-5 required field trips to local forests during the laboratory period, to observe fungi in their natural habits and collect them for further analysis in the laboratory. Students will come out of the course with a broad base of knowledge about fungi and their diversity and the ability to handle them in the laboratory and observe them using the microscope.

**Prerequisite:** fifth-semester or graduate standing in a biological sciences major, with six credits completed in the major

Cross-listed with: PPEM 425

BIOL 426: Developmental Neurobiology

3 Credits

Overview of basic developmental processes as they apply to the central nervous system. BIOL 426 Developmental Neurobiology (3) This course will provide a general overview of developmental processes as they apply to the central nervous systems. From initial differentiation of neuronal tissue to the aging of human brain, this course will expose students to many hot topics in the current neuroscience research field, including synaptogenesis, axon guidance, neural stem cells, apoptosis, learning and memory, and Alzheimer’s disease. Although one textbook will be assigned as the major reference book, many current research results will be integrated into the lectures so that students can grasp the most recent advancement related to each topic. The course will be divided into four parts. Part I introduces the induction of neural tissue, the polarity and regionalization of the neural tissue, and the generation and function of neural stem cells. Cutting-edge research on neural stem cells will be discussed. Part II deals with various interactions within neuronal system, including neuron-glia interaction, cell adhesion and migration, axon growth and guidance, and target selection. Part III teaches synapse formation and maturation, neurotrophic factors and their distinct functions, and neuronal cell death. Part IV talks about learning and memory from developmental view, and also the memory disease -Alzheimer’s disease. Current research on Alzheimer’s disease will be discussed. The lectures will be given in PowerPoint presentations. Classical models and front line research will be integrated to stimulate students’ imaginative thinking. Students will be encouraged to read some current research paper and offer their own view on some particular subject, such as neural stem cells and learning and memory.

**Prerequisite:** BIOL 141 or BIOL 240

BIOL 427: Evolution

3 Credits

Selected topics on the evolution of life.
**Prerequisite:** BIOL 220W, BIOL 230W

Cross-Listed

BIOL 427H: Evolution

3 Credits

Selected topics on the evolution of life.

Cross-Listed

Honors

BIOL 428: Population Genetics

3 Credits

Mathematical formulation of evolution by natural selection, genetic equilibrium under selection, mutation, migration, random drift.

**Prerequisite:** BIOL 220W, STAT 250; MATH 111 or MATH 141

BIOL 429: Animal Behavior

3 Credits

Physiological mechanisms, ecological relevance, and adaptive significance of animal behavior.

**Prerequisite:** BIOL 110, BIOL 220W

BIOL 430: Developmental Biology

3 Credits

Molecular and genetic analyses of mechanisms involved in differentiation and determination in biological systems.

**Prerequisite:** BIOL 222; B M B252 or BIOL 230

Cross-listed with: BMB 430

BIOL 430H: Developmental Biology

3 Credits

Molecular and genetic analyses of mechanisms involved in differentiation and determination in biological systems.

Honors

BIOL 431: Reproductive Biology

3 Credits

Reproduction is essential to all life and the course will explore development, physiology, cell biology, genetic and evolutionary aspects of this area.

**Prerequisite:** BIOL 110 and BIOL 230 or B M B251 or MICRO251 or BIOL 240

BIOL 432: Developmental Genetics

3 Credits

An advanced course in developmental biology, focusing on the use of genetics techniques to study fundamental questions of animal development.

**Prerequisite:** BIOL 230W, or B M B251, B M B252

BIOL 433: Evolution of Vertebrates

3 Credits

Evolution of vertebrate animals, including classification systems based upon morphology and genetics, insights for special adaptations.

**Prerequisite:** BIOL 110 and BIOL 220W and BIOL 240

BIOL 434: Pathobiology of Emerging Infectious Disease

3 Credits

The course will analyze the pathology, immunology, microbiology, evolutionary biology, and policy of important emerging and reemerging infectious diseases.

**Prerequisite:** BIOL 110 and BIOL 230 or MICRO251 or B M B251 or MICRO201

BIOL 435: Ecology of Lakes and Streams

3-4 Credits

Physical, chemical, and biological characteristics of freshwater environments, with special emphasis on factors regulating productivity in freshwater ecosystems.

**Prerequisite:** BIOL 220W

BIOL 436: Population Ecology and Global Climate Change

3 Credits

Ecological responses of individuals, populations, and communities to environmental variation, with emphasis on climate change. BIOL 436 BIOL 436 Population Ecology and Global Climate Change (3)In this course, students will be presented with a close look at the factors shaping the characteristics of populations and their dynamics in time and space, with emphasis on the responses of populations to climatic fluctuation and global climate change. The course begins with an introduction to the basic concepts necessary for understanding the responses of individuals, populations, and communities to climate change in the recent past (the past 2 centuries), present, and future. These concepts include: the science of climate change, how temperature trends are estimated, the data used in assessment reports by the Intergovernmental Panel on Climate Change, large-scale climate systems such as the North Atlantic Oscillation and the El Niño Southern Oscillation, the basic characteristics of populations, how population densities are estimated, and the types of population data used in studies of population responses to climate change. In this first section of the course, students are also introduced to natural selection and the concepts of adaptation and vulnerability, which sets the stage for distinguishing between adaptive ecological responses to climate change vs. susceptibilities to climate change. After presenting these basic concepts, the course then moves on to examine single-species population dynamics. This section of the course teaches students about the different types of population growth, including unlimited growth, density-dependent population dynamics, and density-independent population dynamics. Here, we take a close look at case studies documenting population responses to large-scale climatic fluctuation, and case studies that demonstrate interactions between the opposing influences of density dependence and climate on population dynamics. This section of the course also introduces students to some of the analytical difficulties inherent in quantifying the contribution of climatic fluctuation to local population dynamics. This section finishes with
lectures on the phenomenon of spatial synchrony in population dynamics and the implications of global climate change for widespread population decline and extinction risk. The final section of the course focuses on multi-species dynamics. Lectures in this section introduce students to inter-specific competition through examination of case studies involving desert rodents and ants; then move on to predation, with case studies of wolf predation illustrating the different types of functional and numerical responses, predator-prey cycles, and cascading effects of predators on population dynamics at lower trophic levels including herbivores and plants; and parasite-host dynamics, including discussion of the role of parasites as specialized predators in host population dynamics. This section also includes discBIOL 436 Population Ecology and Global Climate Change (3)

**Prerequisite:** BIOL 220

BIOL 437: Histology

4 Credits

Microscopic structure of the tissue of the animal body.

**Prerequisite:** BIOL 230W

BIOL 438: Theoretical Population Ecology

3 Credits

Theoretical discussions of demographics, population and metapopulation growth models, life histories, and species interactions such as competition, predation, host-parasitoid relationships. BIOL 438 Theoretical Population Ecology (3) At the present time our program has no theoretical and quantitative upper level ecology course. This course is designed to be a highly-quantitative second ecology course. It emphasizes mathematical and theoretical approaches to ecological questions and reinforces the theory with practical, hands-on field and laboratory exercises in which students are required to erect and test hypothesis using appropriate experimental and statistical techniques. The course builds on concepts from introductory ecology and requires students to use tools acquired in biostatistics and calculus to solve ecological problems. It can act as an introduction to or as an extension of experimental design. Although it is not a writing intensive course, students will be required to use standard technical writing and public speaking skills throughout the course. The course covers topics that are relevant to, but not addressed in, evolution and evolutionary genetics. In addition, it offers an opportunity for mathematics students interested in applications of mathematics to biological problems to apply models covered in mathematical modeling to real situations. Throughout the semester analytical and theoretical thinking will be emphasized, starting with simple descriptions of population phenomena and ending with development of mathematical models and the critical experiments needed to test those models. The emphasis lies on empirical tests of ecological theory and applications of ecological theory to real-world problems. Students will be evaluated by means of essay exams covering theory, mathematical models, and the design of hypothetical experiments, in-class presentations of the primary ecological literature and applications of ecological theory to current environmental problems, and laboratory reports in which data collected during laboratory exercises will be analyzed and interpreted. Field exercises will be conducted on the campus of Penn State Erie and will take advantage of the rich natural environment on campus including numerous wetlands, streams, forests, and old fields. This course will be available to all biology majors as elective credit at the 400 level. It also will be a core course requirement for any biology major taking the Ecology Option. It may function as a course for students seeking a minor in biology, particularly for mathematics majors.

**Prerequisite:** BIOL 220W, MATH 140, STAT 250

BIOL 439: Practical Bioinformatics

3 Credits

Practical aspects of retrieving and analyzing biological information residing in common databases. BIOL 439 Practical Bioinformatics (3) This course focuses on practical aspects of biological databases and analyses of molecular data. Students will learn about vast resources available, how to access them, and retrieve only the desired information. Sequence comparison and alignment methods will be presented. We will discuss practical aspects of such algorithms as dot matrix plots, dynamic programming, BLAST, and FASTA. Different strategies of multiple alignments will be discussed as well. We will cover computational genomics and computational analysis of gene expression. Students will learn how to assemble short sequences into long contigs and how to infer biological information from raw sequence data. They will learn how to analyze protein sequences including secondary structure prediction, protein function prediction (based on motifs and functional domains), and structural modeling. The whole course will be well balanced between theoretical description of computational biology methods and practical aspects of bioinformatics (some sessions will meet in computer classrooms). Upon completion of this course, students will have sufficient knowledge to retrieve a desired information from biological databases based on both text and sequence data. They will learn what public resources are available in term of databases and a software. They will know how to interpret results in biological context and how to adjust different parameters in the software to get exact desired results. This course will be one of several courses that are available to students in the genetics and developmental biology and general options in the biology program along with the biology minor.

**Prerequisite:** BIOL 230 or B M B251

BIOL 441: Plant Physiology

3 Credits

Classical and current concepts in plant constituents, mineral nutrition, water relations, respiration, photosynthesis, photoperiodism, plant hormones, growth, and development.

**Prerequisite:** BIOL 230W, BIOL 240W

BIOL 443: Evo-devo: Evolution of Developmental Mechanisms

3 Credits

How evolution of animals and plants can be traced to changes in the regulation and/or interactions of genes controlling development. BIOL 443 Evo-devo: Evolution of Developmental Mechanisms (3) "Evo-devo" is a new, exciting and interdisciplinary field in biology that encompasses knowledge from developmental biology, comparative genomics, gene regulation and evolutionary theory. The key concept in "evo-devo" is that the evolution and diversification of animals and plants can be traced to changes in the regulation and/or interactions of genes controlling development. The first few weeks of the course will bring students up to date on what they need to know about evolution, development and molecular genetics to appreciate the interdisciplinary field of "evo-devo". As this is such a new field, subsequent classes will give students a taste of the excitement of current research through the
use of case studies. There will be ten case studies, seven examples from animals and three examples from plants, covering a range of morphological novelties and concepts. Each case study will involve one or more lectures of background information given by the instructor and one discussion class in which students will read, present and discuss reviews and/or primary research articles. Students will be given enough background information in the fields of evolution, development and molecular biology to enable them to understand and discuss primary literature in evo-devo. For many students this will be the first time they have read reviews and articles from the literature and this course will give them the capacity to move beyond textbook knowledge to knowledge of how science really works. This course will be one of several courses that are available to students in the genetics and development, and general options in the biology program along with the biology minor.

**Prerequisite:** BIOL 220W

BIOL 444: Field Ecology

3 Credits/Maximum of 3

This field course will explore the flora and fauna of the mid-Atlantic area. BIOL 444 Field Ecology of the Central Appalachian Highlands (3)

This course is designed to take advantage of the teaching opportunities presented by the West Virginia highlands. The main advantage of using this area as an outdoor classroom derives from the fact that there are large changes in elevation and soils, and a tremendous variety of community types located in a small geographic area. In this area, students can observe ecological communities ranging from river, bottom forests at 1500 to 2000 feet in elevation to dry ridge slope forests at 3000 feet to the unique acid soil heath barrens community of the Dolly Sods Wilderness at 4000 feet. Since almost all of this area was extensively logged in the past, students will have the opportunity to observe the results of succession, and how the process of succession is affected by variation in topography, soil type and local climate. There are also several types of aquatic communities available for study, including large rivers, small high elevation streams and acidic wetlands. The course will use an integrated natural history approach to study the various ecological communities. This will include discussion of the effects of human activity and the topography and geology of the area in addition to study of terrestrial and aquatic flora and fauna. At terrestrial site, we will, in part, follow the example of the US Forest Service's Forests of the Central Appalachians Projects (http://www.spies.com/~gus/forests/) which uses forest walk inventories to document biodiversity. Therefore, the course would have a significant plant identification and taxonomy component. Each community can be studied as a separate unit and then compared to the adjacent communities at different elevations. By the end of the course, students should understand the relationship of geology, topography and soil type to the distribution of plant communities. They should also understand the relationship of plant communities and water chemistry to the distribution of aquatic insect and vertebrate and be able to use aquatic insects as water quality indicators. This course will be one of several field courses that are available to students in the ecology and general option in the biology program along with the biology minor.

**Prerequisite:** BIOL 220W

BIOL 446: Physiological Ecology

3 Credits

The physiological abilities of plants and animals to adapt to their abiotic environment.

**Prerequisite:** BIOL 220W, BIOL 240W

BIOL 448: Ecology of Plant Reproduction

3 Credits

Analysis of the ecology, evolution, and natural history of angiosperm reproduction, including pollination, fruit-set, dispersal, and relevant plant-animal interactions.

**Prerequisite:** BIOL 220W

BIOL 450: Experimental Field Biology

3-5 Credits

A practical introduction to modern experimental techniques for ecological study of terrestrial, marine, and fresh water habitats.

**Prerequisite:** BIOL 220W, BIOL 240W

Writing Across the Curriculum

BIOL 450M: Experimental Field Biology

3-5 Credits

A practical introduction to modern experimental techniques for ecological study of terrestrial, marine, and fresh water habitats.

Honors

Writing Across the Curriculum

BIOL 451: Biology of RNA

3 Credits

Survey of the roles of RNA in biology, emphasizing evolutionary relationships and relevance to human health.

**Prerequisite:** BIOL 230 or BM B251 or MICRB251

BIOL 459: Plant Tissue Culture and Biotechnology

3 Credits

Principles and techniques for the in vitro culture, propagation, and genetic manipulations of plant cells.

**Prerequisite:** BIOL 230W ; or BM B251, BM B252

Cross-listed with: BIOTC 459, HORT 459

BIOL 460: Human Genetics

3 Credits

The human genome, its variation, origins, and relation to disease and other traits. ANTH 460 / BIOL 460 Human Genetics (3) The course considers many examples derived from the study of the genetics of human disease, and includes most general areas of interest, including
simple Mendelian disorders, and complex chronic diseases such as cancer and cardiovascular disease, and variable special topics including immunogenetics and the genetics of imprinting or other processes. The course usually also touches briefly on the nature of forensic genetics and the problem of making inferences from individual genotypes. Finally, the course considers the bioethical and societal issues involving contemporary human genetics. The study of disease genetics is important for students preparing for graduate work in medicine and other health professions as well as for graduate studies in molecular and evolutionary genetics and related areas, including biological anthropology and bioethics. This course is relevant to requirements or appropriate electives for life science majors and graduate students (check with your academic advisor). Over the years, it has proven to be an excellent preparation for subsequent graduate and professional work in these areas. The course is offered most years, in the fall semester. Depending on enrollment and other factors, the course may include graded homework or other components, but evaluation is predominantly based on exams during the semester and a comprehensive final. This course is cross listed as ANTH 460 and BIOL 460, but there is only one course, at the same time and place, for all students no matter how they register. In some years, ANTH 460H / BIOL 460H, a 4-credit Honors version is offered that is identical to 460 but with an additional class period each week involving additional written and presentational assignments and term projects, along with the regular 460 exams, that combine to determine the final grade. Total enrollment is capped at about 100 students.

**Prerequisite:** ANTH 021, or BIOL 110, or BIOL 133, or permission of program for a different introductory genetics course

**Cross-listed with:** ANTH 460

**BIOL 460H: Human Genetics**

4 Credits

Gene mapping in humans; molecular basis of genetic disease; genomic structure; immunogenetics; and genetic evidence for human evolutionary history. ANTH 460H / BIOL 460H Human Genetics (4) Students will explore interesting normal or pathological variation to understand first its biological nature, then its epidemiological distribution, genes and genetic mechanisms associated with the trait, phylogenetic origins or comparison, and the nature of relevant genotype-phenotype relationships. Alternatively, students may explore methods for identifying and characterizing gene action or structure, or historical subjects related to human variation and evolution. Ethical and societal aspects of these issues will be considered as well. Time will be taken for faculty or students to read and present current important papers appearing in the literature, relevant to the current course topics. As an Honors course, we will have the time, and the students the dedication, to pursue the chosen topic(s) in much greater and more rigorous detail than is possible in the usual lecture or even seminar course format of ANTH 460 / BIOL 460 which, while presenting material at a sophisticated level, will not have time to explore the more subtle, problematic, or challenging aspects. The students who enroll for this course will be given a description of the approach and the intended general topic, on a course web page or by email when the instructor learns they have registered. The nature of the course will be described including semester-specific themes or focus that will apply (if any). Requisite background reading will be identified so students will know what will be expected of them. Some prior reading will be assigned, so that we can begin the semester with a common basis in background. Students will be evaluated on the quality of their project work, including writing ability, presentation ability, and depth of thought. Several written assignments will be given and graded for content and expression quality. Although students will take regular ANTH 460 / BIOL 460 lectures, they may be given separate exams (corresponding to those given in the regular course) that will allow more freedom of expression than multiple-choice exams or homework assignments. Depending on the workload in any semester, there may be a separate written take home synthetic essay final exam. The Honors session each week will be highly interactive rather than passive, and students will be graded on attendance, participation and whether they have done assigned work in advance of the class. Students will be expected to have the stipulated background knowledge of biological anthropology, evolutionary biology, statistics and genetics. This course should count as 4 credits toward additional courses in biological anthropology required for the Anthropology major.

**Prerequisite:** 3 credits in genetics, or ANTH 021, or BIOL 222, or BIOL 230W; and 3 credits in statistics

**Cross-listed with:** ANTH 460H Honors

**BIOL 461: Contemporary Issues in Science and Medicine**

3 Credits/Maximum of 3

Current/classical issues relating to health, research, agriculture, environment, and biotechnology. Active exploration of the impact of science on society. BIOL 461 Contemporary Issues in Science and Medicine (3) The aim of this course is to provide students of the biological and biomedical sciences with a framework to recognize, examine, and resolve conflicts which may affect their professional conduct. Current and classical issues relating to human health, scientific and medical research, agriculture, the environment, and biotechnology will be explored. The history, controversies, and current issues related to each topic will be presented by the instructor through lecture, guest presentations, and multimedia presentations. Each topic will be explored by students through a variety of activities, including role playing, case studies (real and hypothetical), mock trials, small- and large-group discussions, writing exercises, and student research projects presented in oral and poster format. Some activities and discussions will involve the entire class simultaneously, while other activities will be structured for very small groups (2-3 students), small groups (5-6 students), or large groups (10-15 students). This course is especially relevant to any student majoring in Biology, as it allows and encourages them to relate information they have learned in other Biology courses to their own professional conduct. Although the course was specifically designed to cover issues that are relevant to students majoring in each of the Biology concentration areas (Genetics and Developmental Biology, Ecology, Plant Biology, and Vertebrate Physiology), it is also relevant to students in colleges other than Science, who may be enrolled in majors with some biological content or applications. This course is designed to be rigorous and very interactive.

**Prerequisite:** A 400-level Biology course.

**BIOL 463: General Ecology**

3 Credits

Illustrates science of ecology, from individual, population, and community-level perspectives, discusses applications of this science to issues of conservation of biodiversity.

**Prerequisite:** BIOL 220
BIOL 464: Sociobiology

3 Credits

The study of the adaptive function of social behavior, the comparative analysis of social organization, and the ecology of sociality.

Prerequisite: 6 credits in biology or anthropology

Cross-Listed

BIOL 464H: Animal Behavior--Sociobiology

3 Credits

Biological basis of social behavior. Comparative evaluation and adaptive value of social structures, mating systems, ecological correlates of social behavior.

Honors

BIOL 467: Molecular Basis of Neurological Diseases

3 Credits

Students taking this course will learn about neurological diseases in a biological molecular context.

Prerequisite: BIOL 110 and BIOL 230 or B M B251 or MICRO251 or BIOL 240

BIOL 469: Neurobiology

3 Credits

Comprehensive examination of neuroanatomy and physiology designed to integrate the principles of neurochemistry, neuroendocrinology and molecular biology.

Prerequisite: BIOL 240W

Cross-listed with: BBH 469

BIOL 469H: Neurobiology

3 Credits

Comprehensive examination of neuroanatomy and physiology designed to integrate the principles of neurochemistry, neuroendocrinology, and molecular biology.

Cross-Listed

Honors

BIOL 470: Functional and Integrative Neuroscience

3 Credits

Neurobiological function in motivated behaviors, motor and sensory function, learning and memory, development, sexual differentiation, and pathology.

Prerequisite: BIOL 469

Cross-listed with: BBH 470

BIOL 472: Mammalian Physiology

3 Credits

Mechanisms concerned with normal animal function, with special emphasis on humans.

Prerequisite: BIOL 240W, CHEM 203

BIOL 473: Laboratory in Mammalian Physiology

2 Credits

Laboratory experiments demonstrating fundamentals in physiology.

Prerequisite: or concurrent: BIOL 472

BIOL 474: Astrobiology

3 Credits

In depth treatment of principles/concepts of biochemical evolution, the origin/evolution of life; evaluation of distribution of life in the universe. BIOL 474 BIOL (GEOSC) 474 Astrobiology (3)Astrobiology is the study of life in the universe. Astrobiology has become a major focus of scientific research in the United States and a topic often discussed in popular science literature. The recent interest in astrobiology has resulted in the formation of an Astrobiology Institute at Penn State University. This advanced undergraduate course in astrobiology will cover many topics in the field including, biochemical evolution, the origin and evolution of life on Earth, microbial diversity, protein evolution, and the distribution of life in the universe. This course is intended to provide students of the natural sciences with the opportunity to prepare for a research career in the rapidly expanding field of astrobiology. The course will also present astrobiology as a cross-disciplinary framework that ties together the diverse courses the students have already taken. The students will learn new concepts while having, to draw on their previous knowledge of chemistry, biology, and the geosciences. In summary, this course has the following objectives: (1) to develop the student's literacy in astrobiology so that they can critically evaluate claims that they encounter well after the course has ended; (2) to present a scientific question that requires the sum of the student's previous education to solve; (3) to provide a deep background to some of the astrobiological concepts that are often only briefly mentioned in other classes or in the media; (4) to develop research and communication skills required for a young scientist through a class term paper and short oral presentation; and (5) to prepare the students for graduate research in astrobiology by giving them a broad background of the field and by demonstrating many of the outstanding problems yet to be solved.

Prerequisite: BIOL 110, CHEM 110

Cross-listed with: GEOSC 474

BIOL 475N: Anatomy in Italy: Cadavers, Culture, and Science

3 Credits

Anatomy is more than learning to name structures. Students will practice critical thinking and analytical skills, and develop key literacies while studying human cadavers and learning to predict a structure's function by observing its shape, texture, and tissues. Students will practice critical and integrative thinking while discussing the historical circumstances that gave rise to, supported, and sometimes hindered the development of anatomy as a science by synthesizing original arguments (written and oral) that explore the evolution of anatomic science within the context
of Italian history, politics, and culture. Students will also study the ethics of acquiring cadavers within contemporary and renaissance contexts, identify individual graphics and historical sculptures that demonstrate anatomic understanding, and discuss their origins and implications for renaissance-era society. Students will also develop their communication skills: presenting original posters, leading class discussions, writing term papers, and creating webcasts as part of a service project. During spring break, students will travel with the instructors to Italy and study anatomic wax specimens born through collaborations between anatomists and artists; Michelangelo’s hidden anatomy in the Sistine Chapel; and the history of medicine. As preparation for their study abroad experience, students must concurrently enroll in IT 197: Italian Language and Culture for Study Abroad

**Prerequisites:** Consent of Instructors AND ( BIOL 129 OR BIOL 141 OR BIOL 240W OR BIOL 472 OR KINES 202 )

- General Education: Humanities (GH)
- General Education: Natural Sciences (GN)
- General Education - Integrative: Interdomain
- GenEd Learning Objective: Global Learning
- GenEd Learning Objective: Integrative Thinking

**BIOL 479: General Endocrinology**

3 Credits

Endocrine mechanisms regulating the morphogenesis, homeostasis, and functional integration of animals.

**Prerequisite:** BIOL 141 or BIOL 472

Cross-listed with: ANSC 479

**BIOL 482: Coastal Biology**

3-4 Credits

Marine organisms, their interactions with each other, and their relationships with several coastal habitats.

**Prerequisite:** BIOL 220W

**BIOL 492: Senior Seminar in Biology**

1 Credits

Discussion of selected topics from recent biological literature; reports on current research or internship experiences.

**Prerequisite:** 18 credits in Biology; seventh-semester standing

**BIOL 494: Research Project**

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

**BIOL 495: Internship in Biology**

1-12 Credits/Maximum of 12

Practical off-campus experience in Biology under the supervision of a professional and a faculty member.

**BIOL 496: Independent Studies**

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

**BIOL 496A: SPECIAL TOPICS**

0.5-12 Credits/Maximum of 18

**BIOL 496C: SPECIAL TOPICS**

1-6 Credits/Maximum of 18

**BIOL 497: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**BIOL 497A: SPECIAL TOPICS**

3 Credits/Maximum of 9

**BIOL 497G: SPECIAL TOPICS**

0.5-6 Credits

**BIOL 498: Special Topics**

1-9 Credits/Maximum of 12

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Cross-Listed

**BIOL 498A: SPECIAL TOPICS**

0.5-5 Credits

**Biomedical Engineering (BME)**

**BME 100: Biomedical Engineering Seminar**

1 Credits

First-year seminar to introduce the students to the field of biomedical engineering, and related opportunities in research, and industry. BME 100S Biomedical Engineering Seminar 1 A first-year seminar designed for students interested in pursuing a career in Biomedical Engineering. Through a series of lectures, demonstrations and problem solving sessions, the multifaceted world of biomedical engineering will be explored. Students will be: 1) introduced to Penn State as an academic community, including fields of study and research with an emphasis on Biomedical Engineering 2) acquainted with the learning tools and resources available at Penn State 3) given an opportunity to develop relationships with full-time faculty and other students interested in Biomedical Engineering 4) taught about their responsibilities as part of the University community 5) engaged in discussion about Biomedical Engineering and possible career paths that are available to Biomedical Engineering graduates.

First-Year Seminar
BME 201: Fundamentals of Cells and Molecules

3 Credits

Cell and molecular biology taught from an engineering perspective. Includes biochemistry, recombinant DNA, and cell structure/function. BME 201 Cell and Molecular Bioengineering (3) This course provides students foundational knowledge in cell and molecular biology. The first quarter of the course covers fundamentals of biochemistry including ligand-receptor interactions, protein structure, enzyme kinetics, and biochemical thermodynamics. The second quarter of the course covers molecular biology including DNA replication, transcription, translation, recombinant DNA tools, and applications to biotechnology and molecular medicine. The second half of the course covers selected topics in cell biology including cell adhesion, cell signaling, the cytoskeleton, cancer, and tissue engineering. Material is taught from a quantitative and engineering perspective and students are expected to have strong foundations in chemistry, physics and math. Recurring concepts in the class include chemical kinetics, consideration of the free energy of chemical reactions and the role of mechanics at the molecular and cellular level. Tools and applications discussed include recombinant protein expression, molecular mechanisms of pharmaceuticals, genetic testing, and the use of analytical and computational modeling to understand cellular function in health and disease.

Prerequisite: BIOL 141 or BIOL 240W, CHEM 112, MATH 141

BME 301: Analysis of Physiological Systems

4 Credits

Analysis of physiological signals and modeling of physiological systems by electrical and mechanical analogs in the context of continuous linear systems. BME 301 Analysis of Physiological Systems (3) Analysis of physiological signals and modeling of physiological systems in terms of electrical and mechanical analogs in the context of continuous linear systems. The course will cover an introduction to analysis of physiological systems using Matlab to perform numerical analysis and representation of biological signals with the techniques of Fourier frequency domain and linear time domain analyses. These topics will be followed by applications to describe control and function of physiological systems in the context of traditional systems analysis of continuous linear systems. Topics will focus on electrical and mechanical analogs of physiological systems and control of physiological parameters such as blood pressure, oxygen delivery to tissue, and blood glucose levels. The lab/recitation session may be used to review homework problems and implementation of solutions to computer programming assignments.

Prerequisite: BIOL 141 or BIOL 240W, PHYS 212, MATH 250 or MATH 251, CMPSC200

BME 303: Bio-continuum Mechanics

3 Credits

Mechanical properties of fluids and solids with applications to tissue mechanics and vascular system. BME 303 Bio-continuum Mechanics (3) The course serves as an introduction to continuum mechanics for students of biomedical engineering providing a foundation for studies in fluid and solid mechanics, material sciences, and other applications of science and engineering to the biomedical field. It will provide an introduction to concepts of solid and fluid mechanics, analysis in the context of mechanical properties of biological tissues, physiological models and measurement systems. For success in the course, students will draw from their prerequisite background in calculus, physics, statics, strength of materials, vector analysis, and elementary differential equations.

Prerequisite: BIOL 141 or BIOL 240W, E MCH210 or E MCH211 and E MCH213, MATH 230 or MATH 231 and MATH 232, MATH 251

BME 313: Thermodynamics for Biomedical Engineering

3 Credits

Chemical processes, including material and energy balances and heat transfer with emphasis on biological and biomedical applications. BME 313 Thermodynamics for Biomedical Engineering (3) The course provides and introduction to thermodynamics, including the fundamentals of material and energy balances with specific emphasis placed on physiological and biomedical engineering applications. This course will cover equations of state, the first and second laws of thermodynamics in both open and closed systems, and Maxwell Relations. Examples of biological applications that can be considered are the application of thermodynamic analyses to understanding thermoregulation, the cardiac cycle, respiratory gas exchange, cell potentials and to osmosis. This course also covers heat transfer including Fourier's law of conduction, convective and radiative heat transfer. Specific biological examples that may be discussed include applications to bioinstrumentation, thermoregulation and tissue heating by radiation for cancer therapy. A general knowledge of physiology and chemistry are prerequisites; the analytical approach of the course will also require an ability to work with basic differential and multivariable calculus.

Prerequisite: BIOL 141 or BIOL 240W, CHEM 112, MATH 230 or MATH 231 and MATH 232, MATH 251

BME 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

BME 401: Numerical Simulations in Biomedical Engineering

3 Credits

Integration of design theory and finite element analyses for the development of solutions to problems in biomedical engineering. BME 401 Numerical Simulations in Biomedical Engineering (3) Biomedical engineers develop novel devices and models to facilitate patient-specific diagnosis and care. The main goal of this course, therefore, is to help students learn how to use computational modeling software as a means to apply theoretical engineering and biological principles to solve problems in medicine and biology. The course will also focus on integration of ethics and design by continually identifying where ethical decision making and health needs of global populations influence design decisions.

Prerequisite: BME 301, BME 303, BME 313 Prerequisite or concurrent: BME 201

BME 402: Biomedical Instrumentation and Measurements

3 Credits

Biomedical measurements, including consideration of techniques, equipment, and safety. BME 402 Biomedical Instrumentation and
Measurements (3) This course is designed to introduce students to the principles, applications, and design of instruments used in biomedical research and applications. The emphasis is on engineering design and analysis with supplemental discussion of relevant physiological principles. Topics covered include: sensors, biopotential signal origin, amplifiers, filtering, electrodes and signal processing; pressure and flow measurement in the cardiovascular and respiratory systems, chemical biosensors, therapeutic devices, and medical imaging modalities. Students will learn to analyze and design instrumentation and measurement systems through a variety of techniques including in-class examples, homework problems, and active participation.

**Prerequisite:** MATH 250 or MATH 251; BME 301 or E E 210 or E E 212 or PHYS 402

BME 403: Biomedical Instrumentation Laboratory

1 Credits

Building basic biomedical signal processing circuits and biomedical measurement systems, experiments in medical imaging techniques, and measurement of bio-potentials. BME 403 Biomedical Instrumentation Laboratory (1) Laboratory course to accompany BME 402, Medical Instrumentation. Biomedical measurements laboratory where students will build basic biomedical signal processing circuits, run experiments in medical imaging techniques, use transducers to build biomedical measurement systems, and measure bio-potentials. The class is comprised of studies in medical circuits and transducers for static and dynamic biological inputs, and includes measurement of actual biomedical signals. For preparation for industry or research, proper laboratory documentation techniques are taught along with basic skills for presenting experimental data.

**Prerequisite:** Prerequisite or concurrent: BME 402

BME 406: Medical Imaging

3 Credits

Physical principles and clinical applications of medical imaging methods. BME 406 Medical Imaging (3) This course covers all four major diagnostic medical imaging modalities including x-ray, ultrasound, radioisotope imaging, and magnetic resonance imaging. Physical principles, instrumentation, and biomedical applications of these modalities, as well as the basics of imaging signals and image processing will be discussed. Success in this course will require background in physics and electrical circuits, and some experience with Matlab.

**Prerequisite:** PHYS 212 and CMPSC200 or CMPSC201

BME 409: Biofluid Mechanics

3 Credits

The fundamental relations in fluid mechanics and their application to biofluids including steady/unsteady flows, diseased states, devices and biorheology. BME 409 Biofluid Mechanics (3) This course is a first course in fluid mechanics, with application to biomedical problems. This course incorporates understanding of fluid properties of biological materials and applies the fundamental laws (mass, momentum, and energy) that govern fluid mechanics to solve biofluid applications such as those in the cardiovascular system, including diseased states. The course will enable students to use approximation methods and constraints in fluid mechanics to help model and solve biofluid examples. Biorheology and cardiovascular prosthetics in the context of fluid mechanics will be discussed. The students will be able to understand and apply problem solving techniques to steady and unsteady biological flows and be exposed to wave propagation theory and oscillatory flow. Students will be exposed to biofluid devices and flow measurement techniques used to assess these devices.

**Prerequisite:** MATH 230, MATH 251, BIOL 141 or BIOL 240W

BME 410: Biomedical Applications of Microfluidics

3 Credits

Study of fluid mechanics at small length scales including fabrication of microfluidic devices and microfluidic components, lab-on-chip concept and applications. BME 410 Biomedical Applications of Microfluidics (3) Microfluidics is the study of flow phenomena at small length scales with characteristic channel dimensions typically less than the diameter of human hair. Small length scale effects become important as surface forces such as viscous drag and surface tension govern flow behavior rather than body forces (inertia) as seen in macroscale fluid mechanics. Miniaturization of fluid handling systems also allows the development of micro Total Analysis Systems (microTAS) or so called "lab on a chip" which combines biological sample preparation, separation and analysis in a single device. Topics explored in this class include: silicon based microfabrication and non-conventional micro/nano fabrication techniques; flow phenomena at small length scales, including laminar flow and flow resistance, inertial flow, diffusion, capillary effect, electrokinetic flow like electroosmosis, electrophoresis, and dielectrophoresis (DEP); microfluidic components including valves, pumps, mixers, sensors, actuators; lab-on-chip system concept and applications; hands-on lab to make and test microfluidic device; finite element simulation lab to gain better understanding of microfluidic devices.

**Prerequisite:** CHEM 112 and PHYS 211 Prerequisite or concurrent: BME 303 or M E 320 or CH E 330 or AERSP308 or PHYS 213

BME 413: Mass Transport in Biological Systems

3 Credits

An integrated study of the fundamentals of mass transport processes with emphasis on the analysis of physiological systems. BME 413 Mass Transport in Biological Systems (3) This course provides an introduction to mass transport phenomena in biological systems. The course builds upon thermodynamic concepts of phase and chemical equilibrium to analyze ion transport and cell membrane potentials including Nernst potentials, Gibbs-Donnan equilibrium and osmotic pressure. In particular, the course provides fundamental understanding of the diffusion of gases, electrolytes and non-electrolytes in biological applications. Furthermore, the principles of oxygen transport in tissues are specifically described and analyzed using the Krogh Cylinder Modes and hemoglobin-oxygen binding relationships. The transport of substances across biological membranes is discussed and analyzed for various biological transport mechanisms including: passive diffusion, active transport and facilitated transport. Convective transport through porous media is introduced using Darcy’s Law and the Brinkman Equation. Finally, fundamental concepts of pharmacokinetic modeling are introduced and utilized for the analysis of drug transport and distribution within tissues.

**Prerequisite:** BME 313 or M E 300 or M E 302 or CH E 220 or PHYS 213 and MATH 250 or MATH 251 and BIOL 141 or BIOL 240W
BME 419: Artificial Organs and Prosthetic Devices

3 Credits

Analysis of function and consideration of design concerns for biomedical implants, including prosthetic joints, electrical stimulators, and cardiovascular pumps. BME 419 Artificial Organs and Prosthetic Devices (3) This course provides an overview of artificial organs and medical devices (ranging from blood pumps, hemodialysis, BioMEMS, tissue engineered technology, orthopaedic devices, cardiovascular implants, pacemakers, etc.) and how engineers use a design methodology, need to understand the clinical need, and what FDA regulations must be considered to develop this technology. Guest speakers and experts provide lectures on the various technology and students are exposed to industry and academic device development. The basics of biomaterials and biocompatibility are discussed within the context of the technology.

Prerequisite: BIOL 141 or BIOL 240W or BIOL 472 and CMPSC200 or CMPSC201 or CMPSC121

BME 423: Reaction Kinetics of Biological Systems

3 Credits

Chemical kinetics and reaction equilibria with applications to the analysis of physiological function and the design of synthetic organs. BME 423 Reaction Kinetics of Biological Systems (3) Chemical reactions are the underlying mechanism for numerous biological processes such as energy metabolism, biosynthesis pathways, mass transport, and detoxification. This course will introduce the basic concepts in chemical equilibrium and reaction kinetics. The course will then apply these chemical kinetics and analytical approaches to understand the underlying mechanisms of selected biological and physiological processes, which will include metabolic engineering, catalysis, bioreactors, and drug discoveries.

Prerequisite: BIOL 141 or BIOL 240W, CHEM 112, MATH 250 or MATH 251, BME 313 or CH E 210 or M E 300 Concurrent or prerequisite: BME 413 or CH E 410 or B E 302

BME 429H: Biomedical Mechanics and Techniques Laboratory

2 Credits

Experimental laboratory that includes hands-on measurement, computational simulations, and statistical analysis of biofluids, biosolids, and biomaterial phenomena.

Honors

BME 430: Advanced Biofabrication Processes

3 Credits

This course covers advanced biofabrication processes used in tissue engineering, regenerative medicine and drug testing, and provides fundamental statistical concepts and tools that are required to analyze biofabrication process data. Topics include: Introduction, Review of Basic Statistics, Statistics for Analysis of Experimental Data, Hypothesis Testing with Two Sample, Introduction to Biofabrication, Traditional Manufacturing Processes for Tissue Engineering, Micro-patternning and Molding, Microfluidics in Tissue Engineering, Scaffold-free Tissue Fabrication, Modular Assembly and 3D Printing in Tissue Engineering. The course also includes utilization of software packages, hands-on laboratory homework assignments.

Prerequisite: At least 7th semester classification so that students have a technical background before taking the course.

BME 433: Drug Delivery

3 Credits

Engineering and biological principles as applied to pharmaceutical transport and designing drug carriers. BME 433 Drug Delivery (3) The success of drug delivery depends on not only the understanding of chemical synthesis, polymer sciences, and cell biology, but also the fundamental understanding of drug transport that is affected by both drug properties and physiological barriers, which are very critical but often overlooked in the design of drug delivery systems. Therefore, this course covers two main issues: 1) physiological barriers and drug transport; 2) design and characterization of drug delivery systems. The first section of this course introduces transport mechanisms of drug delivery at the levels of cell, tissue and wholebody from the engineering viewpoint. The second section describes the rational design of various drug delivery systems and emphasizes nanomedicines. Case studies of cancer therapy/tissue engineering are described to compare, contrast and analyze current drug delivery systems.

Prerequisite: CHEM 112, and BME 201, BIOL 230W or B M B251, and BME 413 or B E 302 or CH E 410

BME 440: Biomedical Engineering Professional Seminar

1 Credits

Seminar giving students exposure to professionals who apply engineering and related fields to biology and medicine. BME 440 Biomedical Engineering Professional Seminar (1) A senior seminar introducing students to professionals in the field of biomedical engineering and disciplines that are critical to the field (e.g. ethics, regulatory affairs, entrepreneurship). This course is designed to prepare students for the subsequent capstone design course and allow them to consider areas where innovation and design in biomedical engineering are needed. Discussion with presenters will allow students to explore the promises and limitations of the clinical applications of biomedical
engineering and to explore possible career paths. Guest speakers may include representatives and alumni from the medical device industry, biomedical entrepreneurs, medical clinicians, professionals from relevant regulatory agencies, and professionals in bioethics.

**Prerequisite:** 7th semester standing in BME program

**BME 443: Biomedical Materials**

*3 Credits*

Describe properties of materials and composites and their in vivo interactions. BME 443 (MATSE 403) Biomedical Materials (3) Metals, polymers, and ceramics, and their composites, which are capable of emulating the functions of hard and soft tissues, are the subjects of this course. The selection of ceramics for hard tissue prosthesis will be discussed. Orthopaedic and dental applications for ceramics will be discussed. Specific ceramic materials to be treated include dental porcelain, alumina- and zirconia-based ceramics, and bioglasses and pyrolytic carbons. Various classes of inorganic cements, gypsum, zinc phosphates, zinc carboxylates, silicates, and glassionomer cements will also be considered as ceramics. Hydroxyapatite, Hap-based composites and Hap-metal interactions will be discussed in particular Relationships among physical properties, mechanical properties, and chemical interactions with biological fluids will be described. Dental and orthopedic applications of metals will be described. The fracture toughness of metals, their electrochemical responses in vivo, and the nature of the interfacial interactions with hard tissues will be treated Dental amalgams and the noble metals for dental applications will be considered. Metals and alloys, such as Ti, Co-Cr, and vitallium, used in prosthetic applications, will be described and their properties and limitations discussed. The phenomenon of stress shielding and the immune responses associated with the accumulation of metallic and polymeric particulate debris in the vicinity of an implant will be discussed. Polymeric materials are important in a broad range of biomedical applications. Among these are soft tissue prostheses, hemostatic agents, dental restoratives, bone replacement materials, and surgical adhesives. In some applications it is desirable that a polymeric material biodegrade while in others property retention is desirable.

**Prerequisite:** CHEM 112 or MATSE 112

**BME 446: Polymers in Biomedical Engineering**

*3 Credits*

Foundations in polymer chemistry and physics, polymer design, characterization, and processing with a focus on biomedical applications.

**Prerequisite:** CHEM 112, CHEM 113, CHEM 202 or CHEM 210, E MCH 210 or E MCH 211 and E MCH 213

**BME 446H: Polymers in Biomedical Engineering**

*3 Credits*

Foundations in polymer chemistry and physics, polymer design, characterization, and processing with a focus on biomedical applications.

**BME 450: Biomedical Senior Design**

*3 Credits*

Team based capstone design course with open ended project for industry or clinical applications related to Biomedical Engineering. BME 450W Biomedical Senior Design (3) This course is a culminating design experience where students will be presented with open-ended industry and clinically sponsored design projects related to biomedical engineering. Students will work in multi-disciplinary teams to effectively design and prototype a solution for the sponsor. Students will be required to do needs assessment, project planning, budget planning, formulation of design specifications, analysis of the design, and documentation of results. Several design review reports and assessments will be used to monitor progress throughout the semester. Students will develop teamwork and communication skills and learn how to consider the ethical implications of their design, both in construction and use. Students meet with the instructor and sponsor on a regular basis for progress assessment. Notebooks are carefully maintained and critiqued. At the end of the semester, students will demonstrate their final design.
a variety of formats that may include formal presentations, posters, websites, and written reports.

Writing Across the Curriculum

BME 494H: Honors Thesis
1-3 Credits/Maximum of 6

Independent study research and design, leading towards honors thesis.

Honors

BME 496: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

BME 497: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**Biomedical Engineering Technology (BE_T)**

**BE_T 101: Introduction to Medical Equipment Maintenance**
1 Credits

Introduction to the field of clinical engineering and the management of medical equipment and systems. BE_T 101 Introduction to Medical Equipment Maintenance (1) BE_T 101 is an introductory course in medical equipment management. It is an entry level course intended to give students the big picture of the field of biomedical and clinical engineering. The course covers the background and history of the field, exploring how medical equipment technology has changed as well as the management of the service of the equipment. The focus of this class will be from the perspective of the biomedical equipment technician, what skills are necessary, education requirements, training opportunities, certification, job duties and descriptions, and career paths. The types of employers, their organization structures, required regulations, recommended standards and information about the work place will be presented. Business ethics of working with medical equipment, patients, clinical care givers and other health care providers will be discussed. Topics covered include: * Background and history of medical equipment management * Changes in medical equipment technology * Certification for biomedical equipment technicians * BET job duties, descriptions and requirements * BET continuing education needs * Ethical decisions in medical equipment management * Functions Organization of clinical engineering departments * Employer types * Department organization charts * Reporting structures * Services provided by clinical engineering departments * Regulatory and standards requirements * Documentation systems

**BE_T 197: Special Topics**
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**BE_T 201: Medical Equipment & Systems I**
5 Credits

Introduction to the field of biomedical engineering technology, electrical wiring devices, theories of measurement, cardiovascular systems and ECG monitor operation. BE T 201 Medical Equipment Systems I (5) This course introduces the student to electrical safety standards and related wiring devices, methods and systems. Grounding and leakage current is studied so the student understands the causes of leakage current, safety limits, measurement and safe control of medical devices. Electrical wiring devices, over current protective devices, power quality devices and simplified hospital electrical distribution systems are discussed in relation to the electrical power delivery and quality required for medical devices. The electro-physiological theories of measurement, sensors, electrodes and measurement errors are discussed to provide an understanding of how signals are detected on the human body. A variety of transducers will be studied that are used with medical devices, such as: pressure, temperature, audio, relays, solenoids, lighting, video displays, motors, printers and batteries. The blood, heart, and cardiovascular system is studied in detail, as well as the electro-physiological signals of the heart. The normal and many abnormal electrocardiograph signals are studied pursuant to a thorough understanding of the function and operation of the heart. The electrocardiograph (ECG) machine is studied from an electrical/electronic design perspective so the student has an understanding of the electronic circuits required to measure and display the human ECG signal. The controls, operation, electrical safety testing, performance testing and general design of an ECG monitor is studied so the student has a full understanding of its operation, usage and preventative maintenance testing. Topics covered include: * Electrical safety ndash; grounding, leakage current and protective systems bull; electrical wiring devices, over current protective devices, and isolated power bull; power quality, disturbances and corrective methods bull; simplified hospital electrical distribution system bull; theory of measurement: terms, factors, and errors bull; electrodes, sensors, and transducers devices and circuits bull; cardiovascular anatomy and physiology bull; bio-potentials: electro-conduction system of the heart bull; common ECG waveforms: normal and abnormal bull; ECG monitor application and connections to patient

**Prerequisite:** EET 105

**BE_T 203: Biomedical Equipment Laboratory (Internship)**
4 Credits

Practical experience, within or related to the hospital environment, on a variety of biomedical instruments. BE T 203 Biomedical Equipment Laboratory (4) The final semester internship is a curriculum requirement for the Biomedical Engineering Technology (BET) Program. It allows eligible students to develop entry-level skills in the biomedical field while gaining valuable work experience before graduation. The program consists of 400 hours of hands-on experience in an actual work environment on patient care and life support equipment. The student is expected to understand and perform basic fundamentals of the operation, minor corrective repairs and perform basic preventive maintenance and electrical safety tests to a wide variety of medical devices. During the internship, the student will be expected to participate in a wide variety of clinical procedures to learn the environment, application, problems, and the routine and abnormal situations that may occur in regards to the medical devices. Students will also be exposed to the organization and management of a clinical engineering department by attending various committees, investigating education and training.
for biomedical equipment technicians, investigating the risk based preventative maintenance system, investigating the clinical engineering department performance indicators, and investigating the required policy and procedures of a clinical engineering department. Students will be expected to use good communication and customer skills when working with co-workers, clinical personnel, patients, visitors and all others while conducting the internship. Students will be expected to document their activities as required by the course requirements as well as the requirements of the internship location. Students will be assigned an internship supervisor that they will take direction from on a daily basis. The student will be expected to work and follow the requirements of the internship site and follow all required policies and procedures. A biomedical engineering technology student manual will be provided to the student detailing all of the requirements for the internship

**Prerequisite:** BE T 204W, BE T 206, BI SC004 or BIOL 141; must be the last class taken for the degree

BE_T 204: Medical Equipment and Systems II

5 Credits

Principles of medical equipment: operation, application; circuit and block diagrams; preventive maintenance inspections; and troubleshooting with report writing and presentations. BE T 204W Medical Equipment and Systems II (5) This course introduces various types of medical instrumentation in preparation for the biomedical engineering (BET 203). Equipment operation and application, circuit and block diagrams, preventive maintenance, inspections, performance testing, and troubleshooting are explained or reviewed. In addition, the student is required to demonstrate communication skills for the biomedical field in the form of technical reports, equipment reviews, and in-service presentations. In studying the various medical devices, the human cardiopulmonary system, basic anatomy and physiology structures will be reviewed as they apply to that medical device or measurement. Topics covered include: bull; electrical safety bull; ECG monitoring bull; blood pressure monitoring (invasive/non-invasive) bull; cardiac output measurement bull; defibrillators bull; pacemakers bull; pulse oximeter bull; surgical equipment systems bull; sterilization systems process bull; surgical fiber-optic scopes bull; anesthesia gas machines bull; electrosurgical units bull; infusion devices bull; dialysis equipment bull; ventilators respiratory therapy equipment bull; clinical laboratory equipment bull; general medical devices bull; FDA (510K) SMDA requirements bull; regulation standard organization review bull; imaging systems overview bull; X-ray equipment system review bull; report writing bull; technical presentations; Lectures will be supported through laboratory exercises regarding medical devices (physiological ECG monitors, electrocardiographs, blood pressure monitors, noninvasive external pacemakers, defibrillators, pulse oximeters, infusion pumps, and electrosurgical units) and perform operational and preventative maintenance testing on those devices. Written laboratory reports outlining the laboratory activity are required. Reports are graded based upon technical quality, grammar and professionalism. Computers are used to simulate electrical circuits and systems and also produce high quality weekly medical device reports and laboratory reports.

**Prerequisite:** BE T 201, BE T 205

Writing Across the Curriculum

BE_T 205: Medical Electronics

4 Credits

Solid state devices, diodes, power supplies, operational amplifiers, transistors, timing circuits, high power devices, circuits as applied to medical devices. BE T 205 Medical Electronics (4) BET 205 introduces solid state devices and circuits as they apply to medical devices. This course begins with the fundamentals of solid state devices, diode models and applications, then application of these fundamentals in linear power supply design. Students design a theoretical linear power supply as a term project, applying the fundamentals of diodes, transformers, filters and regulators. Operational amplifiers, transistor devices and circuits is presented along with the applications of amplifiers, switches, filters and other related circuits. Special solid state and high power devices will be discussed and their applications to medical device circuits. This course provides students with a broad exposure to a wide variety of solid state devices and their application to medical devices. Topics covered include: bull; fundamentals of solid state principles bull; P-N junction, forward and reverse biasing bull; diode models: ideal, practical and complete bull; specialty diodes: zener and LED bull; diode specifications and testing bull; transformers: step up, step down isolation bull; rectifier circuits: half and full wavebull; linear power supply: rectification, filters regulation designs bull; Switching Mode Power Supply (SMPS) fundamentals bull; linear power supply design project bull; operational amplifiers: amplifiers, comparators, filters and others bull; transistors: BJT, JFET, MOSFET bull; special power devices: photo detectors, optoisolators, TRIAC, DIAC and others bull; timing circuittsbull; tuned amplifiers band width Topics are supported by laboratory exercises were students learn about solid state devices and power supplies. Students are required to complete a theoretical design of a linear power supply with given specifications. Students are also required to prepare written laboratory reports outlining the laboratory activity and power supply design project. Reports are graded on technical quality, grammar, and professionalism. Students in BET 205 are required to use computers in to simulate electrical circuits and systems and also produce high quality laboratory reports.

**Prerequisite:** EET 105

BE_T 206: Medical Computers and Networks

4 Credits

Introduction to computer hardware, software and networks for medical equipment; PC and medical equipment hardware; networking fundamentals. BE T 206 Medical Computers and Networks (4) This course provides an introduction to computer hardware, software and networks used by medical equipment with an in-depth background of PC and medical equipment hardware and networking fundamentals. The topics covered include: Microsoft Office review and advanced applications; personal computer (PC) hardware fundamentals; formatting and sectoring hard drives; installing various Windows operating systems and other required software/drivers; networking hardware component fundamentals; administrator networking software settings and configurations; fundamentals of health level 7 (HL7) standards; fundamentals of digital imaging and communication in medicine (DICOM) standards; operation of DICOM viewer software for medical images; fundamentals of picture archive and communications systems (PACS) configurations for medical applications; fundamentals of The Health Insurance Portability and Accountability Act of 1996 (HIPAA) Privacy and Security Rules in regards to medical equipment maintenance; creation of a simple PC network with several PCs and basic networking hardware.
Biorenewable Systems (BRS)

BRS 221: Engineering Principles of Biorenewable Systems

3 Credits

Application of engineering principles critical to agricultural and biorenewable systems. BRS 221 Engineering Principles of Biorenewable Systems (3) This course provides an overview of engineering principles to students in non-engineering majors, but who are likely to encounter challenges that require quantitative solutions. Problem solving skills are extremely important to technology. At the end of the course, students will be able to: solve problems related to biorenewable systems using a structured, logical method combining concepts from physics and math; recognize and apply unit factoring and dimensional analysis to problem solving; quantify physical relationships and apply engineering principles to evaluate basic engineering technology problems involving electrical systems, structural members, fluid mechanics, heat transfer, and psychrometrics. Hands-on examples are used throughout the course to tie the course material to applications in agricultural and biorenewable industries. Examples include residential wiring; sizing structural members made of wood, steel, and other materials; non-moving and flowing fluids in bioproduct and agricultural processing; heat transfer through wall, windows, and other materials likely to be found in construction and processing facilities; psychrometrics in environmental growth and drying facilities. This course provides the groundwork for topics explored in more detail later in the BioRenewable Systems curriculum.

Prerequisite: MATH 110 or MATH 140; PHYS 250 or PHYS 211

BRS 300: Introduction to Biorenewable Products

3 Credits

Overview of bioproducts and their related industry sectors, including forest products, biocomposites, biofuels, bioenergy, bio-based adhesives, biochemicals, and bioplastics. BRS 300 Introduction to Biorenewable Products (3) This course provides an overview of the nature and utilization of bioproducts, which are defined as products created from biologically derived, renewable industrial feedstocks. These materials are renewable and can be sustainably produced; as such, they will be increasingly utilized as society recognizes the opportunity cost of mining and using other non-renewable industrial feedstocks. The class focuses on overviewing the relevant industry sectors.

Prerequisite: CHEM 110; Concurrent: CHEM 110

BRS 391: Contextual Integration of Communication Skills for the Technical Workplace

2 Credits

To develop corporate communication skills in technically focused students in a contextual manner. A S M (A B E) 391 Contextual Integration of Communication Skills for the Technical Workplace (2) A B E/A S M 391 is the first half of a two-semester capstone experience in corporate focused leadership and communication skills training. The sequence is formatted into two 2-credit courses (second semester Junior for A B E/A S M 391 and first semester senior for the companion A B E/A S M 392 course). A key facet of this training is the contextual approach taken. All course modules are focused around the needs of industry and corresponding technical course content mdash; a complete contextual approach. To meet the needs of the student, the course will reflect clear
understanding of leadership and communication but also appreciate critical aspects of the technical content of students’ work and of the industries within which the students will ultimately work. The primary focus for 391 is communication skills (oral and written) with a secondary focus on leadership and career skills. The course provides the student with interaction with individuals from industry (company visitors, industry trips, and recruiting opportunities). Students will be evaluated through writing and speaking projects, professional presentations, written worksheets in class and out, creation of portfolios and reports, class group and individual exercises, computer graphics presentation assignments, library assignments, interaction with industry executives (reports), and leadership journals.

**Prerequisite:** Junior level standing in B E or BRS

Cross-listed with: BE 391

General Education: Writing/Speaking (GWS)

BRS 392: Contextual Integration of Leadership Skills for the Technical Workplace

2 Credits

B E/BRS 392 is the second half of a two-semester experience in corporate-focused leadership and communication skills training. The sequence is formatted into two 2-credit courses (second semester junior for B E/BRS 391 and first semester senior for the B E/BRS 392 course). A key facet of this training is the contextual approach taken. All course modules focus on leadership and communication needs of industry within its corresponding technical content thereby representing a complete contextual approach. To meet the needs of the student, the course will reflect clear understanding of leadership and communication but also appreciate critical aspects of the technical content of student’s work and of the industries within which the students will ultimately work. The primary focus of B E/BRS 392 is on leadership, with communication, ethics, sustainability and career issues the secondary focus. The course provides students with interactions with individuals from industry (company visitors, industry trips, and recruiting opportunities). Topics developed for B E/BRS 392 include personal development, ethical decision-making, corporate social responsibility, strategic group management, facilitation, and diversity. Students may be evaluated through writing and speaking projects, professional presentations, written worksheets in class and out, creation of portfolios and reports, in-class group and individual exercises, interaction with industry executives (reports), and leadership journals.

**Prerequisite:** BRS 391, junior level standing in B E or BRS

Cross-listed with: BE 392

General Education: Writing/Speaking (GWS)

BRS 393: Industry Tour

1-2 Credits/Maximum of 2

A week-long tour of bioproducts and agricultural systems industries. BRS 393 Bioresources Industry Tour (1) This is a week long course, in which students will travel to tour relevant manufacturing facilities. Roughly half of the time (2.5 days) will be dedicated to the bioproducts industry, and the remaining time will be focused on agricultural systems. Bioproducts and agricultural systems are the two key components of the BioRenewable Systems major.

**Prerequisite:** Junior standing in BRS or B E

BRS 402: Foundations of Sustainable Business

3 Credits

Emphasis on understanding business strategies for enhancing sustainable operations, including issues related to the natural environment and corporate social responsibility. ERM 402 / BRS 402 Foundations of Sustainable Business (3) This course will provide students with an understanding of how environmental and sustainability issues are impacting business strategies and ultimately profits. We will also examine the external stakeholders, such as environmental groups, policy-makers, and "green" consumers, that impact business management. Business students will benefit by a better understanding of environmental/sustainability issues that impact their operations and strategies. Non-business students will benefit by understanding how business decisions can impact the natural environment. An emphasis will be on a thorough understanding of making a business case for sustainability. We will also discuss the triple bottom line and its use. Some Specific Issues to Cover: 1. How are organizations shifting business models to work with sustainability trends? 2. How can we make a business case (justification) for being "green"? 3. Can firms differentiate themselves by being responsible/sustainable? Do consumers and other stakeholders care? 4. Thorough understanding of stakeholders and how they impact operations. 5. How can the "business" side of the world work with the "environmental" side? 6. Use of packaging as an example of where parts of the supply chain are working together to be more sustainable. 7. How "waste" in its many forms can be seen as a surrogate for unsustainable practices. 8. Pros and cons of metrics used to measure sustainability. 9. Impacts of business operations on the environment.

**Prerequisite:** AG BM 101 or ECON 102 or ECON 104 and 7th semester standing

Cross-listed with: ERM 402

BRS 411: Biobased Fiber Science

4 Credits

Theoretical and practical aspects of structure-property relationships for biobased industrial fibers, including fiber biological and chemical constitution and fiber-water relationships. BRS 411 Biobased Fiber Science (4) This course investigates fundamental aspects of biobased industrial fibers (also known as biofibers), and ties their underlying biological and chemical structure to macroscale properties. Bioproducts are defined as products created from biologically derived, renewable industrial feedstocks (wood, cotton, grasses, and bast fibers including jute, hemp, kenaf, etc.). The course begins with a look at the worldwide production of biofibers, and considers implications relating to sustainability. Elements of underlying biological and chemical structure are then investigated, including an introduction to relevant aspects of polymer science. The interaction of biofibers with water is a practical issue that bears great significance; this is the focus of the last third of the course. Students will learn principles of psychrometrics (water-temperature-environment relationships) including measurement of relative humidity and fiber moisture content. Final course subjects include industrial techniques for drying fibers, energy implications of these processes, and troubleshooting of biofiber industry issues relating to moisture.

**Prerequisite:** CHEM 110 , BRS 300
BRS 417: Processing and Manufacturing Systems for Bioproducts

4 Credits

Description of systems and processes used in the manufacture of bioproducts. This course reviews major bioproducts and details how they are manufactured industrially. The focus of the course is wood processing, since wood is by far the leading source of industrially manufactured bioproducts at this time. Beginning at log grading, wood processing is covered in detail with respect to major industrial and commercial practices. Primary wood processing is covered, which details how logs are converted to cants, boards etc., including time dedicated to the function of required manufacturing machinery. The grading of lumber is considered. The manufacturing of common solid wood products is described, as well as how the raw materials of wood are produced and subsequently converted into valued-added bioproducts including those made from veneer, chips, strands, other refined particles and lignocellulosic fibers. Adhesive formulations as binder systems and composites are covered, including those made from other bioproducts.

Prerequisite: W P 200W, W P 203, and sixth-semester standing

BRS 422: Energy Analysis in Biorenewable Systems

3 Credits

Energy management, energy conversions, renewable energy alternatives, engineering economic analyses, national and international perspectives on energy resources. BRS 422 Energy Analysis in Biorenewable Systems (3) This course focuses upon first understanding the various forms of energy in common use today and then analyzing the energy equivalents of various forms of energy. Forms of energy to be studied most extensively include electricity, fossil fuels, and renewable energy sources. Principles and applications of engineering economic analyses will be emphasized because these principles are needed to evaluate the feasibility of converting from one energy form to another. Specific application areas of emphasis include buildings, motors, and lights. For each application area, there will be discussion of the alternatives available for using energy in a more efficient and economical manner. The infrastructure systems needed for providing electricity and natural gas to a specific location will be described as well as typical rate structures for the energy provided. Alternatives to the conventional energy systems will be identified and the course will conclude with discussion of energy strategies throughout the 21st century. Local, national, and international perspectives on energy resources will be infused throughout this course.

Prerequisite: BRS 221

BRS 423: Deterioration and Protection of Bioproducts

3 Credits

Timber, wood, and bioproduct deterioration from fungi, insects, fire; treatment of bioproducts for in-service protection.

Prerequisite: BRS 300; Concurrent: BRS 411

BRS 426: Safety and Health in Agriculture and Biorenewable Industries

3 Credits

Managing occupational safety and health in production agriculture, bioproducts and related operations. BRS 426 Safety and Health in Agricultural and Biorenewable Industries (3) BRS 426 explores management aspects of occupational safety and health specifically as it pertains to both the agricultural and biorenewable systems industry sectors. Employers are increasingly demanding students have training in safety and health. Topics to be covered include principles of safety and health, hazard analysis, hazard prevention and control, human behavior and safety, training and education, safety and health regulations, agricultural emergencies and developing a written safety program.

Prerequisite: 5th semester standing

BRS 428: Electric Power and Instrumentation

3 Credits

Principles and application of electric circuits for power distribution, motors, automatic controls, and instrumentation used in agricultural and biorenewable industries. BRS 428 Electric Power and Instrumentation (3) Nearly every facet of our modern society relies on electricity and electronics. Whether engaged in product development, manufacturing, production, testing, or management, graduates of technical programs benefit from a fundamental understanding of electrical/electronic systems. This course prepares students to analyze electrical/electronic systems applicable to agricultural and biorenewable industries. Upon completion of this course, the student will be able to: demonstrate correct use of common electronic measurement tools including multimeters, oscilloscopes and others; demonstrate sound electrical construction techniques including cable preparation, soldering, circuit board construction, and others; demonstrate sound troubleshooting skills for electrical and electronic systems; understand common elements of power distribution systems; understand simple measurement and control circuits represented by schematics or ladder diagrams; understand and apply various sensors to measure temperature, pressure, strain, force, proximity, speed etc.; understand the application of dataloggers, programmable logic controllers, and computer software to collect data and/or control simple processes; understand the function of common circuit components such as resistors, capacitors, inductors, diodes, op-amps, transistors, and transformers in simple circuits; understand basic maintenance and safety requirements for facility electrical systems.

Prerequisite: BRS 221

BRS 429W: Biorenewable Systems Analysis and Management

3 Credits

BRS 429W is a capstone course for the BioRenewable Systems major. The course covers systems analysis and optimization techniques including an introduction to systems theory, qualitative and quantitative analysis, linear programming, waiting line models, PERT/CPM, minimal spanning tree, calculus methods, simulation modeling for decision making, inventory, and energy audits. All topics are presented in the form of case studies that require the students to solve problems in realistic production and processing scenarios. The course also provides a writing-intensive structure. The course targets BRS students in their last semester because it integrates knowledge and experiences acquired in prior BRS, business, and agricultural science courses.

Prerequisite: BRS 422

Writing Across the Curriculum

BRS 437: Bioproduct Marketing and Sales

4 Credits

Business-to-business bioproduct sales and marketing fundamentals and market overview of key forest industry sectors including biorefinery value chain outputs. BRS 437 Bioproduct Marketing and Sales (4)
This course covers business-to-business (B2B) bioproduct marketing fundamentals and a market overview of key forest industry sectors (solid wood, composite panels, and engineered wood products) including biorefinery value chain outputs (environmental services, energy, fuels, and co-products) and personal selling of bioproducts. Students will apply B2B market principles and concepts toward an understanding of bioproducts industries and markets. Personal selling techniques will be developed and applied to enhance understanding of the industrial sales function within bioproduct firms. Marketing research for decision-makers will be examined.

**Prerequisite:** BRS 300, AG BM101 or ECON 102

BRS 490: BioRenewable Systems Colloquium

1-2 Credits/Maximum of 2

Presentations and discussions of solutions to problems within the biorenewable systems industries.

**Prerequisite:** BRS 300, Prerequisite or concurrent A S M 391

BRS 494: Undergraduate Research

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small group basis.

BRS 494H: Honors Thesis

1-6 Credits/Maximum of 6

Independent study directed by a faculty supervisor that culminates in the production of a BioRenewable Systems honors thesis.

**Prerequisite:** junior or senior standing in the Schreyer Honors College and permission of a BioRenewable Systems honors advisor Honors

BRS 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

BRS 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

BRS 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

---

**Biotechnology (BIOTC)**

BIOTC 416: Microbial Biotechnology

2 Credits

Fundamentals of applied biotechnology; the use of microorganisms in the synthesis of biologically-important and industrially-useful products.

**Prerequisite:** MICRB201, MICRB202, B M B442

Cross-listed with: MICRB 416

BIOTC 459: Plant Tissue Culture and Biotechnology

3 Credits

Principles and techniques for the in vitro culture, propagation, and genetic manipulations of plant cells.

**Prerequisite:** BIOL 230W, or B M B251, B M B252

Cross-listed with: BIOL 459, HORT 459

BIOTC 460: Advances and Applications of Plant Biotechnology

3 Credits

This course provides a comprehensive overview and current status of plant biotech research. The course provides knowledge of plant systems that fall in the category of GMOs. BIOTC 460 / AGRO 460 Advances and Applications of Plant Biotechnology (3)This course will provide a comprehensive overview and status of current plant biotech research. The focus is on providing knowledge of the biology of plant systems. Consequences of development of a transgenic plant either for food (crops) or as a tool to understand molecular, genetic, and inheritance mechanisms of a trait will be discussed in detail. The course will deliver the current literature and understanding of mechanisms involved in herbicide resistance in transgenic plants. Specific topics that will be of interest to students from various disciplines include disease and insect resistance, quality traits, and secondary metabolites. Molecular biology of different pollination systems will be examined so that students will understand the concept of gene flow from transgenic to non-transgenic crops. Examples from recent developments on the beneficial use of transgenic plants as producers of modified compounds, starches, antibodies and their use in phytoremediation of toxic and organic pollutants will be discussed from the perspective of genetic and molecular plant systems. Gene expression of transgenic plant traits and the stability of an engineered crop will be discussed. Specific emphasis will be on different modes of inheritance that a transgenic plant can follow after its development and release into the environment. The course also prepares students for understanding the regulatory processes that are required for testing, moving, and environment release of transgenic crops. The laboratory component of the course will introduce students to the common techniques of molecular biology that are used to detect expression in transgenic plants. Transgenic maize plants will be grown in a greenhouse and analyzed for expression of introduced genes.

**Prerequisite:** BIOL 230W, B M B251, or equivalent

Cross-listed with: AGRO 460

BIOTC 479: Methods in Biofermentations

3 Credits

Bioprocessing principles and development; uses and operation of biofermentors; determination of biomass; problems of scale-up.
Prerequisite: MICRB201, MICRB202; BMB251, BMB252, BMB442

BIOTC 489: Animal Cell Culture Methods
3 Credits
An overview of animal cell culture methodology and its practical application in bioprocess technology.
Prerequisite: MICRB201, MICRB202; BIOL 230W or BMB251

Business Administration (BA)

BA 100: Introduction to Business
3 Credits
A comprehensive view of the contemporary environment of business. B A 100 Introduction to Business (3) (GS) This course provides a broad overview of the study of business and its environment, organization, operation, and interrelationships with government and society. Topic areas include: economic systems, forms of business ownership, information, accounting, finance, management, and marketing principles, legal and regulatory environments, business ethics and international business. A student majoring in business will develop a broad basis for further study in a specific area in business, while other majors will become familiar with the American enterprise system and the functions and issues facing business today.

General Education: Social and Behavioral Scien (GS)

BA 100S: Introduction to Business
3 Credits
A comprehensive view of the contemporary environment of business.
First-Year Seminar
General Education: Social and Behavioral Scien (GS)

BA 195: Cooperative Practicum with Business Offices
3-6 Credits/Maximum of 6
Cooperative practical work with business offices under the supervision of the instructor.

BA 197: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

BA 199: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.
International Cultures (IL)

BA 241: Legal Environment of Business
2 Credits/Maximum of 2
Examines the legal system's role and impact regarding business transactions, liability issues, and ownership of intellectual property. Students earning credit for B A 241 may not earn credit toward Smeal College baccalaureate degree for B Law 243 and/or B A 243. B A 241B A 241 Legal Environment of Business (2) As an integral part of planning and management responsibilities, a business decision-maker must be able to identify risks and opportunities from many sources. The legal environment represents a significant segment of the decision-maker's landscape. This survey course is designed to develop the student's awareness and recognition skills with respect to the major inputs in the increasingly complex commercial legal environment. Students in this course will examine the design and function of the U.S. legal system in its roles as protector of property interests and facilitator of business transactions. Alternatives to judicial resolution and enforcement will also be examined. In addition, students will learn about the legal issues affecting the formation and enforcement of business agreements. This will include studying the impact of our economy's continued shift to digital technology for communication and documentation. Finally, tort liability and intellectual property issues from a business perspective will be examined with a special emphasis upon issues created by the Internet's rapid growth. Students earning credit for B A 241 may not earn credit toward a Smeal College baccalaureate degree for B LAW 243 and/or B A 243.

BA 242: Social and Ethical Environment of Business
2 Credits
Explores the social and ethical environment of business and ethical decision making in a business context. B A 242 Social and Ethical Environment of Business (2) Modern businesses operate in an increasingly interdependent environment. The actions of businesses have major impacts on society. Conversely, society influences a wide range of corporate actions through laws and regulations as well as via public opinion and the media. With changes in information technology, corporate decisions that were once considered private are now subject to public scrutiny. Therefore, more than ever, these decisions must take into account the larger social environment. In this course, students will learn about a broad range of stakeholders and societal issues that affect corporate decision-making and they will consider the corporation's responsibility to society. They will also learn to apply ethical decision-making frameworks to a variety of ethical decisions faced by corporate managers. This course is taught in the sophomore year and therefore lays a broad foundation for other core business courses. For example, other courses tend to focus on a single stakeholder group such as customers (marketing), employees (management), or stockholders (finance). This course teaches students to think broadly about how a business fits into a more complex web of relationships within society.

BA 242H: Social and Ethical Environment of Business
2 Credits
Explores the social and ethical environment of business and ethical decision making in a business context.
BA 243: Social, Legal, and Ethical Environment of Business
4 Credits
Explores the ethical, political, social, legal and regulatory, technological, and demographic diversity environment of business. A student may not receive credit toward graduation for both B LAW 243 and B A 243.

BA 250: Small Business Management
3 Credits
Analysis of problems of the small firm, particularly for the student who wishes to venture into business.

**Prerequisite:** 3 credits in economics

BA 250H: Problems of Small Business
3 Credits
Analysis of problems of the small firm, particularly for the student who wishes to venture into business.

Honors

BA 296: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

BA 297: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**BA 297C: **SPECIAL TOPICS**
1 Credits/Maximum of 9

**BA 297F: **SPECIAL TOPICS**
1 Credits/Maximum of 9

**BA 297H: **SPECIAL TOPICS**
1-9 Credits/Maximum of 9

Honors

BA 299: Foreign Studies
1-12 Credits
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

BA 301: Finance
3 Credits
An overview of finance for non-business majors. Topics include financial markets and institutions, investments, and financial decision making in organizations. B A 301 Finance (3) The goal of BA 301 is to provide insight into the thinking of both the financial manager and the functional manager that is needed to effectively lead and manage not only their business organization but also their personal financial lives. The course will enable the student to learn the key financial concepts, constructs, and models that are used by financial managers every day around the world. Understanding of the mathematics of finance, the use of financial calculators, and development of Excel financial model problem solving will be emphasized. Ethical financial decision-making will be a common theme that is integrated throughout the course. Using a survey overview approach, the first five weeks of the course will cover concepts such as financial statements and analysis, financial ratios and analysis, long-term financial planning and budgeting, time value of money, discounted cash flow analysis, capital budgeting, break-even analysis, and systematic/unsystematic risk. The next five weeks will provide an overview of financial topics that are normally covered in detail in financial markets courses. These topics include financial systems, money markets, the Federal Reserve and monetary policy, derivatives and speculative markets, and legal and operational issues in financial markets. The final five weeks will cover general personal finance topics of interest such as money management strategies, insurance and risk management, consumer credit, tax strategies, investing in stocks, bonds, and Exchange-Traded Funds, and retirement and estate planning. A student may not receive credit toward graduation for both B A 301 and FIN 100, or for both B A 301 and FIN 301.

**Prerequisite:** ECON 102

BA 301H: Finance and Financial Services
3 Credits
Overview of financial manager’s role within the organization; investment, financing, and restructuring activities.

Honors

BA 302: Supply Chains
3 Credits
An overview of supply chain management for non-business majors focusing on the strategic importance of source, make and deliver processes. B A 302 Supply Chains (3) The purpose of BA 302 is to provide non-business students with an introduction to the issues and decisions routinely faced by supply chain managers and the impact of effective supply chains on today’s business environment. Using the Supply Chain Operations Reference model as a framework, this course considers how successful firms plan, integrate and execute sourcing, manufacturing, customer fulfillment, reverse logistics and sustainment processes across a complex marketplace to provide value to the customer. The course will look at the interplay and coordination of product, financial and information flows through a supply chain resulting in value creation for the customer and competitive advantage for the firm. Students will consider the roles of drivers such as cost, quality, time, flexibility, innovation and information sharing in designing supply chain strategies in support of overarching business strategies. Through detailed exploration of models, case studies and real world events, coupled with the application of operation management tools and techniques, the course provides the opportunity to identify and dissect issues, and develop solutions to supply chain challenges not only faced by today’s business managers, but also impact the customer. The course will examine supply chain organization, implementation and management planning, the evaluation and control of manufacturing processes, and the execution of supplier and customer management activities. Students will use basic information technologies and programs…
to leverage tools like business process mapping, value indexing, and total cost analysis to aid in the identification and mitigation of supply chain issues in a global business environment. Students will also be exposed to current supply chain issues such as sustainability and the impact of boundary-spanning information technologies as relevant keys to competitive advantage. The course provides the basic supply chain knowledge and skills necessary for the non-business major to be an effective member of a cross functional team in a professional business environment while providing a level of understanding to benefit the student in navigating the complex customer fulfillment issues present as a consumer of goods and services in today’s globally connected marketplace. A student may not receive credit towards graduation for both B A 302 and and SCM 301.

Prerequisite: ACCTG211 ; ECON 102 ; 3 credits of 200-level statistics

BA 303: Marketing

3 Credits

An overview of marketing for non-business majors. Topics include customer behavior, service/product development, pricing, and promotion in diverse markets. BA 303 Marketing (3) The goal of BA 303 is to provide broad-based exposure and understanding of marketing and its processes. The course is meant to be a “stand alone” marketing course for those interested in the role of marketing within the business context and will cover a range of topics from the basic (what is marketing) to the processes (market segmentation, marketing strategy, development of product, price, place and promotion) to the broader societal questions (why marketing exists, ethics, the future of marketing). There will also be an opportunity to examine marketing from the perspective of various industries for non-business students. Exams will test factual knowledge of marketing and the marketing process. Written homework assignments will ask students to work both individually and in teams to apply course concepts. These may include assignments developing one’s skill set in consumer psychology, target market selection, writing a positioning statement, developing a marketing plan, new product development concepts, promotional campaign ideas, and ethical questions to discuss and debate. Students may also be asked to form small groups for discussion and/or make presentations to the class based on set marketing topics specific to one’s area of interest. Students will also be expected to participate in class discussions. A student may not receive credit towards graduation for both B A 303 and MKTG 221 or MKTG 221W. Furthermore, a student may not receive credit towards graduation for both B A 303 and MKTG 301 or MKTG 301W.

Prerequisite: ECON 102

BA 303H: Honors Core Marketing

2 Credits

Junior Core Marketing - Honors Section. B A 303H Honors Core Marketing (2)This course is an exploration of fundamental concepts and issues in marketing. In this course, we will discuss what marketing is and learn to analyze the marketing environment and our potential customers. Based on these insights, we will then discuss strategy alternatives and the key functions of marketing. A project is a major component of the course. <p>

Honors

BA 304: Management and Organization

3 Credits

This course provides an overview of management for students not enrolling in a Penn State business program. Topics include differences in organizations, decision making, motivation, team effectiveness, corporate strategy and competitor analysis, and implementation in a global context. B A 304 Management and Organization (3) This course is an introduction to management focusing on concepts that will help students understand the behavior of employees, teams, and organizations, and apply these concepts to their own careers. The course will initially use basic social science principles to examine how managers can motivate and coordinate activities among individuals and teams within an organization, using principles of personality, ability, values, attitudes, motivation, power, persuasion, leadership, team dynamics, and organizational culture and structure. Then, the course will shift to how whole organizations interact with their external environments. Students will learn to assess company, competitor and industry performance and use this analysis to set goals, plan firm strategies, and implement them. B A 304 is an introduction and overview course that a body of knowledge that exists concerning the management of modern organizations. Management is critical to business success no matter the industry, the field or the arena. Seven key functions for any manager will be covered – organizational structure, operations, staffing, recruitment, leadership, culture (including ethics) and planning. One key take away for B A 304 is the difference between leadership and management. What do these words mean to you? In recent years we have focused on leadership as the preferred ability to strive for with management skill losing favor. In general it has been said that leaders focus on “doing the right things” and managers focus on “doing things right”. This will be a theme for review and discussion throughout the course as each subject area is covered. A student may not receive credit towards graduation for both B A 304 and MGMT 100 or MGMT 100W. Furthermore, a student may not receive credit towards graduation for both B A 304 and MGMT 301 or MGMT 301W.

Prerequisite: ECON 102

BA 304H: Honors Core Management

2 Credits

Junior Core Business Management - Honors Section. B A 304H Honors Core Management (2) The course will familiarize the student with basic concepts, theories and approaches that can lead to a more nuanced understanding of management practices. A learning objective is to experience and to relate the concepts in a “real” world context. The experiential exercises, video discussions and supplementary readings will help students accomplish this objective. Another objective is to synthesize and integrate seemingly unrelated management topics. Case discussions are particularly useful in accomplishing this type of learning. An additional type of learning is critical inquiry where students feel empowered to create and critique thought. The group project is aimed at accomplishing this type of learning. There are several other skills required to become effective managers. Foremost among them are communication and inter-personal skills. The assignments and the course teaching style will make students aware of the importance of developing these skills. Students are required to read assigned articles and/or cases for each class. They are asked to summarize the main themes underlying the readings and keep journals on what they have learned as well as what they would like to learn. Students in teams are also asked to choose a topic for research and presentation. Possible research topics are: *Structure: Networks, virtual teams *
Skills: Skill obsolescence, recruiting for talent, employee churning
*Style: Transformation leadership
*Staff: Stock options, altruistic reasons for contribution
*System: Six-sigma, management information system
* Super-ordinate goals: Ethics and aesthetics, social responsibility
*Strategy: Stakeholder wealth maximization, triple bottom line. Group projects will also be required. Topics will be approved based on proposals submitted early in the semester. Examples of projects are:
  1. Understanding the functioning of organizations (e.g., Fraternities, McDonalds, student organizations) by observing/interviewing people to identify interesting facets about how organizations work and don’t work.
  2. Tracking the genesis of breakthroughs in organizations.
  3. Desktop research on emerging organizational forms.
  4. Designing and administering a team-building exercise to sensitize a group of freshmen on the virtues and challenges of work-force diversity.
  5. Mapping the informal and formal organizational dynamics using "Organigraphs".
  6. Interviewing faculty to identify emerging issues on management.
Projects will require a written report, oral presentation, and classroom discussion. The purpose of oral presentations is to give students a "feel" for what will be expected of them, as managers, in the real world. Students will be required to present their group papers as they would in a business environment. Appropriate visuals, etc. should be used, and the presentations should be polished and professional.

**Prerequisite:** ACCTG211, B A 243 or B A 241, B A 242, ECON 102, ECON 104, ENGL 015, MATH 110 or MATH 140, MIS 204, SCM 200 or STAT 200

**BA 321: Contemporary Skills for Business Professionals**

3 Credits

Emphasizes the development of individual, group, critical thinking, and presentation skills, through the application of modern method and business technology. B A 321 B A 321 Contemporary Skills for Business Professionals (3) This course is designed to provide fundamental skills necessary for success in the business environment. BA 321 is one of a series of courses that collectively develop the skills and competencies required of a successful business administration student. As a foundational course in the degree program BA 321 emphasizes the following:

- An introduction to student-centered learning, especially with opportunities for active and collaborative learning utilizing state of the art elements of technological business environment.
- An introduction to inquiry-based processes necessary for understanding and addressing issues and opportunities in current and emerging business environment relevant subsequent course work in the student’s chosen option and professional practice.
- Development of basic communications skills, including oral, written, and multimedia, relevant to individual and group effectiveness.
- Team building and participation while completing projects that focus on understanding individual and cultural diversity and respecting the views of others. Additionally, students develop an understanding of and competence in the multiple roles that define successful teamwork.
- Establishing and respecting the roles within a team.
- Awareness of the importance of the needs and opportunities of the community with which the individual contributes as a business professional.
- Application of the hardware and software skills necessary for transferring knowledge of business topics in both face-to-face and virtual settings academic and professional.

**Prerequisite:** ACCTG211; ECON 102 or ECON 104; ENGL 015; Concurrent: SCM 200 or STAT 200, MIS 204

**BA 322: Negotiation Skills for Business Professionals**

3 Credits

Emphasizes the preparation and conduct of business negotiations in a range of situations. B A 322 Negotiation Skills for Business Professionals (3) This course integrates the experiential and intellectual components of negotiation. Course instruction and learning activities emphasize the preparation for and conduct of business negotiations in a range of situations. These situations include integrative and distributive scenarios, development of negotiation relationships, and negotiation in multi-organization, multi-industry, multi-cultural, and multinational environments. Basic negotiation theories will be addressed and applied through the recognition and the resolution of conflict by applying various bargaining strategies. Students will learn how to prepare for a negotiation event. Students will learn to select the appropriate negotiation strategies in order to match the needs of the situation. Students will develop the negotiation skills needed to meet the challenges facing today’s executives. Students will develop the sophistication to analyze bargaining and conflict relationships, and an awareness of their individual bargaining style. Students will apply various techniques in order to: understand the basic elements of negotiation; make informed decisions about continuing a negotiation or walking away; participate or lead in team-based negotiations; and effectively manage international negotiations. A primary component of this course is application of negotiation theories through exercises in which the student assumes various roles within a negotiation scenario. Through practice and role playing, students will develop effective personal and professional negotiation skills.

**Prerequisite:** ACCTG211; ECON 102 or ECON 104; ENGL 015; Concurrent: SCM 200 or ECON 104

**BA 322H: Individual and Interpersonal Effectiveness for the Business Professional**

1-3 Credits/Maximum of 3

Effectiveness of the business professional in team settings, especially the capacity to execute both technologically and cooperatively through group exercises.

**Prerequisite:** ACCTG211; ECON 102 or ECON 104; ENGL 015; Concurrent: SCM 200 or STAT 200, MIS 204

**BA 322H: Individual and Interpersonal Effectiveness for the Business Professional**

1-3 Credits/Maximum of 3

Effectiveness of the business professional in team settings, especially the capacity to execute both technologically and cooperatively through group exercises.

**Honors**

**BA 342: Socially Responsible, Sustainable and Ethical Business Practice**

3 Credits

Course examines actions taken by corporations that impact global citizenship, environmental sustainability, and the economic stability of international societies. It further looks at relationships, rights, and responsibilities between businesses, business decision-makers and their stakeholders. B A 342 Socially Responsible, Sustainable and Ethical Business Practice (3) Businesses and other large organizations have come to influence nearly all aspects of life in contemporary industrialized societies. The actions taken by businesspeople have major impacts on individuals and on society as a whole. Conversely, the expectations of citizens and their representative bodies (e.g., governments, communities, unions, interest groups) influence a wide range of corporate actions. Students of B A 342 will examine these relationships, rights, and responsibilities between businesses, business decision-makers and their stakeholders. As students enter their field of study, this course will introduced them to current ethical, social responsibility and sustainability issues that face business practitioners within their field and across
related disciplines. Each business function—accounting, finance, marketing, risk, supply chain, human resource policies, etc.—has relationships and responsibilities within the larger social environment. This course considers commonalities across the business functions and teaches students to think broadly about how a business fits into a more complex web of relationships within society. The course begins with an overview of the corporation's place and role in society as well as key concepts in understanding why knowledge related to corporate governance, ethics, sustainability and social responsibility issues is critical to professional managers' responsibility and long-term career success. The stakeholder model is reviewed along with the study and application of ethical decision-making frameworks to current ethical dilemmas. Sustainability and global responsibility are introduced within the context of government regulation versus responsible stewardship. The closing section of the course provides thought and discussion on issues facing business practitioners across key business functions.

**Prerequisite:** MGMT 301, MGMT 301W, or B A 304; Prerequisite or concurrent: FIN 301 or B A 301; MKTG 301 or B A 303, SCM 301 or B A 302.

BA 364: International Business and Society

3 Credits

Business organizations and the sociocultural environment; current issues; corporate responsibility; international and multinational business environments. B A 364Y/B A 364Y International Business and Society (3) (US;IL) This writing-intensive course will provide an overview of the relationship between business organizations and the sociocultural environment. Current issues in the media and the scholarly literature will be used to discuss and analyze this relationship. Special attention will be given to the topics of business and government relationships, corporate responsibility, environmental issues, and topics related to international and multinational business environments.

**Prerequisite:** ENGL 202D, MGMT 301

International Cultures (IL)

United States Cultures (US)

Writing Across the Curriculum

BA 395: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

**Prerequisite:** prior approval of proposed assignment by instructor

BA 395A: Practicum in Business Administration

1 Credits/Maximum of 1

Professional and guided work experience in business administration with private or public organizations. May be taken only as an elective.

**Prerequisite:** fifth-semester standing

Full-Time Equivalent Course

BA 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

BA 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

BA 411: Analyzing Business and Industry

3 Credits

Prepares students to obtain an enterprise-wide view of business and industry by integrating operational and financial decisions in a team and learning environment. B A 411B A 411 Analyzing Business and Industry (3) The course provides the students with a methodology for analyzing the business, introduces the students to sources of financial information available from private and public sources and trains the student to prepare and professionally present business analysis reports. The course, which adopts a user perspective, extends the students' basic knowledge of financial reporting and provides them with a broader context for understanding businesses that includes economic and social forces, the regulatory environment of businesses and their financial reporting, capital market operations and corporate governance. It applies concepts and decision tools that are studied throughout the curriculum such as present value, financial ratio analysis, break-even point analysis and statistical analysis.

**Prerequisite:** ACCTG211, B A 301 or FIN 301; B A 302 or SCM 301; B A 303 or MKTG 301; B A 304 or MGMT 301

BA 412: Honors Integration and Research

2-3 Credits

The integration of the business core into a detailed financial, strategy and market analysis of actual companies selected by student teams. BA 412H Honors Integration and Research (2-3 credits) The purpose of this course is to assist students in developing their Schreyer Honors Thesis. It proceeds by exposing students to research conducted within the various business majors; the research conducted by prior honors students; and having student teams conduct research or contemporary businesses and industries. Typical readings include materials related to evaluating an actual company, prior Schreyer Honors theses, contemporary business articles, prior course projects and supporting academic literature. Written company analyses and oral presentations are made by the teams.

**Prerequisite:** ACCTG211, FIN 301 or B A 301, SCM 301 or B A 302, MKTG 301 or B A 303, MGMT 301 or B A 304

Honors

BA 420: Preparation for Career Management

1 Credits

This course emphasizes effective career planning by closely examining oneself, the business world, communication styles and strategies. B A 420 Preparation for Career Management (1) BA 420 develops students' career preparation and management skills through
the close examination of self, the world of work and communication styles and strategies. This course is one of a series in the program which collectively develop the skills and competencies necessary for the business administration student. The course is designed on the belief that (1) career decision-making is greatly enhanced by considering personal traits such as oner’s interests, values, goals, and approach to making decisions; and (2) through the exploration of self and world through out-of-classroom learning experiences. The student becomes empowered to apply prior classroom learning outside of the academic environment. These skills are utilized throughout a person’s career. Students who successfully complete the course will be able to: 1. Prepare resumes targeted to a range of industries and positions. 2. Write effectively to prospective employers. 3. Identify personal traits and qualities in the context of career management. 4. Demonstrate effective interview techniques.

**Prerequisite:** B A 321 or B A 322

BA 421: Project Management

3 Credits

Introduction to Project Management covering all phases of a project including proposal development, planning, execution, and closing. BA 421 Project Management (3) BA 421 is designed to provide the fundamental skills necessary for success in the business environment. BA 421 is one of a series of courses that collectively develop the the skills and competencies necessary for business administration students. BA 421 is designed to provide students with the fundamental understanding of the Project Management Book of Knowledge that defines the standards of the Project Management Institute (PMI) which is the professional credentialing body of the discipline. This introductory course in project management covers all phases of a project, including: proposal development, planning, execution and closing. The course will also explore the application of the Theory of Constraints to project management, and will use project management software to demonstrate and reinforce class concepts. The software will also be instrumental in the execution of a business project. By the end of the proposed new course, students should be able to: 1. Identify the role of the project manager within organizations and projects. 2. Understand the Processes and Procedures needed to Plan and Control a Project. 3. Recognize the options available as well as the inherent strengths and weaknesses of different approaches. 4. Define the project scope and priorities. 5. Create Work Breakdown Structure (WBS) and integrate it with the organization. 6. Estimate and interpret project times and costs. 7. Construct project networks and find critical paths. 8. Understand and Implement Activity Precedence Logic. 9. Identify, assess and respond to project risks. 10. Schedule project resources and evaluate resource constrained projects. 11. Differentiate between the options to accelerate project completion. 12. Use Microsoft Project Management Software as a skilled tool for Project Management.

**Prerequisite:** B A 321 or B A 322

BA 421W: Strategic Business Planning

3 Credits

Study of strategic planning and implementation in multi-industry, multi-cultural, and multi-national settings with emphasis on sustaining competitive advantages. BA 422W Strategic Business Planning is the capstone of the series of business administration courses in the BSB degree. These courses collectively develop the the skills and competencies necessary for the business administration student. BA 422W is designed for students to examine the discipline of strategic management and to develop an appreciation of the criticality of strategic management in guiding a business entity through a changing and challenging environment. The course requires students to build upon their knowledge of business structure, internal and external environments, and functional design as each relates to strategy development and implementation. Students explore methods and techniques to identify strategies best suited to accomplish an entity’s mission and its business objectives. As a writing intensive (W) course, there is a strong emphasis on development and reinforcement of effective writing skills. Students prepare well reasoned, organized, and constructed bodies of work. Upon successful completion of the course, students will be able to: 1. Identify environmental threats and opportunities impacting a firm. 2. Identify strengths, weaknesses and competencies of a firm. 3. Effectively apply critical thinking skills to design strategic alternatives and then the best Alternative. 4. Critique and evaluate strategic actions taken by firms. 5. Explain the profound effects that a strategic move (either at the corporate level or at the business level) can have on the entire organization. 6. Demonstrate exceptional skills in presenting complex business information and issues. 7. Efficiently research a firm or industry using a variety of sources. 8. Demonstrate proficiency in analyzing business cases and formulating well reasoned recommendations when no “right” answer exists. 9. Demonstrate effective leadership skills in a group environment.

**Prerequisite:** B A 321 ; B A 322 ; B A 421 ; FIN 301 ; MGMT 301 ; MKTG 301 ; SCM 301

Writing Across the Curriculum

BA 441: Strategies for Enterprise Sustainability

3 Credits

An understanding and analysis of how environmental and sustainability issues are impacting business strategies and ultimately profits. B A 441 Strategies for Enterprise Sustainability (3) Enterprise globalization warrants a greater level of awareness and responsibility in seeing that products and services maintain a high level of integrity, quality, and reliability; products need to be produced and moved throughout the supply chain in a manner that does not cause unacceptable environmental or social burdens, but that also allows for acceptable profits. We will examine both external and internal forces, such as environmental groups, policy-makers, and consumers that impact business strategies. This will be put into the context of the Id quo;triple bottom liner quo; with an understanding of its challenges and opportunities. Business students will benefit by a better understanding of environmental/sustainability issues that impact operations and strategies. Students will learn via analyses of cases studies and by working in teams to solve real-world problems faced by chosen organizations. Focus will include all key aspects of an enterprise, from procurement to product development, and from human resources to supply chain solutions.

**Prerequisite:** B A 342

BA 442: Sustainable Behavior of Consumers, Firms, and Societies

3 Credits

Strategies to influence sustainable behavior considering consumer response and marketing communications. B A 442 Sustainability Behavior of Consumers, Firms, and Societies (3) Sustainability is a broad domain concerning the extent to which environmental, economic, and social practices are viable for current and future generations. Consumer
awareness of sustainability issues has evolved from an emerging social movement to mainstream values, but increasing sustainable behavior remains a challenge. This course is designed to provide students with the knowledge to enhance sustainable behaviors in firms, among consumers, and in society at large. In doing so, this course will include frameworks for understanding how to influence sustainable practices, consumer response to sustainability, and marketing communication issues as well as real-world examples of sustainable practices and issues, offering both a theoretical and applied approach. The course may also include a project which will entail student teams working on a real-world sustainable behavior problem in collaboration with a business or segment of the university campus when available or other course project addressing a relevant sustainability issue. Students should leave the course with an understanding of sustainability issues in the current marketplace and the knowledge and ability to influence sustainable behaviors. Students will enter their career with the knowledge and skills to be a sustainable business decision-maker and foster sustainable behavior.

BA 462: Business Strategy
3 Credits
Interpretation of business concept in the analysis of problems related to the successful management of a company, institution, or organization. Business Strategy is the study of managerial decisionmaking in a firm’s competitive space. As such, the course focuses on the formulation and implementation of corporate strategy sets as if the student was on the top management team (TMT) inside a for-profit organization. The course covers topics such as decisionmaking under uncertainty, environmental scanning and sequential updating, industry structure, the firm’s regulatory constraints, relative bargaining power, Porters Five Forces, industry barriers to entry, industry value chain analysis, firm-level resources and capabilities, competitive advantage, corporate-level strategy, business-level strategy, and collaborative strategies such as franchising, licensing and joint ventures. The overarching goal of the strategic manager is to ensure that the firm survives and thrives and, with these goals in mind, Business Strategy addresses the actions and outcomes to corporate decisionmaking. The course has a number of objectives in addition to learning and retaining information on the aforementioned topics. These include (i) obtaining critical thinking skills necessary to function as a strategic manager or to perform the tasks comprising the strategic management process, (ii) integrate and apply the knowledge accumulated in various functional areas, such as marketing, human resource management, operations, accounting and finance, (iii) prepare you for management careers by providing inclass opportunities for you to enhance your ability to communicate orally and in written formats, (iv) to lead and to work with others in realistic work settings, (v) expose you to the ethical and societal issues raised in operating an enterprise, and (vi) to provide you with experience in dealing with real strategic decision issues facing managers in all types of organizations. This is accomplished through a number of pedagogical mechanisms that include news articles, case studies, academic articles, documentaries, simulations and written assignments.

Prerequisite: FIN 301, MGMT 301, MKTG 301, B A 364Y, seventh-semester standing or higher

BA 494: Research Project
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.

Prerequisite: B A 321, B A 322, B A 420, and completion of 6 credits at the 300- or 400-level in the student’s option

BA 495A: Business Internship
3-6 Credits/Maximum of 6
B A 495A Business Internship (3-6 per semester/maximum of 6) B A 495A facilitates the application of students’ prior classroom learning in a field setting. This course is one of a series in the business program which collectively develop the skills and competencies necessary for success as a business administration student. The course is designed to provide students with a firsthand opportunity to experience the challenges and rewards of the business professional. Essentially, an internship bridges the gap between the academic environment and the professional environment. Internships provide an opportunity for students to link theory with practice in a nonacademic setting. Internships provide practical, real-world experiences which cannot be simulated in the classroom. Upon successful completion of an internship, students will: have a better understanding of employer expectations related to career advancement; have an enhanced strategic view of the industry/business segment in which they worked; have experience integrating and using their knowledge and skills from the classroom; have increased awareness of professional and technical areas of strengths and weaknesses.

Prerequisite: B A 321, B A 322, B A 420, and completion of 6 credits at the 300- or 400-level in the student’s option

BA 495B: Undergraduate Research in Business
3-6 Credits/Maximum of 6
B A 495B Undergraduate Research in Business (3-6 per semester/maximum of 6) B A 495B provides students an opportunity to apply prior coursework to address a business problem or research question in far greater depth than a traditional research paper. This course is one of a series in the business program which collectively develop the skills and competencies necessary for success as a business administration student. The course provides the students with an opportunity to work intensively on a research project of extended duration and depth of analysis with a supervising faculty member. This course introduces the students to conducting business research on a more advanced level. Students will have the opportunity to develop the research question(s), read extensively in the academic literature, gather and analyze data, and thereby extend learning from prior coursework in a research setting.

Prerequisite: B A 321, B A 322, B A 420, and completion of 6 credits at the 300- and 400- level in the student’s option
BA 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

BA 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

BA 497A: **SPECIAL TOPICS**
1-4 Credits

**Business Law (BLAW)**

BLAW 199: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

BLAW 243: Legal Environment of Business
3 Credits
Social control through law: courts, basic policies underlying individual and contractual rights in everyday society. May not be used to satisfy Smeal College baccalaureate degree requirements. Not available to students who have taken B A 243.

**Prerequisite:** third-semester standing

BLAW 296: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

BLAW 296A: Independent Studies
1-12 Credits

BLAW 299: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

3 Credits
An introduction to the business environment emphasizing business contracts, liability issues arising from business relations, including those in the internet realm and intellectual property issues. Alternative dispute resolution and global perspectives will be integrated throughout. B LAW 341 Business Law I: Introduction to Contracts, Liability Issues, and Intellectual Property (3) Business decisions have legal consequences. Such decisions can represent both legal risks and opportunities. It is important for one entering business to have a fundamental understanding of the governing legal principles. This course will provide an introduction to the U.S. legal system, coverage of the major components of contract law, and an examination of business liability issues under tort law. In addition, the intellectual property issues of trade secrets, trademarks, patents, and copyrights will be covered. The impact of digital technology and business globalization will be integrated into each topic discussed. The course will be taught in a lecture-discussion format to encourage interaction and exploration of difficult issues. The course text and materials will include key business legal cases.

**Prerequisite:** MGMT 301 , MGMT 301W , or B A 304 ; Prerequisite or concurrent: FIN 301 or B A 301 ; MKTG 301 , MKTG 301W , or B A 303 ; SCM 301 or B A 302

BLAW 399: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

BLAW 424: Real Estate Law
3 Credits
Analyze contemporary law applicable to various types of ownership interests and rights, methods of transferring ownership, and use of real property. B LAW 424 B LAW (R M) 424 Real Estate Law (3) Analysis of contemporary law applicable to various types of ownership interests and rights, methods of transferring ownership, and use of real property. The objectives for this course are: (1) to provide students with an understanding of essential U.S. real estate property law, including the rights private property owners may obtain, how ownership and transfer are handled in view of present and future interests, constitutional issues that impact real estate ownership, and the legal aspects of modern real estate contractual transactions; (2) to teach students the ability to spot the legal issues arising from the above as future business leaders and (3) to introduce students to the legal reasoning process necessary to address and avoid the legal dilemmas presented by such issues. Instructional methods for the course will include detailed lectures and classroom discussion of readings and other materials. Student progress and mastery of the material will be evaluated through periodic examinations.

**Prerequisite:** B LAW341 or B LAW243

Cross-listed with: RM 424

BLAW 425: Business and Environmental Regulation
3 Credits
Examines the interplay between environmental regulation and commercial activities, including property interests. B LAW (R M) 425 Business and Environmental Regulation (3) R M/B LAW 425 is an advanced business law course based on foundation knowledge in legal regulation, property rights, and enterprise. The course explores the interplay between environmental laws and property rights and includes topics such as: common law regulation of the environment, government power and private rights, zoning, protecting endangered species, regulating the transportation and storage of hazardous materials, and Federal regulation of water quality. Students will develop their comprehension and analysis of the legal reasoning processes along
with the ability to identify legal issues from the perspectives of the government, property owners, and environmental interest groups. The instructional methods will include class discussions of readings and video presentations. To facilitate thorough analysis of the competing interests affecting environmental law, this course will employ the Socratic teaching method and place a special emphasis upon class discussion and interaction.

**Prerequisite:** B LAW 341 or B LAW 243

Cross-listed with: RM 425

BLAW 441: Business Law II: Agency, Employment and Business Structure

3 Credits

An examination of the laws governing agency relationships, employment, and the various structures of commercial enterprises.

**Prerequisite:** B LAW 341; FIN 301 or B A 301

BLAW 444: Advanced UCC and Commercial Transactions

3 Credits

All articles of the Uniform Commercial Code, banking relationships, debtor-creditor law, and bankruptcy law. B LAW 444B LAW 444 Advanced UCC and Commercial Transactions

(3) This course is designed to: (1) provide the student with a systematic study of the laws governing sales transactions, the instruments for financing those transactions and rights and liabilities of debtors and creditors (the Uniform Commercial Code governs these issues); (2) to explore current trends in the law affecting commercial transactions; (3) to develop further the student’s legal reasoning processes; (4) to enhance the student’s ability to identify legal issues from the business decision maker’s and financial auditor’s perspectives. Instructional methods will include lectures, readings, multimedia content, and class discussions. Student progress and mastery of the material will be evaluated through periodic examinations. Some state C.P.A. Boards require completion of this course as a prerequisite to obtaining certification as a public accountant. Completion of the course will be credited toward fulfillment of the requirements for the Legal Environment of Business Minor.

**Prerequisite:** B LAW 341, B A 241 or B A 243; ACCTG 211; and FIN 301 or B A 301

BLAW 445: Advanced Intellectual Property and Competition Law

3 Credits

Copyrights, trademarks, patents, and trade secrets followed by related topics in the regulation of competition. B LAW 445 Intellectual Property Competition Law

(3) The objectives for this course are to (1) provide students with an understanding of U.S. and international law that supports the creation of beneficial information via intellectual property rights, allows government to regulate information property through antitrust and privacy statutes, and promotes business development by encouraging competitive uses of information; (2) teach students the ability to spot the legal issues arising from the above as future business leaders and (3) introduce students to the legal reasoning process necessary to address and avoid the legal dilemmas presented by such issues. Instructional methods for the course will include detailed lectures and classroom discussion of readings and other materials. The course builds on the introductory business law curriculum by providing an advanced and detailed study of specific areas of law that are highly valuable to modern, technology-driven businesses.

**Prerequisite:** B LAW 441

BLAW 446: Employment Law

3 Credits

Examines the legal and regulatory environment of employment relationships. Topics include anti-discrimination; worker health and safety; and labor relations laws. B LAW 446 Employment Law

(3) The course is designed for business students seeking a solid understanding of labor relations and employment law. It is not a general overview or introduction to law course for those seeking to enter law school. Labor and employment law has developed and changed over the past seven decades, and continues to evolve as the economic model and means of productions changes globally. With the passing of the National Labor Relations Act and subsequent amendments thereto, including development in the ability of public employees to engage in concerted activity, the understanding of the modifications in the employer-employee relationships is necessary for successful business executives and frontline managers. While a thorough understanding of the underpinnings of these laws is necessary, this is only a portion of the issues at hand. The ability to apply these laws in current working environments along with interpreting and critiquing these laws will assist in the preparation of future corporate managers. The course goes into detailed discussion regarding the employment at will doctrine, wrongful discharge, workplace torts, and employee privacy and monitoring. With this foundation, the course then covers civil rights and discrimination based on race, color, religion, gender, sexual orientation, family obligation, disability, and national origin are covered using Supreme Court cases that have tested the validity and soundness of our federal legislation. The closing part of the course focuses on organized labor through the process of unionizing and union membership, negotiations and economic pressure used to obtain concessions in collective agreements. Additionally, fair labor laws and occupational health and safety requirements to diminish workplace accidents and improve productivity is discussed. For each of the topics presented, detailed analysis of prominent cases will be discussed with the expectation that students can apply these case decisions to current employer/employee situations. Exposure to differing opinions, reversed rulings, and detailed legal processes will provide students with a broad understanding of the complex nature of legal proceedings and how these processes impact labor and employment relations in the United States. Content synthesis and critical analysis are the learning goals of the course.

**Prerequisite:** B LAW 441

BLAW 447: Entertainment Law

3 Credits

This course covers legal issues that arise in various entertainment industries through discussion of contemporary issues along with personality rights and intellectual property rights associated with entertainment assets. Issues will be covered within the context of business models, pervasive pop-culture influences affecting entrepreneurial activities, business transactions and contractual provisions unique to creative industries, commercialization of celebrity image, rights of privacy of public figures, defamation, related advanced copyright and trademark issues, ethics and fiduciary responsibilities, and other emerging topics. Students will be introduced to the legal reasoning process necessary to analyze these issues in context and compose
creative solutions that both address and avoid the legal problems presented. Instructional methods for the course will include lecture and classroom discussion focused on readings and other materials. The course builds on the introductory business law curriculum by providing an advanced study of legal principles highly relevant to businesses that employ, promote, or monetize creative talent. Upon completion of the course, students should understand the legal concepts impacting the entertainment industry and the impact this has on talent, intellectual ownership, copyrights and trademarks.

**Prerequisites:** BLAW 341

BLAW 494: Research Project
1-12 Credits/Maximum of 999

Supervised student activities on research projects identified on an individual or small-group basis.

BLAW 494H: Research Project
1-12 Credits/Maximum of 999

Supervised student activities on research projects identified on an individual or small-group basis.

Honors

BLAW 496: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

BLAW 496A: **SPECIAL TOPICS**
1 Credits

BLAW 497: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

BLAW 498: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**Chemical Engineering (CHE)**

CHE 97: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CHE 100: Exploring Chemical Engineering First-Year Seminar
1 Credits

The exploration of Chemical Engineering and available career opportunities.

First-Year Seminar

CHE 199: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CHE 210: Introduction to Material Balances

3 Credits

An integrated approach to the study of material balances and industrial chemical processes important in chemical engineering. CHE 210 Introduction to Material Balances (3) The objective of this course is to present an introduction to chemical engineering calculations, establish mathematical methodologies for the computation of material balances and to present an overview of industrial chemical processes. It is the introductory course in the chemical engineering curriculum and is normally taken in the sophomore year. It is prerequisite for several junior-level courses in the curriculum, including courses in process fluid dynamics, heat transfer and phase equilibrium. The course reviews the fundamentals of chemistry and physics as they pertain to chemical problems and applies mathematics to the development of time-dependent equations to describe materials flow through a process. Examples of the processes studied include stoichiometry in combustion and other reactions, materials flow with recycle streams, humidification and drying process, and the analysis of non-steady systems. In addition, the course presents an introduction to Industrial Chemistry with an overview of steam reforming, ammonia synthesis and similar examples.

**Prerequisite:** MATH 251

CHE 210H: Introduction to Material Balances (Honors)

3 Credits

An integrated approach to honor-level study of material balances and industrial chemical processes important in chemical engineering. CHE 210H CHE 210H Introduction to Materials Balances (Honors) (3) The objective of this course is to present an introduction to chemical engineering calculations, establish mathematical methodologies for the computation of material balances and to present an overview of industrial chemical processes. The course reviews the fundamentals of chemistry and physics as they pertain to chemical problems and applies mathematics to the development of time-dependent equations to describe materials flow through a process. Examples of the processes studied include stoichiometry in combustion and other reactions, material flow with recycle streams, humidification and drying process, and the analysis of non-steady systems. The Honors version of the course places emphasis on the use of computational methods in the solution of chemical engineering problems through the use of advanced mathematical packages.

**Prerequisite:** MATH 251

Honors

CHE 220: Introduction to Chemical Engineering Thermodynamics

3 Credits

Chemical process applications of energy balances, equations of state, thermodynamic properties of real fluids, second law of thermodynamics, cycles. CH E CHE 220 Introduction to Chemical Engineering (3)
This course is the introductory course in chemical engineering thermodynamics. It is normally scheduled in the sophomore year and is continued by a second course which covers the thermodynamics of phase transformations and chemical reactions. The emphasis of this course is in the development of the theory of thermodynamics and its application to pure substances. The theory is applied on the thermodynamic analysis of small- and large-scale processes with multiple streams and energy exchanges, how to compute heat and work loads, and how to assess the efficiency of the process with respect to energy utilization. Starting from small units, such as pumps, compressors, turbines, and heat exchangers, examples grow to include large systems such as power plants and refrigeration cycles, that may involve many interconnecting units and recycle streams. A parallel focus of the course is in the computation of thermodynamic properties through the use of charts, tables, and equations of state with emphasis on non-ideal systems.

**Prerequisite:** MATH 231

**CHE 220H: Introduction to Chemical Engineering Thermodynamics (Honors)**

3 Credits

Chemical process applications of energy balances, equations of state, thermodynamic properties of real fluids, second law of thermodynamics, cycles. CHE 220H CHE 220H Introduction to Chemical Engineering Thermodynamics (Honors) (3) CHE 220H is the introductory course in chemical engineering thermodynamics. The emphasis of this course is in the development of the theory of thermodynamics and its application to pure substances. The theory is applied on the thermodynamics analysis of small- and large-scale processes in closed and open systems. Students learn how to formulate the energy balance for a process with multiple streams and energy exchanges, how to compute heat and work loads, from small units, such as pumps, compressors, turbines, and heat exchangers, examples grow to larger systems such as power plants and refrigeration cycles, that may involve many interconnecting units and recycle streams. The Honors version of the course places special emphasis on (a) the connection between thermodynamics and molecular properties and (b) on the use of computational methods for the calculation of thermodynamic properties under non-ideal conditions.

**Prerequisite:** MATH 231

Honors

**CHE 230: Computational Tools for Chemical Engineering**

1 Credits

This 1-credit course will cover the key computational tools needed by Chemical Engineering students. CH E 230 Computational Tools for Chemical Engineering (1) This 1-credit course will cover the key computational tools needed by Chemical Engineering students. Specific topics of interest include: constructing high quality graphs, statistics and linear regression, solving coupled algebraic equations, solving ordinary and partial differential equations, and matrices.

**Prerequisite:** MATH 251

**CHE 294: Research Project**

1-12 Credits/Maximum of 12

Supervised off-campus, non-group instruction including field experiences, practica, or internships. Written and oral critique of activity required.

**CHE 296: Independent Studies**

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

**CHE 296H: Individual Studies**

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

**CHE 297: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**CHE 299: Foreign Studies**

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

**CHE 300: Professional Development Seminar**

1 Credits

Lectures and discussion by visiting engineers and faculty on chemical engineering, job selection, patents, licensing, ethics, and other professional problems. CH E 300 Professional Development Seminar (1) The course objective is to offer an orientation to the chemical engineering profession and to promote professional attributes such as professional ethics, lifelong learning, and awareness of environmental and societal factors and to highlight their importance in the career lives of chemical engineers. The course consists of a one-hour lecture each week by visiting speakers and Penn State faculty. For some lectures, reading material is distributed a week before the lecture and in some cases, the students must turn in the questionnaire in which they have to answer various questions related to the topic of that week. The topics vary from year to year, but several key topics are included each time the course is taught: ethics, environmental issues, process safety, patent law and intellectual property, graduate school, and job opportunities in various industries.

**Prerequisite:** fifth-semester standing

**CHE 320: Phase and Chemical Equilibria**

3 Credits

Pure component phase properties, solution properties, equilibria among phases, equilibrium stage separations, chemical reaction equilibria. CH E 320 Phase and Chemical Equilibria (3) The course covers the...
fundamentals of phase and chemical equilibrium with emphasis on vapor/liquid systems and their applications to separation processes. It is the second course in chemical engineering thermodynamics and leads to the study of separations and reacting systems. Computational methodologies are presented for the calculation of the properties of mixtures and the construction of phase diagrams (P-x-y, T-x-y) using activity coefficients or equations of state. The theory is applied to the analysis of equilibrium stage separation such as distillation and extraction including the construction of McCabe-Thiele diagrams. In the last portion of the course the principles of equilibrium are further applied to chemically reacting systems.

**Prerequisite:** CH E 210 with minimum grade of C, CH E 220 with minimum grade of C

**CHE 320H: Phase and Chemical Equilibria**

3 Credits

Pure component phase properties, solution properties, equilibria among phases, equilibrium stage separations, chemical reaction equilibria.

**Honors**

**CHE 330: Process Fluid Mechanics**

3 Credits

An integrated study of the fundamentals and the quantitative design techniques involving flow of fluids in chemical processes. CH E 330 Process Fluid Mechanics (3) This course introduces the principles of fluid mechanics that are of fundamental importance to chemical engineers. The list of topics discussed in this course include the mechanical principles governing fluid flow, stress in a fluid, conservation of mass and momentum, using differential and integral balances, elementary constitutive equations, hydrostatics, exact solutions of the Navier-Stokes equations, approximate solutions using control volume analysis, mechanical energy balances and Bernoulli’s equation, dimensional analysis and dynamic similarity, and introduction to boundary-layer theory and turbulence.

**Prerequisite:** CH E 210 with a minimum grade of C

**CHE 330H: Process Fluid Mechanics (Honors)**

3 Credits

An integrated study of the fundamentals and the quantitative design techniques involving flow of fluids in chemical processes. CH E 330H Process Fluid Mechanics (3) This course introduces the principles of fluid mechanics that are of fundamental importance to chemical engineers. The list of topics discussed in this course include the mechanical principles governing fluid flow, stress in a fluid, conservation of mass and momentum, using differential and integral balances, elementary constitutive equations, hydrostatics, exact solutions of the Navier-Stokes equations, approximate solutions using control volume analysis, mechanical energy balances and Bernoulli’s equation, dimensional analysis and dynamic similarity, and introduction to boundary-layer theory and turbulence.

**Prerequisite:** CH E 210 with minimum grade of C

**CHE 340: Introduction to Biomolecular Engineering**

3 Credits

Introduction to concepts and principles of biomolecular engineering, with emphasis on biotechnology and pharmaceutical industries. CH E 340 Introduction to Biomolecular Engineering (3) This course introduces students to the concepts and principles needed to apply chemical engineering principles to the analysis of biological systems, with particular emphasis on the biotechnology and pharmaceutical industries. Students will learn to use appropriate search engines to identify and characterize specific genes and proteins, discuss similarities and differences between biological and chemical processes, perform statistical analyses of biological data, and estimate rates of enzymatic reactions and bioreactor mass transfer. This course is required for the B.S. degree in Chemical Engineering.

**Prerequisite:** CH E 210 with C or better, B M B251, CHEM 212

**CHE 350: Process Heat Transfer**

3 Credits

An integrated study of the fundamentals and the quantitative design techniques involving heat transfer in chemical processes. CH E 350 Process Heat Transfer (3) The objective of the course is to introduce to students heat transfer mechanisms in solids and fluids and their chemical process applications. At the conclusion of the course, the student should possess the ability to model steady and unsteady heat transfer in simple systems, and design heat exchangers and simple heat exchanger networks. The development of the material of this course requires use of thermodynamics and fluid mechanics, scheduled earlier in the curriculum, and sets the basis for the design of reactors and separation processes, which are covered in subsequent courses.

**Prerequisite:** CH E 210 with minimum grade of C

**CHE 360: Mathematical Modeling in Chemical Engineering**

3 Credits

Mathematical model formulation for chemical and physical processes, including applications of ordinary differential equations and numerical methods. CH E 360 Mathematical Modeling in Chemical Engineering (3) This course covers the applied mathematical techniques necessary for the simulation of physical and chemical processes such as mass transfer and reacting systems, and the analysis of process dynamics. In the former area, the formulation of ordinary differential equations for a variety of situations of interest to chemical engineers is considered. Numerical methods and mathematical packages that form the basis for computer simulations are emphasized. In the latter area, the notions of steady-state, stability and controllability are introduced. The tools discussed in this course are used in subsequent courses on the analysis and design of chemical reactors and mass transfer processes.

**Prerequisite:** CH E 210 with minimum grade of C, MATH 230, MATH 251

**CHE 399: Foreign Studies**

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction. International Cultures (IL)
CHE 410: Mass Transfer Operations

3 Credits

Introduction to principles and applications of mass transfer, with focus on the design of equilibrium stage and continuous contacting separation processes. CH E 410 Mass Transfer Operations (3) The objective of this course is to present the principles of mass transfer and their application to separation and purification processes. The course integrates fluid dynamics and thermodynamics and proceeds to develop rate expressions for mass transfer in multiphase, multicomponent systems. Starting with Fick's law and macroscopic balances the course moves to the design of large scale separation processes such as equilibrium stage separations (distillation, extraction) and continuous separation (absorption towers, scrubbers) for the separation and purification of chemical compounds. The course also introduces the use using modern software tools such as HySys, used in the actual design of such processes and also in the capstone design course.

Prerequisite: CH E 320 and either CH E 330 or CH E 350

CHE 423: Chemical Energy Technology

3 Credits

This course provides an overview of current and prospective chemical energy storage and conversion technologies. CHE 423 Chemical Energy Technology (3) This course provides an overview of chemical energy storage and conversion technologies. Current fossil fuel based conversion processes in power plants and transportation applications will be surveyed. The course will emphasize critical evaluation of alternative conversion technologies, with the goal of providing the skills for quantitative assessment of the potential of various storage and conversion technologies. Current conversion technologies surveyed will include coal power plants, petroleum refineries, and internal combustion engines. Alternative technologies will consider unconventional fossil fuel processing, electrochemical energy conversion, solar energy conversion, and agricultural/biological fuel conversion. A semester long student project will involve generation of a future energy scenario 25-50 years in the future. The class structure is interactive, with readings motivating class period discussions.

Prerequisite: CH E 210 with a minimum grade of C; prerequisite or concurrent: CH E 320

CHE 430: Chemical Reaction Engineering

3 Credits

Chemical reaction rates and equilibria, reactors, reactor design; emphasis on industrial chemical processes. CH E 430 Chemical Reaction Engineering (3) This course teaches the principles of reaction engineering and reactor design. It is one of the core subjects in the chemical engineering curriculum and it is normally scheduled in the senior year. Students learn how to apply stoichiometry in combination with a rate law to design a chemical reactor that produces the desired conversion of reactants. The design of various types of chemical reactors is discussed at length, including continuous stirred-tank (CSTR), plug-flow (PFR), continuous-operation and batch-operation reactors. Additional topics include heterogeneous reactors, catalytic systems and fluidized beds, the design and optimization of reactor networks, and safety. The course integrates fluid mechanics and heat transfer to the design and analysis of isothermal and non-isothermal reactors. It leads to the capstone design course in which chemical reactors are integrated into a chemical plant.

Prerequisite: CH E 320

CHE 432: Petroleum Processing

3 Credits

A study of physical and chemical processes to convert crude oil into desired products with an outlook from present to future.

Prerequisite: CHEM 210
Cross-listed with: FSC 432

CHE 438: Bioprocess Engineering

3 Credits

Introduction to the biotechnology field including consideration of upstream and downstream processing of biochemicals.

Prerequisite: CHEM 212

CHE 442: Polymer Processing Technology

3 Credits

Basic principles of polymer melt processing are reviewed and subsequently applied to the most important industrial processing operations. MATSE 448 (CH E 442) Polymer Processing Technology (3) MATSE 448 involves both lectures and laboratory experiments illustrating the interrelations between structure, processing conditions, and physical properties of industrial polymer products. Students apply engineering fundamentals and principles of polymer melt rheology to analyze industrial processing operations. Unlike typical polymer processing courses offered at most U.S. universities, MATSE 448 covers detailed analyses of individual processing operations, rather than dwelling on underlying polymer science fundamentals that are covered elsewhere in our curriculum. Students learn to optimize processing variables, given a particular set of materials and conditions, establishing how processing conditions impact the physical properties of finished polymer products. We explore the physics governing processing operations including extrusion, mixing, calendering, blow molding, thermoforming fiber spinning compression molding, injection molding, and nanolithography.

Prerequisite: MATSE447 or CH E 302A
Cross-listed with: MATSE 448

CHE 443: Introduction to Polymer Science

3 Credits

Introduction to synthesis, structure, characterization and processing of polymers. Single molecule properties, polymer solutions, glasses, crystals and blends. CH E 443 Introduction to Polymer Science (3) The objective of this course is to introduce students to the synthesis, structure, characterization and processing of polymers. Emphasis is placed on the molecular origins of polymer properties. The course will provide an overview of single molecule properties and polymeric solutions, glasses, crystals and mixtures from a Chemical Engineering perspective. The course builds on CH E 320, Chemical and Phase Equilibria, to develop a more in-depth description of the thermodynamics of polymers. This course will also build on CHEM 210, Organic Chemistry, to analyze more in-depth strategies for the synthesis of polymers. At the end of the course, the students will be able to evaluate the viability of synthetic pathways for various polymers, estimate the size of polymer chains in solution and in the melt, calculate thermodynamics phase diagrams
of polymer blends and solutions, and compare and contrast different approaches to describe the physical properties of polymers.

**Prerequisite:** CH E 320 and CHEM 210

### CHE 446: Transport Phenomena

**3 Credits**

Fundamental treatment of mass, heat, and momentum transfer; emphasis on transport properties and mathematical models of chemical engineering transport processes. CH E 446 Transport Phenomena (3) This is an intermediate course in transport phenomena intended to expand on the materials introduced in the required undergraduate courses on momentum, heat, and mass transfer. It introduces the student to the rigorous formulation of transport problems using the conservation principles and flux expressions, and identifies the similarities and differences among the transport processes for momentum, heat, and mass. The main focus of the course is on microscopic treatment of transport problems, with particular emphasis on proper use of dimensional analysis and scaling arguments. Transport phenomena is a rather mathematical subject and the student is assumed to be familiar with ordinary and partial differential equations, elementary vector analysis, and elementary numerical techniques. This course is intended to prepare the student for a graduate-level course in transport phenomena.

**Prerequisite:** CH E 330, CH E 350, CH E 360; prerequisite or concurrent: CH E 410

### CHE 449: Bioseparations

**3 Credits**

Analysis and design of separation processes for the purification of biological molecules. CH E 449 Bioseparations (3) This course introduces students to the principles and applications of separation processes used for the purification of biological molecules, including fine chemicals, pharmaceuticals, and therapeutic proteins. By the end of the course students will be able to perform preliminary design calculations and scale-up of specific separation systems including centrifugation, filtration, chromatography, and membrane processes. Students will also be able to develop outlines of overall separation schemes appropriate for the purification of different biological products. This course is required for the Bioprocessing and Biomolecular Engineering Option in Chemical Engineering.

**Prerequisite:** CH E 410

### CHE 450: Process Dynamics and Control

**3 Credits**

Analysis of time-dependent variables in chemical process plants; reactor design and control; computer applications. CHE 450 Process Dynamics and Control (3) The course is an introduction to chemical process dynamics and control and is offered as a technical elective. The first part of the course is devoted to the dynamical behavior of systems and the mathematical tools (differential equations, Laplace transforms) used in their analysis. The second part of the course covers the design and operation of various types of controllers, including proportional, integral and differential and their combinations. The theoretical principles are demonstrated with applications to chemical engineering processes such as storage tanks, chemical reactors and separation processes.

**Prerequisite:** CHE 210 with minimum grade of C AND MATH 251

### CHE 452: Chemical Process Safety

**3 Credits**

This course provides an overview of Process Safety in the Chemical Industry, focusing on the nature of chemical plant accidents. CHE 452 Chemical Process Safety (3) The course will provide an overview of Process Safety in the Chemical Industry, focusing on the nature of chemical plant accidents, their causes, and steps to eliminate them, with emphasis on inherently safe designs. Chemical Plant accidents deal most often with Flammability and Toxicity issues and these are dealt with in great detail. The role of Human Error in accidents is also examined. Actual case studies (including Bhopal, BP Texas City, Piper Alpha) will be examined to show the relevance in today’s workplace. The course requires active student participation via discussions of system designs, their weaknesses and improvements. Guest lecturers will also be invited to supplement the material. This is offered as a senior elective in Chemical Engineering.

**Prerequisite:** CHE 320 CONCURRENT: CHE 330, CHE 350

### CHE 455: Drug Delivery, Pharmacokinetics, and Artificial Organs

**3 Credits**

CHE 455 is an elective course that examines the application of chemical engineering principles (thermodynamics, transport, and kinetics) to the analysis of a number of medically related phenomena and devices. Specific topics include drug delivery systems, pharmacokinetics, artificial organs, biological transport phenomena, and temperature regulation. One of the important goals of the course is to understand how chemical engineers go about developing appropriate physical models for complex biological systems. Emphasis will be placed on identifying the key physical / biological phenomena governing the system behavior. Where appropriate, the course will also examine some of the social, political, and economic implications of medical technology in our society, e.g., the artificial kidney program. Students do not need a background in biology or physiology – the key biological phenomena will be covered at appropriate places throughout the semester.

**Prerequisite:** CHE 350, BME 409, BME 413, OR BE 302 RECOMMENDED PREPARATION: CHE 410

### CHE 470: Design of Chemical Plants

**3 Credits**

Lectures and practicum on methods and calculations, including economic evaluations for the design of chemical plants; formal technical report required. CH E 470 Design of Chemical Plants (3) The chemical engineering capstone design course introduces the principles of process design and economic evaluation utilizing various industry computer tools, with special emphasis on process simulators. The student will develop critical design logic to evaluate a process, starting with block flow diagrams and simple material balances utilizing practical heuristics and then build the process flowsheet through computer simulation, flowsheet optimization, and detailed equipment design.

**Prerequisite:** CH E 410, CH E 430
CHE 480M: Chemical Engineering Laboratory (Honors)

3 Credits

Data interpretation and analysis from student-operated experiments on pilot-plant equipment. Individual written and oral technical reports. CH E 480M CH E 480M Chemical Engineering Laboratory (Honors) (3) CH E 480M is the laboratory course in chemical engineering. The objectives of CH E 480M is to provide hands-on experience with chemical engineering equipment and consists of a series of experiments that cover the major subjects in chemical engineering, namely, fluid flow, heat transfer, separations and reactions. The subject matter on which these experiments are based is taught in various junior-senior-level classes. This course does not introduce new material but focuses instead on planning, execution and interpretation of experiments. The special aspect of the honors section is that students will be given an open-ended experimental research project.

Prerequisite: ENGL 202C, CH E 320, CH E 330, CH E 350 Honors Writing Across the Curriculum

CHE 480W: Chemical Engineering Laboratory

3 Credits

Data interpretation and correlation from student-operated experiments on pilot-plant equipment. Individual written and oral technical reports. CH E 480W Chemical Engineering Laboratory (3) This is the laboratory course in Chemical Engineering. Its objective is to provide hands-on experience with chemical engineering equipment and consists of a series of experiments that cover the major subjects in chemical engineering, namely, fluid flow, heat transfer, separations and reactions. The subject matter on which these experiments are based is taught in various junior- and senior-level classes. CH E 480W does not introduce new material but focuses instead on planning, execution and interpretation of experiments. The course is team-based and includes laboratory sessions as well as lectures. Evaluation is based on the written and oral reports given based on experiments performed. These reports undergo several drafts, in which at different times students or faculty evaluate the report, suggesting corrections. Course evaluation may also include a "pre-exam" to assure that the students understand technical material coming into the course. Peers assess each others' performance (contributing to the grade), as does the faculty.

Prerequisite: ENGL 202C, CH E 320, CH E 330, CH E 350 Writing Across the Curriculum

CHE 494: Research Projects in Chemical Engineering

1-6 Credits/Maximum of 6

An original problem, including a search of the literature, experimental investigation, and preparation in formal thesis form.

Prerequisite: Permission of program

CHE 494H: Research Projects in Chemical Engineering (Honors)

1-6 Credits/Maximum of 6

An original problem, including a search of the literature, experimental investigation, and preparation in formal thesis form. CH E 494H CH E 494H Research Projects in Chemical Engineering (1-6) Undergraduate research projects for honors students leading to the generation of a thesis for the Schreyer Honors College. The content of this course typically falls within the research interests of the chemical engineering faculty. The work can be computational, theoretical or experimental in nature and culminates with the writing of an honors thesis. Students should select a thesis advisor prior to enrolling in this course and file an honors thesis proposal report form with the Schreyer honors College. A student outside of chemical engineering can take the course if they are working towards an honors thesis in chemical engineering. A student in chemical engineering can take this course with a co-advisor outside of chemical engineering; however, the CH E

Prerequisite: Permission of program

CHE 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

CHE 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Chemistry (CHEM)

CHEM 1: Molecular Science

3 Credits

Selected concepts and topics designed to give non-science majors an appreciation for how chemistry impacts everyday life. Students who have received credit for CHEM 003, 101, or 110 may not schedule this course. CHEM 001 CHEM 001 Molecular Science (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. CHEM 001 is designed for students who want to gain a better appreciation of chemistry and how it applies to everyone's everyday life. You are expected to have an interest in understanding the nature of science, but not necessarily to have any formal training in the sciences. During the course, you will explore important societal issues that can be better understood knowing some concepts in chemistry. The course is largely descriptive, though occasionally a few simple calculations will be done to illuminate specific information. The course does rely on your ability to think systematically, and to relate things to each other. From year to year and instructor to instructor, the course may cover any number of a large variety of topics related to current events, including, but not limited to: air and water pollution, ozone depletion, global warming, acid rain, new and old methods of energy generation and energy use in modern society, examples of production and use of modern polymers, examples of production and use of modern drugs, examples of the chemistry of nutrition, examples of advances in biochemistry and how they affect us.

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

CHEM 3: Molecular Science With Laboratory

3 Credits

Selected concepts and topics designed to give non-science majors an appreciation for how chemistry impacts everyday life. Students who
have received credit for CHEM 001, 101, or 110 may not schedule this course. CHEM 003 CHEM 003 Molecular Science with Laboratory (3) (BA) This course meets the Bachelor of Arts degree requirements. CHEM 003 is a course that includes both lecture and laboratory. It is designed for students who want to gain a better appreciation of chemistry and how it applies to everyone’s everyday life. You are expected to have an interest in understanding the nature of science, but not necessarily to have any formal training in the sciences. During the course, you will explore important societal issues that can be better understood knowing some concepts in chemistry. The course is largely descriptive, though occasionally a few simple calculations will be done to illuminate specific information. The course does rely on your ability to think systematically, and to relate things to each other. From year to year and instructor to instructor, the course may cover any number of a large variety of topics related to current events, including but not limited to: air and water pollution, ozone depletion, global warming, acid rain, new and old methods of energy generation and energy use in modern society, examples of production and use of modern polymers, examples of production and use of modern drugs, examples of the chemistry of nutrition, examples of advances in biochemistry and how they affect us. In the laboratory component, students will conduct experiments that are related to the lecture material being covered.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

CHEM 5: Kitchen Chemistry

3 Credits

An elementary discussion of the chemistry associated with foods and cooking. CHEM 005 Kitchen Chemistry (3) (GN) (BA) This course meets the Bachelor of Arts degree requirements. CHEM 005 incorporates lectures, reading, problem-solving, and is “edibles” focused; home experiments to develop an understanding of chemical concepts and scientific inquiry within the context of food and cooking. The course will start from a primer on food groups and cooking, proceed to the structures of foods, and end with studies of the physical and chemical changes observed in foods. Students will develop an enhanced understanding of the chemical principles involved in food products and common cooking techniques.

General Education: Natural Sciences (GN)

CHEM 20: Environmental Chemistry

3 Credits

Applications of chemistry to environmental problems, including air; water; thermal pollution; pesticides; drugs and birth control agents; food additives; etc. For non-chemistry majors; chemistry majors will not receive credit. CHEM 020 Environmental Chemistry (3) Topics include the study of air, air quality, and the effects of various substances that create air pollution. Significant detail is given to ozone and its interactions in various layers of the atmosphere. The study of fossil fuels and hydrocarbon chemistry leads to an extensive discussion of global warming. Water contamination due to acid rain and acid mine drainage is studied in conjunction with acid-base chemistry. The concept of pH is discussed in detail. Newer sources of energy including fuel cells, photovoltaic cells, biomass fuels, and nuclear energy are investigated with much consideration given to the economics of fuels. These energy topics require a study of electrochemistry, nuclear chemistry, radioactivity and organic chemistry. Biological topics of drug design, toxic substances, pesticides, genetic engineering and food safety complete the course by covering numerous aspects of organic chemistry and biochemistry. Most topics also deal with the associated analytical chemistry of the substances discussed and the challenge of sample procurement, sample preparation, chemical analysis, and result interpretation considering analytical error. Methods of chemistry data presentation to the general public are investigated and criticized.

CHEM 21: Environmental Chemistry Laboratory

1 Credits

Introduction of basic laboratory techniques and data analysis used in environmental chemistry. CHEM 021 CHEM 021 Environmental Chemistry Laboratory (1) This course will provide an introduction of basic laboratory techniques and data analysis used in environmental chemistry. The suggested laboratory experiments will consist of a broad range of scientific inquiry that will enhance the lecture material covered in CHEM 020. The course will provide laboratory experience in the chemistry of air, water, and solids. Experiments have been chosen that have a strong biology component such as Stream Ecology, Toxicity, Testing, and Dissolved Oxygen experiments. These experiments should relate to the BIOL 110 and 220 courses. The Chi-Square and Probability experiments will relate to STAT 250 course. The course will be an integral part of the Environmental Studies major providing an experimental chemistry background and experience.

Concurrent: CHEM 020

CHEM 101: Introductory Chemistry

2-3 Credits

Selected principles and applications of chemistry. Prior study of chemistry is not assumed. Students may take only one course for General Education credit from CHEM 011 or CHEM 110. CHEM 101 CHEM 101 Introductory Chemistry (2-3) CHEM 101 is an introductory chemistry course designed to prepare students for college level chemistry courses, such as CHEM 110 or CHEM 202. Prior study of chemistry is not assumed, so the course introduces the vocabulary along with some basic principles of chemical problem solving. The course covers the following topics: matter and measurement, molecules and molecular compounds, ions and ionic compounds, chemical reaction types, stoichiometry, atomic and molecular weights, the mole, simple quantitative calculations with chemical reactions, the periodic table, nomenclature, electronic structure of atoms, simple periodic properties of the elements, chemical bonding, molecular geometry, and properties of various states of matter, acids and bases, and the basics of chemical equilibrium. There are 2 and 3 credit versions of this course offered at different locations. The 3-credit version usually involves a laboratory component.

Prerequisite: MATH 021; or satisfactory performance on the MATH placement examination--i.e., placement beyond the level of MATH 021
General Education: Natural Sciences (GN)

CHEM 106: Introductory and General Chemistry

5 Credits

Introductory chemistry and chemical principles for students who are required to take additional chemistry, e.g., CHEM 112, but are unprepared for CHEM 110. CHEM 106 Introductory and General Chemistry (5) (GN) (BA) This course meets the Bachelor of Arts degree requirements.
CHEM 106 is an extended version of the first-semester comprehensive general chemistry course. It includes more class time for preparing students so that they learn introductory chemistry and general college level chemistry in one semester. As in CHEM 110, CHEM 106 introduces students to the basic principles of chemistry with an emphasis on the relationships between the microscopic structure and macroscopic properties of matter. Principles are illustrated with a wide variety of examples from the sciences, from engineering and technology, and from everyday life. The course covers the following topics: matter and measurement, molecules and molecular compounds, ions and ionic compounds, chemical reaction types, atomic and molecular weights, the mole, quantitative calculations with chemical reactions, the periodic table, nomenclature, aqueous reactions and solution stoichiometry, thermochemistry, electronic structure of atoms, periodic properties of the elements, chemical bonding, molecular geometry, the gaseous, liquid, and solid states of matter, properties of solutions, some basic aspects of chemical equilibrium, and applications to the real world including environmental chemistry. GN credit for CHEM 106 requires that CHEM 111 also be completed.

Prerequisite: satisfactory performance on the Math placement test – i.e. placement beyond the level of MATH 022; or MATH 022 or MATH 041
Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

CHEM 108: Problem Solving in Chemistry

1 Credits

Techniques, strategies, and skills for solving problems in general chemistry for students potentially at risk in CHEM 110. CHEM 108 CHEM 108 Problem Solving in Chemistry (1) The purpose of CHEM 108 is to facilitate success in the first semester general chemistry course (CHEM 110). Students who need extra help in CHEM 110 are strongly encouraged to take CHEM 108 with CHEM 110. The course covers the same topics in the same sequence as the concurrent CHEM 110 course. It provides an opportunity for students to develop stronger problem solving skills through active and collaborative learning activities and skill building. CHEM 108 does not satisfy the General Education requirement and will not count toward graduation in some majors.

COREQUISITE: CHEM 110

CHEM 110: Chemical Principles I

3 Credits

Basic concepts and quantitative relations. Students may take only one course for General Education credit from CHEM 110 or CHEM 101.
CHEM 110 Chemical Principles I (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. CHEM 110 is the first semester of a two-semester comprehensive general chemistry course that introduces the students to the basic principles of chemistry with an emphasis on the relationships between the microscopic structure and macroscopic properties of matter. Principles are illustrated with a wide variety of examples from the sciences, engineering and technology, and from everyday life. The course covers the following topics: matter and measurement, molecules and molecular compounds, ions and ionic compounds, chemical reaction types, atomic and molecular weights, the mole, quantitative calculations with chemical reactions, the periodic table, nomenclature, aqueous reactions and solution stoichiometry, thermochemistry, electronic structure of atoms, periodic properties of the elements, chemical bonding, molecular geometry, the gaseous, liquid, and solid states of matter, properties of solutions, some basic aspects of chemical equilibrium, and applications to the real world including environmental chemistry. GN credit for CHEM 110 requires that CHEM 111 also be completed.

Prerequisite: satisfactory performance on the Math placement test – i.e. placement beyond the level of MATH 022; or MATH 022 or MATH 041
Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

CHEM 110H: Chemical Principles I - Honors

3 Credits

Basic concepts and quantitative relations of chemistry at a level appropriate for students with advanced backgrounds and talents. Students may take only one course for General Education credit from CHEM 110 or CHEM 101. GN to receive Natural Sciences General Education (GN) credit for certain chemistry courses requires both lecture and laboratory courses be taken. These courses are: (CHEM 106 or CHEM 110 or CHEM 110H) and CHEM 111; (CHEM 112 or CHEM 112H) and (CHEM 113 or CHEM 113B).

Prerequisite: satisfactory performance on the Math placement test – i.e. placement beyond the level of MATH 022; or MATH 022 or MATH 041
General Education: Natural Sciences (GN)
Honors

CHEM 111: Experimental Chemistry I

1 Credits

Introduction to quantitative experimentation in chemistry. CHEM 111 Experimental Chemistry I (1) (GN) (BA) This course meets the Bachelor of Arts degree requirements. CHEM 111 is a one-credit introductory general chemistry laboratory. It is designed to complement the lecture course CHEM 110. The students are introduced to laboratory safety and good experimental technique, how to keep a proper laboratory notebook, interpret data, and write a formal report. The course introduces laboratory experimentation in the context of a variety of specific topics, such as reactions in solutions, spectroscopy, chemistry of natural waters, acids and bases, and the synthesis and analysis of chemical compounds. GN credit for CHEM 111 requires that CHEM 106 or CHEM 110 or CHEM 110H also be completed.

Prerequisite: or concurrent: CHEM 110 or CHEM 106
Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

CHEM 112: Chemical Principles II

3 Credits

Continuation of CHEM 110, including an introduction to the chemistry of the elements. CHEM 112 Chemical Principles II (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. CHEM 112 is the second semester of a comprehensive, two-semester general chemistry sequence following CHEM 110. It uses the same text as CHEM 110 and builds upon the subject matter of that course. The course covers the following topics: reaction rates and chemical kinetics, catalysis, acid-base equilibria, the pH scale, common-ion effect, acid-base titrations,
factors that affect solubility, buffers, chemical thermodynamics, entropy, free energy, electrochemistry, oxidation-reduction reactions, oxidation numbers, voltaic cells, batteries, corrosion, electrolysis, chemistry of the nonmetals such as hydrogen, oxygen, nitrogen, halogens, noble gases, transition metals, modern materials, alloys and metallurgy, nuclear chemistry, radioactivity, fission and fusion. GN credit for CHEM 112 requires that CHEM 113 or CHEM 113B also be completed.

Prerequisite: CHEM 110 or CHEM 106
Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

CHEM 112H: Chemical Principles II - Honors
3 Credits
Continuation of CHEM 110, including an introduction to the chemistry of the elements. GN to receive Natural Sciences General Education (GN) credit for certain chemistry courses requires both lecture and laboratory courses be taken. These courses are: (CHEM 106 or CHEM 110 or CHEM 110H) and (CHEM 111; CHEM 112 or CHEM 112H) and (CHEM 113 or CHEM 113B).

Prerequisite: CHEM 110 or CHEM 106
Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN) Honors

CHEM 113: Experimental Chemistry II
1 Credits
Continuation of CHEM 111, with emphasis on topics related to CHEM 112. CHEM 113 Experimental Chemistry II (1) (GN)(BA) This course meets the Bachelor of Arts degree requirements. CHEM 113 is a second-semester, one-credit introductory general chemistry laboratory course meant to complement the lecture course CHEM 112. The course builds on material learned in CHEM 111 with emphasis on quantitative analytical procedures. Essential material covered includes proper use of a laboratory notebook, writing of a formal laboratory report, use of the chemical literature, experimental design, interpretation of data using statistics, laboratory safety procedures, and an appreciation for what instruments can and cannot do. The course introduces laboratory experimentation in the context of a variety of specific topics, for example: halogens, their compounds and their reactions chemical kinetics of a simple chemical reaction; acid-base equilibria and titrations; oxidation-reduction reactions and electrochemistry; separations of compounds using paper and liquid chromatography; separations using gas chromatography. GN credit for CHEM 113 requires that CHEM 112 or CHEM 112H also be completed.

Prerequisite: CHEM 111 . Prerequisite or concurrent: CHEM 112
Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

CHEM 113B: Experimental Chemistry II - Bioscience
1 Credits
A continuation of CHEM 111 with emphasis on topics related to CHEM 112 in the context of bioscience. CHEM 113B Experimental Chemistry II - Bioscience (1) CHEM 113B is a one-credit introductory general chemistry laboratory course meant to complement the lecture course CHEM 112. This course builds on material learned in CHEM 111. It has the same goals, and covers similar topics to CHEM 113, and for this reason should count as CHEM 113, regardless of major. The main difference is that CHEM 113B covers chemical topics in the context of experiments with biological relevance. The emphasis is on quantitative analytical procedures. Essential material covered includes proper use of a laboratory notebook, writing of a formal laboratory report, use of the chemistry literature, experimental design, interpretation of data using statistics, laboratory safety procedures, and an appreciation for what instruments can and cannot do. The course introduces laboratory experimentation in the context of a variety of specific topics, for example: alcohols; enzyme kinetics; acid-base equilibria and titrations; separations of compounds using paper and liquid chromatography, separations using gas chromatography. GN credit for CHEM 113B requires that CHEM 112 or CHEM 112H also be completed.

Prerequisite: CHEM 111 . Prerequisite or Concurrent: CHEM 112
General Education: Natural Sciences (GN)

CHEM 130: Introduction to General, Organic, and Biochemistry
3 Credits
This course is a one-semester, rigorous college level introductory Chemistry course covering the fundamental principles of general, organic, and biochemistry. One year of high school chemistry is strongly recommended, and students should have math placement beyond the level of Math 021. 3 Credits, fulfills the General Education requirements. Course topics include dimensional analysis, atomic structure and periodicity, chemical bonding, molecular structure, states of matter and intermolecular forces, basic gas laws, solutions and solubility, acids, bases and equilibria, reaction stoichiometry and thermodynamics. In addition, fundamentals of organic nomenclature, properties of main organic functional groups, structure and function of biological macromolecules, as well as metabolism will be discussed. The course will emphasize chemistry in environmental and health-related contexts. This course is primarily designed for students in a program that does not require the more theoretical and mathematically oriented general chemistry courses (CHEM 110/112), such as some majors in the colleges of Nursing, Agriculture Sciences, and Health Human Development. It is a suitable prerequisite for the organic chemistry course sequence CHEM 202/203. This course is not appropriate for medical school preparation and will not serve as a prerequisite for the organic chemistry CHEM 210/212 course sequence. Students majoring in chemistry, other natural sciences, or engineering will normally register in the CHEM 110/112 sequence. Consult your advisor and the instructor if you have questions about CHEM 130 vs. CHEM 110/112.

Prerequisites: Students should have math placement beyond the level of MATH 021
General Education: Natural Sciences (GN)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

CHEM 199: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

3 Credits

Introduction to organic chemistry, with emphasis on the properties of organic compounds of biochemical importance. Because of duplication of subject matter, students may not receive credit for both CHEM 202 and CHEM 210. CHEM 202 CHEM 202 Fundamentals of Organic Chemistry I (3) CHEM 202 is a one-semester, comprehensive course that introduces the students to the fundamental principles of organic chemistry including relationships between the molecular structure of organic compounds and their macroscopic properties. Some of the principles are illustrated with a variety of examples from nature and everyday life. The course covers the following topics: alkanes; alkenes, including polymers; alkynes; benzene and aromaticity; alcohols and phenols; ethers; aldehydes; ketones; carboxylic acids and their acyl derivatives; amines; alkyl halides; nomenclature; stereochemistry, including conformational analysis and chirality. Chemical reactions of the functional groups will be discussed along with the mechanistic details, including stereospecificity, of some of these processes. Biological molecules such as carbohydrates, lipids, steroids, peptides/proteins and nucleic acids, along with their importance in living systems, will be surveyed.

Prerequisite: CHEM 101 or CHEM 110 or CHEM 106

CHEM 203: Fundamentals of Organic Chemistry II

3 Credits

Introduction to organic chemistry, with emphasis on the identification of organic compounds by characteristic chemical reactions and by spectroscopy. The course involves both lecture and laboratory. Because of duplication of subject matter, students may not receive credit for both CHEM 203 and CHEM 213. CHEM 203 CHEM 203 Fundamentals of Organic Chemistry II (3) CHEM 203 is a one-semester organic chemistry course that has both lecture and laboratory components. The lecture introduces students to the basic theory and application (structure determination) of different types of spectroscopy (nuclear magnetic resonance spectroscopy, infrared spectroscopy, and ultraviolet-visible spectroscopy) and mass spectrometry. Certain chemical reactions learned in CHEM 202 will be reviewed along with the mechanistic details of some of these processes. Special topics such as drug discovery, natural product isolation, and synthesis will be surveyed. The laboratory teaches students the fundamental techniques used by organic chemists such as recrystallization, melting point determination, distillation, extraction, thin-layer chromatography, and column chromatography. Mastery of these basic techniques lays the foundation for carrying out organic syntheses and/or natural product isolations. Students are given hands-on access to instrumentation for the characterization of synthetic products or organic unknowns using standard analysis methods such as IR, NMR, UV/V is spectroscopy, mass spectrometry, polarimetry, HPLC, GC and GC-MS. Students are responsible for writing laboratory reports for all experiments.

Prerequisite: CHEM 202

CHEM 210: Organic Chemistry I

3 Credits

Bonding theories for organic molecules; stereochemistry and conformational analysis; reactions (and mechanisms) of alkyl halides, alkenes, alkynes, aromatics, and alcohols. CHEM 210 Organic Chemistry I (3) Organic chemistry is an essential subject for many scientific disciplines, particularly those in the life, materials, and chemical sciences, as well as chemical engineering. The fundamentals of organic chemistry, as developed in CHEM 210, the first part of a two-semester organic chemistry sequence, are required for scientists to understand the electronic structure and reactivity of simple and complex molecules. Concepts taught in CHEM 210 include hierarchical bonding models (Lewis dot, valence bond, molecular orbital), Lewis acids and bases, conformational analysis and stereochemistry, functional groups and their reactivity (alkenes, alkynes, alkyl halides, dienes, aromatics, alcohols, and ethers), organic reaction mechanisms focusing on electrophiles and nucleophiles, and aromaticity. Successful students will understand and be able to apply various structural and reactivity models to solving problems in organic chemistry.

Prerequisite: CHEM 112

CHEM 210H: Organic Chemistry I - Honors

4 Credits

Principles and theories; nomenclature; chemistry of the functional groups; applications of spectroscopy. Because of duplication of material, students may not receive credit for both CHEM 210 and 202. CHEM 210H Organic Chemistry I - Honors (4) Chemistry 210H is the first semester of an in-depth two semester survey of organic chemistry. It should be followed by Chemistry 212H. The concentrated and fast-moving pace of this course is facilitated by four class periods/week, seven (biweekly) hour exams and an evening recitation dedicated to the informal discussion of the subject material covered in previous or pending hour exams. This course will emphasize the mechanistic underpinning of organic chemistry. That is, students will not only learn what happens in organic chemistry but also, and more importantly, why and how. It is hoped that students will develop an intuition for the structure, function and reactivity properties of organic compounds which is of fundamental importance for subsequent studies in the life, material and chemical sciences. The course begins with an introduction to the structural aspects of organic compounds and an appreciation of the three-dimensionality of the subject based upon the important concepts of molecular orbital theory, valence bond theory, hybridization and conformational analysis. Reaction mechanisms and organic synthesis, two important topics that are emphasized throughout the course, are introduced early in the context of addition reactions of alkenes and alkynes. Perhaps the most abstract/vexing topic in organic chemistry is next encountered, namely, stereochemistry. These fundamentals are then used to explore the reactivity properties of various classes of compounds including substitutions and eliminations of alkyl halides, free radical reactions of alkenes, isomerization and cycloadditions of conjugated pi systems, and electrophilic substitution reactions of aromatic compounds.

Prerequisite: CHEM 112 Honors

CHEM 212: Organic Chemistry II

3 Credits

Continuation of CHEM 210. Emphasis is placed on the role of organic reactions in biological chemistry. CHEM 212 CHEM 212 Organic Chemistry II (3) This course will continue to build upon the important concepts learned in the prerequisite course, CHEM 210, with an emphasis on reactions mechanisms and organic synthesis. The course will begin with conceptually new material that will be applied in the laboratory course, namely, the elucidation of the structures of organic compounds using mass spectrometry, infrared spectroscopy and nuclear
magnetic resonance spectroscopy. The majority of the new material is concerned with the chemistry of carbonyl compounds and includes: 1) the nucleophilic addition reactions of ketones and aldehydes; 2) nucleophilic acyl substitution reactions of acid chlorides, anhydrides, esters and amides; 3) carbonyl alpha-substitution reactions and 4) carbonyl condensation reactions. The latter part of the course will be concerned with biologically relevant compounds such as amines, amino acids/peptides/proteins and carbohydrates.

**Prerequisite:** CHEM 210

CHEM 212H: Organic Chemistry II - Honors

3 Credits

Continuation of CHEM 210(H). Emphasis is on the chemistry of carbonyl compounds, spectroscopic analysis and pericyclic reactions. CHEM 212H Organic Chemistry II - Honors (3) CHEM 212H is the second semester of a comprehensive year-long treatment of introductory organic chemistry at an advanced level. CHEM 210H is recommended but not required. This honors course focuses more on depth than breadth, and will delve into some of the more modern approaches/theories to key topics. Most of the material derives from the chemistry of carbonyl compounds. The classic topics -- carbonyls as in electrophiles and as nucleophile (enolate) precursors -- will be covered. In addition, discussions of stereochemical selectivity issues will provide the framework to introduce contemporary concepts of stereoelectronic and steric effects into these topics. For example, Cram, Felkin-Ahn and chelation-based models for stereoselective addition of nucleophiles to aldehydes/ketones will be developed, as will chiral auxiliary chemistry for stereoselective enolate addition reactions. In addition to carbonyl chemistry, an introduction to spectroscopic techniques for compound characterization will be included. These techniques include mass spectrometry, infrared spectroscopy, and nuclear magnetic resonance spectroscopy. Finally, a survey of pericyclic reactions, along with the molecular orbital (stereoelectronic) underpinnings of chemical selectivity observed in these processes, will be pursued. Class grades will be based on 5 exams, 5 (out of 6) homework assignments, and a final exam.

**Prerequisite:** CHEM 210

Honors

CHEM 213: Laboratory in Organic Chemistry

2 Credits/Maximum of 2

Basic laboratory operations; synthesis and chemical or instrumental analysis. Because of duplication of subject matter, students may not receive credit for both CHEM 203 and CHEM 213. CHEM 213 CHEM 213 Laboratory Organic Chemistry (1-2) A strong foundation in organic laboratory skills is provided by this laboratory course. Laboratory work includes learning the basic techniques and recrystallization/melting point determination, distillation, liquid/liquid extraction, thin layer, chromatography and column chromatography in a specific context via theme-based modules. Mastery of these basic techniques lays the foundation for carrying out a multi-step synthesis for the Team Project assignment, which may require the use of more advanced laboratory techniques. Students are required to write professional final reports (ACS-style) for each experiment. Students are often provided with hands-on access to instrumentation for the characterization of synthetic products or organic unknowns using standard analysis methods such as IR, NMR, UV/V is spectroscopy, mass spectrometry, polarimetry, HPLC, GC and GC-MS. CHEM 210 is a prerequisite and CHEM 212 a co-requisite for this course, because they provide the theoretical background for the reaction chemistry as well as the spectroscopic characterization of organic molecules.*Note: The number of credits and meeting times vary from location to location. Some locations offer CHEM 213 as two one-credit courses to be taken in sequential semesters, whereas other locations offer CHEM 213 as a single-semester two-credit course. Normally, the latter format involves two 3-hour labs per week in addition to extensive written work outside of the laboratory. The prerequisite / concurrent requirement for CHEM 212 does not apply when CHEM 213 is taken as a 1 credit course.

**Prerequisite:** CHEM 210 . Prerequisite or concurrent: CHEM 212

CHEM 213H: Laboratory in Organic Chemistry - Honors

2 Credits

Basic laboratory techniques learned in context via theme-based modules, spectral analysis, multi-step synthesis, and professional scientific writing. Because of similarity of subject matter, students may not receive credit for both CHEM 203 and CHEM 213. CHEM 213H Laboratory in Organic Chemistry - Honors (2) A strong foundation in organic laboratory skills is provided by this laboratory course. Laboratory work includes learning the basic techniques and recrystallization/melting point determination, distillation, liquid/liquid extraction, thin layer, chromatography and column chromatography in a specific context via theme-based modules. Mastery of these basic techniques lays the foundation for carrying out a multi-step synthesis for the Team Project assignment, which may require the use of more advanced laboratory techniques. Students are required to write professional final reports (ACS-style) for each experiment. Students are often provided with hands-on access to instrumentation for the characterization of synthetic products or organic unknowns using standard analysis methods such as IR, NMR, UV/V is spectroscopy, mass spectrometry, polarimetry, HPLC, GC and GC-MS. CHEM 210 is a prerequisite and CHEM 212 a co-requisite for this course, because they provide the theoretical background for the reaction chemistry as well as the spectroscopic characterization of organic molecules.

**Prerequisite:** CHEM 210 and CHEM 212; Concurrent: CHEM 212

Honors

CHEM 213M: Laboratory in Organic Chemistry - Honors, Writing Intensive

2 Credits

Basic laboratory techniques learned in context via theme-based modules, spectral analysis, multi-step synthesis, and professional scientific writing. Because of similarity of subject matter, students may not receive credit for both CHEM 203 and CHEM 213.

**Prerequisite:** CHEM 210 and prerequisite or concurrent: CHEM 212

Honors

Writing Across the Curriculum

CHEM 213M: Laboratory in Organic Chemistry - Writing Intensive

2 Credits

Basic laboratory techniques learned in context via theme-based modules, spectral analysis, multi-step synthesis, and professional scientific writing. Because of similarity of subject matter, students may not receive credit for both CHEM 203 and CHEM 213.

**Prerequisite:** CHEM 210 and prerequisite or concurrent: CHEM 212

Writing Across the Curriculum
CHEM 227: Analytical Chemistry

4 Credits

The purpose of this course is to provide students with a rigorous and comprehensive exposure to the techniques and methods used in biotech, environmental, forensic, and pharmaceutical industrial and research laboratories. The principles, methodology and practical aspects of both traditional and modern chemical analysis will be discussed. Laboratory and lecture are fully integrated, emphasizing the importance of the laboratory component to achieving mastery of overall course content. Concepts will include acid-base, precipitation, chelation, electrochemistry, UV/Vis spectroscopy, and introductory chromatography, as well as some more advanced topics at the instructor’s discretion. Students will be expected to develop both their chemical problem solving and laboratory skills, and will be evaluated on their ability to speak and write clearly, solve context-based chemical problems, maintain a research style laboratory notebook, and carry out reliable chemical analysis individually as well as part of a team. This course is relevant to any student majoring or minoring in Chemistry or Forensic Science.

Prerequisites: CHEM 112

CHEM 233: Chemistry and Literature

3 Credits

Exploration of key concepts of chemistry, the reciprocal influence of chemistry and literature through history, and the relationship of science to society, culture, and values. ENGL (CHEM) 233 Chemistry and Literature (3) (GN or GH) ENGL/CHEM 233 is a pedagogically innovative course that will be team taught by an instructor from the English department and one from the Chemistry department. Both instructors will be present in the classroom throughout the semester, providing joint presentations and leading discussions. Students may earn either GH or GN credit for the course, but not both. This course teaches both basic concepts of chemistry and their cultural elaboration in literature. It seeks to provide students with a nuanced understanding of how literature and science inform each other and negotiate cultural, religious, and political tensions. The course seeks to explore ways in which our modern world is defined by and dependent on a variety of sciences and technologies. The impact of scientific and technological discoveries continues to dominate discussions of who we are, where we come from, where we are going, and our place in the universe. Understanding how we, as a society, have acquired knowledge is especially important when the ideas, perspectives, and discoveries are perceived to be in conflict with our religious, cultural, or political beliefs. Understanding the origin and development of these ideas, perspectives, and discoveries is an essential component of science and scientific achievement, but too often our methods of teaching science focus almost exclusively on teaching facts and theories at the expense of the historical discovery and development of those facts and theories. This course teaches both the scientific facts and theories and the contexts of their production in order to sharpen student’s understanding; abilities at critical evaluation of facts. The literary and scientific focus will vary from class to class, but may include writings by literary authors such as Edward Bulwer-Lytton, Bram Stoker, H. G. Wells, Garrett Serviss, William Butler Yeats, Arthur Machen, D. H. Lawrence, A. E. Waite, Aleister Crowley, Arthur Conan Doyle, and Camille Flammarion, and scientific texts by scientists such as William Crookes, William Ramsay, Frederick Soddy, Ernest Rutherford, Wilhelm Conrad Roentgen, Henri Bequerel, J. J. Thomson, Niels Bohr, and Marie Curie. Like many literature courses, ENGL/CHEM 233 interprets history, assesses individual and social behavior, engages philosophical ideas, and expresses ethical and aesthetic values. It is especially useful at exploring cultural and social tensions involving scientific knowledge. For students in science programs, the course will explore the technical and conceptual dimensions of scientific knowledge in historical and cultural context. Political, cultural and personal motivations are integral components of the scientific method and deeply influenced the discovery of many of the fundamental chemical and physical concepts students are expected to master in their science curricula. Students should expect to take two exams consisting of a midterm and a final, to write at least two papers for the course demonstrating their abilities at literary analysis and grappling with the themes of the course, and to make a group presentation to the class. Classroom discussion and general class participation will also be a factor in evaluation. The course can be used as an elective credit toward the English Major and Minor, and can help students in English, Chemistry, or any other major fulfill General Education degree requirements. It will be offered once every other year with 20 seats per offering.

Cross-listed with: ENGL 233

Bachelor of Arts: Humanities
General Education: Humanities (GH)
General Education: Natural Sciences (GN)

CHEM 294: Special Problems and Research

1-4 Credits/Maximum of 12

Designed for freshman or sophomore students who are prepared to undertake special problems and research by arrangement with a faculty member.

CHEM 294H: Special Problems and Research - Honors

1-4 Credits/Maximum of 12

Designed for freshman or sophomore students who are prepared to undertake special problems and research by arrangement with a faculty member.

Prerequisite: permission of instructor
Honors

CHEM 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

CHEM 301: Environmental Chemistry and Analysis

3 Credits

Chemical principles, interpretation, and methods of analysis for groundwater, water supply, wastewater treatment, stream pollution. CHEM 301 CHEM 301 Environmental Chemistry and Analysis (3) The objective of the course is to introduce students to water quality chemistry and the associated laboratory analytical techniques commonly used in groundwater, water supply, wastewater treatment, stream pollution control. This course will be instructed with classroom lectures, laboratory exercises, and a project. These laboratory exercises include pH, solids, turbidity, alkalinity, acidity, dissolved oxygen, biochemical oxygen demand, chemical oxygen demand, total organic carbon, chloride residual, chlorine demand, nitrogen, phosphorus, nitrate, sulfate, chloride, hardness, and metals. This course involves two lecture periods and one laboratory period each week. The students will be evaluated with quizzes, midterm examination, final examination, laboratory reports, and
a project report. The course has a prerequisites of a two-semester General Chemistry course and the associated laboratory courses. This course is a prerequisite for Water Supply and Pollution Control which is one of core courses for Environmental Engineering Program.

**Prerequisite:** CHEM 112 and, CHEM 113

CHEM 310: Introductory Inorganic Chemistry

3 Credits

Conceptual and descriptive aspects of inorganic chemistry, focusing on structures, bonding, and properties. CHEM 310 Introductory Inorganic Chemistry (3)CHEM 310 covers the structure, bonding, and properties of inorganic molecules and solids. Theories and models of chemical bonding, including valence bond theory, crystal field theory, and molecular orbital theory are applied to inorganic molecules, coordination compounds, and solids. Aspects of structural inorganic chemistry are presented, including molecular geometry and structures of metallic, ionic, and covalent solids. Transition metal chemistry is discussed, including key aspects of bonding, properties, and reactions. The course also covers acids and bases, oxidation and reduction, and coordination chemistry. Special topics such as solid-state inorganic materials, inorganic nanoscience, and bioinorganic chemistry may also be included.

**Prerequisite:** CHEM 112

CHEM 316: The Professional Chemist

1 Credits

Industrial employment opportunities and challenges; graduate and professional school opportunities; tailoring the chemistry curriculum to career goals. CHEM 316 CHEM 316 The Professional Chemist (1)

This junior-level seminar course is designed to help prepare chemistry majors to take advantage of opportunities provided by the Department and community of professional chemists in choosing, attaining, and furthering their career goals. A number of guest lectures cover a variety of career-related topics. Careers in the pharmaceutical, chemical production, biotechnology, and analytical sectors and other specialty companies will be discussed. Also, various academic careers paths are presented and compared. Preparing for chemistry graduate school and other post graduate training will be an important element of this seminar. Most of the meetings of the course will be primarily informational. A graded short presentation on a chemistry related topic is also required.

**Prerequisite:** fourth-semester standing in chemistry

CHEM 395: Chemistry Teacher Assistant Training

1-2 Credits/Maximum of 2

Instruction and practice in the role of the teaching assistant in the undergraduate chemistry laboratory.

CHEM 400: Chemical Literature

1 Credits

Instruction in use of the library and of the literature of chemistry. CHEM 400 Chemical Literature (1) CHEM 400 covers an orientation to use the library; sources of organic and inorganic synthesis information; use of relevant indexing and abstracting services; spectral data sources; patent literature; sources related to general chemical information, and properties data. Additional topics may be included as time permits.

**Prerequisite:** 12 credits of chemistry

CHEM 402: Chemistry in the Environment

3 Credits

Chemistry of the atmosphere, natural waters, and the land surface with particular focus on human influence on processes occurring therein. CHEM 402 CHEM 402 Chemistry in the Environment (3) Fundamental and descriptive aspects of the sources, reactions, transport, and effects of chemical species, both natural and synthetic, in water, air, soil, and living systems, and the influence of human activities on these processes. The goal of the course is to gain an understanding of the theory and application of the fundamental processes that determine the distribution and transport of inorganic and organic substances in the environment; the techniques for determining important physicochemical properties that influence environmental fate; and the major sources of important classes of environmental chemicals. Rapid increases in technological sophistication have led to startling innovations in our everyday lives almost unthinkable a century ago. However, at the same time, advances in science and engineering have complicated how we live and react to the new technologies and, at times, force consideration of complex issues before our need for reflection. Approaching problems from different directions and perspectives is fundamental to our understanding of Earth processes. New and continued emphasis in global warming, loss of biodiversity, ozone layer depletion, acid mine drainage, sustainable development and energy use are only a few of the major environmental threats which require an intelligent and informed response. As such, the course provides a balanced discussion of the hard science and social sciences aspects of environmental issues.

**Prerequisite:** CHEM 212. Prerequisite or concurrent: CHEM 450 or CHE 320

CHEM 406: Nuclear and Radiochemistry

3 Credits

Theory of radioactive decay processes, nuclear properties and structure, nuclear reactions, interactions of radiation with matter, biological effects of radiation. CHEM 406 CHEM 406 Nuclear and Radiochemistry (3) CHEM 406 provides a basic introduction to many of the important physical phenomena in nuclear and radiochemistry and the theories that describe them. The exposition of both experimental phenomena and theory complements the content of other upper-level courses in physical chemistry such as CHEM 450 and 452. Specifically, the types of radioactive decay are described, and, using this information, the equations that relate the growth and decay, i.e., the kinetics, of radioactive nuclei are derived. In parallel, a variety of types of nuclear reactions, such as neutron capture are introduced and used to develop the equations that governing the kinetics of nuclear reactions, including the concept of cross section. To describe the nature of nuclear matter, the relationships between energy, binding energy, and mass, are developed and augmented with the introduction of related quantities including the nuclear magnetic-dipole moment, total angular momentum of the nucleus, and Fermi-Dirac and Bose-Einstein statistics. A basic introduction to quantum mechanics, including several problems of increasing complexity, namely, the one-dimensional particle-in-a-box, the three-dimensional particle-in-a-cubic-box, and the particle-in-a-spherical box is then provided. The latter problem forms the basis for developing the single-particle shell-model of the nucleus, which is compared to the single-particle shell-model of the atom, namely, the hydrogen-atom problem. The barrier-penetration theory of alpha-decay, Fermi's phase-space theory of beta-decay, and the selection rules for gamma-ray decay
Introduction to numerical and nonnumerical computer uses in physical science. CHEM 408 CHEM 408 Computational Chemistry (3) CHEM 408 introduces some of the many ways in which computers are used in modern chemical research. The main emphasis is on (1) molecular modeling; (2) including such topics as electronic structure calculation, molecular mechanics, molecular dynamics and Monte Carlo simulation methods. In lesser detail, chemical informatics will also be considered, time permitting. Discussion of the theoretical underpinnings of these various methods and their range of applicability will be combined with exercises illustrating the use of several current chemical software packages and with assignments based on critical reading of illustrative literature papers.

**Prerequisite:** Prerequisite or concurrent: CHEM 452

**CHEM 408: Computational Chemistry**

3 Credits

Conceptual and descriptive aspects of nontransition elements, covering structural, thermodynamic, and kinetic features. CHEM 410 CHEM 410 Inorganic Chemistry (3) CHEM 410 covers structure and bonding in inorganic chemistry, including the chemistry of main group elements and selected topics in transition metal chemistry. Theories and models of chemical bonding (valence bond theory, crystal field theory, and molecular orbital theory) are applied to inorganic molecules, coordination compounds, and solids. The course also covers the following topics: periodic trends in the chemistry of the d- and p-block elements, structural solid state chemistry; magnetism of transition metal complexes and inorganic solids, ionic and covalent bonding in solids, electronic properties of metals, alloys, superconductors, and semiconductors, synthesis of inorganic materials, and properties of nanoscale inorganic solids.

**Prerequisite:** CHEM 112 and CHEM 202 or CHEM 210. Prerequisite or concurrent: CHEM 450 or CHEM 452

**CHEM 410: Inorganic Chemistry**

3 Credits

Structure and bonding of compounds containing transition metals. CHEM 412 Transition Metal Chemistry (3) CHEM 412 covers the chemistry of the transition metals, and in particular the d-block elements. Major areas of emphasis include coordination chemistry, organometallics, and the role(s) of transition metals in biology. The course covers the following topics: molecular symmetry with applications to bonding and vibrational spectroscopy, coordination chemistry, structural and optical isomers, crystal and ligand field theories, electronic structure and electronic transitions, spectroscopic methods for probing transition metal complexes, kinetics and thermodynamics of ligand substitution reactions, oxidation-reduction reactions, organometallic complexes and their basic reaction types, homogeneous and heterogeneous organometallic catalysts and their reaction cycles, the interactions of metal ions with biological molecules, the function of transition metal ions in metalloproteins, and medically-important transition metal complexes.

**Prerequisite:** CHEM 202 or CHEM 210 and CHEM 310. Prerequisite or concurrent: CHEM 450 or CHEM 452

**CHEM 413: Chemistry of the Elements**

4 Credits

Theoretical and descriptive chemistry of the elements; laboratory synthesis and measurements in inorganic, coordination, and transition metal chemistry.

**Prerequisite:** CHEM 213

**CHEM 423W: Chemical Spectroscopy**

4 Credits

Modern methods and instruments of spectroscopy and their applications to problems of chemical structure and analysis. CHEM 423W Chemical Spectroscopy (4) This course reviews modern methods and instruments of spectroscopy and their applications to problems of chemical structure and analysis. Topics include electronics, optics, and atomic and molecular spectroscopy (UV-VIS, Fluorescence, FTIR, Raman, liquid- and solid-state NMR). The course thoroughly integrates lecture and laboratory activities. The laboratory component incorporates skill-building exercises with open-ended guided-inquiry laboratory exercises and a semester-long laboratory- and literature-based research project. Students work in small groups (2-3 students) to complete each assignment. Students are required to write research papers during the semester. The reports are linked to the core course topics and the fifth is associated with the semester-long research project. All reports require students to search for and read the relevant published literature. The course is designed to be rigorous and comprehensive in scope. The writing component for this course includes: maintaining a proper laboratory notebook; reports; and an oral poster presentation. All writing elements are reviewed and graded by the instructor and teaching assistants.

**Prerequisite:** A C or better in (CHEM 227; OR CHEM 221) AND CHEM 452

**Writing Across the Curriculum**

**CHEM 425W: Chromatography and Electrochemistry**

4 Credits

Gas, liquid, and other forms of chromatography; important techniques of electrochemistry.

**Prerequisite:** CHEM 227 or CHEM 221, CHEM 450

**Writing Across the Curriculum**

**CHEM 427: Forensic Chemistry**

4 Credits

Analytical and instrumental methods used in the forensic sciences with special emphasis on the analysis and characterization of trace evidence. CHEM (FRNSC) 427W Forensic Chemistry (4) The purpose of this course is to provide students with a rigorous and comprehensive exposure to the techniques and methods used in private, state and federal crime labs in the analysis of trace evidence. The course thoroughly integrates lecture and laboratory activities to explore the history, controversies and current issues related to each topic. The laboratory component incorporates
skill-building exercises with open-ended guided-inquiry laboratory exercises and a semester-long laboratory- and literature-based research project. Students work in small groups (2-3 students) to complete each assignment. Students are required to write five research papers during the semester. Four of the reports are linked to the core course topics and the fifth is associated with the semester-long research project. All reports require students to search for and read the relevant published literature. The course is relevant to any student majoring in Forensic Sciences or who has an interest in obtaining employment in a crime lab. The course is required for accreditation through the American Association of Forensic Sciences and is recommended by the National Institute of Justice in their published recommendations for undergraduate curricula in the forensic sciences. The proposed course and the course in Forensic Anthropology/Biology comprise the core 400-level science courses required in the Forensic Sciences major. The course is designed to be rigorous and comprehensive in scope. Grades will be based on in-class lecture examinations (20%), problem sets (10%), laboratory notebooks (15%), laboratory write-ups (30%), and a term project (written and oral presentations; 25%). The writing component for this course includes: maintaining a proper laboratory notebook; five approximately 10-page reports; and an oral poster presentation. All writing elements are reviewed and graded by the instructor and teaching assistants. Students are allowed to correct, or rewrite, and resubmit notebook entries for three separate submissions (notebooks are graded a total of eight times throughout the semester) and the written reports excluding the final project report. Students are required to submit a preliminary poster for a non-graded) review prior to the oral presentation. The writing component of the course accounts for 55% of the total course grade.

**Prerequisite:** CHEM 213, CHEM 227 and FRNSC 411 or CHEM 431W

Cross-listed with: FRNSC 427

Writing Across the Curriculum

**CHEM 430: Structural Analysis of Organic Compounds**

3 Credits

Spectroscopic methods as tools in gross and detailed structural analysis and interpretation within the framework of modern theory. CHEM 430 CHEM 430 Structural Analysis of Organic Compounds (3) This course is designed to introduce students to the spectroscopic techniques that are used to elucidate the structures of organic molecules of various molecular weights. Some theoretical background will be provided and is necessary, but the emphasis is on solving problems. The course starts with fundamental concepts and techniques learned in sophomore organic chemistry and builds toward state-of-the-art methods used by modern organic and bioorganic chemists. Topics to be covered include: UV spectroscopy, 1D-1H and 13C NMR, spin-spin (scalar) coupling and chemical shifts, IR spectroscopy, simple and advanced mass spectrometric techniques, stereochemistry, advanced NMR topics including advanced 1D and 2D NMR and correlation spectroscopies. Some consideration will also be given to the challenges associated with structure determination in biomolecules.

**Prerequisite:** CHEM 210 and CHEM 213; Concurrent: CHEM 213

CHEM 431W: Organic and Inorganic Preparations

4 Credits

Preparation, purification, and characterization of both organic and inorganic compounds by modern methods. CHEM 431W CHEM 431W Organic and Inorganic Preparations (3) CHEM 431W is a one-semester, writing-intensive advanced laboratory course that focuses on the preparation, isolation, purification, and characterization of organic, organometallic, and inorganic compounds. Students are expected to use the techniques learned in the introductory organic chemistry laboratory and will learn more advanced techniques such as the use of air-free and anhydrous reaction conditions, glove bags, vacuum manifolds, vacuum distillations, flash chromatography, solvent stils, and gas-tight syringes. Molecular modeling techniques are also introduced. Students are given hands-on access to instrumentation for the characterization of synthetic products or organic unknowns using standard analysis methods such as IR, NMR, UV/V is spectroscopy, mass spectrometry, polarimetry, HPLC, GC and GC-MS. Students are expected to search the chemical literature using databases and online journals and to write formal lab reports in ACS style. The lab assignments include syntheses, separating an unknown mixture, and a team project, which includes a written proposal, synthetic work, a final report, and a poster presentation.

**Prerequisite:** CHEM 213

Writing Across the Curriculum

**CHEM 432: Organic Reaction Mechanisms**

3 Credits

The study, evaluation, and discussion of the mechanisms of selected organic reactions.

**Prerequisite:** CHEM 212

**CHEM 440: Instrumental Analysis**

3 Credits

General instrumental theory and methods used in common atomic and molecular analyses. CHEM 440 CHEM 440 Instrumental Analysis (3) This course presents analytical methods used by the chemistry community in a way that extends and compliments the treatment in CHEM 221. Preliminary discussions will entail sample preparation for organic and inorganic samples, quantitative measurements, sensitivity and limit of detection. Techniques addressed will cover the areas of separation, qualitative and quantitative optical spectroscopic techniques, mass spectrometry, electroanalytical techniques and surface analysis. In separation techniques, methods presented will be capillary electrophoresis, gas, liquid, and ion chromatography. In optical spectroscopy, methods presented will be infrared, Raman, nuclear magnetic resonance, ultraviolet and visible molecular absorption, chemiluminescence, inductively coupled plasma emission, atomic fluorescence, atomic absorption and emission spectrometry. Mass spectrometry methods presented will include time of flight, magnetic sector and electric sector mass spectrometry as well as interfacing with gas chromatography, liquid chromatography and capillary electrophoresis. Electroanalytical methods include amperometric, voltammetric and potentiometric techniques. Surface analysis methods discussed will be atomic force microscopy, scanning tunneling microscopy, Auger electron spectroscopy, X-ray photoelectron spectroscopy and secondary ion mass spectrometry.

**Prerequisite:** CHEM 450 and CHEM 221

**CHEM 441: Elemental Analysis and Instrumental Design Laboratory**

1 Credits

An introduction to the use of modern instruments for problems in chemical structure and analysis. CHEM 441 CHEM 441 Elemental Analysis and Instrumental Design Laboratory (1) CHEM 441 is one of
three laboratory courses (CHEM 441, CHEM 443, and CHEM 445) which accompany the lecture course in instrumental analysis, CHEM 440. The topics for CHEM 441 are: 1) optics, flame atomic emission spectrometry, microwave induced plasma emission spectrometry, 2) electronics and data acquisition/signal analysis, and 3) basic ultraviolet-visible instrument design. Every student will have ample opportunity to become proficient in the operation of the instruments being studied. They will spend about half of the time learning the fundamentals of each instrument and will then carry out a specific determination using each one.

**Prerequisite:** or concurrent: CHEM 440

CHEM 443: Electrochemistry and Chromatography Laboratory

1 Credits

An introduction to the use of modern instruments for problems in chemical structure and analysis. CHEM 443 CHEM 443 Electrochemistry and Chromatography Laboratory (1) CHEM 443 is one of three laboratory courses (CHEM 441, CHEM 443, and CHEM 445) which accompany the lecture course in instrumental analysis, CHEM 440. The topics for CHEM 443 are: 1) ion sensitive electrodes and cyclic voltammetry, 2) gas and high performance chromatography, and 3) gas chromatography-mass spectrometry. Every student will have ample opportunity to become proficient in the operation of the instruments being studied. They will spend about half of the time learning the fundamentals of each instrument and will then carry out a specific determination for each one.

**Prerequisite:** or concurrent: CHEM 440

CHEM 445: Atomic and Molecular Spectroscopy Laboratory

1 Credits

An introduction to the use of modern instruments for problems in chemical structure and analysis. CHEM 445 CHEM 445 Atomic and Molecular Spectroscopy Laboratory (1) CHEM 445 is one of three laboratory courses (CHEM 441, CHEM 443, and CHEM 445) which accompany the lecture course in instrumental analysis, CHEM 440. The topics for CHEM 445 are: 1) flame atomic absorption spectrometry and fluorimetry, 2) infrared and ultraviolet-visible spectroscopy, and 3) nuclear magnetic resonance spectrometry. Every student will have ample opportunity to become proficient in the operation of the instruments being studied. They will spend about half of the time learning the fundamentals of each instrument and will then carry out a specific determination for each one.

**Prerequisite:** or concurrent: CHEM 440

CHEM 446: X-Ray Crystallography

3 Credits

Theoretical and practical aspects of structure determination using x-ray diffraction, from crystal growth to structure solution. CHEM 446 CHEM 446 X-Ray Crystallography (3) CHEM 446 introduces the student to the basic principles of molecular structure determination through the diffraction of X-rays by single crystals. The emphasis is on small organic, coordination and organometallic compounds. However the principles can provide the basis for extensions into disciplines ranging across geology, materials, molecular biology, and nanoscience. The course is organized in the same way that an actual crystal structure determination might proceed, with theoretical considerations introduced as needed. Techniques of crystal growth and selection are summarized. X-ray sources and instrumentation are described briefly. Unit cells, Miller planes, unit cell geometry and Bragg’s law give rationale to the diffraction experiment. Space group symmetry is connected with data collection and the contents of the unit cell. Practical considerations of data collection and instrumentation are covered next. The theoretical description of structure factors and Fourier synthesis leads to consideration of solutions to the phase problem. The remainder of the course illustrates the process of structure solution using real data and software readily available to the students. All the details of publication of a crystal structure; the CIF, ORTEP figures and the format of the experimental section of most journals is described using actual student selected publications. Related structural techniques such as protein crystallography and molecular modeling may be reviewed time permitting.

**Prerequisite:** CHEM 210

CHEM 448: Surface Chemistry

3 Credits

Surface chemistry, emphasizing the physical and chemical aspects of surfaces important for applications in colloids, catalysis, microelectronics and biocompatibility. CHEM 448 CHEM 448 Surface Chemistry (3) CHEM 448 introduces the student to the basic principles of the chemical behavior of surfaces with an emphasis on the fundamental aspects, including surface structure, bonding, thermochemistry and dynamical behavior. The course is intended to provide the basis for extensions into disciplines ranging across geology, materials, environmental engineering, biology, agriculture, physics and nanoscience. Fundamental concepts and relationships of the chemical behavior of organic and inorganic substances that the student has already learned in previous courses will be assembled, correlated and directed towards understanding the behavior of the special case of the surfaces and interfaces of liquids and solids. Starting from the basic principles the student will be guided to evolve a fundamental understanding and predictive ability for important man made and natural applications and phenomena of practical interest, including colloids, surface coatings, lubrication, heterogeneous catalysis, weather, geology, chemical sensing, microelectronics and biocompatibility.

**Prerequisite:** CHEM 450 and CHEM 452

CHEM 450: Physical Chemistry - Thermodynamics

3 Credits

Introduction to physical chemistry with primary emphasis on chemical thermodynamics and its molecular interpretation.(Graduate credit not allowed for students majoring in Biochemistry and Molecular Biology, Chemistry, or Chemical Engineering.) CHEM 450 Physical Chemistry - Thermodynamics is a physical chemistry course that introduces students to chemical properties of matter and the fundamentals of chemical thermodynamics. The theoretical foundations of thermodynamic principles are covered and illustrated with a wide variety of examples from the sciences, engineering and technology fields. The course covers the following topics: gas laws, equations of state, the First Law of Thermodynamics, work and heat, internal energy, enthalpy changes, heat capacity, the Second Law of Thermodynamics, entropy and entropy changes, the Third Law of Thermodynamics, Helmholtz and Gibbs energies, phase stability and phase boundaries, phase diagrams, phase equilibrium, surface tension, capillary action, partial molar quantities, thermodynamics of mixing, chemical potential, solvent and solute activities, colligative properties, the phase rule, thermodynamics of two-component systems, chemical equilibrium, spontaneity of chemical
reactions, the response of equilibria to experimental conditions, and equilibrium electrochemistry. Note: Students cannot receive credit for both CHEM 450 and CH E 320.

Prerequisites: CHEM 112, MATH 141, ( PHYS 211; PHYS 212 ) Students cannot receive credit for both CHEM 450 and CHE 320. Recommended Preparations: MATH 231; MATH 230

CHEM 452: Physical Chemistry - Quantum Chemistry
3 Credits

Introduction to physical chemistry with primary emphasis on molecular structure, spectroscopy, and chemical kinetics. (Graduate credit not allowed for students majoring in Biochemistry and Molecular Biology, Chemistry, or Chemical Engineering.) CHEM 452 CHEM 452 Physical Chemistry - Quantum Chemistry (3) CHEM 452 is an introductory physical chemistry course that covers quantum chemistry, atomic and molecular spectroscopy, and chemical kinetics. If time permits, other possible topics include statistical thermodynamics, nuclear magnetic resonance, electron spin resonance, structures of solids, X-ray scattering, and processes at surfaces. Quantum chemistry includes: development of wave mechanics, Schrödinger equation, particle in a box, in a ring, on a spherical surface, free particle, barrier penetration, harmonic oscillator, postulates, hydrogen atom, helium atom, electron spin, atomic and molecular structure and symmetry. Spectroscopy includes: atomic spectra, microwave, infrared, and visible spectra of molecules. Chemical kinetics includes: rate laws, mechanisms, chain reactions, polymerization reactions, catalysis, reaction mechanism reaction dynamics (collision theory and activated complex theory), and nature of potential energy surfaces for reactions.

Prerequisites: CHEM 112, (PHYS 211; PHYS 212) AND (MATH 231 OR MATH 230)

CHEM 457: Experimental Physical Chemistry
1-2 Credits/Maximum of 2

Laboratory experiments designed to illustrate the principles of physical chemistry and teach techniques of error analysis and the presentation of quantitative data. (Graduate credit not allowed for students majoring in Biochemistry and Molecular Biology, Chemistry, or Chemical Engineering.) CHEM 457 CHEM 457 Experimental Physical Chemistry (2) CHEM 457 is a laboratory course designed to illustrate some of the principles of physical chemistry presented in CHEM 450 and 452 and teach proper treatment and presentation of quantitative data. In this course, students will learn how to write quantitative laboratory reports complete with analysis of the uncertainties of the measurements they make. They will also learn how these uncertainties are propagated through each calculation that make use of the initial measurements. If done so, students should become more aware of the importance of experimental design, proper use of instrumentation, and careful data collection.

Prerequisite: or concurrent: CHEM 450 or CH E 320

CHEM 459W: Advanced Experimental Physical Chemistry
4 Credits

Laboratory experiments and projects for students interested in advanced study in physical chemistry. CHEM 459W Advanced Experimental Physical Chemistry (4) CHEM 459W Advanced Experimental Physical Chemistry is a project-based course designed as a follow-up to CHEM 457. CHEM 459W provides students with further experience in laboratory techniques used for quantitative experimentation and with the processing and interpretation of quantitative data. Experiments and short research projects are designed to complement the theoretical knowledge acquired in lecture courses so as to enhance students' competence in problem solving in a research environment. Particular attention will be devoted to written communication of experimental results in an effective and concise manner according to American Chemical Society journal standards.

Prerequisite: CHEM 450, CHEM 457 Prerequisite or concurrent: CHEM 452

Writing Across the Curriculum

CHEM 464: Chemical Kinetics and Dynamics
3 Credits

Introduction to chemical kinetics and molecular dynamics. CHEM 464 CHEM 464 Chemical Kinetics and Dynamics (3) CHEM 464 is a one-semester course that introduces students to chemical kinetics and molecular dynamics, the branch of chemistry concerned with the rates of chemical reactions and the microscopic details of how reactions occur. The course covers old and new experimental, theoretical, and computational methods for kinetics and dynamics. Example systems are chosen from a variety of application including gas-phase reactions, reactions in solution, atmospheric chemistry, and reactions in biological systems. Topics covered are: basic concepts, phenomenological treatments, mechanisms, chain reactions, potential energy surfaces, collision theory, transition state theory, analysis, reactions of surfaces, photochemistry, molecular beams, Monte Carlo methods, molecular dynamics, energy requirements for reaction, and energy disposition.

Prerequisite: CHEM 450 or CH E 220 and CHEM 452

CHEM 466: Molecular Thermodynamics
3 Credits

Introduction to physical chemistry with a primary emphasis on the statistical and molecular interpretation of thermodynamics. CHEM 466 CHEM 466 Molecular Thermodynamics (3) CHEM 466 is a physical chemistry course that emphasizes the statistical and molecular interpretation of thermodynamics. This focus enables the student to consider macroscopic properties based on the constituent molecular properties. After a very brief introduction to classical thermodynamics, the statistics of large systems is introduced, used to develop the Boltzmann distribution of energies and then combined with the quantum mechanical structure of energy levels to form a basis to predict and understand atomic and molecular properties such as heat capacity and chemical reaction equilibrium. Solution thermodynamics, interfacial phenomena and colligative properties are discussed in terms of lattice models. The course then turns to a molecular view of transport and chemical reaction rates. Molecular transport is described in terms of random molecular motion and intermolecular forces that tie together to give macroscopic behavior such as ionic conductivity and mass diffusion. Reaction rates are formulated in terms of the distributions of energies and statistical probabilities of the combined reactants in a transition state. Cooperativity in phase transitions is discussed, followed by adsorption and catalysis. Examples with proteins and other biomolecules, as well as polymers and various solutions, appear throughout the course.

Prerequisite: CHEM 450 or CH E 220
CHEM 472: General Biochemistry I

3 Credits

Basic structure and function of cellular components; principles of enzyme kinetics and regulation. CHEM 472 General Biochemistry I (3) CHEM 472 will serve as an introductory course in biochemistry. The course will begin with a review a number of chemical concepts applicable to biochemistry including molecular interactions, acid-base reactions, buffers, titrations and basic thermodynamic and kinetic concepts. The focus will then shift to a discussion of the structures of the biomolecules that make up living matter including carbohydrates, lipids, membranes, proteins, and enzymes, emphasizing the relationship between chemical structure and biological function.

Prerequisite: CHEM 212

CHEM 474: Organic Synthesis

3 Credits

Theory and methodology of organic synthesis applied to complex organic molecules. UCHEM 474 CHEM 474 Organic Synthesis (3) CHEM 474 will present the theory and methodology of organic synthesis. The course will initially focus on the methodology necessary to synthesize complex organic molecules. This will include an in-depth look at functional group transformations, carbon-carbon bond forming reactions, ring-forming reactions, aromatic chemistry and heterocyclic chemistry. We will then discuss the use of retrosynthetic analysis and the "disconnection approach" to logically guide total synthesis. Finally, a number of literature syntheses will be used to examine the strategies involved in formulating a total synthesis emphasizing the compatibility of functional groups, sequence of reactions, use of protecting groups and the impact of stereochemistry.

Prerequisite: CHEM 212

CHEM 476: Biological Chemistry

3 Credits

Fundamentals of Biochemistry for Chemists. Students cannot receive credit for both CHEM 476 and BMB 401. CHEM 476 Biological Chemistry (3) This course is designed to be an introduction to biological chemistry from a chemistry student's perspective. The course will cover the basics of protein, nucleic acid, lipid and carbohydrate structure. The three-dimensional structural aspects of these biological macromolecules will be emphasized, showing their structure-function relationships. The course will also cover some of the chemical logic in enzymatic reactions, drawing from advanced organic and inorganic chemistry concepts, and include a focus on physical processes such as reaction kinetics and binding equilibria. More advanced topics of interest to chemistry students will also be covered, including the biochemical aspects of drug design and discovery. Throughout, the approach will be to introduce the analytical tools that have led to major advances in biochemistry as well as the physical and chemical principles underlying each topic. The course will follow a textbook designed for chemistry students. It will also include reading assignments of several types, including historical papers and current scientific literature dealing with recent advances in the field. The course also includes assignments that require students to familiarize themselves with modern biochemical databases such as those from the National Center for Biotechnology Information.

Prerequisite: CHEM 212 and CHEM 450

CHEM 494: Chemical Research

1-10 Credits/Maximum of 20

Experimental investigation of an original research problem. Preparation of a formal thesis is optional. (Credit not allowed for graduate students in Biochemistry, Chemistry or Chemical Engineering.)

CHEM 494H: Chemical Research

1-10 Credits/Maximum of 20

Experimental investigation of an original research problem. Preparation of a formal thesis is optional. (Credit not allowed for graduate students in Biochemistry, Chemistry or Chemical Engineering.)

Honors

CHEM 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor

CHEM 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

CHEM 496H: Independent Studies

1-18 Credits/Maximum of 18

CREATIVE PROJECTS, INCLUDING RESEARCH AND DESIGN, WHICH ARE SUPERVISED ON AN INDIVIDUAL BASIS AND WHICH FALL OUTSIDE THE SCOPE OF FORMAL COURSES.

Honors

CHEM 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Child Maltreatment and Advocacy Studies (CMAS)

CMAS 258: Introduction to Child Maltreatment and Advocacy Studies

3 Credits

Introduction to the multidisciplinary field of child maltreatment. CMAS (HD FS) 258 Introduction to Child Maltreatment and Advocacy Studies (3) This course will focus on the identification, investigation, service, advocacy, prosecution, and prevention of child maltreatment as well as the treatment of adverse health outcomes for children who have been maltreated. Specific topics include the causes, correlates, and consequences of child maltreatment, best practices for reporting and investigating an allegation of child maltreatment, evidence-based prevention and intervention programs, the Child Welfare System, and
relevant legal issues (e.g., termination of parental rights, children's testimony in court, etc.). By definition, this course will detail issues related to the abuse and neglect of children. This material can be difficult to hear, view, and discuss. This course is a required course, and a prerequisite for all advanced courses, for a Minor in Child Maltreatment and Advocacy Studies.

Cross-listed with: HDFS 258, SOC 258

CMAS 465: Child Maltreatment: Prevention and Treatment

3 Credits

Advanced examination in approaches for preventing child maltreatment and treating its consequences. HD FS (CMAS) 465 Child Maltreatment: Prevention and Treatment (3) Child maltreatment, including physical abuse, sexual abuse, emotional abuse, and neglect, is a highly prevalent condition affecting nearly one million children each year in the United States alone. This course will delineate the long-term health consequences affecting those who have experienced child maltreatment with an emphasis on those outcomes exerting the greatest impact on overall public health throughout the lifespan. Importantly, a focus on the etiology of such health consequences in the child maltreatment population will be made in order to understand the causal pathways leading to these health consequences. This focus on etiology will serve as a segue into the remaining sections of this course, specifically the prevention and treatment of child maltreatment and its consequences. Universal and targeted prevention programs, where the focus is to prevent an initial instance of child maltreatment from occurring, will be detailed, as will tertiary prevention programs, where the focus is on preventing a re-occurrence of child maltreatment. Similarly, prevention of adverse health outcomes for those affected by child maltreatment will also be covered. Finally, evidenced-based interventions applied with children who have been maltreated and are currently experiencing clinical levels of impairment (e.g. post-traumatic stress disorder) will be detailed. Identification and rehearsal of treatment components commonly used in prevention and clinical intervention programs will be emphasized. Students successfully completing this course will have direct knowledge of the consequences of child maltreatment and the established methods used in prevention and intervention programs applied with this population.

Prerequisite: CMAS 258 or HD FS258

Cross-listed with: HDFS 465

CMAS 466: Systems and Community Responses

3 Credits

An exploration of the multidisciplinary response to child maltreatment. CMAS 466 / NURS 466 Systems and Community Responses (3) An exploration of the multidisciplinary response to child maltreatment. The roles, responsibilities, and interconnected relationships between the systems that interact when responding to child maltreatment issues will be analyzed. The forensic medical response, challenges, and multidisciplinary team best practices to child maltreatment case are examined. Students will explore responses and best practices within the health care, judicial, child protection, social service, educational, mental health, human service, and community systems. This course provides students with the opportunity to work with a variety of majors and understand more clearly the interdisciplinary nature of child maltreatment prevention, advocacy, and response.

Prerequisite: CMAS 258
expands their knowledge of the language and cultures of the Chinese-speaking peoples in China, Hong Kong, Taiwan, and around the world. To that end, there are both language-learning objectives and socio-cultural ones in this course. About 85% of the class time will be spent in language learning and about 15% in cultural issues. Research indicates that the more knowledge students have about the context in which the target language is used, the higher their overall linguistic proficiency level will be. To facilitate students’ learning of Chinese culture, CHNS 110 also incorporate into the curriculum a variety of culture-related activities, including interviewing native speakers, film screening, calligraphy workshops, etc. Class activities include group discussion, mini-presentations, and in-class conversation practice. Evaluation will be through means such as vocabulary and sentence pattern quizzes, weekly journals and reaction papers, chapter exams, in-class oral presentations, writing assignments, and a final oral interview with instructor. Chinese 110 counts towards the Chinese minor and may also fulfill other requirements, such as providing credits towards the major in Comparative Literature or the major in Asian Studies—check with advisors in those majors.

Prerequisite: CHNS 003
Bachelor of Arts: 2nd Foreign/World Language (All)
International Cultures (IL)

CHNS 120: Introduction to Chinese Literature and Culture
3 Credits
Chinese cultural productions, classical through contemporary, literature and film; changing cultural settings in multiple Chinese-speaking locations. Taught in English. CHNS 120 Introduction to Chinese Literature and Culture (3) (GH;IL) (BA) This course meets the Bachelor of Arts degree requirements. This course provides an introduction to Chinese cultural production from ancient times to the modern era, with an emphasis on literature. In its more recent segments, the course will include film as well as considerations of Chinese cultures in the Chinese diaspora (such as the United States) and throughout the Chinese-speaking world. Students will learn about major eras of Chinese literature and the diversity of Chinese cultures in such locations as mainland China, Taiwan, Hong Kong, and the worldwide Chinese diaspora. Readings will represent several genres, such as poetry, folktale, short story, novel, prose fiction, drama, and historical annals. Through this course students can develop a historical and cultural perspective in order to understand the contexts and value systems that have inspired literary works. Students will investigate such topics as the relation between social institutions and the individual, the traditional patriarchal system, the changing roles of women, westernization, and post-modern consumer culture, among others. Students will read literature and related materials from different periods, with examples from other media such as films where appropriate. Class work will include lectures or presentations by the instructor and student participation through means such as guided discussions, group discussions, and students’ presentations. This participatory approach is intended to deepen students’ appreciation of the texts, to help them understand value systems that may differ from, or else be shared with, those predominant in modern Western cultures, and to assist students in developing analytical and expressive abilities. CHNS 120 is designed to be suitable for all students generally interested in China and the Chinese-speaking world, or interested in literature and other fields of humanistic study, whether or not they have previously studied Chinese culture. All materials will be available in English. The course is designed to count as General Education, as international cultures, and as a B.A. “Other Cultures” course. This course will be taught in the active-learning mode, featuring a variety of instructional components such as lecture, discussion, oral presentations, web-based activities, etc., to provide students abundant opportunity for expressing their opinions. As a general education course, all versions will include writing, speaking, self-expression; information gathering, synthesis, and analysis; and international/intercultural components.

CHNS 120W: Introduction to Chinese Literature and Culture
3 Credits
An introduction to Chinese histories and societies through literature and visual culture. Readings drawn from both classical and modern traditions, covering the period from the 11th century B.C. to the contemporary era.

General Education: Humanities (GH)
Writing Across the Curriculum

CHNS 121: Chinese Film and New Media
3 Credits
Survey of Chinese film and new media in the twentieth century and beyond, with attention to changing cultural settings. Taught in English. CHNS 121 Chinese Film and New Media (3) (GH;IL) (BA) This course meets the Bachelor of Arts degree requirements. This is intended to provide an introduction to modern and cutting-edge forms of cultural production in the Chinese-speaking world from the twentieth century to the present day. Prior study of China is not required and materials will be available in English. Students will learn about major technologies and forms of media, including film, TV, and various forms of new media (cellphone novels, blogs, MMOGs, IM, and Web 2.0 for instance). Readings and screenings will cover several artistic modes including formalism, historiography, documentary, period drama, and experimental works. The course, or individual units within the course, will be structured so that students develop an historical perspective, allowing them to understand the cultural contexts that have inspired the creative works under study. By examining Chinese-language film and new media with attention to changing cultural settings, students will investigate such topics as the relation between social institutions and the individual, the formation and expression of identity, changing gender roles and family structures, the impact of technological and economic trends on social structure, and changing climates of censorship and freedom of expression. In addition, students will learn to think critically about various media’s techniques and aesthetics of representation, and will become more engaged, critical spectators of film and related media. Class work includes some lecture but emphasizes guided discussions, group work, writing exercises, and some student presentations. This participatory approach is intended to deepen students’ appreciation of the works, to help them understand value systems that may differ from those predominant in western cultures, and to assist students in developing both analytical and expressive abilities. Through critical reading, group discussion and interpretive writing, students will hone skills for evaluating modes of cultural production and consumption in the Chinese-speaking world. Evaluation will be through means such as in-class presentations, short writing assignments, midterms or quizzes, one analytic paper (3-7 pages), and in-class/on-line participation and discussion. The course is designed to be suitable for all students generally interested in China, or interested
in various fields of humanistic study, whether or not they have previously studied Chinese culture. It is designed to count as General Education and as a B.A.

CHNS 401: Level Three Chinese A
4 Credits

Emphasis on oral proficiency through discussions of aspects of contemporary Chinese culture. CHNS 401 Advanced Conversation (4) (IL)

(BA) This course meets the Bachelor of Arts degree requirements. This course aims to enhance students’ abilities in speaking, listening, reading, and writing. The objectives in this course are: 1) to review, reinforce, and expand the basic grammar; 2) to expand knowledge of characters, vocabulary and idioms; 3) to be able to speak not only in single sentences, but in dialogues to perform basic communicative functions; 4) to be able to read and understand simple essays and stories; 5) to be able to write short compositions.

Prerequisite: CHNS 110
Bachelor of Arts: 2nd Foreign/World Language (All)
International Cultures (IL)

CHNS 402: Level Three Chinese B
4 Credits

Readings in representative works of traditional and modern literature; practice in composition; study of aspects of Chinese culture.

Prerequisite: CHNS 401 OR EQUIVALENT
Bachelor of Arts: 2nd Foreign/World Language (All)
Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures
International Cultures (IL)

CHNS 403: Level Four Chinese A
4 Credits

Continuation of CHNS 402. Aims to improve students’ proficiency in all four language skills, with a special emphasis on writing. CHNS 403W Level Four Chinese A (4) This is a four credit course designed for those who have completed Level Three Chinese B or the equivalent. The course aims to further develop students’ proficiency in all four language skills, with a special emphasis on writing. Students will study several topics on current social issues in modern Chinese society, such as education and housing issue, woman’s status, through a selected textbook, news reading, and by interviewing native speaker of Chinese from different regions. Via all the debatable topics, students will be guided to explore and practice various writing styles, such as description, narration, argumentation, and expository writing throughout the semester. Comparison of rhetorical strategies between Chinese and English writing will also be introduced to help students think and write more like a native when using the target language. The majority of reading and writing assignments will be done outside of class, with some guidance from the instructor. Class time will be used mainly for discussions of content, feedback on writing. All class activities will be conducted in Chinese. Writing exercises include short response papers on topics, summarizes of the readings, and short essays. Through the writing exercises, students will reflect more deeply on certain topics, synthesize information from course materials, provoke critical thinking and express their opinions and support ideas by referring to and citing from source texts. This will help students be prepared for a longer thesis in the next course in the sequence. This course will help students further advance their writing skills by continuously building their vocabulary, understanding the target culture, and its social issues through various sources of structured and authentic materials. Students will also write a resume and formal letter that help them start building their career in Chinese.

CHNS 404: Level Four Chinese B

4 Credits

Continuation of CHNS 403W. Aims to improve students' proficiency in all four language skills through content-based language learning. CHNS 404 Level Four Chinese B (4) This is a four credit course designed for those who have completed Level Four Chinese A or the equivalent. The course aims to further develop students' proficiency in all four language skills. Students will study several topics on current social issues in contemporary Chinese society. For example, economic spurt in China, environmental protection, values conflict between traditional Chinese culture and Western culture, etc. Students will learn those topics via a textbook, interviewing native speakers of Chinese from different regions, and variety of media, such as newspaper, TV news, and movie. The majority of reading and writing assignments will be done outside of class, with some guidance from the instructor. Students will be guided to use appropriate resources such as dictionaries, reference books, online dictionaries and other online resource to facilitate their learning. Class time will be used mainly for discussion of content, feedback on writing, and presentations by students. All class activities will be conducted in Chinese. Students will be mainly evaluated by writing exercises and presentations. Writing exercises include short response papers on topics, summarizes of the readings, short essays and a final thesis. Through the writing exercises, students will reflect more deeply on certain topics, synthesize information from course materials, provoke critical thinking and express their opinions and support ideas by referring to and citing from source texts. Presentations include debates, individual and group presentation, which will help students advance their communication and presentational skills. E-portfolio will sample the work students have done in the course.

Prerequisite: CHNS 403W

CHNS 410: Chinese Through Film

3 Credits

This course is designed for students who finish Level Two Chinese or higher and aims to help them develop Chinese proficiency through movies. CHNS 410 Chinese Through Film (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course aims to provoke students' critical thinking on China-related issues and improve their Chinese language proficiency by encouraging them to reenact and remake selected scenes from the movies, investigate and discuss the social issues as shown from the movies. This is a three credit course designed to go beyond the day-to-day topics to further develop students' proficiency understanding of the social issues in contemporary China and thus enhance their Chinese language proficiency. Through watching movies in Chinese, students will listen to authentic Chinese and expose to broader aspects of Chinese people's lives and Chinese society. In addition, they will have opportunities to conduct culture comparisons between China and the U.S., East and West, which will enable them to make in-depth analysis when examining a complex social, political or economic issue in China. The follow-up class activities include both speaking and writing assignments. Depending on the topics, speaking assignments may include: reenactment or recreation of a selected scene from the movies, class or group discussions, debates and presentations. Writing assignments may include: writing a new story or different ending for the movies, and reflection essays.

Prerequisite: CHNS 110 or equivalent
Bachelor of Arts: Humanities
International Cultures (IL)

CHNS 411: Chinese Written Characters

3 Credits

This course aims to establish a solid foundation of students' Chinese orthography and prepare students for continuing study in subsequent Chinese courses. CHNS 411 Chinese Written Characters (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course aims to equip students' knowledge and skills of Chinese orthography through both cognitive and meta-cognitive approach of learning, where it is expected to lay a solid foundation for students' continuing study of subsequent Chinese language courses. Students will learn and apply radical and component-building approach to synthesize their already-acquired characters, and further learn approximately 500 additional characters. Characters selected for study in this course are based upon the references of HSK (Hanyu Shuiping Kaoshi) Level V and TOP-Huayu (Test of Proficiency-Huayu) Intermediate level. Building upon these characters, students will further expand their vocabulary volume through character association strategy and extensive reading. Cooperative learning approach will be largely incorporated to promote in-class active learning, such as developing and sharing character learning strategies through keeping learning journal, group reading, discussing cultural connotations of selected amount of characters, etc. Students will also learn the origin, history and evolution of Chinese characters through
textbook reading and multimedia materials learning, such as DVD and YouTube video clips that help visualize the evolution process of selected characters for demonstration. Instructional Objectives (what the student is expected to learn; what skills s/he will develop): 1. Understand the origin, history and evolution of Chinese characters. 2. Develop and apply strategies on learning Chinese characters. 3. Familiarize with available resources that assist Chinese characters learning and memorizing. 4. Strengthen and synthesize students’ existing knowledge of Chinese orthography. 5. Learn approximately 500 new characters. 6. Expand vocabulary volume derived from the acquired characters. 7. Expand reading experience by reading semi-authentic and authentic articles that are constituted of the acquired characters. 8. Strengthen listening and speaking skills of the target language through intensive in-class discussions and lectures

Prerequisite: CHNS 110 or the equivalent
International Cultures (IL)

CHNS 412: Business Chinese
3 Credits

This is a three-credit course designed for those who have completed Level Two Chinese or the equivalent. Business knowledge is presented as a means to facilitate language learning, while the content-based materials enhance cultural awareness. Emphasis will be given to helping students gain the linguistic skills that characterize advanced level second language learners, especially linguistic conventions essential to functioning in business environments. Real cases involving successful multinational Chinese and foreign companies and issues such as marketing, branding, mergers and acquisitions, OEM, and international expansion will be used as texts. The selected textbook is in Chinese with English explanations, but students will be guided through in-class discussions in Chinese. Approximately 80% of the instructional language will be conducted in Chinese. This course is designed to give students exposure to China's vibrant business scene and to enhance both their Chinese skills in the business context and their understanding of the social and cultural aspects of “doing business” in China and the impact of Chinese economy in the globalization era. Students will discuss real business cases from multinational companies that have successfully entered the Chinese market and from large Chinese corporations that have been successful in the global market, especially in the United States. By reading, discussing, and performing communicative tasks related to those cases, students will learn how to use Chinese as a "carrier of culture", thus acquiring a better understanding of China in economic and cultural terms. In addition to the business case analysis, supplementary reading, writing and listening exercises as well as media materials, such as clips of Chinese talk shows and television interviews, will also be provided. Highlights of these exercises are: listening comprehension of business news reports on current issues; analysis of the Chinese financial market; discussion of Chinese business laws, translation of business terms and documents, and commercial language and word processing. Students are supported and guided through the course as they develop the skills they need to continue learning on their own. Students are encouraged to explore and keep up to date with new developments in China's economy through their own efforts, thus developing an independent learning style and connecting classroom learning to the real world.

Prerequisite: CHNS 110

CHNS 414: Chinese Language, Culture and Society
3 Credits/Maximum of 3

The study of Chinese language and culture and a perspective on the way of life in contemporary Chinese society. Through this course, the students are introduced to a cognitive approach to the study of Chinese language and culture and a broad perspective on the Chinese way of life in contemporary Chinese society. In particular, we will study how the interaction between Chinese language and culture frames the worldview of Chinese speakers, how the usage of the Chinese language manifests the underlying conceptual structure, which in turn is shaped by the physical (including bodily) and cultural experience of its speakers, and how conventional usage of linguistic expressions of Chinese reflects, and possibly influences, the ways in which Chinese speakers see or conceptualize the world. We will focus on conventionalized expressions, which include compound words, idiomatic phrases, and proverbial sayings, in the Chinese language, and study the Chinese conventional ways of talking about reality, both external and internal, as windows into Chinese culture and cognition. More generally, we will try to understand the embodied nature of human cognition as we see how abstract thought is grounded in bodily experience in and with the physical and cultural world. We will also look at various domains of life in contemporary China in order to gain a better understanding of Chinese society. The objectives of this course are threefold: (1) to lead Chinese language students to a linguistic approach to language analysis so that they learn about how individual linguistic expressions fit into a coherent linguistic system; (2) to enable them to see how linguistic structures reflect underlying cognitive, conceptual structures which are derived from the interplay between human embodiment and cultural environment; and (3) to provide them with a broad perspective on contemporary Chinese society.

CHNS 415: China Beyond China
3 Credits

Study of modern and contemporary Chinese culture in its diversity and its intercultural contexts. CHNS 415 China Beyond China (3) (IL) In order to begin to understand Chinese culture, we cannot treat it as a monolithic, unified whole. This course will give an introduction to modern and contemporary Chinese culture (focusing on the 20th and 21st centuries) by paying special attention to China’s inner diversity, as well as the continuous shaping of Chinese culture in contact, dialogue, and tension with other cultures. Through the study of literary texts, films, and other cultural material - as well as a small number of theoretical essays - this course will focus on: 1) Chinese culture in its variety by focusing on Chinese cultural spheres beyond the People's Republic (Taiwan, Hong Kong), the Chinese diaspora, as well as other ethnicities and cultures within Mainland China; and 2) the ways in which Chinese modernity was impacted by intercultural impulses, as well as the recent self-representation of China in the context of globalization. Course Objectives include: 1. Understand modern and contemporary China in its cultural diversity, as well as shaped by intercultural and global processes. 2. Critically analyze processes of cultural contact and the representations of cultural differences. 3. Think critically about globalization with its impact on such categories as the local and the national. 4. Question your
assumptions about the world, re-examine your own points of view, and understand cultures and value systems that may differ from (or be shared with) your own.

CHNS 416: Gender and Sexuality in China

3 Credits

Study of gender roles and the imaginary of sexuality in the literary, filmic, and artistic production of modern China. CHNS 416 Gender and Sexuality in China (3) (IL) This course explores gender roles and the imaginary of sexuality in the literary, filmic, and artistic production of modern China (from the end of the 19th century up to today), paying attention also to developments in Chinese cultural spheres beyond the People's Republic, such as Taiwan, Hong Kong, and the Chinese diaspora. This course will use the representation of gender, sex, and sexuality as a lens through which modern and contemporary Chinese culture can be understood in its historical, social, and aesthetic changes. The analysis of representations of gender and sexuality throughout the class will focus on literary and filmic texts, as well as art, rather than on theoretical work on gender and sexuality (in China or in general). Course Objectives include:1. Critically assess the complex construction of gender roles and sexuality in modern and contemporary Chinese literature and film.2. Reflect critically on different ways of understanding and representing gender difference.3. Critically assess the connections between gender and sexuality and changing political, historical, and cultural contexts.4. Question your assumptions about gender and sexualities in the context of cultural difference, understand cultures and value systems that may be different from (or be shared with) your own.

CHNS 417: The Warrior, the Courtesan and the Ghost in Classical Chinese Novels

3 Credits

This course provides an introduction to major classical Chinese novels by focusing on three character types: the warrior, the courtesan, and the ghost. CHNS 423 417 The Warrior, the Courtesan and the Ghost in Classical Chinese Novels (3) (IL) A narrowly defined notion of modern literature is a relatively recent phenomenon that dates back only to the early twentieth century in the Chinese context. There is, however, a long tradition of the vernacular novel that remains influential till today, in spite of its marginalization by the Western-influenced Chinese Enlightenment project. This course provides an introduction to major classical Chinese novels by focusing on three character types: the warrior, the courtesan, and the ghost. The warrior is commonly found in historical romances, tales about errant knights and assassins, and martial arts fiction. Although the typical setting for the courtesan is in novels about prostitution (Xia Xie Xiaoshuo), this course will relate this figure to other female types in various domestic space, thereby tracing the genealogical connections between the domestic fiction and the courtesan fiction. The ghost can be found in Accounts of the Strange (Zhi Guai) and Tales of the Miraculous (Chuan Qi). This course will relate this figure in these narrative genres with other types of the supernatural being, such as Gods and Demons. Most readings will be drawn from the Mind-Qing period (14th -20th c) but modern and contemporary literature as well as visual or media culture that consciously continue or rewrite these narrative traditions will be considered as well. All readings and class discussions will be in English. Knowledge of Chinese or Chinese literature is not assumed or required. From year to year the content we cover might change, but this course will always explore:1) Major classical Chinese narrative traditions that are radically different from the Western-influenced narrative modes of the twentieth century.2) Pre-modern practices of literary reading and criticism and pre-modern notions of literacy, literature, and modes of circulation. Course Objectives include:1. Critically analyze major texts and genres of the classical Chinese novel.2. Understand pre-modern practices of story-telling, literary circulation, reading, and criticism.3. Think critically about pre-modern societies and their connections with the contemporary world.

CHNS 418: Confucius and the Great Books of China

3 Credits

This course familiarizes students with the critical texts and intellectual cultures of Warring States and early imperial China. CHNS 418 / ASIA 418 / HIST 482 Confucius and the Great Books of China (3) This course exposes students to the key texts, thinkers, and ideas that form the foundation of the Chinese classics and classical period, providing an integral foundation for the study of Chinese history, culture, or literature. While the emphasis is on the texts and their main themes, the course will encourage historical engagement with the texts by placing them into a context of competing cultural, social, political trends. Readings may be grouped around categories of teachings such as Confucianism, Buddhism, and Daoism, or around thinkers such as "Confucian) ritualists," "statesmen," "military strategists," "rebels," "recluses," and "spiritual leaders." Students will learn how each of these types of teachings and thinkers related to each other, as well as how they responded to the emergent, centralized political order of the day. This will help students better understand many of the recurrent intellectual, political, and religious themes that arise in later Chinese history as well.

CHNS 419: The Chinese Rhetorical Tradition

3 Credits/Maximum of 6

Study of the rhetorical works in ancient China as well as multiple facets of modern Chinese rhetoric. CHNS 419 The Chinese Rhetorical Tradition (3 per semester/maximum of 6) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course surveys the Chinese rhetorical tradition dating back two and a half millennia. Rhetoric is defined here as the study and practice of artful means of communication, including poetic, expository, and argumentative modes. The class will first delve into the works of competing intellectual schools in pre-imperial China
(pre-221 BCE), which set a corner stone for thoughts and practice of communication in the imperial period (221 BCE - 1918). These schools, including the Daoist, the Confucian, and the Legalist, developed their rhetorical notions through engaging with the political, intellectual, and ethnic Other. From here the class will examine the multiple facets of modern Chinese rhetoric, which has undergone a continual contact and conflation with other rhetorical traditions in the global contact zone. The class will focus on topics such as feminist discourse, Chinese-American rhetoric, and the teaching of writing, which bear direct implications on our contemporary social life.

**CHNS 452: Contemporary China: Culture and Trends**

*3 Credits/Maximum of 6*

Survey of aspects of the contemporary Chinese-speaking world. Includes readings from Chinese newspapers, magazines, and fiction. Topics may vary each semester. CHNS 452 Contemporary China: Culture and Trends (3) (IL) BA - This course meets the Bachelor of Arts degree requirements. This course surveys Chinese cultural production in the contemporary period, with an emphasis on literature. Taught in Chinese; readings and assignments in Chinese. The course will examine the diverse forms of cultural expression (literature, film, new media, theater, television) throughout the Chinese-speaking world. Students will learn about major cultural trends in such locations as mainland China, Taiwan, Hong Kong, and the worldwide Chinese diaspora. Readings will represent several genres, such as poetry, folktale, short story, novel, prose fiction, and drama. Through this course students can develop a historical and cultural perspective in order to understand the contexts and value systems that have inspired literary works in the contemporary period. Students will investigate such topics as the relation between social institutions and the individual, the traditional patriarchal system, the changing roles of women, westernization, and postmodern consumer culture, among others. Class work will include lectures or presentations by the instructor and student participation through means such as guided discussions, group discussions, and students' presentations. This participatory approach is intended to deepen students' appreciation of the texts, to help them understand value systems that may differ from, or else be shared with, those predominant in modern Western cultures, and to assist students in developing analytical and expressive abilities. Chinese 452 is designed to be suitable for students (Chinese majors) who have completed Chinese 401. This course will be taught in the active-learning mode, featuring a variety of instructional components such as lecture, discussion, oral presentations, web-based activities, etc., to provide students abundant opportunity for expressing their opinions. The course will include writing, speaking, self-expression; information gathering, synthesis, and analysis; and international/intercultural components.

**Prerequisite:** CHNS 401
Bachelor of Arts: Other Cultures
International Cultures (IL)

**CHNS 453: Chinese Film**

*3 Credits/Maximum of 6*

Selected films and directors representing various aspects of Chinese culture and cinema. Topics may vary each semester. Taught in Chinese. CHNS 453 Chinese Film (3) (IL) BA - This course meets the Bachelor of Arts degree requirements. This course surveys Chinese film from the early twentieth century to the present time, with an emphasis on film and national history. Taught in Chinese; readings and assignments in Chinese. The course will examine the diverse forms of film language in the works of filmmakers from mainland China, Taiwan, and Hong Kong. Readings will include interviews, reviews, film criticism, and other relevant texts (such as a short story that inspired a film). Through this course students can develop a historical and cultural perspective in order to understand the contexts and value systems that have inspired Chinese-language films. Students will investigate such topics as the relation between social institutions and the individual, the traditional patriarchal system, the changing roles of women, westernization, and postmodern consumer culture, among others. Class work will include lectures or presentations by the instructor and student participation through means such as guided discussions, group discussions, and students' presentations. This participatory approach is intended to deepen students' appreciation of the texts, to help them understand value systems that may differ from, or else be shared with, those predominant in modern Western cultures, and to assist students in developing analytical and expressive abilities. International Cultures (IL)

**CHNS 454: Introduction to Classical Chinese**

*3 Credits/Maximum of 6*

Basic patterns and structures of Classical Chinese to the first millennium B.C. to the 19th century. CHNS 454 Introduction to Classical Chinese (3) (IL) BA - This course meets the Bachelor of Arts degree requirements. This course introduces students to the basic patterns and structures of Classical Chinese. Classical Chinese is a language shaped in the latter half of the first millennium B.C. that still persists as a living medium of expression today. Knowledge of Classical Chinese is important to help students read and understand sophisticated modern Chinese texts, which make frequent use of Classical allusions and constructs. In this course, students will learn basic grammar, syntax, and commonly-used vocabulary. The cultural and literary implications of classical Chinese will be discussed throughout the course in order to provide the students not only with the linguistic knowledge of classical Chinese, but the rich historical backgrounds implied in this particular style of Chinese. The main goal of the course is for students to acquire skills in reading Classical Chinese and expand their knowledge and understanding of ancient Chinese culture, society and history in relation to modern and contemporary Chinese culture, such as Confucianism and family values. With this knowledge and training, not only will students be more comfortable reading the Chinese Classics, they will also thereby increase
their proficiency in modern Chinese and their knowledge of Chinese culture. This course will fulfill the Intercultural Cultures and B.A. "Other Cultures" and foreign language requirements.

**Prerequisite:** CHNS 401 or equivalent (such as study abroad credit)
Bachelor of Arts: Foreign/World Lang (12th Unit)
Bachelor of Arts: Other Cultures
International Cultures (IL)

CHNS 455: Masterpieces of Traditional Chinese Literature

3 Credits

Survey of traditional Chinese literature, including poetry, historical narratives, philosophical texts, and drama and novel. CHNS 455 Masterpieces of Traditional Chinese Literature presents an overview of China's literary tradition, focusing, in particular, on literary techniques used in a variety of text types such as poetry, essays, fiction and drama. This course aims to develop students' advanced knowledge of the features of traditional Chinese literature and its intellectual, cultural, and social background. Through close reading of selected major works, students will become familiar with the features of various genres. For example, students will study prose writings, the major poetic forms and some of the important poets from the Tang period, and aspects of literati culture through close reading of texts from the late imperial period. At the end of this course, a student will have read and discussed sample writings from philosophical and poetic traditions and well as sample writings on the cultural and scholastic activities of the literati. Students should also be able to deal with classical texts on a reasonable level, to identify problematic passages and to be able to clarify them with the help of secondary reference material. Students should also be able to appreciate some of the civilizing aspects of Chinese culture as well as literary and poetic devices such as tonal patterns, rhyme schemes, structure and writing techniques, and discussion of the poets and their work, and have an understanding of the main genres in classical Chinese literature and philosophy.

**Prerequisite:** CHNS 401 or equivalent
Bachelor of Arts: Foreign/World Lang (12th Unit)
Bachelor of Arts: Other Cultures
International Cultures (IL)

CHNS 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

CHNS 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Honors

CHNS 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

CHNS 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**Civic and Community Engagement (CIVCM)**

CIVCM 211N: Foundations: Civic and Community Engagement

3 Credits

Through readings, discussion, deliberation, listening, and individual as well as collaborative action, this course gives students the opportunity to learn about and practice theories and habits of civic and community engagement and public scholarship with the goal of helping to build democratic capacity and sustain participatory democracy. This course emphasizes concepts and case studies that focus on the people's role in shared governance. The course also provides a foundation for understanding how a wide range of other individual and collective practices have an equally important role to play in building and sustaining community. The course draws from studies in demography, political science, sociology, psychology of racial identity formation and education to help students communicate better about and in shared governance. Among the core concepts are the role of students and other citizens in sustaining and transforming their communities, the historical and contemporary mission of Land Grant universities, the centrality of rhetoric and communication to collaborative judgment, and the relationship among media, cultures, and politics as they affect civic and community engagement. Students also learn together about the range of ways that citizens do, can, and might participate in democratic decision-making and will observe and practice these forms in several communication media and across a range of differences. Finally, learn about models of and opportunities for engaging other citizens across and beyond Penn State, including in global environments.

CE 100S: Topics and Contemporary Issues in Civil and Environmental Engineering: First-Year Seminar

1 Credits

First-Year Seminar exploring a specific topic or contemporary issue in civil and environmental engineering. CE 100S Topics and Contemporary Issues in Civil and Environmental Engineering: First-Year Seminar (1) (FYS) The first-year seminar in civil engineering will provide an opportunity for students to explore a specific topic or contemporary issue, which may fall within one of the Department of Civil and Environmental Engineering's technical emphasis areas, or include many of the facets of civil engineering. Civil engineers plan, design, construct, operate, and maintain the physical works and facilities essential to modern life: highways, streets, bridges, dams and levees, water distribution and wastewater collection, and treatment systems. Civil engineers work with architects and other engineers in the design and construction of buildings and industrial structures and facilities. They also have a major responsibility for identifying and remediating environmental hazards. The specific course topic, chosen by the course instructor, will vary by section and semester and will be indicated by the section subtitle. Examples of the topics that may form the core of a seminar section include droughts and floods, lessons from structural failures, engineers as environmental change agents, beneficial reuse of treated wastewater, highway accident reconstruction and engineering, and landmark civil engineering projects. Within the context of the specific seminar topic, each section will provide students with an introduction to the civil engineering field, exposure to some of the professional skills and competencies associated with academic study and the practice of engineering, and access to relevant student and professional societies. Each seminar section will include an active learning element that may include laboratory experiments, group projects, class discussions, and possible trips, providing close interaction with the faculty member teaching the course. This seminar course will help incoming students become acclimated to University life and become aware of available resources and support services.

First-Year Seminar

CE 209: Fundamentals of Surveying

2 Credits

Fundamental surveying measurements, traverse computations, coordinate geometry, mapping, CAD applications. Intended for architectural engineering students. (The lecture will be taught concurrently with CE 211.)

Prerequisite: E G 130, MATH 141

CE 254: Personal & Occupational Safety

3 Credits

Students will learn about principles of safety in work and personal settings. CE 254 Personal Occupational Safety (3) (GHA; US) This is a 3 credit course designed for students who want an understanding of safety practices related to the individual's wellness and developing knowledge, attitudes, habits and skills needed for a safe healthful lifestyle. General safety topics that are relevant to students as they adjust to the transition into and through college are introduced through a values and decision making approach to learning. The students will understand direct and indirect cost related to an accident; identifying the major occupational and general injuries and deaths and the role of workers compensation, and safe procedures. OSHA will be discussed including its structure organization, citations fines, inspections, various standard areas, and developing an effective safety program. The course content will also be related to principles of personal and general safety including, preventive and protective systems, highway/road safety, general child safety, emergency response, and how safety is integrated with their lifestyle and our society. The course is designed to give students a broader understanding of both short-term and long-term wellness and how it is affected by safety behavior.

United States Cultures (US)
General Education: Health and Wellness (GHW)

CE 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

CE 310: Surveying

3 Credits

Fundamental surveying measurements, traverse computations, coordinate geometry, mapping, GPS and GIS, circular and parabolic curves, earthwork, boundary surveys, CAD applications. CE 310 Surveying (3) This is an introductory course in the fundamentals of surveying designed for Civil Engineering students. It includes basic measurement techniques of distance and angles, both horizontal and vertical. Traverse measurements analysis and mapping are discussed. Boundary surveys and legal descriptions are studied. Instruction includes the analysis of circular and parabolic curves, earthwork, and the use of coordinate geometry. Global positioning and graphic information systems are studied.

Prerequisite: EDSGN100, MATH 141

CE 321: Highway Engineering

3 Credits

Highway engineering principles, vehicle and driver characteristics; geometric and pavement design; highway drainage; traffic engineering; capacity analysis, and signal timing. CE 321 Highway Engineering (3) This course provides an introduction to highway engineering and is designed for civil engineering students. It includes topics such as vehicle motion, highway cross-sections, horizontal and vertical alignment, and sight distance. Other topics are pavement design, drainage analysis, traffic engineering and highway capacity. The students will also have a CAD lab where they design a highway using computer software. The semester project provides hands-on highway design experience. This course serves as a prerequisite for advanced highway engineering study.

Prerequisite: CE 310

CE 332: Professionalism, Economics & Construction Project Delivery

3 Credits

Introduction to engineering management process; economic analysis; pricing; contract documents; estimating; ethics; professional practice and engineering economy. CE 332 C E 332 Project Development (3) The
first five weeks of the course introduces concepts relating to engineering ethics, professionalism including the importance of licensure, and engineering economy. The remainder of the semester concentrates on project development and the design and construction of the delivery process. Topics include: scope of design services; conceptual cost estimates; the bidding process, estimating; and risk management.

CE 333: Construction Management I

3 Credits

Components of a construction organization, managerial terminology and documents, labor laws and relations, insurance and safety. C E 333W C E 333W Construction Management I (3) The object of this course is to have a broad understanding of the business process in the construction industry. The construction industry offers a variety of organization with each having specialized needs and processes in operating an effective business. The professional constructor deals with a complex process of decisions and auctions that start from the time of projects conception until the project is completed. The course addresses issues involving legal and code requirements, necessary documents in selecting projects, developing estimates, determining delivery systems, planning and scheduling, and managing a construction project. Also covered are the liability issues that will be required, insurances or bond requirements, and the ethical role of the constructor. The managerial and safety role of the professional constructor is also introduced.

Writing Across the Curriculum

CE 335: Engineering Mechanics of Soils

3 Credits

Soil compositions, classification, subsurface exploration, ground water flow, stress analysis, compaction, soil behavior, bearing capacity, lateral earth pressure, slope stability. C E 335 C E 335 Engineering Mechanics of Soils (3) This course explores the engineering properties of soils, fundamental soil mechanics, and their applications of foundation design and analysis. Specific topics covered in this course include soil compositions, soil classification, subsurface exploration, ground water flow and seepage analysis, stress analysis, compaction, consolidation, strength behavior, bearing capacity, lateral earth pressure, and slope stability analysis.

Prerequisite: E MCH213 ; Prerequisite or concurrent: GEOSC001

CE 336: Materials Science for Civil Engineers

3 Credits

Introduction to civil engineering materials; their structure and behavior: relationship between structure and behavior. C E 336 C E 336 Materials Science for Civil Engineers (3) This course introduces engineering students to the structure, properties and behavior of construction materials, providing the bridge between engineering mechanics and engineering design. The course is an engineering science course focused at providing the students with a working knowledge of the nature and engineering properties of construction materials to understand prediction models and statistical variations for quality control. The course provides an introduction to aggregates, concrete, asphalt, timber, steel, structural alloys, and polymers used in the civil infrastructure and in building construction.

Prerequisite: E MCH213 ; Prerequisite or concurrent: STAT 401

CE 337: Civil Engineering Materials Laboratory

1 Credits

Laboratory investigating the physical and mechanical properties of civil engineering materials; soils, aggregates, concrete; steel; wood; and polymers. C E 337 C E 337 Civil Engineering Materials Laboratory (1) The understanding of the structure, physical and mechanical properties and behavior of engineering materials is at the very core of engineering design. A command of this knowledge is essential for all civil engineers. This 1-credit laboratory provides a hands-on experience with the testing and evaluation of civil engineering materials, including soils, aggregates, concrete, steel, wood and polymers. In addition, this lab builds on the topics of professional communication and engineering in groups that are present throughout the Civil Engineering curriculum. This course is required for all Civil Engineering majors and is a required laboratory component for ABET review. The course also may serve selected Architectural Engineering students that currently enroll in Material Science for Engineers. The laboratory will be taught every semester with an offering of 4-6 sections per semester. The Civil Engineering Materials Laboratory is directly tied to Engineering Mechanics of Soils and Material Science for Civil Engineers. It replaces the laboratory component of both of the existing courses to create a comprehensive materials laboratory experience. By creating a stand-alone course, students may schedule the laboratory separate from the lecture time, eliminating multiple course conflicts. The course meets 3 hours each week throughout the semester with an introductory lecture and training session on lab safety. Concurrent or previous enrollment in Engineering Mechanics of Soils or Material Science for Engineers ensures that the students have completed the Strength of Materials course and have a clear point of reference to the relevance of the material in the course. The Civil Engineering Materials Laboratory will incorporate the use of a variety of equipment, including universal testing machines, Charpy fracture toughness device, Rockwell Hardness device, soil compaction devices, sieves, plasticity index devices, concrete mixing equipment, electronic strain devices, direct/biaxial/triaxial shear devices and other similar equipment.

Prerequisite: C E 335 or C E 336 or concurrent

CE 340: Structural Analysis

3 Credits

Analysis of statically determinate and indeterminate trusses, beams, and frames; reactions, axial forces, shears, moments, deflections. Introduction to influence lines. The course includes an introduction to structural systems and basic analysis methods for beams, frames, and trusses. Topics covered include the analysis of statically determinate and indeterminate structures, deflection calculations, influence lines, and an introduction to the stiffness method and a software package for structural analysis.

Prerequisite: EMCH 213

CE 341: Design of Concrete Structures

3 Credits

Design of reinforced concrete beams, slabs, and columns, with emphasis on ultimate-strength methods; prestressed concrete; building and bridge applications. C E 341 Design of Concrete Structures (3) This course provides students with an understanding of the structural design process, the mechanics of reinforced concrete, and the ability to design and proportion structural concrete members including slabs, beams, and
columns for strength, serviceability, and economy. Design procedures are based on the Building Code Requirements for Structural Concrete published by the American Concrete Institute. The mechanics underlying the code design equations are explained as well as their application to practical design problems. In addition to regular homework assignments the students complete a design project in which the design of specific components is integrated into the design of the structure as a whole.

**Prerequisite:** C E 340 . Prerequisite or concurrent: C E 336

CE 342: Design of Steel Structures

3 Credits

Design of steel tension members, beams, columns, beam-columns, and connections; elastic and plastic methods; design applications. C E 342 Design of Steel Structures (3) This is a first course in design of steel structures intended to develop a fundamental ability to evaluate and design steel tension members, beams, columns, beam-columns, composite beams, and connections. Discussion of design requirements focuses on failure mechanisms and behavior, evaluation of existing components, and the process to develop economical steel member designs. All discussions are based on the current American Institute of Steel Construction steel design specifications with an overview of historical requirements as appropriate. Students complete a design project of a multi-story, steel, commercial building that is intended to synthesize the course material and create a realistic context for the course. Weekly assignments are typically derived from the course project. Computer applications are an important component of these assignments.

**Prerequisite:** C E 336 , C E 340

CE 360: Fluid Mechanics

3 Credits

Mechanics of fluids; flow in conduits and around bodies, friction and energy loss, fluid measurements. C E 360 Fluid Mechanics (3) The course objective is to provide students with the fundamental physical and analytical principles of fluid mechanics through the understanding of the: conservation of mass, conservation of energy, and the conservation of momentum equations. The student will demonstrate the understanding of these fundamentals by solving problems dealing with: fluid properties, fluid statics, pressure on plane and curved surfaces, buoyancy and flotation, kinematics, systems, control volumes, conservation principles, ideal incompressible flow, impulse-momentum, and flow of a real fluid. Fluid mechanics is a prerequisite to all courses in hydrosystems and environmental engineering. It is typically offered fall and spring semesters and during summer session. A series of homework problems are assigned after each lecture and there are typically 3 examinations given during the semester and final examination during the final examination period.

**Prerequisite:** E MCH212

CE 370: Introduction to Environmental Engineering

3 Credits

Nature and scope of environmental issues; air, water, land impacts; fundamentals and processes of pollution control. CE 370 Introduction to Environmental Engineering (3) The objectives of this course are to introduce science and engineering principles for dealing with natural and engineered environmental systems; to provide quantitative tools to solve environmental engineering problems dealing with water and wastewater treatment, air pollution control, and management of solid and hazardous wastes; and to identify alternative ways to deal with pollution and to minimize pollution.

**Prerequisite:** CHEM 110 ; MATH 111 or MATH 141

CE 370H: Introduction to Environmental Engineering

3 Credits

Nature and scope of environmental issues; air, water, land impacts; fundamentals and processes of pollution control.

Honors

CE 371: Water and Wastewater Treatment

3 Credits

Water treatment; water storage; design of water distribution and wastewater systems; pumping stations. CE 371 Water and Wastewater Treatment (3) This course includes engineering design of water and wastewater treatment facilities, and it emphasizes quantitative problem solving. Numerous examples pertain to contemporary water and wastewater treatment facility designs. This course will nurture the ability to use the techniques, skills and state-of-the-art engineering tools so as to prepare students for water and wastewater treatment engineering practice. Water treatment-related topics include: water quality criteria for potable water, reactor characteristics, reaction rates in water and wastewater treatment, mixing and flocculation sedimentation, rapid sand filtration, chlorination and alternative disinfection. Wastewater pretreatment, biological principles for treatment of wastewater, suspended growth bio-systems, attached film bio-systems, nutrient removal processes, and de-watering and treatment processes for sludges is also included.

**Prerequisite:** C E 360 , C E 370

CE 371H: Water and Wastewater Transport Systems

3 Credits

Water, wastewater quantities; water storage; design of water distribution and sewerage systems; pumping stations.

Honors

CE 396: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

CE 396A: Structural Analysis

3 Credits

Analysis of statically determinate and indeterminate trusses, beams, and frames; reactions, axial forces, shears, moments, deflections. Introduction to influence lines. Introduction to matrix analysis methods and computer-aided structural analysis using SAP2000.
CE 396H: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Honors
CE 397: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

CE 399: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)
CE 410: Sustainable Residential Land Development
3 Credits

CE 410 provides students with a working knowledge of the residential land development design process including conservation and green design approaches; site assessment; grading and earthwork; utility design and layout; and stormwater management. The course covers the subdivision and land development regulatory process, zoning issues, and the elements of civil infrastructure design required in the residential land development process. Conservation design and sustainable development techniques are emphasized throughout the course. The course focuses on practice-oriented design problems and a real piece of land (either University owned or privately held) will be used throughout the semester for demonstration of design approaches for homework assignments and in-class examples. The course is an elective for students in the Civil Engineering major and an elective in the Residential Construction Minor.

Prerequisites: CE 332 Corequisites: AE 372 Concurrents: 7th Semester standing in AE or CE major.
Writing Across the Curriculum
CE 411: Residential Construction Design Project
1 Credits

Interdisciplinary teams will develop a complete design and investment package for a real life new residential or real estate development.

Prerequisite: 5th semester standing or higher
CE 421: Transportation Design
3 Credits

Design of streets and highway facilities; emphasis on geometric elements, intersections and interchanges, roadway drainage, and pavement design. C E 421W C E 421W Transportation Design (3) This course provides advanced study in highway engineering and is designed for civil engineering students who are interested in Transportation Engineering careers. It includes topics such as functional classification, highway cross-sections, horizontal and vertical alignment and sight distance. Other topics are pavement design, drainage intersection and interchange design and highway signs. The students will also have a CAD lab where they design a complete highway system. The semester project provides hands-on highway design experience and includes the planning and operational aspects of a new highway design. This course serves as a capstone design course with writing projects. Students are expected to do in-class presentations of their projects.

Prerequisite: C E 321
Writing Across the Curriculum
CE 422: Transportation Planning
3 Credits

Transportation systems planning, programming, and management; modeling and simulation, data collection, analysis, and forecasting. C E 422 C E 422 Transportation Planning (3) In this course, students acquire basic knowledge on the history and recent developments in transportation planning problems and quantitative methods. They will develop an understanding of transportation planning, transportation modeling, transportation system simulation, data collection techniques, and gain laboratory experience with each. Students will use mathematical/statistical models and GIS software to analyze, simulate, and forecast the demand for transport services. They will gain familiarity with the software used in transportation planning practice.

Prerequisite: 3 credits in probability or statistics
CE 423: Traffic Operations
3 Credits

The highway capacity manual, concepts and analyses, freeway operations, signalized and unsignalized intersections, signal coordination, traffic impact studies.

Prerequisite: C E 321
CE 424: Project Info. Modeling
3 Credits/Maximum of 3

Project Information Modeling is the process of constructing a 3D digital model of a project with attached information. Project Information Modeling (PIM) is an integrated process built on coordinated, reliable information about a project from design through construction and into operations. It is a new approach to project delivery in which a digital representation of the project process is used to facilitate the exchange and interoperability of information. Implementation of PIM generates significant benefits, including improved design quality, reduction in design errors, improved field productivity, reduction in conflicts and changes, and finally reduction in construction cost and time. In this course, students will learn applications of PIM used in the industry by different disciplines (e.g., architectural, engineering and construction), design model-based development and coordination (e.g., 3D, 4D, 5D, and XD), value engineering concepts, system clash prevention, and understand the benefits of various parametric modeling applications that can be used. Upon completion of this course, students will have full understanding of PIM concepts throughout the lifecycle of a building or an infrastructure project, from planning, design, pre-construction, construction and operations.

Prerequisite: EDSGN100 ; C E 332 or C E 333W
CE 432: Construction Project Management
3 Credits
Fundamentals of project management, construction scheduling using the CPM technique, construction project preplanning, and control of quality, safety, and costs. C E 432 C E 432 Construction Project Management

(3) This course introduces students to the basic practical aspects of the construction process and the quantitative methods used to manage projects within budget, deadline, and prescribed quality. Students will understand the construction market and the inter-relationships among the various players involved. Focus in this course is on integrating the various facets of construction cost estimating, planning, scheduling, control, and overall project management.

Prerequisite: C E 332

CE 434: Geotechnical Engineering Design
3 Credits
This is an advanced design course in geotechnical engineering, offered to undergraduate senior and graduate students in civil engineering. This course covers fundamental engineering geology, subsurface exploration including geophysical techniques, principles of shallow and deep foundation designs, slope stability, geosynthetics design, groundwater and drainage, and geotechnical earthquake engineering. The course is typically delivered in lecture format and concentrates on practice-oriented design problems in geotechnical engineering.

Prerequisite: CE 335

CE 435: Geotechnical and Materials Engineering Design Capstone
3 Credits
This course is an elective for students in the civil engineering major and serves as an essential prerequisite for continued study in the areas of construction and structural engineering. The course concentrates on practice-oriented design problems in foundation engineering.

Prerequisite: CE 335

CE 436: Construction Engineering Materials
3 Credits
Design, production, application, specification, and quality control of construction materials unique to civil engineering. C E 436 Construction Engineering Materials (3) C E 436 provides students with a working knowledge of the safe design, production and application of quality construction materials unique to civil engineering. The course builds upon the understanding of civil engineering materials gained in the introductory course. C E 436 focuses on the materials design and quality control of aggregates, steel, portland cement concrete, and asphalt concrete.

Prerequisite: C E 336 , STAT 401

CE 437: Engineering Materials for Sustainability
3 Credits
Environmental impact of materials; life-cycle assessment; material selection to optimize performance; design, evaluation, and production of green construction materials.

Prerequisite: C E 336 or equivalent

CE 438: Construction Engineering Capstone Design
3 Credits
Construction project integrating geotechnical reports; materials specifications; quality control; equipment; estimation; scheduling, design details: excavations, foundations, retaining walls, formwork, pavements. C E 438W C E 438W Construction Engineering Capstone Design (3) This course is intended to establish the foundation for organizational and procedural understanding in construction engineering. The student will gain the knowledge necessary to apply engineering principles in analyzing economical approaches to construction problems. This course will cover construction methods, equipments, and cost estimation of the construction materials, excavation, foundation, and other phases of civil engineering construction projects.

Prerequisite: C E 432 and C E 435 or C E 436

Writing Across the Curriculum

CE 439: Geotechnical and Materials Engineering Design Capstone
3 Credits
Subsurface site evaluation; integrated design of retaining walls, foundations, pavements, and materials for airports, highways, dams, or other facilities.

Prerequisite: C E 435 , and either C E 436 or C E 437

Writing Across the Curriculum

CE 441: Structural Design of Foundations
3 Credits
Design of concentrically and eccentrically loaded square, rectangular, and combined footings; analysis and design of mat foundations; retaining walls; piles caps; flexible retaining design, and caissons. C E 441 Structural Design of Foundations (3) This course prepares the structural engineering student to analyze, proportion, size reinforcing, and select steel sections for structural foundations designs based on the state of practice presented in ACI 318, AISC, and available industry literature. Structural foundation analysis techniques for many foundation types are presented with extensive use of EXCEL in the design process. Analysis and design of foundation systems are developed for concrete shear walls, concentrically loaded square and rectangular footings, eccentrically loaded square and rectangular footings, and combined footings. Use of approximate and finite element analysis methods for analyzing mat foundations and grid foundations are presented. Working knowledge of retaining wall, pile cap, and flexible earth retaining structure design methods are also developed. This course is an elective for students in the civil engineering major and serves as an essential prerequisite for continued study in structural engineering and advancement to the structures capstone course. This course is delivered in lecture format and concentrates on practice-oriented structural foundation analysis and design problems.
Prerequisite: CE 340; Concurrent: CE 341
CE 445: Advanced Structural Analysis

3 Credits

Analysis of trusses and frame stiffness matrix method of analysis. Analysis of indeterminate beams, trusses, and frames using classical methods. CE 445 C E 445 Advanced Structural Analysis (3) The course is an advanced analysis which includes an analysis of structures using classical and matrix methods. Topics covered include the analysis of statically determinate and indeterminate beams; trusses and frames. An introduction to the stiffness method and a software package for structural analysis will also be covered.

Prerequisite: CE 340

CE 447: Structural Analysis by Matrix Methods

3 Credits

Analysis of truss and frame structures using flexibility and stiffness methods of matrix analysis. Computer applications.

Prerequisite: CE 340

CE 448: Advanced Structural Design

3 Credits

Wind, snow, seismic, bridge loads; building design using steel, concrete, and prestressed concrete; advanced steel connections; capstone project; computer applications. CE 448W C E 448W Advanced Structural Design (3) The objectives of the course are to develop an understanding of advanced structural engineering design issues in a capstone context that will merge knowledge gained in prerequisite structural design and analysis courses. Building on concepts introduced in introductory steel building, concrete building, and foundation design, students will gain proficiency in structural conceptualization, environmental and induced load determination, modeling and analysis, detailed design of steel and concrete structures, and graphical communication.

Prerequisite: CE 342, CE 441; Prerequisite or concurrent: ENGL 202C

CE 449: Advanced Structural Design

3 Credits

Special systems, frames and bracing in steel, wood and reinforced or precast concrete. Introduction to composite construction. CE 449 C E 449 Advanced Structural Design (3) This course provides students with an understanding of advanced structural design processes, the mechanics of special systems (such as prestressed concrete) as well as the ability to design and proportion structural connections and bracing members including reinforced concrete and steel. The course will also introduce the LRDF approach and composite construction in which the design of specific components is integrated into the design of the structure as a whole.

Prerequisite: CE 340, CE 341, CE 342

CE 454: Safety

3 Credits

This course will focus on safety issues as they relate to OSHA.

Prerequisite: permission of program

CE 456: Planning and Scheduling

3 Credits

Theory and practice used in planning and scheduling projects; defining task and resources, creating logic diagrams, and monitoring the projects. CE 456 C E 456 Planning Scheduling (3) "Planning and Scheduling" encompasses construction tenets and fundamentals including organizing, staffing, directing, and controlling representing concepts and principles integral to career applications in project and design management. Students who successfully complete this course will be able to: 1) understand and use planning, scheduling, and control techniques for managing construction projects 2) understand scheduling techniques and computer applications in critical path methods, PERT; and resource scheduling 3) understand construction financing and schedule / cost relations 4) understand the principles of project tracking, progress measurements, trend analysis, and forecasting.

Prerequisite: CE 332 or CE 333W

CE 458: Construction Management II

3 Credits

Procedures in construction organization including procurement, ethics, field supervision, legal and managerial problems, personnel, cost accounting, and construction business practices. CE 458 C E 458 Construction Management II (3) This course presents policies, procedures, and applications in construction management and organization including procurement, ethics, field supervision, legal and managerial problems, personnel, cost accounting, and construction business practices. The course encompasses construction tenets and fundamentals including planning, organizing, staffing, directing, and controlling. Students who successfully complete this course will be able to: 1) understand organizational issues concerning development of a project delivery system 2) comprehend the roles and responsibility of the Resident Project Representative and members of the construction team and the respective utility of the resident inspection office responsibilities 3) know the various documentation construction records/reports normally 4) recognize the salient features of specifications and drawings and the fundamentals for using them in contract administration 5) become familiar with the prevailing construction laws, policies, and procedures dealing with labor and safety 6) understand the utility of meetings during construction and the principles and techniques of negotiation 7) apply risk management through contractual allocation of rush and liability 8) become well versed in planning/orchestrating during reconstruction operations 9) apply management principles of directing and controlling construction operations and resources including CPM scheduling, inspections, tests, and contractor submittals 10) understand the concept of value engineering in construction operations 11) understand the critical control issues involved with measurement and payments, controlling construction materials and workmanship, and changes and extra work

Prerequisite: CE 333W, CE 456
CE 461: Water-resource Engineering

3 Credits

Qualitative and quantitative description of the hydrologic cycle, flood and drought frequency analysis, climate and land use change impacts, risk analysis and uncertainty, water resource management at regional, national and global scale.

**Prerequisite:** C E 360

CE 462: Open Channel Hydraulics

3 Credits

Free surface flow in rivers, canals, steep chutes, stilling basins, and transitions. C E 462 Open Channel Hydraulics (3) This is an advanced senior level course dealing with steady gradually varied flow. The laws of conservation of mass, energy and momentum are applied to gradually varied steady flow problems in rectangular and non-rectangular channels. Basic definitions and equations governing flow are developed for uniform and nonuniform flow conditions. The students will use their knowledge of fluid mechanics, calculus, numerical analysis and computer science to solve practical open channel flow problems.

**Prerequisite:** C E 360

CE 465: Water Resources Capstone Course

3 Credits

Hydraulic design of river structures and open channels including supercritical and spatially varied flow; hydrologic/hydraulic computer modeling; design project. C E 465W C E 465W Water Resources Capstone Course (3) This course is designed to provide seniors in the water resources area with a major design project. In addition, the course has a writing component, which satisfies the University's writing across the curriculum requirement. Projects cover hydrologic and hydraulic design. Hydrologic analysis is performed to size the hydraulic structure systems that convey the design flows. The students utilize Geographic Information Systems data bases, utilize several state of the art computer models, and are required to write several computer programs.

**Prerequisite:** C E 461. **Prerequisite or concurrent:** C E 462 Writing Across the Curriculum

CE 472: Environmental Engineering Capstone Design

3 Credits

Principles and design of operations for water; domestic and industrial wastewater treatment; equipment selection and application. C E 471 C E 472W Environmental Engineering Capstone Design (3) This course will integrate engineering science and design skills through application to an open-ended environmental problem dealing with one or more of the following: industrial sustainability and pollution prevention; water transmission and treatment; wastewater collection and treatment; solid waste collection, treatment, and disposal; remedial investigation and feasibility studies for a hazardous waste site.

**Prerequisite:** C E 370, C E 371 Writing Across the Curriculum

CE 475: Water Quality Chemistry

4 Credits

Chemistry applicable to the understanding and analysis of water quality, pollution, and treatment. C E 475 C E 475 Water Quality Chemistry (4) C E 475 Water Quality Chemistry is a senior/graduate-level course focused on both theoretical aspects of water chemistry and applied aspects of engineering practice. The course will cover a wide range of fundamental chemical principles that will be investigated further in the laboratory exercises and through an independent research project. The course covers reaction stoichiometry and reaction type with specific examples of processes typically encountered in water, wastewater and hazardous waste treatment situations. The course distinguishes between kinetic and equilibrium reactions and presents mathematical formulations for both types of reactions. The course reviews thermodynamics and electrochemistry and relates them to equilibrium constants and the spontaneity of reactions. The course covers redox reactions especially with respect to the corrosion of civil infrastructure, the generation of acid rock drainage, and biological wastewater treatment processes. The course covers acid/base reactions especially with respect to disinfection of drinking water and pH adjustments commonly used to enhance air stripping of pollutants. The course introduces the use of computer models for determining chemical speciation of acid/base constituents. The course covers alkalinity and the carbonate system especially with respect to the issues of acid rain, acidification of the Earth's oceans, and limestone buffering of surface waters in Pennsylvania. Computer models are used to calculate chemical speciation in carbonate-containing systems. The course covers pH-dependent solubility of common minerals dash; primarily carbonates, hydroxides and aluminosilicates. The course covers engineering applications related to metal solubility including water softening, coagulation for turbidity removal in water treatment plants, heavy metal generation from acid rock drainage, and heavy metal removal in hazardous waste treatment. The course covers complexation reactions especially with respect to effects on metal solubility and toxicity. Computer models are used to calculate chemical speciation in multi-complexant systems. The course covers analytical chemistry especially with respect to the most common parameters measured in water and wastewater treatment systems, and with respect to the principles of measurement (i.e. gravimetric, spectrometric, volumetric, potentiometric analyses). The course involves a research project on a local water quality problem of concern. In the past, this project has focused on the proposed ldquo;Beneficial Reuserdquo; of wastewater in Centre County, and on the impact of acid rock drainage from the construction of I-99 on Buffalo Run in Centre County.

**Prerequisite:** C E 370, CHEM 110, CHEM 111

CE 476: Solid and Hazardous Wastes

3 Credits

Characteristics and treatment of solid wastes and hazardous wastes. C E 476 C E 476 Solid and Hazardous Wastes (3) Solid waste management continues to be a major area of concern for the Environmental Engineering profession. Based on the principle of the conservation of mass, we know that all of our wastes must be deposited in either the air, water or land environments. With improvements in air and water pollution control technologies, resulting in solid residuals, an increasing waste load is being placed on the land. Environmental impacts are being addressed as a future need.
Prerequisite: C E 370 , C E 371

CE 479: Environmental Microbiology for Engineers

3 Credits

Intro microbiology for engineers; microbe structure, function, and diversity; environmental ecosystems; diagnostic labs. C E 479 Environmental Microbiology for Engineers (3) C E 479 Environmental Microbiology for Engineers is a senior/graduate-level course comprised of three main sections: (1) the fundamentals of microbial structure, function, nutrition, and growth for students with no prior formal instruction in microbiology; (2) microbial diversity and ecology; and (3) the application of these fundamental microbial principles to environmental systems. In the fundamentals section, the course covers microbial nomenclature, macromolecules, cell biology, energetics, growth, and genetic regulation. This is illustrated with calculations of thermodynamic constraints in microbiologically catalyzed reactions, the calculation of efficiencies based on energy conservation from common pathways, and the connection of these efficiencies to microbial growth in a chemostat. Building on these fundamental concepts of metabolic potential and conserving energy and acquiring reducing equivalents from redox reactions, the second section covers the reactions and energetics of the primary microbial functional diversity such as phototrophy, lithotrophy, autotrophy, anaerobic respirations, and fermentations. It also introduces modern molecular biology techniques for studying microbial systems, and pulls the concepts of functional diversity together by illustration with the major nutrient cycles, including discussions of environments in which each reaction might be encountered.

Finally, the last section applies these ecological principles to several specific engineered environments of interest. Homework assignments throughout the semester involve questions about the methods, findings, or applications of recent articles that highlight the recently covered material, giving the students experience in the critical evaluation of primary literature and demonstrating the relevance of the material to environmental microbiology research and application. Complementing the progression of the lectures are eight instructional laboratories that provide hands-on application of diagnostic microbiological techniques to the characterization of environmental enrichment cultures and pure cultures. For example, a microscopy lab immediately follows the lecture material on cell biology, an enrichment experiment follows the material on nutrition, an enumeration experiment follows the section on microbial growth, etc. The final seven weeks of the laboratory period are devoted to group projects, in which students apply the techniques they have learned as appropriate to answer specific short-term research hypotheses. The final period is devoted to group presentations of their projects.

Prerequisite: CHEM 111 , C E 370

CE 488C: Capstone Project - Construction

4 Credits/Maximum of 4

This course consists of a project either selected by the students with approval or assigned by the instructor. C E 488C Capstone Project - Construction (4) This course integrates the structural design and construction skills through an application to a project focusing in the construction management area. The course is serves as the capstone of the senior students’ education courses. The course C E 488C identifies the student selection of a structural design capstone project. The student works on a team during the course project process. The team will evaluated on different assignments during the project as well the final product. The team will submit a final written report as well make an oral presentation. The SDCET advisory board is invited to participate in the oral participations. The 4 credit hour course is separated into two parts which are taken in two consecutive semesters. The first course offering is for 1 credit to provide the students an overview of the course and an introduction to the project. The course is then repeated for 3 credits the following semester for the project. This is to allow the necessary time for students to complete the project.

Prerequisite: eighth-semester Structural Design and Construction Engineering Technology student. Previous or concurrent: CET 430 , CET 431 , CET 432 , CET 435 , C E 456

CE 488D: Capstone Project - Structural Design

4 Credits/Maximum of 4

This course consists of a structural design project either selected by the students with approval or assigned by the instructor. C E 488D Capstone Project - Structural Design (4) This course integrates the structural design and construction skills through an application to a project focusing in the construction management area. The course is serves as the capstone of the senior students’ education courses. The course C E 488D identifies the student selection of a structural design capstone project. The student works on a team during the course project process. The team will evaluated on different assignments during the project as well the final product. The team will submit a final written report as well make an oral presentation. The SDCET advisory board is invited to participate in the oral participations. The 4 credit hour course is separated into two parts which are taken in two consecutive semesters. The first course offering is for 1 credit to provide the students an overview of the course and an introduction to the project. The course is then repeated for 3 credits the following semester for the project. This is to allow the necessary time for students to complete the project.

Prerequisite: eighth-semester Structural Design and Construction Engineering Technology student. Previous or concurrent: CET 430 , CET 431 , CET 432 and CET 435

CE 494: Senior Thesis

1-9 Credits/Maximum of 9

Students must have approval of a thesis adviser before scheduling this course.

CE 494H: Honors Senior Thesis

1-6 Credits

Investigation of an original project in the area of Civil Engineering. C E 494H C E 494H Honors Senior Thesis (1-6) Investigation of an original project in the area of Civil Engineering. The thesis topic must be approved by the honors advisor and thesis advisor and submitted as a thesis proposal to the Schreyer Honors College prior to scheduling the course. Students may register for a total of 6.0 credits over their last two semesters.

Honors

CE 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.
CE 497: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Civil Engineering Technology (CET)

CET 308: Construction Methods and Materials
3 Credits
The study of the methods and materials used in the construction industry.
Prerequisite: MATH 022, MATH 026, ED&G 100 or EG T 101 and EG T 102

CET 342: Civil Engineering Materials - Concrete and Bituminous
3 Credits
Properties and tests for aggregates, portland cement, fresh and hardened concrete, concrete mix designs. Bituminous Materials: properties, mixtures and tests.
Prerequisite: MATH 022, MATH 026

CET 343: Soils Mechanics
3 Credits
This course presents the fundamentals of engineering soil mechanics related to civil engineering. CET 343 Soil Mechanics (3) This course presents the fundamentals of engineering soil mechanics related to civil engineering. The course provides the initial exposure to soil mechanics, presenting the fundamentals essential to further study in foundation engineering and other advanced courses. Students study the formation of natural soil deposits by the geological and biological events in the earth's history. The soil sampling procedures are briefly explained, and then various index properties of soils are determined, and utilized in engineering classifications of soils. Options available for compacting soils in the lab and field are studied. The laboratory tests for finding soil permeability are studied, followed by coverage of empirical equations for estimating the permeability. Simple cases of seepage are analyzed using graphical flow net method. Elastic half-space theories and approximate methods are used for estimating the stress distribution in soils. The concepts of pore water pressure and effective stress are introduced. The covered strength theories include the unconsolidated undrained shear strength parameters. Elastic compression and consolidation compression are covered in this course. The course ends with simple field soil investigation procedures.
Prerequisite: MATH 140, Statics; Concurrent: ET 322or E MCH213 or MCH T213

CET 361: Fluid Flow
3 Credits
Fluid flow theory; hydrostatics; dimensional analysis and similitude; pipe flow; flow measurement; open channels; flow forces; fluid machinery.
Prerequisite: MATH 140, Statics, Dynamics

CET 430: Structural Analysis
3 Credits
Analysis of determinate structures; use of influence lines; deflection of structures; classical methods of analysis of statically indeterminate structures.
Prerequisite: Statics, Strength of Materials, MATH 140

CET 431: Structural Design-Steel
3 Credits
Design of steel beams, columns, truss members, decks, bar joists and selected connections.
Prerequisite: Statics, Strength of Materials, MATH 140; Concurrent: CET 430

CET 432: Structural Design-Reinforced Concrete
3 Credits
Design of reinforced concrete beams, columns, slabs, and selected framing systems for bending and shear. Introduction to formwork design.
Prerequisite: Statics, Strength of Materials, MATH 140; Concurrent: CET 430

CET 434: Foundations
3 Credits
Analysis and design of footings, piling, retaining walls; consideration of construction problems involving soils and foundations of structures.
Prerequisite: CET 343, CET 430, CET 432

CET 435: Construction Estimating
3 Credits
Methods and techniques used in estimating construction cost; practice in takeoffs, costing and final bid preparation; microcomputer applications/class projects.
Prerequisite: ED&G 100, ET 200, C E 333W

Classics and Ancient Mediterranean Studies (CAMS)

CAMS 1: Greek and Roman Literature
3 Credits
Selected readings within a chronological and thematic context of significant and influential masterworks of Greece and Rome. CAMS 001 Greek and Roman Literature (3) (GH)(BA) This course meets the Bachelor of Arts degree requirements. This course provides an introduction to the most important literary genres of Greek and Roman literature, which form the basis for Western literature. Content and emphasis may vary each time the course is offered, depending on whether the syllabus concentrates on Greek literature, Roman literature, or a combination of the two. Typically the course surveys Greek or Roman literature or examines a general topic in greater depth such as "Homer and the
Tragic Vision," "Greek and Roman Drama," "Greek and Roman Epic," "Greek and Roman Prose," or "Love in Roman Literature." The course's primary objective is to promote an understanding of major literary themes and rhetorical conventions, especially within ancient Mediterranean contexts (literary, social, or historical). Students will learn how to read texts critically, by gathering information and developing methods of interpretation. They will become familiar with the different cultural assumptions that underpin ancient Greece and Rome. And they will be asked to demonstrate their newly acquired understanding of Greek and Roman literature through a variety of exercises, which aim to develop their skills in writing and speaking. Evaluation methods may take the form of periodic quizzing or testing, with an emphasis on writing coherent short paragraph answers and longer essays; additionally, students may be evaluated through oral presentations, classroom discussion or participation, the writing of short to medium length papers (1-7 pp.), and group projects that aim at collaborative learning. CAMS 001 is an introductory course that may be credited toward every Classics and Ancient Mediterranean Studies major, option, and minor. CAMS 001 is also a General Education course in the Humanities (GH).

Bachelor of Arts: Humanities
General Education: Humanities (GH)

CAMS 4: Jewish and Christian Foundations

3 Credits

Introduction to the perspectives, patterns of worship, morality, historical roots, and institutions of the Judaeo-Christian traditions; their relationships to culture. CAMS 4 / JST 4 / RLST 4 Jewish and Christian Foundations (3) (GH;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. Jewish and Christian Foundations seeks to help students better understand the Bible as the scriptural background for both Judaism and Christianity. Some people believe the Bible is "scripture," self communicated by God to humanity. To others, this text is a compendious collection of poetry, historical writing, law, myth, and mystical writings, which stems from the religious, political, and cultural milieu of the ancient Near East. Some people believe this is a book designed to bring people to belief in the power and reality of the god discussed in these writings. For others, the book is a source of both unity and division among people in the world, and must be treated as ambiguous in nature. Still others see the biblical text as the single most important collection of literature to have shaped the religious, political, and imaginative contours of western civilization. This course focuses on selected portions of the biblical text, representing diverse strands of historical remembrances, interpreted and re-interpreted in light of critical historical events, and serving, first as an oral, and later as a written account of the life, beliefs, and hopes of Jewish and Christian peoples. Readings from both the Hebrew Bible (the Christian "Old Testament") and the Christian scriptures (the "New Testament") will be used. CAMS 4 / JST 4 / RLST 4 provides a broad discussion of the origin of both Judaism and Christianity within a historical and geographical framework. The principle teachers, writers, and "founders" are discussed, including Moses, Isaiah, David, Ezra, Jesus, Peter, and Paul. Students are challenged to read and understand these important writings which have interpreted the human condition and which have oriented generations of people towards a transcendent referent associated with love and loyalty. Evaluation methods may include two hour examinations, a final examination, and two short writing assignments. The examinations are not cumulative. Class participation will also be a factor in overall evaluation for the final grade. CAMS 4 / JST 4 / RLST 4 may be used to fulfill requirements for the Religious Studies, Classics and Ancient Mediterranean Studies and Jewish Studies major/minor. Finally, students will be challenged to evaluate and respond to the literature as it touches on human experience experiences which all people share regardless of their personal religious affiliation.

Cross-listed with: JST 4, RLST 4
Bachelor of Arts: Humanities International Cultures (IL)
United States Cultures (US)
General Education: Humanities (GH)

CAMS 5: Ancient Mediterranean Civilizations

3 Credits

Survey of the history and cultures of ancient Mediterranean civilizations in Mesopotamia, Egypt, Syro-Levant, Anatolia, Greece, and Rome. CAMS (HIST) 005 Ancient Mediterranean Civilizations (3) (GH;IL)This course provides an introduction to the history and cultural traditions of the ancient civilizations of the Mediterranean. From the origins of cities and the invention of writing, it surveys the intellectual, artistic, and political traditions that laid the foundations for the later civilizations of Europe and western Asia. Students will acquire a basic historical framework for the ancient Mediterranean from the third millennium BCE through the end of antiquity in the first millennium CE. Within this framework cross-cultural relationships of time and ideas will be established among religious texts, epic literatures, and political and legal traditions. In the part of the world where the division between Asia and the East and Europe and the West was born, the course will examine the development of regional and ethnic identities along with the historical development of concepts of the universal nature of humanity. This course is designed to serve as the foundation course for all majors in the department of Classics and Ancient Mediterranean Studies (CAMS).

Cross-listed with: HIST 5
International Cultures (IL)
General Education: Humanities (GH)

CAMS 10: Mesopotamian Civilization

3 Credits

Cultural, technological, literary, political, and economic achievements of peoples who occupied the region of Mesopotamia (4,000-331 B.C.E.), in historical context.

Bachelor of Arts: Humanities International Cultures (IL)
General Education: Humanities (GH)

CAMS 10U: MESOPOTAMIAN CIVILIZATION

3 Credits/Maximum of 3

This course will introduce students to the history of the civilization and the culture of Ancient Mesopotamia (Modern Iraq), which contributed to shape both the Western world and the modern Middle East. Ancient Mesopotamia was a land of contrasts between city and countryside, between sedentary and nomadic populations, between official cult and popular religion, between royal ideology and political skepticism. This course will encompass the variegated nature of this civilization and all the cultures that determine the nature of the historical records (written texts and material culture), through which one can reconstruct the history
of Mesopotamia, and, in general, the whole Syro-Mesopotamian region. Furthermore, the connections between this region and other areas of the Ancient Near East (Iran, Anatolia, Syro-Palestine, and Egypt) will be explored.

CAMS 12: Lands of the Bible
3 Credits

Textual and archaeological evidence for the lands, cities, and peoples associated with the Hebrew Bible and Christian scriptures. CAMS (J ST/RL ST) 012 Lands of the Bible (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. CAMS/J ST/RL ST 012 introduces students to the lands, cities, and peoples associated with the Hebrew and Christian scriptures. Using methodologies from historical geography, archaeology, ancient history, epigraphy, and anthropology, students study the Fertile Crescent, from the Nile Valley, through the Levant and its Jordan River valley, to Mesopotamia—the river valleys of the Tigris and Euphrates. Students will study the cities and states of the cultures along these rivers in the Bronze and Iron Ages, including Memphis/Saqqarah, Thebes, Ugarit, Jerusalem, Lachish, Megiddo, Shechem, Samaria, Hazor, Ebla, Babylon, Ur, Petra, Jericho, ´Akko, and others. These are the lands of the Hebrew and Christian scriptures, but also cities that have been revealed through modern study. For example, the texts excavated at Ugarit (Syria) in the 1920’s shed light on the relations between ancient Israelites and their Canaanite neighbors in the period of the "Conquest" and the monarchies of the Iron I and Iron II periods. Students will learn that the culture of the ancient Near East is inexorably linked to an understanding of the religious traditions that grew up in the region, including Judaism, Christianity, and Islam. Classes will be a combination of lecture, discussion, and problem-solving, with frequent use of slides and occasional use of artifacts to illustrate the topics at hand. Students are evaluated on three of the following five means: a midterm test, a final essay examination, a five to seven page term paper, a team research oral presentation, a team research poster presentation. Participation in class discussion will also be evaluated. This course fulfills three credits of the General Education or the B.A. humanities requirement. For majors in CAMS, the course fulfills the requirement of three credits in Near Eastern literature and language, civilization, or archaeology. The course fulfills the three credit requirement for courses in RL ST 001-099 for the Religious Studies major, and the Jewish Studies major’s requirements. The course also would fulfill three credits of the six credit requirement for courses in any field that may be below the 400-level for the Religious Studies Minor, three credits of the nine credits required in course work for the Jewish Studies Minor, and three of the 18 credits required for the CAMS minor.

CAMS 15: Wonders of the Ancient World
3 Credits

Overview of ancient world by focusing on the famed “Seven Wonders” and similar achievements from 3000 B.C.E.-1st Century C.E.
Bachelor of Arts: Humanities
General Education: Humanities (GH)

CAMS 20: Egyptian Civilization
3 Credits

The culture, history, literature, and archaeology of ancient Egypt from the dawn of history to the Greco-Roman period. CAMS 020/CAMS 020 Egyptian Civilization (3) (GH)(BA) This course meets the Bachelor of Arts degree requirements. CAMS 020 is a thematic introduction to the major features of ancient Egyptian civilization. If you have heard of hieroglyphics, Tutankhamen, or the Rosetta Stone and wanted to learn more, CAMS 020 will provide the background and significance of these and many other aspects of ancient Egypt. The course begins with a brief historical overview, and then presents topics such as language and writing, the Pyramid Age, kingship, Egyptian imperialism, Egyptian literature, everyday life, Egyptian religion, death and afterlife, women in Ancient Egypt, and science and medicine. The course concludes with a consideration of Egyptomania, the modern fascination with ancient Egyptian culture. CAMS 020 is taught in lecture and discussion format and will be offered once a year. In some semesters the enrollment is limited to 50 students. In other semesters where enrollment is limited to 120 there are two lectures per week and a discussion section taught by a graduate assistant. Students will make small-group oral presentations in class or in these sections based on library and web-based research. Evaluation will be based on these presentations, on two in-class essay and short answer tests, and a final essay examination. In some sections a term paper may replace the final essay examination. CAMS 020 fulfills a humanities general education or B.A. requirement, and also the requirement for a course in Near Eastern language, literature, history, civilization, or archaeology of the CAMS major. CAMS 020 may be used to fulfill the requirements for 12 credits of course work at any level towards a CAMS minor.

Bachelor of Arts: Humanities
General Education: Humanities (GH)

CAMS 25: Greek Civilization
3 Credits

This course explores the cultural, political, and historical identity of the ancient Greeks ¿ who they were, what they achieved, how they organized their society, and what they believed. This is not a history of ancient Greece, but an examination into the different facets of ancient Greek civilization, including the Trojan War myth, the ancient Olympics, the rise of democracy, slavery, the cultural and political contexts of artistic performance, and the sex-gender system. Students will pursue these topics and others using an interdisciplinary approach, consulting evidence from Greek literature, art, history, and philosophy. Ultimately, this course will provide students with a broad background in ancient Greek civilization and prepare them for more advanced work in the ancient Mediterranean world. As such, it fulfills both the GH and IL requirements.

General Education: Humanities (GH)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

CAMS 33: Roman Civilization
3 Credits
Origin of the Romans; sociopolitical development; food, homes, education, marriage, family life, amusements, private and public worship. CAMS 033 CAMS 033 Roman Civilization (3) (GH;IL) (BA) This course meets the Bachelor of Arts degree requirements. Roman Civilization (CAMS 033) provides a comprehensive survey of one of the major and most interesting societies from which contemporary western culture developed. For over 1200 years, the Romans expanded and ruled over the largest empire in recorded history. An understanding of their successes and failures can inform our own understanding of modern politics and international relationships. Many ideas in such diverse areas as government, law, military organization and strategy, the calendar, social practices, urban life, literature, art, and architecture clearly derive from Roman practices. Knowledge of the Romans, and the similarities and important differences between their lives and ours provides an opportunity to reflect on human values and contemporary culture. The course includes discussion of the origins of the Romans, how they saw themselves, and the rather different picture painted by modern archaeology. How the Romans expanded and maintained their power over long periods of peace from what is now Great Britain to the borders of India, and how their power waned in the later Roman period is one of the great illustrations of political institutional design. Roman society included various social groups, from slaves to the wealthy members of the traditional nobility. The opportunity for movement from slave to freedman or freedwoman to landowner helps explain why for generations Roman law was widely accepted. Roman urban life, with its great public meeting halls, baths, arenas, race courses, and luxurious houses and comfortable apartment blocks was eagerly accepted across Europe, North Africa, and the Near East. Many of these areas were more intensively and successfully populated under the Romans than at any time since. The greatest achievements of Rome's poets, Virgil's "Aeneid" and Ovid's "Metamorphoses" remain rich sources for current writers, composers, and choreographers. Major Roman historians and thinkers also continue to inform and inspire. Religious beliefs and the causes for the growth of Christianity are also important features of the Roman Empire. Almost two thousand years separate us from the summit of Roman power and yet we still benefit from a study of their society to understand our own. The class meetings include twice weekly lectures for all students enrolled and once a week discussion sections of thirty students or less. Small enrollment classes meeting three times each week may also be scheduled. Assignments include individual and group papers, tests, and a final examination. Students are expected to participate actively in class discussions. In addition to twice weekly lectures for the 200 students in this course, smaller discussion sections of 30 students or less are scheduled once per week. All students will be expected to participate actively in the class discussions. In addition, students will write one individual paper and a longer paper based on collaborative work. In preparation of the written papers, students will gather information from both computer/electronic resources and use of the library. WEB resources for the study of classical antiquities and ancient texts are extremely rich. By integrating these various sources, students will be expected to synthesize various sources and to analyze the relationships between ancient and modern culture. A major assignment in this course requires collaborative learning and the preparation of a written paper in groups of 4 students. Study of the Romans includes learning in detail about the geography, resources, and cultures of a very large area of the world from southern Scotland to North Africa, and from Gibraltar to the borders of India. Many basic features of these areas remain relatively unchanged, and the realities of the resources and climate continue to regulate modern societies who inhabit the same spaces, often less successfully.

Bachelor of Arts: Humanities
International Cultures (IL)
General Education: Humanities (GH)

CAMS 44: Ancient Near Eastern and Egyptian Mythology
3 Credits
Survey of major ancient Mediterranean myths, gods, and goddesses in their cultural contexts; influence on later cultures. CAMS 044 CAMS (RL ST) 044 Ancient Near Eastern and Egyptian Mythology (3) (GH;IL) (BA) This course meets the Bachelor of Arts degree requirements. This course introduces students to a selection of major ancient Mediterranean and Egyptian myths, gods, and goddesses. Ancient Canaan, Mesopotamia, and Egypt (geographically approximating the contemporary Middle East) were primary locations for the development-beginning already in the fourth millennium B.C.E.-of highly complex urban civilizations, many of which persisted until the turn of the Era. These ancient societies were responsible for notable technological achievements, such as writing, sophisticated irrigation systems, and the wheel, and for notable cultural achievements, such as impressive legal codes, highly developed astronomical research, and complex religious systems. This course will acquaint students with some major religious writings stemming from these fascinating old world cultures. The class discusses in some detail a limited range of stories about the divine realm, creation, the flood, kingship, life and death, and sexuality. The course pursues such comparisons by studying myths against the background of the different cultures that produce them. Because a number of these religious myths are historically related, the course will also critically compare the similarities and the differences between them. To underscore how important historical and geographic settings are to understanding these stories, the course uses different techniques of instruction such as small group discussions, slides, lectures, and films. Three of the world's major religions-Judaism, Christianity, and Islam-trace their roots to the religions of the ancient Near East and Egypt. Hence, some attention will be paid to the similarities and differences between the views expressed in these myths and the views developed in classical Judaism, Christianity, and Islam. By grappling with issues such as divine character, self-identity, and female/male relationships in the ancient Mediterranean world, students will be better acquainted with how classical Judaism, Christianity, and Islam innovate beyond the religious heritage to which they are indebted.

CAMS 44H: Ancient Near Eastern and Egyptian Mythology
3 Credits
Survey of major ancient Mediterranean myths, gods, and goddesses in their cultural contexts; influence on later cultures.
CAMS 45: Classical Mythology

3 Credits

Introduction to Greek and Roman divinities, heroes and heroines; survey of the major myths and their influence on Western culture. CAMS 045 Classical Mythology (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. The aim of CAMS 045 is to introduce students to the stories that have shaped western art and civilization for a longer time and more profoundly than any others: the myths of ancient Greece and Rome. It is a common assumption that the ancients needed myth because they had no science, and that the birth of science was the death of myth. We beg to differ. A recurring theme of this course is that while science has replaced myth to explain how the world works, myth has always played several other roles in human experience, and continues to do so. Even today myth is everywhere: in literature, the performing arts, and the visual arts, in both high and popular culture. Myth reveals truths about our humanity, and it reaches people at a gut level—which is why it is still of vital interest to novelists, theologians, psychologists, politicians, ad agents, poets, and scriptwriters. The course has several objectives. First and foremost, we want students to come to know, appreciate, and enjoy the myths themselves, by reading them directly in English translations of ancient epics, dramas, and other literary works. Second, we hope that students will come to appreciate the pervasiveness of myth, and its power, not just in past cultures, but also in other cultures throughout the world as well as our own. Third, central to the course are the significant differences between classical antiquity and modern Western societies including the contrast between Polytheistic Paganism and Judeo-Christian Monotheism. The differences in values and practices such as the attitudes toward human sexuality, general relations, slavery, and socioeconomic relations are also discussed. This course will provide valuable experience in the fundamental skills requisite for success both in the University and the workplace: reading, writing, and research. Examples of the evaluation methods may include: a five-page paper, which will be critiqued and returned for correction and rewriting before receiving a final grade, carried out collaboratively with three or four other students, and a group project involving library research and the creation of a WWW-based exhibition of a mythological theme.

CAMS 70: Prophecy: The Near East Then and Now

3 Credits

Prophecy in the ancient Near East, the ancient Jewish and Christian traditions, and today. CAMS 070 CAMS (JST, RL ST) 070 Prophecy: The Near East Then and Now (3) (GH;IL) The objective of this course is to introduce students to the prophetic traditions of the ancient Near East and the Bible of the Judeo-Christian traditions. The course will explore the development of prophetic circles in the ancient Near East (incl. Egypt, Syria, Canaan, and Mesopotamia) and then focus on the major prophetic traditions of the Hebrew Bible (to include at least Isaiah, Jeremiah, Ezekiel, Amos, Hosea, Micah, Haggai, Zechariah, and Daniel) and how these traditions were understood in early Judaism and nascent Christianity. Special attention will be paid to the roles of priests, kings, and prophets in ancient Israel to better understand Israelite and Judean prophetic traditions in ancient Israelite society. The course will then examine the rise of apocalypticism and its modern manifestations in the coalition of conservative Christians and Jews in “Zion” – the new Jerusalem. Additional emphasis will be placed on the religious and political interactions which manifest themselves in the prophetic movements—then and now—including the rhetoric of ideology and propaganda. Important figures and events illustrate these cultural and political trends, in antiquity, and in the contemporary setting.

CAMS 83: First-Year Seminar in Classics and Ancient Mediterranean Studies

3 Credits

Critical approach to the study of ancient Mediterranean languages, literatures, and/or material cultures. CAMS 083S CAMS 083S First-Year Seminar in Classics and Ancient Mediterranean Studies (3) (GH;FYS;IL) (BA) This course meets the Bachelor of Arts degree requirements. The first-year seminar in Classics and Ancient Mediterranean Studies (CAMS) is concerned with interesting and challenging features of one or more of the cultures that surrounded the Mediterranean Sea in antiquity, from around 3,500 B.C. to 500 A.D. While the topic of CAMS first-year seminars varies, in all, you will be introduced to the civilizations that surrounded the Mediterranean Sea in ancient times and why their great accomplishments, their struggles, and their failures remain important to us even today, thousands of years later. You will learn about ancient literature and physical remains that provide information about these cultures. In this class, you will learn to assess theories about ancient societies, the types of evidence that exist for antiquity, and how to gain access to academic resources in the library and in electronic form. The topics of the seminars vary. Some current seminars include a critical study of widely believed “Ancient Mysteries,” such as the continent of...
Atlantis and Pyramid Power; a seminar on the relationships among Christians, Jews, and Pagans in the later Roman period; and Word Power, a course that gives you linguistic tools to understand the sources and nature of much of our modern English vocabulary. You will read selections of ancient literature in English translation and examine the remains of the societies that produced them to ponder basic questions about the meaning and value of human life. Some knowledge of ancient Mediterranean cultures has always been indispensable to intelligent participation in western society. Their social, political, economic, and legal systems, their religious experience, their language and art all are of interest, and their contribution to our own present world view can hardly be overemphasized. Today, the oldest of humanistic disciplines is more vital, more wide-ranging, and more current than ever before. By reading ancient literature, studying the structure of ancient languages, and learning about the religious, political, and social ideas formulated in antiquity, you may gain important insights into our own culture and come to understand the common humanity all people share.

CAMS 90: Jerusalem: Past, Present, and Future

3 Credits

Social, cultural, religious, political, and archaeological history of Jerusalem from earliest times (c. 3000 BCE) to present. CAMS 90 / JST 90 / RLST 90 Jerusalem: Past, Present, and Future (3) (GH;IL)(BA)

This course meets the Bachelor of Arts degree requirements. Jerusalem, a holy city for Judaism, Christianity and Islam, is symbolically depicted in art and literature as the physical and spiritual center of the world. Throughout its history, this "city of peace" was a focal point attracting numerous cultures and peoples, the latter sometimes as prophets and more often as conquerors. The reasons for Jerusalem's centrality and significance during the past five millennia as a heavenly and earthly capital are explored in this course. The course curriculum will survey the religious, political, archaeological and historical record of ancient Jerusalem, beginning with its earliest settlement during the fourth and third millennia BC. Jerusalem's urbanization in the second millennium BC, its role as the capital of biblical Israel and Judah during the First and Second Temple periods, and its transformation as a center of Christianity and later Islam are studied utilizing the testimony of artifacts, architecture, and iconography in relation to the written word. Throughout the ages and continuing into the 21st century, Jerusalem remains a contested city for the three monotheistic faiths. The holy city's impact on the politics of the modern Middle East will be critically examined in light of Jerusalem's history and recent archaeological discoveries and their modern-day interpretation. Objectives include the critical evaluation of archaeological, historical and literary evidence and its relationship to modern-day political and religious perceptions of Jerusalem. The course will encourage research skills (including library training sessions) and writing and oral communication skills based on an analytical approach to the texts and material culture relevant to Jerusalem. This course will fulfill three credits of the General Education or the B.A. humanities requirement and the GI requirement. For majors in CAMS, the course will fulfill the requirement of three credits in Near Eastern literature and language, civilization, or archaeology; and for those in the CAMS ancient Mediterranean archaeology option it will fulfill the three credits of archaeology course work requirement. The course will fulfill three credits of course work concerned with the ancient period or with the land of Israel.

CAMS 100: Ancient Greece

3 Credits

Greek world from the earliest Aegean cultures to the death of Alexander the Great and the beginnings of Hellenistic civilization. CAMS (HIST) 100 Ancient Greece (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements The course presents a survey of ancient Greek history and culture beginning with the Bronze Age palace-states of Crete and Mycenae, examines the emergence of Greek city-states, notably Athens and Sparta, traces their transformation through conflicts among themselves and with the Persian empire, and describes their eventual eclipse by the kingdom of Macedon. Since this course treats the beginnings of historical writing among the Greeks, students learn to evaluate diverse historical texts and their relationship to legend, myth, and poetry. The nature of historical thought itself is emphasized throughout the course. Also emphasized is the debate between the egalitarian Justice of democracy, the sober wisdom of oligarchy, and the overwhelming power of monarchy, as experienced by the Greeks down to the end of the fourth century B.C.E.

CAMS 101: The Roman Republic and Empire

3 Credits

History of the Roman Republic and Empire from the origins of Rome to the disintegration of the Empire. CAMS (HIST) 101 The Roman Republic and Empire (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course fulfills 3 credits of the General Education-Humanities (GH) requirement and is an introduction to the ancient Roman empire: how that empire came into being, how it evolved, how it came to govern much of the Mediterranean and European world, and how that empire declined. Particular stress is placed, through readings and discussion, on the sources of our knowledge of the past and on the social and legal structures employed by a past society to govern an ethically-and-religiously-diverse population. This course complements other courses on the ancient Mediterranean world (such as HIST/CAMS 100) and is a prerequisite to more advanced (400-level) courses in ancient Mediterranean history. An example of evaluation includes: three brief quizzes, a take-home mid-term permitting library and Internet use, and a final examination; all examinations require student synthesis and expression of what has been learned through written essays of varying
CAMS 109Y CAMS 109Y Writing Systems of the World (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. The objective of this course is to provide students with a broad overview of the world's writing systems in historical context. Students will be introduced to the origins, mechanisms, and conventions of diverse writing systems used by different cultures throughout the world. This preliminary overview will enable students to address a wide variety of theoretical issues raised by the origins and development of different writing systems. This course satisfies major and minor requirements for programs of study in the Dept. of Classics and Ancient Mediterranean Studies. This course will be offered once a year, enrolling cap 50. The methods of evaluation include a mid-term and final examinations, two brief quizzes, a term paper and active class participation. Special attention will be given to the history of writing systems. For instance, we will examine how the earliest writing systems in the Near East and East Asia originated and developed orthographic strategies and standards to record the linguistic realities for which they were designed; what processes and mechanisms facilitated the creation of the first alphabet in the Ancient Near East; how modern scholars have been able to decipher scripts lost long ago (such as Egyptian hieroglyphs, and Mesopotamian cuneiform), and how some decipherment processes are advancing and improving our knowledge of other civilizations (such as the Mayan and the Indus Valley).

Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures
CAMS 110: Hebrew Bible: Old Testament

3 Credits

Introduction to the history, literature, and religion of ancient Israel. RLST 110 / CAMS 110 / JST 110 Hebrew Bible: Old Testament (3) (GH;US;IL) (BA) This course meets the Bachelor of Arts degree requirements. The Hebrew Bible is the record of the interaction between the people of ancient Israel and their God. As a religious text, the Bible is inextricably intertwined with the cultures of Israel's neighbors, including the Canaanites, Syrians, Greeks, Assyrians, Babylonians, Arabs, Egyptians, and the peoples of the eastern desert. To study the Hebrew Bible and its development during the first millennium BCE is to study the history, culture, and literature of the entire region. Hebrew Bible introduces students to the literature of ancient Israel, its rituals, the stories which established a people's identity, and which defined their moral behavior. Great figures of the texts, such as Moses, David, Solomon, Bathsheba, Ruth, Jeremiah, Daniel, and Ezra, teach us important lessons about life and how people of faith attempted to relate to one another, to God, and to people outside their ethnic group. Students will read from the text and from a textbook which contains scholarly opinion from a variety of sources. Recent archaeological and epigraphical studies will be incorporated into the course to enhance our work. The ultimate goal will be to assess the meaning of the texts in their ancient Near Eastern environment, and to understand the development of Hebrew religion and the beginnings of Rabbinic Judaism. Students will be evaluated using an hour examination, a 6-8 pp. "hermeneutical essay," a final examination, class attendance and discussion. As an introduction to the scriptures of the Hebrew Bible / Old Testament, RLST 110 / CAMS 110 / JST 110 utilizes the methodologies used in the academic study of religion. The course is related or linked to many courses in religious studies which use these same methods or which are related to the history and development of Judaism, Christianity, or Islam. RLST 110 / CAMS 110 / JST 110 may be used to fulfill requirements for the Religious Studies major. RLST 110 / CAMS 110 / JST 110 may also be used to fulfill the GI or GH requirements in the major or minor in Religious Studies, Classics and Ancient Mediterranean Studies and Jewish Studies.

CAMS 111: Early Judaism

3 Credits

Religious thought, practices, and parties in the Second Temple period; the emergence of rabbinic Judaism. CAMS 111 CAMS (J ST/RL ST) 111 Early Judaism (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. Early Judaism will introduce students to the history of Judaism as reflected in Jewish literature from the period of the Babylonian exile (587/6 BCE) to the closure of the Babylonian Talmud (ca. 600 CE). In this period, ancient Hebrew religion was transformed into a new world religion-Judaism. Students will read selections from the Bible, and from other religious literature, including the Dead Sea Scrolls, the Apocrypha, the Christian Scriptures, the Mishnah, and the Talmudim. By tracing the development of various Jewish "parties," students will appreciate how Classical Judaism evolved, and how the early Church emerged from Jewish roots in the first centuries CE. Early Judaism grew from its roots in the period of Achaemenid domination. Jews were dispersed throughout the eastern Mediterranean, so influences from Persian, Hellenistic, and Roman thought naturally influenced the faith's development. Students in Early Judaism will develop a new appreciation for the basic beliefs and practices of Judaism as well as for the beginnings of the Jesus movement and the development of the early Christian Church. Theological and historical questions concerning the origins of evil, the primacy of prayer, the beginnings of Jewish religious architecture, and the rise of anti-Semitism will be explored. Religion is always linked inextricably to culture. Judaism's transformation in contact with diverse cultures will become evident throughout RL ST/CAMS/J ST 111. The methodologies used in this course will enable students to read and evaluate primary and secondary sources used in the academic study of Judaism. Many other courses in Religious Studies (001, 004, 110, 120, 124), Jewish Studies (010 and 102), and Classics and Ancient Mediterranean Studies, as well as History and Art History are closely related or linked to this course. RL ST 111 may be used to fulfill 3 credits in the Humanities, or to fulfill the GI requirement in the major or minor. The course will be offered once each year, with an enrollment of 65. This course will satisfy 3 credits towards the minor in Jewish Studies or the major in Religious Studies, plus being cross-listed with CAMS, fulfilling part of the requirement for courses in supporting or related areas of all Classical and Ancient Mediterranean Studies majors. The course also provides an excellent addition to other courses, such as CAMS 010, "Mesopotamian Civilization," CAMS 044, "Ancient Near Eastern Mythology," CAMS 045 "Classical Mythology," CAMS 033, "Roman Civilization; and CAMS/ANTH/J ST 012, "Archaeology of the Lands of the Bible."

CAMS 113: Myths and Legends of the Jews

3 Credits

Comparative study of diverse interpretations of stories from the Bible in Judaism and Christianity. CMLIT (J ST/CAMS/RL ST) 113 Myths and Legends of the Jews (3) (GH;IL) The impact of the Bible on Western Culture is immense. Beyond its religious importance, the motifs and images from its myths and stories permeate literature and art, providing a basic frame of reference that for much of history could be taken for granted. A degree of familiarity with these motifs so as to be truly fluent is no longer common, and so it requires special effort to discern allusions to biblical traditions. Moreover, these traditions are not static: religious communities continually re-interpret them and appropriate them in very different contexts. Many prominent traditions in Judaism, Christianity, and Islam do not appear explicitly anywhere in the Hebrew Bible, but are the product of imaginative and ingenious interpretation and tellings. Why, for example, is Noah an example of a righteous person in Christian tradition, but in rabbinic tradition is more often portrayed as a profane, earthly-minded man who was saved only because he was the least bad of an evil generation? Why is Moses commonly portrayed with horns in medieval art? Underlying such different traditions are centuries of debate and reflection on these texts as sacred scripture, and competing religious communities often authorized their distinctive beliefs and practices by reading them into scripture. The differences
are often too subtle to discern apart from careful comparison. This course will explore the boundaries between Scripture and tradition by means of a close examination of the myths and stories in the Hebrew Bible and their subsequent interpretation and re-tellings in Judaism, Christianity, and Islam. Our procedure will be to compare these traditions closely with the biblical text, asking: What is different? What concerns motivated the changes? Is it possible to discern patterns of change, or did different interpreters mean the same thing in different ways? We will also compare with later interpretive traditions (Jewish, Christian, Islamic). Can we trace trajectories of interpretation? Can we discern particular interpretive methods in operation? We will seek to answer: what do these re-workings of the traditions tell us about the development and function of Scripture, and the social circumstances of the communities? Finally, we will seek to detect reflections of these interpretive traditions in literature and art from the medieval to the modern periods.

CAMS 115: Literature of the Ancient Near East

3 Credits/Maximum of 3

Reading and study of literary works from the Ancient Near East, especially from Mesopotamia and Ancient Egypt. This course is designed to provide the student with both a basic knowledge of Ancient Near Eastern literature and the tools to appreciate it. It will present a wide sample of literary compositions from Ancient Mesopotamia and Ancient Egypt, along with some parallels from Ancient Anatolian and Syro-Palestinian traditions. Although mythology is not the main focus of the course, some mythological compositions will be read because of their literary fabric and epic structure. The course will be divided into two main sections: Mesopotamian and Egyptian literatures. Students will read some of the most famous literary compositions from the Ancient Near East (such as Gilgamesh and the Babylonian story of creation), as well as a representative sample of works from a wide variety of genres (love poetry, mythological narratives, laments, religious hymns, tales, wisdom literature). These compositions will be approached from a literary and aesthetic point of view, without neglecting the inherently problematic relation with their historical context (as in the case of compositions that mention actual historical characters, such as the legends of the Sargonic kings in Mesopotamia). Moreover, the works related to both official cult and popular religion (hymns, prayers, incantations, prophecies) will be read in their political, social, and religious context. In the limits between sacred and profane, our approach to love poetry will address some issues of ritual, gender, and sexuality. More strictly mundane genres (wisdom literature and humor) will show that some basic human concerns have remained unchanged. The course will provide students with a detailed overview of the main literary traditions and genres from the Ancient Near East, which played an essential role in the origins and shaping of the Bible as well as in some aspects of the Greek literary tradition (i.e., the foundations of the Western understanding of literature and religious discourse.

CAMS 120: New Testament

3 Credits

Introduction to the history, literature, and religion of early Christianity in the Jewish-Hellenistic setting. CAMS 120 CAMS (J ST/RL ST) 120 New Testament (3) (GH; BA) This course meets the Bachelor of Arts degree requirements. This course introduces the student to the New Testament (NT), the principal religious text of Christians. As such, it is one of the most significant and most studio texts in human history. Written in Greek between approximately 55 C.E. and 110 C-E the New Testament consists of 27 individual books, each written by a separate author (authors), that were later assembled into the “New Testament.” Because of the growth of Christianity, the NT has influenced every aspect of our world-to-name only a few: history, politics, economics, literature, philosophy, ethics, medicine, science, the arts (music, architecture, the visual arts), gender roles, theater and drama, law, psychology, and sociology. After introducing the student to the academic study of religion and the “historical-critical method” our study begins by examining the materials from which the NT’s text is reconstructed, and the period in which the NT was authored. This includes exploring other parallel phenomena (such as miraculous healings, resurrection, and virgin births) in contemporaneous Graeco-Roman religions. After this background is in place, the course turns to an examination of the gospels and their interrelationships, the pictures of Jesus presented (and their relationship to first-century B.C.E. Judaism), variations among Christian understandings of Jesus reflected in the NT and other contemporaneous Christian writings (he was a man, an angel, a lesser divinity), Paul and his life and writings, and the emergence of Christianity from Judaism as a distinct, new, apocalyptic religion. Along the way, we examine the manuscript tradition of the NT, changes that have been made to its text, and different interpretations of certain passages in the NT. We also examine the historical-critical tools scholars use to date and sequence passages in the NT (form, redaction, literary, and historical criticism, for example), for one can correlate the evolution of early Christian theology with the evolution of the NT’s text.

CAMS 121: Jesus the Jew

3 Credits

A historical critical examination of the life of Jesus of Nazareth within the context of first-century Palestinian Judaism. CAMS 121 (J ST 112/RL ST 121) Jesus the Jew (3) (GH; IL) (BA) This course meets the Bachelor of Arts degree requirements. This course offers a historical and critical examination of the life of Jesus within the context of first-century Palestinian Judaism. Major emphases will include the historical, social, religious, political, and cultural contexts of Jesus’s teaching, emergence, including important precursors and Jesus’s teaching, biographical; the political, institutional, and cultural history of Jesus’s teaching; teachings in the aftermath of his death, with attention paid to variant or alternative traditions and to the mechanisms of normalization; the emergence and history of the early church; and critical analysis of key areas of differentiation between Jesus’s teaching; teachings and dominant forms of religious practice at the time. Attention will also be paid to how contemporary religious traditions today imagine Jesus.

CAMS 122: Apocalyptic Literature and Apocalyptic Movements

3 Credits

This course surveys apocalyptic literature and apocalyptic movements from the ancient Near East to the modern world. CAMS (J ST/RL ST) 122 Apocalyptic Literature and Apocalyptic Movements (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course offers a scholarly survey of apocalyptic literature and apocalyptic imagination about the end of the world, from its beginnings in the ancient Near East and the Bible to some examples from the modern world. The course will cover three areas: 1) the ancient literary genre of apocalypse in the Near East; 2) apocalyptic writings in the Jewish and Christian traditions (especially the books of Daniel and Revelation in the Bible, and the Qumran Dead Sea Scrolls), as well as within Islam, which generated Western apocalyptic thinking throughout the ages; and 3) some historical examples and discussion of the sociological underpinnings of apocalyptic groups in the medieval to modern periods. Additional attention will be paid to the impact that apocalyptic worldviews have had on the secular world, especially in the fine arts and cinema.

CAMS 123: Ancient Monotheisms: Judaism, Christianity, Islam

3 Credits

Examines the origins and early development of the three major monotheisms of ancient Near East: Judaism, Christianity, and Islam. CAMS (J ST/RL ST) 123 Ancient Monotheisms: Judaism, Christianity, Islam (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course examines the origins and early development of the three major monotheistic religions: Judaism, Christianity, and Islam. These three related religious traditions originate in the Near East and all center around a belief in the existence of one single god (monotheism). The aim of the course is to describe and compare core events, major beliefs, practices, and significant historical trends in each monotheistic tradition from their respective beginnings to around 750 C.E. The course begins with the origins of Judaism, the first religion in the Near East to be monotheistic. It then examines how Christianity branched out of Judaism in ancient Palestine, as well as how Islam emerged in Arabia in the 7th century C.E. within a historical context rich in Jewish and Christian influences. All three religions share basic beliefs about the nature of deity, the role of the written word in revelation, and prophets as messengers. Equal emphasis will be placed on these commonalities and on the major tenets and practices that differentiate these three religions.

CAMS 124: Early and Medieval Christianity

3 Credits

Analysis in cultural context of selected thinkers, ideas, and movements in Christianity from the second through the fifteenth century. CAMS (J ST/RL ST) 124 Early and Medieval Christianity (3) (GH;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course traces the development of one of the world's "Big 5" religions from the death of its founder (about the year 30 CE) down to the middle ages. It focuses on significant trends, controversies, personalities, and turning points. These are not just diverse in terms of chronological breadth, but are also spread geographically from the eastern end of the Roman Empire (the border with Persia) to northern Europe. Attention is given to the various manifestations of Christianity (Judaic, Hellenistic, Latin), and the linkage between local patterns (culture, history and predispositions) and how these shaped the sort of Christianity that took root in particular areas. Students typically will be evaluated on four "pop" quizzes, a midterm and a final exam. The course can be used towards a major or minor in Religious Studies, Classical and Ancient Mediterranean Studies, and Jewish Studies and used to fulfill 3 credits in the Humanities for non-majors.

CAMS 140: Classical Archaeology--Ancient Greece

3 Credits

Literary sources and material evidence for society, culture of the inhabitants of Greece in ancient times. CAMS 140 Classical Archaeology--Ancient Greece (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. Greek Archaeology (CAMS 140 GH;GL) presents the literary and physical evidence for ancient Greek culture, especially in the Late Bronze Age from about 1550-1100 B.C. and in the Classical Period of the fifth and fourth centuries B.C., when the city of Athens was at its height of political and cultural influence. The course emphasizes the archaeological sites that illustrate these stages, on the island of Crete, at Troy, and on the Greek mainland at places such as Delphi, Olympia, and Athens. The connections among political and economic changes and the artifacts, both impressive buildings and humble fragments of broken pottery, are emphasized. The course begins with some fundamental principles of archaeology, with particular emphasis on survey methodologies; the various scientific and comparative methods used to establish dating; problems with existing ethical guidelines concerning the destructive marketing of antiquities; and the connections among geography, environment, and human settlement patterns. The great sites of the Bronze Age Aegean, including Knossos, Troy, Mycenae, and Pylos are described with discussion of the connections to Egypt and the Ancient Near East. The use of pottery and other artifacts to trace political structure on Crete is demonstrated. The decipherment of the Early Greek Linear B language provides evidence for relating economic and political organization to the results of surveys and excavation at various sites. The course briefly touches on the ceramic evidence for the collapse of this Bronze Age society and the Iron Age transition to Classical culture, including the reintroduction of writing, cultural interchange through Mediterranean trade, and colonization. The course culminates with a detailed consideration of the city of Athens, with
emphasis on the economic and political center in the Agora; housing, coinage, funerary practices and monuments. Lectures illustrate some ways that archaeologists have used information provided by ancient authors such as Herodotus, Pausanias, and Thucydides to understand the excavated areas of the Athenian Agora and nearby sites. This course has two in-class essay examinations and a comprehensive final examination. Collectively these count for 75 percent of the course grade. In addition, students are graded on five assignments, each of which comprises 5 percent of the course grade. Four are essays based on textbook assignments. The fifth consists of a team-led classroom review of the previous six to eight classes. Assignments require use of Perseus II, a major and reliable Web resource for the study of ancient Greek civilization. CAMS 140 is a counterpart to CAMS 133 and 150, an appropriate prerequisite for CAMS 440W, and an appropriate parallel to CAMS/HIST 100 or a successor to CAMS 025. CAMS 140 is one of three courses accepted as a prerequisite for students enrolling in the Penn State Education Abroad Program in Athens. CAMS 140 fulfills common requirements in the major under two categories: (1) for a 3 credit course concerned with Greek or Roman language, literature, civilization, or archaeology, and (2) 6 credits of study in the general field of Classics and Ancient Mediterranean Studies at any level. CAMS 140 may be used to fulfill the requirements for 12 credits of course work at any level toward a CAMS Minor. CAMS 140 is an approved General Education Humanities course that may fulfill three credits of the six-credit requirement. It may also be used to fulfill the three credit B.A. humanities requirement.

Bachelor of Arts: Humanities

CAMS 150: Classical Archaeology–Ancient Rome

3 Credits

Literary sources for the development of Roman civilization in relation to the relevant archaeological discoveries. CAMS 150 Classical Archaeology–Ancient Rome (3) (GH, IL) (BA) This course meets the Bachelor of Arts degree requirements Roman Archaeology (CAMS 150) presents the literary and physical evidence for ancient Roman culture, from its formation in the Republican Period through Late Antiquity, over 1200 years later. The course emphasizes three archaeological sites that illustrate stages of Roman culture, Cosa, Pompeii, and Ostia. The connections between political and economic changes and artifacts, both impressive buildings and humble fragments of broken pottery, are emphasized. The course begins with some fundamental principles of archaeology, with particular emphasis on survey methodologies; the various scientific and comparative methods used to establish dating; problems with existing ethical guidelines concerning the destructive marketing of antiquities; and the connections among geography, environment, and human settlement patterns. The site of Cosa, in Etruscan territory, is used to demonstrate features of Roman urbanism in the Republic and the ways in which influences enter Roman culture from other Italic cultures, both Etruscan and Greek. The course then turns to the extraordinarily well preserved site of Pompeii. This course emphasizes the planning and organization of housing at Pompeii, as well as the artifacts and decoration typical of Pompeii at different stages in its history. The public baths, arena, temples, tombs, and forum are also emphasized. The port of Ostia, where an ethnically diverse population was housed in impressive apartment blocks, provides information on economic and social relationships through a series of funerary reliefs, and the well published excavations. Throughout the course, comparisons to Rome and its major monuments enable students to become familiar with the Roman and Imperial fora and landmark structures such as the Pantheon, the Colosseum, and the Baths of Caracalla. Lectures illustrate some ways that archaeologists have used information provided by ancient authors such as the Elder and Younger Pliny, Vitruvius, Suetonius, and others to understand Roman culture. Assignments include essays based on the assigned readings and participation in student group-directed classroom reviews throughout the semester. Students will be evaluated on essay tests and a final examination, which assess students' ability to identify artifacts and discuss their significance, to compare cultural features at various stages of historical development, and to interpret the relationship between written and physical evidence for Roman culture. Collectively these count for 75 percent of the course grade. In addition, students are graded on five homework assignments, each of which comprises 5 percent of the course grade. Four are essays based on textbook assignments. The fifth consists of a team-led classroom review of the previous six to eight classes. CAMS 150 GH is an appropriate prerequisite for CAMS 440W, an upper level archaeology course. CAMS 150 GH is one of several courses that fulfill common requirements in the major under two categories: (1) for a 3 credit course concerned with Greek or Roman language, literature, civilization, or archaeology, and (2) 6 credits of study in the general field of Classics and Ancient Mediterranean Studies at any level. CAMS 150 GH may be used to fulfill the requirements for 12 credits of course work at any level toward a CAMS Minor. CAMS 150 GH is an approved General Education course that may fulfill three credits of the six-credit Humanities requirement. It may also be used to fulfill the three credit B.A. humanities requirement. Classroom discussion, written assignments based on text readings, and student led review classes are required in CAMS 150. As it is available, assignments will require the use of Perseus II, a major and reliable Web resource for the study of ancient Greek and Roman civilization. In CAMS 150, students have an opportunity to study the geographically dispersed areas of Roman settlement across a long period of time, from Britain to Africa and Spain to Mesopotamia. CAMS 150 allows students to see how the Romans were influenced by the non-Roman cultures of the Mediterranean region as they gained political and economic control over them, and how these regions were Romanized. Students have an opportunity to master the geography and historical developments of this wide-flung area over a 1,200-year period. By seeing how Mediterranean cultures were interrelated in antiquity through trade, colonization, invasion, and accommodation, students are led to reflect on cultural interchange in the present. Some class time is devoted to consideration of the problems brought about by the antiquities market in destroying a shrinking resource for understanding our past. The difficulty in regulating the trade in antiquities through current ethics guidelines permits students to consider the difficult relationship between policy and enforcement in this area, and ethical choices more generally.

CAMS 151: Introductory Biblical Hebrew

3 Credits

Fundamentals of Biblical Hebrew grammar, syntax, and vocabulary. J ST (CAMS/HEBR) 151 Introductory Biblical Hebrew (3) The aim of CAMS/J ST/HEBR 151 is to introduce students to the fundamentals of Biblical Hebrew as quickly and thoroughly as possible. Biblical Hebrew is the language in which the Old Testament was written, between the period of approximately 1200-200 B.C.E. This focuses primarily on the morphology and syntax of Biblical Hebrew. Drills on each point of grammar, as well as translation of sentences from Hebrew to English and English to Hebrew,
and brief passages taken from the Bible are the basis of the student’s homework throughout the semester. By the end of the semester, the students will be prepared to read short, unmodified passages of the Bible. The course will focus primarily on reading and writing, though students will read aloud in class regularly in order to ensure correct pronunciation and understanding. CAMS/J ST/HEBR 151 will prepare students to continue with CAMS/J ST/HEBR 152 and then 400-level courses. The course goals, in addition to providing the students with a firm grounding in Hebrew grammar and vocabulary, include giving the students a basic understanding of the history of the Biblical text. The primary focus will be on mastering paradigms and syntax, but the students will also be introduced to the Biblical texts themselves, which together from such an important piece of literature.

Cross-listed with: HEBR 151, JST 151

CAMS 152: Intermediate Biblical Hebrew

3 Credits

Intermediate study of Biblical Hebrew grammar, syntax, and vocabulary. CAMS (JST/HEBR) 152 Intermediate Biblical Hebrew (3)/(BA) This course meets the Bachelor of Arts degree requirements. CAMS/JST/HEBR 152 continues from CAMS/J ST/HEBR 151, which is a prerequisite for enrollment. After a brief review of key grammar and morphology from the first semester, the course will complete the process of providing students with a sufficient grasp of Hebrew vocabulary, morphology, and syntax to enable them to read unadapted passages from Biblical Hebrew texts (with the aid of a lexicon) by the end of the course. Class sessions will focus on grammar drills, sentences, and similar exercises as homework to supplement class work. As the semester progresses, students will read more and more from actual Hebrew texts, rather than composed sentences by the textbook author, so that when the students enter more advanced classes, they will find the transition to reading Hebrew as smooth as possible. In tandem with the increasing emphasis on Hebrew written by ancient Hebrews, the course will continue to focus on the linguistic and cultural background for the texts that the students read. Students will be evaluated on a combination of written work, including frequent quizzes, tests, homework completion, and course attendance and participation. CAMS/J ST/HEBR 152 will prepare students to continue with courses at the 400-level.

Cross-listed with: HEBR 152, JST 152

Bachelor of Arts: Humanities

CAMS 153: Dead Sea Scrolls

3 Credits

Examines the discovery, contents, and interpretations of the Dead Sea Scrolls, Jewish texts from approximately 225 B.C.E. to 68 C.E. CAMS (J ST/RL ST) 153 Dead Sea Scrolls (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course will explore early Judaism through what is known about it from the Dead Sea Scrolls, Jewish documents dating from approximately 225 B.C.E. to 68 C.E. that were discovered in 1947-1956 along the Dead Sea in Jordan (now the West Bank of Palestine). The course will be divided into three parts: 1) a short introduction to Judaism, especially the history of early Judaism, from the writing of the Hebrew Bible (Old Testament) to the Talmud; 2) a discussion of the caves above the Dead Sea and their relationship to the archaeological site called Khirbet Qumran; and 3) a survey of the contents of the 900+ Dead Sea Scrolls and select readings of some of them. These scrolls are primarily of three kinds:

- Books of the Bible (books that came to comprise what is now known as the Hebrew Bible/Old Testament) and their commentaries or translations; 
- Apocryphal books (books that never made it into the Hebrew Bible, such as Tobit, Enoch, etc.); and
- Pseudepigraphical books (previously unknown Jewish writings that seem to come from a minority Jewish group).

CAMS 160: Sacrifice in Ancient Religions

3 Credits

Examines theories of sacrifice and its manifestations in especially the religions of the ancient Mediterranean world and the Near East. RL ST (CAMS/J ST) 160 Sacrifice in Ancient Religions (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. Sacrifice (from Latin sacer, “sacred” + facere, “to make”) is one of the most prominent and troubling aspects of religion, in that it involves making an offering or slaughtering an animal to a deity. Its destruction and violence is often at odds with other rituals and core understandings within a religion, so why is it done and what good does it bring? This course will first examine some competing definitions and theories of sacrifice, and then turn to its manifestations in the ancient societies and religions of Greece, Rome, Egypt, Mesopotamia, Israel/Palestine (along with its neighbors Hatti and Phoenicia), as well as some examples from outside the Mediterranean world and the Near East, such as Mesoamerica or Vedic religion.

CAMS 180: Ancient Warfare

3 Credits

Historical survey of the evolution of warfare in the ancient Mediterranean region from prehistoric times to the Later Roman Empire. CAMS 180 CAMS (HIST) 180 Ancient Warfare (3) (GH;IL) Warfare has occupied a central place in the civilizations of the Mediterranean from the earliest times. The prehistoric origins of warfare is a hotly debated topic and constitutes the starting point for this course. Most scholars are agreed that military culture grew in step with sociopolitical development over the course of the third millennium BCE. In the following centuries, the Egyptians, and later the Assyrians and Persians, took great strides in developing sophisticated tactical systems, using infantry, chariotry, and cavalry. These matters occupy a little over the first third of the course. Across the Aegean Sea, Bronze Age (Mycenaean) Greece was ruled by elites occupying massively walled citadels, their leaders buried surrounded by their weapons. But how did these warriors fight? Do the epic poems of Homer memorialize Bronze Age combat? In the Archaic Period (700-500 BCE) infantry warfare in Greece was transformed by the appearance of the heavily-armed infantryman (the hoplite), deployed in a tight formation (the phalanx). The processes involved
in the appearance of this kind of warfare, its nature, and its affects on Greek society and culture will be the focus of our attention for the second third of the course. On the periphery of the Mediterranean basin stood a variety of warrior cultures (the Scythians, Celts, or Germans). Numerous warrior-dominated polities vied with each other in archaic Italy, but one of them, sitting on a ford on the river Tiber, ultimately rose to be the greatest military power produced by the ancient Mediterranean world ndash; Rome. The Roman legions first won and then ensured the security of a Mediterranean-wide empire that stood for 700 years and evolved ultimately into world’s first standing army of professional volunteers. The Roman military system holds our attention for the final third of the course. The course defines “warfare”; broadly to include both tactical and strategic, as well as cultural and ideological, matters. Even this canvas is too vast to be surveyed in all its richness, so the major themes explored are: (i) what is war, where does it come from, and how did it change as civilization spread?; (ii) in what ways did warfare develop in the periods under study, in terms of strategy, tactics, and weapons technology?; (iii) how do different warfare practices reflect essential facets of the various cultures under consideration?

CAMS 200: Ancient Philosophy
3 Credits

Examines the thought and influence of major Western thinkers from the pre-Socratics to the neo-Platonists, emphasizing Plato and Aristotle. PHIL (CAMS) 200 Ancient Philosophy (3) (GH;BA) This course meets the Bachelor of Arts degree requirements. PHIL (CAMS) 200 satisfies the GH requirement. As part of the history of philosophy sequence required of undergraduate philosophy majors, this course is designed to present students with a survey of ancient Western philosophy beginning with the pre-Socratics, continuing with Plato (Socrates), Aristotle, and the post-Aristotelians, and concluding with neo-Platonists and early Christians. Emphasis will be placed on Plato and Aristotle. The class will examine the historical and cultural foundations from which ancient Western philosophy grew, and will explore issues which were focal points of ancient philosophy, such as the nature of reality, change, permanence, truth, form, and matter. Students will critically consider these issues in required comparison/contrast papers, a position paper, a collaborative project, and a comprehensive final exam. Students will also be evaluated on class participation. The course is prerequisite to Philosophy 400-

level courses and it will be offered once a year with an enrollment of 35 students. For students studying ancient languages, particularly Greek, this course will offer an important exposure to the interpretation of philosophical text. For Classical and Ancient Mediterranean Studies majors, PHIL/CAMS fulfills the requirement under Supporting Courses for three credits in Greek or Roman literature and language, civilization, or archaeology; and it also fulfills the requirement for six credits for study at any level from an approved list in the general field of Classics and Ancient Mediterranean Studies.

CAMS 210: Numismatics and the Historian
3 Credits

Numismatics—the scholarly study of coins and medals—is a major tool in the study of Classical history and archaeology. CAMS (J ST) 210 Numismatics and the Historian (3) (GH;IL) WHY STUDY NUMISMATICS? Numismatics is the scholarly study of coins. Coinage has been used in the ancient world since the 7th century BCE. Eventually, minted moneymdash;i.e. coinagemdash;came to supplant money in other forms, replacing barter as the primary means of exchange in economies around the world. Coinage became a tool of governments to impose taxation upon their subject peoples, and to spread propaganda about governmental goals or issues. Coins are works of art, but they are common, widely circulating ldquo;works of art,rdquo; which also accomplish a daily monetary function to run commerce and the monetary system of an economy. Coins are also historical records, containing valuable information for the historian who is attempting to reconstruct the history of another time or place. For archaeologists, coins sometimes are the only means of providing absolute dates for excavated strata. The interpretation of numismatic evidence, like any other pieces of evidence in the historical puzzle, however, requires special knowledge and expertise. This course is not a course in ldquo;coin collecting,rdquo; although the collector may find the course helpful or interesting. It is an investigation of the development of coined money in the ancient world, with special investigations into (1) how coins were struck and used in Phoenicia of the 5th and 4th centuries BCE; (2) the variety and early uses for coins in the Greek city states of the 6th-4th centuries BCE; (3) the development of Jewish coins in the Holy Land, from Persian times to the period of the 2nd Revolt (early 2nd century CE); and (4) the development of coinage in the Roman economy of the 1stmdash;5th centuries CE. Photographs of coins will enhance class work. With the cooperation of the Palmer Museum, on Penn State’s University Park Campus, the class will have access at several points during the semester to view and work with coins from the Palmersquot; collection of ancient Jewish coins Students will leave the course with a new understanding of what coins are, how they developed, and what they can teach us about ancient history and economics.

CAMS 250: Honors Classics in Literature and Film

3 Credits

This honors course explores the Classical Tradition as it thrives in the literature of later epochs and film. CAMS 250U Honors Classics in Literature and Film (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. The Classics in Literature and Film has as its objective an exploration of the vital, continuing life of classical literature--its influence on the artistic production of later centuries and the ways in which ancient works re-emerge globally as modern literature and cinema whose verbal and visual rhetorical devices engage motifs and themes of recurring intercultural concern through the millennia. Readings include epic, drama and lyric poetry, all of which encompass global political,philosophical and artistic concerns. The demands of the course reading and film viewing require the strong engagement and critical acumen that should be a staple of students in the Honors College. CAMS 250U relates to programs of study in literature, film classical studies.

CAMS 400: Comparative Study of the Ancient Mediterranean World

3 Credits

Comparative study of ancient Mediterranean civilizations. CAMS 400W Comparative Study of the Ancient Mediterranean World (3)(BA) This course meets the Bachelor of Arts degree requirements. CAMS 400W provides students in the Classics and Ancient Mediterranean Studies (CAMS) Major, and other undergraduate and graduate students in allied fields, a capstone overview of research methodologies as they are applied to contemporary issues in ancient Mediterranean studies. The course is interdisciplinary in nature, and stresses the interactions among the ancient cultures of the Mediterranean region. The specific course content varies depending on the current research interests of the department faculty and the work undertaken by participating students. The course is organized as a seminar with participation by department faculty, and, when appropriate, visiting speakers. The topics concern issues of chronological, geographic, and cultural breadth. Students are expected to give an oral presentation of their research on a relevant topic during the last three weeks of the semester. This course requires a sequence of written assignments that constitute drafts in the process of writing an extended research paper. These consist of a statement of the problem, an annotated bibliography, a preliminary draft, and a final paper revised in light of the instructor’s comments on the assignments. This paper and an oral presentation in class based upon it will constitute about half of the final grade. A quiz and essay final examination will constitute the remainder of the grade.

Prerequisite: 3 credits in Classics and Ancient Mediterranean Studies
Bachelor of Arts: Humanities

CAMS 405: Law & Economy in the Ancient Near East

3 Credits

This course is an overview of the legal and economic texts and institutions in the Ancient Near East. CAMS 405 Law Economy in the Ancient Near East (3) (IL) (BA) This course meets the Bachelor of Arts degree requirements. This course will introduce the students to the legal and economic institutions of the Ancient Near East, as well as to the many theoretical issues raised by their study, such as: the matter of land tenure; the role played by the temple and the palace in the economic structure; the nature of law within political theology and kingship; and the legal and economic status of specific social groups (women, the elderly, slaves, children). Since most of the topics to be examined are widely debated, the course will provide the students with a broad overview of scholarly theories and intellectual schools. In order to accomplish such an objective, the readings for the class will include both introductory works (taken, for instance, from Sasson, Civilizations of the Ancient Near East) and more advanced and specific articles and works (e.g., R. Westbrook, A History of Ancient Near Eastern Law). Students will be asked to prepare these readings, which will be available in the library or in electronic format, so they will be ready to take part in class discussions. The source book for the basic legal texts will be M.T. Roth’s edition of law collections. Moreover, students will be expected to give a presentation based on some of the optional readings listed on the syllabus. Thus, every class will consist of lecture on the topic and a critical and open discussion of the assigned readings. Every lecture will take into account the assigned readings and will be accomplished by some handouts. Students will be evaluated on the basis of class participation (including a class presentation), as well as on writing assignments. The writing assignments will include take-home examinations. This course complements other existing courses in areas such as Ancient Near Eastern studies, biblical studies, Classics, Ancient History, and Linguistics. Moreover, this is one of the several history and culture courses in CAMS that provide detailed overviews of major civilizations of the Mediterranean and Near Eastern regions.

Prerequisite: 6 credits in any undergraduate CAMS courses.
Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures
International Cultures (IL)
The aim of CAMS 420 is to introduce students to the fundamentals of Targumic Aramaic as quickly and thoroughly as possible. Targumic Aramaic is the dialect used by Jews in the last few centuries BCE in their translations of the Bible into Aramaic. Targumic Aramaic texts remain vital within Judaism and Biblical study. This course focuses primarily on the morphology and syntax of Aramaic. Drills on each point of grammar, as well as translation of sentences from Aramaic to English and English to Aramaic, and brief passages taken from the native texts are the basis of the student's homework throughout the semester. By the end of the semester, students will be prepared to read short, unmodified passages of actual Aramaic. The course will focus primarily on reading and writing, though students will read aloud in class regularly in order to ensure correct pronunciation and understanding. CAMS will prepare students to work with Aramaic in related courses in CAMS, in particular those dealing with other Aramaic dialects, the Bible, and other related ancient languages. The course goals, in addition to providing students a basic understanding of the history of the Aramaic literary tradition. The primary focus will be on mastering paradigms and syntax, but the students will also be introduced to real Targumic Aramaic texts, which are of great importance to understanding the history of Biblical textual transmission.

CAMS 425: Books of the Bible: Readings and Interpretation

3 Credits/Maximum of 12

Study of a biblical book/topic in terms of literary, historical, and cultural contexts, history of interpretation, and critical scholarship. CAMS (J ST/RL ST) 425W Books of the Bible: Readings and Interpretation (3 per semester/maximum of 12) The Bible is a diverse collection of writings sacred to Jews and Christians written over about 1000 years, in a variety of different genres and historical circumstances. This course allows students the opportunity to study in depth a particular book of the Bible, from either the Hebrew Bible/Old Testament or the New Testament. We will explore the literary, historical and cultural context of the book in question. A literary analysis of the book will include consideration of genre and literary devices, and a close reading of the text. A historical analysis will consider the date of composition, its source materials, comparative traditions in other cultures, and relevant historical and cultural factors relevant to understanding the text. The course will introduce students to various other approaches to interpretation of the Bible in modern scholarship, including feminist and post-colonial critiques. We will also explore the varied interpretations and uses of the book in Judaism, Christianity, and Islam throughout history, and its influences in Western culture, including art and literature. The course will be offered once a year with varying content, and students may repeat it when taught with different content.

Prerequisite: 3 credits in CAMS or J ST or RL ST, recommended CAMS/J ST/RL ST 110 or 120; or ENGL 104. Cross-listed with: JST 425, RLST 425

Writing Across the Curriculum

CAMS 440: Studies in Classical and Ancient Mediterranean Archaeology

3-6 Credits/Maximum of 6

Selected topics in the literary sources and material evidence for classical and ancient Mediterranean society. CAMS 440W/CAMS 440W Studies in Classical Archaeology (3-6)(BA) This course meets the Bachelor of Arts degree requirements. CAMS 440W is a writing-across-the-curriculum upper level archaeology course on various topics in the broad field of ancient Mediterranean archaeology. The course will vary depending on the specific topic, which could be a study of authors such as Herodotus and/or Pausanias in relation to the archaeological record; epigraphy; numismatics; food production and consumption (e.g., diet, subsistence requirements, public dining, symposia, Roman dining, furnishings) from the literary and archaeological record; various classes of ancient Mediterranean ceramics; or the archaeological study of a specific urban site, such as Troy, Babylon, Egyptian Thebes, the Athenian Agora, or Pompeii with an emphasis upon economic and social organization. In most semesters the topic will emphasize interdisciplinary themes, such as comparative state formation, or Egyptian-Greek-Persian relations, or...
the cultural development of a particular society, such as the Etruscan, that was strongly influenced by interaction with other Mediterranean cultures. Students will learn of major publications in the field of study, and how to conduct searches of the previous archaeological literature and the related literary record. As one requirement, students will complete a research paper on a topic related to the particular theme of the course that semester. The sequence of writing assignments is designed to allow students to develop a project, to search for related publications, to develop a proposal, and to revise drafts of the final paper. The course is also intended to provide students with a practical background in Classical and ancient Mediterranean archaeology that will help prepare them for fieldwork at ancient Mediterranean sites, for the interpretation of archaeological publications, and, as relevant, for utilizing the literary and/or epigraphic record for interpreting archaeological evidence. Those considering enrolling in this course may obtain information about the specific topic by asking the faculty member listed as teaching the course or the Undergraduate Officer in the Department of Classics and Ancient Mediterranean Studies.

Prerequisite: 3 credits from: ANTH 002, ART H311, CAMS 010, CAMS 020, CAMS 025, CAMS 033, CAMS 140, CAMS 150, HIST 100, HIST 101

CAMS 442: Sport in Ancient Greece and Rome

3 Credits

An examination of the continuity of sport in Greek and Roman societies. CAMS 442 / KINES 442 Sport in Ancient Greece and Rome (3) (IL) This course examines the continuity of sport in ancient Greek and Roman societies. It investigates the role of athletic festivals in both cultures as well as the value placed on physical activity as part of the educational process. The objectives of the course are to enable students to gain an appreciation for the continuous involvement of the ancient Greeks in the areas of competitive athletics and gymnastics (Kinesiology) as an important part of their value system. Moreover, the course will provide a comparison of Greek and Roman attitudes of athletics and gymnastics. Typical topics include athletics during the Minoan/Mycenaean Bronze Age, Athenian and Spartan philosophies regarding education, the importance of spectator sports in Roman society and their link to politics.

Prerequisite: CAMS 025, CAMS 033, CAMS 140, CAMS 150, CAMS 100, CAMS 101 or KINES141
Cross-listed with: KINES 442
Bachelor of Arts: Humanities
International Cultures (IL)

CAMS 450: Gender and Sexuality in Ancient Greece and Rome

3 Credits/Maximum of 3

An examination of gender, sexuality, and sexual desire in ancient Greece and Rome. This course examines issues of gender and sexuality in Greece and Rome. Through close analysis of ancient texts and artifacts, we will explore representations of gender in literature and art, medical theories of the male and female body, sexual norms and codes, and views on marriage, rape, adultery, and prostitution. In addition, we will consider how eroticism and gender both support and subvert political and social ideologies. The objective of this course is to enable students to analyze gender identities and conventions surrounding sexuality in the context of the Greek and Roman worlds. This course will also invite students to consider the influence of ancient conceptions of gender and sexuality on modern discussions and debates. Authors and texts may include Homer, Hesiod, Sappho, Sophocles, Aristophanes, Plato, Aristotle, the Hippocratic corpus, Catullus, Virgil, Ovid, and Augustine. These ancient readings will be supplemented with selections from modern feminist theorists and gender studies.

Prerequisite: 3 credits in CAMS
Cross-listed with: WMNST 450
International Cultures (IL)
Writing Across the Curriculum

CAMS 470: Languages and Cultures of the Ancient Near East

3 Credits

This course is an overview of the languages and cultures that populated the Ancient Near East. CAMS 470 Languages and Cultures of the Ancient Near East (3) (IL) (BA) This course meets the Bachelor of Arts degree requirements. This course aims to provide students with a wide overview of the languages spoken in the Ancient Near East. The goal is to go beyond the merely linguistic sketches of the main grammatical features of these languages. In fact, the focus will be placed on historical, literary, social, anthropological, and ethnic matters: language contact settings; relations between language and ethnicity; sociolinguistic aspects of language evolution, language variation, bilingualism, and diglossia; relations between historical and social patterns and the literary, bureaucratic, and popular uses of language; etc. In order to address this ample variety of issues, the students will be introduced first to the essential set of facts needed to comprehend the sociolinguistic history of each region, i.e., basic overviews of the languages in question, their linguistic affiliation, the main periods of their history as evolving linguistic realities, and their different writing systems. These overviews will immediately open the door to the discussion of a tapestry of topics concerning the realities behind these languages, especially their speakers and their ethnic, historical, and political identity. This inquiry into the facets of language as an inherently human reality will lead to a miscellaneous constellation of problems, such as, for instance, the construction of a national identity through the use, revival, or vindication of a concrete language or dialect. Students will be required to do a number of readings before each class. These readings will include basic historical sketches of the languages and linguistic traditions with which the course will deal. Moreover, students will be expected to give a presentation based on some of the optional readings listed on the syllabus. Thus, every class will consist of a lecture on the topic and a critical and open discussion of the assigned readings. Every lecture will take into account the assigned readings and will be accompanied by some handouts. Students will be evaluated on the basis of class participation (including a class presentation), as well as on writing assignments. The writing assignments will include take-home examinations. This course complements other existing courses in areas such as Ancient Near Eastern studies, biblical studies, Classics, Ancient History, and Linguistics. Moreover, this is one of the several history and culture courses in CAMS that provide overviews of major civilizations of the Mediterranean and Near Eastern regions.

Prerequisite: 6 credits in any undergraduate CAMS courses.
International Cultures (IL)

CAMS 471: Sumerian

3 Credits

Introduction to the Sumerian language and the cuneiform writing system. CAMS 471 Sumerian (3)(BA) This course meets the Bachelor of Arts degree requirements. Sumerian was the language originally spoken in the
south of Ancient Mesopotamia (modern Iraq) during the third millennium b.c.e. After it died out as a spoken language, Sumerian became the essential cultural vehicle for a wide variety of literary, scholarly, and religious genres, and it was preserved in writing until the practical disappearance of the Mesopotamian civilization by the second century of our era. This course aims to familiarize students with the basics of Sumerian grammar and enable them to read royal inscriptions from the Early Dynastic and Ur III periods (3rd millennium b.c.e.) as well as provide them with a preliminary introduction to some literary and non-literary texts. Students will be introduced to a variety of genres: royal inscriptions, administrative documents, letters, incantations, and literary texts. Because of the specific nature of the writing system and the fact that most Sumerian texts are available only in copies, students will also be introduced to the cuneiform script, its basic structure, and a basic repertoire of signs. Students will be required to do all the assigned exercises in advance, and participate in class. Special emphasis will be put on class participation: every student will be asked to read and translate in class. Furthermore, occasional quizzes are by no means a remote possibility. In addition, there will be a mid-term and a final examination. This course complements other existing courses in areas such as Ancient Near Eastern studies, biblical studies, Classics, Ancient History, and Linguistics. Moreover, this is one of the courses in CAMS that provide an introduction to an essential language of the Mediterranean and Near Eastern regions.

**Prerequisite:** 6 credits in any undergraduate CAMS course.
Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures

CAMS 472: Akkadian

3 Credits

Introduction to the Akkadian language (Babylonian Assyrian) and the cuneiform writing system. CAMS 472 Akkadian (3)(BA) This course meets the Bachelor of Arts degree requirements. Akkadian is the cover term for the East Semitic dialects spoken and written in Mesopotamia (modern Iraq) from the mid-third millennium b.c.e. to about the first century c.e. These dialects (Babylonian and Assyria) are all quite similar. As is customary, the course will focus on Old Babylonian, as this is the "classical" variety of the language, and served as the basis for the dialect of the vast majority of later Akkadian texts (Standard Babylonian). This course aims to familiarize students with the basics of Akkadian grammar and enable them to read a wide variety of genres: legal texts, letters, omens, royal inscriptions, and literary compositions. Because of the specific nature of the writing system and the fact that many texts are available only in copies, students will also be introduced to the cuneiform script, its basic structure, and a basic repertoire of signs. Every meeting will follow a similar structure: the first part will be devoted to the exercises corresponding to the lesson in the textbook that was explained the previous day; and the second part will be an explanation of the next lesson, the exercises of which will have to be prepared for the next meeting. Students will be required to do all the assigned exercises in advance, and participate in class. Special emphasis will be put on class participation: every student will be asked to read and translate in class. Furthermore, occasional quizzes are by no means a remote possibility. In addition, there will be a mid-term and a final examination. This course complements other existing courses in areas such as Ancient Near Eastern studies, biblical studies. Classics, Ancient History, and Linguistics. Moreover, this is one of the courses in CAMS that provide an introduction to an essential language of the Mediterranean and Near Eastern regions.

**Prerequisite:** 6 credits in any undergraduate CAMS course
Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures

CAMS 480: Greeks and Persians

3 Credits

Development and achievements of the Achaemenid kingdom; relationships between Persians and Greeks.

**Prerequisite:** CAMS 010, CAMS 025, or CAMS 100
Cross-listed with: JST 480
Bachelor of Arts: Humanities

CAMS 481: Introduction to Middle Egyptian & Hieroglyphics

3 Credits

An introduction to the language and script of Ancient Egypt, familiarizing the student with grammar, syntax and lexicon. CAMS 481 Introduction to Middle Egyptian Hieroglyphics (3) This course is offered as a basic introduction to that stage in the evolution of the Egyptian language known as "Middle Egyptian" (used as a vernacular c. 2300-1700BC, and as a "literary" dialect c. 2200-1350BC). First encountered in caption texts and snippets of conversation of the workers and peasants in late Old Kingdom mastaba depictions, Middle Egyptian originally was the vernacular of the "street" during the outgoing Old Kingdom. In the upheaval that swept away the monarchy and elite of the Old Kingdom the language which characterized the Pharaonic court (Old Egyptian) was swept away as well. In the subsequent First Intermediate Period, the language that everyone speaks is a lower class register. Middle Egyptian was given a filip shortly after the turn of the millennium when the new regime of the 12th Dynasty (c. 1991-1786 BC) established a writing school and adopted this dialect as the accepted literary medium. The scribes of this institution produced a number of literary pieces, hymns and poetry which although created in writing, were intended for oral dissemination parlando. They rapidly became classics and were copied and learned by heart for centuries into the future. Middle Egyptian was used in every walk of life from monumental inscriptions, religious, and mortuary texts to letters, business documents and accounts, and the output from Dyn. 12 through 18 was prodigious. Even beyond the 14th Century BC learned scribes would continue to make the attempt at composing in Middle Egyptian, even though the language was no longer spoken, and as a quasi-ecclesiastical speech it continued down to Greco-Roman times. By that time its restriction to temple texts gave the false impression that both language and script had always had the purpose of conveying religious concepts, hence the Greek misnomer 'hieroglyphs', i.e. holy script.

**Prerequisite:** 6 credits in any CAMS course
Bachelor of Arts: Other Cultures
International Cultures (IL)

CAMS 490: Ancient Mediterranean Languages

3-6 Credits/Maximum of 6

Variable topic study of an ancient language of the Mediterranean basin and related areas, other than Greek, Latin, or Hebrew. CAMS 490CAMS 490 Ancient Mediterranean Languages (3-6)(BA) This course meets the Bachelor of Arts degree requirements. CAMS 490 is a variable topic course in ancient languages, other than Greek, Latin, and Hebrew, that are offered by the Department of Classics and Ancient Mediterranean Studies. The course expands the range of ancient languages of areas
in the Mediterranean region which students may study at Penn State. The course permits students of Latin, Greek, or Hebrew to learn the basics of other ancient Mediterranean languages, thereby extending their understanding of the structural similarities and differences of the region’s writing systems. The languages taught at present include Egyptian and Sanskrit. Other languages, such as Akkadian, Hittite, Ugaritic, or Aramaic may be offered in future years. The course consists of three major components: The course begins with an overview of the language of study with respect to the language systems of the ancient Mediterranean world in a historical context. Next students learn the essential features of the language of study including its forms, grammar, and lexicon. In the second part of the semester, students read selected texts of various genres as appropriate, including literary and historical texts and inscriptions. The known features of the oral language will also be discussed. The course complements advanced courses such as LATIN 450W, The History of the Latin Language, and other advanced language offerings in Greek, Latin, and Hebrew. It also complements offerings in historical-comparative and Indo-European linguistics such as LING 102(GH).

**Prerequisite:** LATIN003
Bachelor of Arts: Humanities

CAMS 492: Intermediate Field Methods

3-6 Credits/Maximum of 6

On-site experience in archaeological fieldwork in the ancient Mediterranean region. CAMS 492CAM 492 Intermediate Field Methods (3-6)(BA) This course meets the Bachelor of Arts degree requirements. Students will have the opportunity to participate in a practicum in archaeological fieldwork at Mediterranean sites under the direction of an experienced research archaeologist. Activities will include surveying recognition and recording of stratigraphy and standing remains, recovery of artifacts and ecofacts, and on site conservation. Students will keep a journal and be graded on it as well as on their development of skills in excavation and interpretation. This course may be used to fulfill a requirement for the Classics and Ancient Mediterranean Studies option of the CAMS major and as a 400-level course for the CAMS Minor. The course will be available when CAMS faculty conduct archaeological fieldwork or students participate in projects approved by CAMS archaeology faculty. Estimated enrollment will vary depending on project, funding, etc.

**Prerequisite:** approval by field school director
Bachelor of Arts: Humanities

CAMS 493: Intermediate Field Analysis

3-6 Credits/Maximum of 6

On-site experience in archaeological analysis in the ancient Mediterranean region. CAMS 493 Intermediate Field Analysis (3-6)(BA) This course meets the Bachelor of Arts degree requirements. Students will have the opportunity to participate in archaeological fieldwork at Mediterranean sites under the direction of an experienced research archaeologist. Activities will include analysis of materials recovered in archaeological projects including maintaining an objects database, artifact sorting and reparation, recognition of pottery types, recording finds, proper handling and storing of finds, and understanding the role of artifacts in archaeological interpretation. Students will keep a journal and be graded on it as well as on their development of skills in recording and interpreting archaeological data. This course may be used to fulfill a requirement for the Classics and Ancient Mediterranean Studies option of the CAMS major and as a 400-level course for the CAMS Minor. The course will be available when CAMS faculty conduct archaeological fieldwork or students participate in projects approved by CAMS archaeology faculty.

**Prerequisite:** approval by field school director
Bachelor of Arts: Humanities

CAMS 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Humanities

CAMS 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Humanities

CAMS 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Bachelor of Arts: Humanities

CAMS 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

Bachelor of Arts: Humanities

CAMS 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Honors

Communication Arts and Sciences (CAS)

CAS 83: First-Year Seminar in Speech Communication
3 Credits

Introduction to major theoretical, critical, research and pedagogical issues in human communication.

Bachelor of Arts: Social and Behavioral Sciences
First-Year Seminar
General Education: Social and Behavioral Scien (GS)

CAS 84: First-Year Seminar in Communication Arts and Sciences
3 Credits

Introduction to significant issues surrounding effective human communication; humanities emphasis.

Bachelor of Arts: Humanities
First-Year Seminar
General Education: Humanities (GH)

CAS 100: Effective Speech
3 Credits

Introduction to speech communication: formal speaking, group discussion, analysis and evaluation of messages.

General Education: Writing/Speaking (GWS)

CAS 100A: Effective Speech
3 Credits

Principles of communication, implemented through presentation of speeches, with some attention to group discussion and message evaluation. CAS 100A Effective Speech (3) (GWS) This general education course studies the purposeful use of oral communication as a means of addressing practical problems, both professional and civic. It is designed to introduce students to principles of effective public speaking, implemented through the design and presentation of individual speeches and through practice in message analysis and evaluation. Class size is limited and class meetings involve considerable attention to developing public speaking skills through in-class activities, collaborative learning, peer critiques, and analysis of public speeches and other messages. At least three individual, graded speeches are required in this course. Additional presentations (graded or non-graded) may be required by some instructors. Course work may also include instruction and practice in group decision making. Assessment includes evaluation by examination (one or two; no final exam is given in the course) and by occasional quizzes and other activities, all of which emphasize the mastery and application of the conceptual content of the course. Public presentations are evaluated for content, organization, and presentation.

General Education: Writing/Speaking (GWS)

CAS 100B: Effective Speech
3 Credits

Principles of communication, implemented through group problem solving, with some attention to formal speaking and message evaluation. CAS 100B Effective Speech (3) (GWS) This is a general education course designed to introduce students to principles of effective communication with a specific focus on group problem solving. The goal of CAS 100B differs from the goal of the other sections of CAS 100, with the goal of CAS 100B directed toward skill development in effective group communication, with less emphasis on formal public speaking and message evaluation. Toward the end, class size is limited and class meetings involve considerable attention to group dynamics, teamwork, and effective communication within groups. Through in-class activities, peer critiques, and analysis of both process and product, this course is designed to allow students to actively work in groups and engage in self-analysis of their own group processes. Structurally, this course begins with discussion of the principles of effective communication and public presentation and then covers significant course content addressing group communication and group process. This course enables students to work more effectively in groups, develop teams, and make effective group and individual presentations. At least one individual speech, several group communication activities, and one message evaluation are required in this course. Evaluation methods include evaluation beyond formal exams. Public presentations are evaluated for content, organization, and presentation; group work is evaluated for process effectiveness and outcomes; critical evaluation of messages is assessed in individual assignments; and all course content is covered on exams. There is one midterm exam and one final exam, with the possibility of quizzes on lecture and reading materials throughout the semester.

General Education: Writing/Speaking (GWS)
CAS 100C: Effective Speech

3 Credits

Principles of communication, implemented through analysis and evaluation of messages, with some attention to formal speaking and group discussion. CAS 100C/CAS 100C Effective Speech (3) (GWS) This is a general education course designed to introduce students to principles of effective communication with a specific focus on the analysis and evaluation of messages. Toward the end, class size is limited and class meetings will involve considerable attention to individual and group work in message analysis and critique. Through in-class activities, lecture, and discussion, this course focuses on the critical analysis of persuasive messages. This course will enable students to be better prepared to analyze written and oral messages, work in groups, and develop effective presentations. Students will deliver a minimum of two public speeches and work on at least one group assignment. Public presentations will be evaluated for content, organization, and presentation. Exams will test students ability to synthesize and apply course concepts from the textbook and lectures.

General Education: Writing/Speaking (GWS)

CAS 100S: Effective Speech

3 Credits

Principles of communication, implemented through presentation of speeches, with some attention to group discussion and message evaluation.

First-Year Seminar

General Education: Writing/Speaking (GWS)

CAS 101N: Introduction to Human Communication

3 Credits

CAS 101 introduces students to the field of communication studies and to the most important concepts, questions, and ideas that surround the study of communication today. This class is essential for any student who wishes to consider a major or minor in Communication Arts and Sciences. The course is also an important elective for students who want to understand processes of communication in a variety of social forms or settings, including: interpersonal, small group, organizational, intercultural, public, and technological. The main objectives of the course are: 1) to expose students to the concepts and best practices that cut across every aspect of modern communication, 2) to prepare students to excel in advanced classes within the Department of Communication Arts and Sciences, and 3) to help non-CAS majors incorporate essential communication principles into their own fields of study and future professions. Students from every major or college are welcome. Student grades may be determined by a variety of assignments, including quizzes, exams, in-class discussions, and major individual or group projects. This course invites students not only to learn about major concepts or ideas in the study of communication, but to explore their practical implications.

GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking

CAS 126: Developmental Listening

3 Credits

Introduction to effective strategies of listening, with an emphasis on studying, note taking, test taking, and research paper writing. CAS 126/CAS 126 Developmental Listening (3) This course designed to assist first year students in developing a comprehensive understanding of their role as students, the nature of the learning process and the role of communication in successful learning. A critical objective of the course is for students to understand the integral relationship of communication to academic success. Therefore, considerable attention is given to learning processes and the significant impact of communication on these processes and subsequent learning outcomes. Within this larger context students will be provided opportunities to engage in activities designed to enhance their skills in the following areas: listening, speaking and writing; self awareness and self monitoring; classroom management; time management; study management and learning strategies; exam management; resource management; and researching and developing a thesis in a research paper. Student achievement is evaluated through class participation, including working in groups; a research paper and oral presentation based on developing an effective argument; an academic planning project; reflection papers; quizzes; and two exams. CAS 126 is available only to students participating in the Comprehensive Studies Program, Penn State’s Act 101 Program.

CAS 137H: Rhetoric and Civic Life I

3 Credits

Rhetoric and Civic Life (RCL) is a year-long honors course offering comprehensive training in oral, written, visual, and digital communication. It unites these various modes under the flexible art of rhetoric and uses rhetoric both to strengthen communication skills and to sharpen awareness of the challenges and advantages presented by oral, written, visual, and digital modes. This portion of the course, CAS/ENGL 137 uses rhetoric both to sharpen awareness of the challenges and advantages presented by oral, written, visual, and digital modes. In this semester, students learn to rigorously examine the rhetoric surrounding them, compellingly present their findings in various modes, and thoughtfully contextualize their research. In this course, students will: -Develop a rich understanding of rhetorical concepts - Practice application of concepts and terms in expressing understanding of effectiveness of rhetoric through analysis and contextualization of existing texts -Enhance communication skills by practicing and applying in a variety of communication modes (written, oral, digital)

CAS 138T: Rhetoric and Civic Life II

3 Credits

This course builds rhetorical skills in oral, written, visual, and digital contexts and introduces deliberation and advocacy in civic and disciplinary spheres. CAS (ENGL) 138T Rhetoric and Civic Life II (3) (GWS)ENGL/CAS 138T, Rhetoric and Civic Life II, expands knowledge and aptitudes built in ENGL/CAS 137H by asking students to use rhetorical
skills and principles to develop strategies for persuasion and advocacy in the context of civic issues. The course continues the multimodal emphasis—the focus on oral, written, visual, and digital communication—used in 137H and adds new components as well. Students will develop a repertoire of communication skills through hands-on practice at composing and delivering speeches and essays, and they will work with digital media to create multimedia texts, podcasts, and websites. Students will reflect on these different modes as themselves rhetorical choices. The course’s civic and ethical components take center stage as students learn how to deliberate important public issues thoughtfully and with civility and respect. They will learn the difference between persuasion and advocacy and develop strategies for both in the context of pertinent local, national, and global issues. They will participate in a public deliberation forum on topics they generate and vote on. The forum will be organized to allow small deliberative action groups as well as large forum-style meetings. The course focuses on ethics in many contexts, e.g., community action and public deliberation; ethics of persuasion; ethical controversies in the disciplines. Students will be encouraged to explore percolating disciplinary interests and to share knowledge in online disciplinary communities. Students will work throughout the semester to design and build a final electronic portfolio that represents their academic work with an eye to their imagined professional futures. The portfolio assignment is designed to permit assessment of learning outcomes and encourage students to move toward qualifying for the College of the Liberal Arts Excellence in Communication Certificate (https://laus.la.psu.edu/current-students/paterno-fellows-program/excellence-in-communication-certificate), a mechanism which helps students hone their communication abilities throughout their Penn State careers by creating and perfecting an online portfolio.

CAS 162N: Communicating Care
3 Credits/Maximum of 3

Communicating Care ENGL 162N / SOC 162N / CAS 162N What do we talk about when we talk about health? Our states of well-being and illness are topics that, like the weather, drive our daily conversations, but we rarely have time to study and practice these vital exchanges. Spoken in emergency rooms or on long-distance calls, by medical professionals, family members, or strangers making small talk, the languages we use to share pain and recovery require our knowledge of long-established scripts and our willingness to improvise. By exploring how these encounters draw from and work as textual and dramatic performances, this course will guide students to achieve a new level of literacy in the most essential communicative art of caring. Students will analyze health conversations in literary texts, such as short stories, poems, memoirs, and graphic novels. They will explore real-life scenarios drawn from their own experiences, fieldwork, social science theories, and published case studies. Developing skills in the humanities (GH), they will see how subjective, often individual experience, historical perspectives, and creative expression help people to communicate about health and care. Developing their abilities in the social and behavioral sciences (GS), they will see how theory provides insights to predict and understand health and practices of care, investigate objective perspectives and recognize the contributions of fieldwork and data-driven studies to analyzing and improving communication when health is a main concern. They will integrate these methodologies especially to pursue these fields’ common goals of making beneficial connections between individuals and groups, and managing private and public life.

CAS 175: Persuasion and Propaganda
3 Credits

Propaganda, in common usage, is a deliberate, systematic attempt to manipulate beliefs and emotions, usually through methods considered deceitful and unethical. Persuasion, on the other hand, is an everyday activity in our personal, social, and civic lives. Persuasion is considered acceptable, even necessary in a free society. This course will explore the distinction between propaganda and persuasion, with an emphasis on developing the critical skills necessary to distinguish between the two. There are many different definitions of propaganda and the term often is used to label and discredit political opponents. This course allows students to develop a more precise understanding of propaganda and the techniques of the propagandist. In more practical terms, students will learn to recognize, describe, and evaluate propaganda in all of its various forms and contexts. Toward this end, it includes important cases from the history of propaganda as well as contemporary cases of public advocacy that raise questions about the distinction between persuasion and propaganda.

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CAS 199: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.
International Cultures (IL)

CAS 200: Language, Culture, and Communication

3 Credits

Introduction to language, language development, cultural literacy, culture, and intercultural communication. CAS 200 CAS 200 Language, Culture, and Communication (3) (US;IL) This course defines culture broadly, including how people conceptualize and enact reason, rationality, race/ethnicity, sex/gender, power, and age. Course content is organized into three large units: (1) how culture shapes language use; (2) how language use shapes culture; and (3) how culture and language (both verbal and nonverbal) operate together and influence each other, including how language is used to create, and negotiate understandings of culture. In the first unit, the class examines the effects of preconceived cultural beliefs on behavior; that is, how beliefs that a culture takes for granted as being true filter persons' perceptions of reality. This unit also covers the concepts of self-fulfilling prophecies, cultural stereotypes about age, the possibility of cross-cultural universals (e.g., politeness), and African-American culture. In the second unit, the class examines how the structure of different culture's languages (e.g., their vocabulary and grammar) shapes how persons experience the world and thus shapes their "reality." In the third unit, the class takes the position that various aspects of culture (e.g., race/ethnicity, sex/gender, power, and age) are constantly being constructed and re-constructed through language. This unit examines how persons accomplish being "a woman," "African American," "old," "polite," "powerful," etc. This class is interdisciplinary and incorporates materials from anthropology, applied linguistics, linguistic anthropology, communication studies, and sociology. Grades are based on three in-class exams (two midterms and a final), which are closed-book and involve short-answer and essay-type questions. Attendance is mandatory. This is one of the three core-required courses for the major. This course ties into another core course, Communication Theory, by discussing several key Communication Theories in different ways, such as the Sapir/Whorf hypothesis, Politeness Theory, and various theories of language. This course ties into those dealing with race and gender.

International Cultures (IL)
United States Cultures (US)

CAS 203: Interpersonal Communication

3 Credits

The phenomenon called interpersonal communication encompasses the complexities of interaction between people in any of a variety of situations. The expectations people form prior to a conversation, the messages they produce using language and nonverbal cues, the ways in which they attach meaning to the behaviors of others, and the systemic qualities of the dyad are all part of interpersonal communication. And interpersonal communication occurs in contexts as varied as strangers sharing a seat on a bus, neighbors passing each other in the street, college roommates or married couples coordinating their lives, and co-workers negotiating office politics. In the home, at school, at work, and in public, interpersonal communication is an intricate process that weaves the fabric of our lives as social beings. This class is designed as an opportunity to explore the complexities of interpersonal communication and to develop a repertoire of interpersonal communication skills.

Honors

CAS 206: Mediation and Communication

3 Credits

Presentation of the history, theory, and practice of mediation as a means of resolving conflict through communication. CAS 206 CAS 206 Mediation and Communication (3) There are two overall objectives to this course. First, the course will acquaint students with conflict as a normal part of the human condition, and with the efforts of humans for thousands of years to resolve conflict in a peaceful way. The specific method of conflict resolution addressed by the course is mediation, which involves the intervention of a third party who is neutral in the conflict. Modern uses of mediation to resolve conflict extend from the playground to essential functions in society, for example, labor relations, legal systems, government operations, including international relations, and family disputes. While Western methods will be emphasized, mediation also plays an important role in non-Western cultures. For example, Hawaiian, Palestinian, Native American, and Chinese cultures rely on mediation to resolve conflict and rebuild relationships. In fact, mediation is the most popular means of conflict resolution in China, Taiwan, and Japan. Second, the course will acquaint students with the essential means by which mediation is accomplished, communication. The success of the mediation depends on the ability of the mediator to communicate well in specific ways when addressing the assembled parties, and when interacting with them individually. The course will also acquaint students with communication issues in mediation under study by both professional mediators and communication scholars. This course relates to lower-division Communication Arts and Sciences courses in rhetoric and interpersonal communication, in that it demonstrates how the different theories and practices they discuss can be integrated to produce important positive outcomes not only to individuals in conflict, but also to cultures. This course relates to upper-division Communication Arts and Sciences courses in rhetorical theory, interpersonal communication theory and research, conflict resolution and family communication theory and research, by providing an introduction to communication issues arising from an important context of communication, mediation, issues that can stimulate both further theory and research. This course relates to upper division courses in Labor Studies and Industrial Relations dealing with workplace dispute resolution and collective decision-making, and in Human Development and Family Studies dealing with interventions and resolving problems, to the extent that these courses discuss mediation. This course introduces the communication bedrock on which mediation rests.
Prerequisite:

persuasive, technical and ceremonial speeches. Organizing, adapting and presenting ideas in public informative, 3 Credits

GenEd Learning Objective: Soc Resp and Ethic Reason
GenEd Learning Objective: Key Literacies
GenEd Learning Objective: Crit and Analytical Think
General Education: Humanities (GH)

3 Credits

Penn State has a special opportunity to create new leaders who learn deliberative approaches to politics and public life. This one-credit course provides a background for this approach to democratic leadership, and it also prepares students for the Nevins Fellows paid internship program. Those who complete this course will have first priority when awarding these internships each year. The centerpiece of this course are day-long workshops that introduce students to effective civic leaders in government or the non-profit sector. Bracketing these workshops are a handful of seminars, which introduce ideas, discuss reading assignments, and reflect on the workshops. In addition to short reaction papers, students will produce a narrative essay at the end of the course that describes how they could see themselves advancing democracy in the United States (or elsewhere) and what kind of internship experience will help them prepare for such a career. For those who opt to seek an internship, this essay will supplement their formal application. Credit for the course requires attendance at every class meeting and workshop, or equivalent makeup assignments, if permitted.

Honors

CAS 210: Landmark Speeches on Democracy and Dissent

3 Credits

Landmark Speeches on Democracy and Dissent offers a survey of key speeches, debates, and controversies making up the rich tradition of U.S. civic life. The course is designed to introduce students to the basic historical contexts within which these key events arise; engage them in close readings of speeches, tracts, and polemical writing; and develop skills in critical thinking and writing. Students will attend to a broad spectrum of voices, including those of historically under-represented peoples as well as canonical figures. Landmark Speeches on Democracy and Dissent thereby encourages students to develop a broad rhetorical literacy in the diverse democratic voices that have long contributed to essential U.S. arguments about nationhood, protest, war, race, gender, religion, and more. The course presupposes that students will be able to apply this rhetorical literacy to both participation within and critical thinking about contemporary forms of democracy and dissent.

CAS 214: Speech Writing

3 Credits

Writing speeches for delivery in political, professional, and ceremonial settings; emphasis on composition and language for oral presentation.

Prerequisite: CAS 100

Writing Across the Curriculum

CAS 215: Argumentation

3 Credits

This course provides an in-depth examination of argumentation in both public and private contexts. The course requires students to investigate the process of researching sound evidence, constructing legitimate argumentative claims, and participating in live debates. Fundamental to this endeavor is a strong attention to research, ethics, and strategy. Major topics may include essential components of effective arguments, in-depth examination of different types of evidence, introduction to forms of reasoning, negative and affirmative cases, and debate rules or strategies. Students may be evaluated with a range of assignments, from oral debates or presentations to written assignments, quizzes, and exams. This course thereby offers students opportunities to enhance their skills in effective inquiry and advocacy, useful for academic as well as professional success. Understanding the theoretical foundation of argumentation will enable students to accomplish four objectives: 1) to understand the significant role argumentation plays in public and private discourse, 2) to research, gather and organize supporting material into argumentative discourse so as to become a skilled advocate, 3) to be familiar with the physical and virtual PSU libraries, and 4) to become an effective critic of argumentative discourse.

CAS 216: Practical Parliamentary Procedure

3 Credits

Practice in presiding over and participating in meetings conducted under rules of order.

Cross-listed with: AEE 216

CAS 220: Persuasion

3 Credits

The course aims to impart knowledge of scientific theories of persuasion by engaging students in the design and execution of a persuasion campaign. The applied component of the course involves (a) selecting a consequential issue, (b) evaluating the extent to which that issue might
be amenable to solution via persuasion, (c) learning how members of
the target audience view the issue via formative research, (d) designing
theoretically-informed messages adapted to the target audience, (e)
implementing a campaign that utilizes multiple messages in multiple
modalities, and (f) evaluating the impact of the campaign. Classic and
contemporary concepts of persuasion science are brought to bear on
each stage of this sequence.

GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Soc Resp and Ethic Reason

CAS 222N: Foundations: Civic and Community Engagement
3 Credits
Through readings, discussion, deliberation, listening, and individual as
well as collaborative action, this course gives students the opportunity
to learn about and practice theories and habits of civic and community
engagement and public scholarship with the goal of helping to build
democratic capacity and sustain participatory democracy. This course
emphasizes concepts and case studies that focus on the people’s
role in shared governance. The course also provides a foundation for
understanding how a wide range of other individual and collective
practices have an equally important role to play in building and sustaining
community. The course draws from studies in demography, political
science, sociology, psychology of racial identity formation and education
to help students communicate better about and in shared governance.
Among the core concepts are the role of students and other citizens
in sustaining and transforming their communities, the historical
and contemporary mission of Land Grant universities, the centrality
of rhetoric and communication to collaborative judgment, and the
relationship among media, cultures, and politics as they affect civic
and community engagement. Students also learn together about the
range of ways that citizens do, can, and might participate in democratic
decision-making and will observe and practice these forms in several
communication media and across a range of differences. Finally, learn
about models of and opportunities for engaging other citizens across and
beyond Penn State, including in global environments.

CAS 250: Small Group Communication
3 Credits
Skill development in the areas of group discussion, leadership, and
teamwork. CAS 250 Small Group Communication (3) This course serves
to develop students’ skills in decision-making, problem-solving, and
leadership. To provide opportunities for students to develop competence
as communicators and leaders, this course will address both theory
and practices. Learning from case studies and analyzing real-world
problems are at the center of exploring group communication in this
course. CAS 250 fulfills the skills requirements for our majors and minors
and is the skills course associated with an organizational communication
pathway emphasis in the major. Additionally, involvement in groups
is essential to learn about group processes; therefore students will
participate in a variety of group-based assignments and presentations.
Evaluations will be determined at the individual level (e.g., exams,
papers, attendance, peer evaluation) and at the group level (e.g., group
presentation, group process, group paper). There will be two exams,
a problem analysis report, and at least two small papers required in
addition to the final group project and presentation.

CAS 252: Business and Professional Communication
3 Credits
Interviewing, briefing, conferring, and decision making; analyzing
and evaluating formal and informal patterns of communication in
organizations.

CAS 253: Health Communication
3 Credits
To introduce students to principles of health message design and the
general theories and models used to guide these efforts. CAS 253 Health
Communication (3) This course is designed to provide students with
theoretical principles for practice in planning and evaluating health
messages for dissemination by health organizations, policy makers,
and other interested publics. CAS 253 emphasizes the potential positive
and negative outcomes associated with specific messages designed to
impact individuals’ knowledge and behavior with health consequences.
It emphasizes the importance of audience segmentation on goal
selection in guiding health message design, as well as the effects and
effectiveness of source and channel selection for reaching particular
audiences. The CAS 253 Health Communication course is one of a series
of electives for Communication Arts and Sciences majors or minors
interested in pursuing careers in organizational communication, health
communication, sales, and training and development in small groups. The
course is possibly linked to those with interests in biobehavioral health.

CAS 271: Intercultural Communication
3 Credits
Introduction to intercultural communication. Focus on topics such as
language, identity, prejudice, and intergroup relations on a domestic/
international level. CAS 271 Intercultural Communication (3) (US;IL)
This is an introductory course that also fulfills an intercultural
and international competence (GI) requirement. CAS 271 is designed to
give undergraduate students an introduction to the various issues,
trends, and historical perspectives pertaining to communication within
U.S. domestic and international cultures. Students will be graded on
the following required assignments: (1) exams, (2) book reviews, (3)
opinion-editorial position papers, (4) a class-organized campus tour
designed to accent the achievements and contributions of people of
color who are or have been affiliated with Penn State University, (5)
journal of personal reflections concerning racial, ethnic, cultural and
international communication issues, (6) six abstracts of journal articles
that when synthesized will comprise a six-article literature review, (7) final
presentation on cultural relationship building through communication.
CAS 271 is an introductory survey course that is highly recommended to
students as a course preceding several other 300 and 400-level courses
on interpersonal, group and intercultural communication, relationships, and processes.

International Cultures (IL)
United States Cultures (US)

CAS 272: Political Communication and Technology
3 Credits

This course examines how interactive communication technologies reshape political rhetoric, discursive civic culture, deliberation, and participatory democracy. CAS 272 Political Communication and Technology(3)(GH) This course examines how interactive communication technologies reshape political rhetoric, discursive civic culture, deliberation in the online public sphere, and participatory democracy. It traces the evolution of the public sphere and explores theoretical and empirical issues related to online political discourse (blogs, political discussion fora, viral politics of social networking sites), cyberactivism, smart mobs, networked publics, and peer-to-peer production (YouTube, Wikis). CAS 272 concentrates on online rhetorical and discursive strategies of candidates for public office, and individuals and organizations campaigning on specific issues and causes. It emphasizes civic engagement and includes topical areas such as mechanisms of online public spheres, citizen generated discourse and content, viral politics, connections between social networking sites and political discourse, and behaviors such as networked activism. It examines how various interactive communication options have affected political discourse, campaign communications and public deliberation. It provides students with hands-on experiences in analyzing the rhetorical and persuasive strategies involved in creating video content, writing blogs, creating wikis and twitter messages. It teaches students how they could use these communication options in working for political campaigns, civic action groups and non-profit institutions. The goal of the course is to help students understand the opportunities and constraints involved in using interactive communication technologies for civic and political actions, and facilitate their development as informed citizens. Class activities focus on identification and critique of rhetorical strategies employed when using interactive communication technologies, and learning to create content such as weblogs, wikis, and mashups. Students will be graded on exams, participation in discussion groups, analyzing and connecting course concepts to real world examples, creating content such as mashups, and analysis of rhetorical strategies of political candidates and activist groups. CAS 272 is highly recommended to students interested in examining the potential of interactive communication technologies for civic and political action.

General Education: Humanities (GH)

CAS 280W: Storytelling and Speaking
3 Credits

Principles of oral performance from storytelling to the printed page; includes oral performance of stories, speeches, prose, drama, and poetry.

Writing Across the Curriculum

CAS 283: Communication and Information Technology I
3 Credits

Introduction to communication technology and information management; intended for students in the Liberal Arts.

CAS 295: Internship
1-16 Credits/Maximum of 16
Supervised nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor

CAS 296: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

CAS 296A: **SPECIAL TOPICS**
1-6 Credits

CAS 297: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CAS 297H: **SPECIAL TOPICS**
1 Credits/Maximum of 1
Honors

CAS 299: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CAS 301: Rhetorical Theory
3 Credits

History and theory of public advocacy and civic discourse.

Bachelor of Arts: Humanities
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

CAS 302: Social Influence
3 Credits

Explores how humans influence others through communication.

CAS 303: Communication Theory
3 Credits

This course is intended as a foundational course in communication theory for Communication Arts and Sciences majors and others interested in social science theory in general. It is designed to show how communication theory can be applied to understand and improve communication in your professional (and personal) life. The theories
examine the range of communication contexts, including interpersonal, group, organizational, mediated, and cross-cultural interactions. At the conclusion of this semester, students should be able to demonstrate: knowledge of major ideas from a substantial number of communication theories, ability to apply theories of human interaction to explaining and improving communication behavior, especially in professional contexts in addition, students should also have: improved skills at both creative and analytic writing that includes practice in giving helpful feedback on others’ writing, and facilitating discussion.

Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking

CAS 304: Quantitative Methods for Communication Research
3 Credits

The purpose of this course is to instruct students on concepts and issues of quantitative research methods in Communication. Students will learn how Communication researchers conduct and evaluate research from using a variety of quantitative methodologies. By the end of the course, students will possess the knowledge necessary to understand and evaluate arguments utilizing research to persuade, as well as, to conduct sound research on their own. A primary goal of the course is to enable students to become a critical consumers and producers of information that defines the world around them. The course will educate on the proper terminology/concepts used in research methods. The end result of the course should be a fundamental understanding of how to critique and conduct research in the field of Communication.

General Education: Social and Behavioral Scien (GS)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies
GenEd Learning Objective: Soc Resp and Ethic Reason

CAS 311: Methods of Rhetorical Criticism
3 Credits

Principles for the analysis and evaluation of public discourse.

CAS 315: Debate and Civic Life
3 Credits/Maximum of 3

This course provides historical background on debate in politics and in civic life, examining both public and competitive debate practices. Debate has been a vital part of democratic engagement in the United States since the founding of the country. This course explores the role debate has played in the United States, focusing primarily on debate practices in the 20th and 21st century. This course provides historical background on debate in politics and in civic life, examining both public and competitive debate practices. Course material will expose students to theories and practices of debate including the history of important debate moments in the United States, analysis of contemporary political debates, and practical debate techniques inside the classroom and in a public setting.

CAS 321: Rhetoric and Law
3 Credits

A survey of the literature on the role of rhetoric in law, including trial advocacy, appellate argument, and judicial reasoning. CAS 321 CAS 321 Rhetoric and Law (3) A survey of the literature on the role of rhetoric in law, including trial advocacy, appellate argument, and judicial reasoning. Rhetoric and Law explains how knowledge of rhetorical principles enhances the understanding of legal documents, reasoning, and performance. This course surveys classical to contemporary rhetorical literature demonstrating its utility to the study of law. Students will examine the role rhetoric plays in injury deliberation, trial advocacy, appellate argument and judicial reasoning. Students will demonstrate their understanding of rhetorical theory by participating in a mock trial. In this exercise, students will deliver opening statements, closing arguments as well as conduct direct and cross-examination of witnesses. Finally, the class will examine United States Supreme Court majority and dissenting opinions as rhetorical documents.

CAS 340: Communication and Civility
3 Credits

Communication behaviors contributing to civil and uncivil discourse; their implications in business, public life, across cultures and in interpersonal relationships.

CAS 352: Organizational Communication
3 Credits

This course examines the function and structure of communication in both formal and informal situations.

CAS 360: Communication for Teachers
3 Credits

Analysis of dynamics of instructor-student communication implemented through structured exercises in instructor listening, verbal and nonverbal message-making.

Prerequisite: CAS 100

CAS 373: The Rhetorics of War and Peace
3 Credits

This course explores how war and peace are advocated. CAS 373 The Rhetorics of War and Peace (3)In The Wealth of Nations (1776), the first classic of capitalism, Adam Smith speaks of "the art of war," deploying a phrase from Sun-Tzu’s The Art of War that would later appear in Baron von Clausewitz’s On War and also in contemporary U.S. military handbooks. This course argues that war is indeed an art, and a thoroughly rhetorical one in which the political economy of persuasion is as important as high-tech weaponry and whiz-bang battle plans. By considering some of war’s most thoughtful theorists, by discussing wars past and present, and by reading powerful defenses and trenchant critiques of war, this course will help students understand how wars are managed rhetorically. This course satisfies a grave need: for living in the post-9/11 world requires the critical rhetorical skills necessary to understand not just how war is waged or how it structures our lives but how war is advocated and defended. The trajectory of this course will thus make the full arc from war to peace. Perhaps most importantly in this time of grave post-modern warfare, this semester’s readings...
and discussions will make us all better rhetorical scholars capable of imagining alternative futures. From the realities of war comes the possibility of peace.

CAS 375: Rhetoric and Public Controversy
3 Credits
Survey of important events in the history of public address, including speeches, debates, and persuasive campaigns and movements.

CAS 383: Culture and Technology
3 Credits
This course will examine the area of cyberculture as it relates to communication studies.

CAS 390: Qualitative Research Methods
3 Credits
An overview of Qualitative Research Methods, including how to conceive, design and execute a research study. CAS 390 Qualitative Research Methods (3) (GS) This course provides students with an understanding of both qualitative research methods and the theoretical frameworks that inform qualitative inquiry. Additionally, this course focuses on tools for data collection such as individual and focus-group interviewing and observing and recording interaction. This course provides practical experience for students in collecting and analyzing qualitative data with and without the use of technology and examines particular difficulties in the interpretation and reporting of qualitative findings. Qualitative Research Methods is course that bridges disciplinary boundaries and is useful to any student who will be investigating human interaction.

General Education: Social and Behavioral Scien (GS)

CAS 395: Forensics Practicum
1-2 Credits/Maximum of 16
Provides students in forensics the opportunity for supervised participation in the activity in class and in intercollegiate competition.

CAS 398: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

CAS 399: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction. International Cultures (IL)

CAS 402: Speech and Human Behavior
3 Credits
General semantics, thought, and human behavior; not offered at University Park campus.

CAS 403: Interpersonal Communication Theory and Research
3 Credits
Examining behavior within interpersonal encounters, with emphasis on both theoretical/applied explanations for how and why people act during such interactions.

Prerequisite: CAS 203

CAS 404: Conflict Resolution and Negotiation
3 Credits
Conflict and its management are critical issues that pervade the fabric of our society. This class is designed as an opportunity to explore the complexities of conflict, to understand the forces that make conflict challenging, and to develop a repertoire of skills for thinking about and managing conflict more effectively. In this pursuit, we first examine the features that define and set the stage for conflicts. We then turn to the communication behaviors that people use to manage conflicts. Finally, we consider some of the dynamics that make constructive conflict management a challenge. The objective of this course is to expose students to the scholarly study of interpersonal communication in a way that both captures the vitality of the discipline and enhances interpersonal communication skills. As a General Education course contributing to the social and behavioral science requirement, this class is also expected to (a) survey existing knowledge in the subject domain, (b) promote an understanding of social scientific methods, (c) clarify the multiple nature of causality in social settings, (d) demonstrate the relationships between the study of interpersonal communication and other disciplines, and (e) encourage students to integrate empirical knowledge and theoretical views of the social world. The course content, assignments, and exams were developed to attend to these concerns. Recommended Preparation CAS 100

Prerequisites: 5th Semester standing

General Education: Social and Behavioral Scien (GS)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Soc Resp and Ethic Reason

CAS 405: Family Communication Theory and Research
3 Credits
Explores the nature and functions of communication in family life; emphasis on meaning, patterns, and styles of family communication.

Prerequisite: CAS 101, CAS 202

CAS 406: Honors Course in Communication Arts and Sciences
3 Credits
Individual study and seminar in selected areas or issues of speech communication.

Prerequisite: an all-University average of B; approval of the departmental Honors Committee
CAS 409: Democratic Deliberation

3 Credits

Explores the theory and practice of democratic deliberation in elections, town meetings, juries, legislatures, and other public institutions. CAS (PL SC) 409 Democratic Deliberation (3) Many modern democracies have made strides to become more deliberative in how they make decisions. This course looks closely at the most promising innovations in self-government while also reviewing the persistent anti-deliberative and undemocratic features of modern societies and governments. Topics covered in the course include deliberative democratic theory, political conversation, common forms of public meetings, mediated deliberation, campaigns and elections, the jury system, and deliberative democracy on larger social scales.

**Prerequisite:** CAS 137, CAS 175, CAS 201, CAS 202, CAS 216, CAS 250, CAS 272 or PL SC001, PL SC017, PL SC112, PL SC130

Cross-listed with: PLSC 409

CAS 411: Rhetorical Criticism

3 Credits

Principles of rhetorical criticism examined through analysis of selected texts and critics.

**Prerequisite:** CAS 201 or CAS 100
Bachelor of Arts: Humanities

CAS 415: Rhetoric of Film and Television

3 Credits

Rhetorical analysis of the artistic forms and cultural structures of film and television; intensive study of selected examples.

**Prerequisite:** CAS 100 or COMM 150
Bachelor of Arts: Humanities

CAS 420: Rhetorical Theory

3 Credits

Ancient, medieval, Renaissance, Enlightenment, and contemporary theories of rhetoric.

**Prerequisite:** CAS 201
Bachelor of Arts: Humanities

CAS 421: Communication and Aging

3 Credits

Concentrates on the pivotal role that communication plays in the social process of aging. CAS 421 CAS 421 Communication and Aging (3) Communication and Aging is a course that concentrates on the pivotal role that communication plays in the social process of aging. An understanding of the communicative behavior of older adults can result in significant improvements in our ability not only to describe the essential components of a quality life, but to actively intervene in the various factors that help each of us adapt to the many physiological, psychological, social and economic challenges of the aging process. Topics covered in this course include: the theories of social aging; attitudes and ageism; mass media use and portrayals; work, leisure, and retirement; family relationships such as siblings, grandparent-grandchild, parent-child; friendships; health and aging; death and dying; and successful aging. This course places communication and our interactive behavior at the heart of the aging process and helps us combine the growing bodies of literature in physical, psychological and social aging as we attempt to grasp the process of life long development.

**Prerequisite:** Three credits of CAS

CAS 422: Contemporary African American Communication

3 Credits

A focused study on the continuities between African and African American culture and communication. CAS 422 / AFAM 422 Contemporary African American Communication (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. At least once a year, this multidisciplinary course is designed to serve both Speech Communication and African and African American Studies. It is concerned with the relationship between a people’s culture and world view and their systems of rhetoric/communication. It also provides a focus on the continuities between African and African American culture and communication. Specifically, it offers an approach to ascertaining the salient features of African and African American communication for community development. Special emphasis is given to the development and rhetoric of the Civil Rights Movement. The course utilizes videos, guest lectures, tapes of speeches, etc. to clarify objectives and stimulate classroom discussion. Students will be evaluated on two exams, one oral report, a final paper and class participation. Even though students need 400-level courses for their major and minor, this course is not required for Speech Communication majors. However, it does meet the Intercultural and International Competency requirement because it focuses on the communication of African Americans and how that communication has affected all Americans. The course will accommodate ten students in Speech Communication and ten students in African and African American Studies to ensure active discussion of issues.

**Prerequisite:** CAS 100
Cross-listed with: AFAM 422
Bachelor of Arts: Humanities
United States Cultures (US)

CAS 426W: Communication Ethics

3 Credits

Ethical issues in public and private communication; role of communication in expressing and realizing individual and social values.

**Prerequisite:** CAS 100
Bachelor of Arts: Humanities

CAS 426W: Communication Ethics

Writing Across the Curriculum

CAS 438: Rhetoric of Documentary

3 Credits

Rhetorical analysis of the documentary in film, television, and other media; historical and critical analysis of functions and form.

**Prerequisite:** CAS 201

CAS 450W: Group Communication Theory and Research

3 Credits

Selected theories of problem solving through group discussion emphasizing participation and leadership. CAS 450W Group
Communication Theory and Research (3)(BA) This course meets the Bachelor of Arts degree requirements. CAS 450W: Group Communication Theory and Research is a writing-intensive course in which students study a broad range of theories and perspectives concerning the role of communication in decision-making and problem-solving groups through a variety of writings by leading scholars in the area of Group Communication. The objectives of CAS 450W are: (1) to expose students to various facets of group life and theories that account for their performance; (2) to provide a summary knowledge of representative findings from research on group interaction; (3) to develop critical skill in the assessment of theoretical arguments and the adequacy of the evidence on which they are based; and (4) to enhance students’ capacities for addressing, both orally and in writing, substantive issues posed by the subject matter. Theoretical material is examined with a view toward determining how to improve the performance of decision-making and problem-solving groups. Hence, the course has a strong concern with the identification of communication practices on which students can draw in making choices concerning how to participate in such groups. The course incorporates a discussion, rather than lecture, format. Attendance is required. Students will receive a set of questions in advance of each reading assignment that will provide a basis for discussion in the class sessions. The questions for the five reading assignments will also serve as topics for a series of five short position papers that fulfill the writing intensive component of the course. In addition to the position papers, students are required to complete a midterm and final examination, both of the open-book, essay variety, and a course paper exploring a significant communication issue raised in the course. Among the topics covered in the course are the impact of member characteristics on interaction, the social dynamics of groups, the management of conflict, argument and decisional outcomes, leadership, and principles of meeting management. Students completing the course will have not only a better understanding of why decision-making and problem-solving groups both succeed and fail, but also a much improved basis for contributing effectively to them. CAS 450W satisfies requirements in the Communication Arts and Sciences Major and Minor, the Liberal Arts Business Minor, and the Dispute Management and Resolution Minor. It may also be used as an elective and is complementary to courses dealing with groups and group process in Psychology, Sociology, and Management.

**Prerequisite:** CAS 100 or CAS 250

Bachelor of Arts: Social and Behavioral Sciences

Writing Across the Curriculum

CAS 452: Organizational Communication Theory and Research

3 Credits

Explores the nature and functions of communication in organizations; emphasis on concepts, tools, and skills for effective management of communication.

**Prerequisite:** CAS 202 or CAS 252

CAS 452W: Organizational Communication Theory and Research

3 Credits

Explores the nature and functions of communication in organizations; emphasis on writing and exploring concepts, tools, and skills for effective management of communication. CAS 452W CAS 452W Organization Communication Theory and Research (3)This course is designed to further introduce you to the field of Organizational Communication. Emphasis is placed on macro-organizational variables that can systematically affect micro-communication behaviors: in other words, how could something like the hierarchy of the organization influence who you talk with as an organizational employee. The purpose of the course is to provide you with a basic understanding of communication-relevant behaviors and activities in organizations. This includes things like leadership, teamwork, conflict management, and diversity. Additionally, we will examine various theories of and approaches to studying communication within organizations. My hope is that when you've successfully completed the course you've mastered these objectives: - Develop a vocabulary and understanding of organizational communication concepts. - Become familiar with the historical, current, and future issues and problems facing organizations. - Apply theoretical perspectives and concepts to organizational situations and settings. - Identify and understand the relationships between macro (e.g. structure and hierarchy) and micro (e.g. social support and stress) organizational communication variables. - Experience locating, reading, synthesizing, and evaluating scholarly research appropriate for organizational communication phenomena.

**Prerequisite:** CAS 202 or CAS 252

Writing Across the Curriculum

CAS 453: Health Communication Theory and Research

3 Credits

Principles of communication about health across the lifespan and within health-care contexts. CAS 453 Health Communication Theory and Research (3) This is an upper division course designed to provide students with a comprehensive introduction to multiple discourses about health and health care. CAS 453 emphasizes the communication about health and health care that reaches us everyday through many and varied professional, personal, and mediated forms. Interactions with health care providers were once limited primarily to physicians and nurses. Today, careers in health care are among the most rapidly expanding job areas, and a bewildering array of technicians and technical and professional titles greets the client of formal health care. Awareness and understanding of how to assess these various roles increases the ability of students to interact competently with care providers. Family, friends, and the cultural groups that nurture our youth and sustain our adulthood interact with us about health on a regular basis as well. Awareness and understanding of the impact that interactions with these primary social network members has on interactions with health care providers increases the likelihood that both provider and client will be better understood and better served. Every message about health and health care carries an ethical dimension in its content. The course will increase a students' critical thinking and informed decision-making skills associated with others efforts to influence them regarding their own health practices. It also frames discussion about the ethics of and ethical decision-making associated with health communication. Students will examine communication about health in many situations and contexts to illustrate how it reflects efforts to assign labels to illness and disease, and sometimes the environmental and political contributors to the situation. Students will assess whether communication about health and health care places the responsibility on individuals, institutions, society, or some combination for the particular health condition or situation. Finally, students will evaluate how communication is used to invoke personal, professional, and societal norms of conduct associated with standards of conduct that should promote health and well-being. The course is linked to the courses in interpersonal communication, organizational communication, health communication, and small group communication, as discourse about health crosses societal, cultural, and personal contexts. CAS 453 is one of the upper division courses that may
be used to fulfill Major or Minor students’ requirements for upper division credits.

Prerequisite: CAS 100

CAS 455: Gender Roles in Communication
3 Credits

Explores the literature on gender research in the discipline of human communication. CAS (WMNST) 455 Gender Roles in Communication (3) (US) This 400-level course is a theory and application course which also satisfies an intercultural requirement. CAS/WMNST 455 strives to ensure that students understand female and male differences and similarities in communication patterns, perceptions of the opposite sex, and expectations and stereotypes regarding the opposite sex. Many researchers find that gender communication is “cross cultural,” i.e., that women and men come from two different cultures, and therefore misunderstanding of each other’s intention and expectations may frequently occur. This course examines how distinctions in meaning and interpersonal dynamics may create these two differing cultures, and promotes understanding and possibilities for adaptation. It also investigates when and if changing communication styles is desirable, and in which settings. A goal of the course is to help students to solve puzzles toward understanding those we work with and relate to, as well as to apply their knowledge to their own lives and contexts. The course content and format reflect these goals. CAS/WMNST 455 begins with theoretical information, later applying it to situations of interest to most — relationships, language use differences (verbal and nonverbal), media messages, and workplace issues. Lecture incorporates considerable discussion and exploration of gender issues, and most topics are followed by activities, which illustrate how theories work in real life. This course is useful for any students seeking an intercultural course. It is recommended to Communications Arts and Sciences and Women’s Studies majors and minors due to emphasis on communication theory and gender issues. Business, counseling, psychology, sociology, education and any social science majors may fulfill a US requirement through 455.

Prerequisite: CAS 202
Cross-listed with: WMNST 455
United States Cultures (US)

CAS 460: Introduction to Honors Thesis
3 Credits

This course will guide students through steps that result in Honors Thesis Proposal.

Prerequisite: Student must be in good standing in Schreyer Honors College. CAS 201 or CAS 202 ; CAS 204 Honors

CAS 470: Nonverbal Communication
3 Credits

Examining ways nonverbal messages, such as gestures, posture, vocal intonation, and facial expressions, affect us on a daily basis.

Prerequisite: 6 credits in Communication Arts and Sciences

CAS 471: Intercultural Communication Theory and Research
3 Credits

Intercultural and cross-cultural communication research theory and practice as applied within and across national boundaries. CAS 471 Intercultural Communication Theory and Research (3) (US;IL) This course is designed to introduce theoretical approaches to cross-cultural communication from a variety of disciplines, e.g., speech communication, anthropology, linguistics, sociology, sociolinguistics, psychology, and has a double aim of combining theory with practical application and empirical observation. We will be utilizing a number of readings, films, and such mass media elements as films, magazines, newspapers, and television programs and commercials, as well as actual interviews with people from other cultures. Classes will be conducted through lecture sessions, class discussions, and small group activities. Specific: To examine characteristics of communication, language, and culture; to consider which aspects of language, communication, and culture may be universal, culture-specific or individual characteristics of speakers; to examine cultural values and their relationships to communication involving members of the same cultural group and members of groups outside of that culture; to raise awareness of both similarities and differences within and between cultural groups; to analyze how effective communication is achieved and to identify potential sources of miscommunication and/or misunderstanding; to raise awareness of our own cultural norms, preferences, and expectations; to increase acceptance, understanding, and appreciation of similarities and dissimilarities among people. Students will be evaluated on two midterm exams (undergrads) or two extended analytic journals (grads) 25%, observation journals (6 total) 15%, thought journals (4 total) 15%, article presentation and critique 15%, final paper and oral report 25%, and participation 5% The content and focus of this course is related to any field which has the potential of dealing with persons of other cultures, including but not limited to biobehavioral health, business and marketing, and education. This course is inherently related to Speech Communication Majors and Minors, but is also valuable from a cross-disciplinary perspective since we deal squarely with issues of humanity, tolerance, values, and communication.

Prerequisite: CAS 271
International Cultures (IL)
United States Cultures (US)

CAS 475: Studies in Public Address
3 Credits

History and criticism of public discourse; intensive analysis of selected public addresses and social movements.

Prerequisite: CAS 100
Bachelor of Arts: Humanities
Bachelor of Arts: Social and Behavioral Sciences

CAS 478: Contemporary American Political Rhetoric
3 Credits

Analysis of selected speeches, debates, and persuasive campaigns and movements in recent American political history.

Prerequisite: CAS 100
Penn State University

CAS 483: Communication and Information Technology II
3 Credits
Theory and application of interactive internet-based communication and information management; for students who want a Liberal Arts approach.
Prerequisite: CAS 283

CAS 490: Peer Tutoring for Public Speaking
3 Credits
This course will prepare students to become peer tutors in public speaking. CAS 490 Peer Tutoring for Public Speaking (3) This course will prepare undergraduates for work as peer tutors in the area of public speaking. Students will begin by considering peer tutoring as an opportunity for civic engagement, and public speaking as integral to the democratic process. Students will review and practice elements of the speaking process both to become excellent speakers themselves and also highly competent tutors for their peers across the university's curriculum. In addition to instruction on elements of public speaking, students will study and practice the art of critique. This course will include in-class instruction, discussion, and activities, as well as a practicum in which students will participate in reviews of peers' work; work at all stages of the speaking process.
Prerequisite: CAS 100A or CAS 137H or ENGL 137H or CAS 138T or ENGL 138T or approved higher level speaking course

CAS 493: Undergraduate Teaching Assistantship
1-3 Credits/Maximum of 6
As a Teaching Assistant, you will activate your learning in a way that will reinforce and enrich your understanding of course material. In addition to this intellectual benefit, working as a Teaching Assistant is great professional experience that enhances other skill sets including: organization, time management, planning and executing effective meetings, and, of course, effective communication. Finally, teaching assistantships are great ways to cultivate strong relationships with faculty and graduate students who may become mentors and personal and professional resources. Specific duties of undergraduate teaching assistants might include leading discussions, holding office hours, doing research or creating materials for the instructor, and performing tasks related to the course (e.g., taking attendance or keeping records). Grading of exams and assignments is not an appropriate task for undergraduate TAs.

CAS 494: Research Topics
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small group basis.
Prerequisite: prior approval of proposed assignment by instructor

CAS 495: Internship
1-18 Credits/Maximum of 18
Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.
Prerequisite: prior approval of proposed assignment by instructor

CAS 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.
CAS 496A: **SPECIAL TOPICS**
1-9 Credits
CAS 496B: **SPECIAL TOPICS**
1-6 Credits/Maximum of 6
CAS 496H: Introduction to Thesis Research
1-3 Credits
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.
Honors
CAS 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.
CAS 498: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Communication Sciences and Disorders (CSD)

CSD 100: Preventing Vocal Abuse, Misuse, and Disorders
3 Credits
Principles of the voice mechanisms, preventing vocal abuse, and promoting vocal health across the life span. CSD 100 Preventing Vocal Abuse, Misuse, and Disorders (3) (GHA; US) CSD 100, Preventing Vocal Abuse, Misuse, and Disorders is a 3 credit course intended to be the first course for all University students exploring communication sciences and disorders as a possible major, and students interested in learning specifically about vocal hygiene, voice use, vocal abuse and voice disorders. Principles of the voice mechanisms, preventing vocal abuse, and promoting vocal health across the life span are core principles of the course. The focus of this course is on preventing voice disorders and promoting activities that contribute to healthy vocal habits across
the life span. The course is designed to integrate theoretical knowledge, practice-based, and measurement-focused activities to assist learners in understanding, achieving, maintaining, and promoting a lifetime of healthy vocal activities. Learning activities include: mini-lectures, power point presentations, information/research gathered via library and Internet resources and specialized computer instrumentation for analyzing voice qualities. The educational objectives of the course are to: 1) develop a basic understanding of the normal and disordered vocal mechanism; 2) understand the need for maintaining and promoting lifetime wellness in your vocal activities and habits for any occupational choice; 3) learn about the prevention of vocal disorders across the life span from vocal nodules to laryngeal cancer; 4) understand the subjective and objective measures of vocal qualities to assist in changing and altering vocal abuses and misuses while improving and enhancing good vocal habits, and 5) developing an understanding of how vocal behaviors influence social behaviors, employment, and quality of life. The course includes an overview of the anatomy and physiology of the respiratory and vocal mechanisms, physics of voice production, development of vocal abuses and resulting pathologies, disorders including vocal growths, paralysis, voice disorders associated with cleft lip and cleft palate, syndromes, neurodegenerative disorders, aging and head and neck cancer. Students are required to complete readings from web-based texts, internet sites (e.g. NIH, National Voice Academy, American Speech-Language Hearing Association, National Cancer Institute), multiple choice and true false tests and one written research-to-practice assignment.

United States Cultures (US)
General Education: Health and Wellness (GHW)

CSD 101: Preventing Hearing Loss
1.5 Credits
Assessment, intervention, and prevention of hearing loss caused by loud music and recreational and industrial noise.

United States Cultures (US)
General Education: Health and Wellness (GHW)

CSD 146: Introduction to Communication Sciences and Disorders
3 Credits
Classification of speech, language, and hearing disorders, diagnostic and treatment procedures; skills and responsibilities of the speech-language pathologist and audiologist. CSD 146CSD 146 Introduction to Communication Disorders (3) (US;IL) CSD 146, Introduction to Communication Sciences and Disorders (INTRO TO CSD), is a 3-credit course typically offered every semester. The course is intended as the first course for Communications Sciences and Disorders majors or for students exploring Communications Sciences and Disorders as a possible major. For Communications Sciences and Disorders majors, CSD 146 is a required course, requiring a grade of “C” or better, and should be taken during the first or second year (semester standing 1–4) since CSD 146 is a prerequisite for CSD 230, 245, 395W, 442, 444, 451, and 459W. The educational objectives of the course are to introduce students to speech, language, and hearing disorders and the professions of speech/language pathology and audiology. This is done by providing an overview of the normal aspects of speech, language, and hearing followed by an overview of speech, language, and hearing disorders with emphasis on assessment and intervention strategies. The course includes an overview of the anatomy and physiology of the speech and hearing mechanisms, physics of sound, and linguistic and psycholinguistic development. Students are required to complete several observations of speech, language, or hearing therapy or assessment in the Penn State Speech and Hearing Clinic and readings from a required text and Internet sites. Students are evaluated by three to four tests and their clinical observation reports.

International Cultures (IL)
United States Cultures (US)

CSD 218: American Sign Language I
3 Credits
Introduction to sign language; provides basic receptive and expressive skills; includes out-of-class practice. CSD 218CSD 218 American Sign Language I (3)CSD 218, American Sign Language I (AM SIGN LANG 1), is a 3-credit course that can be taken by any student interested in learning sign language. Several sections of the course are offered every semester. For Communications Sciences and Disorders majors, the course is highly recommended as an elective. The intent of the course is to provide students with a basic understanding of receptive and expressive sign language skills. The educational objectives are that students will (a) acquire a basic knowledge of expressive and receptive skills in American Sign Language (ASL), content variety signifying, and finger spelling, (b) acquire a knowledge of the role of ASL in the lives of deaf people and to other cultural aspects of deafness, (c) develop and demonstrate a 600 word sign language vocabulary, and (d) demonstrate basic sign language communication skills. Students meet the educational objectives by attending class, completing reading assignments, observing video tapes, and practicing sign language inside and outside of class. Students will be evaluated using five tests. One test concerns aspects of the deaf culture as it pertains to the use of ASL and the grammatical structure of ASL. Four tests assess knowledge of vocabulary and communication skills by having the instructor sign vocabulary and questions and having students write down or sign back the answer. CSD 218 is a prerequisite for CSD 318, Sign Language II.

CSD 230: Introduction to Audiology
3 Credits
Basic measurement procedures, evaluation, and screening of hearing loss using pure-tone and speech audiometry, immittance, and physiological measurements. CSD 230CSD 230 Introduction to Audiology (3) CSD 230, Introduction to Audiology (INTRO TO AUDIOLOGY), is a 3-credit course typically offered during Fall semester. The course is prerequisites by Communications Sciences and Disorders 146, required for Communications Sciences and Disorders majors, and should be taken during the second or third year. The course can also be taken by students exploring CSD as a major. The intent of this course is to provide students with a basic understanding of hearing measurement procedures, screening for hearing loss, and the educational, social, and vocational problems of hearing impaired individuals across the age span. The educational objectives are that students will acquire an understanding of: 1) acoustics as related to hearing testing, 2) anatomy and physiology of the auditory system, 3) common disorders of the auditory system, 4) the basic principles of measuring hearing sensitivity, speech understanding ability, and middle ear function, 5) screening for hearing loss, and 6) the educational, social, and vocational problems caused by a hearing loss across the life span. Students meet the educational objectives by attending and participating in class discussions, completing assigned
research, and (d) the interaction between normal and abnormal language
relations between theories of language development and empirical
and linguistic differences contribute to language development, (c) the
theories and information concerning the relations between normal and
active learning experiences so that students understand (a) several
to child language development as the foundation for assessing and
language pathology and provides the foundation for higher level speech
is oriented toward students who intend to pursue a career in speech-
taken during the second or third year (semester standing 3-6). The course
is a required course, requiring a grade of "C" or better, and should be
taken during the second or third year (semester standing 3-6). The educational objectives of
this course are to introduce students to the phonetic transcription of
speech sounds using the Internal Phonetic Alphabet, provide an overview
of articulatory phonetics, describe representative sounds from languages
of the world with primary emphasis on American English and its dialects,
and the transcription of disordered speech production. Students will be
expected to read and transcribe broad and narrow phonetic symbols,
become familiar with sociolinguistic factors and non-organic and organic
speech disorders that affect pronunciation. In addition, students will
be expected to describe the phonetic capabilities of humans including
the articulatory basis of speech sounds, aspects of speech production,
and speech sounds produced by the world's languages and disordered
speakers. Recitation and extensive practice in transcription of live speech
are integral parts of the course.

Prerequisite: CSD 146
International Cultures (IL)
United States Cultures (US)

CSD 311: Clinical Phonetics
3 Credits
Introduction to phonetic transcription of speech emphasizing articulatory
phonetics of American English, its dialects, and disordered speech;
extensive transcription experiences. CSD 311 Clinical Phonetics (3) For
Communications Sciences and Disorders majors, CSD 311 is a required
course, requiring a grade of "C" or better, and should be taken during the
second or third year (semester standing 3-6). The educational objectives of
this course are to introduce students to the phonetic transcription of
speech sounds using the Internal Phonetic Alphabet, provide an overview
of articulatory phonetics, describe representative sounds from languages
of the world with primary emphasis on American English and its dialects,
and the transcription of disordered speech production. Students will be
expected to read and transcribe broad and narrow phonetic symbols,
become familiar with sociolinguistic factors and non-organic and organic
speech disorders that affect pronunciation. In addition, students will
be expected to describe the phonetic capabilities of humans including
the articulatory basis of speech sounds, aspects of speech production,
and speech sounds produced by the world's languages and disordered
speakers. Recitation and extensive practice in transcription of live speech
are integral parts of the course.

Prerequisite: CSD 146
United States Cultures (US)
General Education: Social and Behavioral Scien (GS)

CSD 269: Deaf Culture
3 Credits
Explores the economic, social, psychological, and political aspects of the
default culture and its interaction with the majority hearing culture. CSD 269
CSD 269 Deafness and Society (3) (GS;US;IL) explore this community
as being a distinct culture having its own rules of social interaction,
values, group norms, and identity. The educational objectives are that
the student will acquire an understanding of: 1) the development of the
American Deaf Community, 2) factors affecting an individual's choice to affiliate with the Deaf Community, 3) history and current trends
in deaf education, 4) American Sign Language (ASL) and other forms
of communication used by Deaf Americans, 5) social, emotional, and
psychological aspects of deafness, 6) diversity with the Deaf Community, and 7) deafness in the literature, media, and the arts.

International Cultures (IL)
United States Cultures (US)

CSD 296: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on
an individual basis and which fall outside the scope of formal courses.

CSD 297: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively
narrow subject which may be topical or of special interest.

CSD 300: Developmental Considerations in the Assessment and
Treatment of Language Disorders
3 Credits
Using a developmental framework to interpret problems in child language
acquisition. CSD 300 Developmental Considerations in the Assessment and
Treatment of Language Disorders (3) (US;IL) CSD 300, Developmental
Considerations in the Assessment and Treatment of Language Disorders
(DEV OF LANG DIS), is a 3-credit course typically offered every Fall
semester. For Communications Sciences and Disorders majors, CSD 300
is a required course, requiring a grade of "C" or better, and should be
taken during the second or third year (semester standing 3-6). The course
is oriented toward students who intend to pursue a career in speech-
language pathology and provides the foundation for higher level speech
and language courses in Communications Sciences and Disorders.
The overall educational objective of the course is to introduce students to
child language development as the foundation for assessing and
treating children with language disorders. This is done by lecture and
active learning experiences so that students understand (a) several
theories and information concerning the relations between normal and
abnormal language development in children, (b) how individual, cultural,
and linguistic differences contribute to language development, (c) the
relations between theories of language development and empirical
research, and (d) the interaction between normal and abnormal language
development in children. Students are required to complete reading
assignments and participate in group activities.

Prerequisite: CSD 146
International Cultures (IL)
United States Cultures (US)

CSD 318: American Sign Language II
3 Credits
Review of basic signing, plus continued development of signing skills.
CSD 318 American Sign Language II (3)CSD 318, American Sign
Language II (AM SIGN LANG II), is a 3-credit course that can be taken
by any student interested in learning sign language provided they have
taken CSD 218, Sign Language I. The course is offered every semester.
For Communications Sciences and Disorders major's, the course is
highly recommended as an elective. The intent of the course is to provide
students with an intermediate and some advanced understanding of
receptive and expressive sign language skills. The educational objectives
are that students will: 1) acquire intermediate and some advanced
knowledge of expressive and receptive skills in American Sign Language
(ASL) and content variety signing, 2) acquire conversational skills for
interaction with members of the Deaf community, and 3) continue to
develop signed vocabulary, ASL grammar, fluency in the use of signs
and finger spelling, and knowledge of the Deaf culture. Speech is not
permitted in the classroom. Students meet the educational objectives by
attending class, completing reading assignments, observing video tapes,
practicing sign language inside and outside of class, and spending at
least 10 hours outside of class conversing in ASL with others who sign.

Prerequisite: CSD 218

CSD 331: Anatomy and Physiology for Speech and Hearing
3 Credits
Structure and function of the physical systems involved in speech and
hearing, including respiration, phonation, articulation, perception, and
neurology. CSD 331 Anatomy and Physiology for Speech and Hearing
(3) For Communications Sciences and Disorders majors, CSD 331 is a required course, requiring a grade of "C" or better, and should be taken during the second or third year (semester standing 3-6). The overarching goal of this course is to provide a comprehensive foundation for understanding normal anatomy and physiology of the speech and hearing mechanisms (respiration, phonation, articulation, neurology, and perception), which is essential for evaluating and treating individuals with speech, language, or hearing disorders. Through lectures and active learning experiences, students will be expected to (a) distinguish between principles of anatomy and physiology, (b) demonstrate knowledge of terminology, concepts, and theories related to anatomy and physiology of the speech and hearing mechanism, and (c) understand how normal anatomy and physiology of the speech and hearing mechanism relates to understanding communication disorders.

Prerequisite: CSD 146, Course in human biology

CSD 341: Acoustic Principles in Communication Sciences and Disorders

3 Credits

Explores the fundamental concepts of acoustics as applied to individuals with communicative disabilities; special emphasis is placed on the acoustic analysis of speech. CSD 301 CSD 301 Acoustic Principles in Communication Sciences and Disorders (3) For Communications Sciences and Disorders majors, CSD 301 is a required course, requiring a grade of "C" or better, and should be taken during the second or third year (semester standing 3-6). The educational objectives of the course are to introduce students to fundamental concepts of acoustics and to apply those concepts to individuals with communicative disabilities and to the acoustic analysis of speech. The course includes a detailed overview of the physics of sound, sound propagation, sound measurement, the generation, acoustic principles, measurement of speech sounds, and the acoustical analysis of speech for normal and disordered speakers. Students are required to have a scientific calculator capable of exponentiation, logarithms, and trigonometric functions.

Prerequisite: CSD 311, CSD 331

CSD 397: Special Topics

1-3 Credits/Maximum of 3

Formal Courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CSD 431: Neuroanatomical and Neurophysiological Foundations of Communication Disabilities

3 Credits

This course discusses various modes of communication, including speech perception, speech production, reading, writing, and sign language. All levels of language processing are discussed, from the morpheme level (smallest unit of meaning) to the discourse level, including prosody. The major psycholinguistic and neurolinguistic models of and the basic neuroanatomy responsible for the major aspects of linguistic communication are investigated. For all modes and levels of communication, examples from both normal and disordered language processing perspectives are included. Patterns of disordered language that result from neurological insult or neurodegeneration are discussed. To facilitate understanding, neuroanatomy, brain mapping methods, and the aphasias are the first topics of discussion.

Prerequisites: CSD 331

CSD 433: Aural Rehabilitation

3 Credits

Methods for improving receptive skills of persons with hearing impairments; clinical observation and practice. CSD 433 Aural Rehabilitation (3) Students will gain a basic understanding of the principles of aural rehabilitation for hearing impaired (HI) and deaf infants, children, and adults. Specifically, students will gain an understanding of: 1) hearing loss and hearing handicap in relation to speech understanding and communication, 2) the principles of amplification systems and assistive listening and alerting devices, 3) assessment of communication and communication strategies, 4) auditory training, 5) speech reading, 6) aural rehabilitation for adults, and 7) aural rehabilitation for infants/children. In addition, students will also acquire knowledge concerning the roles and work-sites of professionals working with HI and deaf individuals, and the impact of hearing loss and deafness on the individual, family, and society.

Prerequisite: CSD 146, CSD 230

CSD 433H: Aural Rehabilitation

3 Credits

Methods for improving receptive skills of persons with hearing impairments; clinical observation and practice.

Honors

CSD 442: Introduction to Disorders of Articulation and Phonology

3 Credits

This course is required for Communications Sciences and Disorders majors and should be taken during the third or fourth year. The intent of this course is to provide students with a basic understanding of the etiology, diagnosis, and treatment of children having articulatory and phonological disorders. The course is designed to facilitate critical thinking through problem solving. The educational objectives are that students will acquire an understanding of: 1) the theoretical and practical bases of language and dialectal variations, 2) normal and abnormal articulatory and phonological acquisition, 3) factors related to phonological disorders, 4) assessment procedures and analysis and interpretation of assessment results, and 5) remediation concepts, principles, and methodologies.

Prerequisite: CSD 311, CSD 331

CSD 444: Introduction to Organic Disorders of Speech and Language

3 Credits

Etiology, diagnosis, and principles of treatment of stuttering, and of speech-language disorders having organic bases. CSD 444 CSD 444 Introduction to Organic Disorders of Speech and Language (3) The course is required for Communications Sciences and Disorders majors, and should be taken during the third or fourth year. The intent of this course is to provide students with a basic understanding of stuttering, related fluency disorders, and other organic disorders. The course is designed to facilitate critical thinking through problem solving with emphasis on the etiology and treatment of organic speech disorders. The educational objectives are that students will acquire an understanding of: 1) stuttering and related fluency disorders with emphasis on causation
theories and assessment techniques, and 2) other organic disorders causing speech disorders with emphasis on stroke and closed-head trauma.

**Prerequisite:** CSD 300, CSD 331

CSD 451: An Introduction to Augmentative and Alternative Communication

3 Credits

Examination of assessment and intervention issues in augmentative and alternative communication techniques with persons with severe communication disorders. The course is required for Communications Sciences and Disorders majors, and should be taken during the third or fourth year. The intent of this course is to examine assessment and intervention issues in augmentative and alternative communication (AAC) techniques for persons having severe communication disorders. Students will be expected to spend outside of class time becoming familiar with common AAC devices located in the department’s AAC laboratory. The educational objectives are that students will acquire an understanding of: 1) persons with severe communication disorders who may require AAC, 2) terminology and principles of AAC applications, 3) types and evaluation of existing AAC systems and emerging technology, 4) assessment issues for children and adults concerning the use of AAC devices, 5) intervention, learning, and therapy issues for children and adults who use AAC, 6) research in AAC, and 7) theoretical issues. Although the course will focus on non-electronic AAC applications, students will be expected to spend time in or outside of class becoming familiar with common electronic AAC devices located in the department’s AAC laboratory.

**Prerequisite:** CSD 300

CSD 459: Principles of Clinical Management in Communication Disorders

3 Credits

CSD 459W, Principles of Clinical Management in Communication Disorders (PRIN CLIN MGMT), is a 3-credit writing-intensive course required for Communications Sciences and Disorders majors, and should be taken during the final year of their undergraduate curriculum. The intent of this course is to closely review the principles and practices for assessing and treating people across the lifespan who have a communication disorder as well as reviewing, interviewing, counseling, and report writing skills. Overall, this “how-to” course is designed to provide students with practical solutions and methods when serving persons with communication disorders. The educational objectives are that students will acquire an understanding of: 1) report writing with emphasis on different styles and the need for clear documentation and explanations, 2) assessment with emphasis on interviewing skills, preparation and test administration, interpretation of the results, and oral and written presentation, 3) therapy practices with emphasis on task analysis, behavioral objectives, and implementation, 4) documentation with emphasis on lesson plans, mid and final reports, documentation specific to school versus medical settings, and billing, and 5) client and family counseling and group sessions.

**Prerequisite:** CSD 300, CSD 230 plus 3 additional credits in CSD at the 300-level

Writing Across the Curriculum

CSD 462: Clinical Bases of Language Disorders

3 Credits/Maximum of 3

Description of pathological language and cognitive development, and principles of assessment and remediation among individuals with communication disorders. The course is required for Communications Sciences and Disorders majors, and should be taken during the third or fourth year. The course is designed to be an overview of language disorders with emphasis given to child language disorders. Specifically, the course provides information with a wide range of language disorders that affect individuals having different disabilities such as autism, hearing impairment, mental retardation, cerebral palsy, specific language impairment, learning disabilities, and traumatic brain injury. Through lecture, active learning experiences, and out-of-class assignments, students will learn to differentiate communication characteristics and associated problems for specific populations and become familiar with basic assessment and intervention principles. In addition, students will gain information of associated educational and medical problems common to individuals with language disorders.

**Prerequisite:** CSD 300

International Cultures (IL)

United States Cultures (US)

CSD 494: Senior Honors Thesis

1-6 Credits/Maximum of 6

Independent study related to a student’s interests directed by a faculty super supervisor and culminating in the production of a thesis.

Honors

CSD 495A: Speech Therapy Practicum

1-6 Credits/Maximum of 6

CSD 495A, Speech Therapy Practicum (SPCH THPY PRACT), is a variable credit (1-6 credit) course offered every semester. The course is not required for Communications Sciences and Disorders majors. Fourth year Communications Sciences and Disorders students having a GPA of 3.0 can apply to take this course by contacting the Penn State Speech and Hearing Clinic, Coordinator of Clinical Services; however, Communications Sciences and Disorders graduate students are given priority. Typically, undergraduate students enroll in this course for 1-2 credits. Students enrolled in this course are student clinicians and provide assessment and treatment to clients of the Penn State Speech and Hearing Clinic. Students are highly supervised by Communications Sciences and Disorders clinical faculty and may be paired with Communications Sciences and Disorders graduate students. Students must adhere to all of the policies and procedures stated in the Penn State Speech and Hearing Clinical Policy Manual. Students are evaluated using outcome-based competency measures that includes oral and written reports skills.

**Prerequisite:** CSD 442

CSD 495B: Audiology Practicum

1-5 Credits/Maximum of 5

CSD 495B, Audiology Practicum (AUDIOLOGY PRACT), is a variable credit (1-5 credit) course offered every semester. The course is not required for Communications Sciences and Disorders majors. Fourth year Communications Sciences and Disorders students having a GPA of 3.0
and an interest in Audiology can apply to take this course by contacting the Penn State Speech and Hearing Clinic, Coordinator of Audiological Services; however, Communications Sciences and Disorders graduate students are given priority. Typically, undergraduate students enroll in this course for 1-2 credits. Students enrolled in this course are student clinicians and provide hearing assessment and treatment to clients of the Penn State Speech and Hearing Clinic. Students are highly supervised by Communications Sciences and Disorders clinical faculty and may be paired with Communications Sciences and Disorders graduate students. Students must adhere to all of the policies and procedures stated in the Penn State Audiology Clinic Policy Manual. Students are evaluated using outcome-based competency measures that includes oral and written reports skills.

**Prerequisite:** CSD 433

CSD 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

CSD 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CSD 497A: Neuro Foundation

3 Credits

This course will introduce students to the underlying neuroanatomy and neurophysiology of communication and social disabilities focus will be on the role of the nervous system plays in communication (e.g., speaking, listening, writing). This course will prepare CSD majors for higher level course, dealing with assessment and treatment of individuals who suffer from, neurological insult, injury, lesions, as well as congenital and degenerative, disorders.

**Communications (COMM)**

COMM 1: Newspaper Practicum

1-3 Credits/Maximum of 8

A newspaper/print media practicum. Credits do not fulfill Communication major credits in all programs.

COMM 2: Newspaper Editorial Staff

1-3 Credits/Maximum of 8

A newspaper/print media practicum. Credits do not fulfill Communication major credits in all programs.

**Prerequisite:** COMM 001

COMM 3: Radio Practicum

1-3 Credits/Maximum of 8

A broadcast media practicum. Credits do not fulfill Communication major credits in all programs.

COMM 4: Television Practicum

1-3 Credits/Maximum of 8

A broadcast media practicum designed to provide students experience with TV and video production in a variety of contexts.

COMM 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

COMM 100: The Mass Media and Society

3 Credits

AMST 106 / COMM 100 The Mass Media and Society (3) (GS) (BA) This course meets the Bachelor of Arts degree requirements. The Mass Media and Society is an overview of the interaction between mass media and society. By drawing from selected topics, the course pays particular attention to the social influences (e.g., economics, politics, technology, law and culture) that shape media messages. Among others, the course examines the nature of media controllers as well as the character of "users" and "consumers" of media products. By so doing, students are informed about the overall structure and scope of the mass media and led to understand the power and influences associated with media messages and practices. By the end of the semester, each student should have a better understanding of the dynamic nature of the mass media in an information society.

Cross-listed with: AMST 106
Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)

COMM 110: Media and Democracy

3 Credits

COMM 110 Media and Democracy (3) (GH) (BA) This course meets the Bachelor of Arts degree requirements. COMM 110 seeks to introduce students to the important role of the mass media in developing conceptions of democracy and democratic participation in contemporary societies. Utilizing current events, popular culture and the students’ own relationship to media as the template, this course is designed to stimulate student thinking about the interrelationship between the dynamics of US culture, news, politics, and civil society in order to develop a greater understanding and appreciation of what civic engagement and global awareness can do towards nurturing democracy's principles and practices.

Bachelor of Arts: Humanities
General Education: Humanities (GH)

COMM 118: Introduction to Media Effects

3 Credits

COMM 118 Introduction to Media Effects (3) (GS) Aside from working and sleeping, individuals in the United States spend more time consuming media than any other single activity. By the time the average person reaches the age of 65, he or she will have spent over six full years of life watching television - not to mention the additional time spent...
reading newspapers and magazines, listening to the radio, using the Internet, and playing videogames. Given the centrality of media in the lives of most people, it is imperative that we understand and critically explore the variety of ways in which we perceive and are influenced by media messages. The purpose of this course is to introduce students to the study of the effects of media on individuals and on society. This course will overview a broad range of media theories that have examined media as a social force, that have explored factors that affect individuals’ selection of and perceptions of media messages, and that have studied how media affect viewers’ attitudes, beliefs, and behaviors. These theories will be used to examine a variety of different types of content, including media violence, portrayals of race and gender, politics, advertising, and entertainment, among others. Students will be assessed by exams on these theories and topics, by group-based writing assignments, and by an assignment requiring students to locate, identify, and critically evaluate media content that illustrates the theories and issues covered in class.

General Education: Social and Behavioral Scien (GS)
COMM 120: Advertising and Society
3 Credits
History and structure of advertising in American society; the role of advertising in the economic and communications systems; regulation. May not be used to fulfill requirements of any major in the Bellisario College of Communications.

COMM 150: The Art of the Cinema
3 Credits
COMM 150 The Art of the Cinema (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. Communications 150 is an introduction to cinema studies. The course assumes, as film historian John Belton puts it, that films can reveal, both directly and indirectly, something about cultural identity and memory, and that movies "can be analyzed—even psychoanalyzed—to reveal something about the cultural conditions that produced them and attracted audiences to them." The course seeks both to familiarize students with works they probably haven't seen and to "defamiliarize," through critical and historical analysis, works they very well may have seen. Movies are examined as formal constructs, market commodities, and cultural artifacts—as reflections, however distorted, of life in the twentieth century. Topics include the emergence of the cinema as an institution; the global dominance of classical Hollywood cinema; American film industry organization (production, distribution, exhibition, vertical integration, the studio system, the star system); analysis of film styles (national cinemas, historical movements); analysis of film genres (e.g., silent film melodrama, film noir, comedy, the war film, the western); consideration of film audiences (reception, spectatorship, criticism); introduction to film aesthetics (film art and appreciation); and alternative cinemas (independent, documentary and experimental cinemas). COMM 150 emphasizes media literacy and seeks to help students develop critical thinking, reading and viewing skills. All sections integrate lectures and readings with viewing feature films during the weekly practicum period. Many sections also incorporate slides and film or video clips during the lecture periods to allow students to exercise their critical viewing skills regarding certain teaching points. Students prepare for film screenings by reading, listening to lectures, and analyzing examples of relevant works. Introductory lectures seek to provide a critical and historical context for each week's screening; follow-up lectures offer critical analysis and examinations reward close viewing. The core purpose of the course, therefore, is to make film viewing a conscious, critical and analytic activity. COMM 150 serves as a prerequisite for most upper-level film studies courses. It is required for Media Studies majors who have chosen the Film/Television option, and is among three courses (along with COMM 100 and COMM 180) from which all Media Studies majors are required to choose. It has no prerequisite and assumes no prior exposure to film studies, and so is directed primarily to students outside the field.

Bachelor of Arts: Arts
General Education: Arts (GA)

COMM 150H: The Art of the Cinema
3 Credits
COMM 150H The Art of the Cinema (3) (GA) This course takes a critical and historical approach to cinema, exploring relationships between classical and contemporary films and society and culture. It stresses critical thinking, analytical viewing, and essay writing (rather than memorization of facts or aesthetic evaluation of movies). COMM 150H assumes that the cinema reveals, both directly and indirectly, something about collective experience, identity, and culture, and that movies can be analyzed—even psychoanalyzed—to reveal something about the cultural conditions that produced them and attracted audiences to them. The course seeks both to familiarize students with works they probably haven't seen and to "defamiliarize," through critical and historical analysis, works they very well may have seen. Students will examine movies as formal constructs, market commodities, and cultural artifacts—as reflections, however distorted, of society in the twentieth and twenty-first century.

Bachelor of Arts: Arts
General Education: Arts (GA)
Honors

COMM 160: Basic News Writing Skills
1 Credits
COMM 160 Basic News Writing Skills (1) COMM 160 is a one-credit course that will provide instruction in the basic writing skills required of all journalists. The course will cover three main topics: (1) spelling and word usage, (2) grammar, and (3) punctuation. Students will be assessed by exams on each of the three course parts and a comprehensive final exam. Writing is the lynchpin of the journalism curriculum and it is essential that students possess the basic writing skills necessary to be successful in journalism classes. For that reason, COMM 160 will be a prerequisite to all writing courses in the journalism curriculum. Students will be advised to take the course in their freshman year.

COMM 168: American Journalism: Values, Traditions, and Practices
3 Credits
COMM 168 American Journalism: Values, Traditions, and Practices (3) This course is aimed at consumers of news. This course will appeal to students with varying backgrounds who have an interest in how and why the news is gathered, presented, and marketed the way it is. This course explores where the American news business has come from, where it is now, and where it is going. The principles, practices and traditions of American journalism are studied. Students will gain an understanding of how a confluence of financial and competitive pressures is changing –
and in some cases, distorting – journalism's institutions and values. This will be a team taught course involving faculty from the Bellisario College of Communications as well as guest presenters from the news industry. The first few weeks of the course focus on the historic development of the American press from the Colonial period to the present. The legal and constitutional framework under which the news media operate in the United States are also examined. The second segment will look at a news organization's obligations to its community, and a journalist's duty to uphold core values: seek the truth, act independently and be accountable. The role American journalism played in crucial times of the country's history, such as the abolition movement, the great reforms, the Civil Rights era and in cleaning up political corruption are also examined. Students will also gain an understanding of how these principles have begun to fray under financial and corporate pressures in the hothouse environment of the Internet age. Considerable effort will be devoted to making sure students understand the differences in news standards among, for example, major national newspapers and unedited web sites or politically-oriented cable networks. The course will discuss the economic realities of the news as a business. How newspapers and broadcast outlets traditionally made their money and why that is eroding. Finally, students will get some "hands on" experience through exercises that will allow them to distinguish between acceptable and unacceptable journalism, and spot flaws in journalistic practice. Students will be required to do independent research in historical archives and assess how the news media covered major events. Each student will be part of a group to make a presentation to the class on one of several major topics. Students will also be required to write a book review and a film review. There will also be one major exam. Depending on the size of the class, discussion and debate will be encouraged.

General Education: Humanities (GH)

COMM 170: Introduction to the Sports Industry

3 Credits

COMM 170 Introduction to the Sports Industry (3) Since 1987 the sports industry has grown from $50 billion to more than $200 billion. It has become one of the ten leading industries in the United States. It is also an industry that is unlike any other in its structure and operating principles. In traditional business, the participants compete vigorously with one another for revenue and profits. By contrast, in almost every sports venture, the competitors, while competing on the field of play, must cooperate off the field in order for the venture to be profitable. Students in this course will study the unique aspects of the sports industry. They will begin to understand the workings through learning the history. Students will study the effect of the sports industry on the mass media and vice versa. The interrelationships of sports with the print, broadcast and electronic media will be considered. Students will learn how the basic principles of law, marketing, labor relations, profitability, finance and economics apply to the sports industry. The effect of legislation and regulation on the sports industry will be covered. The subject of ethics in sports will also be examined. The course will explore the formation and structure of leagues and governing agents in the sports industry. Professional, amateur, collegiate, international and Olympic sports will be included. An emphasis will be placed on current events in the sports industry. Students will be required to read and discuss the contents of weekly editions of Sports Business Journal. They will apply the principles learned in class and through the readings to the business problems of the day as reported in the Journal. Career opportunities in the sports industry and related fields will be explored. Students will be able to begin to evaluate their interest and ability to pursue careers in this area. The course will explore the formation and structure of leagues and governing agents in the sports industry. Professional, amateur, collegiate, international and Olympic sports will be included. An emphasis will be placed on current events in the sports industry. Students will be required to read and discuss the contents of weekly editions of Sports Business Journal. They will apply the principles learned in class and through the readings to the business problems of the day as reported in the Journal. Career opportunities in the sports industry and related fields will be explored. Students will be able to begin to evaluate their interest and ability to pursue careers in this area.

COMM 180: Survey of Electronic Media and Telecommunications

3 Credits

COMM 180 Survey of Electronic Media and Telecommunications (3) (GS)(BA) This course meets the Bachelor of Arts degree requirements. This course is an introduction to electronic communications (telecommunications) and their consequences for society and the economy. Until a few years ago, this primarily meant over-the-air television, radio and cable TV, and a dial-up telephone. Increasingly, however, the field has expanded to include a wide variety of broadcast, wire-based and wireless forms of video, data and voice communications. The rapid convergence of previously disparate industries and services, especially the melding of television, telephone and Internet systems, will be a dominant theme in the course. At the same time, a global system of electronic communications has been steadily evolving. This class is also about the dynamics of that changing system; it is about the origins of the telecommunications system, and its future. To better understand these developments, we will examine powerful interacting forces that are shaping the world of information by drawing on history, economics, technology studies, politics, and culture. While the course is intended primarily for Telecommunications majors planning careers in these fields, all students will benefit from the course by learning to critically analyze media structures and programming and to better appreciate the importance of ICTs (Information, Communication and Technology) in their lives. This course serves both as an introductory core course for students in the Telecommunications major and as a broad social science course for students in other departments across the university. For students within the Telecommunications major, the course introduces the key terminology, concepts and issues in the field as well as the range of career options within the telecommunications industries. For students outside the major, this course provides a grounding in the current shift from an industrial society to an information society in which electronic media play a pervasive role in our personal, social, economic, and political lives.

Bachelor of Arts: Social and Behavioral Sciences

General Education: Social and Behavioral Sciences

COMM 190: Gaming and Interactive Media

3 Credits

COMM 190 (GAME 140) Gaming and Interactive Media (3) The course is an introduction to the digital interactive media industries for students who may consider seeking employment in that sector, which includes video games and simulations, products for education, training, medicine, business, government/military, and virtual environments for a range of applications. Students will learn about industry structures, basic economics, business models, work flow, types of enterprises, job descriptions, and opportunities. It examines both the national and global markets. It provides students with a factually and theoretically informed
appreciation of these industries. The course will build on the students' personal and social experiences of these media, but it is not a course about playing or designing games or mastering individual applications. No special knowledge or experience in playing video games, using "serious games," or experiencing virtual worlds is required. It will provide students with the foundation to make a well-informed choice about careers in this sector and respond to their natural curiosity about this pervasive part of their lives. The course is divided into five segments. The first provides general context: history, scale and scope of the field, information on industry structure, business models and operations, and types of skills required. The second focuses on the video game industry, including social, regulatory and ethical issues. Video games are now a major media industry, having surpassed in U.S. revenue both the movie and recorded music industries. The third section looks at "serious games." A "serious game" is a game designed for a primary purpose other than pure entertainment, such as education, scientific exploration, health care, emergency management, city planning, military, engineering, religion, etc. The fourth segment looks at simulations and virtual worlds and their multiple models and uses (entertainment, learning, business, research, etc.), and the development of related online communities. The final section will examine the interrelationship of these industries with the other entertainment industries in terms of planning, marketing, finance, production, etc. It will conclude with a look ahead at new technologies, markets, business models, advancements in artificial intelligence and the convergence of virtual and material worlds. The course will employ presentations, class discussions, outside readings, demonstrations, videos, class exercises, online explorations, guest experts (in person and via technology), and experiences in virtual worlds.

Cross-Listed
General Education: Social and Behavioral Scien (GS)

COMM 197: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

COMM 199: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.
International Cultures (IL)

COMM 205: Gender, Diversity and the Media
3 Credits
COMM (WMNST) 205 Women, Minorities, and the Media (3) (GS;US)(BA)
This course meets the Bachelor of Arts degree requirements. This course is aimed at consumers of media in any form. It explores the relationship between the media and society through critical analysis of media and its role in education about and creation of social reality. Students research literature on human diversity issues in media representation. Students explore economic, political and social implications of media practice. Course content is designed to help build deeper understanding of gender, race, ethnicity, ability, sexual orientation and class diversity in media. Students explore the role of media and media literacy within the pluralistic democratic US society in the context of a diverse global society. Communication theory helps explain how media representations impact human construction of meaning in social relationships.

Bachelor of Arts: Social and Behavioral Sciences
United States Cultures (US)
General Education: Social and Behavioral Scien (GS)

COMM 215: Basic Photography for Communications
3 Credits/Maximum of 3
An introduction to digital photography, emphasizing camera skills, aesthetics and storytelling. COMM 215 Basic Photography (3) An introduction to photography as a means of visual communication in the digital age. Students will learn basic picture-taking principles, camera techniques, photographic aesthetics, and the use of digital imaging software. Students will be encouraged to explore photography as an aesthetic, expressive, and socially significant medium. This will be achieved through individual and group critique of each student's photographs, as well as through analysis of examples of the work of prominent photographers. Students will complete a series of assignments that help them learn to produce visual content for a digitally savvy audience. At the end of the semester, students will be able to produce story-telling images as well as write captions for their photographs. They will have a knowledge of the aesthetics of photography, will understand the importance of both form and content, and will have the ability to critically evaluate photographs.

COMM 230: Writing for Media
3 Credits
COMM 230 Writing for the Media (3)This course is an introduction to writing for various kinds of mass communication media. Students will practice writing public relations news releases, public information announcements, print, television and radio advertisements, as well as news stories and editorials. Students will be given weekly writing assignments, some of which will be re-writes of earlier submissions. In-class exercises will include various writing exercises designed to get students more comfortable with writing for media. Prerequisite: ENGL 015 and ENGL 202.

Prerequisite: ENGL 015 and ENGL 202
Writing Across the Curriculum

COMM 234: Digital Cultures
3 Credits
Introduction to the rapidly changing world of digital cultures, and the communicative, and social impacts on individuals and institutions.

Cross-listed with: IST 234
General Education: Social and Behavioral Scien (GS)

COMM 241: Graphic Design for Communications
3 Credits
Introduction to basic design principles, critical analysis of visual material, and solving graphics problems utilizing traditional and digital production tools.
COMM 242: Basic Video/Filmmaking

3 Credits

COMM 242 Basic Video/Filmmaking (3) COMM 242 is an introductory course that emphasizes the development of creative expression and technical skills in film and video production. Students will explore modes of moving image representation through screenings, lectures, discussions, and especially through hands-on film and video making. Students are required to construct projects that have both clear intentions and technically competent execution. The work of the course will facilitate the development of basic skills in image design, editing, and writing as they apply to single camera techniques for documentary, narrative, and experimental film and video. The course will also provide a basic cultural and historical context for the various production modes, and students will be encouraged to consider their own projects in relation to work of other video and film artists. Creative collaboration and group critique are essential elements of the course. Students will be required to produce some collaborative projects, and to respond critically to the work of other students in the course. Students will make projects using 16mm film and video cameras, microphones, portable lighting, and nonlinear editing stations.

Prerequisite: COMM 150 and second, third, or fourth semester standing.

COMM 250: Film History and Theory

3 Credits

Exploration of film theory and criticism in the context of aesthetic, technological, and economic evolution of film history.

Prerequisite: COMM 150
Bachelor of Arts: Arts
General Education: Arts (GA)

COMM 251: The Nature of Media

3 Credits

A theoretical, cultural, and philosophical study of print and non-print media, including their histories, possibilities, limitations, and interrelationships. COMM 251 The Nature of Media (3) An examination of the theory, history, practice, and meaning of media. Within the framework of various media theories, students examine how print media, broadcast media, film, telephones, the Internet, and other technological forms communicate. Executives and practitioners from various media outlets visit the class to discuss what happens in the real world and what career opportunities might be available. Emphasis is placed on a final creative project which should reflect each student’s understanding of the nature of media and how it creates the culture we live in.

COMM 260W: News Writing and Reporting

3 Credits/Maximum of 3

COMM 260W News Writing and Reporting (3) COMM 260W introduces students to the basics of news reporting and writing. Through a combination of lecture, discussion, and writing assignments, students learn how to write news stories that are accurate, fair, clear, and concise. The goals of COMM 260W are to produce students who can: * Demonstrate an understanding of the importance of accurate, thorough, and fair news writing * Write concise, well-organized stories with effective leads that get the reader’s attention and tell the most important news * Gather information through the use of interviews, documents, and basic reference materials * Generate story ideas that reflect an understanding of the elements of newsworthiness (timeliness, prominence, proximity, conflict, novelty, and impact) * Produce copy free of misspellings, grammatical errors, AP style errors, and factual errors * Understand the legal, ethical, and historical principles underlying journalism, including the role of journalists in society * Appreciate the joy and importance of being well informed.

Prerequisite: ENGL 015 or ENGL 030; COMM 160; third-semester standing and typing proficiency
Writing Across the Curriculum

COMM 261: The Literature of Journalism

3 Credits

Representative nonfiction by writers such as Susan Sheehan, George Orwell, Joan Didion, Alice Walker, Truman Capote, C. D. B. Bryan, Russell Baker. COMM 261 The Literature of Journalism (3) (GH) The Literature of Journalism introduces students to 20th century nonfiction by people who were/are considered journalists. Most of the work originally appeared in magazines or newspapers and in some cases was expanded on before being published as a book. This is not a course in literary journalism, although some of the books assigned might qualify as such. Instead, the course is designed to give students a greater appreciation for the journalistic enterprise and different styles of writing. Students will also see how different writers influenced other writers. Students will read works by Hunter Thompson, Alex Haley, Joan Didion, Truman Capote, George Orwell, and James McBride, among others.

General Education: Humanities (GH)

COMM 269: Photojournalism

3 Credits

COMM 269 Photojournalism (3) Photography as a medium for communication; creating visual content for newspapers, magazines, and online publications; digital camera and editing techniques. Students complete a series of assignments that help them learn to produce visual content for newspapers, magazines, and online publications. Major topics of the course include fundamentals of digital photography for multimedia and print, ethics, composition, caption writing, photo editing, and the use of electronic imaging software. Through individual and class projects, students critically evaluate their own work and the work of others. Students use class assignments to create a portfolio.

Prerequisite: or concurrent: COMM 260W or COMM 320

COMM 270: Introduction to Multimedia Production

3 Credits

Introduction to multimedia project activities to explore image editing, layout, the integration of texts and images and web architecture.

COMM 271: Principles of Multimedia Journalism

3 Credits

The course introduces how journalists work with the tools of multimedia and how multimedia is changing journalism. COMM 271 Principles of Multimedia Journalism (3) Journalists have never had better tools to cover the news than they do today. Every news organization can now tell stories with text, video, sound and images. Reporters can interact
with their audience while covering stories in real time. Audiences have unprecedented choice in when and where they can access information. These innovations are allowing the news industry to reinvent itself. But there are major challenges. What does it take to be competitive in a 24/7 news cycle? What is the best way to work with text, video, still images and sound? How much do reporters and editors need to know about these tools? What role do social media have in this mix? Are ethical standards and being lost in the scramble to gain audience and grow revenue? This course will introduce multimedia news and be a foundation for skills courses. It will examine the latest platforms and tools of the trade, adding value with multimedia, the roots and development of multimedia, working in a cross-platform environment, multimedia reporting and editing, data visualization, intellectual property rights, ethical issues, citizen journalism, social media and the news, business models for multimedia journalism, finding a job, and other subjects.

COMM 280: Introduction to Telecommunications Technologies

3 Credits

Students will evaluate content creation and distribution methods and demonstrate proficiency across emerging digital products and services. COMM 280 Introduction to Telecommunications Technologies (3) The media, communication and information industries of the 21st century are built upon the digitization of information. Professionals and consumers alike rely on digital technology for the creation and distribution of content. The technologies used for production, distribution and consumption of this content continue to evolve at a rapid pace. The proliferation of smartphone, tablet, and wearable devices has dramatically altered the way in which consumers interact with media. This course will introduce students to the basic technologies used in the creation of various types of digital content and examine the technologies used to distribute that content across wireless and wired networks. By the end of this course, students will understand the prevalent technologies utilized within the telecommunications industry. Through extensive project work, students will also develop an appreciation for the myriad of compatibility challenges that exist in a world with rapid technology advancements and multi-industry convergence. This course is especially appropriate for students in the Telecommunications major as it will familiarize them with the technologies they will encounter during their course of study and future careers.

COMM 282: Television Field Production

3 Credits

COMM 282 Television Field Production (3) COMM 282 provides an introduction to the pre-production, production and post production techniques when creating video content. The course will explore the grammar and syntax of constructing and criticizing video messages in single camera productions. Students will apply shooting and editing concepts while doing a variety of projects typical of single camera shoots. Students will learn the particularities of single camera production from the textbook, the lectures, discussions and classmates’ experiences. While learning the technical aspects of video production, the students will learn the managerial aspects of production. Students will practice and apply the processes of budgeting, topic and location research, script writing, production treatments, dealing with unions, releases, etc.

COMM 283: Television Studio Production

3 Credits

Students will learn the technical aspects of multi-camera studio television production. COMM 283 Television Studio Production (3) Communications 283W is an advanced video course. The course builds on the principles learned in Communications 282. The purpose of this course is two fold. The first goal is to learn the technical aspects of multi-camera (studio) television production. Students will learn how to brainstorm ideas, write program proposals, treatments and scripts for various formats of television studio production. Incorporated in the technical aspects of the class, the students will learn how to produce and direct a studio production. They will also learn all the crew positions in a television studio production including audio, teleprompter, technical director, assistant director, videotape, floor manager, character generator operator and camera crew. The second goal of this course is to apply the grammar and syntax of constructing and criticizing video messages to multi-camera television productions. Students will apply shooting, producing and directing concepts while doing a variety of projects typical of multiple-camera shoots. They will learn the particularities of multi-camera television production from lectures, discussions and their own experiences.

Prerequisite: COMM 282 or COMM 242

Writing Across the Curriculum

COMM 292: Introduction to Media & Politics

3 Credits

This course explores the intersection of media and politics, introducing students to the critical analysis of mediated political discourse. COMM 292 Introduction to Media Politics (3) (GH) COMM 292 examines how mass media and political institutions interact to shape public thinking and debates around social goals, priorities, and policies. The course explores how media structures, routines, and practices shape political decision making; how political forces influence mass media institutions; and how public opinion and media audiences are formed. Students will gain an understanding of these issues through in-depth case studies, class discussions, and written assignments, helping students to develop their own informed views and to learn to express them constructively. The course is designed for both Communications majors and other students with an interest in media and politics.

General Education: Humanities (GH)

COMM 294: Research Project Courses

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

COMM 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.
COMM 296A: **SPECIAL TOPICS**
1-6 Credits

COMM 297: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

COMM 297B: **SPECIAL TOPICS**
1-9 Credits/Maximum of 9

COMM 299: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

COMM 304: Mass Communication Research
3 Credits

COMM 304 Mass Communication Research (3) This course provides an introduction to the logic and methods of social science research as it is employed to study topics in media. Students will be introduced to key principles of social scientific reasoning, including aspects of concept explication and effective measurement, evaluation and demonstration of causality, and reliance on empirical data. Core standards of evidence are presented for both quantitative and qualitative data, but a focus is placed on statistical evidence and reasoning. Topics include effective question wording, ethical treatment of research participants, experimental research designs, sampling and survey research, content analysis, and sound interviewing techniques. In addition, students address key ideas in statistical analysis, including principles of inference, common descriptive statistics, and widely used tests of both bivariate and multivariate relationships. Presentation of this material includes training in effective use of appropriate statistical software. Based on this training, students should be able to contribute to sound research on media-related topics in both the academic and professional environments. In addition, significant attention is paid to evaluating research done by others. Students read and assess original research and consider the merits of such research as well as its applicability to novel studies. Based on this training, students should be prepared to better understand the results presented in social scientific research, particularly within the field of media studies, and apply this knowledge to future coursework. Beyond this, students learn how to critically evaluate quantitative research when presented in media content, such as public opinion polling, and when making professional judgments about sound organizational strategies as a response to research conducted by others. At the end of this course, students should be better prepared to engage with the increasingly complex array of statistical information available to modern companies and citizens.

Prerequisite: 3 credits from STAT 200, SCM 200, or PSYCH 200; and 3 credits from COMM 100, COMM 110, COMM 118, COMM 150, COMM 180, COMM 260W, COMM 320, or COMM 370

COMM 305: Introduction to Critical Studies of Media
3 Credits

The course will acquaint students with the key terms, concepts and research areas of critical media studies (e.g. key terms/concepts and topic areas) and prepare them more effectively for advanced material in media studies. The course will also integrate practical insights into professional opportunities for the media studies major concentrations as well as future careers in media industries and media research (including jobs for the public sector, private industry, and academia). In addition, by presenting a critical perspective on the cultural forces represented by media in a global context, students develop media literacy skills to better evaluate their own use of media and the political and social consequences of the modern media industry. The course provides an overview of a diverse set of domains in the study of media throughout the world as well as the underlying principles that drive research in these areas and the skills necessary to both understand and evaluate such research. Perspectives summarized include critical theory, cultural studies, and political economy approaches.

Prerequisite: COMM 100; COMM 110; COMM 118; COMM 180; COMM 205

COMM 310: Digital Media Metrics
3 Credits

Analysis of audience data for traditional and new media to create metrics for advertising, content marketing and audience analysis. COMM 310 Digital Media Metrics (3) The emergence of a converged marketplace where all media are now digital, including broadcasting, websites and social media, has created enormous new opportunities for advertising, promotions and content distribution. The proliferation of media has made the marketplace much more competitive, but simultaneously the availability of data too has increased significantly making possible the much more precise and segmented distribution of messages and content. For media practitioners in this new environment, a familiarity with audience data, metrics and dimensions is essential. This course is an introduction to the methods for collecting, analyzing and utilizing audience data for traditional and new media. The class will cover the fundamentals of traditional media audience analysis, web metrics, and social media metrics, specifically as they relate to audience measurement, advertising campaign evaluation and content distribution. Students will learn the methods of data collection, analysis and use for traditional broadcast media, and the transformation of these practices in the newly digitized and converged multiphase, multiscreen environment. The course will also cover the basics of data capture for new media (at an appropriate technical level), and the use of this data for the design of metrics appropriate for various purposes such as monitoring traffic, conversions and revenue generation. The use of metrics in pricing models for advertising, sales generation and content distribution will also be covered. Students will be introduced to data sources for digital media audience analysis, with a special focus on Google Analytics. Students passing this class would be able to pass the Google Analytics Individual Qualification test.

Cross-listed with: IST 310

COMM 315: Applications for Media Writing
3 Credits

Tutorial and practice in various kinds or journalistic and commercial writing, emphasizing basic skills.
The goal is to have students think more clearly and critically about the advertising, from the 1880s to the 2010s, to illustrate the topics covered and how it can affect society. The class includes numerous examples of advertising, from the 1880s to the 2010s, to illustrate the topics covered.

The goal is to have students think more clearly and critically about the advertising, from the 1880s to the 2010s, to illustrate the topics covered and how it can affect society. The class includes numerous examples of advertising, from the 1880s to the 2010s, to illustrate the topics covered.

Prerequisite: COMM 160 and ENGL 202A, ENGL 202B, or ENGL 202C

COMM 320: Introduction to Advertising

3 Credits

Advertising management in business, including communication theory; common industry practices; basics of copy, media, and budget decision; and environmental influences. A student may not receive credit for both COMM 320 and MKTG 322. COMM 320: Introduction to Advertising introduces students to the advertising industry and provides a foundation for understanding what advertising is and how it developed to its current state, what it tries to accomplish, how it works, and how it can affect society. The class includes numerous examples of advertising, from the 1880s to the 2010s, to illustrate the topics covered.

The goal is to have students think more clearly and critically about the commercial actors behind advertising, their strategic objectives, how advertising messages help achieve specific marketing goals, and the possible social impacts. This course provides the basis for all further courses students take in the advertising sequence. During the course students: learn the basic concepts and vocabulary essential to the fields of advertising and brand promotion; understand the process and effects of advertising and brand communications; are introduced to the strategic and conceptual decisions advertisers face when deciding the best way to both say and deliver a message within the public marketplace; learn the landscape of the advertising industry, including understanding how the industry works and how it is organized; understand current trends in the advertising and marketing industries, and examine their implications for both industry and society; are exposed to the history and role of professionals and institutions in shaping communications; gain an understanding of the diversity of groups in a global society in relationship to communications. Specific topics covered in the course include definitions of marketing, advertising, and integrated marketing communication (IMC). Students learn what it means to be a brand, as well as how brand equity is developed by marketers. The fundamentals of brand positioning are also explored, in the context of brand promotion and evolution. The psychological processes that underlie persuasive commercial messages are explored. The differences between subliminal and non-conscious routes to persuasion are presented and discussed. The course also includes a review of promotional activities outside of traditional advertising, including public relations, direct marketing, personal selling and sales promotions. The role of social media and other online communications in the promotional mix are explored. The legal and ethical dimensions of commercial communication are outlined. Students are asked to think critically about the implications of marketing harmful products, selling to susceptible target audiences, using controversial appeals and the perpetuation of negative stereotypes.

Prerequisite: fourth-semester standing; A student may not receive credit for both COMM 320H and MKTG 322.

Honors

COMM 325: Effects of digital games

3 Credits

The course explores the influences of digital games on players and society. It helps students make sense of the complex and conflicting evidence from social science research about both positive and negative outcomes from playing games. Topics include violent and stereotypical content, enjoyment and immersion, addiction, learning, and persuasive applications such as games for health. In particular, the class considers prominent debates about the effects of games and how to understand the actual evidence and methodological controversies behind these debates. A significant focus is on the logic of media effects research and the strengths and weaknesses of this approach. Students emerge with greater familiarity with media effects scholarship as a process as well as the specific ways it can help them media literate players of games as well as thinking about how games might be used to promote positive outcomes.

Prerequisite: COMM 100 or COMM 118 or COMM 190

COMM 326: Effects of social media

3 Credits

The course explores the effects of social media on individuals, organizations and society. It introduces students to social science research about both positive and negative outcomes of using social
media. Topics include identity formation, self-esteem, social capital, relational maintenance, addiction, cyberbullying, enterprise social media, crisis management, political mobilization, online activism, philanthropy, online terrorist networks, effects of social media use for news, entertainment, advertising, public relations and other mass communications. Theoretical mechanisms governing the causes and consequences of social media will be explored, with a substantial discussion component. Applications to media practices and implications for design of future media will also be covered.

**Prerequisite:** COMM 100 or COMM 118

**COMM 327: Effects of entertainment media**

3 Credits

This course examines the central role that entertainment plays in the lives of most people in contemporary media landscapes. Today we are almost constantly tied to media entertainment through a variety of mobile devices, second screens, and streaming content. We see and listen to the world though entertainment media, and we construct, share, and post our lives on entertaining platforms. This course will examine the variety of ways that we use, experience, and are affected by entertainment, including its benefits and its harms. Topics include specific types of media content such as music, sports, and humor, as well as outcomes on our self-images, our stereotypes of others, and our feelings of connection with friends, family, and with society at large.

**Prerequisite:** COMM 100; COMM 118

**COMM 332: Reporting**

3 Credits

Practice in researching and gathering material for and preparation of news stories for print media. COMM 332 Reporting (3) The course is an introduction to the various tools and techniques of researching and gathering information, using a combination of traditional research methods and new computer-based technologies. It develops performance and critical skills focusing on concepts of news, fact checking, finding and developing sources, interviewing, writing styles, and structures of different story types. It also provides solid grounding in historical, ethical, and legal dimensions of U.S. newspaper journalism within a comparative media system context. For the duration of the course, there shall also be continuous discussion on the role of the journalist in society, where students shall examine the legal provisions and ethical considerations that govern the practice of journalism, the unwritten "social contract" between journalists and their audiences, and the nature of the relationship between journalists and those who wield political and economic power in the community.

**Prerequisite:** COMM 260W

**COMM 333: Film History for Filmmakers I: The Development of the Cinema to 1960**

3 Credits

Film History I describes the prehistory and history of the medium of cinema to 1960. The course explores the artistic, technical, economic development of the cinema, and the cultural contexts in which this development occurred. The course covers narrative, experimental, and documentary cinema and trains students in the techniques of close formal analysis of the cinema. The course stresses formal, thematic, and cultural analysis of the cinema throughout the first decades of its history. This course is integral to the curriculum in Film-Video. It provides Film-Video students with a detailed description of trends in their art form. It provides students with intensive study in the history of an influential medium in the development of the concept of mass media and communications.

**Prerequisite:** COMM 150, COMM 424

**COMM 337: Intermediate Documentary Production**

3 Credits

Exploration of documentary video techniques and aesthetics through the completion of short exercises and projects. COMM 337 Intermediate Documentary Production (3) This course focuses on intermediate technical and aesthetic aspects of single-camera documentary production with an emphasis on storytelling. In producing a series of short visual exercises students will explore the conventions of the documentary form, formal concepts of the visual image – both still and motion, the principals of controlling light and sound recording, the conventions of editing, and idea development. Written work and group critique will also inform the study of non-fiction modes of visual media. Technically this course builds on the skills and knowledge obtained in the beginning production course. Students work independently and collaboratively on the production of short media projects using video and digital technologies that provide project-driven experience in the disciplines of writing, producing, directing, camera work, sound, and editing. This course introduces new technologies and production techniques in relation to non-fiction modes. Students will develop ideas for one or more documentary projects and will have the opportunity to work in a variety of production roles. The course will require a significant amount of work outside of class. Students are encouraged to participate in class discussions and contribute critical feedback on their classmates’ projects.

**COMM 338: Intermediate Narrative Production**

3 Credits

Exploration of narrative film or video techniques and aesthetics through the completion of short exercises and projects. COMM 338 Intermediate Narrative Production (3) This course is an intermediate aesthetic and technical production course in short-form narrative production. Through screenings, discussions, readings and creative production projects, students will explore the collaborative process of narrative filmmaking and the conventions of the fiction form. This course builds on the skills and knowledge obtained in the beginning production course. Students work independently and collaboratively on the production of short media projects using video and digital technologies that provide project-driven experience in the disciplines of writing, producing, directing, camera work, sound, and editing. The success of any narrative film depends on a focused collaborative effort by a number of individuals to tell a story. In this course, students will explore the process of producing a short narrative video using traditional production techniques. An emphasis is placed on learning the responsibilities and established practices of key production roles such as producer, director, cinematographer, sound designer and editor. Working in small groups, students will develop a short project where they will apply the processes associated with pre-production, production and post-production. Students will be building on their technical and aesthetic knowledge of digital video formats through lectures, demonstrations, outside readings and class exercises; videos will be viewed throughout the semester to demonstrate these concepts. Students will participate in class discussions and contribute critical feedback on their classmates’ projects. The emphasis will be on the
exploration of visual and aural expression and a fundamental mastery of the digital medium as it applies to traditional narrative production.

**Prerequisite:** COMM 242 and Film-Video major

COMM 339: Intermediate Alternative Production

3 Credits

Exploration of alternative film or video production techniques and aesthetics through the completion of short exercises and projects. COMM 339 Intermediate Alternative Production (3) COMM 339 is an intermediate level course in alternative film and video aesthetic theory and technique. The class is designed to expose students to a broad range of alternative and avant-garde filmmaking concepts, including classical and contemporary experimental practices, animation and new forms of cross-disciplinary media production. The course is designed to encourage students to think about film and video production as the beginning point in an expanding journey of creative exploration. It exposes students to a diverse range of historical and contemporary alternative or experimental filmmaking practices and forms and enables them to:  
- Expand their creative horizons beyond preconceived and popular forms of film culture.  
- Develop their abilities to discover their own personal filmmaking focus and language.  
- Learn the skills necessary to create unique bodies of work in film and video media.  
- Critically assess the success of their own and their fellow students’ efforts.

**Prerequisite:** COMM 242 and Film-Video major or program permission

COMM 340: Intermediate Cinematography and Editing Techniques

3 Credits

Exploration of film and video production techniques through the use of camera, lighting, audio and digital post-production equipment.

**Prerequisite:** COMM 242, Film-Video major

COMM 342: Idea Development and Media Writing

3 Credits

Introduction to various modalities of idea development and written expression for media production. COMM 342 Idea Development and Media Writing (3) This writing-intensive course is designed to introduce students to various modalities of idea development and expression for audio-visual projects. Writing as an ideational, descriptive or reflexive tool is an integral element of each modality. Learning objectives encompass the development of skills in the following areas:  
- Conceptualization: finding, refining and articulating the idea into a clearly worded proposal  
- Visualization: translating the proposal into a visual and highly imagistic form  
- Decision-making: deciding what form and genre would best suit the visual form of the idea  
- Intellectual articulation: explaining and rationalizing the visual idea in a written form, either as a treatment or script  
- Manifestation: initial preparation for production of developed idea(s) into selected audio-visual formats. Emphasis will be placed on using written work as an integral part of the creative process. As a designated W course, students will gain experience in the writing of media criticism and analysis as well as learning the writing styles specific to the profession. Writing assignments will include informal writing such as exercises in intuitive and timed writing, one minute response papers and collective story telling. Formal writing assignments will include observational essays, descriptive essays or stylistic "treatments", formal narrative proposals, analytic and editorial story reports, and self-reflexive critique papers. Students will progress through a series of creative exercises that support the development of the above skills consisting of:  
- Written and oral exercises in synthetic thinking and idea generation. These will be comprised of short 200-500 word in class "warm up" exercises and include assignments in intuitive and timed writing, one minute response papers and collective story telling.  
- Exercises in visual thinking, visual storytelling and image composition (photography as well as other forms of two dimensional imagery) to be undertaken in a complementary structure with written assignments comprised of observational essays and narrative translations of visual data.  
- Longer (750-1500 word) written assignments in various forms (descriptive, persuasive, analytical, editorial and critical) tailored to the professional requirements of the film-video major; these include descriptive essays or stylistic "treatments" formal narrative proposals, analytic and editorial story reports, and self-reflexive critique papers. Written feedback from the instructor will be provided on a regular basis, as well as in class peer critique and story workshops. Students will be required to redraft and rewrite assignments as needed.

**Prerequisite:** COMM 242 and Film-Video Major

COMM 346: Writing Across the Curriculum

3 Credits

A beginning course in narrative Screenwriting emphasizing analysis, creativity, and critiquing skills necessary for the development of storytelling. COMM 346 Writing for the Screen I (3) The course is about the creative process of conceiving and fashioning films that wish to order experience into a meaningful and expressive narrative structure. It is designed for students who wish to delve more deeply into screenwriting and those wishing to develop a script for senior-level production. It continues to develop screenwriting and storytelling skills introduced in Introductory Film and Video Production and Media Writing, and seeks to further hone their creative skills as writer-filmmakers. A large part of classroom sessions will be conducted in a traditional writers workshop structure, focusing on the presentation, discussion, and critiquing of written work; other sessions will concentrate on the analysis and critiquing of professional screenplays, with particular emphasis on close-reading of individual scenes, and study of screenwriters writing about the process. Scripts produced will be limited to short-form work, target length being no more than 15 pages maximum. Such a length combines both the virtues of disciplined, sharply-focused perceptions with a length sufficient for developed narrative arcs and tonal and thematic complexity. Scripts produced in this class will be appropriate for all of the advanced single semester advanced production courses and submission as part of a students’ application for the two-semester advanced production for groups course. Assessment is based on the progress of creative written work throughout the semester, as well as participation within the critiquing process, both verbally in class discussions and in critical writing submitted to each other and the instructor. Each individual will be expected to: (a.) display an understanding of the various creative elements of filmic storytelling rather than including visual story-telling, character, dialogue, narrative structure, and theme - and how those elements create and amplify meanings in the work; (b.) thoroughly develop original and meaningful narratives and effectively convey them cinematically; (c.) hone the specific writing and (most especially) re-writing skills needed for successful screenwriting through their application and practice; (d.) illustrate the ability to thoughtfully and constructively critique their own work as well as that of their fellow writers in the class. During the semester students will be expected to
learn to write original and creative constructed pitches, treatments, and scripts.

**Prerequisite:** COMM 342W

**COMM 360: Radio Reporting**

3 Credits

Reporting, writing, producing, and presenting radio news programs, focusing on the development of news judgment and writing skills. COMM 360 Radio Reporting (3) COMM 360 provides an introduction to broadcast news writing and radio production. Students take this course after they have completed an introductory print reporting course but before they take advanced courses that focus on television news production. This course is designed to introduce students to the general principles of broadcast writing used in both the radio and television mediums. As a prerequisite for 400-level courses, COMM 360 is offered on a regular basis to allow students to complete curricular requirements in a timely manner. Students learn the techniques needed to report, write and produce radio news. During the semester, students report on news and learn to produce, anchor and engineer a newscast. Learning objectives for COMM 360 are that students: * demonstrate an understanding of professional ethical principles in news reporting and apply those principles in newsgathering; * demonstrate basic proficiency in the tools used to report and produce broadcast-quality radio news; * demonstrate the ability to write news for a broadcast format; * demonstrate the ability to produce quality work on deadline; * apply an understanding of news values in the creation of a newscast; and * demonstrate the ability to supervise other students in a working newsroom. Students work together in a broadcast facility to produce a radio newscast. They are evaluated throughout the semester on their ability to integrate skills and concepts they learn into their broadcast stories. Upon successful completion of the course, students will have learned the theories and skills at the core of their broadcasting profession.

**Prerequisite:** COMM 260W

**COMM 363: Desktop Publishing**

3 Credits

Practical and theoretical approach to visual communication production in newspaper journalism, advertising, public relations, and other communication industries. COMM 363 Desktop Publishing (3) An introduction to publication design and production for the print media, with an emphasis on newspaper, newsletter, advertising, and magazine design. Students critically analyze existing publication designs in order to develop their visual literacy and visual analysis vocabularies. For assignments, students make layouts and designs using desktop publishing and visual editing software, learning to combine visual and textual elements in publications to make them elegant, consistent, and visually appealing as well as readable and accessible. Assignments are critiqued in class discussion sessions designed to further develop critical visual vocabularies. Unique design issues associated with online and interactive media design are also discussed.

**Prerequisite:** COMM 215 or COMM 241

**COMM 370: Public Relations**

3 Credits

Public understanding of organizations and institutions; identification and analysis of public; media relations; public relations practice. COMM 370 Public Relations (3) This is the introductory course in public relations. It is a survey course that will provide students with a foundation for understanding the role and function of public relations and public opinion in American society, business and industry. The course defines the role of public relations, its societal value, and the workplace settings where public relations is practiced. Students are introduced to the interrelationships between the disciplines of public opinion and public relations and the many definitions of public relations and how they vary from organization to organization. Students learn how individuals, interest groups, organizations, corporations and politicians monitor and analyze public attitudes, opinions and issues that impact individual citizens, groups, organizations, institutions, and society. Students examine public relations from a historical perspective and study important social campaigns that have laid the groundwork for public relations in the modern era. Students are introduced to a myriad of communications theories and how they apply to different scenarios ranging from persuasion to crisis communications. The course helps students develop an understanding of the history, structure, and functions of public relations, the four-step public relations process (research, objectives, programming, and evaluation), the tools used to carry out public relations, ethics in public relations, and legal framework adhered to by public relations practitioners. Additionally, students are taught to appreciate the value of public relations in solving problems and making policy, i.e., the importance of being involved in the decision-making body of a corporation or public relations firm. Students are also shown why individual as well as institutional credibility is critical to public relations practice.

**Prerequisite:** third semester standing

**COMM 370H: Public Relations**

3 Credits

Public understanding of organizations and institutions; identification and analysis of public; media relations; public relations practice. COMM 370H Public Relations (3) This is the introductory course in public relations. It is a survey course that will provide students with a foundation for understanding the role and function of public relations and public opinion in American society, business and industry. The course defines the role of public relations, its societal value, and the workplace settings where public relations is practiced. Students are introduced to the interrelationships between the disciplines of public opinion and public relations and the many definitions of public relations and how they vary from organization to organization. Students learn how individuals, interest groups, organizations, corporations and politicians monitor and analyze public attitudes, opinions and issues that impact individual citizens, groups, organizations, institutions, and society. Students examine public relations from a historical perspective and study important social campaigns that have laid the groundwork for public relations in the modern era. Students are introduced to a myriad of communications theories and how they apply to different scenarios ranging from persuasion to crisis communications. The course helps students develop an understanding of the history, structure, and functions of public relations, the four-step public relations process (research, objectives, programming, and evaluation), the tools used to carry out public relations, ethics in public relations, and legal framework
adhered to by public relations practitioners. Additionally, students are taught to appreciate the value of public relations in solving problems and making policy, i.e., the importance of being involved in the decision-making body of a corporation or public relations firm. Students also show why individual as well as institutional credibility is critical to public relations practice.

**Prerequisite:** fourth-semester standing

**COMM 372: Digital Public Relations**

3 credits

This course discusses digital strategies and techniques for public relations. COMM 372 Digital Public Relations (3) This course provides students with a conceptual and applied overview of how digital media are used in the field of public relations. Digital media combines traditional public relations content creation with social media, search and mobile, thus transforming static news into conversations and connecting directly with target audiences online. This hands-on experience will be supported by theoretical, strategic and professional best practices. A specific focus will be on current digital tools while preparing students for future growth and changes by covering trends, strategy, and analytics.

**COMM 373: Crisis Communications in Public Relations**

3 credits

The course is designed to introduce students to organizational risk assessment and protecting an organization's reputation in times of crisis. COMM 373 Crisis Communications in Public Relations (3) All organizations, large or small, face the prospect of a crisis. At best, a crisis is a challenge; at worst, it has the potential to destroy the organization's ability to conduct business. Nearly half of Fortune 500 companies operate without a crisis communications plan in place, yet there are scores of examples of crises that should serve as a warning to businesses to prepare for the worst. This course is designed to introduce students to organizational risk assessment and how to protect the company's reputation while minimizing the. Students learn to deliver positive media interviews in order to deliver key messages to target publics. In times of crisis, public perception is reality. It is the practitioner's job to be prepared and to act quickly and efficiently in times of crisis and be able to work with the media, not against them. It is also important that practitioners address their audiences with the right messages at the right time. Students will learn how to assemble a crisis communication team, hold a news conference to address a crisis, manage key information, and maintain effective media relations. An associated objective is to prepare students with a conceptual and applied overview of how digital media are used in the field of public relations.

**Prerequisite:** COMM 260W and COMM 370 or COMM 320

**COMM 374: Audio Production**

3 credits

Introduction to basic principles of management as they apply in electronic media industries. COMM 380 Telecommunications Management (3) This course aims to introduce students to the operation and management of the broadcast, cable and telecommunications industries. It is one of three required courses for the telecommunications major of the Bellisario College of Communications, and is the entry-point into the major’s management sequence. The learning objectives for the course is to provide an understanding of the management function in the media and telecommunications industries; to familiarize students with sources of information about and markets; to provide basic training in critically evaluating and using financial information; and to improve writing skills. An associated objective is to prepare students for successful careers in the media and telecommunications industries, by building awareness about industry events and trends, and communicating information about job designations and career paths. The class provides a broad survey of management topics and includes modules devoted to topics such as financial management, marketing and sales, and human resources. These topics are customized to accommodate the management issues specific to the media and telecommunications industries, such as program management, ratings analysis and the Federal Communications Commission's Equal Employment Opportunity (EEO) guidelines. A special module devoted to management ethics is included in the course. Topical coverage for the course includes not only the radio and television industries that have been the traditional mainstay of telecommunications careers, but also industries such as cable, wireline and mobile telephony, and the dot-com sector in which increasing numbers of telecommunications majors are finding job opportunities.

**COMM 381: Telecommunications Regulation**

3 credits

Overview of the regulation of electronic media.
COMM 383: Advanced Video Production
1-3 Credits

Advanced video production techniques and production management issues. COMM 383 Advanced Video Production (1-3) This course uses rotating topics to teach advanced video and television production techniques. Building on the concepts and skills taught in the introductory production course, students will learn advanced techniques in production budgeting, preproduction planning, location scouting, logistics, advanced lighting and audio techniques, post-production techniques, video formats and distribution issues. Each semester the instructor will choose an appropriate project that will serve as the focus of the course. Projects that occur outside the studio will include logistical issues such as power supply and safety and environmental considerations. Examples of projects include coverage of live sporting events, development of scripted and non-scripted programs, and exploration of alternative distribution platforms via the Internet and alternative telecommunications networks.

Prerequisite: COMM 283W and permission of program

COMM 383A: Webcast Production
3 Credits

Explore all aspects of producing a live television show. Includes streaming a live webcast online. COMM 383A Webcast Production (3) The purpose of this course is to learn all aspects of producing a live video webcast. The first goal is to learn the technical aspects of video production. The class will learn how to plan a live remote broadcast including site selection and evaluation, audio and video techniques, lighting and contingencies for outdoor productions, converting a video signal into an IP stream, and streaming the signal live over the Internet. The second goal of this course is to apply the acquired skills to the production of a live webcast.

Prerequisite: COMM 283 or permission of program

COMM 384: Telecommunications Promotion and Sales
3 Credits

Principles of marketing services applied to telecommunications and information products/services; models of customer-focused selling and their applications to media time sales. COMM 384 Telecommunications Promotion and Sales (3) The two-fold objective of this course is learning the foundations of service marketing and achieving technical proficiency in applying models of customer-focused selling. The context is the ever-changing marketplace for voice, video, and data services in computing, telephone, broadband (cable) and broadcasting. Topics covered include principles of services marketing and of customer-focused selling, electronic marketing, distribution and sales, selling media advertising products, (television, radio, Web), niche position marketing for voice, video, and data services, marketing and advertising trends in Ecommerce. Classroom time is devoted to lecture, discussion, team activities and presentations. Other course work may involve online discussion groups and other forms of electronic distributed learning, creating and presenting sales presentations to actual clients and study by case method.

Prerequisite: COMM 180 or COMM 320

COMM 385: Media Programming Strategies
3 Credits

Framework, principles, and strategies for media programming from perspective of content distributors and media outlets. COMM 385 Media Programming Strategies (3) This course will expose the students to the framework, principles, and strategies for content distribution via wired and wireless networks. Students will learn programming strategies for cable and broadcast networks, local television stations, cable systems, Internet sites, and other distribution outlets. The class will explore programming from the perspective of the network or outlet that acquires programming content as well as the perspective of the content producer trying to obtain distribution. The course explores how new technologies, laws, and social trends influence programming strategies. Students will learn audience analysis including Nielsen ratings and Internet measurement techniques. The class typically includes multiple group projects, presentations and written reports that evaluate programming strategies in addition to quizzes and exams. By the end of the course students should have a fundamental understanding of programming strategies, trends, and terminology. Broader course objectives include the understanding and application of ethics, diversity, the role of professionals in the industry, critical thinking, written and oral presentations including the use of visual information, appropriate use of mathematical concepts, professional writing, clear communication, and conducting and evaluating research.

Prerequisite: COMM 180

COMM 386: Telecommunications History
3 Credits

Historical development of telecommunications systems in the United States, including telegraph, telephone, radio, television, and the internet. COMM 386 Telecommunications History (3) Telecommunications History examines the development of electric and electronic communication systems in the United States within their economic, political, social and cultural contexts. Students will look at the origins and growth of communications systems and how those systems arise from and are constrained by existing social conditions. The evolution and impact of the telegraph, telephone, radio, television and Internet systems and industries will be among major topics addressed. In the process of examining the evolution of specific industries, students will be exposed to broader theories of technology and social change. As a 300-level course, students will be expected to acquire modest skills in historical research, including library, Internet and some original research such as oral histories.

COMM 388: Production Management
3 Credits

Videos are an important means by which organizations communicate, whether online, through social media, during presentations, or delivered through traditional media platforms. In the professional arena, more and more organizations use videos to raise money, communicate, or market and promote their business. This course teaches students how to manage a video production agency and produce videos for clients. COMM 388, through a combination of lecture, readings, and practical exercises, will teach students how to communicate with clients, assign production team roles, create accurate and effective production timelines and budgets, as well as understand the legal issues that can arise when creating videos for clients that meet their specific needs. Student will bring an actual client’s story from the idea phase to final delivery, as well
as learn and utilize proper client etiquette, including email, phone, and in person conversations. Student will have the opportunity to learn about the responsibilities of each member on a production team, how to create and manage a production budget, the purpose and use of contracts and release forms, all while working together as a team to create a video for their client. The course will follow a standard production timeline starting with pre-production topics such as the basics of pitching, story development, and budgeting. The second portion of the class will focus on production issues particularly as they apply to client based production. This will include scheduling, interview outlining, location scouting, conducting on camera interviews, and filming footage. Finally, post-production and formatting topics will be addressed including discussions of different delivery platforms, including online, presentation, and social media. Throughout the semester students will complete practical exercises that will help build their skills at translating a client’s ideas into a realized project with a minimum budget and maximum production value.

**Prerequisite:** COMM 242 OR COMM 282 Must attain a C or better in prerequisite courses.

**COMM 399:** Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

**COMM 400:** In the Game: TV Sports Magazine

3 Credits

Students will produce, report, anchor and direct half-hour sports magazine show. COMM 400 In the Game: TV Sports Magazine (3) Magazine shows have expanded beyond traditional news subjects to cover various aspects of American culture. None is more prominent and prevalent than the coverage of sports. In the Game: TV Sports Magazine is a sports story-telling course in which students examine sports-related topics in their context within society. Students will use writing, photography, editing and technical skills gained from their journalism skills courses. The goal will be to produce sports enterprise stories.

**Prerequisite:** COMM 465, COMM 283W or COMM 242, and permission of program

**COMM 401:** Mass Media in History

3 Credits

Relationship of news media to social, economic, and political developments in the Western world.

Bachelor of Arts: Social and Behavioral Sciences

**COMM 402:** International Reporting

3 Credits

International Reporting is an advanced level course in the Bellisario College of Communications designed to give student journalists experience in reporting the news in a foreign country. COMM 402 International Reporting (3) International Reporting is an advanced level course in the College of Communications designed to give student journalists experience in reporting the news in a foreign country. The course is offered in the spring semester only. The key component is a 10-day reporting trip over the spring break to a foreign country. In its first three semesters, the class has gone to Mexico City and Shanghai, and Cape Town, South Africa. The course has been approved as an embedded program by the Office of Global Programs. Admission to the course is highly selective and open only to junior and senior journalism majors. Students must apply for admission and present examples of their work as well as recommendations by a member of the journalism faculty. The aim of this course is to help young journalists acquire the skills they will need to compete in a industry where increasingly the threads of even the most local stories either come from, or lead, overseas. This is not a course aimed at training students to become foreign correspondents. Rather, we hope to prepare students to function in a foreign environment, and to recognize, overcome and ultimately benefit from the linguistic, cultural, economic and legal challenges that working in another country will entail. The course has three segments. In the first half of the semester we study the history, culture, politics and economics of the country to which we are traveling. We also develop and refine our ideas for the stories we will report when we get there. We will also learn about foreign reporting and how it differs from the reporting we have been used to doing here. The second part of the course consists of supervised travel to our target country. Here, we report the stories we have selected, file blogs and video posts to ComMedia, and also meet with local journalists, officials and students of the host country. Depending on the country in which we are working, students also have the opportunity to collaborate, when appropriate, with students from local universities. The final half of the semester is devoted to supervised individual work aimed at turning our reporting into stories suitable for publication or broadcast. Although students are required to acquire a general working knowledge of the country to which we are traveling, and will be tested on it, in the end they will be evaluated almost entirely on their work product. This results-oriented approach has been chosen because it most closely replicates the environment of a professional newsroom.

**Prerequisite:** COMM 260W, COMM 360, COMM 465, and permission of program

**COMM 403:** Law of Mass Communications

3 Credits

Nature and theories of law; the Supreme Court and press freedom; legal problems of the mass media. COMM 403 Law of Mass Communications (3) This discussion-intensive seminar provides an in-depth analysis of contemporary First Amendment issues ranging from the protection of violent media content and sexually explicit speech to defamation and invasion of privacy. Students explore the legal standards, public policies and theories that protect - and restrict - the Constitutional rights of free speech and free press. The primary area of study in this course is the law of mass communications and, in particular, legal issues facing the entertainment and news media. Using a law school casebook, written by a Harvard Law School professor, we will cover legal issues related to topics such as sex and violence in the media, defamation, privacy, and copyright.

Bachelor of Arts: Social and Behavioral Sciences

**COMM 403H:** Law of Mass Communications

violent media content and sexually explicit speech to defamation and invasion of privacy. Students explore the legal standards, public policies and theories that protect - and restrict - the Constitutional rights of free speech and free press. The primary area of study in this course is the law of mass communications and, in particular, legal issues facing the entertainment and news media. Using a law school casebook, written by a Harvard Law School professor, we will cover legal issues related to topics such as sex and violence in the media, defamation, privacy, and copyright.

Honors

COMM 404: Telecommunications Law

3 Credits

Overview of the regulation of electronic media. COMM 404 Telecommunications Law (3) Telecommunications Regulation offers students an introduction to a wide range of regulatory and policy issues affecting the telecommunications industries. These industries include traditional radio and television broadcasting, cable, satellite, telephone (wired and wireless), broadband, and the internet. This class is especially useful for students interested in careers in telecommunications, electronic commerce, public policy, information science, business management, law, information policy, and other related fields. Students taking this course will learn how regulations can affect business opportunities and how public policy shapes the development of the world's communications infrastructure. New developments in technology, business practices, and regulatory philosophy are leading to dramatic changes in the regulatory climate in telecommunications. The goal of this course is to help you understand the implications of these changes for business strategy and for society as a whole. Some of the questions we will consider include: Why do we regulate telecommunications? What are the legal parameters of regulation? How does the regulatory process work? Why do "experts" disagree on the proper way to regulate? How do regulations influence business strategy and industry development? How do regulations affect the way individuals communicate and acquire information? How can we choose the best policies for the future to balance reliance on marketplace forces versus the need for Government intervention? This course emphasizes an economic and legal approach to regulation. Readings will include primary documents such as FCC regulations, court cases, and statutes as well as historical and economic analyses of telecommunications regulation.

COMM 405: Political Economy of Communications

3 Credits

COMM 405 takes a critical look at the structure and practices of the U.S. mass media within the U.S. and global political economy. The normative purpose of the course is to consider whether a media system operates in a manner which supports and promotes the development of a democratic society. As such, the course is both a theoretical and practical exploration of the study of political economy and the development of capitalism as it relates to the mass media. Topics include: the structure of contemporary capitalism (its nature and logic); the ownership and control of mass communications; commercialism, advertising and their impact on U.S. society, the mass media and journalism; the economic structure and organization of the cultural industries and precarious labor; the political economy of digital media; media policy; the tenets of democratic communication.

Prerequisite: ECON 102

Bachelor of Arts: Social and Behavioral Sciences

COMM 406: Electronic News Gathering and Editing

3 Credits

Intermediate level skills in creating and editing television news packages. COMM 406 Electronic News Gathering and Editing (3) This course is designed to provide a substantial background in video production techniques coupled with electronic newsgathering and the use of video equipment. Although students enrolled in this course would be expected to have a basic understanding of video production from previous courses, more advanced editing techniques, along with sustained practice in interviewing, taping, organizing and writing various types of news and feature packages, should provide an excellent preparation for subsequent internships or employment. This is a "hands-on" course and will provide extensive opportunities for practical application of material covered in class. Students will be evaluated on the quality of their productions. This course serves as a supporting course in the Communication and Media Studies major.

Prerequisite: COMM 315 or COMM 283W

COMM 407A: Media and Government

3 Credits

This course examines the relationship between politics, governance, and news media, and provides a foundation for understanding media's role in public policy. COMM 407A Media and Government (3) The course is designed to broaden, inform, and empower thinking about media influence on the ways people think about issues and how that influences public policy choices. The course will also analyze the various ways in which elected officials seek to craft messages and manipulate media to encourage support for policy agendas and initiatives. Through the process of examining the relationship between these powerful forces, students will gain critical thinking skills that will better prepare them to consume and create media and to function as citizens in American democracy. This course will examine the symbiotic relationship between politics, governance, and media, particularly news media, and will provide a foundation of classic media theory combined with new thinking on media's role in public policy formation and its impact on the larger society. The course will emphasize the importance of political narratives, how they are constructed and communicated and also how they influence elections and public policy choices. Primary sources will provide diverse perspectives on the many questions that will emerge from readings and discussions. This course is only offered as part of the Washington, D.C. Program.

Prerequisite: permission of program

COMM 407B: Perspectives on American Journalism

3 Credits

The course examines a number of current issues and topics surrounding journalism including: ethics, state of the industry, and news vs. entertainment. COMM 407B Perspectives on American Journalism (3) Journalism is a unique occupation. News editors, reporters, producers, anchors, and other media professionals have a special responsibility to the public - the responsibility to provide their readers and audience members with the information they need in order to make choices about how to vote, what issues to get involved with, how to live their daily lives. While journalists - unlike members of other professions - have very few laws that exist specifically to govern their work, their duty to the public
The course examines a number of current issues and topics surrounding journalism. While there will be new themes and topics for each week's class, nearly all of the topics are interrelated, and each class will build on what has gone before. Among the topics that will be covered are the current state of the news industry, the ethical guidelines that journalists are supposed to follow, the blurring of lines between news and entertainment, and the news media's role in making people famous or infamous. The issues that we examine in this course will be most directly related to the practice of journalism, although we may touch on other aspects of communications (e.g. advertising or public relations) from time to time. Our goal will be to examine news coverage with a critical eye - to think about the reasoning and decision-making that shape the final products that we read or view. The class meetings themselves will center on discussion of the readings and presentation of real-world examples drawing from current news stories and issues involving the news industry.

**Prerequisite:** permission of the program

**COMM 407C: Media and World Politics**

3 Credits

**COMM 407C** helps to make sense of the impact of media, public opinion and non-state actors shaping foreign policy.

**Prerequisite:** permission of the program

**COMM 408: Cultural Foundations of Communications**

3 Credits

Examination of oral, scribal, print, industrial, and electronic cultures; analysis of impact of technology on communications and social structure. **COMM (S T S) 408 Cultural Foundations of Communications (3) (BA)** This course meets the Bachelor of Arts degree requirements. COMM (S T S) 408 traces the development of communications technologies and their impact on culture over the last 500 years. Students will examine how different tools for communicating changed the way people organized and made sense of their worlds. The course begins by looking at oral cultures and moves on to the scribal, print, industrial and post-industrial or postmodern cultures, studying the media developments that marked each of these eras. With each period and its corresponding technology students will examine how and why the new media altered not only the form of communication (the type of speech, form of writing and/or speed of information transfer), but also how such changes altered the content of knowledge (how people made sense of their lives and communities). Readings are drawn from a range of disciplinary perspectives on the issues, from history, sociology and anthropology, to philosophy, communication studies and cultural theory. The historical and theoretical knowledge provided by the course will give students a solid foundation for coming to terms with media trends in present-day society and for thinking through their possible epistemological, political and cultural impacts. The course is a communications elective for the Journalism and Telecommunications majors and the Media Studies minor.

**Prerequisite:** select 3 credits from COMM 100, COMM 110, COMM 118, COMM 150, COMM 180, COMM 251, COMM 260W, COMM 320, COMM 370; or 3 credits of S T S

Cross-listed with: STS 408

Bachelor of Arts: Social and Behavioral Sciences

**COMM 409: News Media Ethics**

3 Credits

Ethical problems in the practice of journalism; principal public criticisms of news media; case study approach. **COMM 409 News Media Ethics (3) (IL)(BA)** This course meets the Bachelor of Arts degree requirements. This course examines the role of international mass media in communications and debates about global questions and/or crises between and among nations and peoples. These roles will be examined using such theories as imperialism, hegemony, information society, modernization, globalization, capitalism, cultural industries, propaganda, and others. Among other issues the course will examine the way in which media report, portray, represent, misrepresent, and construct knowledge about global questions and crises that may border on social injustices, health, the politics of armament, disarmament, and recognition of statuses of states. The course may also explore other issues of international importance not limited to those involving economic questions such as balance of trade, global debt, and financial crises. In addition, this course provides avenue for the appraisal of mediated debates between nations at such platforms as the United Nations (UN), the World Health Organization (WHO), and the World Trade Organization (WTO) among other international and bilateral organizations that serve as platforms for consideration of issues of global importance. Students are led to understand ways in which states relate and communicate with each other in the environment of supranational governance. Students are exposed to these issues through readings in pertinent theories, ICT-enhanced conversations, and critical examinations of applicable
The mass media as creators and critics of mass culture in American life; relationships between the media and mass culture. COMM 411 Cultural Aspects of the Mass Media (3) This course examines the mass media as creators and critics of mass culture in American life and the relationship between the media and the mass culture. What are the mass media? What is culture? What are the relationships between mass media and culture? How do mass media help construct the way we live our lives? Do the mass media reflect or condition social reality? How does one study or engage the mass media? Why would you want to anyway? This course is designed to answer some of these questions by promoting a critical understanding of the mass media from historical, social, philosophical, cultural, and economic perspectives. Ultimately, the course will equip students to address these opening questions on their own terms, without simply allowing the mass media to provide their own pictures of how they should be understood. One of the goals of this course is to denaturalize the way people view the mass media as simply a given, or as pure unmediated reality. Media culture has been and continues to be made. Course materials and lectures will provide several ways of thinking about and studying the conditions of media making and interpretation. Students are encouraged to think as broadly and creatively as possible: to this end, the course will make use of research across a wide range of academic fields such as sociology, history, ethnography, cultural studies, literature, politics, gender studies, economics, art, and philosophy. The course is a communications elective for the Journalism and Telecommunications majors and the Media Studies minor.

**Prerequisite:** COMM 305

Bachelor of Arts: Social and Behavioral Sciences

COMM 411H: Cultural Aspects of the Mass Media

3 Credits

The mass media as creators and critics of mass culture in American life; relationships between the media and mass culture. COMM 411H Cultural Aspects of the Mass Media (3) COMM 411H takes a cultural studies approach to media and more generally culture and politics. The class is predicated upon three assumptions about media. First, media must be examined in context. Second, media play a significant role in the construction of our lived reality. Third, these constructions and all attempts to study them are political and implicated in relations of power. As such, this course treats media as part of cultural and political processes that are not separable, but instead co-constitutive. In other words, these three assumptions have some immeasurable effect on each other and impact our understanding of their relationships.

**Prerequisite:** select 3 credits from the following COMM 100, COMM 118, COMM 150, COMM 180, COMM 251, COMM 260W, COMM 320, or COMM 370

Bachelor of Arts: Social and Behavioral Sciences

COMM 412: Sports, Media and Society

3 Credits

Sport and media relationship in American culture. COMM 412 Sports, Media and Society (3) This course is designed to help students more critically view the role of sport media in American culture. The influence of/relationship between sport media and issues such as race, gender, sexuality (homophobia), nationalism, capitalism/consumerism, violence and civic life will be examined. Issues in relation to journalism ethics and the production of sport media also will be examined.

COMM 413: The Mass Media and the Public

3 Credits

Nature of mass communications, relationships between mass media and public, media influences on opinion; social pressures on the media.

**Prerequisite:** 3 credits selected from the following: COMM 100, COMM 110, COMM 118, COMM 150, COMM 180, COMM 251, COMM 260W, COMM 320, or COMM 370

Bachelor of Arts: Social and Behavioral Sciences

COMM 413W: The Mass Media and the Public

3 Credits

Social-level and political theories of the relationships between media and public; media influences on public opinion; social pressure on the media; political communications. COMM 413W The Mass Media and the Public (3) This course is designed to explore the complex and dynamic relationships among the media, public, and government. These relationships are examined through the lenses of sociological and political theories regarding the nature and process of mass communication. The central questions answered in the course are: "How do the media influence the public, its opinions, and social and political behavior?" and "How does the public - through social pressures, and political constraints - influence media performance and content?" Special attention is paid to modes of inquiry in communication research, social functions and control of the media, social construction of reality, political communication, and public opinion. The goals of the course are to introduce students majoring in professional areas of communications to theoretical frameworks that help explain media practices, advance the understanding of the communications research literature for Media Studies majors, and develop skills of all students to be informed and critical consumers of the media. The course is required of Media Studies majors and is a communications elective for the Journalism and Telecommunications majors, the Corporate Communications and Journalism options in Communications, and the Media Studies minor.

**Prerequisite:** select 3 credits from the following COMM 100, COMM 118, COMM 150, COMM 180, COMM 251, COMM 260W, COMM 320,
or COMM 370 and select 3 credits from the following: COMM 304, COMM 420
Bachelor of Arts: Social and Behavioral Sciences
Writing Across the Curriculum

COMM 414: Media Management

3 Credits

Theoretical bases and practical approaches for management and administration of communications projects, organizations, and resources. COMM 414 Media Management (3) Students examine various management styles and how they are applied in various media industries. Special issues in media management such as intellectual rights and work-for-hire contracts are covered. General business management topics are also covered, such as human resource management, sales, motivation, working with unions, managing talent and other assets, and maximizing profits within the framework of very basic business principles. In addition, this course includes topics useful for small media business startups and freelance media content producers. Usually this course utilizes a case/book study approach relying heavily on in-class discussion.

Prerequisite: COMM 100 or COMM 251

COMM 415: Advanced Photography for Communications

3 Credits

Advanced applications in documentary photography emphasizing the narrative qualities of imagery, and utilizing digital technologies. COMM 415 Advanced Photography (3) An advanced undergraduate examination of documentary photography with the goal for each student to produce a portfolio of pictures suitable for exhibition or to show prospective employers. Each week students complete photographic assignments designed to simulate commercial photography work and to give experience with a variety of photographic techniques and subjects. Assignments include topics such as portraiture, documentary photo story production, studio lighting, fill-flash lighting, and sports photography. Classroom exercises include demonstrations of various techniques as well as critique sessions to discuss student assignments and other photography work.

Prerequisite: COMM 215 or COMM 269 and permission of program

COMM 416: News Practicum

3 Credits

News Practicum is a professionally oriented course for students who have mastered basic news writing and interviewing skills to produce stories for professional news outlets. COMM 416 News Practicum (3) This is a course in which students employ skills they developed in previous classes including: reporting, writing and working in collaboration with editors to develop a variety of short and long stories that are designed to be used in professional publications. In the course of reporting stories, students will work independently, using sources ranging from first responders to local government officials and experts, to gather information that they will use writing their stories. Students will turn in multiple drafts to the instructor, who will work with them to edit the stories in preparation for publication. Part of the course will include post-publication review of the stories to discuss techniques and how to improve upon them.

Prerequisite: COMM 260W, and permission of the program

Cross-Listed

COMM 417: Ethics and Regulation in Advertising and Public Relations

3 Credits

Ethical issues in practice of advertising and public relations; legal and regulatory issues; case studies. COMM 417 Ethics and Regulation in Advertising and Public Relations (3) The purpose of this course is to help students gain an understanding of the complex legal and ethical issues they may face in advertising and public relations practice. Through an examination of historic and contemporary issues and cases, students will develop a professional framework for evaluating ethical dilemmas. Perspectives of advertisers, public relations practitioners, agencies, government, media, clients and advocacy groups will be examined, with a focus on social responsibility in professional practice.

Prerequisite: COMM 320 or COMM 370
Bachelor of Arts: Social and Behavioral Sciences

COMM 417H: Ethics and Regulation in Advertising and Public Relations

3 Credits

Ethical issues in practice of advertising and public relations; legal and regulatory issues; case studies.

Bachelor of Arts: Social and Behavioral Sciences Honors

COMM 418: Media Effects: Theory and Research

3 Credits

Investigation of social and psychological effects of media messages and technologies via theories and empirical evidence pertaining to processes of effects. COMM 418 Media Effects (3) This is an upper-level undergraduate course on the social and psychological effects of media messages and technologies, which moves beyond a simple introduction of media theories. Drawing on social and behavioral research in communication, psychology and related disciplines, it will attempt an advanced understanding of media effects via theories and empirical evidence pertaining to the processes of effects. Emphasis will be placed on rigorous examination of theory testing and theory development. The class will assume a general familiarity of basic communication theories pertaining to the relationship between media and public (COMM 118) and a working knowledge of quantitative research methods (COMM 304).

Prerequisite: COMM 118 and COMM 304 or equivalent

COMM 419: World Media Systems

3 Credits

Comparative study of modern mass systems and the evolution and structure of specific countries’ systems. COMM 419 World Media Systems (3) (US;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course is a comparative study of modern mass media systems with focus on the ways in which two or more countries’ media have evolved and are structured by the political, economic, social, and cultural environments within which they exist. Students will be exposed to the theories and practices of media systems - as explained in such normative expositions as the four theories of the press and other contemporary iterations. One objective of the course is for students to gain a better appreciation of the structure and location of the media system in the United States vis-à-vis greater awareness of media systems
in other political contexts where media cultures may vary from the U.S. matrix. Across the board of sampled countries, media systems, students will be exposed to the ways in which each country's media have developed, are shaped, and are continually shaped by factors that include history, political cultures, evolving legal regimes, media regulations, finances, media economics, new technologies, institutional arrangements, citizens' access to information, or lack thereof. Another objective of this course is to equip students with a toolbox and framework with which they can replicate comparative media systems analyses in other countries and regions of interest as they contemplate study abroad and/or long-term career (employment, graduate studies) engagements. To achieve foregoing objectives students will be exposed to readings in theories of media systems and to academic articles using comparative methodologies to examine structural evolution of media in tandem with countries transformations over time. Students will analyze historical or contemporary media systems' developments through careful comparisons and applying critical thinking skills. In the process, students develop analytical skills useful in contending with academic and professional environments.

Prerequisite: COMM 410; and select 6 credits in the arts or the humanities
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
United States Cultures (US)

COMM 419H: World Media Systems
3 Credits

Comparative study of modern media systems of mass communications in selected foreign countries. COMM 419H World Media Systems (3) (US;IL)(BA) This course meets the Bachelor of Arts degree requirements. Students in this course will have the opportunity to discover the variety of media systems in the world today and, more importantly, how they got that way and what functions they perform for their respective societies. Students will evaluate each media system's history and analyze the functions of the mass media in the respective contexts. They will examine the historical, social, economic and cultural forces that influence the adoption of a national media system. They will compare perspectives on the problems and issues in freedom of expression within national media systems and evaluate the organization, regulation and economics of those systems. Finally, students will analyze the national development of media systems and the impact of the mass media in the modernization of peasants.

Prerequisite: select 6 credits in the arts or the humanities; and 3 credits from the following: COMM 100, COMM 110, COMM 118, COMM 150, COMM 180, COMM 251, COMM 260W, COMM 320, or COMM 370 Bachelor of Arts: Social and Behavioral Sciences International Cultures (IL)
United States Cultures (US) Honors

COMM 420: Research Methods in Advertising and Public Relations
3 Credits

Primary and secondary research methods used in the development of solutions to advertising and public relations problems. COMM 420 Research Methods in Advertising and Public Relations (3) This course is designed to provide an introduction to the logic and methods of social science research and its applications in the professional practice of advertising and public relations. Students will be introduced to methods of primary research used in the advertising and public relations fields such as survey, focus group, content analysis, and experimental design. Students will also become more familiar with basic and advanced statistical techniques and statistical software used in the field. Understanding how research is conducted and the strengths and limitations of research findings is a critical first step in developing the ability to apply research findings to communication problems in advertising and public relations. In addition to helping students understand how to conduct research, this course is also designed to help them become critical consumers of the research conducted by others. Advertising and public relations problems often require the identification, understanding, synthesis, and application of data collected by others in developing problem solutions. Understanding secondary sources of data commonly used in the field, such as Simmons, Nielsen, Arbitron and SRDS, is an essential component of professional expertise. Problem-solving in advertising and public relations requires decision-making in a turbulent and dynamic marketing environment. To help students learn how to relate research tools and outcomes to the advertising and public relations problems at hand, this course will examine the role of research in decision-making at the critical steps in the problem-solution process. As part of developing understanding of this decision-making process, students will also become more aware of the ethical issues associated with research in advertising and public relations.

Prerequisite: COMM 320 or COMM 370; STAT 200

COMM 421W: Advertising Creative Strategies
3 Credits

Planning, designing, writing advertisements; introduction to graphics and production techniques and processes; layout and copywriting practice and critiques. COMM 421W Advertising Communications Problems (3) This course is designed to provide students with an overview of the intellectual and practical skills involved with the development of advertising creative work. Students are introduced to research and thinking strategies that lead to creative ideas and are provided with computer software and other training that facilitates the execution of advertising based on their ideas. The course requires students to complete several creative projects, in distinct product categories (e.g., packaged goods, durable goods, public services, consumer services), over the course of the semester. Before developing advertising, students will be expected to research the product, service or idea that constitutes the creative project. They will gain an understanding of the kinds of information most valuable to creative professionals in the development of ideas, and be provided with an overview of research strategies leading to the discovery of such information. After completing the required research, students will produce briefs that summarize findings and serve as a platform for further work on their creative projects. Given the course's designation as writing intensive, these documents will be evaluated both for their content and the degree of accuracy demonstrated in grammar, spelling, punctuation and word choice. Since the evaluation of creative ideas is inherently subjective, these written research documents are usually weighted more heavily in the calculation of final course grades. Students will use their own research as the platform for generating creative ideas to advertise their product, service or idea. Instruction on creative thinking techniques will be provided as tools for this activity. As ideas are developed, students are encouraged to share their work with their peers and the instructor for feedback. In "workshop" fashion, these in-class critiques of creative work serve to refine and improve ideas. Over the course of the semester, students work toward finalizing creative solutions. By semester's end, each student will be expected to submit a final portfolio of work that demonstrates proficiency in the subject matter
covered by the course. Traditionally, the final portfolio includes creative briefs and ads developed from them.

**Prerequisite:** COMM 320

**Writing Across the Curriculum**

**COMM 422: Advertising Media Planning**

3 Credits

Analysis, selection, and scheduling of advertising media; examination of algorithms, technologies, and software used in media planning.

**COMM 422 Advertising Media Planning (3)** This course is designed to provide an introduction to the concepts and techniques of media planning. The course will cover traditional and online media options. The student will learn to use software models to facilitate media decisions. Secondary sources of research used in the media planning process will be discussed. The design, construction, implementation and evaluation of effective media plans that meet specific advertising objectives will be detailed. Ethical media planning processes will be reviewed. The goal of the course is to develop critical thinking skills that will improve decision making in a dynamic and turbulent media environment.

**Prerequisite:** COMM 320

**COMM 424: Advertising Campaigns**

3 Credits

Advertising campaign problems from the viewpoint of the national advertiser and advertising agency; production of a complete advertising campaign.

**COMM 424 Advertising Campaigns (3)** This comprehensive capstone course is designed to provide an opportunity to showcase your creativity and knowledge about advertising communications. Strategic integrated marketing communications concepts are emphasized. The campaign proposal developed in this course will showcase the full weight of your knowledge and skill in the area of advertising communications. Students will need a background in creative design and practices, media planning principles and practices, and research methods used to delineate appropriate target groups and evaluate campaign effectiveness. A strong focus will be on understanding the audience and developing message strategies that have a high potential to influence attention and marketing behaviors. During the course you will create a complete advertising/marketing communications campaign proposal that reflects a set of communication goals derived from a set of measurable objectives all designed to meet the needs of your client. A situation analysis will be developed to provide a detailed assessment of the product or service environment. This includes analysis of the product class, life cycle, generic and brand level competition, and target group identification. The goal is to gain relevant information that can be used to make justifiable strategic decisions related to the advertising campaign. Strategic goals and objectives will be developed that allow the direction and efficacy of the campaign to be measured. Tactics must reflect the strategies developed in the campaign. Campaigns include diagnostic and performance benchmarks used to evaluate the progress of a set of predetermined measurable objectives. The goal is to provide timely feedback that allows the agency and client to evaluate the effectiveness of the campaign. This is especially important as client-agency relations continue to adapt a series of formal measures of campaign effectiveness. The class is designed to develop critical thinking skills. For example, each strategic decision presented in a campaign must have a fully explicated rationale that is based on quantitative and qualitative criteria. Research tools will be presented in class that allow and support the development of measurable objectives. The campaign proposal must include a series of benchmarks designed to evaluate the progress of the campaign at key time points. The campaign will have a complete media plan that includes selected media, cost efficiencies, and media schedule. Students will be expected to be familiar with media principles and media planning software.

**Prerequisite:** COMM 420 or COMM 304; COMM 421W, COMM 422

**COMM 425: Advanced Advertising Campaigns**

3 Credits

An academic option for student AAF members who will develop an integrated advertising campaign to be presented in District competition.

**COMM 425 Advanced Advertising Campaigns (3)** The class is structured along the lines of a real-world advertising agency and the manner in which they might pitch a new account. Students work through the research and situational analysis to develop an integrated communication plan, campaign budget, and message strategies for a client. The client is provided by the National Student Advertising Competition. This group provides undergraduate advertising students with a realistic problem that is solved through team effort, knowledge and creativity. Students might have the opportunity to pitch their plan to the NSAC client.

**Prerequisite:** COMM 420, COMM 421W, COMM 422, COMM 424 or COMM 471 and permission of the program

**COMM 426: International and Intercultural Strategic Communication**

3 Credits

Advertising and public relations in the international and intercultural arenas; multicultural strategic communications strategies. COMM 426 International and Intercultural Strategic Communication (3) COMM 426 will provide students with a framework for applying their existing public relations and advertising tools in the global arena. Working internationally and/or interculturally challenges the advertising, public relations or marketing executive to think outside his or her own “cultural box.” Some of the challenges include finding research about consumers, competitors and the marketplace outside of North America and Western Europe, understanding local cultures and customs, understanding the importance of ethnicity, and building an integrated core of professional communications that work with a common purpose, even if they come from different backgrounds or are on different continents. The emphasis will be on developing a methodology for researching international and intercultural strategic communications problems, and then discussing possible communications-based solutions. To that end, case studies from both the international advertising and international public relations disciplines will play an important role in the course. Additionally, students will be exposed to a number of frameworks for analyzing culture, coming from the areas of anthropology (Schwartz’ 10 Value Domains), social psychology) Bond’s essay on impression management in multicultural organizations) and international business (Hofstede’s Dimensions of National Culture).

**Prerequisite:** COMM 320 or COMM 370

**COMM 427: Client/Agency Relations**

3 Credits

Building and maintaining client-agency relationships in advertising, public relations and direct response agency business functions.
COMM 427 Client/Agency Relations (3) Client/Agency relations provides students with an understanding of advertising, public relations and direct response agency business functions, and the important role of building and maintaining client/agency relationships. It covers the phases of pre-relationship (identifying, prospecting, pitching and winning accounts), developing relationships with clients and maintaining and enhancing these relationships over time. Client/agency relationships are built on the development of viable partnerships with clients, establishing strategies to support and maintain the vitality of client business success, and the on-going delivery of fresh creative ideas from all agency disciplines. Today's agency has become a resource for all integrated marketing communication (MARCOM) needs. This includes, but is not limited to, advertising, promotion, public relations, direct response marketing, event marketing, customer-relationship marketing, interactive internet communication and branding ideas. This course covers the integration of these disciplines on behalf of an agency's clients.

Prerequisite: Advertising Option - Prerequisite or concurrent - One can be taken concurrently: COMM 421, COMM 422 . Public Relations Option - Prerequisite: COMM 471, Prerequisite or concurrent: COMM 473

COMM 428A: Principles of Strategic Communications

3 Credits

Principles of Strategic Communications provides an overview of the various media and communications methods that comprise modern integrated marketing campaigns. COMM 428A Principles of Strategic Communications (3) Principles of Strategic Communications will introduce students to strategic communications in the context of integrated marketing communication (IMC). It will overview the industry by providing a foundation for understanding what IMC is and how it developed to its current state, what it tries to accomplish, how it works, and how it can affect society. It lays the groundwork for other courses in the strategic communications sequence. The fundamentals of consumer psychology will be introduced, along with theories of persuasion. In addition to traditional advertising, the course will review other critical functional areas of IMC such as public relations, sales promotion and direct marketing. The role of the internet and emerging new media technologies will also be covered. The advantages and disadvantages for different media will be summarized, and the basics of media planning will be introduced. Course content is present in the context of strategy and planning, with the goal of illustrating how various elements in the promotional mix work together to achieve campaign objectives. The importance of effective measurement and accountability at each point of campaign development and execution will be explained. Finally, the ethical and regulatory environment for IMC will be explored.

Prerequisite: Permission of program

COMM 428B: Strategic Communications Law

3 Credits

Analysis of laws and regulations affecting online advertising and strategic communications. COMM 428B Strategic Communications Law (3) Strategic communications law focuses on the key legal issues affecting strategic communications, advertising and marketing in an online environment. Major topics include First Amendment protection for commercial speech; advertising regulation including spam and the use of trademarks and copyrights; privacy regulation including the collection of user data and use of endorsements, and procedural issues such as jurisdiction and analysis of various regulatory authorities. Additional topics will include domain names, marketing to minors and current developments in advertising and Internet law.

Prerequisite: COMM 428A and permission of the program

COMM 428C: Strategic Communications in a Global Environment

3 Credits

Strategic Communications in a Global Environment will provide students with a framework for applying public relations and advertising tools across media platforms and across cultures. COMM 428C Strategic Communications in a Global Environment (3) Strategic Communications in a Global Environment will provide students with a framework for applying public relations and advertising tools across media platforms and across cultures. While cross-cultural communication has always been a challenge for strategic communicators, introducing online elements to campaigns exposes strategic communications professionals to a host of new challenges, including a wide range of ethical and legal dilemmas emanating from new to abilities to collect sensitive data from audiences, often without their knowledge. Students will be exposed to a number of frameworks for segmenting publics in this new environment, both geographically and psychographically, and will learn the skills to work with colleagues across borders and cultures to create effective, ethical strategic communications campaigns.

Prerequisite: COMM 428A, COMM 428D, and permission of the program

COMM 428D: Research & Analytics

3 Credits

This course covers online research methods for strategic communication, including web analytics, online surveys, online interviews, and content analysis. COMM 428D Research and Analytics (3) Increasingly, organizations are using the web as a vehicle for communicating with key audiences such as customers, shareholders, volunteers, donors, community members, and government entities. In this class students will be exposed to theories and practices in the areas of online research and analytics with a focus on understanding how customers perceive the organization, assessing the engagement with target audiences online, measuring the value of relationships that organizations initiate and build online, and tracking how web site visitors experience an organization's site. The course will expose students to tools for tracking and measuring online communication, and it will help students understand how to prioritize audiences and communication to maximize the effectiveness of measurement. Research methods taught in this class include web analytics, online surveys, online interviews, content analysis, and online focus groups. Gauging the impact of online communication helps organizations engage in more efficient and effective communication practices. Practitioners in strategic communication need to understand how to measure and evaluate the effectiveness of their communication in this medium. This course will prepare students to conduct online research in practice.

Prerequisite: COMM 428A, STAT 200, and permission of program

COMM 428E: Social Media Strategies

3 Credits/Maximum of 3

This course covers social media theory, tools and best practices to prepare students for current and future use of social media. COMM 428E Social Media Strategies (3) Social media - including social networking, podcasting, bookmarking, blogging, microblogging, location-based, wikis,
COMM 437: Advanced Documentary Production

3 Credits/Maximum of 6

Advanced exploration of documentary production techniques and aesthetics through the completion of a short video project. COMM 437 Advanced Documentary Production (3 per semester/maximum of 6) This course is designed to enable students to produce portfolio-quality work while bringing together ideas, processes, practices, and theories in the service of documentary production. Students will explore the history, conventions and theory of the documentary film form, while developing and producing a film or video work for screening at the end of the semester. Working in small crews with others from the class and using sophisticated production equipment, students will write and
produce short digital video projects. Utilizing a workshop structure, class time will be focused on discussion and analysis of the challenges faced by individual productions as well as providing the support, guidance, and critique necessary for a successful production. Particular emphasis is given to the traditions of social criticism, the creative treatment of actuality, the individual and collective points of view. The history of documentary form is illustrated by comparing the work of the American "Direct Cinema" style embodied in the work of Drew Associates to the French "Cinema Verite" style developed by Jean Rouch. The evolution of these styles into what we now just refer to as "Verite" filmmaking is put into practice through a series of exercises that incorporate a variety of points of view. Analysis of the above works, as well as examples from Barbara Kopple, Errol Morris, and Frederick Wiseman, provide students with a springboard to develop their own style, vision, and personal creative voice. An examination of Bill Nichols taxonomy of non-fiction film classification further contextualizes aesthetic and theoretical issues for students. A series of lectures, discussions, readings, and screenings move students through the personal and collaborative process of documentary production.

**Prerequisite:** COMM 337, COMM 340, COMM 342W

COMM 437A: Advanced Documentary Production Abroad

3 Credits

Advanced exploration of documentary production techniques and aesthetics through the completion of a short video project abroad.

COMM 437A Advanced Documentary Production Abroad (3) This course is designed to enable students to produce portfolio-quality work while bringing together ideas, processes, practices, and theories in the service of documentary production. Working in small crews with others from the class and using sophisticated production equipment, students will write and produce short digital video projects. While exploring the history, conventions and theory of the documentary film form, students will develop and produce a 3-9 minute video work to be filmed abroad either during the Spring Break, in the middle of Maymester or over the Thanksgiving Break (depending on the semester offered). Upon return from their time abroad, students will edit and screen their final projects. Utilizing a workshop structure, class time will be focused on discussion and analysis of the challenges faced by individual productions as well as providing the support, guidance, and critique necessary for a successful production. Particular emphasis is given to the traditions of social criticism. The history of documentary form is illustrated by comparing the work of the American "Direct Cinema" style embodied in the work of Drew Associates to the French "Cinema Verite" style developed by Jean Rouch. The evolution of these styles into what we now just refer to as "Verite" filmmaking is put into practice through a series of exercises that incorporate a variety of points of view. Analysis of the above works, as well as examples from Barbara Kopple, Errol Morris, and Frederick Wiseman, provide students with a springboard to develop their own style, vision, and personal creative voice. An examination of Bill Nichols taxonomy of non-fiction film classification further contextualizes aesthetic and theoretical issues for students. A series of lectures, discussions, readings, and screenings move students through the personal and collaborative process of documentary production.

**Prerequisite:** COMM 337, COMM 340, COMM 342W

COMM 438: Advanced Narrative Production

3 Credits/Maximum of 6

Advanced exploration of narrative production techniques and aesthetics through the completion of a short film or video project. COMM 438 Advanced Narrative Production (3 per semester/maximum of 6) This course is designed to enable students to produce portfolio-quality short projects that bring together ideas, processes, practices, and theories in the service of narrative production. Over the course of the semester, students will pursue an entire project from conception to completion through intensive pre-production, production, and post-production stages. Working in small crews composed of fellow classmates and using sophisticated production equipment, students will write and produce short digital video projects. Utilizing a workshop structure, class time will be focused on discussion and analysis of the challenges faced by individual productions, as well as providing the support, guidance, and critique necessary for a successful production. There will be an emphasis on the thorough execution and evaluation of the steps taken toward completion of their project. As a workshop, specific topics pertaining to the three stages of production will be reviewed as necessary. Students will be expected to hand in a pre-production packet (budget, schedule, script breakdown and lined script) before proceeding to the production phase.

**Prerequisite:** COMM 338, COMM 340, COMM 342W

COMM 439: Advanced Alternative Production

3 Credits/Maximum of 6

Advanced exploration in experimental and animation forms through the production of a film or video project. COMM 439 Advanced Alternative Production (3) Advanced Alternative Production is a senior level course focusing on the development and expression of the individual filmmaker. The emphasis of the course is on exploring the history, conventions and modes that surround the experimental and animation film forms and using this knowledge in creating work that challenges conventions of mainstream media. The course involves viewing works of classic and contemporary alternative media, discussing its contribution or value in communications, and using these examples as models for exploration. Utilizing a workshop structure, class time will be focused on discussion and analysis of the challenges faced by individual productions, as well as providing the support, guidance, and critique necessary for a successful production. There will be an emphasis on the thorough execution and evaluation of the steps taken toward completion of their project. This course assumes a working knowledge of intermediate film and video production and post-production techniques. Additional production and post-production techniques may be introduced based on the students' interest.

**Prerequisite:** COMM 339; and COMM 340, COMM 342W or permission of program

COMM 440: Advanced Cinematography and Lighting Techniques

3 Credits

Advanced exploration in camera, lighting, audio, and color-grading techniques, emphasizing technical skills as well as aesthetics. COMM 440 Advanced Cinematography and Lighting Techniques (3) This course is a comprehensive approach to techniques, equipment and procedures of film and video production with an emphasis on both practical skills and aesthetics. The course is divided into four sections
COMM 443: Producing Workshop

Prerequisite: COMM 241 or COMM 371

COMM 443: Producing Workshop

3 Credits

This course will immerse students in the language and practice of producing film and video projects. COMM 443 Producing Workshop (3) Through a combination of lecture, readings, screenings, and practical exercises, students will learn the fundamental producing skills needed to begin to understand creative producing in an increasingly complex global marketplace. Producing students will learn how to bring stories all the way from development through post-production and beyond. Students will be afforded an opportunity to develop their creative voices, all the while developing their communication and problem-solving skills. The course will follow a standard production timeline starting with pre-production topics such as the basics of pitching, script development, and financing. The second portion of the class will focus on production issues particularly as they apply to independent film production. This will include line producing and production management, including scheduling/budgeting, script breakdowns, assembling talent and crew, location scouting, and running a set. Finally post-production and distribution topics will be addressed including discussions of trends from major trade publications that impact the industry. Throughout the semester students will complete practical exercises that will help build their skills at translating a script into a realized project with a minimum budget and maximum production value. COMM 443 is a support course for the senior level capstone production courses. Student producers in COMM 448 (Adv. Production for Groups) are strongly encouraged to take this course concurrently. It can also be taken as an elective technique course in conjunction with any of the one-semester mode specific advanced production courses (COMM 437, COMM 438, or COMM 439). The prerequisites are in place to ensure students have the necessary production background taught in the intermediate-level courses.

Prerequisite: COMM 340, COMM 342W and two of either: COMM 337, COMM 338 or COMM 339

COMM 444: Advanced Post-Production Techniques

3 Credits

This course offers intensive practical experience in editing, motion graphics and sound mixing techniques, emphasizing both technical skills and aesthetics. COMM 444 Advanced Post-Production Techniques (3) Through a combination of lectures, readings, screenings, and practical exercises, students will learn advanced post-production techniques needed to produce high quality finished film and video pieces. The course includes modules on the theory and aesthetics of editing, motion graphics, visual effects, 2D animation, audio signal processing and audio mixing. The course will enable students to develop creative skills for translating ideas into short films and to serve as post-production support for senior level productions. Specific design strategies and approaches will be discussed. Students will also be required to demonstrate competency in a variety of digital graphics programs. Throughout the semester students will work individually and collaboratively on practical exercises for critique and evaluation, developing technical, analytical and critical skills. The course is divided into three sections. In the first section students will focus on the procedures for successful post-production supervision and workflow management, including an exploration of accepted professional practices of editing departments. Students will explore advanced methods of picture editing in all modes and will edit and critique a professionally produced scene. In the second section of the course, students will work on graphics, animation and special effects procedures generally accepted as part of film-video post-production processes. The focus will be on techniques that translate to a variety of software and work environments; including manipulation of picture and text, light and color effects, compositing of multiple images and manipulation thereof. The third section of the course will focus on the practice of preparing elements for a professional audio mix and use of advanced digital audio workstations. This section will feature a discussion of the theory and practice of how tracks are organized,
advanced psychoacoustics and signal processing, preparing a multi-track project for mix, and completion of a mixed sound design project.

**Prerequisite:** COMM 340, COMM 342W and two of the following: COMM 337, COMM 338 or COMM 339

COMM 445: Directing Workshop
3 Credits

An advanced aesthetic and skill production course in directing for the screen. COMM 445 Directing Workshop (3) This course is an advanced aesthetic and skill production course in directing for the screen. The class is designed to introduce more advanced directing concepts and techniques as well as to more deeply explore the collaborative processes of working with a creative team on effectively integrating the aesthetics of cinematography, production design and acting performance in film narrative. The first section of the course will focus on understanding the actor's preparation and process with the goal of developing the appropriate and effective communications skills to coach performance. Students will thoroughly explore scenes for interpretation of subtext and motive, and will learn accepted practices of script preparation. Casting and audition styles will be investigated and demonstrated, as will various types of rehearsal techniques. At the end of this section students will workshop a scene in a small group, blocking it and executing it to illustrate concepts of character relationships, stage and camera craft to produce a short scene for discussion and critique. The second section of the course will be an advanced aesthetic exploration of the visual vocabulary, including cinematic, psychological and fine art concepts that contribute to the planning and design of screen direction. Students will then analyze the technical means to execute this aesthetic vision through production design, lighting and composition. In practice the students will then translate this analysis into a working scene plan and will produce a short scene for discussion and critique. Students will also be introduced to professional practices such as location and studio set protocols and on-set safety procedures. The third section of the course will explore narrative conventions and their relationship to screen genres in the interest of understanding the film language shared between filmmaker and audience. At the end of the section students will produce a short classic scene with an alternative interpretation for discussion and critique.

**Prerequisite:** COMM 340, COMM 342W and two of the following: COMM 337, COMM 338 or COMM 339

COMM 446: Writing for the Screen II
3 Credits

An advanced course in screenwriting that further develops elements of storytelling technique.

**Prerequisite:** COMM 346

COMM 448: Advanced Group Production I
3 Credits

A two semester advanced production course emphasizing intensive collaborative film-video production from script through post-production. COMM 448 Advanced Cinematography and Sound Workshop (3) This course is designed to enable students to produce portfolio-quality work in any production mode (alternative, documentary, narrative) and to bring together ideas, processes, practices, and theories in the service of this production. Over the course of the semester, students will engage in intensive pre-production and production of an approved film or video project. Utilizing a workshop structure, class time will be focused on discussion and analysis of the challenges faced by collaborative productions as well as providing the support, guidance, and critique necessary for a successful production. There will be an emphasis on the thorough execution of every step of pre-production, principal photography, and preparation for post-production in spring semester. Students will fill a single production role (such as producer, director, cinematographer, sound designer, editor) throughout the two semesters and are strongly encouraged to take concurrently the supporting technique course for that production role. Students will be assigned individual exercises specific to their production role in addition to the collaborative work of the project’s production. Production groups will be formed the first week of class. The first part of the semester is devoted to the development of the projects and pre-production. Roughly half way through the semester, the projects will begin production, with shooting and editing to be completed the following semester.

**Prerequisite:** COMM 340, COMM 342W and two of the following: COMM 337, COMM 338 or COMM 339 and permission of program

COMM 449: Advanced Group Production II
3 Credits

Continuation of advanced production course emphasizing intensive collaborative film-video production from script through post-production. COMM 449 Advanced Film and Video Projects (3) This course is the second half of a two-semester production course designed to enable students to produce portfolio-quality work in any production mode and to bring together ideas, processes, practices, and theories in the service of this production. Students from the fall semester will complete production and engage in intensive post-production in order to have a high-quality finished project to submit to film festivals by the end of the semester. Utilizing a workshop structure, class time will be focused on discussion and analysis of the challenges faced by individual productions as well as providing the support, guidance, and critique necessary for a successfully completed project. Students will continue in the same production role (producer, director, cinematographer, sound designer, editor) from the fall semester, learning new skills for their role in the post-production phase. Students will be assigned individual exercises specific to their production role in addition to the collaborative work of the project’s production. It is expected that all production group members will continue into the spring as well.

**Prerequisite:** COMM 448

COMM 450A: Search Engine Marketing
3 Credits/Maximum of 3

This project-oriented course provides students with the knowledge and skills necessary to conduct a sponsored research and keyword advertising-based marketing campaign. This course offers the students an opportunity to gain knowledge and hands on experience on sponsored search and keyword advertising. In this course, students will gain knowledge and skills to advertise products and services using keyword advertising. Strategies for developing successful advertising campaigns will be discussed, including targeting potential customers based on the geo-location, applying A/B testing to identify the feasible advertising set-up, and organizing keywords with various products and services for effective management. In addition, various tools will be introduced to students for facilitating efficient and effective performance. By participating in a firm-based project, the students will acquire the
experience of business consulting for advertising using current web-based techniques.

**Prerequisite:** COMM 310; IST 310; Fifth semester standing  
Cross-listed with: IST 450A

COMM 450B: Digital Advertising  
3 Credits

This course will explore the digital advertising "ecosystem," identify key players and trends, and review programmatic media buying. COMM (IST) 450B Digital Advertising (3) Beyond keyword advertising, digital has transformed many industry activities related to buying and delivering advertising. Information technology and big data have revolutionized the way media and content providers interact and negotiate with advertisers, agencies and third parties. This course will explore the digital advertising and media "ecosystem," identify key players and trends, lay out the basics of digital advertising campaign management, and review performance analysis and evaluation. Students passing this class will be able to take the Interactive Advertising Bureau Digital Media Sales certification exam. Students can opt to take the exam any point in time, while it’s not required.

**Prerequisite:** COMM 310 or IST 310  
Cross-listed with: IST 450B

COMM 451: Topics in American Film  
3 Credits/Maximum of 6

Critical and historical studies of American films. Analysis of directing, cinematography, editing, screenwriting, and acting.

**Prerequisite:** COMM 250  
Cross-listed with: AMST 451

COMM 452: Topics in International Cinema  
3 Credits/Maximum of 6

Critical and historical studies of topics in non-American film. Analysis of theory, direction, cinematography, editing, and screenwriting.

**Prerequisite:** COMM 250

COMM 453: Narrative Theory: Film and Literature  
3 Credits

Comparative study of the aesthetics and techniques of film and literature; close analyses of masters of each art form.

**Prerequisite:** COMM 150 or 3 credits in literature  
Cross-listed with: CMLIT 453

Bachelor of Arts: Humanities  
International Cultures (IL)

COMM 454: Documentary in Film and Television  
3 Credits/Maximum of 6

Study of representative films from various documentary movements, examining form, technique, trends, and audience objectives.

**Prerequisite:** fourth-semester standing

COMM 455: Advanced Film Theory and Criticism  
3 Credits/Maximum of 6

Close examination of classic and contemporary film theory and critical perspectives.

**Prerequisite:** COMM 250

COMM 456: Media Criticism and Theory  
3 Credits

Critical and theoretical approaches to the analysis of media and communication. COMM 456 Media Criticism and Theory (3) To what extent does media (television, movies, print, radio, Internet, etc.) shape our awareness of not only the world around us but also ourselves as thinking human beings? Is it all a matter of perception and relative exposure to these media? How do we approach everyday interfaces with the immense number of media messages in both public and private spaces? Where do our opinions of the validity of both the informational and the aesthetic standards of media messages come from? In this class we attempt to come to terms with the rise and apparent predominance of media as a dominant cultural institution.

**Prerequisite:** COMM 371

COMM 457: Media Audiences and Contexts  
3 Credits

Survey of the ways media attempt to influence audience reception and how audiences hold sway over media content. COMM 457 Media Audiences and Contexts (3) The course begins with an examination of how the mass audience is conceived as a statistical entity by analyzing quantitative methods such as the Nielsen ratings. Much of the course is then spent interrogating how this statistical information is used and by whom. If the audience is created as a commodity and is sold to advertisers, what ethical guidelines are in place? How do audience profiles influence the programs we see and consume? As media become more and more fragmented, how does the problem of audience as a commodity get resolved? Students utilize a case-study approach to explore a variety of audience problems and present their findings in papers, demonstrations, and exhibitions.

**Prerequisite:** COMM 100 or COMM 251

COMM 458: Media Law and Ethics  
3 Credits

The study and practice of key issues in media law and ethics, including libel law, conflict of interest, truth in advertising. COMM 458 Media Law and Ethics (3) An examination of the role of the mass media in American society in regard to the rights, responsibilities, and duties of practicing media professionals. The semester is almost evenly divided between law and ethics topics. Students examine current laws in mass media with the goal of preparing them to be lawful and responsible members of the profession. Law topics include defamation, privacy, intellectual property and protection of anonymous sources. Students also get an introduction to ethical theories and their practical applications in media industries. Topics include journalistic responsibilities, objectivity, conflicts of interest, invasion of privacy, and the ethics of persuasion and entertainment.
Prerequisite: COMM 100 or COMM 251

COMM 459: Cultural Effects of Interactive and Online Media
3 Credits

Study of the global social impact and rhetorical limitations of converging media, emphasizing cross-cultural media influences. COMM 459 Cultural Effects of Interactive and Online Media (3) An examination of the various effects of digital media on society and culture. The nature of digital media affects content and production, the way people use media, and social interaction. Topics include convergence, the information society, the global village, and the various changes in the ways media producers do their work. Various aspects of changes including philosophical, economical, and political are examined with the goal of helping students understand how to prepare for future changes in media industries.

Prerequisite: COMMS251

COMM 460: Reporting Methods
3 Credits

Techniques in reporting news and trends at the local, regional, and county levels. Emphasis on both deadline and interpretive reporting.

Prerequisite: COMM 260W

Writing Across the Curriculum

COMM 461: Magazine Writing
3 Credits/Maximum of 6

Students will learn about idea conception, writing, and editing of magazine stories. COMM 461 Magazine Writing (3 per semester/maximum of 6) Students will learn about idea conception, writing, and editing of magazine stories. They will walk through the idea process, including how to pitch their ideas to editors. They will learn about research and reporting for stories, and then begin the process of organizing and writing their material. They will write stories and then work with editors to rewrite and improve the story for publication.

Prerequisite: COMM 260W

COMM 462: Feature Writing
3 Credits

Reporting and writing the human interest article for newspapers and magazines. COMM 462 Feature Writing (3) COMM 462 teaches the fundamentals of reporting and writing feature stories for newspapers and magazines. Students learn reporting and writing techniques for various types of feature stories. The course emphasizes the development of sound journalistic judgment and proper ethical standards. Students write various types of features stories.

Prerequisite: COMM 260W

COMM 463: Newspaper Design
3 Credits

This course will cover newspaper design. Students will learn to solve design problems, edit photos, and work with industry software. COMM 463 Newspaper Design (3) This upper-division course will cover contemporary design theory, grid systems, typography, color and photography as they pertain to newspapers. Students will develop skills necessary to solve design problems associated with the editing process. Students will also learn to use photo editing and page layout software.

Prerequisite: COMM 160, COMM 260, COMM 467 or permission of program

COMM 464W: Editorial, Opinion and Commentary Writing
3 Credits

Introduces techniques of editorial, opinion and commentary writing. COMM 464W Editorial, Opinion and Commentary Writing teaches the fundamentals of writing editorial, opinion and commentary articles. Students learn the techniques of gathering information and writing various types of opinion articles. The course emphasizes the development of sound journalistic judgment and proper ethical standards. Students write various types of opinion articles.

Prerequisite: COMM 260W

Writing Across the Curriculum

COMM 465: Television Reporting
3 Credits

Television news reporting and production. COMM 465 Television Reporting (3) COMM 465 provides an introduction to television news reporting and production. Students learn the techniques of reporting and writing news for television. They also learn the audio and video techniques required to produce television news stories. The course emphasizes the development of sound news judgment and proper ethical standards. Students complete actual news assignments.

Prerequisite: COMM 360

COMM 465H: Broadcast Journalism II
3 Credits

Television news reporting and production.

Honors

COMM 466: Public Affairs Broadcasting
3 Credits

Students research, write, produce and direct public affairs shows and in-depth reports. COMM 466 Public Affairs Broadcasting (3) This is an advanced field production and reporting course focusing on the exploration of timely public affairs issues on the local, state and national level. Students learn to research a topic, conduct effective television interviews in the field, and produce in-depth reports with emphasis on solid broadcast writing, visual storytelling, editing, fairness, balance and accuracy.

Prerequisite: COMM 465 or COMM 283W

COMM 467: News Editing and Evaluation
3 Credits

Concepts and procedures involved in processing news for various news media, but with emphasis on print media editing. COMM 467 News Editing and Evaluation (3) The goal of the course is to qualify the student to be a proficient newspaper copy editor. These skills can be easily transferred to editing assignments on a Web site, in magazines and
other publications, in broadcasting, and in public relations. Even if the student does not intend to become a copy editor, the course should help him or her do a better job of writing. The course emphasizes editing for accuracy, clarity, precision in language, and fairness of content. Students will learn about evaluating the relative importance of news and writing headlines, captions and other display elements. The course familiarizes the student with editing photographs and graphics and designing a newspaper page. Skill in editing is particularly important to the student majoring in print journalism. It is useful to anyone who regularly works with words. The student is evaluated through written work (editing copy, writing headlines and captions) and through quizzes, examinations, or other methods the instructor chooses to assess a familiarity with the theory and principles of the course. Because students need an opportunity to practice their skills under supervision, the course must be taught in a laboratory setting in which each student has access to a computer connected to the Internet. COMM 260 is a prerequisite. COMM 467 builds on the student’s understanding of reporting and news writing techniques by teaching rigor in the use of language.

**Prerequisite:** COMM 260W

COMM 468: Graphic Applications in Print Communications

3 Credits

Issues, concepts, and practice identified with contemporary design strategies for print journalism, advertising, and public relations.

**Prerequisite:** COMM 260W or COMM 320

COMM 469: Photography for the Mass Media

3 Credits

**Prerequisite:** COMM 269

Development of an informed and critical approach to photocommunication; individual and team projects, seminars, and critiques.

**Prerequisite:** COMM 260W

COMM 470A: Convergent Media News Service: Newspaper Production

3 Credits

Practicum emphasizing newsgathering and reporting for newspaper and for additional media formats.

**Prerequisite:** COMM 260W

COMM 470B: Convergent Media News Service: TV

3 Credits

Practicum emphasizing television news package production for periodic campus news program and for additional media formats. The digital revolution and cross media ownership has challenged all areas of communications, especially the electronic and print news media. Post media outlets now have an online presence along with their traditional operations. Increasingly news outlets are producing news packages for more than one media outlet, which can include online production of breaking news reports presented with text, images, movies and/or sound bites. Currently, students preparing for news careers must have traditional news skills across media along with multimedia computer-based skills to develop versatility in reporting and production. This practicum in streaming radio and online news provides opportunities to produce pieces for streaming radio and online publications and also to reformat these pieces for other media outlets such as the newspaper or television. It will also give students the opportunity to produce news pieces suitable for a crossmedia portfolio.

**Prerequisite:** COMM 260W and COMM 242; COMM 282 or permission of the program

COMM 470C: Convergent Media News Service: Radio and Online Publications

3 Credits

Practicum emphasizing streaming radio news package production or production of news pieces for online publications and for additional media formats. The digital revolution and cross media ownership has challenged all areas of communications, especially the electronic and print news media. Most media outlets now have an online presence along with their traditional operations. Increasingly news outlets are producing news packages for more than one media outlet. It will also give students the opportunity to produce pieces suitable for a crossmedia portfolio.

**Prerequisite:** COMM 260W, and COMM 270; COMM 374 or permission of program

COMM 471: Public Relations Media and Methods

3 Credits

Analyzing media and audiences for public relations purposes; planning, designing, and writing public relations communications; press relations and publicity methods. COMM 471 Public Relations Media and Methods (3) COMM 471 introduces students to the methods used in public relations to generate media coverage for organizations and individuals. The public relations practitioner must understand the goals of the client organization and its publics to establish effective and ethical communication between them. This course focuses on writing and is designed to assist students in developing and improving professional writing skills for public relations practice, in many forms and for a wide variety of media. Students will learn the importance of different writing approaches required for specific publics and news media organizations. In this course, students learn to: (1) locate, read, and evaluate research materials; (2) develop clear, concise program objectives based on the organization’s or client’s goals and the results of their research; (3) determine materials that need to be developed and written to achieve the program objectives; (4) develop newsworthy story ideas; (5) write clear, concise copy that is accurate and logically organized; (6) write in a variety of formats commonly used in public relations practice, including: pitch letters, news releases, position papers, backgrounders, public service announcements; and (7) design media kits.

**Prerequisite:** COMM 260W and COMM 370
COMM 471H: Public Relations Media and Methods

3 Credits

Analyzing media and audiences for public relations purposes; planning, designing, and writing public relations communications; press relations and publicity methods.

Honors

COMM 472: Public Relations Event Planning

3 Credits

Effective planning, organization, implementation and evaluation of events planning. COMM 472 Public Relations Events Planning (3) This course links the public relations theories and practices with skills and techniques required for effective events planning. Students will build on their understanding of public relations introduced in COMM 370 by working on projects that are designed to help them to develop skills in conceptualizing public relations events, designing events, selecting sites, analyzing audiences, budgeting, and promoting/marketing. Students will gain experience in event conceptualization and implementation through in-class exercises and discussions, and public events projects. These assignments will provide students the opportunity to develop portfolio materials.

Prerequisite: COMM 370

COMM 473: Public Relations Campaigns

3 Credits

Case studies and problems in publicity and public relations in industry, government, and institutions. COMM 473 Public Relations Problems (3) This capstone course in the public relations major is designed to provide the student with the opportunity to develop a comprehensive public relations/marketing communications campaign plan based on the four-step process of public relations programming. Those steps include formative research, objectives, programming, and evaluative research. Initially, students will critically analyze award-winning public relations problems, cases, and programs that will provide a foundation for understanding the public relations planning process. Students will be introduced to public relations and communications theories that provide the foundation for excellence in program development. The public relations campaign plan will be developed from the analysis of primary and secondary research sources. The campaign plan will begin with a situation analysis that includes the client’s historical, financial, and competitive position in the marketplace. Previous public relations, advertising, and marketing communications programs will be reviewed and evaluated. Additional secondary research will include a content analysis of the client’s news media coverage as well as an analysis of the psychographic and demographic profiles of previously targeted publics. Account teams will design and conduct surveys and focus groups as part of the formative research required in setting the program objectives, strategies, and tactics. The public relations plan will require the development of a media plan, media objectives, production timetable, and budget for implementing the program objectives, strategies, and tactics. Students will apply their critical thinking skills and creative abilities to design and produce communication executions that will communicate the program message to the targeted publics. Those creative abilities include a working knowledge of writing, desktop publishing, photography, and graphic communication. The final phase of the public relations/marketing communications plan will include the design of evaluative research to measure the effectiveness of the program objectives. Those research methods will include content analysis, survey research, and focus groups. Students will work in account teams where each team will be responsible for developing a public relations counseling firm, where team members will produce a firm manual outlining the firm’s mission statement, organizational policies, organizational chart, records of all meetings with clients, records of all firm meetings, time sheets for each firm member, a weekly summary of firm activities, project budget reports, bi-weekly evaluations of firm members, and a client presentation plan. The final public relations plan will be presented to the client for evaluation and critique. The final goal of the course is to provide students with the technical and managerial knowledge and experience required for effective public relations program design and implementation.

Prerequisite: COMM 370, COMM 420 or COMM 304, and COMM 471

COMM 474: Depth Reporting

3 Credits

Exploration of strategies for developing indepth newspaper or magazine articles, with an emphasis on gathering information and long-form writing. COMM 474 Depth Reporting (3) This is an upper-level undergraduate course designed to prepare students for writing in-depth newspaper or magazine articles, which extends beyond the basics of writing and reporting techniques emphasized in courses such as News Writing and Reporting, Reporting Methods, and the Feature Article. Depth stories are comprehensive accounts that go well beyond a basic news story or feature. An emphasis on longer, more comprehensive stories that require extensive research and interviews gives students an opportunity to be more than technicians following a rigid set of journalistic guidelines or principles. Depth stories require journalists to spend days, weeks or months exploring and investigating a topic and writing a lengthy story that must be cemented with effective transitions.

Prerequisite: COMM 260W

COMM 475: Issues for Newsroom Managers

3 Credits

Newspaper and television management, the state of the industry and topics that prospective employees should know about. COMM 475 Issues for Newsroom Managers (3) This is an upper level course for students with an interest in newspaper or/and television management. Issues that managers deal with and management approaches will be covered, emphasizing practical experiences. The basic text may be a packet based on professional experiences of instructor. There will be two papers of roughly 1,500 words. There will be one oral presentation, accompanied by a short summary outlining the main points. The class will consider major issues affecting the industry - the economy, the effort to attract younger audiences and how the look of a product forms the basis of what the audience thinks about the brand and whether it appeals to them. The class will consider how the Internet can be an asset to TV stations and newspapers, if used effectively. Students will evaluate some TV and newspaper Internet sites. The role of advertising and community relations for newspapers and television stations will be discussed. Newspaper opinion pages and public (or interactive journalism) will be covered. The importance of a good local report, and evaluating how effective local coverage is, will focus on state newspapers and television stations. The role of The Associated Press and other news agencies and their approach to coverage and how they relate to local media will be covered. Leadership, management and decision-making will be part of the course. The traits of effective leaders and managers will be discussed. There will
Techniques of effective media relations used in a sports information office. COMM 478 Sports Information (3) This is an upper-level course designed to prepare students for a specialized form of modern media relations, sports information. Sports information professionals combine skills of both journalists and public relations specialists, so the advanced techniques go beyond those taught in introductory classes such as News Writing and Public Relations Methods. As the popularity of high-school, college, and professional sports has exploded, sports information professionals have increasing demands put on them. More and more journalists, working for a variety of publications and broadcasts, cover sports today. Moreover, the growing complexities of modern sports - from the impact of drugs to the enormous salaries of many athletes - means that sports information professionals have to provide more than simple information on athletes, coaches and sporting contests. Through a variety of assignments, the course will provide students with the experience that will prepare them for the demands of being sports information professionals. And it will ground them in the ethical principles that all media relations specialists must follow.

Prerequisite: COMM 260W , COMM 360

COMM 478: Sports Information

3 Credits

Techniques of effective media relations used in a sports information office. COMM 478 Sports Information (3) This is an upper-level course designed to prepare students for a specialized form of modern media relations, sports information. Sports information professionals combine skills of both journalists and public relations specialists, so the advanced techniques go beyond those taught in introductory classes such as News Writing and Public Relations Methods. As the popularity of high-school, college, and professional sports has exploded, sports information professionals have increasing demands put on them. More and more journalists, working for a variety of publications and broadcasts, cover sports today. Moreover, the growing complexities of modern sports - from the impact of drugs to the enormous salaries of many athletes - means that sports information professionals have to provide more than simple information on athletes, coaches and sporting contests. Through a variety of assignments, the course will provide students with the experience that will prepare them for the demands of being sports information professionals. And it will ground them in the ethical principles that all media relations specialists must follow.

Prerequisite: COMM 260W , COMM 360 ; or permission of the program
COMM 480: Television News

6 Credits

Produce a weekly television newscast. COMM 480 Television News (6)
COMM 480: Television News will help prepare students for a career in
television newscast content, presentation and production with a strong
multimedia component. Students will gain experience in all aspects of
producing a newscast. The class will meet Mondays and Fridays, but
they will be expected to produce content on a daily basis, whenever and
wherever stories in Centre County happen. After a few weeks of training,
we will produce the Centre County Report each week with elements BOTH
ONAIR and ONLINE. This is NOT a newscast focusing only on Penn State
activities. Students must be prepared to produce a newscast that informs
the larger audience of Central Pennsylvania. COMM 480 needs the best
students to produce the Centre County Report. Students will primarily
serve as the news-editorial side of the newscast (anchors, reporters,
sports, producers and some in-field photojournalists and studio camera
operation) or as the technical team (director, technical director, audio,
graphics, studio camera operator AND field production/photojournalists).
By the end of this course, students will have the skill set to: 1. Pursue a
career in television news 2. rite solid television news scripts 3. Enhance
your storytelling ability 4. Enhance your ability to produce and technically
support a newscast 5. Understand the importance of multimedia 6.
Produce an effective resume tape

Prerequisite: COMM 360, COMM 465, permission of program

COMM 481: Advanced Multimedia Production

3 Credits

Advanced work in multimedia production using web authoring,
video editing, audio editing, image editing and animation software.
COMM 481 Advanced Multimedia Production (3) This course builds
on the foundations of multimedia production developed in COMM 270
giving students the opportunities to create multimedia website projects.
Students will apply advanced multimedia concepts and techniques to
website production and demonstrate versatility in multimedia software.
Working individually and in teams, students will develop projects for
clients using multimedia software, including web authoring, video editing,
audio editing, image editing and animation software. These projects
will be uploaded to the World Wide Web, and will serve as portfolio
materials for the students. This course emphasizes skills development
in multimedia and visual media in support of program objective to help
students develop cross-media skills and versatility in media.

Prerequisite: COMM 270 or COMM 260W plus one of the following:
COMM 269, COMM 360, COMM 460, COMM 462 or permission of
program

COMM 483: Wireless Communications Industry

3 Credits

A broad examination of the wireless phone industry including its
development, current structure and future. COMM 483 Wireless
Communications Industry (3) Since the 1990s, the wireless industry
has transformed "how" people communicate. The ability to offer mobile
communication services to consumers allowed the telecommunications
industry to rapidly expand and create new products and services.
Throughout this period of rapid growth, new players emerged from
relative obscurity while incumbent telecommunication providers weighed
the benefits drawbacks of deploying this new technology. Although
wireless devices have become pervasive throughout the United States,
few people appreciate the technology and partnerships that are required
to offer wireless services for millions of customers. This course will
address a variety of wireless topics to allow students to develop a greater
understanding and appreciation of the wireless industry. In terms of
course design, there are three distinct elements: (1) The early days of
the wireless and the key figures and events that shaped an industry, (2) A
current state view of the tier 1 carriers, device manufacturers and product
offerings, (3) The emerging trends in the wireless industry and the
potential impact on consumer products and services. By the end of this
course, the objective is for students to view the wireless industry quite
differently. Students will understand the relationship between wireless
spectrum, carrier, device manufacturer and products. The industry
landscape will be clearer to students and they will be well positioned to
pursue a career in wireless.

Prerequisite: COMM 180, COMM 380 or permission of the program

COMM 484: Emerging Telecommunications Technologies

3 Credits

Overview of technology of electronic media and related societal
issues. COMM 484 Emerging Telecommunications Technologies (3)
COMM 484 introduces advanced topics related to the technologies in
telecommunications and information processing. The course investigates
old, new and prospective technologies primarily through analysis of
incumbent or emerging companies bringing products and services
to market. Students will examine materials not customarily used by
undergraduates including stock prospectuses, company annual reports,
and Internet searches. The class will consider recent strategic alliances,
mergers and acquisitions (whether consummated or not) in the context
of whether and how technologies drove the deal.

Prerequisite: COMM 180, COMM 280, or permission of the program

COMM 484A: Wireless Devices and Global Markets

3 Credits

Examination of the global market for smartphones, tablets, and other
wireless devices. COMM 484A Wireless Devices and Global Markets (3)
Wireless devices and applications have become pervasive throughout
the world. Global wireless carriers continue to evolve their networks
to provide increased access and data speeds for their subscribers. To
leverage the increased network capabilities, device manufacturers have
responded by introducing smartphone wireless devices that are feature-
rich, complex and dramatically influence the way in which subscribers
access and download wireless applications. This course will specifically
focus on the major wireless device manufacturers in the world. In
addition, students will understand the competitive wireless landscape
along with the challenges of sustaining long-term success in the global
marketplace. Students will also develop an appreciation for the intense
competition that exists in the wireless device market as well as how
swiftly market conditions can impact the long-term viability of a device
manufacturer. By the end of this course, the objective is for students to
appreciate the complexity of the global wireless device industry. Students
will understand the importance of device operating systems, carrier
relationships and global markets. The wireless device industry will be
clearer to students and they will be well positioned to pursue a career in
wireless.
Prerequisite: COMM 180, COMM 280, COMM 483; or permission of program

COMM 484H: Emerging Telecommunications Technologies
3 Credits

Overview of technology of electronic media and related societal issues. COMM 484H Emerging Telecommunications Technologies (3) COMM 484H introduces advanced topics related to the technologies in telecommunications and information processing. The course investigates old, new and prospective technologies primarily through analysis of incumbent or emerging companies bringing products and services to market. Students will examine materials not customarily used by undergraduates including stock prospectuses, company annual reports, and Internet searches. The class will consider recent strategic alliances, mergers and acquisitions (whether consummated or not) in the context of whether and how technologies drove the deal.

Prerequisite: COMM 180, COMM 280; or permission of program Honors

COMM 485: Analysis of Broadcast-Cable Policy
3 Credits

Analysis of current policy issues in Broadcast/Cable. Standards and methods for evaluating telecomm policy processes and outcomes.

Prerequisite: COMM 404 or COMM 483

COMM 486: Telecommunications Ethics
3 Credits

Drawing on normative theory and political philosophy, this course explores problems in ethics and social responsibility in telecommunications. COMM 486 Telecommunications Ethics (3) In this course the instructor and students work together to consider and analyze ethical issues in contemporary telecommunications practice. Using the tools of ethical and political philosophy, students will discuss current cases in often long-standing problem areas such as truth, privacy and content control. The intention is that all involved will develop a greater sensitivity to the ethical dilemmas confronting telecommunication professionals and a greater ability to evaluate media performance. The course also strives to help students gain a deeper insight into their own ethical principles and become more keenly aware of the foundations and professional implications of those principles. In the first few weeks of the semester, students will review the major ethical theories and theorists. They will discuss the nature and types of normative analysis, including the major systems of ethical thought, the process of ethical reasoning and the meta-ethical problems of definition and justification. They will also explore the foundations of political philosophy as they relate to the role of telecommunications industries in democratic society. Related topics will include the nature and history of professional norms and values, the development of ethical codes within specific industries and existing organizational processes for the applications of those standards (the clearance process). In the remainder of the semester, students will discuss case studies involving various ethical dilemmas in professional practice across all segments of the relevant industries including, broadcasting, cable, telephony and the Internet. Special attention will be given to contemporary problems in areas such as social networking and Internet search companies. Topics will include: content control in entertainment and advertising, including issues involving race, gender and age; freedom of expression; privacy; intellectual property; international and cross-cultural issues; truth and anonymity; system access and power; questions of civic engagement; image ethics in a digital age; and broader philosophical questions about the inherent social nature of telecommunications technology. There are, of course, no 'correct' answers in these cases; stress is placed on the process of analysis. Students will be evaluated on their ability to articulate their assumptions and formulate coherent ethical rationales based on those assumptions. COMM 180 is a prerequisite for this course.

Prerequisite: COMM 180, COMM 280, COMM 380; or permission of the program

Writing Across the Curriculum

COMM 487: Advanced Telecommunications Management and Leadership
3 Credits

Strategic management, leadership and ethics issues including marketing, financing, entrepreneurship, and innovation. COMM 487 Advanced Telecommunications Management and Leadership (3) This senior-level capstone course discusses a range of strategic management, leadership and ethics issues in telecommunications and media firms. Learning objectives include creative problem-solving, critical thinking and writing, basic financial literacy and management considerations in ethics, globalization, diversity and free speech. Specific areas of emphasis include marketing, programming, customer service, technology adoption, finance and strategic planning. Broadly, the aim is the honing of critical and creative problem solving skills and the enhancement of collaboration and communication skills. The course also stresses the fiduciary and social responsibilities that adhere to the telecommunication manager’s role.

Prerequisite: COMM 180, COMM 280, COMM 380; or permission of the program

Writing Across the Curriculum

COMM 488: Writers’ Seminar
3 Credits/Maximum of 99

Workshop designed for advanced students interested in professional writing, involving extensive mutual and self-criticism. COMM 488 COMM 488 Writer’s Seminar (3) This course is designed for advanced students interested in professional writing in the theatre, screen, and media arts. The class work involves submission and extensive revision of a variety of written projects. Revisions are based upon direct feedback from the instructor, as well as mutual critiques from classmates. Students will also learn the technique of self-criticism of their writing and in doing so develop a sense of their own writing style and subject matter preferences.

Prerequisite: COMM 230W or COMM 260W

COMM 489: Advanced Telecommunications Topics
3 Credits

Exploration of advanced topics related to the telecommunications industries. COMM 489 Advanced Telecommunications Topics (3) This capstone course provides students with an in-depth exploration of current issues facing the telecommunications industries. Students will have the opportunity to synthesize and apply the concepts and skills they have acquired in their previous telecommunications courses. Topics vary by instructor and semester and may include: intellectual property, privacy and surveillance, technology applications, children and media,
social impact of telecommunications, impact of telecommunications on democracy, environmental impact of telecommunications, and the relationship of telecommunications to economic development. Students must have senior standing and completed all required core courses in the major before taking this course.

**Prerequisite:** COMM 180, COMM 280, COMM 380; or permission of the program

**Writing Across the Curriculum**

COMM 490: Issues in Electronic Commerce

3 Credits

Analysis of issues related to electronic commerce over the Internet. COMM 490 Issues in Electronic Commerce: Policy and Implementation (3) This senior level course teaches students about the unique business, policy, regulatory and legal aspects of commerce on the Internet, as well as the social implications of the global implementation of such commerce for areas such as privacy and consumer protection. Learning objectives include creative problem-solving, critical thinking and writing, basic financial literacy and management considerations in ethics, globalization, diversity and free speech.

**Prerequisite:** COMM 180, COMM 380, or permission of program

COMM 490A: Convergent Media Seminar

3 Credits

This seminar examines media convergence issues, trends, and effects on society through discussions, presentations, and creation of a capstone project.

**Prerequisite:** seventh- or eighth-semester standing and 3 credits of COMM 470A, COMM 470B, or COMM 470C

COMM 491: International Telecommunications

3 Credits

Impact of globalization, regulation, and new technologies on telecommunications in different countries and regions. COMM 491 International Telecommunications (3) This course will provide a forum for students to investigate and debate ongoing or anticipated conflicts in international telecommunications. Students will learn how international bodies such as the ITU, WTO, WIPO, and United Nations influence telecommunications. The course also will examine how various nations have organized and reorganized the telecommunications sector. In this portion, we will consider such developments as privatization, liberation, deregulation and globalization. Students will explore how technology, culture, and law interact within a nation or region to shape the development and structure of its telecommunications industries. Students will study how media and communications firms and regulators in a given nation respond to technological change and how a nation’s specific geographic, cultural, and political environment shapes its response. Students will also examine how the nation’s regulatory scheme and the structure of its telecommunications industries impact freedom of expression, political discourse, and commerce.

**Prerequisite:** COMM 180

COMM 492: Internet Law and Policy

3 Credits

Development in the law, policy, and business of Internet-mediated communications and commerce; emphasis on impact on existing legal, regulatory, and economic models. COMM 492 Internet Law and Policy (3) This course will provide a forum for students to investigate and debate ongoing or anticipated conflicts in Internet-mediated telecommunications, information processing and commerce. The resulting confrontations may stem from technological innovation, real or perceived changes in the marketplace, or the imperatives of prevailing regulatory, political or economic philosophies. Conflict resolution often results from persuasive advocacy, coalition building, and accommodation of outsiders with new perspectives or entrepreneurial visions, rather than applying legal precedent or treaty interpretations. Internet mediation has the potential to change how we communicate, educate, inform, entertain, and transact business. Technological and marketplace convergence means that Internet mediation will have a profound impact on many legal, regulatory and economic constructs, i.e., the preexisting templates we use to describe and understand the communications process and impact on individuals and society. The course also will examine the growing body of cases that have addressed aspects of Internet-mediation in each of the following general categories: *Speech-commercial and political speech, obscenity, forums analysis* *Legal and Regulatory Consequences of Convergence—the juxtaposition of telecommunications and information processing technologies, markets and regulatory regimes* *Governance and regulation of the Internet—whether the need exists for government intervention on such matters as numbering and domain registration* *Intellectual Property Rights—the impact of Internet-mediation on copyright, trademark and patent laws* *Electronic Commerce—the law and policy of Internet-mediated transactions, privacy and encryption concerns* *Equity, Competition Policy and Consumer Protection Concerns—what, if anything, should governments do to remedy market failures*
Prerequisite: COMM 180, COMM 380, or permission of the program

COMM 494: Research Project Courses
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.

COMM 494H: Research Project Courses
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.

Honors
COMM 495: Internship
1-3 Credits/Maximum of 6
Supervised practicum with newspapers, broadcasting stations, public relations, and advertising agencies.

Prerequisite: continuing student majors in the College of Communications; departmental approval

Full-Time Equivalent Course
COMM 495A: Internship
1-6 Credits/Maximum of 6
Supervised practicum with newspapers, broadcasting stations, public relations, and advertising agencies.

Prerequisite: continuing student majors in the College of Communications; departmental approval

COMM 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

COMM 496H: Independent Studies
1-6 Credits/Maximum of 6
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses. These are generally used as thesis credits for undergraduate students in the Schreyer Honors College with the area of honors in one of the majors in the College of Communications. The honors thesis may take the form of a scholarly project involving the examination of some aspect of the field of communications, or the thesis may involve the production of a professional project.

Honors
COMM 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

COMM 497D: **SPECIAL TOPICS**
3 Credits

COMM 498: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Community Environment and Development (CED)

CED 152: Community Development Concepts and Practice
3 Credits

Concepts and practice of community development. CED 152 Community Development Concepts and Practice (3) Community development is broadly recognized as a process by which places (communities, small towns, neighborhoods) and the people in them, improve their economic and/or social well-being. Health of the environment and sustainable use of natural resources ensure the long-term well-being of human populations and so are central to sustainable community development. The practice of community development requires the ability to identify and understand the interrelationships of economy, society and environment locally, nationally and globally. Community development hinges on the capacity of local communities and residents to influence and determine their own futures. Students will gain an introduction to the concepts and models of community development and will become familiar with the roles of community development practitioners in developed and developing country settings. They will be able to identify the consequences of development strategies for social, economic and environmental well-being, focusing on the interrelationships of these aspects of development. Students will be introduced to strategies to identify capacity and resources available in communities and those that need to be enhanced. Models of decision-making will be introduced and students will work in teams in class with a focus on successful team functioning, identifying commonalities and shared interests to foster decision-making, and being able to extend that experience to working with groups in a community. Students will gain knowledge and understanding of the relevant concepts, processes and practice through readings and in-class lecture and discussion. Case studies of specific community development issues will give students the opportunity to apply the concepts and skills they learn in class, and to work in teams where students take on perspectives of different stakeholders and attempt to reach a resolution. Examples will be used throughout the course to portray important concepts. This knowledge and associated skills can be used to form the basis for further training and a career in community development or to provide a basic understanding for those interested in volunteering in their own community.

CED 155: Science, Technology and Public Policy
3 Credits

This course will survey the main issues that relate science and technology to public policy.

Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)
CED 160: Introduction into Ethics and Issues in Agriculture

3 Credits

This course covers ethics and the social contract to include substantive ethical theories focusing on rights-based ethical theories (libertarianism and egalitarian theories) and consequentialist theories (utilitarianism and axiology). These theories assist in conceptually defining levels of participation and consent in democracy. This course explores the circumstances in which rational persons and political groups historically agree to be bound in collective decision making. The primary focus by examines four separate ethical themes illustrating why and how individuals accept a variety of terms. The course highlights philosophical/ethical decisions related to agriculture issues during the history of the United States. Issues range from non-interference rights to opportunity rights dealing with food, fiber, natural resource and environmental issues. Procedural theory emphasizes the formation of legitimate and defensible rules rather than ethics. Policy choices are assumed to be legitimate and defensible as long as individuals follow the rules/procedures for decision making. The content of this course meshes the procedural and the substance theories found throughout historical debates in agriculture communities. The course identifies traditional agrarian problem identification, policy formation, policy adoption and funding, program implementation and program evaluation. How ethics figures historically in agriculture policy processes is applied in a variety of case studies and debates as well as selected readings. The course includes an examination of the ethics of when, how and where the policy process historically influenced agriculture public policies. The course emphasizes the need to critically think about various points of view expressed by various conflicting authors.

Cross-listed with: AG 160
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Soc Resp and Ethic Reason

CED 201: Introductory Environmental and Resource Economics

3 Credits

Apply principles of economics to analyze environmental protection policies and natural resource use decision. Examine contemporary policy issues. E RRE (AG EC) 201 Introductory Environmental and Resource Economics (3) An introduction to the concepts, theories, and applied methods used in the economic analysis of environment and natural resource issues. The course covers topics such as the principles of market efficiency, why the market often fails where environmental and natural resource issues are concerned, and environmental policy prescriptions and tools designed to correct this market failure. These principles and tools are explored with respect to air and water pollution, management and use of renewable natural resources such as forests and fisheries, and the unique problems of managing nonrenewable resources such as minerals and oil. The course aims to give students an understanding of how traditional economic principles can be used to suggest and evaluate possible responses to the environmental and resource problems facing society.

Prerequisite: AG BM101 or ECON 102
Cross-Listed

CED 230: Development Issues in the Global Context

3 Credits

Exploration of issues related to economic development in national and international contexts, where key interrelationships between and among developed and developing regions are made explicit. CED 230 Development Issues in the Global Context (3) Local communities - in both developed and developing countries - are influenced by strong global forces that affect the well-being of their residents. Community economic development is one approach to enhance improve economic outcomes. This course will use an issue-oriented approach to help students understand economic development patterns and resultant issues in the U.S. as compared to what is observed and what is of critical concern in other places. Topics will include the concept of globalization, economic restructuring trends, investment in human capital and the ability to retain this often mobile form of capital, migration and change in patterns of migration, and environmental effects of development in different contexts. Each year that the course is taught, there will be a focus on patterns of economic development by region in the U.S. but with comparisons to three other selected countries – one in Latin America, one in Asia and one in Africa. Students will be encouraged to compare and contrast economic and related social issues that arise in these contexts, with particular emphasis given to recent economic trends and events and to the rate of change compared to the past.

Prerequisite: ECON 102, ECON 104, R SOC011 or SOC 001

CED 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

CED 309: Land Use Dynamics

3 Credits

Theory of land use and land use decision-making. CED 309 Land Use Dynamics (3) Land is a key natural resource for society. Decisions related to land use are understood through alternative theories that serve to explain why prevailing land use patterns occur and change. This course examines the theoretical foundations of land use and policy practices to better understand how land use may change in the future in response to changes in land prices, population growth, human preferences and especially preferences for natural amenities, and the quality of the natural environment, among other factors. Given current issues including the twin problems of urban sprawl and land abandonment, the course will also examine the role of land use policy and specific programs to guide and provide greater public control over land use decisions. Students will gain an appreciation of the importance of land as a resource, and the potential for irreversibility in many land use decisions. Knowledge will be gained of the relevant theories, trends and policies through readings and in-class lecture and discussion.

Prerequisite: ECON 102 or equivalent; GEOG 160

CED 375: Community, Local Knowledge, and Democracy

3 Credits

Understanding community decision-making, citizen-expert interactions and methods for resolving seemingly intractable conflicts associated with public issues. CED 375H Community, Local Knowledge, and
Democracy (3) Decisions made in our communities have far reaching effects on individuals, families, neighborhoods, the local economy, the environment, the health and welfare of all citizens, and the community as a whole. These decisions or choices are the result of the collective action of community leaders and citizens, either through governmental, non-governmental, or community organizations. This course will familiarize students with principles, concepts and skills essential to understanding processes of community decision making and community development. These processes involve countless human interactions, which ultimately lead to choices that affect the future economic, environmental, political, and social viability of citizens, their families, and the sustainability of their communities. These interactions are central to community decision making and community development, and to the functioning of local democracy. The nature of these interactions and the way in which they take place determine if desired community outcomes occur or not. This course seeks to reveal important, sometimes neglected or underdeveloped, factors in community decision making, specifically issue framing, tensions between local and expert knowledge, methods for resolving seemingly intractable conflicts associated with public issues, and the nature and role of participatory processes in debate, deliberation, and doing public work. This course will enable students to use these factors for analyzing community decision making situations and as community development tools in professional practice. In addition, students will be challenged to examine ethical issues in community decision making and community development professional practice.

**Prerequisite:** Prerequisite or concurrent: CED 152 Honors

CED 400: Exploring Indigenous Ways of Knowing in Great Lakes Region: Lecture

2.5 Credits

Explore concepts and values distinctive to indigenous ways of knowing in the Great Lakes Region through readings, reflections, and library research. CED 400 Exploring Indigenous Ways of Knowing in the Great Lakes Region: Lecture (2.5) (US) Exploring Indigenous Ways of Knowing in the Great Lakes Region (400A) explores concepts and values distinctive to indigenous ways of knowing (IK) in the Great Lakes Region through readings, video segments, and lectures. Five structural concepts or key themes will provide a conceptual framework for understanding indigenous cultures and knowledge production and their unique contributions to western society in the 21st century. Students will be introduced to the Algonquian cultures of the Great Lakes Region and to the Ojibwe (Anishinaabeg), Odawa, and Potawatomi (Three Fires) cultures in particular. This course will introduce students to the distinctive ways indigenous people experience, understand, and know the world through their relationship with the land or region to which they belong. Too often, colonizers around the world have ignored indigenous knowledge systems even though these ways of knowing have sustained peoples, cultures, and environments for thousands of generations. Because these ways of knowing are generally preserved and transmitted through stories, music, ceremony, and embodied traditions, they are seldom understood and frequently dismissed by those who control the production of knowledge in the modern world. The knowledge of the indigenous peoples of the Great Lakes region will, in this course, be presented as an empirically grounded scientific body of knowledge and theory comparable and complementary to the European tradition and, in specific ways, enhancing the sustainability of western scientific knowledge and practice. This course is a prerequisite for the Maymester field experience—Exploring Indigenous Ways of Knowing among the Ojibwe (400B)—which offers students an opportunity to experience indigenous ways of knowing by engaging with Ojibwe educators, traditional knowledge holders, elders, and families among the Anishinaabeg of Red Lake, Leech Lake, and White Earth Nations, the three largest Ojibwe reservations in the US.

**Prerequisite:** R SOC011, SOC 001 or equivalent United States Cultures (US)

CED 401: Exploring Indigenous Ways of Knowing Among the Ojibwe

0.5 Credits

Through an intensive cultural engagement students will learn skills important to the pursuit of ethnographic research in cross-cultural contexts. CED 401 Exploring Indigenous Ways of Knowing Among the Ojibwe (0.5) (US) Exploring Indigenous Ways of Knowing among the Ojibwe (CED 400B, a 2-3 week field experience, transports students from the classroom to the Red Lake, Leech Lake, and White Earth Nations in northern Minnesota. During travel, students will follow part of the 800 year Great Migration route of the Ojibwe from their ancestral home around the St. Lawrence River estuary to western Lake Superior and the headwaters of the Mississippi River. This field experience will immerse students in the Anishinaabeg community, the largest of the ldquo;three firesrdquo; (Ojibwe, Odawa, Potawatomi) of the Great Lakes region. While most Americans learn history facing west, history will be presented through the experiences and memories of people facing east. Early Ojibwe history will be outlined while the period of contact, colonization, and restoration (late 1700 to the present) will be covered in greater detail. Ojibwe cultural codes and spiritual values will be explored through l'dquo;the teachingsrquo; and participation in important ceremonies (sweat lodge, pipe, big drum, wiping the tears, shake tent, intertribal traditional powwow). The political and social injustices of colonialism will be examined, including removal, allotment, religious oppression, and the boarding school era. To experience family and social life, students will live for two days with Ojibwe host families on the Red Lake Nation (one of 2 closed reservations in the US). Students will be introduced to indigenous science and environmental justice (climate change, water quality, biodiversity and endangered species, traditional and sustainable agriculture, fish and game, wild edible and medicinal plants, forest management, etc.). Finally, a canoe trip through the headwaters of the Mississippi River will focus on nature and environmental health. The five key IK themes explored in the classroom—local knowledge, relational knowledge, empirical knowledge, spiritual knowledge, and traditional knowledge—will provide a framework for engaging with and understanding Ojibwe culture and knowledge production and their unique contributions to western science and American culture. Students will meet and learn from more than 25 prominent Ojibwe elders, educators, scientists, political leaders, medicine men/women, environmentalists, ethnobotanists, storytellers, and host family members. Students will also learn listening, observing, attending, respecting, critical thinking, and recording skills, all important to the study of cultures and the pursuit of ethnological research in cross cultural contexts. Exploring Indigenous Ways of Knowing among the Ojibwe (CED 400A, offered during spring semester), is a prerequisite for this field experience.

**Prerequisite:** CED 400A or comparable course United States Cultures (US)
CED 404: Community, Environment and Development Research Methods

3 Credits

Students will learn empirical research methodology in the areas of community, environment and development. CED 404 Survey Research Methods (3) CED 404 teaches students practical approaches to empirical research in the areas of community, environment, and development (CED). The course covers research tools commonly used by CED professionals at the local level, including secondary data analysis, surveys, focus groups, and participatory research. As importantly, students learn and practice the basic mindset required for developing and exploring research questions. Students discuss and practice appropriate methods for presenting research results, including writing for different genres.

Prerequisite: STAT 200

Cross-Listed

CED 409: Land Use Planning and Procedure

3 Credits

General land use planning laws and procedures. CED 409 Land Use Planning and Procedure (3) This course provides students with an understanding of the legal and procedural aspects of land use planning as found in the United States. The emphasis of the course is to explain the sources of land use planning authority, the processes by which it is applied and the potential conflicts that arise in the application of this authority. As a result of taking this course, students will be expected to learn and explain a) the objectives of land use planning systems and a comparative analysis of these systems; b) the bases on which land use planning law and procedure is applied across the U.S.; c) policies, strategies and principles that can be applied to land use planning decisions; d) several land use planning models currently applied in American jurisdictions, including the structure of each land use planning system; e) the procedural steps used to engage the land use planning system by property owners and government officials; f) typical conflicts that arise in creating, changing or enforcing land use planning measures; g) how land use planning conflict is resolved in various systems. Student performance will be measured in two midterm exams and a final exam. The instructor reserves the right to give additional exams to aid in measuring student knowledge and understanding of course material. Each test will primarily be short essays questions that ask for an explanation, discussion, comparison or application of specific concepts and principles. Case studies also will be used to present students with situations to hone their analytical, organizational and problem solving skills on specific problem situations. This will ask students to analyze a given set of facts, assess the issues raised by the facts from the perspectives of individuals who are described in the situation and form and present a response that addresses a specific question posed to the student.

Prerequisite: 6 credits of B LAW, CED, ECON, E R M, E RRE, PL SC, R EST, SOC, S T S (any combination)

CED 410: The Global Seminar

3 Credits

Exploration of critical global issues relevant to sustainable development and the environment. Collaborative with other universities worldwide. CED 410 The Global Seminar (3) The Global Seminar course will help students gain an understanding of the implications of global change in a world of limited natural resources. The course will help students to understand the difficulties that society faces in balancing the environment with human needs; appreciate the challenge of balancing competing needs at different levels (individuals, communities, organizations, governments); understand trade-offs and the role of policy; and explore and critically assess avenues for effectively dealing with global issues. Students participating in the Global Seminar have the opportunity of direct interaction with students from other universities and academic institutions who may have different perspectives on these issues. To allow this interaction, the Global Seminar is offered jointly with other universities from across the world, with students engaging in global videoconferences, virtual classroom discussions and group work with student peers at other universities. Case studies are used, with critical assessment of important global issues related to development and environment, with a particular focus on food production and natural resources. Specific cases vary by course offering but may include cases related to: population dynamics, biodiversity, water quality, waste management, GMOs, BSE, organic food production, novel protein foods, among others. Issues of long-term sustainability are explored to gain a better understanding of the implications of alternative choices. The course is offered in collaboration with Cornell University, with students using Cornell's Blackboard system. The course is intended to strengthen linkages for students with other universities for study and research.

CED 417: Power, Conflict, and Community Decision Making

3 Credits

Impact of institutions on human interdependence and behavior; the structure of power, and community decision making and public policy. CED 417 Power, Conflict, and Community Decision Making (3) Community decision making and public choice is the result of collective action among individuals. The purpose of this course is to develop frameworks for analyzing conflict, power, and public choice. This course enables students to understand how culture and institutions affect the nature of human interdependence and behavior, shape patterns of influence and power, and impact community decision making and policy.

Prerequisite: R SOC011 or SOC 001

Cross-Listed

CED 420: Women in Developing Countries

3 Credits

Analysis of women's work, experiences, and development policies and practices in Africa, Asia, and Latin America. CED (WMNST) 420 Women in Developing Countries (3) (US;IL)The purpose of this course is to increase understanding of women's lives in third world countries at the time when women's movements, grassroots activism, and feminism are on the rise in the third world. The course examines third world women's challenges to Western definitions of feminism and traces the theoretical shifts and practical changes related to women's issues in African, Asia, and Latin America. Students participate in studying specific community and agricultural development projects. Topics include feminist critiques of development and post-colonialism, ecofeminism and environment, sexuality and reproduction, global restructuring, and grassroots community activism. This course will add diversity to both the rural sociology, community and economic development, and women's studies curricula. International, gender, ethnic, and racial issues are core components of the course. The course will be an elective for Women's Studies majors and minors and will serve graduate students in rural sociology, women's studies, and other fields.
CED 425: International Community and Economic Development

3 Credits

International community and economic development. CED 425 International Community and Economic Development (3) Eight of ten people on the planet live in developing countries where problems such as hunger, malnutrition, infant mortality, inadequate housing, underemployment, over-urbanization, and environmental degradation often are severe. This class will focus on community and economic development in developing countries. Through lectures, readings, a series of topical videos, and in-depth class discussions, students will obtain a firm grounding in the ways development has been defined, the social and economic problems facing developing countries today, the basic ways in which economic development has been approached theoretically and empirically, the implications for developing countries of being embedded in a globalizing economy, the influence of multinational corporations, the policies that developing countries have followed to foster economic growth, the nature of foreign aid, the causes and consequences of Third World debt, the promise of micro-enterprise and the informal economy, rural development and land reform, and other topics.

Prerequisite: CED 152 and CED 230

CED 427: Society and Natural Resource

3 Credits

Analysis of the relationships between societal development and enhancement and natural resources. CED 427W Society and Natural Resource (3) There is a common tendency to portray environmental and natural resource problems as biophysical in nature. The implication of this tendency is that such problems are best addressed by scientists and engineers who discover evidence of and devise new technologies to fix them. Another common tendency is to assume that people resist solutions to environmental and natural resource problems because of individually held anti-environmental attitudes. In contrast to these two perspectives, sociologists point out that environmental and natural resource problems often lie at the intersection of biophysical processes and social, political, economic, belief, value, and knowledge systems. The goals of this writing-intensive course are to introduce students to the complexity of environmental and natural resource problems and to teach them to think sociologically. After taking this course, students should be better prepared to engage in debates with academics, politicians, and other citizens regarding the causes of potential solutions to environmental and natural resource problems.

Prerequisite: R SOC001 or SOC 001 and ENGL 202 Writing Across the Curriculum

CED 429: Natural Resource Economics

3 Credits

Optimal management of resources; roles of markets and other institutions; resources and economic development; public policy.

Prerequisite: ECON 302 and MATH 110 or MATH 140

CED 430: Principles of Community Economic Development

3 Credits

Concepts, strategies and techniques of local economic analysis, planning and development; case studies and decision-making exercises. CED 430 Principles of Community Economic Development (3) This course is designed to introduce the issues giving rise to concern for rural and regional economies, and the theories, concepts and tools of rural and regional economic development. The goal is to integrate theory and practice and apply them to economic development problems. Tools are presented in a "how to" manner. Topics include current issues in rural economies, the economic view of rural development; business retention, expansion and location; entrepreneurship and its role in the economy; understanding the local economic structure and the forces of chance; introduction to economic growth theories; export base theory and economic base analysis; the role of labor and capital in development; techniques of market area, central place, shift-share and input-output analysis; policies of local economic development and growth.

Prerequisite: introductory course in economics

CED 431: Economic Analysis of Environmental and Resource Policies

3 Credits

Economic analysis of environmental and natural resource policies, benefit-cost analysis, non-market valuation techniques; resource damage assessment.

Prerequisite: ECON 302

CED 450: International Development, Renewable Resources, and the Environment

3 Credits

Theories of agricultural and economic development, with particular attention to interactions between development, renewable resources, and the environment. CED 450 International Development, Renewable Resources, and the Environment (3) (IL) This course introduces the key economic concepts and theories used to analyze agricultural and economic development in developing countries, with particular attention to interactions between development, natural resources, and the environment. The course examines how economic development can affect natural resources and the environment, and how resource and environmental conditions affect development. The course integrates theory with empirical evidence from developing countries, so that students gain an understanding of how different development strategies have actually fared in practice.

Prerequisite: 6 credits in Environmental Economics, Resource Economics or Economics

CED 452: Rural Organization

3 Credits

Social organization and change in rural communities; use of sociological principles in analysis of rural problems and rural development. CED 452 Rural Organization (3) This course combines an introduction to the social theories of communities with real-life examples of applications to understanding community problems and concerns. The focus is on the special circumstances facing small towns and rural communities, but the concepts are applicable in all communities, from urban
neighborhoods to suburbs. Topics covered include local community in a global economy, power and decision-making, the role of governments and other social institutions, development of community and the importance of building social infrastructure as well as economic and physical infrastructure, multi community collaboration and building, and sustainable communities. Those taking the class will gain experience in conducting a case study of a small Pennsylvania community, build skills in working in a team, and gain understanding of the complexity of factors that influence community (and your own) well-being. If your future career involves operating within a community setting, this course can increase your knowledge of that setting and how to function within it. And, even if you don’t plan on working with communities in your job, you will be living in a community. This course can help you to understand the ways that you can contribute to improving your own quality of life by becoming involved in your community.

**Prerequisite:** 6 credits in rural sociology, sociology, or psychology

**CED 475: CED Integrated Capstone Experience**

3 Credits

An experiential-learning course that provides a capstone learning experience for seniors graduating from the Community, Environment and Development major. CED 475 CED Integrated Capstone Experience (3)

A well-designed capstone experience provides students with a valuable reflective and integrative experience as they complete their baccalaureate degree programs. This course is designed to encourage students to reflect, integrate and apply the knowledge that they have learned in previous coursework for the CED major. The course is built on discussion and exercises that require integration. Like the CED program more generally, this course relies on case studies to help students apply the skills that they have learned to actual cases that challenge communities and regions in developed and developing areas of the world. The CED program is also designed to include experiential-learning exercises throughout the program; this course engages students in a significant in-depth experience or project that will vary year-by-year. The experience could be in the United States or in another country. The project will be hands-on and action-oriented. Evaluation is based on assessment of active participation in class discussions, papers that provide critical assessments of the case studies assigned to the class, and a final project conducted in the field, either in the U.S. or internationally.

**Prerequisite:** senior status only

**CED 494: Undergraduate Research**

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small group basis.

**CED 494H: CED Honors Research Project**

1-12 Credits

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

**Honors**

**CED 495A: Internship in Community, Environment, and Development**

1-15 Credits/Maximum of 15

Supervised field experience in an environmental setting.

**Prerequisite:** prior approval of program

**Full-Time Equivalent Course**

**CED 496: Independent Studies**

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

**CED 497: Special Topics**

1-18 Credits/Maximum of 18

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

**CED 497A: SPECIAL TOPICS**

1-3 Credits/Maximum of 18

**CED 497D: SPECIAL TOPICS**

0.5-3 Credits/Maximum of 18

**Comparative Literature (CMLIT)**

**CMLIT 1: Introduction to Western Literatures Through the Renaissance**

3 Credits

Introductory comparative survey of European and American literatures of Ancient through Renaissance periods, considering genre, themes, cultural and literary values.

Bachelor of Arts: Humanities International Cultures (IL) General Education: Humanities (GH)

**CMLIT 2: Introduction to Western Literatures Since the Renaissance**

3 Credits

Introductory comparative survey of European and American literatures, post-Renaissance through Modern, considering genre, themes, cultural, and literary values.

Bachelor of Arts: Humanities International Cultures (IL) General Education: Humanities (GH)

**CMLIT 3: Introduction to African Literatures**

3 Credits

Comparative analysis of drama, essay, novel, poetry, and stories from traditional oral forms to contemporary expressions of African literary styles. CMLIT 003 Introduction to African Literatures (3) (GH;IL)(BA)

This course meets the Bachelor of Arts degree requirements. CMLIT 003, Introduction to African Literatures, provides an introduction to the
wonderful variety of African literary production, from early oral epic traditions, through the colonial/post-colonial period, to recent Nobel Prize winning authors. We will read texts written in English or translated into English from French or African languages, including several recorded from the oral tradition, as well as some texts from the African Diaspora. These literary works come from different geographic and cultural areas of Africa, and are composed in a variety of forms (novel, drama, epic, poetry), and range in date from 2,000 BCE to the colonial period to the modern national era. The focus of the course, however, is on the 20th century. We will also consider the ways in which history, culture, and geography impact literary production. African literary and cultural influences on Western traditions may also be explored. Students will be evaluated on some or all of the following: short answer/essay exams, in-class discussion and group work, written assignments, collaborative presentations, and a final comprehensive exam/essay. Writing and speaking will always be included. This course fulfills a requirement for the Comparative Literature major and the World Literature minor. This course also fulfills the General Education Humanities requirement and the Bachelor of Arts Humanities and Other Cultures requirement. It also satisfies the United States and International Competence requirement.

Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures
International Cultures (IL)
General Education: Humanities (GH)

CMLIT 4: Introduction to Asian Literatures

3 Credits

Comparative interpretations of narrative, drama, lyric, and other writings from East Asia and other regions, viewed as world literature.

Cross-listed with: ASIA 4
Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures
International Cultures (IL)
General Education: Humanities (GH)

CMLIT 5: Introduction to Literatures of the Americas

3 Credits

Comparative interpretation of the oral and written literary traditions of North, Central, and South America. CMLIT 5 Introduction to Literatures of the Americas (3) (GH;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. CMLIT 5, Introduction to Literatures of the Americas, allows you to explore the great variety of literatures of the Americas, including translations of texts written in Spanish, French, Portuguese, and Amerindian languages, as well as texts originally written in English. Readings include many genres and artistic forms dealing with histories and accounts of "American" issues, such as conquest, nationalism, slavery, diaspora, and immigration. You will also consider the various influences among these traditions in terms of time period and genre. This course investigates the literary and cultural notion of "America," and what it means to be "American," in terms of the entire hemisphere. We will deal with issues of race, ethnicity, class, religion, as well as other vital concerns of identity and "Americanness" as reflected in both oral and written literary traditions through the history of the Americas. At the conclusion of this course, you should be able to understand and make comparisons among the many "American" literary traditions. This course fulfills requirements for the Comparative Literature major, the World Literature minor, General Education Humanities, Bachelor of Arts Humanities, and General Education United States and International Competency.

Bachelor of Arts: Humanities
International Cultures (IL)
United States Cultures (US)
General Education: Humanities (GH)

CMLIT 6: Philosophy and Literature in Western Culture

3 Credits

Explores fundamental issues of human existence through the traditions of western literature and philosophy. CMLIT 006CMLIT (PHIL) 006 Philosophy and Literature in Western Culture (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course is designed to introduce students to the various interpretive approaches to literature and philosophy. The class will explore key philosophic themes as these are exhibited in imaginative literature, and in doing so will practice both philosophical interpretation of literature and literary treatment of philosophy. The central themes of this course could include, for example, self-knowledge and self-deception; self-isolation, alienation, and community; conflict of moral responsibilities; the use and abuse of language; the meaning of art; the ideal of a "simple life," normalcy and madness. The class will ask such questions as what counts as literature, what purpose it serves, what is the relationship between literature and ideology, and whether a text can be considered independently from what the author wanted to say in it. Students may be graded by a variety of methods, including exams, papers, and individual and group projects. One example might be a collaborative annotated bibliography project, a collaborative position paper, individual evaluations of position papers, and a comprehensive final exam. This course is a non-major General Education Humanities course. It may be used to fulfill minor requirements in philosophy. This course may be used to fulfill an additional-course requirement in either the minor or the major in Comparative Literature, although it is geared primarily towards non-majors. This course will be offered once a year with an enrollment of 25-200 students depending on location. This course deals with literature and philosophy in the Western tradition, and thus helps to complete the range of our other courses on western literature, such as Comparative Literature 001 and 002 (survey courses of Western Literature to the Renaissance, and Western Literature since the Renaissance), and Comparative Literature 401W and 402W (upper level chronological courses on Western Literature). This course differs from those however, by its strong emphasis on philosophical texts.

CMLIT 10: World Literatures

3 Credits

The development of literature around the world—from epic, legend, lyric, etc. in the oral tradition to modern written forms. CMLIT 010 The Forms of World Literature: A Global Perspective (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. As a one-semester introduction to the range and diversity of world literature from the ancient past to the present, CMLIT 010 is intended to help you read (or listen to) a work of literature from any time or place and to appreciate
it more fully—whether it belongs to the more familiar types of literature you may have read in the Western tradition or is a fable, folktale, heroic story, play, or narrative from another cultural tradition. You will practice expressing your ideas through written exams and in-class and on-line discussions/activities. Discussion sessions allow interaction with the instructor and with other students in the class. This course presents a global sampling of masterpieces of world literature. Through active class participation, you will become familiar with various literary genres and become proficient in the analysis of the similarities and differences between texts from many different time periods and cultures. CMLIT 010 is one of the choices of survey courses which can count toward the Comparative Literature major and the World Literature minor. This course also fulfills the General Education humanities requirement, the Bachelor of Arts humanities requirement, and the United States and International requirement.

General Education: Humanities (GH)
Honors

CMLIT 11: The Hero in World Literature
3 Credits

The figure of the hero/heroine examined in world literature as a vehicle for expressing social and cultural values. CMLIT 011 The Hero in World Literature (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course will examine the concept of heroism and of heroes throughout the world in different time periods and different literary genres. We will examine different types of heroes and theories of heroism, as well as gender relations involved in concepts of heroes/heroines, and the roles of anti-heroes, villainous heroes, and the enemies of heroes. Heroes represent the most ideal values of a particular society. By examining heroes revered by a variety of societies, a greater awareness of values both specific to individual cultures and universal across cultures can be reached. Through comparisons of a variety of heroes, literary and social roles in the formulation and manipulation of heroic types can be assessed. The objectives of this course include expanding your awareness of the values of different cultures, examining the consequences of value systems as explored in literature, and increasing your skills of critical analysis on a body of literature designed to encourage you to accept, reject, or question specific ideas of good and evil, proper behavior, and appropriate conduct within cultural contexts. CMLIT 011 is one of the many choices of survey courses which count towards the Comparative Literature major and the World Literature minor. This course also fulfills the General Education Humanities requirement, the Bachelor of Arts Humanities requirement, or the United States and International requirement.

Bachelor of Arts: Humanities

International Cultures (IL)

CMLIT 12: Introduction to World Drama and Performance
3 Credits

The power, ethics, and excitement of drama and related forms of performance literature, presented in a global and comparative context. CMLIT 012 Introduction to World Drama and Performance (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. Introduction to World Drama will enable students to discover the power and excitement of drama in a global context. Students will encounter a variety of cultural contexts as they observe how playwrights portray local histories and lifestyles, in settings from many parts of the world. The course will offer (1) an introductory overview of concepts and terms associated with understanding drama. It will present (2) traditional dramatic forms such as tragedy, comedy, history play, allegory, Noh, etc., as seen in plays prior to the twentieth century; and (3) recent dramatic forms such as testimonial, other politically engaged plays, drama online or on film, etc., as seen in plays from the twentieth and twenty-first centuries. Attention will be given to (4) the dramatic contributions of multiple cultural groups in the U.S., with African American, Asian American, Latino, and other U.S. plays seen not in isolation, but in relation to world drama. Finally, (5) the course will consider ways in which drama, as a form of world literature, can have an international and intercultural impact, both in earlier periods (for example, the ancient Sanskrit play "Shakuntala," from India, influenced the German writer Goethe's "Faust" in the nineteenth century) and recently, when global circulation and international collaboration are increasingly frequent. Class work will include lectures or presentations by the instructor, presentations by students, web based activities, and focused discussions. Where feasible, attendance at one or more live theatrical performances will be encouraged.

Bachelor of Arts: Humanities
International Cultures (IL)
General Education: Humanities (GH)

CMLIT 13: Virtual Worlds: Antiquity to the Present
3 Credits

Virtual worlds from ancient to postmodern, in a comparative and global context that includes literature, film, and online multiplayer games. CMLIT 013 Virtual Worlds: Antiquity to the Present (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. What are virtual worlds? And why do they speak so intensely to us about the present? This course puts immensely popular online virtual worlds like World of Warcraft into a historical perspective. Beginning with Homer, students will work through some of the major imaginative worlds of literary history, including those of the Bible, Dante, Shakespeare, Goethe, Lu Xun, Basho, Balzac, and others. We will conclude with two weeks of reading and discussion about the meaning and value of contemporary online virtual worlds. We will analyze the ways in which virtual worlds represent/reflect on the cultures from which they emerge; their ethical stances and structures; and the alternative imageriesthey embody. Students will be expected to spend at least 10 hours in such worlds as part of the course.

CMLIT 19N: Being in the Universe

3 Credits

Being in the Universe" considers three fundamental questions of human existence from both humanistic and scientific perspectives: (1) What is the nature of our universe, and to what extent are creatures like ourselves a predictable consequence of it? (2) What is the nature of time, and what does it mean to be a conscious living our lives through time? (3) What would it mean for humans to be alone in the Galaxy or the universe, or alternatively, not alone? "Being in the Universe" is an integrative GH+GN GenEd course. The course's three major units cover the following topics: (1) We discuss cosmology and religion as human enterprises, as well as the history of science; (2) We study the basic scientific theory of the Big Bang universe, and consider its implications for human life; (3) We address contemporary theories of the multiverse from scientific, philosophical, and literary perspectives; (4) We consider the thermodynamic and relativistic theories of time, and the basic philosophical approaches to time, and discuss the implications of these for our ordinary human experience of the past, present, and future; (5) We discuss the history of life in the universe, the possibility of life on other planets, and the social, religious, and imaginative reactions to those possibilities in literature and film.

CMLIT 83: First-Year Seminar in Comparative Literature

3 Credits

International topics in literature and culture; each seminar will have a specific topic as announced (see the Comparative Literature Web site). CMLIT 083S First-Year Seminar in Comparative Literature (3) (GH,FYS,IL) (BA) This course meets the Bachelor of Arts degree requirements. One of the most important trends of our time is the increasing emphasis on internationalism and globalization. This course offers an international, intercultural approach to the study of literature, crossing the boundaries of time, place, nationalities, languages, and cultures. The range of literature taught in Comparative Literature as a discipline draws from every continent of the globe and from the ideas, experiences, and inspiration of women and men across thousands of years. With an entire world of literature to choose from, the content of the course varies with the expertise and interests of the faculty member. Sample topics include "Literature and Illness," "Literary Reflections of Biblical Themes," "The Power of Literature to Change Our Lives," and "America Seen Through Foreign Eyes." Each seminar focuses on a specific topic that highlights the nature of literary study and research, presents debates in the discipline, and opens the way to further investigations. Topics for each semester are posted on the department's website. At the end of the seminar, students will be acquainted with representative texts from multiple literatures, with the methods of comparative literature study, and with selected important literary genres, themes, periods, and styles. This seminar can be used to fulfill the General Education or Bachelor of Arts Humanities requirement, the Intercultural/International Competence requirement, and the first-year seminar requirement. Students will have gained experience in writing, speaking, information synthesis, and international approaches. The seminar will help prepare students for a variety of additional courses in literature and the humanities generally. In addition to the academic topic of this course, students should gain a general introduction to the University as an academic community, including exploring their responsibilities as members of that community. They should also develop an understanding of the academic tools and resources available to them, including the opportunity to work with faculty and other students who share their academic interests.

CMLIT 100: Reading Across Cultures

3 Credits

Comparative approaches (studying international literary periods, themes, genres, etc.) and principles of literary interpretation introduced through readings representing various cultures. CMLIT 100 Introduction to Comparative Literature (3) (GH,IL)(BA) This course meets the Bachelor of Arts degree requirements. CMLIT 100 is an introductory course to the discipline of Comparative Literature. The course is built around a central theme (or series of themes) and the reading assignments are chosen to complement this central concept of the course. Past themes have included "Literatures of the Body," "Mortality and Immortality," "Close Encounters Africa and the West," "Knowledge and Power," among others. Through various traditional (books) and non-traditional (film, multimedia, hypermedia) texts from around the world, students will develop the ability to analyze literature in different ways. Students will examine the works both within their individual and diverse cultural contexts, and in their relationship to broad or universal themes that transcend the boundaries of time and place. As an introductory course, CMLIT 100 is intended to lay a solid foundation for further study in any college-level courses on cultures or literature. Through an examination of a wide range of world literature, we will explore the practical aspects of what it means to deal with literary works in a comparative global context. The course is intended to help you develop your analytical and comparative skills and to simultaneously introduce you to a wide variety of interesting world literatures. Students are evaluated on essay exams, in-class discussion, group projects, and a final comprehensive exam/essay. Evaluation may also include web-based activities, on-line discussion and written student journals/reaction papers. Note CMLIT 100 is a required
CMLIT 101: Race, Gender, and Identity in World Literature

3 Credits

Identity and race, gender and heritage, centrality and marginality, self and other, as expressed in literary works from around the world. CMLIT 101 The Theme of Identity in World Literatures; Race, Gender, and Other Issues of Diversity (3) (GH;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course examines issues of race, gender, religions, and ethnicity as expressed in literary, social, and cultural contexts. We will address these questions in works from a variety of traditions and time periods. Literary works from around the world show a wide range of response to the "other" – idealization of difference as exotic, fear of difference as threat, the desire to suppress difference or force it into conformity, the recognition of difference within ourselves, etc. The scope includes authors who are themselves members of racial, sexual or ethnic groups with which you may be less familiar. You will also consider the question of who and what constitutes identity as perceived by oneself and by others. CMLIT 101 is one of the many choices of survey courses, which count towards the Comparative Literature major and the World Literature minor. This course also fulfills the General Education Humanities requirement, the Bachelor of Arts requirement, and the United States and International Cultures requirement. In general, this course will be taught in the active-learning mode, featuring in-class discussion, writing projects and web-based activities. Specifically:
- Writing, speaking, self-expression: Students will write essays and/or papers, which require the analysis and comparison of various literary works from the standpoint of identity issues. 
- Engagement in collaborative learning and teamwork: Small discussion groups both in-class and on-line will facilitate learning as a group activity. Activities may include group in-class presentations.
- Application of intercultural/ international competence: Students will deal with a wide range of texts from around the world and compare/contrast the texts focusing on issues of diversity. This course, by definition, deals directly with issues of inter- and intra-cultural identity. Dialogue pertaining to social behavior, community, and scholarly conduct. The discussion of diversity issues is related to students' perception of their own identity and reaction to the notion of the "other." Implicit in this discussion is the issue of "community" creation of the "other" and individual response to the community.

personal gratifications, and one’s long-range obligations to other people? Means of evaluation will be selected from the following (always including writing): essay exam questions, short answer and objective questions, reading journals, quizzes, in-class discussion, group projects (including web sites), research and critical papers, and final comprehensive written exam. CMLIT 106 is not required for the Comparative Literature major but may be selected to fulfill one of the course requirements for the major or the World Literature Minor. This course also fulfills the General Education Humanities requirement, the Bachelor of Arts Humanities requirement, and the United States and International Cultures requirement.

Bachelor of Arts: Humanities
International Cultures (IL)
General Education: Humanities (GH)

CMLIT 107: Exploration, Travel, Migration, and Exile

3 Credits

An international selection of journey narratives, from the real to the imaginary; travel narratives as critiques of self and society. CMLIT 107CMLIT 107 The Literature of Exploration: Extraordinary Voyages from Antiquity into the Future (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. CMLIT 107 compares the literatures of travel and exploration from ancient times to the future, from narratives of journeys actually experienced through narratives of journeys imagined in the mind. The notion of the journey is broadly defined as encompassing both literal and metaphorical experiences, including travel journals and diaries, epic adventures, quests of introspection, dreams and visions, and depictions of the future. Through reading, discussion, and writing, you will examine and compare the different roles that travel can play in the imaginations of both the individual writers and the cultures from which they come. You will not only explore recurrent themes and timeless topics, but also the ways in which travel writing can both reinforce and subvert the basic value-systems, stereotypes, or other assumptions present in its cultural context. For many writers, traveling elsewhere is a means of evaluating their own societies, as well as a means of recording their responses to encountering real or imagined new places. The journeys of this course, which vary greatly from each other, will also allow you to consider some of the vast unknowns of the individual human mind and imagination. By traveling through this course, you will have the opportunity to develop the analytic reading, thinking, and writing skills necessary for the understanding of a variety of literatures and cultures, as well as the exploration of your own identity as an individual. This course fulfills requirements for the Comparative Literature major, the World Literature minor, General Education Humanities, Bachelor of Arts Humanities, and General Education International/Intercultural Competency. Student performance in this course will be measured in a variety of ways, including some or all of the following (always including writing and discussion): -in-class and/or take-home essays/exams - literary diaries or reaction papers -in-class and/or online discussion/ participation -individual and/or group in-class presentations/projects - research or topic papers.

General Education: Humanities (GH)

CMLIT 108: Myths and Mythologies

3 Credits

World mythology: myths primarily of non-Western cultures, based on selected areas and traditions around the world. CMLIT 108 Myths and Mythologies (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course offers a survey of several different cultural traditions as expressed in myth, as well as discussion of myth in its literary, social, geographical, political, and religious contexts. Various theories of the evolution and analysis of myth will be examined. Mythological traditions from around the globe will be compared in order to determine qualities which they share and examine ways in which they are unique. This course will help you see the world in new and exciting ways, based on the wide variety of global myths. At the same time, you will consider the permanent human issues which connect all of these traditions to each other, to the modern world, and to you. CMLIT 108 is one of the choices of survey courses, which count toward the Comparative Literature major and the World Literature minor. This course also fulfills the General Education humanities requirement, the Bachelor of Arts humanities requirement, the United States and International Cultures requirement, or the B.A. other cultures requirement.

CMLIT 109: Native American Myths, Legends, and Literatures

3 Credits

Myths, legends, and literatures of Native American cultures. CMLIT 109CMLIT 109 Native American Myths, Legends, and Literatures (3) (GH;GI)(BA) This course meets the Bachelor of Arts degree requirements. CMLIT 109, Native American Myths, Legends, and Literatures, will allow you to read many traditional tales and selected works of modern literature representing a variety of American indigenous peoples. We will be examining the ways in which the myths, legends, and literary works reflect the cultural values and religious beliefs of the tribal nations from which they derive. You will learn how to read critically, analyzing symbols, archetypes, and motifs through the comparison of selected tales to others from the same and from different cultures, allowing you to recognize the rich diversity and unique oral traditions of Native American culture. You will also examine various geographical, historical, political, and social conditions which contribute to myth-making. Through the application of various theories of myth analysis, you will also synthesize the information learned about various Native American traditions with a view toward understanding the distinctive identities of Native American cultures, including where applicable their position as minority cultures, and also seeing their participation in universal human beliefs and concerns. Typically, students will be evaluated on any combination of papers, tests, class participation and/or projects, and legend-collection assignment. CMLIT 109 may follow upon CMLIT 108. However, each can be taken separately. CMLIT 109 can serve as a foundation for other courses dealing with the literatures of the Americas or for other courses dealing with minority literatures and cultures. Some students would take CMLIT 109, Native American Myths, Legends, and Literature, to fulfill the three-credit cultural diversity requirement; others would use it for the general education humanities slot. Liberal Arts majors could select it as their "Other cultures" course. CMLIT 109 is not required for the CMLIT
CMLIT 110: Jewish Literature: An International Perspective

3 Credits

Literature of the Jewish tradition in various cultures and contexts, such as Europe, Israel, Islamic countries, and the Americas. CMLIT 110 Jewish Literature: An International Perspective (3) (GH;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. CMLIT 110 will provide an introduction to the multiple worlds of Jewish experience and the different literatures they continue to inspire. Jewish literary creativity has varied widely with the personal and communal experience of writers in many parts of the world, and in many different time periods. Readings usually range from the first Jewish literary text, the Hebrew Bible, to twentieth-century works, including writings about the Holocaust. The course typically includes units such as Jewish writing and culture in Eastern Europe, in the Americas, in Spain during the Middle Ages, and in Israel and the Middle East today. The material may be organized chronologically, thematically, or by regions or languages. Texts that critique or apparently suppress Jewish identity, as well as texts with representations of Jews by writers of other heritages, may be included for comparative purposes. We will include writings by Jewish authors who have written in languages usually associated with Jewish tradition (such as Hebrew and Yiddish) and in other languages (such as Spanish, Arabic, German, English, etc.). Topics discussed in the literature may focus on questions of Jewish identity and continuity, the situation of Jews as a minority people, the immigrant and diasporic experience, representations of the Holocaust, and the establishment of Israeli culture as a mixture of several traditions. We will question generalizations about the meaning of “Jewish” by showing the wide range of characteristics associated with Jewish literary productions, and the great diversity of depictions of Jews and Jewish lifestyles, in different times and places. In addition to our primary focus on literary texts, we may include examples of other cultural productions (film, music, the visual arts, philosophy, etc.). All offerings of the course include writing assignment and discussion in the evaluation methods. The syllabus often includes 2 or 3 mid-term exams (with essay questions); a final exam, paper, or project; oral presentations; participation in online discussions. CMLIT 110 counts towards the Comparative Literature major and the World Literature minor. No prior knowledge of Jewish tradition is required, and General Education students are welcome. This course also fulfills the General Education Humanities requirement, the Bachelor of Arts Humanities requirement, and the United States and International Cultures requirement.

are often too subtle to discern apart from careful comparison. This course will explore the boundaries between Scripture and tradition by means of a close examination of the myths and stories in the Hebrew Bible and their subsequent interpretation and re-tellings in Judaism, Christianity, and Islam. Our procedure will be to compare these traditions closely with the biblical text, asking: What is different? What concerns motivated the changes? Is it possible to discern patterns of change, or "agendas" of the author? We will also compare with later interpretive traditions (Jewish, Christian, Islamic). Can we trace trajectories of interpretation? Can we discern particular interpretive methods in operation? We will seek to answer: what do these re-workings of the traditions tell us about the development and function of Scripture, and the social circumstances of the communities? Finally, we will seek to detect reflections of these interpretive traditions in literature and art from the medieval to the modern periods.

CMLIT 116: Jewish Great Books

3 Credits

Historical and cultural survey of key texts of the Jewish Tradition, from The Bible to the present. CMLIT (J ST) 116 Jewish Great Books (3) (GH;IL) (BA) This course meets the Bachelor of Arts degree requirements. This course will introduce students to the rich and diverse expanse of the Jewish tradition through a survey of that tradition’s most important texts. Starting from the Bible, moving up through the contemporary world, and spanning the globe, the course will examine religious, cultural, folkloric, philosophical, national, and literary traditions, and attention will be paid to both breadth—in emphasizing the vast range and diversity of Jewish thought and writing—and depth—in emphasizing the complexity and subtlety of particular texts—in examining the material. Students will learn methods and practices of textual, cultural, and historical criticism as they engage in analysis of Jewish textual traditions, of the relationship between representation and history, and of the productive interchanges between representation, history, and identity.

CMLIT 120: The Literature of the Occult

3 Credits

Important literary works dealing with witchcraft, demonology, vampirism, ghosts, and related concepts, from biblical times to present. CMLIT 120 The Literature of the Occult (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. CMLIT 120 is the study of literatures of the occult. Through readings of creative and critical works, you will develop an enhanced awareness of the variations among cultures and historical periods in accepting, fostering, tolerating or sometimes suppressing-unorthodox traditions. Our range of readings from world literature will show that what is rejected or scorned in one cultural context may be tolerated or even honored in another. You will also explore the social, political, ethical and religious implications of "occult." The course will be designed to compare various manifestations of the occult in literatures from around the globe and throughout history. You will explore issues of difference, and will develop an awareness of the tendency to demonize the 'strange' and 'inaccessible.' Through various texts from around the world, you will develop the ability to analyze literature in different ways. Readings will be examined both within their cultural context, and in relation to widely found or perhaps universal themes of the occult which transcend the boundaries of time and place. CMLIT 120 is one of the many choices of survey courses which count towards the Comparative Literature major and the World Literature minor. This course also fulfills the General Education Humanities requirement, the Bachelor of Arts Humanities requirement, or the United States and International Cultures requirement.

CMLIT 122: Global Science Fictions

3 Credits

A study of the relationships between science, literature, and film, from an international and interdisciplinary perspective. CMLIT 122 Global Science Fictions (3) (GH;US;IL) (BA) This course meets the Bachelor of Arts degree requirements. A course on science fiction and the fictions of science from an international and interdisciplinary perspective. Includes a history of the idea of science, of its engagement with and by fictional, filmic, dramatic, and poetic narratives, within an explicitly comparative framework that includes material from Europe, the Americas, Asia, and Africa. Students will develop a theory of genre and its development over time; they will recognize regional, cultural, and historical differences and forms of change that affect the intellectual development of the arts and sciences. They will practice and master these skills through class discussion, short papers, and/or quizzes and exams.

CMLIT 128: The Holocaust in Film and Literature

3 Credits

Thematic, formal, and historical analysis of filmic and literary representation of the Holocaust. CMLIT (J ST/ENGL/GER) 128 The Holocaust in Film and Literature (3) (GH;US;IL) This course provides an introduction to the film and literature of the Holocaust through a historical survey of these traditions—key texts, figures, and themes. Both US and international texts and traditions will be covered, as will both fictional and nonfictional treatments of the Holocaust. The course will focus on the defining aspects of the literature and film and on what these traditions reveal about the Holocaust and about how we understand the Holocaust. The course will use Holocaust literature and film to seek both the points of cohesion and the points of divergence that characterize the experience of the Holocaust, the interpretive cultures through which we approach the Holocaust, and Jewish and other cultures. The course will also introduce students to the concept and theory of trauma, and to its place in theories and traditions of representation, as well as to the concept and history of genocide. Some time will be spent analyzing what has been called the Americanization of the Holocaust.
will consist predominantly of primary texts, including both fiction and nonfiction film, prose fiction and nonfiction, poetry, and drama. Course methodology will emphasize the close reading of texts and analysis not only of what is represented, but also of the "how"; of representation, drawing students' attention to genre distinctions and the different expectations we bring to fiction and non-fiction, to film and the written word.

CMLIT 130: Banned Books: International and Comparative Perspectives
3 Credits

The world of banned books, their history, and their politics, studied comparatively and internationally. CMLIT 130 Banned Books: International and Comparative Perspectives (3) (GH;IL) This course examines one of the most documented events in the history of book reception—the banning of books. Bannings provide a useful window onto the myriad functions of culture in social identity formation. In order to understand how and why offense is given and taken, students will learn to place texts in a specific context of their historical production and reception and also to extrapolate connections between disparate moments when taboos were named. Incorporating examples from a range of global systems of censorship, the course examines differences in the modes and effects of repression and the sometimes surprising connections between church and monarchy, fascism and democracy. This course raises the following questions: How has censorship been justified? When, if ever, is censorship justifiable? What are the grounds on which censorship can be judged successful or incomplete? Who censors? Who is censored? What are local categories of censorship? Though books are banned for reasons of blasphemy, sedition, and obscenity in various guises in several cultures, are these global categories? How do writers write against a ban? How do they write within it? What are the roles of importation, technologies of circulation, and geography in the censorship of texts? How do border-crossings and forms of miscegenation offend? Is there a unifying aesthetics to books that offend? Class work emphasizes discussions, group work, writing exercises, and student presentations. This participatory approach is intended to deepen students' appreciation of the works, to assist students in developing both analytical and expressive abilities. The course will help students understand value systems and historical contexts in which they were produced and in which they caused offense. It will also ask students to draw connections between seemingly unrelated moments of offense in order to assist students in developing both analytical and expressive abilities. The course is designed to be suitable for all students, whether or not they have previously studied literature or comparative literature.

International Cultures (IL)
General Education: Humanities (GH)

CMLIT 131: Crime and Detection in World Literature
3 Credits

Issues of ethics, truth, justice, and social order as embodied in crime and detective literature, presented in comparative contexts. CMLIT 131 Crime and Detection in World Literature (3) (GH;IL) This course studies the origins and development of crime and detective literature from an international and interdisciplinary perspective. Beginning with early Greek tragedies, the course traces literature's investment in issues of crime, violence, detection, forensics, and social justice through a variety of historical and cultural contexts; this may include the classical era, the early modern period, the Enlightenment, the industrial era, and the modern/contemporary world. Some of the questions addressed may include reifying myths about law and order; the rise of urban societies and mass culture; the construction of the detective figure, the witness, the criminal, and the victim as models of subjectivity; issues of gender and sexual violence; and the nature of justice. Students will learn about the history of the idea of crime and its relationship with literary form. They will develop ideas about the contribution of literary thinking to ideas of social justice, as well as a theory of genre and its development over time; they will recognize regional, cultural, and historical differences and forms of change that affect the intellectual development of literature and detection alike. They will practice and master these skills through class discussion, short papers, and/or quizzes and exams.

International Cultures (IL)
General Education: Humanities (GH)

CMLIT 132: Nobel Prize Literature
3 Credits

Introduction to Nobel Prize winning literature and the culture of the prize in international and historical context. CMLIT 132 Novel Prize Literature (3) (GH;IL) (BA) This course meets the Bachelor of Arts degree requirements. This course will provide an introduction to Nobel prize-winning literature. Students will learn about the authors and their works in cultural and historical context. Readings will cover several genres (such as poetry, drama, short story, and novel) and will include authors from an array of linguistic and cultural traditions (such as African, Latin American, Middle Eastern, European, North American, and Asian). In addition to reading primary literature, students will enrich their understanding of literary history by exploring secondary material such as essays, short biographies, reviews of authors' works, and the authors' Nobel Prize acceptance lectures. The course will begin by introducing Alfred Nobel, founder of the Nobel Prize, and by surveying the parameters guiding how the prize has been awarded since its inauguration in 1901. Further readings may be organized temporally or thematically, but will be structured so that students develop a global perspective, allowing them to understand the variety of cultural contexts that have inspired the creative works under study. By examining the primary literature in connection with developing trends in prize culture, students will investigate such topics as pacifism and optimism in international prize culture, narrative and rhetorical techniques, the formation and expression of identity, changing gender roles and social expectations, the development of global Englishes, the emerging notion of world literature, and the changing climates of censorship and freedom of expression. Class work includes some lecture but emphasizes guided discussions, group work, short writing exercises, and some student presentations. This participatory approach is intended to deepen students' appreciation of the works, to assist students in developing analytical and expressive abilities, and to encourage students to pursue individual areas of interest by researching cultural norms and historical situations in a range of times and places. Through critical reading, group discussion, short writing exercises, and group presentations, students will hone skills for evaluating modes of cultural production and valuation. Evaluation will be through means such as in-class presentations, short writing assignments or quizzes, and a final exam or final paper. The course is designed to be suitable for all students.
generally interested in literature and the globalization of culture. Prior study of literature is not required and all materials will be available in English.

Bachelor of Arts: Humanities
International Cultures (IL)
General Education: Humanities (GH)

CMLIT 140: Literature and the Other Arts: International and Comparative Perspectives
3 Credits

A comparative, international examination of the relationship between literature and non-literary art forms. CMLIT 140 Literature and the Other Arts: International and Comparative Perspectives (3) (GH;IL) (BA) This course meets the Bachelor of Arts degree requirements. All around the world, literature and other forms of creative expression are related in many fascinating ways. Writers and artists often find inspiration from each other, and some artists work across a wide spectrum of genres and embody several identities at once. In different times and places, how have writers and artists reacted to critical events or lifecycle experiences? What techniques have writers, artists, composers, and choreographers shared? In examining a broadly international range of materials, in this course we will consider (1) how artists and writers depict common themes such as nature, death, aging, love, and more; (2) ways in which art and literature relate to each other; and (3) how literature and other arts are influenced by, and in turn exert influences upon, their cultural and social contexts. Using a global perspective, we will examine relationships between literature and a variety of artistic forms, such as painting, photography, comics, film, theatre, opera, music, sculpture, and more. Students will practice enabling skills for reading across genres, media, and cultures, and for expanding their skills in analyzing and synthesizing information, their awareness of a wide variety of value systems and cultural traditions in different times and places, and their horizons of literature in global contexts. Evaluation methods will typically include class participation, short essays or papers or projects, and exams. This course can be used as a course for the major in Comparative Literature or the minor in World Literature.

Bachelor of Arts: Humanities
International Cultures (IL)
General Education: Humanities (GH)

CMLIT 141: Religion and Literature
3 Credits

Major religious themes as expressed in literary masterpieces; sacred texts from various cultures read as literature. CMLIT 141 Religion and Literature (3) (GH;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. CMLIT 141 is an introduction to literature, to religious writing, and to the many ways in which literature draws upon or interacts with religion. Among the many possible relationships between religion and literature are: straightforward dramatization of sacred texts; allegory; expression of mystical experience; exploration, dramatization, and individualization of theological issues; the creation of literature to promote or to meet the needs of piety; and utilization of religious imagery and symbolism as a poetic resource. Readings will include sacred texts, and also literature that draws upon or responds to sacred texts and religious traditions. It may also include avowedly secular literature that shows some relationship to religious tradition, and even literature questioning or critical of specific religious traditions or their adherents. Students will read works from a range of historical periods and world societies, both Western and non-Western. Students will be evaluated on essay exam questions, short answer and objective exam questions, reading journals, quizzes, in-class discussion, group projects, research and critical papers, and final comprehensive written exam. CMLIT 141 is not required for the CMLIT major but may be selected to fulfill one of the course requirements for the major or for the World Literature Minor. This course also fulfills the General Education Humanities requirement, the Bachelor of Arts Humanities requirement, and the United States and International Cultures requirement.

Bachelor of Arts: Humanities
International Cultures (IL)

CMLIT 142: The Psychology of World Literature
3 Credits

A comparative, psychological approach to world literature from the perspectives of writer, narrative, character, and reader. CMLIT 142 The Psychology of World Literature (3) (GH;IL) (BA) This course meets the Bachelor of Arts degree requirements. This course explores various psychological approaches to the discussion of literature from the perspectives of writer, narrative, character and reader. Can authors, narrators, and fictitious characters be “psychoanalyzed”? To what extent do cultural variants affect a psychological approach to literature? Are there psychological universals that transcend time and culture? How does an awareness of psychology affect the reader? All of these issues will be discussed and compared with an eye to speculating the ways in which the human mind creates literature and literature impacts the human mind.

Bachelor of Arts: Humanities
International Cultures (IL)
General Education: Humanities (GH)

CMLIT 143: Human Rights and World Literature
3 Credits

Human rights violations discussed in tandem with their literary representation, presented in a global and comparative context. CMLIT 143 Human Rights and World Literature (3) (GH;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. "Human rights" refers to basic rights and freedoms to which all humans are entitled, often held to include the right to life and liberty, freedom of thought and expression, and equality before the law. But these ideas have not always been a part of human thought and some scholars believe that without certain forms of literature today's understanding of human rights would not exist. Through comparative analysis of a variety of human rights storytelling genres that reflect a range of contexts, this course will suggest that it is impossible to understand human rights without also thinking about the stories that create and sustain their idea. One main premise of this course is that the representation of human rights violations is always a vexed undertaking. It is both urgent and necessary, while also incomplete and inadequate. In order to explore this dilemma, this course focuses on the intersection between human rights advocacy and the various cultural forms that explicitly attempt to participate in human rights discourse. The course will cover a variety
of cultural forms such as comic books, movies, photography, novels, testimonials, poetry, plays, etc. that reflect on human rights atrocities such as slavery, the Holocaust, war, dictatorships, apartheid, Genocide, and more. At the center of the course are questions about aesthetics and ethics. What are the risks and obligations of human rights storytelling and how are these linked to specific cultural forms and aesthetic practices? This course examines a range of human rights stories through a balance of context and close reading, where stories are studied both for what they say and how they say it.

CMLIT 153: International Cultures: Film and Literature
3 Credits

Comparison of narrative techniques employed by literature and film in portraying different cultures, topics may vary each semester. CMLIT 153 CMLIT 153 International Cultures Through Literature and Film (3) (GH;IL) (BA) This course meets the Bachelor of Arts degree requirements. This course will compare narrative and artistic techniques employed by literature and film in portraying different social and cultural environments, which will range widely around the globe and may include Africa and the Middle East, East Asia, and South America, as well as European and North American examples. Students will view approximately twelve to fourteen films and read five to six novels or other texts such as short stories, plays, and poems. The purpose of this course is to have students examine how the selected artists have developed their intentions and their subject matter in their respective medium, literature or film, and to allow students to study modes of narration across different cultures and media. Through a combination of lectures and comparative discussions, students will examine how narrative components, including plot, genre, environment, character, and point of view are developed in films and fiction from diverse cultures. The comparative nature of the course allows students to understand, evaluate, and appreciate both the universal and unique qualities of the human condition. The study of narrative technique will help students develop analytical skills in discussing and writing about the literary and cinematic expression of cultural values. Student performance will be evaluated through means such as midterm and final short answer and essay examinations, a short initial paper (1-2 pages), and a final comparative paper (4-5 pages). The individual instructor may choose to replace or supplement some of these assignments with oral presentations. The examinations and papers will allow the student to demonstrate competency in evaluating and comparing cultures, artists and mediums, and in expressing their ideas.

Bachelor of Arts: Humanities

CMLIT 185: World Novel
3 Credits

Development of the modern novel in the last century (outside the British Isles and the United States); lectures, discussions, readings in translation. CMLIT 185 CMLIT(ENGL) 185 The Modern Novel in World Literature (3) (GH) (BA) This course meets the Bachelor of Arts degree requirements. In this course, which is cross-listed with English, students will read examples of the modern novel from around the world. Focusing on novels written outside of America and England, this class will explore the development of the modern novel as a genre across a number of world cultures. As an example, moving from the beginnings of literary modernism (the late nineteenth century) through the early and mid twentieth century, the course will consider works by writers such as the following: Chinua Achebe, Italo Calvino, Albert Camus, Simone deBeauvoir, Fyodor Dostoevsky, Isak Dinesen, Marguerite Duras, Natalia Ginzburg, Herman Hesse, James Joyce, Thomas Mann, Gabriel Garcia Marquez, Kenzaburo Oe, and Marcel Proust. This course will address the ways in which the world novels under consideration constitute examples of various literary forms and styles. The class will examine the differences and distances between literary movements such as social realism and magical realism, modernism and postmodernism. The goals of this course will be to hone students' critical reading and writing skills while granting them the ability to think about the modern novel as a distinct genre in a comparative global context. Students will be asked to read a minimum of five to six novels, spending an average of two weeks studying each work. They will be asked to complete at least three writing assignments including at least two kinds of writing such as the essay, essay exam, or semester-long reading journal. This course will prepare students for additional college-level literature courses by helping them to develop the analytical skills necessary to analyze complex written texts. This course fulfills a General Education Humanities requirement.

CMLIT 189: Modern Drama
3 Credits

Playwrights who set the world's stage for twentieth-century drama; issues that continue to shape the contemporary theatrical world. CMLIT (ENGL) 189 The Founders of Modern Drama (3) (GH)(BA) This course meets the Bachelor of Arts degree requirements. CMLIT/ENGL 189 will constitute a wide-ranging study of plays by authors often credited with the making of modernist drama. The class will approach these plays from a variety of thematic, historical, and/or generic vantages. Authors under consideration will vary from class to class, but may include writers such as Ibsen, Strindberg, Chekhov, Shaw, Wilde, Galsworthy, O'Neill, Beckett, and Yeats. Topics under consideration will vary from class to class but may include a chronological introduction to the development of modern drama, a consideration of a principal theme or themes in modern drama through a number of plays, or a consideration of plays in the context of historical events or formal or aesthetic elements. Time allotted for the study of the works under consideration will vary. This
class will prepare students for advanced courses in dramatic literature as well as other academic courses that engage in the verbal and written analysis of complex written texts. The course may be used as an English or Comparative Literature major credit or as credit toward the English or Comparative Literature minor.

CMLIT 191: Introduction to Video Game Culture
3 Credits

A comparative, international look at the nature and history of video games as cultural artifacts, from Pong to online role-playing. CMLIT 191 (GAME 160) Introduction to Video Game Culture (3) This course is a comparative introduction to the nature and history of video games as cultural artifacts, from Pong to online role-playing. It introduces students to academic discussion on and creative work in new digital forms including hypertexts, video games, cell phone novels, machinima, and more. Students will survey major debates over the meaning and value of video games, and study some of the major theoretical terms and perspectives developed to elaborate the cultural and sociological value of video games. The course extends students’ skills in literary interpretation to a variety of new objects, and makes them aware of the role medium plays in aesthetic development and production. Students will leave with a far sharper understanding of how the interpretive tools used in the humanities can be extended to include new media, and with a sense of the historical role video games have played and will continue to play in global cultural production. Because the course is historically focused, it will spend significant time looking at the differential development of video games in three major regions: the United States, Europe, and East Asia (especially Japan).

CMLIT 401: The Western Literary Heritage I

3 Credits

Major literary movements and authors in the literature of the Western world from the beginnings through the early Renaissance.

**Prerequisite:** 3 credits in literature or history
Bachelor of Arts: Humanities
International Cultures (IL)
Writing Across the Curriculum

CMLIT 403: Latina/o Literature and Culture

3 Credits

Literary and other forms of cultural expression (film, music, art, and theater) are compared across different Latina/o communities. LTNST (CMLIT) 403 Varieties of Latina/o Cultural Expression (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. This course provides students with a multi-faceted comparative view of Latina/o literature in relation to other forms of cultural expression. First, the course presents a variety of cultural expressions to students in an effort to teach them the different ways that form affects content. Each text will be studied in its historical context as well, thereby providing students with a sense of Latina/o cultural history. Second, this course compares works from within the same genre, allowing students to recognize the ways that Latina/o culture has worked to build identity, to deconstruct identity, and to challenge cultural stereotypes. Such comparison further facilitates comparison of the ways that different cultural forms have been used by diverse Latina/o communities. Third, this course compares cultural forms, allowing students to see how Latina/o poetry affects music or how Latina/o theater affects novels Fourth, this course will include texts that represent a variety of linguistic and national contexts, including many countries in Latin America, thereby allowing students to see the relationship between history, culture, language, geography, and identity. These are all themes that are at the center of both Latina/o Studies and Comparative Literature. A comparative perspective facilitates appreciation of the vast and varied ways that Latina/o communities have used cultural expression. A particular point of contact between Latina/o Studies and Comparative Literature is the influence of hybridity. A central issue explored in this course concerns the intricate connections between multiple ways of expressing identity, in the arts, literature, music, etc., in diverse circumstances, such as locations where Latina/o cultures may be in the mainstream (such as in Latin America) and in the minority (in the U.S.). Drawing upon approaches offered by comparative literature and theories such as post-structuralism, feminism, and post-colonialism, we will examine the complex process through which Latina/o culture has been defined, disseminated, contested, and commercialized. Of particular interest from a comparative perspective are the ways that Latina/o cultures are created through hybridization, processes of mutual borrowing and differentiation, as well as through transnational processes of migration, urbanization, and cultural contact. The course’s objective is to show not only how complex societies consolidate a shared culture but also how diverse Latina/o communities have produced a multiplicity of cultures that have been expressed via a broad range of cultural registers. These communities often span vast geographical areas, not only in the U.S. but across the Americas as people continue to look to their countries of origin for artistic inspiration.

**Prerequisite:** 3 credits in the humanities or in any LTNST course, or 4th-semester proficiency in Spanish

Cross-listed with: LTNST 403
Bachelor of Arts: Humanities
United States Cultures (US)

CMLIT 404: Topics in Asian Literature

3 Credits

Selected works from the major poetry, fiction, and drama of such countries as India, China, Japan. CMLIT 404 / ASIA 404 Topics in Asian Literature (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course focuses on Asian literature in a comparative and international frame. Different iterations of this course will have different topics as well as different historical or geographic foci, but may include literatures from the countries of East Asia (China, Japan, Korea), Southeast Asia (Thailand, Vietnam, Laos, Indonesia, Cambodia), or South Asia (Bangladesh, India, Pakistan). Because the course is comparative it will highlight relationships between and among literary traditions of Asia, or between Asia and the rest of the world, whether in the fields of poetry, drama, or fictional and non-fictional prose.

**Prerequisite:** 3 credits in literature or related field appropriate to this course
Cross-listed with: ASIA 404
Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures
International Cultures (IL)
Writing Across the Curriculum

CMLIT 405: Inter-American Literature

3 Credits

This course examines the development of literature in Canada, the United States, Spanish America, the Caribbean area, and Brazil.

**Prerequisite:** 3 credits in literature
Bachelor of Arts: Humanities
International Cultures (IL)
United States Cultures (US)

CMLIT 406: Women and World Literature

3 Credits

Literature written by women, especially women from non-Western cultures; the spectrum of genres in which women writers have excelled.

**Prerequisite:** 3 credits in literature or in women’s studies
Bachelor of Arts: Humanities
International Cultures (IL)

CMLIT 408: Heroic Literature

3 Credits

Traditional heroes, their traits and adventures; typical themes and examples chosen from the epics and sagas of world literature.

**Prerequisite:** 3 credits in literature or folklore
Bachelor of Arts: Humanities
International Cultures (IL)
CMLIT 410: Literary Translation: Theory and Practice

3 Credits

Emphasizing literary translation, a study of the theoretical and practical problems encountered in the processes of translation, transmission, and interpretation. CMLIT 410 Literary Translation: Theory and Practice (3) (IL) (BA) This course meets the Bachelor of Arts degree requirements. This course focuses on the history and practice of literary translation, ranging across space and time to provide a comparative, international perspective. It addresses such issues as the difficulties of literary language; theories of translation and translatability; theories of semantic equivalence; alternative modes of translation including sound- and graph-translation; and the history of important moments of translation in shaping the literary imagination. No second language is required, but students interested in learning how to translate literature may be given assignments allowing them to practice important skills connected to that task.

Prerequisite: 18 credits in a foreign language
Bachelor of Arts: Humanities
International Cultures (IL)

CMLIT 415: World Graphic Novels

3 Credits

Critical analyses of form, genre, medium, and discourse of the graphic novel and its historical precedents in an international and comparative context. CMLIT 415 World Graphics Novels (3) (GH; US; IL) (BA) This course meets the Bachelor of Arts degree requirements. This course considers the graphic novel (also known as graphic fiction, comics, or sequential narrative) as an emergent literary medium and global phenomenon. The course focuses on texts that engage issues of contemporary identity, ethnicity, sexuality, technology, and/or history (personal, family, and national). These graphic novels engage these issues through the medium of text joined with image. This course explores the aesthetic of sequential narrative, its methods of production and consumption, and its place in a contemporary culture of reading. Assigned texts include titles from the United States, France, Japan, Italy, Canada and Norway. All texts will be read in English translation.

Prerequisite: 3 credits in literature
Bachelor of Arts: Humanities
International Cultures (IL)
United States Cultures (US)
General Education: Humanities (GH)

CMLIT 422: African Drama

3 Credits

Traditional and popular drama forms; modern anglophone and francophone drama; nationalism and social criticism in contemporary African drama.

Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures
International Cultures (IL)

CMLIT 423: African Novel

3 Credits

From traditional oral narratives to modern autobiographical, historical, satirical, sociological, and allegorical forms; novelist as social critic.

Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures
International Cultures (IL)

CMLIT 424: Transnational Korean Literature

3 Credits

Exploration of seminal Korean texts, including poetry, fiction, autobiography, and criticism, from the early twentieth century to the contemporary era. This course provides a comprehensive overview of modern Korean literature within a transnational context. As we learn how to critically analyze seminal Korean texts, we will locate them in the social, political, economic, and cultural conditions under which they were produced and received. In grappling with some of the fundamental issues they raise, including colonialism, migration, national division, war, gender relations, developmentalism, urbanization, democratization, and contemporary consumer culture, we will also seek to situate these writings in the Korean vernacular within the larger context of global modernity. Rather than take Korean literature and global modernity as given or apart from each other, we will attend to their intersections by raising such questions as: How did modern experiences, constructed through the interface with unfamiliar Others, change preexisting ways of writing and reading? How did foreign occupations affect the formation of a national literature? In what ways do Korean writers’ representations of the inter/national events and phenomena on and beyond the Korean peninsula at once enrich and complicate empirical investigations into modern histories of Korea, East Asia, and the world? In an increasingly borderless world, can we draw a boundary around what is called “Korean” literature? In parallel with these questions, we will further discuss why and how to engage in literary practices in the current age of digital reproduction. Instruction and all materials will be in English. No preliminary knowledge of Korean history or language is required for taking this course.

Prerequisite: KOR 120; KOR 121; ASIA 100; ASIA 102; ASIA 83; ASIA 4;
CMLIT 4; 5th Semester standing
Cross-listed with: ASIA 424, KOR 424
Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures
International Cultures (IL)

CMLIT 425: Global Korean Cinema

3 Credits

Exploration of Korean cinema from the early twentieth century to the present, with an emphasis on its global/local dynamics. This course offers an introductory overview of Korean cinema. As we trace its history from the colonial period to the current “Korean wave,” we will also engage with film criticism, the trans/national contexts of film productions, the particular aesthetics of selected auteurs/genres, and local/global receptions of Korean cinema. Our discussion of formal elements and key issues featured in these films; modernity, colonialism, division, nation, class, gender, identity, tradition, ideology, desire, violence, and migration, among others; will be informed by readings of secondary sources and theoretical works, as well as literary materials produced during the
same period. Throughout our analyses, we will seek to contextualize the cinematic texts within moments of major shifts not only in modern Korean history, but also in the transnational film industry and screen culture. In pursuing a broad and detailed perspective of Korean cinema, this course will ultimately enrich, and simultaneously complicate, our understanding of Korea, cinema, and the world. Instruction and all materials will be in English. No preliminary knowledge of Korean history or language is required for taking this course.

**Prerequisite:** KOR 120; KOR 121; ASIA 100; ASIA 102; ASIA 83; ASIA 4; CMLIT 4; 5th Semester standing
Cross-listed with: ASIA 425, KOR 425
Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures
International Cultures (IL)

**CMLIT 429: New Media and Literature**

3 Credits

New media literary genres; critical discussion of creative works in digital media.

Cross-listed with: ENGL 429
Bachelor of Arts: Humanities

**CMLIT 430: Global Modernisms**

3 Credits

A comparative investigation of global Modernisms, with an emphasis on the relations between modernism, modernity, and modernization. CMLIT 430 Global Modernisms (3) (IL) (BA) This course meets the Bachelor of Arts degree requirements. This course explores and reassesses, comparatively, the ironies, conundrums, paradoxes, and the self-defying and self-engendering strategies of Modernism's relentless activity as aesthetic movement and as complement to modernity. Readings from theoretical texts and literary works across cultural contexts, international traditions, and linguistic frontiers. Students will learn how to do critical analyses of written texts, and how to analyze and write about the history of aesthetic and particularly literary modernism and the concepts of modernism, modernity, and modernization. Students will leave the course as better critics of literary work and with an increase in ability to perform literary and cultural analysis that relies on a solid grasp of relevant historical and theoretical contexts. Grading will involve a combination of class discussion, writing assignments, and exams, depending on class size and instructor preference.

**Prerequisite:** 3 credits in literature
Bachelor of Arts: Humanities
International Cultures (IL)

**CMLIT 435: Cultures of Globalization**

3 Credits/Maximum of 3

Cultural and literary effects of the process of globalization, with an emphasis on world literatures and transnationalism. CMLIT 435 Cultures of Globalization (3 per semester/maximum of 6) (IL) This course focuses on the cultural and literary effects of the process of globalization, with an emphasis on world literatures and transnationalism. It invites students to think about the ways in which the globalization of culture, politics, and/or the economy affects literary production, and the ways in which such literary features as genre, form, medium, style, and theme in turn reflect and attempt to shape our understanding of the global and its becoming.

The course will have a significant focus on primary material (literature, film, other media) and secondary material (philosophy, journalism, criticism, and so on). It will introduce students to the main theoretical concepts that govern thinking about globalization and global culture, as well as to important literary and cultural texts that articulate those values. It will prepare them for further research in comparative literary studies and in the critical history of globalization.

**Prerequisite:** 3 credits in the study of literature
Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures
International Cultures (IL)

**CMLIT 438: Fantastic Worlds: International and Comparative Perspectives**

3 Credits

A comparative, international study of fantastic worlds in literature and visual culture. CMLIT 438 Fantastic Worlds: International and Comparative Perspectives (3) (IL) This course will explore a wide range of ldquo;fantasticrdquo; narrative voices, crossing the boundaries of genres, periods, and nations, through literary and visual texts from the 19th century to contemporary eras, and from Asia to Americas. Students will examine various types of literary techniques and concepts, such as magic realism, grotesque realism, the absurdity, the fantastic, etc., and learn how texts best capture/grasp the nature of ldquo;reallrdquo;ities and ldquo;fantasticsrdquo; in their creation of ldquo;reallrdquo;ities and ldquo;fantasticsrdquo; worlds. Students will develop more profound understanding of literatures through global lenses, develop and refine critical thinking, in speech and writing, and comparative methods of literary analysis, and develop communications skills in essays, response papers, class discussions, presentation and research papers. Instructional objectives: 1) Students will develop more profound understanding of literatures through global lenses 2) Students will develop and refine critical thinking, in speech and writing, and comparative methods of literary analysis 3) Students will develop communications skills in essays, response papers, class discussions, presentation and research papers.

**Prerequisite:** 3 credits in literature
International Cultures (IL)

**CMLIT 446: Postcolonial Literature and Culture**

3 Credits/Maximum of 3

Postcolonial literature and theory in a comparative and international context. CMLIT 446 Postcolonial Literature and Culture (3 per semester/maximum of 6) (IL) (BA) This course meets the Bachelor of Arts degree requirements. Taking a comparative and transnational approach, this course will provide an advanced introduction to the field of postcolonial literature and theory. Readings will include the foundational anti-colonial writings of the early twentieth century, the postwar literature of decolonization, and the most recent literature on cultures of globalization. Themes to be discussed may include nationalism, subalternity, neocolonial formations, migration, and cultural translation. In general, this course will be taught in the active learning mode, featuring in-class discussion, writing projects, and group presentations. CMLIT 446 is one of the many courses, which count towards the Comparative Literature major and the World Literature minor.

**Prerequisite:** 3 credits in literature
Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures
International Cultures (IL)
CMLIT 448: Literary Cultures of Buddhism

3 Credits

Comparative exploration of various Buddhist literary cultures, from the classical Indian subcontinent to modern movements like the Beats and dalit writing. CMLIT 448 Literary Cultures of Buddhism (3) (IL) This course will provide an in-depth exploration of various cultures of Buddhist literary production. Readings will cover a broad temporal and geographical range. Prior study of Buddhism or literature is not required and materials will be in English. Students will learn about major genres of Buddhist literature, such as sutras (scripture), ?taka (stories of the Buddhas); previous incarnations), hagiography, miracle tales, religiously inspired poetry, and k?an meditational riddles. The course will also examine the various forms into which contemporary authors have adapted these materials (such as manga, novels, memoirs, and film). The course, or individual units within the course, will be structured so that students develop an historical perspective, allowing them to understand the literary cultures that gave rise to the works under study. Class work includes some lecture but emphasizes guided discussions, group work, writing exercises, and some student presentations. This participatory approach is intended to deepen students’ appreciation of the works, to help them understand value systems that may differ from those predominant in western cultures, and to assist students in developing both analytical and expressive abilities. The course is designed to be suitable for all students generally interested in religious cultures of writing, in Buddhism, or in literature, whether or not they have previously studied in any of these areas. The Comparative Literature major requires a certain number of electives at the 400-level, of which this could be one, depending on its content. Further, the course is designed to count as General Education and as an IL (International); course. It will be taught, as feasible, every 2-3 years with an enrollment of 20-30 students. With the addition of supplementary reading and research assignments, the course may also be suitable for certain graduate students. This course would benefit from access to a laptop and digital projector.

Prerequisite: 3 credits in literature
International Cultures (IL)

CMLIT 449: Literary Cultures of Islam

3 Credits/Maximum of 3

Comparative discussion of the literary cultures of Islam from the seventh century to the present. CMLIT 449 Literary Cultures of Islam (3-6) (IL) (BA) This course meets the Bachelor of Arts degree requirements. This course is an advanced introduction to the literary cultures of the Islamic world, from the seventh century to the present. No prior knowledge is required. Works will be read in translation. Students will study the foundational text of Islam, the Quran, as a literary text, and learn about major genres of Islamic literatures (ghazal, masnavi, and maqamah, among others). They will also examine how these genres have been adapted in modern literature and media (novels, memoirs, and film). Supplementary historical readings will be provided to contextualize the primary texts. CMLIT 449 is one of the many courses which count toward the Comparative Literature major and the World Literature minor.

Prerequisite: 3 credits in the study of literature
Bachelor of Arts: Humanities
Bachelor of Arts: Other Cultures
International Cultures (IL)

CMLIT 453: Narrative Theory: Film and Literature

3 Credits

Comparative study of the aesthetics and techniques of film and literature; close analyses of masters of each art form.

Prerequisite: COMM 150 or 3 credits in literature
Cross-listed with: COMM 453
Bachelor of Arts: Humanities
International Cultures (IL)

CMLIT 455: Ethics, Justice, and Rights in World Literature

3 Credits

Concepts of ethics, justice, and rights, appearing in world literature and/or film. CMLIT 455 Ethics, Justice, and Rights in World Literature (3) (IL) The course will consider how literature and culture address common concerns, including morality, justice, equality, and agency from different perspectives, aesthetic styles, and formal constraints. Students will consider how cultural texts, like legal and philosophical texts, have the power to influence politics and society. Literature is important for understanding ethics, justice, and rights because it teaches ways of thinking and of relating to others that are central to social values. How do we develop the commitment to social equity? How do stories develop ideas of altruism, of prejudice, of pathos, and more in their audience? What role does culture play in developing the moral imagination required to think through social crises? Each class will explore one or more interrelated topics through a variety of cultural and philosophical works. Readings might include works by Melville, Shakespeare, Kafka, Glaespell, Morrison, Capote, Garcia Marquez, and others. Topics might include: formalism; the paradoxes of equity; narrative, storytelling, and framing; custom, law and the political order; law, society, and power; interpretation, authority, and legitimacy; punishment, retribution, and redemption; and others. This course will provide an opportunity to think about the law and ethics in a new way, to read engaging works of fiction and non-fiction, and to examine the humanistic and philosophical perspectives that are at the core of the ethical imagination.

Prerequisite: 3 credits in the study of literature
International Cultures (IL)

CMLIT 470: The Modern Novel

3 Credits

Major novels of Joyce, Proust, Kafka, Thomas Mann, Nabokov, and others; their contributions to the art of the novel. CMLIT 470 The Modern Novel (3) (IL) (BA) This course meets the Bachelor of Arts degree requirements. This course focuses on the modern novel in a comparative and transnational perspective. It explores the basic connections between the modern period and the novel as a form, noting the rise to prominence of the novel in the modern period, and focuses on several important examples of the genre. Some versions of this course may adopt specific organizing themes, such as the novel and the city, the novel and war, the novel and love, and so on. Other versions may focus on the historical development of the novel over time or on crucial interpretative or narratological issues, including the problems of character, time, or point of view; still others may concentrate on major sub-genres of the modern novel, including realism, magic realism, modernism, and postmodernism.

Prerequisite: 3 credits in literature
Bachelor of Arts: Humanities
CMLIT 471: Poetry and Poetics

3 Credits

Theoretical and practical concepts in the comparative, global history of poetry and/or poetics. This course explores theoretical and practical concepts in the history of poetry and/or poetics. Like all comparative literature courses, it pursues this task through discussions of poetry from a wide variety of national or linguistic origins and ranges widely across historical period, medium, and social form, where appropriate. Students will develop a broad array of interpretive skills appropriate to poetry and poetics; they will acquire a knowledge of a wide variety of poetic forms; they will undertake comparative analyses of poems and poetic structures; they will learn how to think about poetics outside poetry.

Prerequisite: 3 credits in literature

CMLIT 480: The International Folktale

3 Credits

Traditional tales from various parts of the world: their origin, characteristics, forms; their transmission as oral narrative and written literature.

Prerequisite: 3 credits in literature or folklore

Bachelor of Arts: Humanities

International Cultures (IL)

CMLIT 486: Tragedy

3 Credits

Development of tragic drama and its relationship to social background and philosophical theory.

Bachelor of Arts: Humanities

International Cultures (IL)

CMLIT 487: Comedy

3 Credits

Development of comic drama and its relationship to social background and philosophical theory.

Bachelor of Arts: Humanities

International Cultures (IL)

CMLIT 488: Modern Continental Drama

3 Credits

From Ibsen to the drama of today: Strindberg, Chekhov, Hauptmann, Pirandello, Ionesco, Beckett, Genet, and others.

Prerequisite: ENGL 015 or ENGL 030

Cross-listed with: ENGL 488

Bachelor of Arts: Humanities

International Cultures (IL)

CMLIT 489: Contemporary World Fiction

3 Credits

A survey of developments in contemporary world fiction in translation. This course is to expose students to the developments in world fiction in the last 50 years and to expose them to a range of authors from a number of countries. This course, then, also involves getting to know the novel-writing histories of those countries and in many cases, the recent histories of those countries (for example, in novels like Rushdie’s Midnight’s Children, García Márquez’s One Hundred Years of Solitude). The class will approach these fictions from a variety of thematic, historical, and/or generic vantages. Authors under consideration will vary from class to class, but may include writers such as Pamuk, Grass, Murakami, and Márquez. Time allotted for the study of the works under consideration will vary.

Prerequisite: 3 credits in literature

CMLIT 490: Video Game Lit Studies

3 Credits

A comparative look at the nature and history of video games as cultural artifacts, from Pong to online role-playing. This course meets the Bachelor of Arts degree requirements. The video game industry is larger than the film industry, and yet the academic study of video games has only just begun. This course is a comparative introduction to the nature and history of video games as cultural artifacts, from Pong to online role-playing. It introduces students to academic discussion on and creative work in new digital forms including hypertexts, video games, cell phone novels, machinima, and more. Students will learn basic narrative theory, and study its impact on game studies and game production. They will survey major debates over the meaning and value of video games, and review its history from Pong to contemporary games, including online world-based games. The course extends students’ skills in literary interpretation to a variety of new objects, and makes them aware of the role medium plays in aesthetic development and production. Students will leave with a far sharper understanding of how the interpretive tools used in the humanities can be extended to include new media, and with a sense of the historical role video games have played and will continue to play in global cultural production.

Prerequisite: GAME 160, GAME 140, or 3 credits in literature; Concurrent: GAME 160 or GAME 140 if desired

Cross-listed with: GAME 460

Bachelor of Arts: Humanities

International Cultures (IL)

CMLIT 491: Literary Adaptation: International and Comparative Perspectives

3 Credits/Maximum of 3

A comparative, international study of adaptations between literature and other media (film, theater, photography, music). This course meets the Bachelor of Arts degree requirements. From the very first expressions of literary impulses in prehistoric times, and continuing through the present, literary material has been re-used and creatively recycled through processes of adaptation and appropriation, often involving translations not only....
between languages, but also between media. This course uses a global perspective to explore the processes and aesthetics of adaptations of literary works, including adaptations into other genres or media, such as the visual arts, a film, opera, stage play (or vice versa mdash; adaptations from other media into literature). Drawing upon a broadly international selection of materials, we will explore multiple discourses surrounding adaptation; address the importance of translation and the dynamics between languages, audiences, and texts; study how adaptations address common themes such as race, class, gender, and sexual orientation; discuss international taxonomies of literary genres; and critically assess different cultural notions of authorship, intellectual property, and communal vs. individual ownership. From year to year the works and authors studied in this course may change. Course objectives include (1) to encourage students to think critically about adaptations within and between cultures and media, in different parts of the world (2) to critically evaluate several of the often conflicting analytical paradigms which characterize the study of literary adaptations; (3) to assess varied approaches to genre in adapted works in different cultural settings; (4) to understand different perspectives on the concept of the author, such as the literary author and the Isquo;authorrsquo; in theatre studies; (5) to question assumptions about the world, re-examine personal points of view, and understand an expanded international range of ethical and value systems as expressed in literature. For methods of student evaluation, see the syllabus for each section; options include class presentations, response papers, research projects, and exams. This course may form part of the Comparative Literature major, the World Literature minor, and other majors.

**Prerequisite:** 3 credits in literature or other fields relevant to this course

Bachelor of Arts: Humanities

International Cultures (IL)

CMLIT 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

CMPEN 111: Computers and Computer Hardware

1 Credits

A brief orientation to University life and resources and an introduction to computers and computer hardware. CMPEN 111S Computers and Computer Hardware (1)This course contains two components: an orientation to University life and an introduction to the hardware aspects of computer engineering. In the orientation to University life, students learn about the responsibilities of and expectations on a student including ethical behavior, and explore some of the academic and non-academic resources of the University. In the introduction to computer engineering students learn about some of the fundamental concepts, devices, and methodologies that are involved in the design and use of digital and computer hardware. This exploration begins with a foundation of logic and critical thinking. Logic is examined first from a theoretical problem solving standpoint. The discussion then progresses to an implementation perspective examining how logic devices are created and used. Included is a look at some CAD tools and some logic design laboratory exercises. Using logic as a basic building block, the organization and design of a computer is then examined, ending in an exploration of some of the contemporary methods used to make computers faster and more efficient.

First-Year Seminar

CMPEN 270: Digital Design: Theory and Practice

4 Credits

Introduction to digital systems and their design. Topics include combinational and sequential devices and circuits, modern design tools and design practices. Students may take only one course for credit for CMPEN 270 or 271 and CMPEN 270 or 275. CMPEN 270 Digital Design: Theory and Practice (4)CMPEN 270 is a first course in digital systems and digital system’s design. It lays the groundwork for many later courses in computer organization and architecture and switching theory. The course includes both a lecture component to introduce important concepts, principles, methodologies and theories and a laboratory component in which the lecture material can be applied and practiced. The course introduces the theoretical foundation for
digital systems including number systems, a variety of commonly used codes and Boolean algebra. Combinational devices, logic gates, and sequential devices, latches and flip-flops are introduced along with design techniques, methods and tools. Design criteria and objectives are considered and design trade-offs are examined. Higher level design elements are also examined such as decoders, multiplexers, counters, and registers, and their use in system design. Students are exposed to a variety of design tools and implementation techniques, including schematic capture tools, simulation tools, Hardware Description Languages (HDL) and HDL design tools. Laboratory work includes the design, construction and debugging of a variety of digital circuits, and the use of standard laboratory tools such as the oscilloscope and logic analyzer, and various software design tools.

**Prerequisite:** PHYS 212

**CMPEN 270H: Digital Design: Theory and Practice**

4 Credits

Introduction to digital systems and their design. Topics include combinational and sequential devices and circuits, modern design tools and design practices. Students may take only one course for credit for CMPEN 270 or 271 and CMPEN 270 or 275.

Honors

**CMPEN 271: Introduction to Digital Systems**

3 Credits

Introduction to logic design and digital systems. Boolean algebra, and introduction to combinational and sequential circuit design and analysis. Students may take only one course for credit for CMPEN 270 or 271. CMPEN 271/CMPEN 271 Introduction to Digital Systems (3) This course introduces students to logic design and digital systems. The course begins with an overview of number systems, base conversions, and binary arithmetic. Boolean algebra is presented and several basic theorems and postulates are introduced. Boolean algebra is then used to model digital devices. Canonical forms for expressing Boolean functions are introduced including sum-of-products and product-of-sum forms. Basic Small Scale Integrated (SSI) combinational devices are introduced along with a description of their operations characterization, and use. The basic symbols used in a logic diagram/schematic are introduced and the principles involved in reading and creating logic diagrams/schematics are discussed. A systematic design methodology for combinational circuits is covered, including the concepts of function minimization using Karnaugh maps, handling don’t care conditions, and designing multiple output circuits. Medium Scale Integrated (MSI) combinational devices and functions such as multiplexors and decoders are discussed and their use in a variety of applications is explained. Simple programmable logic devices and their use in implementing combinational functions is covered. The process of combinational circuit analysis is discussed and the use and interpretation of timing diagrams is introduced. Binary arithmetic is reviewed along with binary addition and subtraction circuits. Various negative number codes are discussed including 2's complement, 1's complement and sign-magnitude representation. The concept of state and memory is introduced along with various sequential devices including the R-S latch, the D latch and the D, T, and J-K flip-flops. Timing considerations such as set-up and hold times for sequential devices is discussed along with various flip-flop triggering methods. The basic model for a sequential circuit/finite state machine is introduced. A systematic design methodology for creating synchronous sequential circuits is covered including state table/diagram creation, state reduction, state assignment, and circuit implementation. The process of sequential circuit analysis is also described. Special sequential devices and circuits are introduced including counters and registers. Their use in various applications is highlighted. The course ends with a discussion of memory devices including RAM's and ROM's. Throughout the course, students use a schematic capture and design simulation CAD tool to model and test a variety of circuits.

**Concurrent:** PHYS 212

**CMPEN 271H: Introduction to Digital Systems**

3 Credits

Introduction to logic design and digital systems. Boolean algebra, and introduction to combinational and sequential circuit design and analysis.

**Honors**

**CMPEN 275: Digital Design Laboratory**

1 Credits

Introduction to digital design techniques. Students may take only one course for credit for CMPEN 270 or 275.

**Concurrent:** CMPEN 271; PHYS 212

**CMPEN 275H: Digital Design Laboratory**

1 Credits

Introduction to digital design techniques.

**Honors**

**CMPEN 296: Independent Studies**

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

**CMPEN 299: Foreign Studies**

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

**International Cultures (IL)**

**CMPEN 331: Computer Organization And Design**

3 Credits

INTRODUCTION TO MAJOR COMPONENTS OF A COMPUTER SYSTEM, HOW THEY FUNCTION TOGETHER IN EXECUTING A PROGRAM, HOW THEY ARE DESIGNED. CMPEN 331 Computer Organization and Design (3) The goals of the course are to introduce students to the major components of a computer system (the data path, the control path, the memory system, the I/O system), how they function together in executing a program, and how they are designed. The relationships between instruction set design, addressing modes, fetch and execute operations, and their impact on the underlying architecture are presented. Students will develop skills both in assembly language programming and in designing architecture components in a hardware description language (VHDL or verilog). CMPEN 331 is a required course for both computer engineering and computer science majors. CMPEN 331 requires access to
PCs/workstations with commercial hardware description language tools (e.g., Synopsys VSS compiler and simulator) and a modern assembler/debugger (e.g., SPIM MIPS assembler, simulator, and debugger).

Prerequisite: CMPEN271 or CMPEN270; CMPSC121 or CMPSC201

CMPEN 331H: Computer Organization and Design
3 Credits

Introduction to major components of a computer system, how they function together in executing a program, how they are designed.

Honors

CMPEN 351: Microprocessors
3 Credits

Microprocessor architecture; memory system design; assembly language programming; interrupts; the stacks and subroutines; memory and I/O interfacing; serial I/O and data communications; microprocessors applications.

Prerequisite: CMPEN271; CMPEN275

CMPEN 352: Embedded Systems Design
3 Credits

Design/development of embedded systems for data acquisition, process control, and special-purpose computing systems; peripheral interfacing, serial/parallel communications and bus systems. CMPEN 352WMicroprocessor-based System Design (3) In this course students learn how to design application specific embedded systems. Embedded systems are increasingly important as they are used in industrial applications, personal computing, and consumer products. Embedded systems are based on microprocessors and microcomputers, but are not intended to be general-purpose computers. In the laboratory students will design, implement, and validate application specific embedded systems. Being a writing-across-curriculum course, students will learn effective techniques of reporting their technical designs.

Prerequisite: CMPEN351 or CMPEN472; E E 210

Writing Across the Curriculum

CMPEN 362: Communication Networks
3 Credits

Data transmission, encoding, link control techniques; communication network architecture, design; computer communication system architecture, protocols. CMPEN 362CMPEN (E E) 362 Communication Networks (3)CMPEN (E E) 362 is an elective course in both the electrical and computer engineering curricula which provides an overview of the broad field of data and computer communications. First, a general model of the communication task is presented, including the layered concept by which each layer provides services for the layer above. First, the lowest (physical) layer is studied. This involves signal design, Fourier analysis representations, bandwidth concepts, transmission impairments and communication media properties. Then the next higher (link) layer is considered which involves organizing bits into frames, data link and error control methods (including frame sequence numbering and error detection principles). Multiplexing to share a link is studied, including frequency division multiplexing, dedicated time division multiplexing, and statistical time multiplexing. At the network layer level, there are two categories: broadcast (usually local area) and switching networks. Broadcast and local area network studies include bus, tree and star topologies, Ethernet, optical fiber bus networks, ring networks, and medium access control protocols. Switching and routing concepts for networks are explained, including both circuit and packet switching, datagrams and virtual circuits. Properties of frame relay and asynchronous transfer mode (ATM) networks are described. Internetworking frame structures, routing and protocols are studied. Also, bridge routing for local networks is described. At the still higher transport (network end-to-end control) layer, transport protocols, including TCP/EP, are described.

Prerequisite: CMPEN270 or CMPEN271; Concurrent: STAT 301 or STAT 318 or STAT 401 or STAT 414 or STAT 418

Cross-listed with: EE 362

CMPEN 371: Advanced Digital Design
3 Credits

Theory, design, and implementation of digital circuits based on combinational and sequential circuits; implementation of designs using hardware description language. CMPEN 371 Advanced Digital Design (3) Students will learn advanced concepts in digital design for complex combinational and sequential logic, and learn how to effectively use minimization and synthesis techniques. Contemporary CAD tools and target digital technologies including Field Programmable Gate Arrays (FPGAs) are utilized. The use of a hardware-description language for digital design is introduced. In the laboratory portion, students will implement, simulate, and test designs.

Prerequisite: CMPEN271; CMPEN275; CMPSC121 or CMPSC201; E E 210 or E E 211

CMPEN 395: Internship
1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor

CMPEN 396: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

CMPEN 396A: Current Technologies in Computer Engineering
1-6 Credits

Investigation of a current technology relevant to computer engineering.

CMPEN 397: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.
CMPEN 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CMPEN 411: VLSI Digital Circuits

3 Credits

Basic building blocks of CMOS design, design rules, chip planning, layout design, system power and timing, simulation of VLSI structures.

Prerequisite: CMPEN371 or CMPEN471; E E 310

CMPEN 416: Digital Integrated Circuits

3 Credits

Analyses and design of digital integrated circuit building blocks, including logic gates, flip-flops, memory elements, analog switches, multiplexers, and converters. CMPEN 416 is a technical elective available to electrical and computer engineering students. It is intended for students who wish to specialize in the field of digital circuits. This course introduces the basic concepts involved in the design of digital circuits, which find practical application as logic and memory circuits in computers and other digital processing systems. The course emphasizes integrated circuit process-compatible circuit design techniques in recognition of the amazing synergy that has characterized the relationship between computer circuits and integrated circuit processing technology. This course includes three lectures and a two-hour laboratory each week. The only prerequisite is E E 310, a basic circuits course required for both electrical engineering and computer engineering students. CMPEN 416 begins with a review of the bipolar junction transistor (BJT) device and proceeds into the more advanced Ebers-Moll device model. This is followed by an examination of a series of BJT-based saturating and non-saturating digital circuits of ever increasing complexity illustrating the evolution of the modern bipolar logic circuit families. The next phase of the course reviews the metal oxide semiconductor field effect transistor (MOSFET) and proceeds along the same path taken for the bipolar transistor circuits. Various MOSFET logic circuit families are introduced and analyzed. Computer semiconductor memory circuits are considered next. Both BJT and MOSFET versions of both static and dynamic read-write and read-only memories are considered. The cell array, memory addressing circuits, and sense amplifier designs are all examined in detail. This is followed by the related subject of programmable logic arrays, the final topic. The emphasis of the laboratory component of the course is to compare the performance of representatives of each class of circuits to computer simulations of the same circuits. Parameters such as input-output voltage transfer characteristics, noise margins, and propagation delays are evaluated by building and measuring laboratory models. Most of the laboratory exercises require the student to evaluate a specified circuit, but the final exercise requires the student to design a circuit to meet a predefined set of specifications, then to prove that the design meets the requirements by measuring the circuit performance. Students are required to write a formal engineering report detailing the results of each laboratory exercise.

Prerequisite: E E 310

Cross-listed with: EE 416

CMPEN 417: Digital Design Using Field Programmable Devices

3 Credits

Field programmable device architectures and technologies; rapid prototyping using top down design techniques; quick response systems. CMPEN 417 Cross-listed with: EE 417 Digital Design Using Field Programmable Devices (3) Field Programmable Devices, such as Field Programmable Gate Arrays (FPGAs) and Complex Programmable Logic Devices (CPLDs) are widely used for rapid prototyping and quick response-time designs. The objective of this course is to introduce the student to digital design using Field Programmable ICs, and to provide an understanding of the underlying technologies and architectures of these Integrated Circuits. The course begins by introducing design alternatives for modern electronic systems identifying and classifying alternative system solutions, and evaluating when particular design solutions are optimal. These alternatives include microprocessors, microcontrollers, off-the-shelf digital ICs, Programmable logic ICs (FPGAs and CPLDs), and various forms of Application Specific Integrated Circuit (ASIC) designs. A homework assignment requires the student to quantitatively evaluate the cost, complexity, packaging, and time-to-market issues for a complex system design specification. Next, the underlying Field Programmable Logic IC architectures and technologies are studied in detail. Following a broad survey of available programmable IC vendors and on-chip programming technologies (and their cost/performance trade-offs), several specific case studies are presented in the class. The first is the Xilinx XC4000xl line, because of the target boards used in the CAD laboratory component for this class. The initial lab portions of the class help the students to specify their design using various forms of design entry tools and also allow them to see how their design map on to the underlying FPGA architecture. The students also learn the underlying algorithms used by the design software they use in their Labs. Next, the systematic top-down method for specifying complex designs using VHDL is introduced. Students are given a supporting homework assignment to develop high-level behavioral models for a simple digital system to reinforce this segment of the course. VHDL behavioral synthesis is now introduced as a preferred path to go from high-level system behavior to actual implementation on the FPGA. The strengths and weaknesses of synthesis are discussed, as are the emerging CAD tool trends. Additional VHDL-based homework assignments reinforce behavioral design and synthesis using commercial CAD tools. The final segment of the class covers special topics that identify current trends in digital system architecture and programmable logic design. These include such topics as partially reconfigurable architectures and dynamic reconfiguration techniques, system design for testability, and field programmable analog arrays. Applications of FPGAs in special purpose computing environments such as signal processing, Java acceleration and image processing are also introduced. In the laboratory, student design project assignments explore larger and more complete system specifications of such things as controllers, CPU and memory design, and signal processing blocks. These assignments reinforce the lecture content as the students model, synthesize and implement their digital designs on the target Xilinx FPGA boards.

Prerequisite: CMPEN331

Cross-listed with: EE 417

CMPEN 431: Introduction to Computer Architecture

3 Credits

Introduction to computer architecture. Memory hierarchy and design, CPU design, pipelining, multiprocessor architecture. CMPEN 431
Introduction to Computer Architecture (3) This course will introduce students to the architecture-level design issues of a computer system. They will apply their knowledge of digital logic design to explore the high-level interaction of the individual computer system hardware components. Concepts of sequential and parallel architecture including the interaction of different memory components, their layout and placement, communication among multiple processors, effects of pipelining, and performance issues, will be covered. Students will apply these concepts by studying and evaluating the merits and demerits of selected computer system architectures.

Prerequisite: CMPEN331 or CMPEN371

CMPEN 431H: Honors Introduction to Computer Architecture

3 Credits

Honors course in principles of computer architecture: memory hierarchies and design, I/O organization and design, CPU design and advanced processors. CMPEN 431H Introduction to Computer Architecture (3) This course will introduce students to the architecture-level design issues of a computer system. They will apply their knowledge of digital logic design to explore the high-level interaction of the individual computer system hardware components. Concepts of sequential and parallel architecture including the interaction of different memory components, their layout and placement, communication among multiple processors, effects of pipelining, and performance issues, will be covered. Students will apply these concepts by studying and evaluating the merits and demerits of selected computer system architectures.

Prerequisite: CMPEN331

CMPEN 441: Operating Systems

3 Credits

Resource management in computer systems. Process scheduling, memory management, file system design, I/O management, Unix operating system.

Prerequisite: CMPSC360

CMPEN 454: Fundamentals of Computer Vision

3 Credits

Introduction to topics such as image formation, segmentation, feature extraction, matching, shape recovery, object recognition, and dynamic scene analysis. CMPEN 454CMPEN 454 Fundamentals of Computer Vision (3)CMPEN 454 is an introduction to computer vision. The goal of computer vision is to make computers understand and interpret visual information. Computer vision systems bring together imaging devices, computers, and sophisticated algorithms for solving problems in areas such as industrial inspection, medicine, document analysis, autonomous navigation, and remote sensing. The course involves both pedagogical written assignments and computer projects. The beginning of the course gives an overview of computer vision and introduces low level image analysis techniques for binary images. Binary vision systems are useful when the silhouette of imaged objects convey enough information to recognize them. Examples can be found in optical character recognition, chromosome analysis and recognition of industrial parts. Moreover, many techniques developed for binary systems can be applied to gray level or color images. Next, the course covers image segmentation and contours. These topics are the foundation of most computer vision techniques. For an image to be correctly interpreted, it must be partitioned into regions that correspond to distinct objects or parts of objects. First, region based techniques such as thresholding, split and merge, region growing and texture analysis are introduced. Next, edge based techniques using gradient and Laplacian operators are discussed. Finally, contour representations and curve approximations linking edges into region boundaries are studied. Next, depth from vision, with emphasis in stereo vision, is considered. Calculating distances to and among various points in the scene is important in many computer vision tasks such as inspection, robot manipulation, and autonomous navigation. In this part of the course the geometry of stereo systems and how to obtain depth maps from stereo image pairs is studied. Also, alternative 3D imaging sensors such as laser based range finders and radars are discussed. Following stereo, the topic of computer vision is broaden to understand sequences of images over time. In this section techniques using information on spatial and temporal changes are used to design computer vision systems capable of coping with moving and changing objects, changing illumination and changing viewpoints. Visual motion is important primarily for two reasons. First, motion is a very important cue to understand the scene structure. Second, biological systems do use motion to infer properties of the surrounding world with very little a priori knowledge. Finally, the topic of 3D object recognition is discussed. Object recognition entails two main issues: object identification and object localization. Identification determines the objects being imaged while localization determines their position in the world and with respect to the sensors. This topic builds upon all the different techniques discussed until this point.

Prerequisite: MATH 230 or MATH 231 ; CMPSC121 or CMPSC201

Cross-listed with: EE 454

CMPEN 455: An Introduction to Digital Image Processing

3 Credits

Overview of digital image processing techniques and their applications; image sampling, enhancement, restoration, and analysis; computer projects. E E (CMPEN) 455 An Introduction to Digital Image Processing (3) E E/CMPEN 455, a technical elective available to both electrical and computer engineering seniors and graduate students, discusses many current techniques for processing and manipulating digital images. The course involves both pedagogical written assignments and computer projects. The beginning of the course gives an overview of digital image processing systems and digital image fundamentals. During this unit, important elements of human visual perception are reviewed; these ideas help motivate many of the computer-based techniques described in subsequent units. Also, the standard model for a digital image, in addition to the concepts of sampling and quantization, are described. Finally, basic topological concepts between digital image pixel are discussed. The next unit considers image transform analysis, with a primary focus on Fourier-based techniques. The one-dimensional Fourier transform is reviewed, and then two-dimensional Fourier transform analysis is discussed. To bridge the gap from the continuous world to the digital world, the sampling theorem is introduced. Next, the Discrete Fourier Transform and its properties are described. Fourier-based filtering techniques, such as the ideal low-pass and Butterworth filters are then introduced. The Fast Fourier Transform is also discussed. Finally, the Discrete Cosine Transform, used later in JPEG and MPEG, is introduced. The next unit discusses techniques for image enhancement and segmentation. These techniques include point-based techniques based on histogram analysis. They also involve linear and nonlinear mask-based methods for noise reduction and region sharpening. Further, techniques of mathematical morphology, which involve an application of
set-theoretic concepts to image processing, are described. Finally, image segmentation methods, based on edge detection and thresholding, are described. The final unit considers the concept of image compression. Techniques for image encoding and decoding are discussed. A brief model of the encoding-decoding process is described. Next, compression techniques, such as run-length encoding and Huffman coding, are described. Finally, the multimedia image-compression methodologies, JPEG and MPEG, are discussed.

**Prerequisite:** E E 350 or E E 353; CMPSC201 or CMPSC121
Cross-listed with: EE 455

CMPEN 461: Communication Networks

3 Credits

Data transmission, encoding, link control techniques, network architecture, design, protocols, and multiple access. CMPEN 461 Communication Networks (3) This course introduces students to fundamental concepts and principles underlying data communication networks, with an emphasis on the Internet and its five-layer architecture: the application, transport, network, link, and physical layers. The fundamental issues to be covered include, but not limited to, reliable communication over an unreliable network layer, connection establishment/teardown and handshaking, congestion and flow control, path determination, multiple access control. The student learning these principles will gain knowledge that lasts long after today’s; network standards and protocols have become obsolete.

**Prerequisite:** CMPEN271 ; CMPSC121 or CMPSC201

CMPEN 471: Logical Design of Digital Systems

3 Credits

Basic switching theory and design of digital circuits, including combinational, synchronous sequential, and asynchronous sequential circuits.

**Prerequisite:** CMPEN331

CMPEN 472: Microprocessors and Embedded Systems

3 Credits

Microprocessors: architecture, design, assembly language, programming, interfacing, bus structure, and interface circuits and their use in embedded systems. CMPEN 472 Microprocessors and Embedded Systems (3) In this course students should learn about the operation and design of microprocessor-based systems, including both hardware and software aspects with an emphasis on real time control environments and embedded systems. After completing the course, students should be able to develop, write and debug programs in a microprocessor's assembly language and use standard assembly language program development tools. They should also be able to interpret and analyze basic microprocessor system hardware. This course is a senior level elective for students in computer engineering and computer science. The course requires the use of general department computing facilities consisting of UNIX workstations running the appropriate program development tools.

**Prerequisite:** CMPEN331

--

CMPEN 472H: Honors Microprocessors and Embedded Systems

3 Credits

Honors course in microprocessors: architecture, design, assembly language, programming, interfacing, bus structure, and interface circuits and their use in embedded systems.

**Prerequisite:** CMPEN331

Honors

CMPEN 473: Microcomputer Laboratory

3 Credits

Design of digital systems using microprocessors. CMPEN 473 Microcomputer Laboratory (3) This laboratory course provides senior students with both theory and practice in designing, implementing, and debugging microprocessor-based systems. Students are guided through a series of projects in which they design, develop, and implement all of the components in a microprocessor based single-board system. After completing the course students will be able to design microprocessor based systems, including both software and hardware design. Students will also be able to use standard system design tools including standard laboratory equipment. This course is a senior level elective for computer engineering majors. CMPEN 472 is a prerequisite for this course. The course requires the use of a design laboratory including standard test equipment such as an oscilloscope, logic analyzer and signal generator as well as a PC with appropriate design software and a microprocessor or EPROM emulation system.

**Prerequisite:** CMPEN472

CMPEN 475: Functional Verification

3 Credits

Introduce concepts, methods, and technology for effective functional verification of modern electronic systems. CMPEN 475 Functional Verification (3) Verifying design correctness of increasingly complex system-on-chip designs poses a major challenge to the semiconductor industry. Functional or logic errors in a chip design that are not identified early in the design phase can dramatically increase a project’s overall cost and schedule. Further, design verification is consuming an ever-increasing portion of IC development time and cost. As much as 70% of effort in a complex IC design project is now attributed to verification. This course will cover five key aspects of verification: an introduction to verification; a detailed description of simulation-based dynamic verification; formal verification; verification methodologies and advanced techniques; and case studies. First, the course will place verification in the context of the chip design process and introduce the verification cycle. Then, it will cover essential methodology principles and introduce the first hands-on example. It will also delve into various topics in dynamic verification, including the basic constructs of stimuli, monitors, checkers, observations categories, assertions, and test benches. Various case studies on actual industry and research designs will be provided. The course will be supplemented by lab-assignments that provide hands-on experience to experiment with methodologies taught in lectures.

**Prerequisite:** CMPEN331
CMPEN 480: Computer Engineering Design
3 Credits
Engineering design and modeling, engineering economy, project planning, capstone project selections, and technical communication skills. CMPEN 480 Computer Engineering Design (3) This course prepares senior computer engineering students for industrial engineering design and project management. It covers the engineering design process, project planning and evaluation, engineering ethics, and engineering economy. In addition, students select, specify, and start their capstone design project, which is completed, in the follow-up course, CMPEN 481. Students are expected to carry out a group design project that is on par with industrial expectations. Upon completion of this course a student should have a solid understanding of the engineering design process, a clear capstone project description, should have completed some preliminary design work, and be adequately prepared to complete the project in CMPEN 481.

Prerequisite: CMPEN352W ; CMPEN431

CMPEN 481: Computer Engineering Project
3 Credits
Group or individual design projects in the area of computer engineering.

Prerequisite: CMPEN480

CMPEN 482: Computer Engineering Project Design
3 Credits
Computer engineering design project, project management, documentation, reporting, and group and individual communication skills. CMPEN 482W Computer Engineering Project Design (3) The two principle goals of CMPEN 482W are (1) to introduce the fundamentals of systems engineering and systems engineering management, and (2) to develop written and oral communication skills. The course explores the process of translating a problem statement into an effective and economical computer system that meets the needs of the customer. Topics include a comparison of popular process models, analysis and derivation of requirements, requirements allocation and flow down, the work breakdown structure, object-oriented analysis and modeling, the design and development of the user interface, reliability engineering, scheduling, costing, and ethics. Communication skills are developed through oral presentations and a sequence of writing assignments, beginning with a description of requirements and leading to a final design document. CMPEN 482W is not a prerequisite for any other course. CMPEN 482W requires access to PCs or Unix workstations having a C++ compiler. Other specialty hardware or software may be required on a semester-by-semester basis.

Prerequisite: E E 310;E E 353;CMPSC 473;ENGL 202C Writing Across the Curriculum

CMPEN 494H: Research Project
1-12 Credits/Maximum of 12
Supervised student activities on research projects identified on an individual or small-group basis.

Honors

CMPEN 495: Internship
1-18 Credits/Maximum of 18
Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor

CMPEN 496: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

CMPEN 497: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

3 Credits

Computer Engineering Technology - CA (CMPET)

CMPET 5: Engineering Methods in Engineering Technology
1 Credits
Introduction to experimental and computer methods in engineering technology; applications of experimental concepts through student involvement in computer exercises. CMPET 005 Engineering Methods in Engineering Technology (1) Engineering Methods in Engineering Technology is a follow-on computer skills course to EET 002S. Its purpose is to teach EET students how to use computers to help solve technical problems. The course begins by focusing on the use of the mathematical and graphing capabilities of spreadsheet programs to help analyze and present technical data. This is followed by investigation of more sophisticated problem-solving and analytical software such as Mathcad, Matlab, Mathmatica, etc. (depending upon availability). Finally, the basic electronic simulations introduced in EET 002S are extended to include more sophisticated circuit analyses using PSpice, Electronic Workbench, etc. In all cases, the problem studied in CMPET 005 are typical of the applications that will be seen in future technology classes and in the engineering technology field. In some cases, again depending on availability of the software, students are exposed to the capabilities of modern 4th generation programming languages such as Visual Basic, LabView, HPVee, etc.

Prerequisite: EET 101 , MATH 081
Fundamentals of digital circuits, including logic circuits, boolean algebra, Karnaugh maps, counters, and registers. CMPET 117 Digital Electronics covers fundamentals of both combinational and sequential digital logic circuits. Basic topics include Boolean algebra, binary codes, boolean logic simplification and minimization theorems, and Karnaugh maps. Combinatorial and sequential logic topics include the theory and operation of arithmetic circuits, registers, counters, multiplexers, encoders/decoders, all major types of flip-flops, A-D and D-A conversions, counters and memory systems. The course focuses primarily on small and medium scale devices using TTL logic with some use of MOS devices. Significant emphasis is placed on the use of manufacturers' data books to define device operating characteristics. CMPET 117 is generally taken concurrently with CMPET 120, which is a digital electronics laboratory course. The lab exercise in CMPET 120 are coordinated with the CMPET 117 lecture material.

Prerequisite: Prerequisite and/or concurrent: EET 105

CMPET 120: Digital Electronics Laboratory

1 Credits

Laboratory study of digital electronics circuits. CMPET 120 Digital Electronics Laboratory (1) Digital Electronics Laboratory is a one credit laboratory that meets for a single 2-hour session each week. It is normally taken concurrently with CMPET 117. The lab exercises in CMPET 120 expose students to the digital devices that are described in the CMPET 117 lecture course and give them an opportunity to observe and understand their operation in practical terms. The exercises cover basic logic gate functions using AND, OR, NOT, NAND, and NOR devices. Students also investigate the operation of flip-flops, adder circuits, binary counters, shift registers, encoders and decoders, and memory units. Often, students are required to complete a digital design project as part of the CMPET 120 course. Many faculty also require selected labs to be submitted as formal reports. Digital simulation software is also commonly used in this course.

Concurrent: EET 105, CMPET 117

CMPET 211: Embedded Processors and DSP

3 Credits

Introduction to micro-controllers and embedded controllers with applications, including concepts of digital signal processing. CMPET 211 Embedded Processors and DSP (3) CMPET 211 provides students with a basic understanding of microprocessors and microcontrollers with an emphasis on integrated embedded control of real world applications. The course provides a background in micro-processor/controller architecture, presents the operation and application of microcontroller peripherals, and introduces assembly language and higher level structured programming language. This can be a structured language such as C++ or PIC Basic. The intent is to introduce the students to a more powerful programming language capable of developing algorithms for embedded control of real world processes. Students will learn the analog to digital (ADC) and digital to analog (DAC) process and understand the resolution and aliasing consequences of these conversions. With the ADC and DAC material mastered, the course will then introduce students to basic applications of Digital Signal Processing (DSP), such as digital filtering and noise reduction. Simple discrete Fourier transforms can be covered along with sampling theory and digital aliasing. Although some of the mathematical theory underlying DSP techniques, such as Fourier and Hilbert Transforms, digital filter design and signal compression, can be fairly complex, the numerical operations required to actually implement these techniques are relatively simple and will be shown. DSP chips and applications will be covered to illustrate how to carry out such operations incredibly fast and efficiently. Topics covered include:- Microprocessor, microcontroller, and embedded system architecture- Microcontroller peripherals- Assembly Language Syntax and Programming- Structured Programming and Algorithms- Input and Output interfacing- ADC and DAC conversions- Sampling and DSP The course will emphasize the concepts, principles, procedures, and programming models used by engineers and technologists to design, develop and implement digital control for real world instrumentation. Particular emphasis will be given to embedded controllers for process control. Lectures will be supported by laboratory exercises in which the student will develop, assemble, download, and run programs on the target processor. Lectures will be supported by laboratory exercises in which the student will develop, assemble, download, and run programs on the target processor. Lectures will be supported by laboratory exercises in which the student will develop, assemble, download, and run programs on the target processor. Students will be required to prepare written laboratory reports outlining the program documentation. Reports will be graded based both on their technical quality and their grammatical and professionalism. Students in CMPET 211 will be required to use computers in both class and laboratory exercises to develop and test their programs.

Prerequisite: CMPET 117, CMPET 120

CMPET 301: Algorithmic Processes for Electrical Systems

3 Credits

Algorithms, languages, notations and applications of object- and procedure-oriented languages to electrical and electronic problem solving. CMPET 301 Algorithmic Processes for Electrical Systems (3) Algorithmic Processes for Electrical Systems is a required course for junior-level students in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. It is essential for Electrical Engineering Technology students to acquire a working knowledge of a computer language commonly used in practice. This course will prepare the student to analyze a problem and implement a structured procedural design and also an object-oriented design. This course is a follow-up course to CMPET 5 and CMPET 211, and prepares the student for several more advanced courses in the program related to computer analysis of circuits and systems. This course covers properties of algorithms and languages, software development process, notations for describing algorithms, applications of object- and procedure-oriented languages to electrical and electronic problem solving, high-level language programming, integrated development environment, and structured programming. Laboratory exercises parallel lecture material.

Prerequisite: CMPET 211; Concurrent: MATH 141 or MATH 210

CMPET 333: Computer Networking

3 Credits

Introduction to Local Area Networks (LANs) and Wide Area Networks (WANs), including transmission mediums, protocols, topologies, software, and hardware. CMPET 333 Computer Networking (3) The purpose of the course is to understand the principles of networking as applied to local area networks (LANs) and wide area networks (WANs). The students learn internet working models such as the OSI seven-layer, Ethernet, and Cisco three-layer models. Network topologies and various connectivity devices are investigated to form networks. Cisco IOS is introduced and console port and web interfaces are used for configuring Cisco devices.
Subnetting is discussed and Cisco switches and routers are used for the implementation of LANs and WANs. Various protocols such as ARP, ICMP, IP, and TCP are presented and a software protocol analyzer is utilized. Applications such as file-sharing and remote data collection are investigated. Laboratory exercises reinforce concepts developed in lecture.

**Prerequisite:** EET 212W, CMPET301

**CMPET 355: Intermediate Microprocessors and Microcomputers**

3 Credits

Microprocessor architecture and assembly language programming. Hardware and software of basic microprocessors. Input/output structure in microcomputers. CMPET 355 CMPET 355 Intermediate Microprocessors and Microcomputers (3) Intermediate Microprocessors and Microcomputers is a required course for junior-level students in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. This course builds upon prerequisite digital logic, microprocessors and electronics courses. It includes microprocessor architecture and assembly language programming, hardware and software of basic microprocessors, and input/output structure in microcomputers. The course covers a review of number systems, digital logic, computer architecture, software development process; the microcontroller, specifications, block diagrams; assembly language programming; jump, loop and call instructions; I/O port programming, addressing modes, arithmetic instructions and programs, logic instructions and programs, single-bit instructions and programs, counter/timer programming, serial communication, interrupts programming, real world interfacing, and bus interfacing to external memory. Laboratory exercises parallel lecture material.

**Prerequisite:** EET 212W, CMPET301, EET 341

**CMPET 401: Data Communication and Networking**

3 Credits

Signal representations, communication techniques, interfacing, serial and parallel communication, modems, error detection, LAN and WAN protocols. CMPET 401 CMPET 401 Data Communication and Networking (3) This course is designed to provide the students with a foundation in signal presentation, communication techniques, serial and parallel communication, modems, and other interfacing methods. The networking technologies for local and wide area networks are also studied in detail. The range of topics covered depends on students' background. Topics: Part 1. (2 weeks) Overview: Introduction Protocols and Architecture; Part 2. (9 weeks) Data Communications: Data Transmission Media Data encoding Communication techniques Data Link Control Multiplexing; Part 3. (4 weeks) Local and Wide Area Networks: LAN and WAN protocols Switching techniques Bridges and routers High speed networks Internetworking Internet resources. This course is a required course in the Computer Engineering Technology Option of the Electrical Engineering Technology BS curriculum.

**Prerequisite:** CMPEN271 or CMPET117

**CMPET 402: Data Communication and Networking Laboratory**

1 Credits

Network operating systems, LAN and WAN protocols, serial and parallel communications, modems, FAX, and other interfacing methods.

**Prerequisite:** or concurrent: CMPET401

**CMPET 403: Switching Circuit Design**

4 Credits

Analysis and design of advanced combinational and sequential circuits using IC logic devices and PLDs while promoting the use of software development tools. CMPET 403 Switching Circuit Design (4) This course is designed to enhance students' abilities to analyze and design complex digital systems. The course will include the following topics: 1. Review of combinational circuits' analysis and design using, karnaugh maps with up to six variables and Quine-McCluskey method 2. Advanced combinational logic analysis and design with MSI logic circuits 3. Hazard in digital systems 4. Review of analysis and design of synchronous finite state machines (Moore and Mealy methodologies) 5. Synchronous sequential logic design using One-hot finite state machines 6. State reduction for completely and incompletely specified circuits/systems 7. Analysis and design of asynchronous sequential circuits/systems 8. Logic circuit testing and testable design 9. Introduction to Hardware Description Language

This course is a technical elective in the Electrical Engineering Technology BS curriculum and is intended to be taken by students who have completed their first digital systems course requirements. As such, the course integrates materials from the above undergraduate electrical course in addition to related math, engineering, and science courses. No special facilities are required for this course other than laboratories available to the Electrical Engineering Technology Program.

**Prerequisite:** CMPEN271 or CMPET117; CMPEN275 or CMPET120

**CMPET 412: Microcomputers**

4 Credits

Design, architecture, programming, and interfacing of microprocessors, enhanced by lab experiments. CMPET 412 Microcomputers (4) EET 412 is an intermediate course in microprocessor architecture, programming, and interfacing. It details the inner workings of a contemporary microprocessor, including its registers, busses, external connections, instruction set, and its available support devices for memory management, data transfer, clocking and interfacing. It includes a laboratory in which students program in machine language, assembly language, and high level language. Labs also teach students to interface a microprocessor to the user keyboard, the user display, floppy and hard disk drives, and external serial and parallel devices. EET 412 is intended as an intermediate course, offered to students who have already had some exposure to microprocessor systems, computer architecture, and low-level computer programming.

**Prerequisite:** CMPEN271 or CMPET117; CMPEN275 or CMPET120

**CMPET 456: Advanced Microprocessors, High Level Interfacing**

3 Credits

Operating systems; systems programming; high-level application programming; high-level hardware and software protocols; serial and parallel digital communications. CMPET 456 CMPET 456 Advanced Microprocessors, High Level Interfacing (3) Advanced Microprocessors, High Level Interfacing is a required course for senior-level students pursuing the computer engineering technology (CET) option in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. Topics of this course include operating systems, systems programming, high-level application programming, high-level hardware and software protocols, serial and parallel digit...
communications. The purpose of this course is to extend and augment the topics covered in the earlier computer oriented courses, and build upon the foundations established there. It covers large scale embedded systems along with the related hardware and software design considerations. It is organized around a few intensive projects that cover the breadth of the material. The need for operating systems is discussed, as well as their important features including system services, command processing, device drivers, interrupt handling, memory and device management, system libraries, dynamic linking, virtual memory, multitasking, and inter-task communication. Unique considerations of real time operating systems are reviewed, such as throughput, task blocking, semaphores and special services. The gray area between operating systems and application programming known as systems programming is addressed, including standardization, generalization, choice of language, and make-buy decision issues. A large part of the course is spent on high-level application programming. Topics include structured programming, user-written functions, data structuring and packetizing, and use of commercial libraries and other intellectual property. Protocols based on current technology such as EPP, RS232, RS485, IIC, DeviceNet, USB, IEEE488, IEEE1394, are covered. Binary and character-based data transfer is discussed, along with communication layers and error detection, correction, and recovery issues. Serial and parallel communication topics include analysis and evaluation of the pros and cons of each protocol, debugging, monitoring, timing, and throughput.

**Prerequisite:** CMPET355

CMPET 457: Software Engineering

3 Credits

Application of modern techniques in software development, including program design based on new methods and tools. CMPET 457 Software Engineering (3) Software engineering is a required course for senior-level students pursuing the computer engineering technology (CET) option in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. Topics of the course include application of modern techniques in software development including program design based on current methods and tools. The purpose of this course is to stress a rigorous and systematic approach to embedded software development that represents current best practices and is widely accepted by business, industry and regulatory agencies governing embedded software. This includes proper planning and implementation. Knowledge of generally accepted core standards and guidelines is stressed, including safety planning, hazards analysis, software management planning, requirements specification, design documents, coding, test plans, test specifications, test logs, test reports, design reviews, structured code walk-throughs, verification and validation, and reporting. The Unified Modeling Language (UML) is introduced and followed, including the components of UML, class diagrams, object diagrams, use-case diagrams, state diagrams, sequence diagrams, activity diagrams, collaboration diagrams, component diagrams, and deployment diagrams. Object-oriented concepts include classes, abstraction, inheritance, polymorphism, encapsulation, message sending, associations, and aggregation.

**Prerequisite:** CMPET355
Digital Logic, Designing Arithmetic Hardware, Cryptography and Security Programming Languages, Networking and Wireless Communication, Artificial Intelligence, and Computer Ethics.

First-Year Seminar

CMPSC 121: Introduction to Programming Techniques
3 Credits
Design and implementation of algorithms. Structured programming. Problem solving techniques. Introduction to a high-level language, including arrays, procedures, and recursion.

Prerequisite: MATH 110 or prerequisite or concurrent MATH 140
Bachelor of Arts: Quantification
General Education: Quantification (GQ)

CMPSC 122: Intermediate Programming
3 Credits
Object-oriented programming, recursion, fundamental data structures (including stacks, queues, linked lists, hash tables, trees, and graphs), the basics of algorithmic analysis, and an introduction to the principles of language translation.

Prerequisite: CMPSC121

CMPSC 122H: Intermediate Programming
3 Credits
Object-oriented programming, recursion, fundamental data structures (including stacks, queues, linked lists, hash tables, trees, and graphs), the basics of algorithmic analysis, and an introduction to the principles of language translation.

Honors

CMPSC 131: Programming and Computation I: Fundamentals
3 Credits
This course introduces the fundamental concepts and processes of solving computational problems through the design, implementation, testing and evaluation of efficient and robust computer programs. The concepts include basic computational constructs found in imperative, object-oriented and functional programming languages such as iteration, conditionals, functions, recursion, and datatypes. These provide the basic building blocks found in virtually all programming languages. The processes include the stepwise refinement of a problem description into individual components that can be implemented, tested, and integrated into an effective solution. A central theme to the course is computational thinking which includes a wide range of approaches to solving problems and designing systems that draw upon concepts fundamental to computer science. Computational thinking includes thinking recursively, considering parallel processing, thinking about types and type checking, judging a program not just for correctness and efficiency but also for its aesthetics, and judging a system design for its simplicity and elegance. Computational thinking is applying principles of abstraction at multiple levels to focus on important details; it is applying problem decomposition to identify small problems that can be individually solved then combined to form a solution to the original problem. Computational thinking uses program invariants to describe a system’s behavior succinctly and declaratively. Computational thinking considers multiple models of computation when designing an effective solution to a problem.

CONCURRENT COURSES: MATH 110; MATH 140

CMPSC 132: Programming and Computation II: Data Structures
3 Credits
This course builds upon the foundations of programming and computation by introducing and studying the data structures and programming language features that support the design and construction of large-scale software systems. It introduces the foundations of object-oriented programming, the design and analysis of efficient algorithms using important data structures, and programming techniques that support reusable and modular program components, including data abstraction, polymorphism, and higher-order functions. Topics from object-oriented programming include classes, objects, inheritance, methods, message passing, static and dynamic type checking. These topics form the core of most object-oriented languages and provide a foundation for learning more advanced language topics. Data structures capture the common organization of many kinds of data arising in the design of efficient solutions to computational problems. Specific data structures covered include stacks, queues, trees, graphs and linked lists. The design and analysis of efficient algorithms using these data structures provide a foundation for the study of computing, where understanding the complexity of a problem and the availability of efficient solutions are essential skills. Finally, topics including higher-order functional programming, data abstraction and parametric polymorphism, as well as principles from object-oriented programming, come together to support the design and implementation of modular, reusable and robust code.

Prerequisite: CMPSC 121; CMPSC 131

CMPSC 199: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CMPSC 200: Programming for Engineers with MATLAB
3 Credits
Development and implementation of algorithms in a procedure-oriented language, with emphasis on numerical methods for engineering problems. A student may receive credit for only one of the following courses: CMPSC 101, 102, 200, 201, or 202. CMPSC 200 CMPSC 200 Programming for Engineers with MATLAB (3) CMPSC 200 is a service course offered to engineering and science majors. The course teaches basic programming concepts including: algorithm development, data types, number representation, control structures, functions, plotting and basic numerical analysis techniques. The course enables students to develop computer programs in MATLAB to solve simple engineering problems. The basic numerical analysis techniques covered in the course include matrix operations, systems of equations, solving equations, roots, curve fitting, interpolation, numerical integration and ordinary differential equations. Students analyze physics-based and engineering problems; develop algorithms to solve the problems; implement the algorithms in the MATLAB programming environment; and produce informative output in both numerical and graphical form. The general
programming concepts learned in the course are commonly found in most programming language environments. The problem-solving skills learned in the course can be utilized in upper-level engineering and science courses. The lecture portion of the course gives students the conceptual and syntactical background needed for the successful completion of practical programming assignments during the laboratory portion of the course. The laboratory instruction involves hands-on programming by individual students or student teams assisted by a teaching assistant and/or instructor. Evaluation methods may include examinations, in-class labs, and programming projects. The course is generally held in a STEC room where each student has access to a computer. The course will be offered during the Spring semester.

**Prerequisite:** MATH 140; Concurrent: MATH 141  
General Education: Quantification (GQ)

CMPSC 201: Programming for Engineers with C++  
3 Credits

Development and implementation of algorithms in a procedure-oriented language, with emphasis on numerical methods for engineering problems. A student may receive credit for only one of the following courses: CMPSC 101, CMPSC 102, CMPSC 200, CMPSC 201, or CMPSC 202.

**Prerequisite:** MATH 140; Concurrent: MATH 141  
Bachelor of Arts: Quantification  
General Education: Quantification (GQ)

CMPSC 202: Programming for Engineers with FORTRAN  
3 Credits

Development and implementation of algorithms in a procedure-oriented language, with emphasis on numerical methods for engineering problems. A student may receive credit for only one of the following courses: CMPSC 101, 102, 200, 201, or 202.

**Prerequisite:** MATH 140; Concurrent: MATH 141  
Bachelor of Arts: Quantification  
General Education: Quantification (GQ)

CMPSC 203: Introduction to Spreadsheets and Databases  
4 Credits

Design, use, and programming of spreadsheets and data bases with applications from a range of disciplines.

**Prerequisite:** 2 entrance units in mathematics  
Bachelor of Arts: Quantification  
General Education: Quantification (GQ)

CMPSC 208: Technical Game Development  
3 Credits

Introduction to the tools and techniques required to implement games in a virtual environment. GAME 250 (CMPSC 208) Technical Game Development (3) First, students learn about game and player elements by creating characters and objects and the means of user interactivity. Both orthographic and perspective views are introduced to assist in character design. Objects and characters are created using fundamental geometric primitives like scale, rotation, translation and extrusion. The set operations, union, intersection, and subtraction, are applied to create compound objects. Bezier and NURB curves are introduced to create objects with irregular contours. Students also learn to design graphical user interfaces (GUIs) and handle mouse and keyboard events to support user interactions. Second, students are introduced to methods of storytelling and guide them to build narratives for games. Methods of proximity and collision detection in the environment are studied for both static and dynamic objects. Dynamic objects are programmed to move and behave in a deterministically, random, or probabilistically under a variety of lighting methods including ambient, directional, point and diffuse lights are introduced. A number of particle systems are developed with different considerations of randomness, vector direction and velocity. The concept of linear interpolation is illustrated and applied to texture mapping to improve the look and feel of objects. Third, students are introduced to functions, propositional logic, loops, and randomness to model game behavior. Students will learn to combine a series of primitive actions into a function for control and reuse. Propositional logic will guide students to define conditions and develop game rules. Loops are introduced to simplify the implementation of repeated game behavior. Randomness enables the simulation of many life-like object movements. Students will learn and practice how to write concurrent, event drive and sequential processing algorithms for game objects. Fourth, students are introduced to the game development process of pre-production, production and post-condition phases and have them apply it to their own project. The topic of maintenance will be introduced with an emphasis on refactoring techniques, critical to improving the quality of game and providing flexibility for future updates. This course has a significant applied element. Game engine tools are used to develop prototypes of games and playtest them. Lab assignments are given throughout the semester and a final project requires students to demonstrate mastery of all aspects of the course.

**Prerequisite:** MATH 021  
Cross-listed with: GAME 250  
General Education: Quantification (GQ)

CMPSC 221: Object Oriented Programming with Web-Based Applications  
3 Credits

The course covers advanced object-oriented principles and their application to web-based, net-centric computing. Major topics include virtual machines, intermediate code generation (Java-specific), graphical user interfaces (GUI) design, event handling, server-side programming with database queries, and security, permissions and file management concepts for client/server systems. Extensive programming assignments provide an understanding of the entire process of client/server development including interface prototyping, program design, implementation of both client and server programs, unit testing, and documentation. This course prepares students to meet immediate demands in solving complex computational problems.

**Prerequisite:** CMPSC 122 OR CMPSC 132
CMPSC 221H: Object Oriented Programming with Web-Based Applications

3 Credits

This course will continue with object-oriented programming and will introduce graphics, virtual machines, programming language concepts and web-based programming using Java.

Honors

CMPSC 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

CMPSC 296A: **SPECIAL TOPICS**

1-18 Credits

CMPSC 296B: **SPECIAL TOPICS**

1-18 Credits

CMPSC 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CMPSC 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CMPSC 302: Intermediate Visual Programming

3 Credits

OO programming, visual programming, classes, objects, ADTs, inheritance, recursion, regular expressions, user-defined controls, documentation, testing, verification, productivity tools. CMPSC 302 Intermediate Visual Programming (3) This course forms the second of a two course sequence of courses for non-major students. It is designed to build upon concepts and skills presented in the first course, CMPSC 102, with the intent of enabling the student to develop larger scale programs and interface with databases and Web servers using a visual programming language. Some of the topics covered in this course will be object-oriented programming, inheritance, string manipulation, regular expressions, creating custom controls, creating controls dynamically, interfacing with databases and using an appropriate platform, such as ASPX.net to create web pages. This course forms the second of a two course sequence of courses for non-major students. It covers advanced features of the target language, building larger scale programs and interfaces to databases and web servers. It builds on the skills covered in CMPSC-102 and introduces creating new controls, dynamically placing controls at run time, arrays and lists of controls, the use of regular expressions, more in-depth treatment of classes and objects, including inheritance and polymorphism, multi-dimensional arrays, lists, unit testing and project deployment.

Prerequisite: CMPSC102 or CMPSC121

CMPSC 311: Introduction to Systems Programming

3 Credits

Unix system programming in C; organization of programs and data; program analysis and support tools; software standards; common system functions. CMPSC 311 CMPSC 311 Introduction to Systems Programming (3) System Programming concerns the development of software components and methods for their combination, independent of any particular application. This course will provide information and experience required to understand, design and implement components of large software systems. In general, students should be able to evaluate design alternatives according to standard practice, specifications, performance analysis, robustness, etc. To concentrate attention, we investigate one system and one programming language in detail, through demonstration programs, short- and long-term programming assignments. The specific system is Unix, a family of operating systems forming a complete standardized programming environment based on the idea of software tools. The specific language is C, which is widely used for operating system implementations, and which forms the basis for the C++ and Java languages studied in the prerequisite courses. This will help students understand operating system services available to application programmers, and provide a firm ground for study of operating systems in general. There are several themes of the course: (1) Understand computer systems, especially low-level influences on high-level goals. This includes the machine-level representation of programs and data structures; the memory hierarchy and its impact on performance; access to stored information via file systems, and access to other computer systems via networks. (2) Understand existing system software and software standards, especially the UNIX tools. This includes preparing a program (editors, static analysis, development environments); running a program (compilers and interpreters, assembler, linker, loader, debugger, profiler, tracer); controlling parts of a program (memory management, threads); communication between programs (within one system using signals, between systems using sockets and communication protocols); and combinations of software tools with scripting languages. (3) Understand "real code", such as selections from the Linux operating system kernel and GNU utilities and libraries, and through comparative selections from Solaris, Linux, and Mac OS X. (4) Understand system performance, including experiments on program performance and optimization techniques.

Prerequisite: CMPSC221

CMPSC 312: Computer Organization and Architecture

3 Credits

Data representation, digital logic, instruction set/control logic, machine/assembly languages, advanced architectures, memory hierarchy, I/O devices, overall system design.

Prerequisite: CMPSC121 or equivalent

CMPSC 313: Assembly Language Programming

3 Credits

Program design, addressing modes, subroutines, parameter passing, stacks, bit manipulation, text processing, DOS functions, macros, I/O, high level language interfaces. CMPSC 313 CMPSC 313 Assembly Language Programming (3) This is a course in assembly language programming for IBM PCs and compatibles. Students will gain experience writing
efficient, well-documented programs that are easily maintained. The course investigates the architecture and instruction set of a typical microcomputer based on the Intel 80x86 microprocessors. Topics include the basic structure of computers, the internal behavior of computers, program design, testing, debugging, machine architecture, addressing, BCD and binary arithmetic, subroutines and parameter passing, stacks, text processing, bit manipulation, DOS functions, macros, I/O routines, high level language interfaces and the assembly process. This course is important because assembly language is often used in programs where small size or fast execution is critical. Knowledge of assembly language is also useful in debugging programs written in high level languages. It also helps bridge the gap between hardware and high level languages. After successfully completing CMPSC 313, the student should be able to: explain the 80x86 architecture, including registers and segment-offset addressing; describe different ways data are represented in a computer and work with binary and hexadecimal numbers; describe the functions of an assembler; implement program designs in 80x86 assembly language, including: writing, documenting, testing and debugging a program in PC assembly language; manipulating strings; coding basic algorithms such as searching and sorting in assembly language; calling and passing parameters to subroutines; utilizing DOS functions; and interfacing with a high level language; explain how the underlying hardware affects software design and performance; appreciate the factors that contribute to program efficiency. Students will be evaluated on homework (35% of grade), semester exams (35%), and a final comprehensive exam (30%). The major only requires that a student have experience with assembly language programming.

This course is intended for students who have not had any experience with assembly language programming before entering the program. It will also serve as an elective. The material learned in this course is beneficial in understanding concepts in the required courses CMPSC 422, CMPSC 472, and CMPSC 460, as well as in the elective courses CMPSC 428 and CMPSC 470. No special facilities are required for this course. The software necessary is available in the computer labs or for students to use at home. This course will be offered once per year, with an expected enrollment of 55.

**Prerequisite:** CMPSC 312

CMPSC 335: Fundamentals of Communication Networks

3 Credits

Introduction to the composition of communication networks, including transmission mediums and protocols, transfer methods, topologies and software, and communications hardware.

**Prerequisite:** 3 credits of programming

CMPSC 360: Discrete Mathematics for Computer Science

3 Credits

Discrete mathematics and foundations for modern computer science. Topics include sets, relations, logic, algorithms, graphs, finite state machines and regular expressions.

**Concurrent:** CMPSC 122

**Recommended Preparation:** DS 310; CMPSC 448 This course introduces modern programming models and related software stacks for performing scalable data analytics and discovery tasks over massive and/or high dimensional datasets. The learning objectives of the course are that the students are able to choose appropriate programming models for a big data application, understand the tradeoff of such choice, and be able to leverage state-of-the art cyber infrastructures to develop scalable data analytics or discovery tasks. Building on data models covered in DS 220, this course will introduce programming models such as MapReduce, data flow supports for modern cluster computing environment, and programming models for large-scale clustering (either a large number of data samples or a large number of dimensions). Using these frameworks and languages, the students will learn to implement data aggregation algorithms, iterative algorithms, and algorithms for generating statistical information from massive and/or high-dimensional data. The realization
of these algorithms will enable the students to develop data analytic models for massive datasets.

**Enforced Prerequisite:** CMPSC 122 and DS 220. Recommended Preparation: DS 310 or CMPSC 448.

Cross-listed with: DS 410

**CMPSC 412: Data Structures Lab**

1.5 Credits

Programming with common data structures; recursion; stacks, queues, dictionaries, priority queues; string searching and manipulation; sorting; trees; combinatorics.

**Concurrent:** CMPSC462 or CMPSC465

**CMPSC 413: Algorithms Lab**

1.5 Credits

Programming with common algorithm design techniques; divide and conquer, greedy method, dynamic programming, and tree and graphy traversals.

**Concurrent:** CMPSC463

**CMPSC 414: Contest Programming**

1 Credits/Maximum of 4

Programming Contest Questions; Common Data Structures; Strings; Sorting; Searching; Combinatorics; Number Theory; Graph Algorithms; Dynamic Programming. This course provides hands-on practice with a wide range of computer science topics that are used to solve programming contest questions. These topics include common data structures; strings; sorting; combinatorics; number theory; graph traversal and other algorithms; dynamic programming. In the course, students will solve a range of programming contest questions, both using an online judge in practice sessions and during actual programming contests. In addition to solving programming problems, the course time will also be used to explore topics mentioned above and the relationship to specific problems, solution techniques, and the analysis of proposed solutions to specific problems. This course is envisioned to be a hands-on lab, with instructor supported, self-guided study. The course topics will be chosen from topics that commonly appear in current programming contests, including but not limited to: - Contest Programming - Common Data Structures - Strings - Sorting - Combinatorics - Number Theory - Graph Traversal and Other Algorithms - Dynamic Programming

**CONCURRENT:** CMPSC 221

**CMPSC 421: Net-centric Computing**

3 Credits

This course introduces JavaScript and AJAX for creating Rich Internet Applications, and XML for client-server communication and Web Services. CMPSC 421 Net-centric Computing (3) This course will build on the client-server computing concepts and techniques that students learned about in prerequisite courses. The goal of the course is to introduce students to the most significant and fundamental of those technologies that are used in the computing paradigm known by a number of terms including "Net-centric," "Web 2," and "cloud" computing. On the client: We will use Dynamic XHTML, Cascading Style Sheets, JavaScript and AJAX to develop the client side of Rich Internet (or Web) Applications. For client-server-communication: We will learn how to create and validate XML documents and use these as the primary language for transmission of data from the server to the client. We will also consider how JavaScript Object Notation (JSON) can sometimes be used as a viable alternative to XML for server to client data transmission. On the server: We will learn about a variety of server-side technologies for consuming, storing, transforming, and generating content. We will use the three main types of XML parsers to consume, transform, and generate XML: we will use XSL and XPath to style and transform XML; we will use XML binding tools to convert XML to and from classes (in some high-level language); we will use Data Access Objects and object-relational mapping tools for data persistence. We will learn how servers use Web services and RSS feeds to provide XML structured content, and we will consume existing Web services and RSS feeds and produce simple Web services.

**Prerequisite:** CMPSC221 or SWENG311

**CMPSC 426: Object-oriented Design**

3 Credits

Object-oriented analysis and design; design patterns such as creational, structural, and behavioral patterns; UML; and unified process.

**CMPSC 426 Object-Oriented Design (3)** The primary goal of this course is to study the object-oriented design paradigm, including modeling languages, classes and objects, the inheritance relationship, polymorphism, and software engineering topics relating to object-oriented design. Study of this topic should provide a solid understanding of object-orientation for students to use in studying diverse topics such as operating systems, software engineering, and database design. This course is an elective for students in the BS COMP program. The course builds on topics learned in earlier object-oriented programming courses.

**Prerequisite:** CMPSC221, CMPSC462

**CMPSC 430: Database Design**

3 Credits

Relational database model, query languages, integrity, reliability, normal forms for design. CMPSC 430CMPSC 430 Database Design I (3) The main goal of this course is to explore the relational database model, with special emphasis on the design and querying of relational databases. Secondary goals include exploration of the mathematical basis for relational databases and exploration of the relationship of database to the rest of computer science. Study of these topics should improve student skills in programming, modeling the structure of data and using and administering databases. Grades will be based on midterm and final exams totaling 250 points, and 10 - 12 homework assignments totaling approximately 200 points. Grades will be based directly on percentage of the total points received from those listed. This course is an elective for students in the BS COMP program and is required for admission into the MS COMP program. The course builds on concepts learned in earlier programming, data structure and discrete mathematics courses. No special facilities are required for this course. This course will be offered once per year, with an expected enrollment of 60 - 70 students.

**Prerequisite:** CMPSC462
and algorithmic frameworks used in machine learning such as linear
technology from both fields. Students will learn about important models
as well as probabilistic and mathematical tools needed for applications of
important concepts in machine learning and artificial intelligence, as
data to achieve specific goals. This course provides an introduction to
mostly concerned about how to use knowledge gained from previous
branches of computer science that deal with the development of
AI (3) Machine learning and artificial intelligence are closely-related
programming with APIs. CMPSC 448 Machine Learning and Algorithmic
network security, client-server computing, web application development,
problems and pitfalls in the software development process. The course will
investigate some basic problems in AI using LISP as a vehicle language.
Prerequisite: CMPSC221, CMPSC312

CMPSC 441: Artificial Intelligence
3 Credits
Problem solving, search techniques including local search and genetic
algorithms, knowledge representation, planning, learning, and neural
networks. CMPSC 441 Artificial Intelligence (3) The primary goals of this
course are (1) to provide the students with an introduction to Artificial
Intelligence concentrating on some fundamental areas of AI, and (2) to
provide the students with a working knowledge of LISP so that they can
investigate some basic problems in AI using LISP as a vehicle language.
Prerequisite: CMPSC122, CMPSC360

CMPSC 442: Artificial Intelligence
3 Credits
This course provides an overview of the theory, research paradigms,
implementation techniques, and philosophy of artificial intelligence. A
wide range of topics are covered that include search, problem solving,
and game-playing, as well as knowledge, reasoning and belief networks.
The material includes a brief introduction to machine learning and
classification problems. Through programming assignments that sample
these topics, students acquire an understanding of what it means to build
erational agents of different sorts, especially the contrast between agents
that operate in certain versus uncertain environments. Applications to
specific areas of AI such as language and vision are presented.
Prerequisite: CMPSC 221 CONCURRENT: CMPSC 465

CMPSC 443: Introduction to Computer and Network Security
3 Credits
Introduction to theory and practice of computer security with an
emphasis on Internet and operating system applications.
Prerequisite: CMPSC473, CMPEN362

CMPSC 444: Secure Programming
3 Credits
Secure software design principles/practice, common threats, applied
cryptography, trust management, input validation, OS-/programming
language-specific issues, software validation. CMPSC 444 Secure
Programming (3) This course presents an overview of the principles
and practice of secure software design. The course begins with a
presentation of overarching principles of secure software development
that enable the design, implementation, and testing of secure systems
that can withstand attacks. These principles and strategies for realizing
them will be illustrated through an analysis of common security issues
and pitfalls in the software development process. The course will
cover a variety of programming languages including C/C++, Java, and
scripting languages; different classes of systems including standalone
applications, client/server systems, and peer-to-peer applications; and
models, neural networks, decision trees, support vector machines, k-
nearest neighbor, adaboost, k-means clustering, and agglomerative
clustering as well as methods for evaluating and tuning these models.
Students will also learn about key artificial intelligence concepts such as
A* search and reinforcement learning which are used by software agents
(such as game AI's) to navigate and explore their environment.
Prerequisite: CMPSC221, CMPSC312

CMPSC 442: Artificial Intelligence
3 Credits
This course provides an overview of the theory, research paradigms,
implementation techniques, and philosophy of artificial intelligence. A
wide range of topics are covered that include search, problem solving,
and game-playing, as well as knowledge, reasoning and belief networks.
The material includes a brief introduction to machine learning and
classification problems. Through programming assignments that sample
these topics, students acquire an understanding of what it means to build
erational agents of different sorts, especially the contrast between agents

and pitfalls in the software development process. The course will
cover a variety of programming languages including C/C++, Java, and
scripting languages; different classes of systems including standalone
applications, client/server systems, and peer-to-peer applications; and
development issues specific to different operating systems. Students will develop and analyze programs that demonstrate security principles, strategies, coding techniques, and the use of tools that can help make code more resistant to attacks.

**Prerequisite:** CMPSC221; Concurrent: CMPSC430 or CMPSC431 or CMPSC421W

CMPSC 448: Machine Learning and Algorithmic AI
3 Credits
Evaluation and use of machine learning models; algorithmic elements of artificial intelligence.

**Prerequisite:** STAT 319 or STAT 415 and CMPSC122 or prior programming experience

CMPSC 450: Concurrent Scientific Programming
3 Credits
Problems of synchronization, concurrent execution, and their solution techniques. Design and implementation of concurrent software in a distributed system.

**Prerequisite:** CMPSC121, CMPSC201 or CMPSC202; MATH 220; MATH 230 or MATH 231

CMPSC 451: Numerical Computations
3 Credits
ALGORITHMS FOR INTERPOLATION, APPROXIMATION, INTEGRATION, NONLINEAR EQUATIONS, LINEAR SYSTEMS, FAST FOURIER TRANSFORM, AND DIFFERENTIAL EQUATIONS EMPHASIZING COMPUTATIONAL PROPERTIES AND IMPLEMENTATION. STUDENTS MAY TAKE ONLY ONE COURSE FOR CREDIT FROM MATH 451 AND 455.

**Prerequisite:** 3 credits of programming; MATH 230 or MATH 231
Cross-listed with: MATH 451
Bachelor of Arts: Quantification

CMPSC 452: Numerical Analysis
3 Credits
Algorithm efficiency and accuracy, function interpolation and polynomial approximation, numerical differentiation and integration, initial-value problems, and approximation of eigenvalues. CMPSC 452 Numerical Analysis I (3) General principles for evaluating the accuracy and efficiency of floating point algorithms; methods for solving single equations and systems of linear equations, function interpolation and polynomial approximation, numerical differentiation and integration, initial-value problems, approximation of eigenvalues.

**Prerequisite:** MATH 220

CMPSC 455: Introduction to Numerical Analysis I
3 Credits
Floating point computation, numerical rootfinding, interpolation, numerical quadrature, direct methods for linear systems. Students may take only one course for credit from MATH 451 and MATH 455.

**Prerequisite:** CMPSC201, CMPSC202, or CMPSC121; MATH 220; MATH 230 or MATH 231
Cross-listed with: MATH 455
Bachelor of Arts: Quantification

CMPSC 456: Introduction to Numerical Analysis II
3 Credits
Polynomial and piecewise polynomial approximation, matrix least squares problems, numerical solution of eigenvalue problems, numerical solution of ordinary differential equations.

**Prerequisite:** MATH 455
Cross-listed with: MATH 456
Bachelor of Arts: Quantification

CMPSC 457: Computer Graphics Algorithms
3 Credits

**Prerequisite:** CMPSC122; MATH 220

CMPSC 458: Fundamentals of Computer Graphics
3 Credits
Fundamentals of computer graphics: input/output devices, transformation, projection, clipping, hidden line/surface elimination.

**Prerequisite:** CMPSC311; MATH 220; MATH 230 or MATH 231

CMPSC 459: Scientific Visualization
3 Credits
Visualization techniques for data analysis and presentation. Applying visualization and perceptual theory. Using extending platform independent visualization software. CMPSC 459CMPSC 459 Scientific Visualization (3)Visualization of scientific data and processes has always been important for gaining insights into scientific phenomena. Historically, such visualization has taken place in the scientist's imagination and was then rendered in drawings, graphs and diagrams. The rapid advance of computer technology, and in particular, computer graphics, has made new tools available to the scientist to aid in the interpretation and communication of scientific information. In this course students will study a variety of computer graphics, scientific visualization, and virtual reality techniques and apply them to scientific visualization projects. The projects will be drawn from all of the sciences and the resulting projects will then be available to faculty and students to use as tools in their disciplines. The prerequisites for this course are CMPSC 122. Students will apply the writing skills gained in ENGL 202C and refine them in the context of scientific writing. They will also have the opportunity to apply the knowledge and skills gained in CMPBD 360 and its predecessors, CSE 103 and CSE 120 within the context of a significant natural science or mathematical visualization problem. Software and languages used in this course will change as the discipline of scientific visualization evolves. Currently, programming will be done in C++ and
Java, VRML and other virtual reality languages, and scientific specialty languages such as IDL, MuPad, xpp, Mathematica, Maple, etc. Projects initiated in this course can form the basis for further development as a 494 research project. The course will take advantage of a variety of computing platforms available at Behrend including Windows NT and Unix.

**Prerequisite:** CMPSC122

CMPSC 460: Principles of Programming Languages

3 Credits

Design and implementation of high level programming languages and survey of language paradigms including imperative, functional, and object-oriented programming. CMPSC 460 Principles of Programming Languages (3) The primary topics of this course include run-time systems for imperative programming languages and aspects of the object-oriented, functional and declarative paradigms that have applications in industrial software development. Study of these topics should improve student skills in programming, debugging and problem solving.

**Prerequisite:** CMPSC312, CMPSC462; Concurrent: CMPSC469

CMPSC 461: Programming Language Concepts

3 Credits

Fundamental concepts of programming language design, specifications, and implementation; programming language paradigms and features; program verification.

**Prerequisite:** CMPSC221, CMPSC360

CMPSC 462: Data Structures

3 Credits

In-depth theoretical study of data structures such as balanced trees, hash tables, priority queues, B-trees, binomial heaps, and Fibonacci heaps. CMPSC 462 Data Structures (3) The primary goals of this course are (1) to provide the students with a set of basic data structures useful in the design of efficient algorithms, and (2) to provide the students with the ability to design and analyze new data structures as needed to solve problems. The secondary goal of this course is to introduce basic algorithm analysis techniques to prepare the students for the follow up course CMPSC 463, Design and Analysis of Algorithms. This is a required course in the BS COMP program. It is also a prerequisite for a number of other courses in the COMP program such as CMPSC 463, 460, 430, etc.

**Prerequisite:** CMPSC360

CMPSC 463: Design and Analysis of Algorithms

3 Credits

Recurrences, algorithms design techniques, searching, sorting, selection, graph algorithms, NP-completeness, approximation algorithms, local optimization algorithms. CMPSC 463 Design and Analysis of Algorithms (3) The primary goals of this course are (1) to provide the students with fundamental techniques for designing and analyzing algorithms, and (2) to introduce some techniques for dealing with inherently intractable problems. This is a required course in the BS COMP program.

**Prerequisite:** CMPSC462; Concurrent: MATH 318, STAT 301 or STAT 318

CMPSC 464: Introduction to the Theory of Computation

3 Credits

Computability/Complexity: finite automata, regular context-free languages, Turing machines, Church-Turing Thesis, undecidability, reducibility, completeness, time/space complexity, P versus NP. CMPSC 464 Introduction to the Theory and Computation (3) CMPSC 464 introduces students to an essential part of theoretical computer science: how to define abstract mathematical models of computational devices (automata), how to characterize their computational power by studying the family of languages that they can recognize (formal languages), and what the limitations of even the most powerful computational devices are (computability). The course studies regular languages by means of deterministic and nondeterministic finite-state automata and regular expressions; it studies context-free languages through the use of context-free grammars and pushdown automata; and it studies computability by means of Turing machines and recursive and recursively-enumerable languages. The unsolvability of the halting problem for Turing machines is proved by a diagonalization argument, and this result is then used to show that various problems about languages are unsolvable, such as the problem of determining whether two context-free grammars generate the same language. Finally, the concept of computational complexity is introduced, and the classes P and NP are defined. (Informally, the former class consists of problems that can be solved computationally in a manageable amount of time, and the latter consists of problems for which a proposed solution can be verified in a manageable amount of time.) The concept of an NP-complete problem is defined, and some specific problems are proved to be values to the variable of a Boolean formula that will make the formula true.

**Prerequisite:** CMPSC465

CMPSC 465: Data Structures and Algorithms

3 Credits

Fundamental concepts of computer science: data structures, analysis of algorithms, recursion, trees, sets, graphs, sorting.

**Prerequisite:** CMPSC122, CMPSC360 or MATH 311W

CMPSC 467: Factorization and Primality Testing

3 Credits

Prime sieves, factoring, computer numeration systems, congruences, multiplicative functions, primitive roots, cryptography, quadratic residues. Students who have passed MATH 465 may not schedule this course.

**Prerequisite:** MATH 311W

Cross-listed with: MATH 467

Bachelor of Arts: Quantification

CMPSC 469: Formal Languages with Applications

3 Credits

Regular, context free, recursive, and recursively enumerable languages; associated machine models; applications. CMPSC 469 Formal Languages with Applications (3) The primary goal of this course is to explore formal language theory, including regular, context free and recursively enumerable languages. Notations for specifying these languages (regular expressions, finite automata, context free grammars and turing machines) are emphasized. Applications of these languages, including pattern recognition, scanning, parsing, specification of
programming language syntax and Unix shell programming, are also
discussed. Study of these topics should provide a solid theoretical basis
for students to draw on in studying diverse areas such as algorithm
analysis, complexity theory and compiler construction.

**Prerequisite:** CMPSC360

CMPSC 470: Compiler Construction

3 Credits

Compiler design and implementation; scanning, parsing, semantic
analysis, optimization (including static analysis), code generation,
garbage collection, and error detection. CMPSC 470 Compiler
Construction (3) The primary topics of this course are areas of compiler
construction that are applicable both in building compilers and in
many other areas of computer science. Both the concepts and the
implementation of these techniques will be emphasized. Study of these
topics should improve student skills in programming, debugging and
software engineering. This course is an elective for students in both
the BS COMP and MS COMP programs. The course builds on concepts
learned in earlier programming, data structure and computer organization
courses.

**Prerequisite:** CMPSC221, CMPSC312, CMPSC462, CMPSC469

CMPSC 471: Introduction to Compiler Construction

3 Credits

Design and implementation of compilers; lexical analysis, parsing,
semantic actions, optimization, and code generation.

**Prerequisite:** CMPSC461

CMPSC 472: Operating System Concepts

3 Credits

Theoretical and practical issues of operating systems design and
implementation, process management, concurrent programming, memory
management, scheduling, I/O, and security. CMPSC 472
Operating Systems Concepts (3) A course on operating systems is an
essential part of a computer science education. This course is intended
as an introduction to study the concepts, structure and mechanisms that
underlie operating systems. A tremendous range and variety of computer
systems exist for which operating systems are designed. Rather than
focus on individual operating systems, this course discusses the key
mechanisms of modern operating systems, the types of design trade-offs
and decisions involved in operating system design and the context within
which the operating system functions. After completing CMPSC 472
the student should be able to: (1) describe and understand the four
major components of an operating system: process management
(including synchronization, scheduling, mutual exclusion, deadlocks
and concurrency), input/output (including disk scheduling and disk I/O),
memory management (including virtual memory, paging, segmentation
and addressing) and management of the file systems (2) describe and
understand how a centralized operating system functions (3) describe and
understand the various components of an operating system (4)
describe the various goals of protection and the security problem in
general (5) compare centralized operating systems with distributed
operating systems. Students will be evaluated on homework (35% of
grade), semester exams (35%), and a final comprehensive exam
(30%). This course is required in the computer science (COMP) BS
curriculum. It is intended for seniors to take this course in their fall
semester. This course is also an admission requirement for the (COMP)
MS program. No special facilities are required for this course. The
software necessary is available in the computer labs or for students to
use at home. This course will be offered once per year, with an expected
enrollment of 80.

**Prerequisite:** CMPSC312, CMPSC462

CMPSC 473: Operating Systems Design & Construction

3 Credits

Design and implementation of computer operating systems;
management of various system resources: processes, memory,
processors, files, input/output devices.

**Prerequisite:** CMPSC311, CMPEN331

CMPSC 473H: Operating Systems Design & Construction

3 Credits

Honors

CMPSC 474: Operating System & Systems Programming

3 Credits

Operating Systems overview and principles; processes and signals;
concurrency and synchronization; memory and file management; client-
server computing; scripts; systems programming.

**Prerequisite:** CMPSC122, CMPSC312

CMPSC 475: Applications Programming

3 Credits

Development of software for devices including smart phones, tablets,
handheld units, and other general purpose computing platforms.

**Prerequisite:** CMPSC221, CMPSC311 or CMPSC312, CMPSC462 or
CMPSC465

CMPSC 483: Software Design Methods

3 Credits

Applications of scientific knowledge and methods in the design and
construction of computer software using engineering concepts.

**Prerequisite:** CMPSC 221, CMPSC 465, ENGL 202C

Writing Across the Curriculum

CMPSC 484: Computer Science Senior Project I

2 Credits

Computer science capstone project with documentation emphasis.
CMPSC 484 CMPSC 484 Computer Science Senior Project I (2) This
course is phase one preparation for completing a design for a project
to serve as the capstone to the computer science degree program. The
course provides instruction and specification of a simulated real-world
work environment and associated activities to employ and integrate
computer science concepts. Technical instruction and delivered products
will be required. Students enrolled in the program will: 1) produce a design
for a significant senior project using a cooperative, team approach,
2) present concepts, progress, and products to and interact with peer
and faculty review boards. The course will: 1) provide the student with an opportunity to work in a team environment designed around sound development practice, 2) present to students current team organization and management techniques, 3) describe various forms of written communication targeted to different audiences, and 4) reinforce the technical knowledge attained through the computer science curriculum.

Prerequisite: ENGL 202C ; CMPSC221 ; CMPSC465

CMPSC 485: Computer Science Senior Project II
3 Credits

Computer science capstone project with documentation emphasis.

Prerequisite: CMPSC484

Writing Across the Curriculum

CMPSC 487: Software Engineering and Design
3 Credits

Software development process, life cycle; requirements analysis, specification, design, prototyping, testing, project management, and documentation. CMPSC 487W Software Engineering and Design (3)
The primary goal of this course is to familiarize students with the wide variety of techniques and methodologies used in software engineering to assist in the development of large software systems. Issues discussed include the human factors involved in developing software, models of the software development process, the use of formal methods in software engineering, software validation and verification, and software maintenance. A second goal is to help students understand the importance of written communication in software engineering, and to provide opportunities for students to improve the quality of their writing - specifically in describing software systems. The primary means of accomplishing this goal is a semester long project in which students write requirements for a large software system. In writing these requirements, students describe the system for non-technical readers (clients and users) and specify it for technical readers (other system developers). A final goal is to emphasize the role of teams in software development. Modern software systems are simply too large to reasonably be produced by one person, so the ability to work as part of a team is vital. To support achieving this goal, techniques and tools for working in groups are discussed in the course, and students work on the semester project in teams. This course is a required course in the computer science (COMP) BS curriculum, and is intended to be taken by seniors as the capstone course for the major. As such, the course integrates material from many (potentially all) of the undergraduate computer science courses. This course is also available as an elective for students in the MS COMP program.

Prerequisite: ENGL 202C, CMPSC221, CMPSC462

Writing Across the Curriculum

CMPSC 488: Computer Science Project
3 Credits

Project design and implementation with an emphasis on team work, documentation, and the employment and integration of computer science concepts. CMPSC 488 Computer Science Project (3) This class provides a hands-on experience designing and developing a real-world software system. The course will emphasize collaboration and teamwork to employ and integrate computer science concepts. Students will work on a project that will serve as the capstone to the computer science degree program. Technical instruction, research, software implementation and delivered products will be required.

Prerequisite: CMPSC487W

CMPSC 494: Senior Honors Thesis
1-6 Credits/Maximum of 6

Supervised Honors thesis research in computer science and engineering.

Honors

CMPSC 495: Internship
1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experience, practica, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor

Full-Time Equivalent Course

CMPSC 496: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

CMPSC 496A: **SPECIAL TOPICS**
1-6 Credits

CMPSC 497: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CMPSC 497E: **SPECIAL TOPICS**
1-6 Credits

CMPSC 498: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Corporate Communication (CC)

CC 200: Introduction to Corporate Communication
3 Credits/Maximum of 3

Introduces fundamental concepts, theories, and practices in Corporate Communication and is a lower division gateway to the major. As a field, Corporate Communication involves taking organizational goals and translating them into communication strategies and tactics inside and outside the organization as well as managing communication processes on an ongoing basis. Corporate Communication is complex, dynamic, and involves various media.

Prerequisite: ENGL 15, Student may not enroll if enrolled in or has successfully completed CC 300
Bachelor of Arts: Social and Behavioral Sciences

CC 401: Internal Communication

3 Credits

Explores the various ways organizations communicate with internal stakeholders, including senior leaders, managers, and frontline employees. CC 401 focuses on strategic communication processes between the organization and internal stakeholders such as senior leaders, managers, and frontline workers. The course explores the effective use of internal media, including intranet content, emails, social media content (strongly directed at internal audiences), memos, reports, newsletters, brochures, training content, and speeches. Considerable attention will be given to how to write effectively for each channel. Emphasis will also be placed on the importance of strategically coordinating internal communication and sustaining the overall function. CC 401 provides a thorough grounding in one of the two major subdivisions of the Corporate Communication field (with external communication as the other major subdivision). As an advanced course in the major, CC 401 provides considerable depth in terms of concepts, theories, and practices. Students will mainly need to apply, analyze, evaluate, and synthesize/create in this course. Students will primarily explore internal communication in terms of present day practices and future trends.

Prerequisite: CC 200 or CC 300. Fifth semester standing

CC 402: External Communication

3 Credits

Explores the various ways organizations communicate with external stakeholders. CC 402 focuses on the process of communication with external stakeholders. An integral part of Corporate Communication, external communication is an integrated function that includes building relationships and writing for the traditional media, creating materials such as advertisements and brochures, writing for the web, and creating credible spokespeople. As such, this course focuses on identifying and defining methods of external communication, as well as, how to write effectively for each communication channel. Students will gain experience in core Corporate Communication competencies, including writing media releases, integrating content and design, and evaluating communication effectiveness.

Prerequisite: CC 200 or CC 300. Fifth semester standing

CC 404: Risk and Crisis in Corporate Communication

3 Credits

Explores crisis communication theory and practice as related to internal and external processes. Every organization will encounter crisis. Understanding how to communicate before, during, and after a crisis can dramatically alter the trajectory of an organization. This course approaches the topic of crisis holistically, as part of the organizational lifecycle, with a focus on internal and external organizing, and ultimately positions crisis as an organizational learning opportunity. The course is broken into four sections: key concepts, and pre-, during, and post-crisis organizing and communicating. The first section will cover foundation concepts such as crisis, risk, and uncertainty, as well as provide an overview of crisis types and stages. The second section of the course will explore pre-crisis issues such as risk assessment, crisis management teams and plans, and contingencies for crisis eventualities. The third section will focus on the acute stage of crisis, including activating the crisis management plan and exogenous variables that affect crisis communication. The final section of the course will focus on the post-crisis stage, including organizational learning, evaluation, and preparing for future crises.

Prerequisite: CC 200 and Fifth semester standing

CC 405: Strategic Speaking

3 Credits

This course addresses the design and delivery of strategic spoken word communications with stakeholders inside and outside organizations. CC 405 concentrates on strategic spoken word communications used to advance overall Corporate Communication goals inside and/or outside the organization. The course specifically addresses group-based speaking and/or speaking potentially shared with a large number of individuals through electronic means. For each of various contemporary modes of strategic spoken expression, students will learn standard elements, examine industry examples, create an original design, and deliver an original performance. CC 405 will be an additional elective course in the Corporate Communication major. It is designed to integrate with the internal-external conceptual model used throughout the Corporate Communication major. As an advanced course in the major, CC 405 provides considerable depth in terms of concepts, theories, and practices. Students will mainly need to apply, analyze, evaluate, and synthesize/create in this course. Students will primarily explore strategic speaking in terms of present day practices and future trends.

Prerequisite: CC 200 and Fifth semester standing

CC 406: Social Media in Corporate Communication

3 Credits

Explores the internal and external functions of social media in organizations, with a focus on organizational-stakeholder relationships. Social media allows organizations to connect and build dialogic relationships with stakeholders, and is therefore an integral part of the Corporate Communication field. This course discusses the role of social media in Corporate Communication, the communicative and social functions that social media technology enables, issues of appropriate and effective use, social media use from both the organizational and stakeholder point of view, and the ethical considerations of using social media. Emphasis will be placed on theoretical understanding and practical application in the context of organizations seeking to advance internal and external communication goals. This course integrates the internal/external communication focus that shapes the Corporate Communication major by focusing on the different types of messages, platforms, and issues that are unique to each audience, while also emphasizing how to create synergistic organizational messages that resonate with both internal and external audiences.

Prerequisite: CC 200 and Fifth semester standing

CC 490: Seminar in Corporate Communication

3 Credits

Explores and applies concepts and theories to various cases, emphasizing written development of strategies relevant to the internal and external organization. This course explores Corporate Communication as it encompasses both the internal and external organization. It takes a comprehensive approach to exploring theory and application in the context of specific cases. Course content builds on
and unifies other required courses in the major. Coursework will primarily involve students developing major strategies and related tactics for existing or newly emerging organizations. Coursework may also involve students applying Corporate Communication concepts and theories to the development of their own career plans. This course emphasizes student synthesis and creativity in applying theory and research from Corporate Communication and allied fields to the total organization. The course will typically include analysis and evaluation of practitioner and scholarly readings, students’ work, and case studies.

Prerequisite: CC 200 or CC 300. Fifth semester standing
Writing Across the Curriculum

CC 495: **SPECIAL TOPICS**
3 Credits

CC 495A Internship in Corporate Communication (3) Communications experience in businesses or agencies that may include activities in writing, media production, planning, public relations, advertising, employee relations, or training.

CC 495A: Internship in Corporate Communication
3 Credits/Maximum of 3

CC 495A Internship in Corporate Communication (3) Communications experience in businesses or agencies that may include activities in writing, media production, planning, public relations, advertising, employee relations, or training.

Prerequisite: MKTG 310 and sixth-semester standing

Counselor Education (CNED)

CNED 97: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CNED 100: Effective Career Decision-Making
3 Credits

Examination of internal and external factors that contribute to career development to assist students undecided about major or career. CN ED 100/ED 100 Effective Career Decision-Making (3) CN ED 100 teaches students career decision-making skills by closely examining internal factors, the world of work, and decision-making styles and strategies. The premise of this course is that career decisions are greatly enhanced by: (1) considering personal traits such as interests, values, abilities, decision-making styles and other factors; (2) gathering information about the world of work and education; and (3) integrating knowledge about the self and the world through an on-going process. Learning the career decision-making process is empowering and skills learned in the course can be valuable throughout life as individuals encounter crossroads that may prompt career changes. CN ED 100 is intended for students who are undecided about their major and career selection. The course format consists of lectures, discussions, and experiential learning activities designed to help students analyze their personal traits and to relate their traits to career theories, occupational fields and work settings. Self-assessment activities include reflective writing, use of established career assessment inventories, and completion of various activities. Diverse information is shared on majors and occupations as well as information gathering strategies. Students more closely discuss their career development and progress in formal small group sessions, facilitated by career counseling professionals. Five classes of the semester are devoted to these meetings.

CNED 197: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CNED 198: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CNED 200: Peer Mentoring
1 Credits
This course will prepare students for the roles and responsibilities of being a Peer Mentor. CN ED 200 Peer Mentoring (1) "Peer Mentoring" is designed to present to the student the basic principles, characteristics, and benefits of a peer mentoring relationship. Peer Mentoring is a beneficial relationship to both the mentee and mentor and ultimately can aid in college retention rates. Once this knowledge is gained, students in the course will learn how to deal with the various situations that could occur during the transition process. This course offers the student the opportunity to develop intellectual relationships with faculty, current campus peer mentors, and fellow classmates who share similar academic interests in leadership, mentorship, and role modeling. In this course, students will be introduced and learn to apply active listening skills, the hidden rules of college, how to conduct mentee interactions both virtually and in person, intrinsic and extrinsic motivation, along with cultural and self-awareness. Once introduced to the multi-layer elements of the course, students will demonstrate their knowledge of these skills through their in class involvement. The course is delivered as an interactive learning environment where in class exercises and hands-on demonstrations help the student understand the principles and implications of peer mentoring. Additionally, students will work on a campus resource project outside of the classroom that will be presented to the entire campus community at the conclusion of the semester. The course is open to all students, however, students interested in taking the course must get course entry approval by the faculty member in charge to determine the students’ true interest in peer mentoring.

CNED 280: Job/Internship Search and Professional Skills
1 Credits
This course will teach students how to implement a career strategy to effectively secure a job/Internship.

CNED 296: Independent Studies
1-18 Credits/Maximum of 18
Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.
CNED 297: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CNED 298: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CNED 301: Student Organization Management
2 Credits
Exploration and development of leadership and group process skills necessary for effectively managing student organizations in higher education settings.

CNED 303: Career Search Strategies for Educators
1 Credits
An aid in preparing students with information helpful for entry into education and alternative job markets.

CNED 304: Education of the Peer Assistant
3 Credits
Student development theories: skill development in listening, informing, and referring culturally diverse peers in individual and group situations.
Prerequisite: limited to students selected as peer assistants or similar positions

CNED 397: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CNED 401: Foundations of Chemical Dependency Counseling
3 Credits
An overview of diagnosis and assessment, models for chemical dependency prevention, counseling, and recovery; contexts of chemical dependency treatment.
Prerequisite: 3 credits in general psychology

CNED 402: Group Procedures in Guidance and Counseling
3 Credits
The nature and functioning of groups in educational and agency settings. Provides prospective counselors with experience in the group process.
Prerequisite: 6 credits in counselor education; 6 credits in psychology, sociology, or individual and family studies

CNED 416: Interpersonal Relationships and Alcohol and Other Drugs (AOD) Dependency
3 Credits
This course examines families with chemically dependent members, dynamics, appropriate interventions, and treatment.
Prerequisite: CN ED401 or RHS 301

CNED 420: Chemical Dependency: Youth at Risk
3 Credits
Study of youth who are at-risk of developing chemical dependency including the characteristics and factors related to chemical dependency.
Prerequisite: CN ED401

CNED 421: Counseling Strategies for Preventing Chemical Dependency
3 Credits
Examines helping professional's role in primary and secondary prevention of substance abuse, and related problems like delinquency, suicide, and pregnancy.
Prerequisite: CN ED401

CNED 422: Foundations of Addictions Counseling
3 Credits
Study of the fundamental principles of counseling individuals with a wide variety of addictions. CN ED 422 Foundations of Addictions Counseling (3) Students explore the fundamental principles of addictions counseling from a wide range of perspectives. These include the psychopharmacological aspects of alcohol and abusable drugs, along with theories and assessments of addictive disorders. Many treatment models are considered, and are examined in the context of individual, group, and family therapy perspectives. The course also addresses the research literature on codependence, COA’s AA and other 12-step programs, dual diagnosis, relapse, prevention, and multicultural and gender issues.
Prerequisite: a minimum of 12 hours of coursework in sociology, psychology, education, or family studies.

CNED 423: Student Assistance Programs
3 Credits
Exploration of early stages of adolescent “at-risk” behavior and skills for student assessment and intervention within schools and communities.
Prerequisite: CN ED401

CNED 424: Facilitating Career Development
3 Credits
This course provides individuals with relevant skills and knowledge to assist others in planning careers and obtaining meaningful work. CN ED (WF ED) 424 Facilitating Career Development (3) This course provides individuals with relevant skills and knowledge to assist others in planning careers and obtaining meaningful work. This course addresses the following 12 Career Development Facilitator (CDF) competencies: 1) helping skills, 2) labor market information and resources, 3) assessment,
4) diverse populations, 5) ethical and legal issues, 6) career development models, 7) employability skills, 8) training clients and peers, 9) program management/implementation, 10) promotion and public relations, 11) technology, and 12) consultation. These 12 competencies are identified by the National Career Development Association (NCDA) for those who (will) deliver career development programs and services in a variety of settings. Potential job titles of CDFs include career group facilitator, job search trainer, career resource center coordinator, career coach, career development case manager, intake interviewer, occupational and labor market information resource person, human resource career development coordinator, employment/placement specialist, and workforce development staff. With certain years of work experience in career development, students who complete this course are eligible to apply for the Global Career Development Facilitator (GCD) certification through the Center for Credentialing Education (CCE), which is affiliated with the National Board for Certified Counselors (NBCC). A GCD is a person who works in any career development setting or who incorporates career development information or skills in their work with students, adults, clients, employees, or the public. As of January 2011, about 18,000 individuals acquired the GCD certification worldwide including Bulgaria, Canada, China, Germany, Japan, Romania, Turkey, South Korea, and New Zealand. The goal of the GCD certification was to provide standards, training specifications, and credentialing for diverse career development practitioners. This GCD credential differentiates two levels of career practice, which are 1) career counseling and 2) career facilitation that does not require a counseling degree. This differentiation reflected the reality where many individuals who are currently providing career assistance are not professional counselors. This course is taught by a nationally and internationally trained CDF instructor (CDFI) who is certified by the NCDA. In addition, the CDF curriculum is updated every three years by the Career Development Leadership Alliance (CDLA) under the supervision of the NCDA CDF Advisory Council in order to keep up with recent changes in the field. 

Prerequisite: 300-400 level Psychology, HD FS, or Education courses or permission of the program

Cross-listed with: WFED 424

CNED 430: Couples and Family Counseling

3 Credits

The theory and practice of counseling with couples and families emphasizing family development and major intervention approaches. CN ED 430 Couples and Family Counseling (3) Students study the theory and practice of couples and family counseling with an emphasis on models of family development and major approaches to intervention with couples and families. Systemic models of family intervention are emphasized as well as the study of other historically important and contemporary approaches to couples and family therapy. The course blends didactic and experiential learning.

Prerequisite: A minimum of 12 hours of coursework in sociology, psychology, education, or family studies.

CNED 431: Counseling and Teaching Youth at Risk

3 Credits

This course is focused on how to counsel and/or teach youth at risk for a variety of social, emotional, and educational problems. CN ED 431 Counseling and Teaching Youth at Risk (3) This course is designed to provide participants with an overview of information focused on counseling and teaching youth at-risk. Emphasis will be placed on identifying youth-at-risk for depression, suicide, eating disorders, pregnancy, AIDS, use and/or abuse of alcohol and drugs, homelessness, gang membership, difficulties related to sexual orientation, and several other at-risk behaviors. Ideas for primary, secondary, and tertiary prevention from individual, family, school, and community perspectives will also be presented. The course provides a varied format structured to include lecture/discussion, audio-visual presentations, participant self-evaluation of their own at-risk behaviors, role-plays and small group discussion.

Prerequisite: A minimum of 12 hours of coursework in sociology, psychology, education, or family studies.

CNED 432: Ethical, Legal, and Professional Issues in Counseling

3 Credits

Examination of the current ethical and legal issues related to professional counselors and counseling. CN ED 432 Ethical, Legal, and Professional Issues in Counseling (3) Participants explore an overview of ethical and legal issues related to the professional practice of counseling. Topics include responsibility, competence, public statements, confidentiality, professional relationships, licensing and other regulatory programs, and research. The course emphasizes clinical strategies relevant to legal and ethical issues.

Prerequisite: A minimum of 12 hours of coursework in sociology, psychology, education, or family studies.

CNED 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

CNED 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CNED 498: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Criminal Justice (CRIMJ)

CRIMJ 12: Criminology

3 Credits

Explanations and measurement of crime; criminal law; characteristics of criminals and victims; violent, property, white-collar, organized, and sexual crimes. SOC (CRIMJ /CRIM) 012 Criminology (3) (GS) (BA) This course meets the Bachelor of Arts degree requirements. Criminology is the study of the causes of criminal behavior. As such this course is an introduction to the topic with special focus on the major theories explaining criminal behavior including differential association, anomic, control theory and labeling theory. A key focus of the class is examining the most recent scientific research testing the basic theories. The students learn the
various research techniques that have been used to study criminal behavior including crime statistics such as the Uniform Crime Report that serves as a monitor on crime trends. Several important areas of study that link understanding criminal behavior and its distribution across the social system are investigated including age, gender, race and ethnicity. One goal of the course is to promote a more complete understanding of crime and how it is enmeshed in human social life. The course concludes by using the knowledge base generated in the course to study the link of our understanding of criminal behavior and the emerging crime control policies of the past few decades. Finally, the course reviews the impact and effectiveness of some of these policies. Throughout the course, the lectures as well as the readings emphasize the complexity of explaining human behavior and criminal behavior in particular. One aspect of the course is the use of a term paper on the objective and subjective availability of crime to the student. This paper emphasizes the complexity of the student's social life and the role that these factors may have on whether they have engaged in criminal behavior and their analysis of the causes of their criminal behavior. This project personalizes the various theories and helps the student understand the importance of their social environment in whether they have or will engage in crime. Discussion and questions are encouraged in all sections. Sections of this course may include group research projects, debates, and library or internet-based research. Along with personal contact, students have the opportunity to communicate with teaching assistants and faculty members via e-mail. Writing assignments, along with in-class examinations, are required in all sections. This course meets a General Education requirement in the Social and Behavioral Sciences for non-majors, is required for the CLJBA and CLJBS majors, and may be used in the SOC majors and minors.

Cross-listed with: CRIM 12, SOC 12  
Bachelor of Arts: Social and Behavioral Sciences  
General Education: Social and Behavioral Scien (GS)

CRIMJ 12H: Honors Criminology  
3 Credits  
Criminology is the study of the causes of criminal behavior. As such this course is an introduction to the topic with special focus on the major theories and concepts explaining criminal behavior. This honors version of Introduction to Criminology is especially designed to be appropriately challenging for Schreyer Honors College students. A key focus of the course is examining the most recent scientific research testing the basic theories in criminology. Students learn the various research methods and data sources used to study criminal behavior. Several important areas of study that link understanding criminal behavior and its distribution across the social system are investigated including age, gender, race and ethnicity. One goal of the course is to promote a more complete understanding of crime and how it is enmeshed in human social life. Students read a general text, as well as scholarly articles in criminology.

General Education: Social and Behavioral Scien (GS)  
Honors  
GenEd Learning Objective: Crit and Analytical Think  
GenEd Learning Objective: Integrative Thinking  
GenEd Learning Objective: Key Literacies

CRIMJ 13: Juvenile Delinquency  
3 Credits  
Juvenile conduct, causes of delinquency, current methods of treatment; organization and function of agencies concerned with delinquency.

Cross-listed with: SOC 13  
General Education: Social and Behavioral Scien (GS)

CRIMJ 83S: First-Year Seminar in Criminal Justice  
3 Credits  
Critical approaches to issues in criminal justice and criminology.  
CRIMJ 083S CRIMJ (CRIM) 083S First-Year Seminar in Criminal Justice  
(3) (GS;FYS)(BA) This course meets the Bachelor of Arts degree requirements. Each section of this course will be limited to 20 students who will be instructed by an experienced faculty member. Each section will focus on a well-defined body of scholarship that addresses a relatively specific topic while at the same time providing an opportunity to broadly survey existing knowledge in the discipline. For example, some sections may address very broad questions that encompass the entire field, such as criminal justice policy, issues related to social justice, or explanations of crime. Other sections may focus on justice system responses to certain types of crime, such as violent crime, white collar crime, organized crime, or transnational crime. Finally, some sections may take a comparative and international approach, and consider how justice systems are administered or how patterns of crime vary in a range of countries and jurisdictions. Each section will emphasize the development of discussion writing, and analytical skills and will give students the opportunity to work individually and in small groups. Students can expect to gain a general introduction to the University as an academic community and to explore their responsibilities as members of that community. They will also become familiar with the learning tools and resources available to them, and they will be able to establish relationships with faculty and other students who share their academic interests. This course fulfills a general education or Bachelor of Arts requirement in the social/behavioral sciences. A section of the course will be offered once a year. Students will write essays in class or out of class, engage in classroom discussion and group exercises, and make presentations. Faculty Member Proposing Course: Thomas S. Bernard

Bachelor of Arts: Social and Behavioral Sciences  
First-Year Seminar  
General Education: Social and Behavioral Scien (GS)

CRIMJ 100: Introduction to Criminal Justice  
3 Credits  
Overview of the criminal justice system, including legal foundations, processing and correction of offenders, extent and types of crime, victims. CRIMJ 100 CRIMJ (CRIM) 100 Introduction to Criminal Justice  
(3)(BA) This course meets the Bachelor of Arts degree requirements. This course provides an overview of the criminal justice system in the United States. Topics to be covered include: the extent of crime in the United States; competing and complementary goals of the criminal justice system; sources of criminal law; the history and development of the system; the functions of police, attorneys, courts and correctional agencies; the interactions between different parts of the system; and the impact of crime on the victim. Students are evaluated on two exams
The History of the FBI introduces students to the FBI to help shape its priorities and structure. With such a long history, studying the FBI engages students with each of the various historical time periods from the late 19th century to the present, including Reconstruction, the Gilded Age, Progressive Era, First World War, the New Era, the Great Depression, the Second World War, the Cold War, post-Cold War, Age of Terrorism, and contemporary history. Students will understand the evolution of Federal law enforcement, bureaucracy, their increasing power of the Executive branch, the targeting of various minority groups, civil rights and civil liberties issues, and the growth of a national security role for the federal government over time. In its long history the FBI has intersected with a wide variety of groups and issues, and this reality will further expose students to the histories of African Americans, gays and lesbians, women’s groups, Latinos, Native Americans, war protestors, students, various political dissenters, immigrants, targeting of morality, obscenity, and labor organizing. Because the FBI is responsive to both the political and policy interests of presidents and the influences of American society, students will come to appreciate the influences that politics has on bureaucracy and law enforcement, as well as the different social, political, economic, and cultural influences that each historical time period have exerted on the FBI to help shape its priorities and structure.

United States Cultures (US)

CRIMJ 113: Introduction to Law

3 Credits

Introduction to law in society with a focus on criminal law, judicial code, laws of sentencing and corrections, criminal procedure. CRIM (CRIMJ) 113 Introduction to Law (3) Introduction to the law is designed to provide CLJ majors with an introductory level of knowledge of the criminal law, and other legal codes such as the Judicial Code, laws of corrections, probation and parole, and the rules of criminal and appellate procedure. The course will serve as a gateway course to taking more advanced criminology and criminal justice courses. CRIMJ (CRIM) 113 is one of the Prescribed Courses in the CLJ curriculum and is used as a prerequisite for many 400 level courses including CRIM 467 AND 469.

Cross-listed with: CRIM 113
United States Cultures (US)

CRIMJ 150N: Safe and Sound: The Intersection of Criminal Justice and Public Health

3 Credits

This course will consider the overlapping responsibilities and epistemologies of criminal justice and public health. Both fields concerned with the promotion of population welfare, the public health and criminal justice systems nevertheless confront the same social problems from different ethical perspectives, research methodologies, and knowledge bases. Each may further mobilize different institutional actors driven by divergent political agendas. While we will discuss the productive collaboration between public health and public safety agencies, we will also consider ongoing ownership struggles over certain issues, behaviors, and even populations. Given its practical relevance to many ongoing social issues and controversies of general importance, this course is motivated by a commitment to community-engaged scholarship and thus will include topics, readings, assignments, speakers, and field trips of local and state importance. At the same time, specific topics will be framed in terms of their national and international importance, and students will be encouraged to link micro-level processes to macro-level processes.

CRIMJ 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

CRIMJ 200: Introduction to Security and Loss Control

3 Credits

A general introduction to the field of private security and asset protection. CRIMJ 200 CRIMJ 200 Introduction to Criminal Justice (3) (GS)(BA) This course meets the Bachelor of Arts degree requirements. This course focuses on a body of scholarship addressing the critical issues, policies, and complexities of the criminal justice system. It includes specific topics on key components of the system while demonstrating the intra-relationships of the system. Students will be provided numerous opportunities to broadly survey the concept of justice as well as investigate comparative issues on a governmental level and internationally. Students will also focus on specific social and justice system challenges such as substance abuse, family violence, minorities and justice, street crime, corrections for adults and juveniles, sentencing patterns, and ethics. Students will also analyze the global impact of criminality as they study transnational crime and the challenges faced by the collaboration of nations. Students will be required to familiarize themselves with electronic web sites, refereed journals, and national and international events for class discussion, research, and writing assignments. Students will learn how to comprehend legal decisions and legal procedures. By the end of the course students will be expected to integrate the information of the semester into comparisons and critical evaluation of the criminal justice system components. Frequency of enrollment: Every semester with 35 students.
CRIMJ 205N: Critical Race Theory in the Humanities and Social Sciences

3 Credits

This course closely examines the place and power of race in America. By tracing the history of how race works in particular American institutions, such as public education, criminal justice, and federal housing, students will gain a deep sense of how social categories and understandings shape material conditions and human welfare. Through the study of policies, court cases, memoirs, documentary films, and freedom struggles, this course will interrogate the many “Americas” that race has created and their implications for democracy and justice. Not only will this course focus on making race visible, but also the many ways that race intersects with class, gender, and sexuality, and how these concepts empower and marginalize at the same time. All the while, students will use Critical Race Theory methods to reach empathy and strengthen social (GS) and historical (GH) literacies. Discussion, writing, critical reading, and primary source analysis will be integral to this class. Class sessions will include whole- and small-group discussion where active listening and thoughtful participation will be taught and required. Students will be encouraged to explore their own conceptions of race and how those ideas shape knowledge and experience. Ultimately, this is a course that will weave data, theory, and story as we encourage students to move toward empathy through comprehensive understandings of race. This course therefore examines race as both deeply personal and structural.

3 Credits

Punishment and treatment of sentenced offenders, correctional institution organization, staffing, inmates, and subcultures.

CRIMJ 234: Fundamental Techniques of Scientific Criminal Investigation

3 Credits

Traditional and innovative technical approaches utilized by law enforcement scientists; capabilities and limitations of technical techniques highlighted. CRIMJ 234 CRIMJ 234 Fundamental Techniques of Scientific Criminal Investigation (3) This course is designed to introduce students to the fundamental methods by which scientific-criminal investigations are pursued. Course objectives focus upon a familiarity with various strategies and techniques of scientific criminal investigation within the law enforcement context so that students may understand both the potentials and limitations of such methods. The course maintains a focus upon traditional methods of scientific criminal investigation as well as examination of scientific developments that have altered investigation in recent years. While this course cannot produce expertise in the more sophisticated technologies of criminal investigation, it serves as a basic introduction to the field. As such, it is designed to give an overview of various possibilities, so that students completing the course will have a general grasp of the various strategies and techniques that are available for criminal investigation and will be in a position to call upon the necessary and appropriate expertise when the occasion arises. The course design alerts students to many of the limitations of the various strategies and techniques of scientific criminal investigation, equipping them to judge the validity of various findings and to assess the qualifications, and methods employed by different experts. The course gives special attention to strategies and tactics of interrogation and to means of corroborating interrogation data with scientific data obtained from other investigative techniques. The course provides an introduction to various techniques of fingerprinting, including ink pads and dusting techniques, as well as several techniques for bringing out latent fingerprints, with an emphasis on the careful collection and preservation of this evidence. It will introduce methods of drug testing, including techniques for insuring the validity of specimens and basic chemical analysis kits currently available for drug testing, with an emphasis on the careful collection and preservation of this evidence. It demonstrates and provides practical experience in breathalyzer utilization, as well as other investigative techniques for assessing driver impairment resulting from excess alcohol intake. It provides a basic introduction to DNA technology to the point of equipping students with a fundamental understanding of DNA evidence, including probabilities associated with various findings. Throughout the course, there is special stress on the concept of crime scene investigation, including strategies for cordonning off crime scenes and restricting contamination of evidence, basic crime scene mapping, and analysis of evidence such as blood spattering, foreign objects, unusual markings, hair and fiber samples, and other aspects of evidence. Finally, the course stresses preparation of investigative reports, with an emphasis upon clarity of presentation, attention to relevant details, preparation for presentation of evidence in court, and careful and concise writing. Faculty Member Proposing Course: Richard A. Ball
CRIMJ 240: Field Research in the Criminal Justice

4 Credits

Field research and observational strategies appropriate to the identification, investigation, and analysis of research questions in criminal justice. CRIMJ 240W CRIMJ 240W Field Research in Criminal Justice (4) Administration of Justice majors who are interested in completing an internship must first complete CRIMJ 240W. As augmented, this course attempts to introduce students to research strategies appropriate to the identification, investigation, and analysis of research questions in the administration of justice, while also providing intensive training in the use of various investigative strategies and intensive training in analysis of findings derived from such research, as well as preparation for an internship and extensive writing experience. As augmented, it will involve additional writing assignments by which students will demonstrate their ability to identify researchable questions, lay out their investigative strategies in written form and produce in writing analyses of their findings and conclusions, with recommendations for policy if appropriate. Considerable time is devoted to strategies for identification of research questions. Students will be required to perform an analysis of a setting in administration of justice, locate and specify aspects of the setting that require systematic research in order to explicate the setting or provide information on problems that might be solved by various administrative approaches or promising programs, projects or policies that might be adopted by other agencies. The course will provide an overview of field research methods appropriate to investigation of administration of justice issues such as those identified earlier. The course will include introduction to the theory and rationale of field research in the social sciences and considerable training and experience in field research methods across several different areas of methodology. The overview of field research methods introduces students to the variety of field methods that are available to researchers in administration of justice. Students will then proceed to an understanding of the issues associated with the theoretical perspectives and epistemological assumptions underlying the various field methods examined in the preceding overview. Here attention will be given to the assumptions upon which each research method is built and the strengths and weaknesses of each method. As augmented, this course is designed to require students to take special account of the weaknesses of the various methods and learn how to counter these weaknesses by augmenting the research strategy by complementary methods where appropriate. As augmented, the course is designed to teach students the reasons for use of various methods as well as the methods themselves. Because this course places such emphasis on data collection, and because research is best learned by doing it, the course is further augmented with additional research exercises. Students are required to spend additional time in the field research exercises beyond that required for a 3-credit course, completing as much as 20 hours of participant observation for sharpening their observational skills, as 10 hours of focus group work, with much of this effort aimed at sharpening their ability to interpret communications from several different sources with respect to the same events, and as 20 hours of interviewing, using several different interviewing techniques. These efforts concentrate upon developing students' ability to elicit information from interviewees and cross-validate the information through a variety of interview techniques. Students must complete several papers demonstrating their ability to organize their research finding and present them in understandable form. The research writing elements in this course include development of hypotheses, preparation of a research proposal, development of literature reviews, description of research settings, and preparation of research bibliographies. Finally, this course is designed to serve as a bridge in preparation for a successful internship experience. As such, it must succeed in teaching students how to develop and conduct a research study on their own before graduation. Faculty Members Proposing Course: Lisa Morris and Richard A. Ball

Prerequisite: CRIMJ100
Writing Across the Curriculum

CRIMJ 241: Computer Applications in Public Affairs/Criminal Justice

3 Credits

Introduction to computer applications for criminal justice and public affairs agencies. CRIMJ 241 CRIMJ (PUBPL) 241 Computer Applications in Public Affairs (3) The student will gain a working knowledge of microcomputer and Internet applications to utilize them in course and/or job functions. The class will be treated primarily as a lab. The purpose is to make the student familiar with popular computer applications in current use. Applications covered include: Word Processing (Microsoft Word); Spreadsheet (Microsoft Excel); Presentation Package (Microsoft PowerPoint); Database (Microsoft Access). Internet Applications include: email - Webmail; World Wide Web Browser - Netscape Communicator and Internet Explorer; and creating a Homepage.

Cross-listed with: PUBPL 241

CRIMJ 250W: Research Methods in Criminal Justice

3 Credits

Fundamental concepts of social science research including design, measurement, sampling, and interpretation of the study of crime, law, and justice.

Prerequisite: CRIM 012
Writing Across the Curriculum

CRIMJ 260: Statistical Analysis for the Social Sciences

3 Credits

Methods of collection, presentation, and analysis of quantitative data in the social science; procedures, interpretation, and application. CRIMJ 260 Statistical Analysis for the Social Sciences (3) This course covers the theory and methodology of statistical analysis. This course includes mathematical calculation of Univariate and Bivariate models, including mean, mode median, variance and standard deviation, Crosstabs with Chi-Square, Independent and Paired Samples t-tests, Anova and Tukey's H.S.D. Correlation and Regression. It also makes use of SPSS and publically available data sets to examine univariate data, and test hypotheses at both the bivariate and multivariate level. Students become familiar with the calculations behind the analysis, and engage in the analysis and reporting of actual data.

Prerequisite: 2 units of High School Algebra, and CRIMJ100, or permission of the program

General Education: Quantification (GQ)

CRIMJ 290: Introduction to Internship Experience

1-3 Credits

Planning and preparation for field experience in a criminal justice agency setting. This course provides the student learner with an intimate understanding of the academic requirements of the criminal justice
The rationale for the course is to provide students with an overview of what can be done in the forensic sciences to preserve or recreate a scene through the use of the most current techniques as well as to educate students so that they will be able to ask and/or answer questions more intelligently in a court of law. In addition, students will learn to utilize critical thinking and problem-solving in the course of ordinary day-to-day encounters in the field.

**Prerequisite:** CRIMJ 100 or concurrent: CRIMJ 240W

CRIMJ 294: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

CRIMJ 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

CRIMJ 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CRIMJ 300: Honors Seminar: Issues and Trends in Criminal Justice

3-6 Credits/Maximum of 6

Discussion of various, specific criminal justice topics, such as discretionary decision-making, due process, equal protection, violence, and recidivism.

**Prerequisite:** fifth-semester standing, and admission to Schreyers Honors College Honors

CRIMJ 304: Security Administration

3 Credits

Interdisciplinary analysis of security and loss prevention; its administration, role in crime control and prevention, and relationship to criminal justice.

CRIMJ 310: Forensic Science I

3 Credits

Presentation of the techniques, skills, and limitations of modern crime laboratory. CRIMJ 310 CRIMJ 310 Forensic Science I (3) Presentation of techniques, the principles underlying the techniques, skills and limitations of the modern crime laboratory for student who has no background in the forensic sciences form the basis of the course. The nature of physical evidence is emphasized along with limitations that technology and knowledge impose on its individualization and characterization. Particular attention is paid to the meaning and role of probability in interpreting the individual significance of scientifically evaluated evidence. Major, lecture topics include the following: The Crime Scene; Physical Evidence; Physical Properties of Glass, Soil, and Plastics; Organic Analysis; Inorganic Analysis; the Microscope; Hairs, Fibers, and Paints; Drugs; Forensic Toxicology; Forensic Aspects of Arson and Explosion Investigation; Forensic Serology; Forensic Anthropology; DNA; Finger Prints; Fire Arms; Tool Marks and Other Impressions; Document and Voice Examination; and Forensic Science on the Internet. To understand the techniques used in crime scene analysis hands-on activities as formal experiments in the laboratory setting form part of the course. The specific objectives of the laboratory components of the courses are: 1) To provide a first set of laboratory experiments for criminal justice and general science students who have had little or no previous science laboratory experience. 2) To show beginning students in criminal justice and general science the significance of physical evidence at the scene of a crime. 3) To demonstrate what happens to physical evidence when it is sent to the laboratory so that students will know what is needed, how much is needed, and how to prepare 4) To educate the student in basic laboratory practices so that they can ask and/or answer questions more intelligently in a court of law. And probably most important, to educate students so that they will not unintentionally destroy physical evidence at a crime scene, and will in fact try to preserve it for the trained forensic scientist. The experiments are designed to provide students with an overview of what can be done as a prelude to making them potential professional forensic scientists/criminologists. The proposed courses are meant for students majoring in the Administration of Justice Programs and should augment their knowledge of criminology and reinforce approaches utilized by law enforcement scientists. Students will carry out hands on experiments in biology, chemistry and physics in a dedicated laboratory setting. Use of instrument to analyze specimens and gather/interpret data using computers and statistical techniques form part of the course. Students will be graded based on their understanding of the principles involved in selecting and using specific laboratory techniques and on the quality of results of their laboratory experience. It is anticipated that the course will be offered once a year, first part during fall semester and the second part during the following semester. Since laboratory space and instruments are limited class size will not exceed fifteen.

**Prerequisite:** CRIMJ 100

CRIMJ 345: Criminal Justice and the Community

3 Credits

Justice agencies and the community's crime prevention and participation strategies; community involvement in policy development.

**Prerequisite:** CRIMJ 100

CRIMJ 389: Gangs and Gang Behavior

3 Credits

The history, structure, and practices of gangs in America as well as societal reaction to them. CRIMJ 389 CRIMJ 389 Gangs and Gang Behavior (3) This class takes a look at gangs: their history, structure, activities, and practices as well as law enforcement practices targeting gangs and gang members. This class examines the following types of gangs: Outlaw Motorcycle Gangs, Supremacists and Militias, Skinheads, African-American, Latino, and Asian Gangs. It also addresses relatively recent phenomena in gang involvement: (1) the rise of the independent girl gang; (2) middle class suburban gangs (Goths); and, (3) anti-drug and anti-sex Straight-Edge gangs. Both the positive and negative functions of gangs are examined critically through a comparison of conventional and non-conventional youth activities. It concludes with an examination of emerging trends in gang development and activities, including the link between street gangs and organized crime. This course complements CRIMJ 403-Juvenile Law and Justice and is recommended for students
wishing to pursue a career in juvenile intervention. It consists of three examinations (objective and subject measures), three traditional essays (out-of-class), and four directed asynchronous message board essays (using ANGEL course management software). This course will be offered annually with a projected enrollment of 25 students.

CRIMJ 406: Sociology of Deviance

3 Credits

Theory and research concerning deviant behaviors and lifestyles viewed as significant departures from a group's normative expectations. SOC (CRIMJ/CRIM) 406 Sociology of Deviance (3) (BA) This course meets the Bachelor of Arts degree requirements. Sociology of Deviance focuses on the theory and research in social construction of social norms, the violation of norms, and social reaction to the violation of norms. The course focuses on the role of social structure and power in the definition of deviance, on structural, cultural, and social psychological processes involved in deviant behavior, and the dynamics of social reaction to deviance. The course includes some content focusing on criminal deviance, but also emphasizes non-criminal deviance, as well as the role of social movements and social change in constructing and contesting deviance definitions. CRIMJ/SOC/CRIM 012 and CRIM/CRIMJ 250W are prerequisites. This course may be counted toward the credits required for the B.A. and B.S. in Crime, Law, and Justice. It would fulfill one of the 400-level requirements in the "Crime" component of the major. The course may also be counted toward credits required for the B.A. and B.S. in Sociology for students with the Deviance and Criminology specialization.

Prerequisite: SOC 012, SOC 013, or SOC 005, or permission of program
Cross-listed with: CRIM 406, SOC 406
Bachelor of Arts: Social and Behavioral Sciences

CRIMJ 407: Victimology

3 Credits

This course will explore the legal, emotional, and social responses to the process of victimization by offenders and third parties. CRIMJ 407 Victimology (3) (US) Victimology studies the victim-offender relationship. Victimization is analyzed using the Bible, Anglo-Saxon Law, Common Law, and legal precedent as a historical development of the status of "victim." Cultural changes during the 1950s and 1960s resulted in the reemergence of the victim and the designation of social services and community awareness for victims. Social scientific studies of the status of unique groups analyzed victimizations according to demographics and socioeconomic status. Political viability of victims in terms of restitution and community response are viewed in terms of Census data, the Department of Justice's National Crime Victimization Survey and The Uniform Crime Reports, Morbidity Reports, Emergency Room Reports, and the Insurance Industry Reports. The above data is evaluated in terms of age, race, education, socioeconomic status, and gender. The development and merging of culture, sub-cultural liaisons, social relationships, leisure activities, and routine transactions are reviewed as they apply to personal and unique group victimizations. Comparative issues and transnational crime are addressed under the format of globalization, gender, economics, and cultural mores. Interdisciplinary evaluation of Victimology considers psychology, medicine, sociology, criminal justice, legal studies, and mass media. Documentaries, case studies, problem based learning, and popular films provide numerous activities for discussion, analysis, and integration in writing and for discussion.

United States Cultures (US)

CRIMJ 408: Police Administration

3 Credits

Principles of administration as they relate to a police organization; and policy development. CRIM 408 CRIM J 408 Legal Aspects of Law Enforcement (3) This course is one of the law enforcement offerings directed at students interested in pursuing a career in the field. This course builds upon legal courses and the police administration course. It is intended to challenge students to comprehend the complexities of working within a litigious society where policing is often the target of simultaneous praise and criticism. Research is introduced to allow students to consider alternatives to conflicts and the court's interpretation of the efficacy and constitutionality of such efforts. Civil liberties, use of force, use of technology, and communications have played significant roles challenging public safety. The consistent expansion of the role of law enforcement presents complexities that are often different according to the jurisdiction and community sentiment. Issues of hiring, training, education, accreditation, force, and racial profiling are the basis for assignments, research, and directed projects and class discussion.

Prerequisite: CRIMJ100 or CRIM 100 and CRIMJ210 or CRIM 210
CRIMJ 410: The Pennsylvania Court System

3 Credits

Tracing the steps of criminal cases through the investigative stage, arrest, trial, sentencing and appellate review in Pennsylvania.

Prerequisite: CRIMJ100, CRIMJ113
CRIMJ 412: Crime, Social Control, and the Legal System

3 Credits

Legal and extralegal control; public opinion on crime; criminal justice and correctional processes; legal sanctions; control strategies. Field trip.

Prerequisite: CRIM 012, CRIM 013, or SOC 005
Cross-listed with: CRIM 412
CRIMJ 413: Advanced Criminological Theory

3 Credits

This course provides an in-depth look at theories of crime and examines influential empirical studies designed to these theories. CRIMJ 413 (CRIM/SOC) 413 Advanced Criminological Theory (3) Advanced criminological theory is intended to extend and deepen students' knowledge of core ideas in criminology. The course has four main emphases: 1) learning major schools of thought in criminology, 2) learning about the uses and construction of theory, 3) learning about approaches to integrating criminological theories, and 4) exploring how criminological concerns are grounded in and interrelated with core issues in sociology. The course is offered once a year with 50 seats per offering. CRIMJ/SOC 012 is a prerequisite. Students will be evaluated on research or analytical papers, written assignments on course readings, and/or in-class essay-style exams. This course may be counted toward the credits required for the B.A. and B.S. in Crime, Law, and Justice. It would fulfill one of the 400-level requirements in the major. The course
CRIMJ 414: Criminal Careers and the Organization of Crime

3 Credits

Research on and theory of criminal careers and crime organizations, emphasizing recruitment and disengagement; offender characteristics and lifestyles; policy implications.

Prerequisite: CRIMJ012, CRIMJ250W
Cross-listed with: CRIM 413, SOC 413

CRIMJ 415: Drug Control Policy in Comparative Perspective

3 Credits

Examines the history of drug control policy in the United States; comparisons and contrasts with other countries' experiences. CRIMJ 415 CRIMJ (PUBPL) 415 Drug Control Policy in Comparative Perspective (3)This course focuses on the history of drug control policy in the United States and the internationalization of drug prohibition. We also examine the experience of other countries with drug use, abuse and control, including alternative regulatory policies in Western Europe. This class is both historical and comparative in orientation: in tracing the roots of drug prohibition, and examining the experience of other countries, we seek to enrich our understanding of American style drug control and the feasibility of alternative approaches.

Prerequisite: CRIMJ020 or PL SC001 or PL SC014 or SOC 001
Cross-listed with: PUBPL 415

CRIMJ 420: Criminal Law and Procedure

3 Credits

Common law and statutory crimes; constitutional rights of accused persons, liability of criminal justice professionals.

Prerequisite: CRIMJ113

CRIMJ 421: Violent Crime in the United States

3 Credits

The impact of violent crime on victims, their families, and communities; the police process as it relates to violent crime. CRIMJ 421 CRIMJ (CRIM) 421 Violent Crime (3)This course will examine the nature, frequency, and causes of violence, generally and of assault, robbery, rape, and homicide, specifically. Several different theoretical and research perspectives are reviewed, including biological, psychological, social, and cultural. The course also examines individual and societal responses to violence. Students are evaluated on three objective exams (25% each) and a series of short assignments (25%). CRIM/CRIMJ 421 may be used by both CLJBA and CLJBS degree candidates to satisfy a 400-level course requirement in the major. This course will be offered twice a year with 60 seats per offering.

Prerequisite: CRIMJ012
Cross-listed with: CRIM 421

CRIMJ 422: Victimization

3 Credits

Examines the history, how victimization is measured/studied in social sciences, public policy implications of victimization movement in U.S. CRIM 422 / CRIMJ 422 Victimization (3) Victimology has emerged as an important area of study for the social sciences and an important arena for policy development. This course will familiarize students with the historical development of the research into victimization and the importance of the victims' movement to public policy. Areas explored will include the relationship between victim and offender, the cultural images of victims and their impact on the victim and the response of the criminal justice system to them, and how research has attempted to measure victimization. The course will be one of the supporting courses where the student must select 6 credits at the 400 level.

Prerequisite: CRIM 250W
Cross-listed with: CRIM 422

CRIMJ 423: Sexual and Domestic Violence

3 Credits

Legal, sociological, and psychological perspectives on sexual and domestic violence. CRIMJ 423 / CRIM 423 / WMNST 423 Sexual and Domestic Violence (3) (US) This course investigates violence against women, specifically domestic, sexual, and relationship violence. Students will examine some of the legal, sociological, and psychological perspectives about sexual, domestic, and relationship violence as well as the social and cultural roots of violence against women. Students will also gain an understanding of the experiences of victims of domestic and sexual violence as well as the issues presented by perpetrators. Students will be evaluated based on performance on exams, and two research papers. CRIMJ 423 / CRIM 423 / WMNST 423 is a supporting course in both the WMNST major and minor as well as a supporting course in the CLJ major. It may also be used to satisfy a GI requirement. This course is offered fall and spring semester with an enrollment of 60 students each semester.

Prerequisite: CRIMJ100
Cross-listed with: CRIM 423, WMNST 423
United States Cultures (US)

CRIMJ 424: Drugs, Crime, and Society

3 Credits

Why do people take drugs? Why and how does society attempt to control drug use and distribution? What is the association between drugs and crime? Exploring questions such as these will be central in CRIM 424. The focus of this course will be examining explanations of drug use and the social construction of drug policies. We will begin by asking the question “What are drugs?” From there, we will discuss theories of drug abuse and the methods used to study patterns of drug use. We will also take an in-depth look at the histories, pharmacologies, and patterns associated with the most popular drugs in modern society. In the second half of the semester, we will focus on the social control of drugs and the connections between drugs and crime. At the heart of this discussion will be the causes and consequences of modern U.S. drug policies. We will conclude with a look at alternative drug policies and what the future may hold for drug use in America. Throughout the semester, you will be asked to think critically about material and evaluate its strengths and weaknesses. To foster critical thinking skills, you will
have ample opportunities to discuss topics in class, analyze arguments in written assignments and in-class exercises, and apply ideas to real world situations through course projects and presentations.

Cross-listed with: CRIM 424

CRIMJ 424W: Drugs and Crime
3 Credits
Analysis of international narcotics trafficking in the twentieth century.

Prerequisite: CRIMJ100
Writing Across the Curriculum

CRIMJ 425: Organized Crime
3 Credits
This course examines organized crime in terms of historical antecedents, structure, related theories, and policy issues. CRIM (CRIMJ) 425 Organized Crime (3) This course will provide students with a historical and theoretical overview of organized crime. Students will gain an understanding of the structure of organized crime as well as an understanding of the businesses associated with traditional and nontraditional organized crime groups. The course will also provide students with a detailed analysis of state and federal laws and policies regarding organized crime. Students will be evaluated by two mid-term exams (25% each), an essay final exam (40%), and class participation (10%). Crime, Law, and Justice students may use this course to satisfy a 400-level course requirement in the Bachelor of Arts and Bachelor of Science majors. This course will be one of the supporting courses from which students are required to select six credits.

Prerequisite: CRIM 100
Cross-listed with: CRIM 425

CRIMJ 426: Special Offender Types
3-6 Credits/Maximum of 6
Study of special offender types; relationships with criminal justice system (drug abuse, victimless crime, white collar crime considered different semesters).

Prerequisite: 3 credits in Criminal Justice or permission of program

CRIMJ 430: Alternatives to Incarceration
3 Credits
Control and treatment of offenders in the community, probation and parole organizations, diversion programs, innovative sentences, supervision techniques. This course introduces students to the system of "criminal justice" as defined and interpreted by the Supreme Court as well as lower courts. Students study the judicial process, the intricacies of opinion formation, the nature and extent of judicial power, the willingness of the courts to hear appeals, and the reality of criminal sanctioning and procedure. The adversarial process, the willingness of the courts to hear appeals, and the conflicting opinions of the court introduce students to the lack of conformity that is part of upholding Constitutional rights. Court attitudes and how the changing system is studied through stare decisis and case briefing. Particular cases and issues are critiqued such as capital punishment of the mentally ill, juveniles, and those who are mentally challenged. The tension between justice versus law is studied through cases, evaluation of court behavior, and changing attitudes towards racial inequities.

Prerequisite: CRIMJ100, CRIMJ113, and CRIMJ230, or permission of program

CRIMJ 431: Offender and Prisoner Rights
3 Credits
The identification of correctional problems and the setting of objectives as reflective of court rulings, legislative change, and administrative law.

Prerequisite: CRIMJ100, CRIMJ113, CRIMJ230 or permission of program

CRIMJ 432: Crime and the American Court System
3 Credits
This course examines the American court system including structure and the way courts process offenders with special focus on sentencing. CRIM (CRIMJ) 432 Crime and the American Court System (3) CRIM/ CRIMJ 432, Crime and The American Court system, studies the courts from the lower courts to the Supreme Court and the various actors that play important roles in the functioning of the courts. First, the course studies the jurisdictions of the various courts and their organization in various state systems as well as the federal courts as well as the organization of state and federal administrative offices that manage the courts including the training of judges and the preparation of the court budget. Subsequent to the development of the basic understanding of the court jurisdiction and organization, the class studies the roles of the key actors in the day-in and day-out operation of the courts. In the spotlight are judges, prosecutors and defense attorneys although the role of the probation officers and clerk of courts are also intertwined with the processing of defendants. Of particular importance in this component of the course is the development of what is referred to as the court community and the focal concerns and goals that the court must consider as it processes cases. An, understanding of court community and focal concerns serves as crucial context for understanding the role of public policy as it attempts to shift or change the decision making of the court. One important dynamic of this course is the understanding that the court, although functioning as an institution to provide a neutral field on which accusations of criminality are to be played out, operates similarly to other organizations in that they are to be efficient (move cases with minimum overhead) and to be effective (provide justice, and protect the public). How the courts balance these competing demands and the informal processes that emerge in the processing of defendants is the key focus of the class. Finally, the course explores the attempts to reform the courts from the sentencing reforms such as determinate sentencing, mandatory minimums including "3 strikes" and sentencing guidelines. These issues highlight the political context of the courts and adaptability of the courts to attempts to change their values, and decisions. This course serves as one core 400-level course in the major. Each student must take two of the five core 400-level courses.

Prerequisite: CRIM 100
Cross-listed with: CRIM 432

CRIMJ 435: Border Security
3 Credits
This course provides knowledge about government organizations charged with American border security, guiding laws and policies. CRIMJ 435 Border Security (3) The Border Security course provides depth
of knowledge of key border issues for students of homeland security. The course achieves this goal by focusing on border integrity strategies, the motivation and nature of criminal and other organizations which violate borders, the policies established by governments to maintain border integrity, identification of the key players in maintaining the border, and the relevant legal issues in enforcing laws on the border. This course allows the student to apply principles and concepts of homeland security to a specialized and very relevant area.

**Prerequisite:** 6th semester standing

**CRIMJ 439: The Politics of Terrorism**

3 Credits

Analysis of political terrorism as a violent alternative for peaceful change and traditional warfare in the nuclear age.

**Prerequisite:** CRIMJ100 or PL SC014, or permission of program

Cross-listed with: PLSC 439

Bachelor of Arts: Social and Behavioral Sciences

**CRIMJ 441: The Juvenile Justice System**

3 Credits

Historical and contemporary view of the juvenile justice system. Focus on analyzing components of the system, their interactions, processing, and handling of youths. CRIMJ 441 CRIMJ (CRIM) 441 Delinquency and Juvenile Justice (3) This course examines delinquency and the juvenile justice system from a variety of viewpoints. It looks at the problems the system is expected to address, how the problems have changed through the ages, how the current juvenile justice system developed, and the programs used to prevent and control delinquency and their effectiveness. By the end of the course, students should be able to think critically about the research and issues in the field. Evaluation methods include exams, brief writing assignments and a longer paper on policy issues. Students will be evaluated through brief written assignments, a term paper, a mid-term essay, and essay final. This course will be offered twice a year with 60 seats per offering. Students in the major may select CRIM (CRIM) 441 as one of several required courses in either the BA or BS program. This course is one of the core courses in the curriculum from which students must choose six credits from five core courses offered. It also serves as one of the supporting courses in the curriculum from which the students must take six credits at the 400-level.

**Prerequisite:** CRIMJ100

Cross-listed with: CRIM 441

United States Cultures (US)

**CRIMJ 441W: The Juvenile Justice System**

3 Credits

Historical and contemporary view of the juvenile justice system. Focus on analyzing components of the system, their interactions, processing, and handling of youths.

**Prerequisite:** CRIMJ100 or permission of program

Writing Across the Curriculum

**CRIMJ 450W: Senior Seminar**

3 Credits/Maximum of 6

Capstone course exploring past, current and future developments in criminal justice.

**Prerequisite:** CRIMJ100 or CRIM 100 and sixth semester standing or permission of program.

Writing Across the Curriculum

**CRIMJ 451: Race, Crime, and Justice**

3 Credits

This course focuses on the significance of race, class, and ethnicity to criminal justice processing and criminal offending. CRIMJ 451 CRIMJ (CRIM) 451 Race, Crime, and Justice (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. This class is designed to explore the relationship between the criminal justice system and racial minorities in the United States. Students will examine theoretical issues of race and justice, as well as empirical understandings of the relationship between race, crime, and the criminal justice system. Students will endeavor to understand some of the economic, political, and sociological reasons why racial minorities are over-represented in the criminal justice system. Students will also explore normative issues of justice and equity in broader social interactions that influence and are influenced by crime and the criminal process. This course may be used towards the additional courses requirements for the CLJ BS/BA and ADM J degrees. It will also satisfy the Intercultural/International competence (GI). Students will be evaluated by a midterm and final exam, a term paper and class participation. This course will be offered twice a year with 60 seats per offering.

**Prerequisite:** CRIMJ100

Cross-listed with: CRIM 451

Bachelor of Arts: Social and Behavioral Sciences

**CRIMJ 453: Women and the Criminal Justice System**

3 Credits

This course focuses on the experiences of women as offenders, victims, and professionals in the criminal justice system. CRIMJ 453 / CRIM 453 / WMNST 453 Women and the Criminal Justice System (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. This class is designed to explore the role of women in the criminal justice system and look at the issues related to women as offenders, victims of crime, and as professionals in the system. Students will gain an understanding of the issues concerning women in the criminal justice system, examine how societal arrangements affect women as offenders, victims, and criminal justice professionals, and better understand the overlooked problems faced by women in the criminal justice system. Students will be evaluated on the basis of exams, presentations, and papers. CRIMJ 453 / CRIM 453 / WMNST 453 is a supporting course for both WMNST and CLJ majors, as well as the WMNST minor. This course may also be used to satisfy a GI requirement. This course will be offered twice a year with 60 seats per offering.

**Prerequisite:** CRIMJ100 or WMNST100

Cross-listed with: CRIM 453, WMNST 453

United States Cultures (US)
CRIMJ 455: Contemporary Issues in Law Enforcement

3 Credits/Maximum of 3

This course will examine some of the current and most pertinent issues facing law enforcement today. This course will examine some of the current and most pertinent issues facing law enforcement today. The course is designed to provide both insight and application of some of the fundamentals necessary to be successful as a law enforcement professional. An interactive and collaborative learning approach will focus on various topics of concern which are vital to effective law enforcement personnel. Examples of these topics may include: use of force, drug enforcement, search and seizure, interviewing and interrogation, stress in policing, as well as any other topics which may develop as an issue of concern for law enforcement.

Prerequisite: CRIMJ 100; CRIMJ 210

CRIMJ 460: History and Function of Criminal Justice Components

3 Credits

Historical development of criminal justice system components (police, courts, corrections) related to formulation and function of the state.

Bachelor of Arts: Social and Behavioral Sciences

CRIMJ 462: Comparative Criminal Justice Systems

3 Credits

A comparison of American and selected foreign justice systems to illustrate the variety of possible responses to crime.

Prerequisite: CRIMJ100 or permission of program
Bachelor of Arts: Social and Behavioral Sciences

CRIMJ 465: Ethics in Criminal Justice

3 Credits

Ethical behavior in the criminal justice system.

Prerequisite: CRIMJ100 or permission of program

CRIMJ 467: Law and Society

3 Credits

Law and society studies the social origins of law and legal systems; occupational careers, and decision-making of legal officials. SOC (CRIMJ/CRIM) 467 Law and Society (3) (BA) This course meets the Bachelor of Arts degree requirements. Law and society teaches students’ knowledge of key concepts and core ideas about the role of law in society. The course will cover the basics of key legal philosophies, major social science theories of law and society, research in law and society, the structure of the legal profession, and vital contemporary issues involving the role of law in society. CRIM/CRIMJ 113 and CRIMJ/CRIM 250W are prerequisites. The evaluations methods will include written assignments on course readings, and essay-style exams. Law and Society may be counted toward the credits required for the B.A. and B.S. in Crime, Law and Justice. It would fulfill one of the 400-level requirements in the "Law" component of the major. The course may also be counted toward credits required for the B.A. and B.S. in Sociology for students with the Deviance and Criminology specialization.

Prerequisite: CRIMJ100 or CRIMJ113 or permission of program

Cross-listed with: CRIM 467, SOC 467
Bachelor of Arts: Social and Behavioral Sciences

CRIMJ 469: Drugs and Drug Policy in the United States

3 Credits

Examines the history and dimensions of drug use and analyzes the impact of drug policy. CRIMJ 469 / HIST 469 Drugs and Drug Policy in the United States (3) For nearly a century, the United States has been waging its version of a hundred years’ war on drugs, spending billions of dollars and incarcerating thousands of offenders while failing to significantly reduce the use of illicit drugs. This course examines drug use in a historical context while addressing the changing nature and dimension of drug use, including the pharmacology of drugs, patterns of drug use, and sentencing policies. Because drug control is inextricably linked to social, political, and public policy, the course will provide the student with a foundation for critical thinking and rational decision making relative to the efficacy of the various drug control initiatives. Since drugs seemingly permeate every level of American society and directly or tangentially touch most Americans’ lives, issues such as drug testing in the workplace, the use of drug courier profiles, legalized medical marijuana, and needle exchange programs are evaluated.

Students will be expected to learn the pharmacology of various drugs, the history of drug use in the United States since the colonial era, the evolution of federal drug agencies, and acquire knowledge about contemporary drug issues. They also will be expected to develop and strengthen their critical thinking skills as they assess the consequences of implementing particular anti-drug policies and their impact on reducing the use of illicit drug use. An example of the evaluation methods would be: students will be evaluated on the basis of three exams and four “think pieces” (requiring students’ critical responses to an assigned topic) scheduled throughout the semester. Class attendance also will influence the grade. Faculty Member Proposing Course: John C. McWilliams

Prerequisite: CRIMJ100 or HIST 021
Cross-listed with: HIST 469
Bachelor of Arts: Humanities

CRIMJ 471: Legal Rights, Duties, Liabilities of Criminal Justice Personnel

3 Credits

Civil law issues within a justice agency and between criminal justice agencies and members of the public.

Prerequisite: CRIMJ100
Cross-Listed

CRIMJ 473: Criminal Procedure and Evidence in the Business Community

3 Credits

Law of evidence and proof, constitutional constraints on police procedures (arrest, search, etc.) in society and the business community.

Prerequisite: CRIMJ100
Cross-Listed

CRIMJ 482: Seminar, Criminal Justice Agency Administration

3 Credits

Relates organizational and public policy management approaches to police, courts, and correctional institutions. CRIM (CRIMJ) 482 Seminar, Criminal Justice Agency Administration (3) In this course, you will
learn about the nature of criminal justice organizations, individual and group behavior within the system, and the issues involved in reforming the system. This course will NOT teach you how to become an administrator in the criminal justice system, but hopefully will teach you about the issues and theories surrounding organizations and reform and most importantly, teach you to think and communicate (in both written and verbal form). After taking this course, you should have a more accurate perception of criminal justice organizations and have a better understanding of the complexity surrounding the administration and management of these organizations. Criminal Justice Agency Administration may be counted toward the credits required for the B.A. and B.S. in Crime, Law, and Justice.

**Prerequisite:** CRIM 100

Cross-listed with: CRIM 482

CRIMJ 489: Victimology: Predatory Crime

3 Credits

This course uses medical, social scientific and legal research to study the complexities of predatory crime. CRIMJ 489WCRIMJ 489W Victimology: Predatory Crime (3) This course builds upon CRIMJ 407, Victimology. Students are directed toward the development of forensic knowledge, crime scene analysis, comprehension of predatory injuries, films, and current serial crimes to initiate research and critical thinking. Issues such as gender, family abuse, protective services, trends in victim selection, and societal responses provide numerous opportunities for learning communities and interaction with other classes. The use of WEB based assignments and Department of Justice information encourages students to expand their research skills for writing assignments, short research papers, and legal research. The course also uses graphic slides to introduce students to the reality of physical and sexual child abuse, sexual assault, and homicide. Students are expected to review anatomy and use proper terminology when speaking about predatory behavior, victimization injuries, and psychological issues. Crime classification is introduced using the Federal Bureau of Investigation Manual and the DSM IV is used to classify aberrant behavior. Research completed by leaders in the field are assigned readings and special topics such as female serial killers, angels of death, spree killers, and terrorism provide a basis for class discussions and projects. The course also includes the "high crime low-war" classification of international terrorism and concepts of lethality of attack.

**Prerequisite:** CRIMJ407

Writing Across the Curriculum

CRIMJ 494: Research Topics

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis. CRIMJ 494CRIMJ 494. Research TopicsThis common course will focus on specific research issues. Issues to be covered will be social violence, legal issues, and impact on crime control. Students will study the design and implementation of topical issues as they address specific issues. The course will add to the diversity offerings within the criminal justice program.Facult member proposing course: M. A. DuPont-Morales

CRIMJ 494H: Research Topics

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Honors

CRIMJ 495: Internship in Criminal Justice

3-12 Credits/Maximum of 12

Experience with a criminal justice agency coordinated through readings and discussion.

**Prerequisite:** CRIMJ100

CRIMJ 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

CRIMJ 496H: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

Honors

CRIMJ 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

**Criminology (CRIM)**

CRIM 12: Criminology

3 Credits

Explanations and measurement of crime; criminal law; characteristics of criminals and victims; violent, property, white-collar, organized, and sexual crimes. SOC (CRIMJ /CRIM) 012 Criminology (3) (GS) (BA) This course meets the Bachelor of Arts degree requirements.Criminology is the study of the causes of criminal behavior. As such this course is an introduction to the topic with special focus on the major theories explaining criminal behavior including differential association, anomie, control theory and labeling theory. A key focus of the class is examining the most recent scientific research testing the basic theories. The students learn the various research techniques that have been used to study criminal behavior including crime statistics such as the Uniform Crime Report that serves as a monitor on crime trends. Several important areas of study that link understanding criminal behavior and its distribution across the social system are investigated including age, gender, race and ethnicity. One goal of the course is to promote a more complete understanding of crime and how it is enmeshed in human social life. The course concludes by using the knowledge base generated in the course to study the link of our understanding of criminal behavior and the emerging crime control policies of the past few decades. Finally, the course reviews the impact
and effectiveness of some of these policies. Throughout the course, the lectures as well as the readings emphasize the complexity of explaining human behavior and criminal behavior in particular. One aspect of the course is the use of a term paper on the objective and subjective availability of crime to the student. This paper emphasizes the complexity of the student's social life and the role that these factors may have on whether they have engaged in criminal behavior and their analysis of the causes of their criminal behavior. This project personalizes the various theories and helps the student understand the importance of their social environment in whether they have or will engage in crime. Discussion and questions are encouraged in all sections. Sections of this course may include group research projects, debates, and library or internet-based research. Along with personal contact, students have the opportunity to communicate with teaching assistants and faculty members via e-mail. Writing assignments, along with in-class examinations, are required in all sections. This course meets a General Education requirement in the Social and Behavioral Sciences for non majors, is required for the CLJBA and CLJBS majors, and may be used in the SOC majors and minors.

Cross-listed with: CRIMJ 12, SOC 12
Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)

CRIM 12H: Honors Criminology

3 Credits

Criminology is the study of the causes of criminal behavior. As such this course is an introduction to the topic with special focus on the major theories and concepts explaining criminal behavior. This honors version of Introduction to Criminology is especially designed to be appropriately challenging for Schreyer Honors College students. A key focus of the course is examining the most recent scientific research testing the basic theories in criminology. Students learn the various research methods and data sources used to study criminal behavior. Several important areas of study that link understanding criminal behavior and its distribution across the social system are investigated including age, gender, race and ethnicity. One goal of the course is to promote a more complete understanding of crime and how it is enmeshed in human social life. Students read a general text, as well as scholarly articles in criminology.

General Education: Social and Behavioral Scien (GS)
Honors
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

CRIM 100: Introduction to Criminal Justice

3 Credits

Overview of the criminal justice system, including legal foundations, processing and correction of offenders, extent and types of crime, victims. CRIM 100 CRIM (CRIM) 100 Introduction to Criminal Justice (3)(BA) This course meets the Bachelor of Arts degree requirements. This course provides an overview of the criminal justice system in the United States. Topics to be covered include: the extent of crime in the United States; competing and complementary goals of the criminal justice system; sources of criminal law; the history and development of the system; the functions of police, attorneys, courts and correctional agencies; the interactions between different parts of the system; and the impact of crime on the victim. Students are evaluated on two exams (20% each), two written assignments (30%), and a final exam (30%). This course is a prescribed course in the CLJBA, CLJBS, ADM J BS and ADM J BA majors, and it is also a prerequisite for most 400-level courses in Crime, Law, and Justice.

Cross-listed with: CRIMJ 100
Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)

CRIM 113: Introduction to Law

3 Credits

Introduction to law in society with a focus on criminal law, judicial code, laws of sentencing and corrections, criminal procedure. CRIM (CRIMJ) 113 Introduction to Law (3) Introduction to the law is designed to provide CLJ majors with an introductory level of knowledge of the criminal law, and other legal codes such as the Judicial Code, laws of corrections, probation and parole, and the rules of criminal and appellate procedure. The course will serve as a gateway course to taking more advanced criminology and criminal justice courses. CRIMJ (CRIM) 113 is one of the Prescribed Courses in the CLJ curriculum and is used as a prerequisite for many 400 level courses including CRIM 467 AND 469.

Cross-listed with: CRIMJ 113
United States Cultures (US)

CRIM 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

CRIM 201: Presumed Innocent? Social Science of Wrongful Conviction

3 Credits

Social science of how wrongful convictions occur; disparities in the criminal justice system; risks, factors, and policies.

Cross-listed with: SOC 201
General Education: Social and Behavioral Scien (GS)

CRIM 249: Criminology Theory and Evidence

3 Credits

This course provides criminology majors a more in-depth understanding of the theories, methodologies, and research results within the scientific discipline of criminology. Students will first focus on concepts and definitions associated with theory development and research methods prior to applying these to historical and present theories of criminal behavior. Sociological theories and methods will be given greater weight in the course. At the end of the course, students will apply what they've learned to theoretically motivate a testable research question and outline this in a short research proposal. Throughout the course, theoretical concepts and evidence will be connected to current and historical criminal justice policies. This course serves as the foundation for later courses on specific substantive criminological topics, such as violence, race, gender, and neighborhood crime. The course also provides students the theoretical and methodological background for completing CRIM 250W, Research Methods in Criminal Justice, which includes an empirical research paper component. The Criminology program learning objectives directly relevant for this course are: Recognize the causes
and consequences of crime at the micro and macro levels and match these with prominent criminological Course Justification perspectives. - Apply theories of crime to explain actual and hypothetical scenarios, behaviors, and trends. - Explain the various social science methods of inquiry and use these to test specific criminological research questions.

**Prerequisite:** CRIM 12; SOC 12 CONCURRENT: CRIM 100; CRIM 100H

**CRIM 250W: Research Methods in Criminology**

3 Credits

The purpose of this writing-intensive course is to engage students in the social scientific research process used by criminologists to answer empirical research questions. It is the second course (after CRIM 249) that overviews theory and research in criminology. Students learn to use social science research methods through instructor-led demonstrations and applications of research methods, data analysis exercises, and critical reading of published research. Students apply their research knowledge and skills to an empirical research project completed in a sequence of steps producing written drafts that receive instructor feedback. After completion of this course, students will have acquired the following knowledge and skills: (1) The ability to generate a research question and effectively and efficiently search and review the relevant research literature. (2) A working knowledge of how to apply social science research methods and research designs to answer research questions. (3) The ability to strategically read published research articles to extract different types of information. (4) An understanding of the inductive and deductive aspects of the research process. (5) The ability to collect, analyze, and interpret quantitative and qualitative data. (6) The ability to design a quantitative research project to test hypotheses of interest to criminologists. (7) The ability to summarize and explain in writing the methods used and results derived from studies seeking answers to a common research question. (8) An understanding of social science research methods needed to be critical consumers of research and claims about crime, criminal behavior, and social response to them. (9) A certified knowledge about ethical issues in social science research.

**Prerequisite:** CRIM 249, STAT 200

**Writing Across the Curriculum**

**CRIM 298: Preceptorship in Criminology**

1-6 Credits/Maximum of 6

**CRIM 298 Preceptorship in Criminology** (1-6 per semester/maximum of 6) The Preceptorship provides undergraduates with an opportunity to work closely with a faculty member in a regularly scheduled course as a teaching assistant. Undergraduate juniors and seniors who have done well in a particular course can deepen their understanding of the material by assisting in teaching about the subject. The Preceptorship also provides greater opportunity for interaction between faculty and students. Moreover, if graduate students also are involved in teaching, they provide role models for undergraduates.

**CRIM 395: Internship in Criminal Justice**

1-9 Credits/Maximum of 9

Field experience focusing on the student’s major interest within the area of criminal justice.

**Prerequisite:** CRIM 250W

**CRIM 406: Sociology of Deviance**

3 Credits

Theory and research concerning deviant behaviors and lifestyles viewed as significant departures from a group’s normative expectations. SOC (CRIMJ/CRIM) 406 Sociology of Deviance (3) (BA) This course meets the Bachelor of Arts degree requirements. Sociology of Deviance focuses on the theory and research in social construction of social norms, the violation of norms, and social reaction to the violation of norms. The course focuses on the role of social structure and power in the definition of deviance, on structural, cultural, and social psychological processes involved in deviant behavior, and the dynamics of social reaction to deviance. The course includes some content focusing on criminal deviance, but also emphasizes non-criminal deviance, as well as the role of social movements and social change in constructing and contesting deviance definitions. CRIMJ/J/SOC/CRIM 012 and CRIM/CRIMJ 250W are prerequisites. This course may be counted toward the credits required for the B.A. and B.S. in Crime, Law, and Justice. It would fulfill one of the 400-level requirements in the "Crime" component of the major. The course may also be counted toward credits required for the B.A. and B.S. in Sociology for students with the Deviance and Criminology specialization.

**Prerequisite:** SOC 012, SOC 013, or SOC 005, or permission of program Cross-listed with: CRIMJ 406, SOC 406 Bachelor of Arts: Social and Behavioral Sciences

**CRIM 412: Crime, Social Control, and the Legal System**

3 Credits

Legal and extralegal control; public opinion on crime; criminal justice and correctional processes; legal sanctions; control strategies. Field trip.

**Prerequisite:** CRIM 012, CRIM 013, or SOC 005 Cross-listed with: CRIMJ 412

**CRIM 413: Advanced Criminological Theory**

3 Credits

This course provides an in-depth look at theories of crime and examines influential empirical studies designed to these theories. CRIMJ
413 CRIMJ (CRIM/SOC) 413 Advanced Criminological Theory (3) Advanced criminological theory is intended to extend and deepen students’ knowledge of core ideas in criminology. The course has four main emphases: 1) learning major schools of thought in criminology, 2) learning about the uses and construction of theory, 3) learning about approaches to integrating criminological theories, and 4) exploring how criminological concerns are grounded in and interrelated with core issues in sociology. The course is offered once a year with 50 seats per offering. CRIMJ/CRIM/SOC 012 is a prerequisite. Students will be evaluated on research or analytical papers, written assignments on course readings, and/or in-class essay-style exams. This course may be counted toward the credits required for the B.A. and B.S. in Crime, Law, and Justice. It would fulfill one of the 400-level requirements in the major. The course may also be counted toward credits required for the B.A. and B.S. in Sociology for students with a Deviance and Criminology specialization.

**Prerequisite:** CRIMJ012, CRIMJ250W Cross-listed with: CRIMJ 413, SOC 413

CRIM 421: Violent Crime in the United States

3 Credits

The impact of violent crime on victims, their families, and communities; the police process as it relates to violent crime. CRIMJ 421 CRIM (CRIM) 421 Violent Crime (3) This course will examine the nature, frequency, and causes of violence, generally and of assault, robbery, rape, and homicide, specifically. Several different theoretical and research perspectives are reviewed, including biological, psychological, social, and cultural. The course also examines individual and societal responses to violence. Students are evaluated on three objective exams (25% each) and a series of short assignments (25%). CRIMJ/CRIM 421 may be used by both CLJBA and CLJBS degree candidates to satisfy a 400-level course requirement in the major. This course will be offered twice a year with 60 seats per offering.

**Prerequisite:** CRIMJ012 Cross-listed with: CRIMJ 421

CRIM 422: Victimization

3 Credits

Examines the history, how victimization is measured/studied in social sciences, public policy implications of victimization movement in U.S. CRIM 422 / CRIM 422 Victimization (3) Victimology has emerged as an important area of study for the social sciences and an important arena for policy development. This course will familiarize students with the historical development of the research into victimization and the importance of the victims’ movement to public policy. Areas explored will include the relationship between victim and offender, the cultural images of victims and their impact on the victim and the response of the criminal justice system to them, and how research has attempted to measure victimization. The course will be one of the supporting courses where the student must select 6 credits at the 400 level.

**Prerequisite:** CRIM 250W Cross-listed with: CRIMJ 422

CRIM 423: Sexual and Domestic Violence

3 Credits

Legal, sociological, and psychological perspectives on sexual and domestic violence. CRIMJ 423 / CRIM 423 / WMNST 423 Sexual and Domestic Violence (3) (US) This course investigates violence against women, specifically domestic, sexual, and relationship violence. Students will examine some of the legal, sociological, and psychological perspectives about sexual, domestic, and relationship violence as well as the social and cultural roots of violence against women. Students will also gain an understanding of the experiences of victims of domestic and sexual violence as well as the issues presented by perpetrators. Students will be evaluated based on performance on exams, and two research papers. CRIMJ 423 / CRIM 423 / WMNST 423 is a supporting course in both the WMNST major and minor as well as a supporting course in the CLJ major. It may also be used to satisfy a GI requirement. This course is offered fall and spring semester with an enrollment of 60 students each semester.

**Prerequisite:** CRIMJ100 Cross-listed with: CRIMJ 423, WMNST 423

United States Cultures (US)

CRIM 424: Drugs, Crime, and Society

3 Credits

Why do people take drugs? Why and how does society attempt to control drug use and distribution? What is the association between drugs and crime? Exploring questions such as these will be central in CRIM 429. The focus of this course will be examining explanations of drug use and the social construction of drug policies. We will begin by asking the question “What are drugs?” From there, we will discuss theories of drug abuse and the methods used to study patterns of drug use. We will also take an in-depth look at the histories, pharmacologies, and patterns associated with the most popular drugs in modern society. In the second half of the semester, we will focus on the social control of drugs and the connections between drugs and crime. At the heart of this discussion will be the causes and consequences of modern U.S. drug policies. We will conclude with a look at alternative drug policies and what the future may hold for drug use in America. Throughout the semester, you will be asked to think critically about material and evaluate its strengths and weaknesses. To foster critical thinking skills, you will have ample opportunities to discuss topics in class, analyze arguments in written assignments and in-class exercises, and apply ideas to real world situations through course projects and presentations.

Cross-listed with: CRIMJ 424

CRIM 425: Organized Crime

3 Credits

This course examines organized crime in terms of historical antecedents, structure, related theories, and policy issues. CRIM (CRIMJ) 425 Organized Crime (3) This course will provide students with a historical and theoretical overview of organized crime. Students will gain an understanding of the structure of organized crime as well as an understanding of the businesses associated with traditional and nontraditional organized crime groups. The course will also provide students with a detailed analysis of state and federal laws and policies regarding organized crime. Students will be evaluated by two mid-term exams (25% each), an essay final exam (40%), and class participation (10%). Crime, Law, and Justice students may use this course to satisfy a 400-level course requirement in the Bachelor of Arts and Bachelor of Science majors. This course will be one of the supporting courses from which students are required to select six credits.

**Prerequisite:** CRIM 100
This course explores the study of the application of criminological theories to our understanding of various forms of criminal behavior. CRIM 429 Seminar in Criminal Behavior (3-4/maximum of 7) The course is intended to provide in the curriculum an avenue for the faculty to offer special focus courses on emerging forms of criminal behavior. For example, during the past several years the criminal justice system has had to respond to new forms of criminal behavior that have developed as we have developed new technologies. Recent use of the Internet as a means of committing crime has been the focus of federal and state legislation. Thus, societies have developed new forms or new means to old forms of criminal behavior through the use of technology. CRIM 429 will provide the faculty with the opportunity to develop special criminal behavior topic courses on offenses such as these and many other topics on our understanding and ability to explain criminal behavior. The course can satisfy 400 level requirements for the students in the CLJ major. This course will evaluate the students using a combination of written assignments and oral presentations.

**Prerequisite:** CRIM 012

**CRIM 430:** American Correctional System

3 Credits

Study of corrections from probation, intermediate punishment, adult and juvenile correctional institutions to parole. CRIM 430 American Correctional System (3) This course examines the correctional system from the sentencing decision to reentry or release from the correctional system. The course focuses on the choices that decision-makers face in sentencing, classification and responding to violations by offenders as well as the problems that offenders face as they confront their treatment/ punishment. As part of the analysis the course explores the persistent conflicting expectations that society imposes on our correctional system and the effectiveness of the system in rehabilitating, deterring and incapacitating offenders. This course expands on the brief introduction of the topic in CRIM/CRIMJ 100 and relies on the student’s understanding of social science research developed in CRIM/CRIMJ 250W to critically analyze what we know about corrections. This course provides the opportunity for students to study in depth a major component of the criminal justice system and is one of five classes students may select from to meet a major core course requirement.

**Prerequisite:** CRIM 100, CRIM 250W

**CRIM 432:** Crime and the American Court System

3 Credits

This course examines the American court system including structure and the way courts process offenders with special focus on sentencing. CRIM (CRIMJ) 432 Crime and the American Court System (3) CRIM/ CRIMJ 432, Crime and The American Court system, studies the courts from the lower courts to the Supreme Court and the various actors that play important roles in the functioning of the courts. First, the course studies the jurisdictions of the various courts and their organization in various state systems as well as the federal courts as well as the organization of state and federal administrative offices that manage the courts including the training of judges and the preparation of the court budget. Subsequent to the development of the basic understanding of the court jurisdiction and organization, the class studies the roles of the key actors in the day-in and day-out operation of the courts. In the spotlight are judges, prosecutors and defense attorneys although the role of the probation officers and clerk of courts are also intertwined with the processing of defendants. Of particular importance in this component of the course is the development of what is referred to as the court community and the focal concerns and goals that the court must consider as it processes cases. An, understanding of court community and focal concerns serves as crucial context for understanding the role of public policy as it attempts to shift or change the decision making of the court. One important dynamic of this course is the understanding that the court, although functioning as an institution to provide a neutral field on which accusations of criminality are to be played out, operates similarly to other organizations in that they are to be efficient (move cases with minimum overhead) and to be effective (provide justice, and protect the public). How the courts balance these competing demands and the informal processes that emerge in the processing of defendants is the key focus of the class. Finally, the course explores the attempts to reform the courts from the sentencing reforms such as determinate sentencing, mandatory minimums including “3 strikes” and sentencing guidelines. These issues highlight the political context of the courts and adaptability of the courts to attempts to change their values, and decisions. This course serves as one core 400-level course in the major. Each student must take two of the five core 400-level courses.

**Prerequisite:** CRIM 100

Cross-listed with: CRIMJ 432

**CRIM 433:** Sentencing

3 Credits

This course studies sentencing from prosecutorial charging decisions through revocation of probation, and the complex goals and responsibilities at sentencing. CRIM 433 Sentencing (3) This course focuses on the key decision in our court system—sentencing. The course covers the historical development of sentencing both within the United States and internationally as a backdrop to the reform efforts of the late 20th Century. The course explores how sentencing has changed from a judge-based discretionary system to a system where numerous restrictions to judicial discretion have been imposed by state and federal legislatures. Students will be evaluated on two essay exams (midterm and final) with the midterm worth 20 and the final 30 percent of the grade. A research analysis paper will be required that will be completed in three stages. The first stage will be the setting forth of a research problem and a scheme for analyzing the data (10%). The second stage will be an oral presentation of the findings (20%). The final stage will be a written term paper on the project (20%). This course will be used by CLJ majors as one of the six credits of 400-level elective credits required in the major.

**Prerequisite:** CRIM 100, CRIM 250W

**CRIM 435:** Policing in America

3 Credits

This course will focus on current, historical, theoretical, and research issues surrounding law enforcement in the United States. CRIM 435 Policing in America (3) This course is designed to provide a basic knowledge of the structure of policing in America and to explore findings from research considering police behavior. Students will examine and discuss controversial issues relating to policing in American society. Current trends in policing philosophies and strategies will be identified and their effectiveness will be debated. The relationship between police
and citizens will be stressed. CRIM 435 can be used to satisfy a core 400-level course requirement in the CLJBA and CLJBS majors.

Prerequisite: CRIM 100, CRIM 250W

CRIM 441: The Juvenile Justice System

3 Credits

Historical and contemporary view of the juvenile justice system. Focus on analyzing components of the system, their interactions, processing, and handling of youths. CRIMJ 441 CRIMJ (CRIM) 441 Delinquency and Juvenile Justice (3) This course examines delinquency and the juvenile justice system from a variety of viewpoints. It looks at the problems the system is expected to address, how the problems have changed through the ages, how the current juvenile justice system developed, and the programs used to prevent and control delinquency and their effectiveness. By the end of the course, students should be able to think critically about the research and issues in the field. Evaluation methods include exams, brief writing assignments and a longer paper on policy issues. Students will be evaluated through brief written assignments, a term paper, a mid-term essay, and essay final. This course will be offered twice a year with 60 seats per offering. Students in the major may select CRIM (CRIM) 441 as one of several required courses in either the BA or BS program. This course is one of the core courses in the curriculum from which students must choose six credits from five core courses offered. It also serves as one of the supporting courses in the curriculum from which the students must take six credits at the 400-level.

Prerequisite: CRIMJ100
Cross-listed with: CRIMJ 441
United States Cultures (US)

CRIM 451: Race, Crime, and Justice

3 Credits

This course focuses on the significance of race, class, and ethnicity to criminal justice processing and criminal offending. CRIMJ 451 CRIMJ (CRIM) 451 Race, Crime, and Justice (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. This class is designed to explore the relationship between the criminal justice system and racial minorities in the United States. Students will examine theoretical issues of race and justice, as well as empirical understandings of the relationship between race, crime, and the criminal justice system. Students will endeavor to understand some of the economic, political, and sociological reasons why racial minorities are over-represented in the criminal justice system. Students will also explore normative issues of justice and equity in broader social interactions that influence and are influenced by crime and the criminal process. This course may be used towards the additional courses requirements for the CLJ BS/BA and ADM J degrees. It will also satisfy the Intercultural/International competence (GI). Students will be evaluated by a midterm and final exam, a term paper and class participation. This course will be offered twice a year with 60 seats per offering.

Prerequisite: CRIMJ100
Cross-listed with: CRIMJ 451
Bachelor of Arts: Social and Behavioral Sciences
United States Cultures (US)

CRIM 453: Women and the Criminal Justice System

3 Credits

This course focuses on the experiences of women as offenders, victims, and professionals in the criminal justice system. CRIMJ 453 / CRIM 453 / WMNST 453 Women and the Criminal Justice System (3) (US) This course will examine the role of women in the criminal justice system and look at the issues related to women as offenders, victims of crime, and as professionals in the system. Students will gain an understanding of the issues concerning women in the criminal justice system, examine how societal arrangements affect women as offenders, victims, and criminal justice professionals, and better understand the overlooked problems faced by women in the criminal justice system. Students will be evaluated on the basis of exams, presentations, and papers. CRIMJ 453 / CRIM 453 / WMNST 453 is a supporting course for both WMNST and CLJ majors, as well as the WMNST minor. This course may also be used to satisfy a GI requirement. This course will be offered twice a year with 60 seats per offering.

Prerequisite: CRIMJ100 or WMNST100
Cross-listed with: CRIMJ 453, WMNST 453
United States Cultures (US)

CRIM 467: Law and Society

3 Credits

Law and society studies the social origins of law and legal systems; occupational careers, and decision-making of legal officials. SOC (CRIMJ/CRIM) 467 Law and Society (3) (BA) This course meets the Bachelor of Arts degree requirements. Law and society teaches students' knowledge of key concepts and core ideas about the role of law in society. The course will cover the basics of key legal philosophies, major social science theories of law and society, research in law and society, the structure of the legal profession, and vital contemporary issues involving the role of law in society. CRIMJ/CRIM 467 and CRIMJ/CRIM 250W are prerequisites. The evaluations methods will include written assignments on course readings, and essay-style exams. Law and Society may be counted toward the credits required for the B.A. and B.S. in Crime, Law and Justice. It would fulfill one of the 400-level requirements in the "Law" component of the major. The course may also be counted toward credits required for the B.A. and B.S. in Sociology for students with the Deviance and Criminology specialization.

Prerequisite: CRIMJ100 or CRIMJ113 or permission of program
Cross-listed with: CRIMJ 467, SOC 467
Bachelor of Arts: Social and Behavioral Sciences

CRIM 469: Seminar in the Law

3-4 Credits/Maximum of 7

The focus of this seminar is the law such as the laws of sentencing, appellate course decisions and their impact. CRIM 469 Seminar in Law (3-4 per semester/maximum of 7) This seminar explores topics related to the law and will vary from semester to semester depending on current events, faculty research and other areas of study related to the criminal law. Evaluation methods will vary depending on the focus of the seminar, however, student evaluations will rely on techniques such as writing and presentations to enhance student presentation skills as well as evaluate their understanding of the course material. Students may take this course twice. This course serves as one of the supporting courses from which students must select 6 credits at the 400-level. It also serves as one of
the additional courses from which students must select 18 credits under the Legal Studies Option.

Prerequisite: CRIM 113

CRIM 480: Research Topics in Crime, Law, and Justice

1 Credits

Students are exposed to a variety of research topics related to crime, law, and justice. CRIM 480H CRIM 480H Research Topics in Crime, Law, and Justice (1) This one-credit seminar is intended for Scholars in the fall semester of their third year who intend to complete their Honors thesis in Crime, Law, and Justice. Students are exposed to a wide variety of research topics related to crime, law, and justice. The specific topics depend on the interests of the students and on the current research being conducted by the faculty of the Crime, Law, and Justice program. Students read and summarize research reports, engage in discussions with Crime, Law, and Justice faculty, and attend lectures by visiting scholars. At the conclusion of the seminar, students select a research topic for their honors thesis and a CLJ

Prerequisite: CLJ major and admission to the Schreyer Honors College Honors

CRIM 481: Information Literacy in Crime, Law, and Justice

1 Credits

Students are exposed to a variety of information sources related to crime, law, and justice. CRIM 481H CRIM 481H Information Literacy in Crime, Law, and Justice (1) This one-credit seminar is intended for Scholars in the spring semester of their third year who intend to complete their honors thesis in Crime, Law, and Justice. This course surveys the structures of information, patterns of information retrieval, and the resources and technologies used to research topics related to crime, law, and justice. Students complete a series of assignments involving information retrieval and the effective use of information technologies. This includes working with their faculty supervisor and collecting information on the topic they have selected for their honors thesis. At the conclusion of the class, students present a research proposal for their honors thesis, including a review of the relevant literature and a schedule for completing the thesis during their fourth year.

Prerequisite: CLJ 480H Honors

CRIM 482: Seminar, Criminal Justice Agency Administration

3 Credits

Relates organizational and public policy management approaches to police, courts, and correctional institutions. CRIM (CRIMJ) 482 Seminar, Criminal Justice Agency Administration (3) In this course, you will learn about the nature of criminal justice organizations, individual and group behavior within the system, and the issues involved in reforming the system. This course will NOT teach you how to become an administrator in the criminal justice system, but hopefully will teach you about the issues and theories surrounding organizations and reform and most importantly, teach you to think and communicate (in both written and verbal form). After taking this course, you should have a more accurate perception of criminal justice organizations and have a better understanding of the complexity surrounding the administration and management of these organizations. Criminal Justice Agency Administration may be counted toward the credits required for the B.A. and B.S. in Crime, Law, and Justice.

Prerequisite: CRIM 100
Cross-listed with: CRIMJ 482

CRIM 490: Crime Policy

3 Credits

This course focuses on criminal justice policy and the factors that influence policy development and implementation. CRIM 490 Crime Policy (3) This class will study crime and criminal justice in the context of law and the development and implementation of public policy. The course will focus on the politics of law and social control by exploring the construction of crime as a social problem, fundamental aspects of the policy development and implementation process, the legal interpretation of public policy, and the role of federal, state, and local governments in crime control. Students will be evaluated on essay exams and a term paper. This course is intended to be a capstone course for advanced undergraduates. The course will draw on the broad range of course work that students will have taken prior to taking this course to develop a course that takes what we know about crime, the law and the justice system and focus on public policy as it relates to these areas. The course may be used toward the six credits required at the 400 level under Additional Courses or as one of the courses under the Legal Studies Option.

Prerequisite: CRIM 100 , CRIM 113 , CRIM 250W , 6 credits of 400-level CRIMJ courses and 7th semester standing

CRIM 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

CRIM 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

CRIM 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

CRIM 497A: **SPECIAL TOPICS**

3 Credits

Cross-Listed

Curriculum and Instruction (CI)

CI 195: Early Observation Experience for Teacher Preparation

1-2 Credits/Maximum of 2

Early observational work in educational settings with a variety of age/grade levels.
CI 200: Peer Tutoring

1 Credits

Prepares students to develop successful practices as a peer tutor.

CI 210: Small Group & One-on-one Tutoring

1 Credits

The course gives students knowledge in one-on-one peer tutoring as well as in a small group setting.

CI 250: Education Research: Issues and Approaches

3 Credits

Introduction to frameworks and methods for education research, including classroom-based and non-classroom-based research. CI 250H Education Research: Issues and Approaches (3) This course serves as an introduction to the major issues and traditions surrounding research in education. Educational research spans the full range of settings in which people learn and/or teach, including schools and classrooms but also non-school settings such as community, therapeutic, or workplace environments. This research is carried out within a broad range of intellectual traditions and using a diverse set of methodologies as well. Further, some educational research is carried out by practitioners as they engage in their daily work (such as teachers conducting classroom inquiry), while others study education from non-practitioner perspectives. This course will serve as an overview of major questions, frameworks, and methods that characterize educational inquiry, serving as an introduction to the broad set of frames for studying education. In addition, the course will address controversies surrounding the conduct and utility of educational research. The course is appropriate for undergraduate students interested in engaging in independent research, honors theses, or collaboration on faculty research projects; or those simply interested in becoming more informed consumers of research on education. Students will read examples of research in different education subfields, interact with faculty from various subfields in education, and consider how their own educational questions might be approached. Students will also learn about the dissemination of education research in journals and presentations. Upon finishing the course, students will be prepared to develop a research proposal suitable for an undergraduate project such as a thesis or capstone paper.

Honors

CI 280: Introduction to Teaching English Language Learners

3 Credits

Introduction to language, culture, instruction, assessment, and professionalism as they relate to teaching English Language Learners in U.S. schools. CI 280 Introduction to Teaching English Language Learners (3) (GH) CI 280 focuses on the development of foundational knowledge to successfully assist English language learners in U.S. school contexts. The basic premise of the course is that teachers play an important role in creating a positive classroom learning environment and bringing school success for English language learners. This course is designed to develop essential dispositions, skills, and knowledge for teacher education students to fulfill their important role. Course objectives are to understand culture, language, learning contexts, and pedagogy. Culture focuses on a) sociocultural characteristics of English language learners, b) how English language learners' cultural communication and learning styles affect the learning process, c) how English language learners' cultural values affect their academic achievement and language development, d) negative effect of cultural bias in instruction, materials and assessments, and e) the importance of developing cross-cultural competence in interactions with colleagues, administrators, school and community specialists, students and their families.

Prerequisite: EDPSY010 or EDPSY014 or EDTHP115

General Education: Humanities (GH)

CI 295: Introductory Field Experience for Teacher Preparation

1-3 Credits/Maximum of 6

Selected observation of schooling situations with small group and tutorial participation.

Prerequisite: second-semester standing, Official clearances required. See: http://www.ed.psu.edu/preservice/clearance.htm

CI 295A: Introductory Field Experience for Teacher Preparation

1-3 Credits

CI 295A Introductory Field Experience for Early Childhood Education (1-3)CI 295A is designed to enable students interested in early childhood education as a potential major and career to gain experience observing and assisting in a variety of school and community settings. Students will be engaged in observing as well as tutoring individual children and small groups of children in pre-kindergarten settings as well as in kindergarten through fourth grade settings. As students have not yet been exposed to methods of instructional planning and delivery, their tutoring of individuals and small groups will be carried out under the direct supervision of a professional teacher. Through their observation and participation in these educational settings, students will develop an awareness of observation as a tool for understanding and analyzing educational environments, teaching and learning. They will develop an understanding of the nature of participant observation as well as a variety of frameworks and strategies that can be used for observation as well as the skills necessary to communicate observations professionally and ethically. Engaging in extended observations in educational settings provides students with an opportunity to enrich and deepen their understanding of a variety of educational concepts that they will encounter in prerequisite or concurrent courses including child development, English language learning and development, principles of human learning, individual differences in human ability including special needs students, cultural diversity, and contemporary issues in education and their impact on childhood educational settings. Finally, CI 295A will provide an opportunity for students to examine childhood education as a future career. They will be introduced to notions of teaching in general as a career as well as to specialized aspects of teaching in both pre-kindergarten and elementary school settings. Students will examine their own biographies as learners and the implications of their biographies for the development of a teacher identity and the potential suitability of childhood education as a career. Students will also be engaged in examining a variety of codes for professional and ethical conduct for educators. Through examining, critiquing and synthesizing these various articulations of professionalism, students will begin the development of a personalized code of ethical, and professional conduct.

Prerequisite: second semester standing; Concurrent: HD FS229or CI 280 or EDPSY014 or EDTHP115 or SPLED400
CI 295B: Introductory Field Experience in Middle Level Education
1-3 Credits/Maximum of 3

CI 295B: Introductory Field Experience for Middle Level Education
(1-3)
CI 295B is designed to enable students interested in middle level education (Grades 4 to 8) as a potential major and career to gain experience observing and assisting in a variety of school settings. Students will be engaged in observing as well as tutoring individual children and small groups of children in middle level educational settings. As students have not yet been exposed to methods of instructional planning and delivery, their tutoring of individuals and small groups will be carried out under the direct supervision of a professional teacher. Through their observation and participation in these educational settings, students will develop an awareness of observation as a tool for understanding and analyzing educational environments, teaching and learning. They will develop an understanding of the nature of participant observation as well as a variety of frameworks and strategies that can be used for observation as well as the skills necessary to communicate observations professionally and ethically. Engaging in extended observations in educational settings provides students with an opportunity to enrich and deepen their understanding of a variety of educational concepts that they will encounter in prerequisite or concurrent courses including child development, English language learning and development, principles of human learning, individual differences in human ability including special needs students, cultural diversity, and contemporary issues in education and their impact on middle level educational settings. Finally, CI 295B will provide an opportunity for students to examine middle level education as a future career. They will be introduced to notions of teaching in general as a career as well as to specialized aspects of teaching in both pre-kindergarten and elementary school settings. Students will examine their own biographies as learners and the implications of their biographies for the development of a teacher identity and the potential suitability of middle level education as a career. Students will also be engaged in examining a variety of codes for professional and ethical conduct for educators. Through examining, critiquing and synthesizing these various articulations of professionalism, students will begin the development of a personalized code of ethical, and professional conduct.

**Prerequisite:** second semester standing, HD FS229 or equivalent

CI 295D: **SPECIAL TOPICS**

3 Credits

CI 295H: Introductory Field Experience for Teacher Preparation
1-3 Credits/Maximum of 6

Selected observation of schooling situations with small group and tutorial participation.

Honors

CI 296: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

CI 296H: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

CI 297: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CI 387: Education, Culture, and Society in Brazil and Colombia
3 Credits

Given the increasing need to instill students with global perspectives, students from a range of backgrounds and academic majors will benefit from an in-depth exploration of the educational systems, cultures, and societies of Brazil and Colombia -- additionally, the course may also prepare students for (optional) summer travel to Brazil and/or Colombia (provided they are interested in either of both of those opportunities). Students are invited to use their emerging understandings to reflect upon the U.S. educational system, its culture, and its society. Throughout the course, students will examine the structure of educational systems, educational policy, educational inequality across nations, education as a constitutional right, colonial histories, Dependency Theory, government corruption, urban and rural environments, labor issues, economics (i.e. Marxism, socialism, communism, inflation, currency devaluation, neoliberalism), politics, Colombia's ongoing civil war, and Brazilian culture (including music, beauty obsession, and sports). In addition, the course also provides a grounding in basic travel skills and basic Portuguese. Although the course's main emphasis is on education, students from a broad variety of backgrounds and educational interests are encouraged to enroll, since they are likely to find a broad array of topics that will increase their international acumen considerably.

Honors

CI 400: Introduction to Research Literature
3 Credits

Introduction to research literature and methodology; stress on interpretation, sources, and research reporting.

**Prerequisite:** student teaching or teaching experience

CI 405: Strategies in Classroom Management
3 Credits/Maximum of 3

Managing and coping with disruptive student behavior in instructional settings so that they support the teaching/learning process. EDLDR 405 / CI 405 Strategies in Classroom Management (3) This course has been designed to engage students in in-depth examination of the process of creating and sustaining a classroom learning community that fosters and enables success for all children. Emphasis is placed on understanding a variety of theoretical models of classroom management as well as observing and studying individual children to develop a better understanding of their needs. The result should be the development of
a coherent set of beliefs concerning the creation of classroom learning environments that support learners and meet their individual needs.

**Prerequisite:** teaching experience or supervised practicum experience

**Cross-listed with:** EDLDR 405

**CI 444:** Writing Support for IUG and Honors Scholars

3 Credits

The purpose of this course is to support IUG/Reading Specialist MED students in writing their Master’s papers as well as Schreyer Honors Scholars in The College of Education writing their Honors theses. The course provides an overview to the conventions of academic writing, and divides a major task into manageable sections. This class walks students through each section, provides models, and engages students in the actual practice of writing. Substantial working time is dedicated to writing the thesis. Students often have more faith in their ability to structure writing time into their week than is actually warranted. This course provides structured writing time, and students work in close proximity to other writers and to instructor feedback.

**Prerequisite:** 4th Semester Standing Honors

**CI 492:** Identities, Power and Perceptual Pedagogies in Teaching and Learning

3 Credits

Students will perform inquiries into the intersections of identities, power, and pedagogical formations in relation to urban teaching/learning contexts. AFAM 492 / CI 492 / EDTHP 492 Identities, Power and Perceptual Pedagogies in Teaching and Learning (3) In this course, students will take part in inquiries into the intersections of identities, power, and perceptual pedagogies, particularly as these phenomena pertain to methods of teaching and learning in urban contexts. To develop new knowledge and analytic skills, students will be introduced to perceptual and conceptual frameworks that assist deep engagements with youth- and teacher-centered case studies. These cases will depict actual lived experiences among racially and economically diverse students and teachers in urban contexts.

**Prerequisite:** 5th semester standing

**Cross-listed with:** AFAM 492, EDTHP 492

**CI 495:** Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

**Prerequisite:** prior approval of proposed assignment by instructor

**CI 495A:** Clinical Application of Instruction--PK/4

1-6 Credits/Maximum of 6

**CI 495B:** Clinical Application of Instruction--Elementary and Kindergarten Education (3) CI 495B for Middle Level Education is a full-time teaching practicum. It provides an opportunity for teacher candidates to integrate concepts, theories, and ideas from their coursework. Specifically, CI 495B engages candidates in examining 1) what it means to be a professional and establish professional relationships with colleagues, students, and families, 2) how to use various tools (e.g., observation, writing, reflection, teaching, case studies, etc.) that are available to them in learning to be a teacher, 3) how to make connections across the various courses and experiences they are taking during the semester, and 4) how effectively they are developing their knowledge and skills as a beginning teacher and what sources of evidence they should use in judging their effectiveness. Teacher candidates in CI 495B are expected to achieve desired outcomes in four domains: 1) planning and preparing for student learning, 2) teacher, 3) inquiry and analysis of teaching and learning, and 4) fulfilling professional responsibilities. CI 495B is a part of a block of courses in a PSU teacher education program that is unified by a basic set of principles and a field experience component.

**Prerequisite:** CI 295, EDPSY014, EDTHP115. Official clearances required. See: http://www.ed.psu.edu/preservice/clearance.htm; Concurrent: MTHED420, SCIED458, SS ED430W

**CI 495C:** Clinical Application of Instruction--Secondary Education

3 Credits/Maximum of 3

Practicum situation for demonstration of selected instructional strategies and management skills acquired in professional training. To be offered only for Satisfactory/Unsatisfactory grading.

**Prerequisite:** CI 295, EDPSY014, EDTHP115. Official clearances required. See: http://www.ed.psu.edu/preservice/clearance.htm; Concurrent: special methods course(s) in area of certification

**CI 495D:** Practicum in Student Teaching--Childhood and Early Adolescent Education

12 Credits/Maximum of 12

Full-time classroom instruction in early childhood and elementary education. Students supervised by University personnel and practicing teachers. No concurrent courses other than CI 495F permitted.

**Prerequisite:** CI 495A or CI 495B; a grade of C or higher in all specified and professional courses. Official clearances required. See: http://www.ed.psu.edu/preservice/clearance.htm
is to ensure that students with diverse backgrounds can gain the
and underlying computing theory are covered. The intent of this course
literacy. The history, architecture and operation of computing systems
This is an introductory university-level course in computer systems
3 Credits
CI 495F: Professional Development Practicum
3 Credits/Maximum of 3
Instruction concurrent with student teaching practicum. Students focus
on the solution of instructional problems identified at the practicum site.
Prerequisite: Official clearances required. See: http://www.ed.psu.edu/
Honors
CI 496: Independent Studies

Cybersecurity Analytics and Operations (CYBER)

CYBER 100: Computer Systems Literacy
3 Credits
This is an introductory university-level course in computer systems
literacy. The history, architecture and operation of computing systems
and underlying computing theory are covered. The intent of this course
is to ensure that students with diverse backgrounds can gain the
information technology fundamental skills and understanding to succeed
with subsequent in-depth courses in the Cybersecurity Analytics and
Operations curriculum. At the same time the general nature of the
introduction may make it useful for other programs that involve education
in concepts and skills relating to information and computing systems.

CYBER 100S: Computer Systems Literacy
3 Credits
This is an introductory university-level course in computer systems
literacy. The history, architecture and operation of computing systems
and underlying computing theory are covered. The intent of this course
is to ensure that students with diverse backgrounds can gain the
information technology fundamental skills and understanding to succeed
with subsequent in-depth courses in the Cybersecurity Analytics and
Operations curriculum. At the same time the general nature of the
introduction may make it useful for other programs that involve education
in concepts and skills relating to information and computing systems.

First-Year Seminar

CYBER 262: Cyber-Defense Studio
3 Credits
This studio course teaches four basic hands-on cyber-defense skills:
configuring a firewall, implementing a host-based intrusion detection
software tool, using the Metasploit tool to do penetration testing,
and implementing a network intrusion detection tool. The first cyber-
defense skill is on configuring an ACL (Access Control List) firewall. This
module provides the students with a practical exercise applying their
analytical skills to properly configure the ACL of a firewall and to verify
the correctness of their firewall configurations. Through this exercise,
the students also learn firewall oriented network security policies. The
second cyber-defense skill is on implementing a host-based intrusion
detection software tool which can detect suspicious user sessions on a
computer. This module provides the students with a practical exercise
applying their programming skills to solve anomaly detection problems.
The third cyber-defense skill is on using the Metasploit tool to do
penetration testing. This module provides the students with a practical
exercise applying their programming skills to do penetration testing.
The fourth cyber-defense skill is on implementing a network intrusion
detection software tool which can detect suspicious network flows. This
module provides the students with a practical exercise applying their
programming skills to solve signature-based intrusion detection problems
Enforced Prerequisite: CYBER 100S and IST 140

CYBER 342W: Cyber Incident Handling and Response
3 Credits
Cyber Incident Handling and Response is an intermediate course
appropriate for students who are majoring in Cybersecurity. This
course provides the student with the background, experience and
perspective that is required to document organizational preparation
for cyber incidents, document cyber incident impact and resolution,
document response strategies, as well as integrate business continuity
planning into the organization. This is a writing intensive course, which
requires each student to individually document cyber security incidents
and communicate the impact of those incidents to the organization.
Peer writing evaluation will help students to consider how effective
their written communication skills are. Team writing assignments
will provide students will the real-world experience of writing portions
of organizational documents such as preparedness documentation, documenting the organization of computer incident response teams, documenting organizational disaster recovery plans, and documenting post-incident recovery plans. Students will receive peer feedback on their writing assignments, as well as direct feedback from the instructor with a goal of improving writing skills and conforming their writing styles to the expectations of organizations and industry.

**Enforced Prerequisite:** CYBER 262 and SRA 221 and SRA 231

**CYBER 362: Cybersecurity Analytics Studio**

3 Credits

Cyberattacks involve advanced and sophisticated techniques to infiltrate corporate computers, networks and enterprise systems and critical infrastructures. Types of attacks include advanced malware, zero day attacks and advanced persistent threats. Advance warning about attackers and intelligence about the threat landscape is considered by many security leaders to be essential features in cyber-defense. The massive increase in the rate of novel cyberattacks has made data-mining-based analytics techniques a critical component in detecting security threats. Big data analytics in security involves the ability to gather massive amounts of digital information to analyze, visualize and draw insights that can make it possible to predict and stop cyberattacks. This studio course teaches fundamental data-driven cybersecurity analytics skills using programming skills acquired in earlier courses. The course will be divided into three modules. The first module prepares students for security analytics, by refreshing or making them familiar with two popular data analytics programming languages (e.g., R and Python). The second module focuses on understanding the key cybersecurity analytics process including data exploration, data visualization and data preparation and examining popular data mining algorithms such as linear and logistic regression, decision trees, support vector machine, and neural networks and similar techniques for security analytics. In the third module, students use analytics process and methods for selected cybersecurity problems, such as security breaches, ZeroAccess Infection, Log Analytics, Access Analytics and Web Hacking Analytics. Through this studio course, the students will gain concrete understanding of security analytics processes, methodologies and how to apply these concepts and tools to real-world cybersecurity. A major component of the course will be several hands-on exercises and a final team-based project. Hands-on exercises provide students with knowledge, skills and hands-on experience of learning security analytics process and methodologies to address security problems. The team-based project allows students to apply what they have learned to address real world security threat. This course will incorporate collaborative and action-learning experiences wherever appropriate. Emphasis will be placed on developing and practicing writing and speaking skills through application of the concepts, theories and technologies that define the course.

**Enforced Prerequisite:** STAT 200 and IST 261 and CYBER 262 and enforced co-requisite SRA 365.

**CYBER 342W and ENGL 202 and 7th semester standing.**

**DANCE 100: Dance Appreciation**

3 Credits

Explore dance as a vital, communicative and performing art, reflecting social values and cultural beliefs. DANCE 100 Dance Appreciation (3) (GA;IJUS;IL)(BA) This course meets the Bachelor of Arts degree requirements. An introduction to dance as a vital, communicative and performing art reflecting social values and cultural beliefs. Through a combination of lectures, video samples, and active participation in scheduled movement classes, lecture demonstrations and live performances, this course will examine a wide range of dance across cultures and time periods. Students will learn to identify the key components of movement: time, space, shape and effort. Once identified, these elements will become the building blocks for further analysis and understanding of the myriad forms of movement that can be called dance. Emphasis will be placed on the integration of dance within various cultural belief systems and the relationship between dance and cultural identity. The influence of social and political values as they relate to the development of specific dance forms will also be examined. Students will be graded on their ability to clearly and intelligently articulate their observations and analysis through participation in threaded discussions and on-line quizzes. Students will also be graded on their level of participation in scheduled movement classes, lecture demonstrations and attendance at live performances. The mid term and final exams will assess the students ability to integrate and synthesize the experiential components of the course.

**Bachelor of Arts: Arts**
DANCE 170: Conditioning for Dancers
1.5 Credits/Maximum of 3
This course is designed to improve technique through strengthening, toning, improving coordination, increasing balance, and helping alignment. The course also addresses common areas of injury.

Prerequisite: and dance course
General Education: Health and Wellness (GHW)

DANCE 222: Beginning Hip Hop Dance
1.5 Credits/Maximum of 3

Mojah introduces intermediate/advanced level dance students to a unique dance technique that blends Horton, Dunham, West African and jazz movements in one form. DANCE 222 Mojah Fusion Dance (1.5 per semester/maximum of 3) DANCE 282 is an introduction to the Mojah dance form. Moja is a Swahili term meaning one. Mojah fuses various forms to create a unique style of modern African dance that blends Horton, Dunham, West African and jazz movements into one form. The objectives of the course include: learning/executing Mojah terminology and technique; and learning/executing the techniques from which Mojah is derived. Mojah is a dance course and is directly related to other dance courses, theatre/arts courses and African American studies courses.

Prerequisite: DANCE 231, DANCE 241 or DANCE 261 or permission of the program

DANCE 221: Introduction to African Dance and Culture
1 Credit

An introduction to African dance based in a holistic approach integrating music, movement, drama, costume, and vocalization.

DANCE 222: Beginning Hip Hop Dance
1 Credit

Beginning Hip Hop dance introduces the student to Hip Hop culture through dance, free expression with the body/freestyle and choreography. DANCE 222 Beginning Hip Hop Dance (1) Hip Hop dance is designed for students with an interest in Hip Hop dance/culture. This class introduces students to Hip Hop through movement that includes freestyle dancing, locomotive movements, and choreography. In addition, this class includes lecture sessions and discussions about Hip Hop culture and its role in society. This course seeks to introduce students to a culturally significant art form, enhance mind/body awareness, and provide practical opportunities for students to apply skills learned in class via performances. This course is directly related to dance, theatre, African American history and other arts based and humanities based courses.

DANCE 230: Ballet
1.5 Credits/Maximum of 6

An exploration of Ballet technique. DANCE 230 Ballet (1.5 per semester/maximum of 6) (GA)(BA) This course meets the Bachelor of Arts degree requirements. DANCE 230 is an exploration of Ballet technique. The course is designed for any student with an interest in Ballet and to support the Dance Studies Minor. This class explores the many styles and genres of Ballet developed through history. Emphasis is placed on the development of a strong technique, vocabulary, and performance. Ballet, as a technique class, has at its core, increasing the strength, alignment and flexibility of each dancer. Each semester, the dancer will be introduced to different aspects of ballet which will require an increasing awareness of ballet and its impact on all of dance. Technique classes will be supported through viewing historical and contemporary dance footage. In every class, daily movement experiences will be introduced to build coordination, flexibility and strength, as well as the understanding of the ballet technique. These experiences will take place at the barre, in the center floor, adagios and allegros, and culminate in a combination of all these experiences in a combination to develop their potential as a performer.

Bachelor of Arts: Arts
General Education: Arts (GA)

DANCE 231: Beginning Ballet I
1.5 Credits

An introduction to the techniques of ballet. DANCE 231 Beginning Ballet I (1) In DANCE 231, the student will learn the basics of ballet. These include the structure of a ballet class and the required focus and behavior of the successful student, as well as the fundamental positions and vocabulary of movement characteristic of ballet. The course is designed for any beginning student of ballet and, in particular, to instruct the first-year BFA Music Theatre candidate with a foundation of technique to support their success in the prescribed sequence of dance courses in that major. The student will be introduced to alignment exercises from the Zena Rommett floor barre technique and the Pilates technique to develop strength and flexibility in their execution of dance. The course also is designed to help the student develop greater physical self-awareness and discipline. The student’s grade is determined by their attendance, attitude, and progress. More than three absences or lateness will affect the grade. Their attitude should be positive, receptive to correction, and exhibit an eagerness to work, and their progress should reflect growth in their abilities to perform the choreography and to know the terms used. The student will be required to identify and explain the meaning of the terms used in class, as well as perform choreography with confidence and a sense of character. This course serves as a prerequisite for DANCE 232. Together, these two semesters satisfy requirements for the BFA Music Theatre option and can also fulfill optional requirements for the Dance Minor. For the BFA Music Theatre candidates: part of the final exam for this course will be a performance juryed by members of the School of Theatre Performance Faculty. Their evaluation will help to determine whether the candidate may be allowed to enroll into the next level of the performance course sequence. Required dress for this course for women is black leotard, pink or tan tights, pink ballet shoes and for men is black tights, white t-shirt, black ballet shoes, and dance belt. Belts, suspenders, leg warmers are optional. Sweat clothes are not to be worn. All hair must be secured so that it cannot fly into the face.

Prerequisite: admission into Musical Theatre Major

DANCE 232: Beginning Ballet II
1.5 Credits

A continuation of Beginning Ballet I to augment technical proficieny.
DANCE 232 Beginning Ballet II (1) DANCE 232 allows the student who
has successfully completed DANCE 231 to continue broadening their knowledge of fundamental movements in ballet. The barre warm-up and the center floor work is more demanding and challenges the student to learn the combinations of movement quicker. Choreography is more complex, involving more different kinds of turns, large jumps, and adding beats to the petit allegro. Adagios are longer and demand more stamina to sustain. The ability to communicate character and mood through dance is emphasized more strongly. The student will deepen their knowledge of the Zena Rommett floor barre techniques and Pilates techniques to develop more strength and flexibility. The development of increased self-awareness and discipline is stressed. The student’s grade is determined by their attendance, attitude, and progress. Also, to supplement their understanding of the variety of ways ballet can be performed, the student is required to write two papers, expressing their reactions to two different dance concerts viewed during the semester. Classical ballet concerts are preferred, but the student is encouraged to consult the instructor concerning a performance they are interested in viewing. Dates will be designated for the completion of these papers. No late papers will be accepted. Attendance is mandatory; more than three absences or lateness will affect the grade. The attitude should be positive, receptive to correction, and exhibit an eagerness to work, and the student’s progress should reflect growth in their ability to perform the choreography and to know the terms used. The student will be required to identify and explain the meaning of the terms used in class, as well as perform choreography with confidence and a sense of character.

Students enrolling in this course should have successfully completed DANCE 231 or have received the permission of the instructor. For the BFA Music Theatre candidate, this course serves as a prerequisite for DANCE 241, Beginning Jazz I. Part of the final exam for this course will be a performance juryed by members of the School of Theatre Performance Faculty. Their evaluation will help to determine whether the candidate may be allowed to enroll into the next level of the performance course sequence. Required dress for this course for women is black leotard, pink or tan tights, pink ballet shoes and for men is black tights, white t-shirt, black ballet shoes, and dance belt. Belts, suspenders, leg warmers are optional. Sweat clothes are not to be worn. All hair must be secured so that it cannot fly into the face.

Prerequisite: DANCE231

DANCE 240: Jazz Dance

1.5 Credits/Maximum of 6

An exploration of jazz dance technique throughout history. DANCE 240 Jazz Dance (1.5 per semester/maximum of 6) (GA) (BA) This course meets the Bachelor of Arts degree requirements. DANCE 240 is an exploration of Jazz Dance. The course is designed for any student with an interest in Jazz Dance and to support the Dance Studies Minor. This class explores the many styles and genres of jazz dance developed through American history. Emphasis is placed on the development of a personal jazz dance style, exploration, and self-expression. Jazz dance, as a technique class, has at its core, increasing the strength, alignment and flexibility of each dancer. Each semester the dancer will be introduced to different styles of jazz which will require a changing perspective of the body and itsrsquo; movement. Movement classes will be supported through viewing a variety of the dance styles being studied. In each style, daily movement experiences will be introduced to build coordination, flexibility and strength, as well as the understanding of the particular jazz dance idiom. These experiences will take place in the center floor, across the floor accumulations, and culminate in a combination of all these experiences in a dance to develop their potential as a performer. Connections to the social aspect of jazz dance will be consistently addressed, as all dance forms are vernacular in origin. Jazz dance, being a true American dance form, has its roots in the late 1800rsquo;s and early 1900rsquo;s with a pre-history in Africa and West Indies. The desire for self-expression through physical movement drove the dance form to a formal art expression on the concert stage. This connection to the vernacular has been maintained in the jazz dance idiom. The exploration in Jazz Dance emphasizes the individual expression through movement in response to music particular to the style being presented in each semester.

Bachelor of Arts: Arts
General Education: Arts (GA)

DANCE 241: Beginning Jazz I

1.5 Credits

An introduction to the techniques of Jazz dance. DANCE 241 Beginning Jazz I (1)DANCE 241 is an introduction to basic jazz techniques. The course is designed for any beginning student with an interest in jazz dance, those who are BFA Music Theater candidates, and Dance Minors. The work will include awareness of space as related to the barre, floor, other dancers, and environment. The student will learn basic jazz dance vocabulary as well as the awareness of space to stage elements such as audience, direction, focus, and energy. The student’s grade will be based on attendance, attitude, and progress of learning and performing dance combinations. More than three absences or lateness will affect the grade. Maintaining a positive attitude, proper discipline, and willingness to work and learn are essential. The student is required to perform individual rehearsal hours (as homework). Students are responsible for learning and executing all material taught in class. This course serves as a prerequisite for DANCE 242. Together, the two semesters of jazz satisfy requirements for the BFA Music Theater option and the Dance Minor. The BFA Music Theater student will be juried by the School of Theatre Performance Faculty as a part of their final grade. The jury will consist of a showing of the pieces taught in class. This evaluation will help to determine whether the candidate may be allowed to enroll into the next level of the performance sequence. The required dress for men: Jazz shoes, t-shirt or muscle shirt, dance belt, Jazz pants or tights. For women: Jazz shoes, leotard and tights (possible character shoes).

Prerequisite: DANCE232

DANCE 242: Beginning Jazz II

1.5 Credits

A continuation of Beginning Jazz I to augment technical proficiency. DANCE 242 Beginning Jazz II (1)DANCE 242 allows the student who has successfully completed DANCE 241 to continue to broaden their knowledge of beginning jazz dance. The course will emphasize a broader dance vocabulary and more complex dance combinations. The repetition and rehearsal techniques will be reinforced and intensified. The ability to communicate character and setting through dance is strongly emphasized. The student’s grade will be based on attendance, attitude, and progress of learning and performing dance combinations. More than three absences and lateness will affect the grade. Maintaining a positive attitude, proper discipline, and willingness to work and learn are essential. The student is required to perform individual rehearsal hours (as homework). Students are responsible for learning and executing all material taught in class. Students enrolling in this course should have successfully completed DANCE 241 or have permission of the instructor. JAZZ 242 satisfies requirements for the BFA Music Theater option and
the Dance Minor. The BFA Music Theater student will be juried by the School of Theatre Performance Faculty as a part of their final grade. The jury will consist of a showing of the pieces taught in class. This evaluation will help to determine whether the candidate may be allowed to enroll into the next level of the performance sequence. The required dress for men: tap shoes, t-shirt or muscle shirt, dance belt, Jazz pants or tights. For women: Jazz shoes, leotard and tights (possible character shoes).

Prerequisite: DANCE241

DANCE 250: Tap Dance
1.5 Credits/Maximum of 6

An exploration of tap dance technique throughout history. DANCE 250 Tap Dance (1.5 per semester/maximum of 6) (GA)(BA) This course meets the Bachelor of Arts degree requirements. DANCE 250 is an introduction to Tap Dance. The course is designed for any student with an interest in Tap Dance and to support the Dance Studies Minor. This class explores the many styles and genres of Tap Dance developed through American history. Emphasis is placed upon the understanding of the origins of tap, exploration, and self-expression. Tap Dance is grounded in rhythm, exploration and importance of improvisation and origins with a focus on the entertainment component. DANCE 250 will introduce the dancer to different styles of tap, which will require a changing perspective of rhythm and expression. In each style, daily movement experiences will be introduced to build coordination, stamina and flexibility with rhythms, as well as the understanding of the particular historical aspect of Tap Dance. These experiences will take place in the center floor, across the floor accumulations, and culminate in a combination of all these experiences in a dance to develop their potential as a performer. The origins and influences of tap are rich and deep, imbedded in the history of the country and the people. The richness of this history allows the dancer to take on a personal and individual style important to the further development of tap and dance in general. Tap Dance will emphasize this importance and assist the student in their exploration of this dance form.

Bachelor of Arts: Arts
General Education: Arts (GA)

DANCE 251: Beginning Tap I
1.5 Credits

An introduction to the technique of tap dance. DANCE 251 Beginning Tap I (1)DANCE 251 is an introduction to basic tap techniques. The course is designed for any beginning student with an interest in tap dance, those who are BFA Music Theater candidates, and Dance Minors. The work will include awareness of space, sound, rhythm, and tempo. The work will also introduce counting, executing rhythm, and developing confidence for a beginner level tap dancer. The student will learn basic tap vocabulary as well as the awareness of space and stage elements such as audience, direction, focus, and energy. The student’s grade will be based on attendance, attitude, and progress of learning and performing dance combinations. More than three absences or lateness will affect the grade. Maintaining a positive attitude, proper discipline, and willingness to work and learn are essential. The student is required to perform individual rehearsal hours (as homework). Students are responsible for learning and executing all material taught in class. This course serves as a prerequisite for DANCE 252. Together, the two semesters of jazz satisfy requirements for the BFA Music Theater option and the Dance Minor. The BFA Music Theater student will be juried by the School of Theatre Performance Faculty as a part of their final grade. The jury will consist of a showing of the pieces taught in class. This evaluation will help to determine whether the candidate may be allowed to enroll into the next level of the performance sequence. The required dress for men: tap shoes, or hard soled shoes with taps attached. T-shirt or muscle shirt, dance belt, Jazz pants or tights. For women: tap shoes, leotard and tights (possible character tap shoes). The clothing must allow movement, and still be able to distinguish an outline of the dancer’s body.

Prerequisite: DANCE251

DANCE 252: Beginning Tap II
1.5 Credits

A continuation of Beginning Tap I to augment technical proficiency. DANCE 252 Beginning Tap II (1) DANCE 252 allows the student who has successfully completed DANCE 251 to continue to broaden their knowledge of beginning tap dance. The course will emphasize a broader dance vocabulary and more complex dance combinations. The repetition and rehearsal techniques will be reinforced and intensified. The ability to communicate character and setting through dance is strongly emphasized. The student’s grade will be based on attendance, attitude, and progress of learning and performing dance combinations. More than three absences or lateness will affect the grade. Maintaining a positive attitude, proper discipline, and willingness to work and learn are essential. The student is required to perform individual rehearsal hours (as homework). They are responsible for learning and executing all material taught in class. Students enrolling in this course should have successfully completed DANCE 251 or have permission of the instructor. Tap DANCE 252 satisfies requirements for the BFA Music Theater option and the Dance Minor. The BFA Music Theater student will be juried by the School of Theatre Performance Faculty as part of their final grade. The jury will consist of a showing of the pieces taught in class. This evaluation will help to determine whether the candidate may be allowed to enroll into the next level of the performance sequence. The required dress for men: tap shoes, or hard soled shoes with taps attached. T-shirt or muscle shirt, dance belt, Jazz pants or tights. For women: tap shoes, leotard and tights (possible character tap shoes). The clothing must allow movement, and still be able to distinguish an outline of the dancer’s body.

Prerequisite: DANCE251

DANCE 261: Beginning Modern Dance I
1.5 Credits/Maximum of 6

Introduction to modern dance as an art form; development of dance technique and composition; teaching methods for improvisational skills. DANCE 261 Beginning Modern Dance I (1.5) (GA) (BA) This course meets the Bachelor of Arts degree requirements. DANCE 261 is an introduction to Modern Dance. The course is designed for any student with an interest in Modern Dance and Dance Minors. This class explores the use of weight, time, space, and energy in relation to a release based modern dance technique. There is emphasis placed upon the development of a personal movement vocabulary, experimentation, and self-expression. Modern dance is grounded in somatic practices with importance placed upon finding organic or efficient ways to engage the body in movement. Students should demonstrate an opening and willing attitude in every class situation. Students are responsible for learning and executing all material taught in class. This class serves as a prerequisite for
DANCE 262. Together these two semesters serve as core technique classes for all dance minors.

Bachelor of Arts: Arts
General Education: Arts (GA)

DANCE 262: Beginning Modern Dance II
1.5 Credits

A continuation of Beginning Modern Dance I to augment technical proficiency and to further comprehension of choreographic methods. DANCE 262 Beginning Modern Dance II (1.5) DANCE 262 is a continuation of Beginning Modern Dance I. The course is designed for any student with an interest in Modern Dance and Dance Minors. This class explores the use of weight, time, space, and energy in relation to a release based modern dance technique. There is emphasis placed upon the development of a personal movement vocabulary, experimentation, and self-expression. Modern dance is grounded in somatic practices with importance placed upon finding organic or efficient ways to engage the body in movement. The students grade is based upon attendance, participation, attitude, progress, keeping a dance journal, setting dance goals, doing a mid-semester self evaluation, and attending a mid-semester "check-up" with the instructor. More then three absences (excused or unexcused) will automatically drop the final grade one letter. Students should demonstrate an opening and willing attitude in every class situation. Students are responsible for learning and executing all material taught in class. Beginning Modern Dance I and Beginning Modern Dance II serve as core technique classes for all dance minors.

Prerequisite: DANCE261

DANCE 270: Introduction to Bartenieff Fundamentals
3 Credits

Physical and theoretical approach to movement: facilitates efficiency, and expression through dynamic alignment, mobility, kinesthetic awareness; reduce physical injuries.

General Education: Health and Wellness (GHW)

DANCE 280: Dance Improvisation
1 Credits

Introduction to the concepts and techniques of dance improvisation.

Prerequisite: DANCE261

DANCE 285: Contemporary Dance Performance
1-2 Credits/Maximum of 8

Contemporary Dance Performance is designed to introduce the beginning performer to the choreographic and rehearsal process as preparation for performance. DANCE 285 Contemporary Dance Performance (1-2 per semester/maximum of 8) This is a dance course to introduce the beginning performer to the rehearsal process, creative process and performance experience. The class will develop around the building of an original dance piece, created on and for the participating students by the instructor of record. The students will perform this piece at the end of the semester in a formal performance situation, on a proscenium stage with full lighting and sound accompaniment. The instructor will create an original dance on students enrolled in this course which will provide the student with performance experience in a live dance concert. The student will learn original choreography, be responsible for retention of movement, experience and assist in the choreographic process, participate in discussions concerning choreography, expression, rehearsal expectations and roles. The student will keep a journal and complete written assignments which demonstrate cognitive understanding of the artistic process. Each student will be expected to execute the choreography at a level suitable for concert performance, show an understanding of the choreographic process through written work, demonstrate growth as a dancer and artist through performance and written work and participate fully in a concert performance of the dance work created in class.

DANCE 296: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

DANCE 297: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

DANCE 301: Movement Analysis
2 Credits

Introduce student to principles of practical and abstract movement analysis to determine individual physical limitations and potentials.

DANCE 320: Intermediate Mojah Fusion Dance
1.5 Credits/Maximum of 9

Intermediate Mojah continues instruction for intermediate level dance students and builds on the technical training of Beginning Mojah

7. DANCE 331 Intermediate Ballet I (1) Dance 331 allows the student who has had a solid introduction to the fundamental movements and style of ballet to develop more strength and flexibility in their technique. The pace of the class is faster. Choreography is more complex and taught more quickly. The student is expected to know the elements that constitute a ballet class and is ready to embrace seriously the study of the skill and artistry required to perform ballet. The student is expected to be able to execute a double pirouette and simple beats in petit allegro. Interpretation of choreography taught for exams is emphasized more strongly than in the previous courses. The attitude should be positive, receptive to correction, and exhibit an eagerness to work, and the student’s progress should reflect growth in their abilities to perform the
choreography and to know the terms used. The student will be required to identify and explain the meaning of the terms used in class, as well as perform choreography with confidence and a sense of character. Required dress for the course for women is black leotard, pink or tan tights, pink ballet shoes and for men it is black tights, white T-shirt, black ballet shoes, and dance belt. Belts, suspenders, leg warmers are optional. Sweat clothes are not to be worn. All hair must be secured so that it cannot fly into the face.

**Prerequisite:** DANCE230 or permission of the program

DANCE 332: Intermediate Ballet II

1.5 Credits/Maximum of 6

A continuation of the course work established in Intermediate Ballet I. DANCE 332 Intermediate Ballet II (1) Dance 332 allows the student who has a strong background in the basics of ballet technique to be challenged with more difficult movements and choreography and to develop a more mature approach to healthy alignment. The Zena Rommett floor barre and the Pilates techniques will be explored with more emphasis than in the beginning semesters of ballet study. The student is expected to know the terms used in ballet in French, their meaning, and how to execute them. The student should be able to perform choreography with a sense of character and style, as well as strong technique. The attitude should be positive, receptive to correction, and exhibit an eagerness to work, and the student's progress should reflect growth in their abilities to perform the choreography and to know the terms used. Required dress for the course for women is black leotard, pink or tan tights, pink ballet shoes and for men it is black tights, white T-shirt, black ballet shoes, and dance belt. Belts, suspenders, leg warmers are optional. Sweat clothes are not to be worn. All hair must be secured so that it cannot fly into the face.

**Prerequisite:** DANCE230 or permission of the program

DANCE 341: Intermediate Jazz I

1.5 Credits

A continuation of the course work established in DANCE 242, Beginning Jazz II. DANCE 341 Intermediate Jazz I (1) Dance 341 allows the student who has successfully completed Beginning Jazz II to continue to broaden their knowledge of Intermediate Jazz Dance. The purpose of this course is to improve the beginner's knowledge of jazz dance. Technique will be stressed, but performance and interpretation will be emphasized with the following in mind: to develop character, mood and the ability to improvise and choreograph Jazz Dance. A variety of challenging choreographed dances ranging from pop, jazz, to musical theatre styles will be taught which the student will be expected to perform. The student's grade will be based on attendance, attitude, and progress of learning and performing dance combinations. A positive attitude and maintaining proper discipline and willingness to work and learn are essential. The student is required to perform individual rehearsal hours (as homework). They are responsible for learning and executing all materials taught. Jazz Dance 342 satisfies the requirement for the BFA Music Theater option and fulfills one of the requirements for the Dance Minor. The BFA musical theatre student will be juried by the School of Theatre Performance Faculty as a part of their final grade. The jury will consist of a showing of the pieces taught in class. This evaluation will help to determine whether the candidate may be allowed to enroll into the next level of the performance sequence. The required dress for men: Jazz shoes, T-shirt or muscle shirt, dance belt, Jazz pants or tights. For women: Jazz shoes, leotard and tights (possible character shoes).

**Prerequisite:** DANCE341

DANCE 342: Intermediate Jazz II

1.5 Credits

A continuation of the course work established in DANCE 341, Intermediate Jazz I. DANCE 342 Intermediate Jazz II (1) Dance 342 allows the student who has successfully completed Intermediate Jazz Dance I to continue to broaden their knowledge of Jazz Dance. The purpose of this course is to continue to improve the dancer's technical aspect of Jazz Dance. Combinations will be taught at a faster pace. Techniques will be stressed, but performance and interpretation will be emphasized with the following in mind: to develop character, mood and the ability to improvise and choreograph Jazz Dance. A variety of challenging choreographed dances ranging from pop, jazz, to musical theatre styles will be taught which the student will be expected to perform. The student's grade will be based on attendance, attitude, and progress of learning and performing dance combinations. A positive attitude and maintaining proper discipline and willingness to work and learn are essential. The student is required to perform individual rehearsal hours (as homework). They are responsible for learning and executing all materials taught. Jazz Dance 342 satisfies the requirement for the BFA Music Theater option and fulfills one of the requirements for the Dance Minor. The BFA musical theatre student will be juried by the School of Theatre Performance Faculty as a part of their final grade. The jury will consist of a showing of the pieces taught in class. This evaluation will help to determine whether the candidate may be allowed to enroll into the next level of the performance sequence. The required dress for men: Jazz shoes, T-shirt or muscle shirt, dance belt, Jazz pants or tights. For women: Jazz shoes, leotard and tights (possible character shoes).

**Prerequisite:** DANCE262

Bachelor of Arts: Arts
General Education: Arts (GA)

DANCE 361: Intermediate Modern Dance I

1.5 Credits/Maximum of 6

Development of techniques and principles of modern dance on the intermediate level. DANCE 361 Intermediate Modern Dance I (1.5) DANCE 361, Intermediate Modern Dance I, continues to build on the technical foundation from Beginning Modern I and Beginning Modern II in relation to a release-based modern dance technique. This intermediate level class centers on developing a strong technical foundation in modern dance. Along with technique, students should develop greater flexibility, strength, and alignment. The concepts of weight, time, energy, and space are central to the class. The body as a tool of expression and communication and using dance as a language is stressed. This class serves as a prerequisite for DANCE 362.

**Prerequisite:** DANCE262

DANCE 362: Intermediate Modern Dance II

1.5 Credits/Maximum of 6

A continuation of Modern Dance I to augment technical proficiency. DANCE 362 Intermediate Modern Dance II (1.5) DANCE 362, Intermediate Modern Dance II, continues to build on the technical foundation from Intermediate Modern Dance I in relation to a release-based modern dance technique. This intermediate level class centers on developing a strong
technical foundation in modern dance. Along with technique, students should develop greater flexibility, strength, and alignment. The concepts of weight, time, energy, and space are central to the class. The body as a tool of expression and communication and using dance as a language is stressed.

**Prerequisite:** DANCE361
Bachelor of Arts: Arts
General Education: Arts (GA)

DANCE 365: Contemporary Movement Lab I

3 Credits

An intermediate level modern dance technique utilizing improvisation to enhance technical and performance issues: alignment, connection, balance, transition, expression, discovery. DANCE 365 Contemporary Movement Lab I (3) DANCE 365 is an intermediate level modern dance course utilizing improvisation as a tool for understanding technique and performance. This class is designed specifically for the Dance Studies Minor student to enhance the efficient and expressive use of the body as a vehicle for expression. The student will not only develop greater flexibility, strength, and alignment, but also will gain self-awareness and begin to develop a personal dance vocabulary. Contemporary Movement Lab I will meet four hours a week, with an additional 1-hour studio lab for personal discovery. CML I is designed to further expose the intermediate level dancer to the style and techniques of modern dance as it uses improvisation for expression and performance. The intermediate level dancer will be further developed through a more thorough level of movement requirements: floor work, and strengthening experiences while exploring the connections of technique to composition and performance. Full articulation of body, feet and arms will be fostered through regular exercises, which will bring about stronger connections through the body to support complicated and difficult movement. Each class period will allow time to be spent in the traditional aspects of an intermediate modern dance technique class: floor warm up and connection to center of weight, center floor balance and strengthening technique exercises and combinations, traveling sequences across the floor, and final accumulative combination. An equal amount of time will be spent in discovering the many theories and tools of composition: time, weight, space, rhythm/phrasing, theme based creative experiences, and dance as a tool for communication. Students will be expected to create a variety of studies regularly through individual and group work. Outside reading and follow up discussions will further support their experience in the studio. Discussion, journals, goal setting and writing assignments will allow for opportunities to share and express levels of comfort and personal discoveries with various experiences.

**Prerequisite:** any 200 level technique course or program permission

DANCE 370: Anatomy for Performers

3 Credits

To provide performers with anatomical theory and concepts applicable to the disciplines of the performing arts.

**Prerequisite:** DANCE270 or THEA 102
General Education: Natural Sciences (GN)

DANCE 370H: Anatomy for Performers

3 Credits

To provide performers with anatomical theory and concepts applicable to the disciplines of the performing arts.

General Education: Natural Sciences (GN)

DANCE 381: Dance Composition I

2 Credits

Introduction to the basic principles and craft of choreography. DANCE 381 Dance Composition I (2) This course is an introduction to the basic principles and craft of the art of choreography. The students will work with the principles and craft of choreography through practical methods to foster and enhance the creative process with relation to the solo form. Each student will develop an understanding of the architectural strengths of the proscenium stage and how best to use these for the solo form; gain knowledge of professional working methods through the exploration and use of the choreographic tools; develop an individual vocabulary through improvisational and
choreographic elements; gain a knowledge of the craft for original creative expression; and demonstrate an overall understanding of the course by choreographing an original solo work as a culminating project.

DANCE 382: Music Theatre Dance--Style I
1.5 Credits

A practical study of dance styles from the 1890’S to the 1990’S. DANCE 382 Music Theatre Dance –Style I (1.5) DANCE 371 allows the student who has successfully completed two semesters of ballet (DANCE 231 and 232), two semesters of jazz (DANCE 241 and 242), and two semesters of Music Theatre Studio (THEA 223 and 224) to expand their capabilities of combining their skills of dancing and acting through the use of different stylistic approaches. In this semester, the BFA Music Theatre candidate will study and perform choreography characteristic of Vaudeville, Charleston, Ragtime, Ballet, Folk/ Ethnic and elements of Modern and Jazz. In particular, Agnes deMille’s use of ballet and Jerome Robbins’ use of Ballet/Jazz/Modern will be studied. The goals of the course include enabling the student to feel confident in identifying, performing, and competing in the professional audition venue using these styles. Also, the student should deepen their understanding of how the use of varied dance styles contributes to the development of character and/or the furthering of plot in Music Theatre. Successfully completing DANCE 371 is the prerequisite for DANCE 372.

Prerequisite: THEA 224

DANCE 384: Music Theatre Dance--Style II
1.5 Credits

A continuation of course work established in Music Theatre Dance Style I. DANCE 384 Music Theatre Dance –Style II (1.5) DANCE 372 allows the student who has successfully completed DANCE 371 to continue broadening their understanding and expanding their performance skills of different stylistic approaches to choreography. In this course the student will study and perform choreography using stronger Jazz and Folk/ Ethnic/ Social influences. In particular, the works of Jerome Robbins, Ron Field, Michael Bennett, and Bob Fosse will be studied. The goals of the course include enabling the student to feel confident in identifying, performing, and competing in the professional audition venue using these styles. Also, the student should deepen their understanding of how the use of varied dance styles contributes to the development of character and/or the furthering of plot in Music Theatre.

Prerequisite: DANCE382

DANCE 385: Leadership Practicum: Dance
1 Credits

Supervised experiences in teaching and assisting with the teaching of dance techniques.

Prerequisite: DANCE362

DANCE 399: Dance Foreign Study
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction. International Cultures (IL)

DANCE 410: Dance History
3 Credits

Survey of dance history concerning perspectives of culture, race, and gender with a focus on Nineteenth and Twentieth centuries. DANCE 410 Dance History (3) (US/IL) DANCE 484 (US; IL) Dance History (3) Survey of dance history concerning perspectives of culture, race, and gender with a focus on Nineteenth and Twentieth centuries. Dance History (3) General Education: None Diversity: US; IL Bachelor of Arts: None Effective: Fall 2006

Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

International Cultures (IL)
United States Cultures (US)

DANCE 411: From Africa to Hip Hop- The Evolution of African American Dance History
3 Credits

From Africa to Hip Hop- Evolution of African-American Dance History will explore the history of African related dance from its beginnings in West Africa through the contemporary expressions of Hip Hop. DANCE 411 From Africa to Hip Hop- The Evolution of African-American Dance History (3) (GH) From Africa to Hip Hop- Evolution of African-American Dance History will explore the history of African related dance from its beginnings in West Africa through the contemporary expressions of Hip Hop.

Prerequisite: DANCE261

General Education: Humanities (GH)

DANCE 412: Practical Applications of Movement in the Classroom
3 Credits

This course will guide the students in movement-oriented activities and explore how these activities relate to learning academic concepts. DANCE 412 Practical Applications of Movement in the Classroom (3) Moving and learning is the focus of this course. Classrooms vary in size, age, understanding, world experience and venue. Being able to recognize all these situations as learning opportunities is a talent built on experience. This class will challenge the students to see learning not just as an event that must happen in desk chairs with only the use of traditional classroom technology to support the Isquo;lessonsquo; but also as an opportunity for expansion into the whole child, including the moving child. Experience in designing and applying movement ideas into curriculum ideas and concepts will be developed throughout the semester. The student will begin to see ideas and learning themes as opportunities to engage the child through their physicality while expressing ideas, challenging the expected way of learning and yes, even having fun. Teaching is a creative act, learning is a creative act, and designing moving opportunities to reinforce the act of learning creates a sense of knowing within the child that becomes embodied. Reading, discussion, classroom application of material, and critical assessment of self and others will create an environment, at times, modeling some of the potential venues in which the student may expect to find themselves. Using this information will be critical to their growth into visualizing movement as a viable option for teaching and learning.

Prerequisite: DANCE261 or HD FS229 or HD FS239
DANCE 422: Advanced Hip Hop Dance

1.5 Credits

Advanced Hip Hop Dance reinforces and expands concepts from Beginning Hip Hop Dance. Free expression of the body, freestyle, and choreography are emphasized. DANCE 422 Advanced Hip Hop Dance (1.5) Advanced Hip Hop Dance is designed for the serious minded dance student with an interest in Hip Hop dance/culture. This class provides an intensive study of dance, choreography and culture. As in Beginning and Intermediate Hip Hop Dance, freestyle dancing, locomotive movements, and choreography are emphasized. In addition, this class includes lecture sessions and discussions about Hip Hop culture and its role in society. By the end of this course students should be able to articulate why Hip Hop is a culturally significant art form and choreograph and perform a Hip Hop dance combination. This course also enhances mind/body awareness, and provides choreographic and performance opportunities. This course is directly related to dance, theatre, African American studies and other arts based and humanities based courses.

Prerequisite: DANCE222

DANCE 431: Advanced Ballet I

1.5 Credits

An advanced ballet training course. DANCE 431 Advanced Ballet I (1)DANCE 431 allows the student who has successfully completed DANCE 232, or who has interviewed with the Instructor concerning their previous dance training, to challenge themselves further in the study of ballet. The barre work continues to emphasize proper alignment, supported by exercises using the Zena Rommett floor barre technique and the Pilates technique, and the floor work moves more quickly than in the beginning levels of study. The student will learn more complex steps requiring greater strength and coordination, and the class will move at a faster pace, thus enabling the student to learn choreography more quickly. The student will also develop their ability to communicate character and mood through their dancing. More advanced ballet terminology will be taught, and the student will learn the French terms, their English meanings, be able to identify the steps and perform them. DANCE 431 can satisfy one of the two semesters of advanced dance study required by the BFA Music Theatre degree option and can satisfy requirements for the Dance Minor. The student's grade is determined by their attendance, attitude, and progress. Attendance is mandatory. More than three absences or lateness will affect the grade. The attitude should reflect a serious focus on improving their abilities with a positive approach to applying corrections on their dancing. Their progress will be assessed through observation of their classroom work and especially the video-taped performances of their mid-term and final exam choreography. There will be a final showing at the end of the semester with an invited audience. The exams will also include an oral section, covering the terms used in class. Required dress for class is - for men, dance belt, black tights, white t-shirt, and black ballet shoes, and for women, pink or tan tights, leotard, and pink ballet shoes. All hair must be pulled back and secured away from the face. No sweat clothes may be worn, but leg warmers, belts, and suspenders are optional.

Prerequisite: DANCE232

DANCE 432: Advanced Ballet II

1.5 Credits

A continuation of Advanced Ballet I to augment technical proficiency. DANCE 432 Advanced Ballet II (1)DANCE 432 allows the student who has successfully completed DANCE 431, or who has interviewed with the Instructor concerning their previous dance training, to challenge themselves further in the study of ballet. The barre work continues to emphasize proper alignment, supported by exercises using the Zena Rommett floor barre technique and the Pilates technique. The center work expands on some of the vocabulary taught in DANCE 431, requiring more confidence, strength, and stamina in different ways of turning and jumping, as well as adagio work. The student will learn more complex steps requiring greater strength and coordination, and the class will move at a faster pace, thus enabling the student to learn choreography more quickly. The student will also develop their ability to communicate character and mood through their dancing. More advanced ballet terminology will be taught, and the student will learn the French terms, their English meanings, be able to identify the steps and perform them. DANCE 432 can satisfy one of the two semesters of advanced dance study required by the BFA Music Theatre degree option and can satisfy requirements for the Dance Minor. The student's grade is determined by their attendance, attitude, and progress. Attendance is mandatory. More than three absences or lateness will affect the grade. The attitude should reflect a serious focus on improving their abilities with a positive approach to applying corrections on their dancing. Their progress will be assessed through observation of their classroom work and especially the video-taped performances of their mid-term and final exam choreography. There will be a final showing at the end of the semester with an invited audience. The exams will also include an oral section, covering the terms used in class. Required dress for class is - for men, dance belt, black tights, white t-shirt, and black ballet shoes, and for women, pink or tan tights, leotard, and pink ballet shoes. All hair must be pulled back and secured away from the face. No sweat clothes may be worn, but leg warmers, belts, and suspenders are optional.

Prerequisite: DANCE431

DANCE 441: Advanced Jazz I

1.5 Credits

An advanced course in the techniques of jazz dance. DANCE 441 Advanced Jazz I (1)DANCE 441 allows the student who has successfully completed DANCE 242 to continue their study of jazz technique and performance. The focus of the course is to improve capability through learning and performing more challenging choreography at a faster pace. Eight combinations of choreography are taught, to music of various types - pop, jazz, and musical theatre. Performing with confidence and a sense of character will be emphasized. The student will also become familiar with the fundamentals of the Pilates technique to improve alignment, strength, and flexibility. The student will also be given opportunities to develop confidence in improvisation. DANCE 441 enables the BFA Music Theatre candidate to satisfy one semester of advanced level dance training. For the Dance Minor and other students of dance, it provides challenges in technical execution and a greater range of jazz styles. The student's grade will be determined by their attendance, attitude, and progress at learning quickly and performing the dance combinations, as well as the completion of two projects. Attendance is mandatory; more than three absences or lateness will affect the grade. The attitude should be focused, positive, receptive to correction, and eager. Progress will be assessed in frequent performance "quizzes". The mid-term
An advanced course in the techniques of tap dance. DANCE 451 Advanced Tap I (1)DANCE 451 allows the student who has successfully completed DANCE 251 and 252, or has permission of the instructor, to continue to broaden their knowledge to tap dance. The work will include expanding the student's knowledge of tap vocabulary, rhythm, tempo and counting. The work introduces audition techniques from the dancer's perspective and expands the awareness of proper rehearsal discipline. Professional conduct and behavior is now cultivated into a useful marketing tool. Material is taught faster and with greater detail to reinforce audition techniques and equate professional challenges. Audition classes will be held at the instructor's discretion. The student's grade will be based on attendance, attitude, and progress of learning and performing dance combinations. More than three absences or lateness will affect the grade. Maintaining a positive attitude, proper discipline, and willingness to work and learn are essential. The student is required to perform individual rehearsal hours (as homework). Students enrolling in this course should have successfully completed DANCE 451 or have permission of the instructor. Tap DANCE 451 satisfies requirements for the BFA Music Theater option and the Dance Minor. The BFA Music Theater student will be juried by the School of Theatre Performance Faculty as a part of their final grade. The jury will consist of a showing of the pieces taught in class. This evaluation will help to determine whether the candidate may be allowed to enroll into the next level of the performance sequence. The required dress for men: tap shoes, or hard soled shoes with taps attached. T-shirt or muscle shirt, dance belt, Jazz pants or tights. For women: tap shoes, leotard and tights (possible character tap shoes). The clothing must allow movement, and still be able to distinguish an outline of the dancer's body.

Prerequisite: DANCE 451

DANCE 452: Advanced Tap II

1.5 Credits

A continuation of Advanced Tap I to augment technical proficiency. DANCE 452 Advanced Tap II (1)DANCE 452 allows the student who has successfully completed DANCE 251 and 252, or has permission of the instructor, to continue to broaden their knowledge of advanced tap dance. The course will emphasize a broader dance vocabulary and more complex dance combinations. The repetition and rehearsal techniques will be reinforced and intensified. The ability to communicate character and setting through dance is strongly emphasized. Material is taught faster and with greater detail to reinforce audition techniques and equate professional challenges. The student's grade will be based on attendance, attitude, and progress of learning and performing dance combinations. More than three absences or tardiness will affect the grade. Maintaining a positive attitude, proper discipline, and willingness to work and learn are essential. The student is required to perform individual rehearsal hours (as homework). Students enrolling in this course should have successfully completed DANCE 451 or have permission of the instructor. Tap DANCE 452 satisfies requirements for the BFA Music Theater option and the Dance Minor. The BFA Music Theater student will be juried by the School of Theatre Performance Faculty as a part of their final grade. The jury will consist of a showing of the pieces taught in class. This evaluation will help to determine whether the candidate may be allowed to enroll into the next level of the performance sequence. The required dress for men: tap shoes, or hard soled shoes with taps attached. T-shirt or muscle shirt, dance belt, Jazz pants or tights. For women: tap shoes, leotard and tights (possible character tap shoes). The clothing must allow movement, and still be able to distinguish an outline of the dancer's body.

Prerequisite: DANCE 451

DANCE 461: Advanced Modern Dance I

1.5 Credits

Development of dance technique and movement combinations on the advanced level. DANCE 461 Advanced Modern Dance I (1.5) DANCE 461 is Advanced Modern Dance. This class continues the technique foundation from DANCE 261 DANCE 262 of exploring the use of weight, time, space, and energy in relation to a release-based modern dance technique. DANCE 461 also works with focus, style, and performance techniques. Students should gain greater technical proficiency, flexibility, strength, and alignment. Understanding and demonstrating the different uses
of weight and the concept of grounding is essential. Students should begin to develop as an individual mover (personal artistic voice) and gain greater confidence in using the body as a tool of expression and communication. Students should demonstrate an opening and willing attitude in every class situation. Students are responsible for learning and executing all material taught in class. This class serves as a prerequisite for DANCE 462. Together these two semesters serve as core technique classes for all dance minors.

**Prerequisite:** DANCE262 or permission of the program

**DANCE 462: Advanced Modern Dance II**

1.5 Credits/Maximum of 9

A continuation of Advanced Modern Dance I to augment technical proficiency. DANCE 462 Advanced Modern Dance II (1.5) DANCE 462 is a continuation of Advanced Modern Dance I. This class continues the technique foundation from DANCE 261, 262, and 461 of exploring the use of weight, time, space, and energy in relation to a release based modern dance technique. DANCE 462 also works with focus, style, and performance techniques. Students should gain greater technical proficiency, flexibility, strength, and alignment. Understanding and demonstrating the different uses of weight and the concept of grounding is essential. Students should begin to develop as an individual mover (personal artistic voice) and gain greater confidence in using the body as a tool of expression and communication. Students should demonstrate an opening and willing attitude in every class situation. Students are responsible for learning and executing all material taught in class. DANCE 461 and 462 serve as core technique classes for all dance minors.

**Prerequisite:** DANCE461 or permission of the program

**DANCE 466: Contemporary Movement Lab III**

3 Credits/Maximum of 6

An advanced exploration of modern dance techniques supported by the choreographic process. DANCE 466 Contemporary Movement Lab III (3 per semester/maximum of 6) DANCE 466 is an advanced level modern dance course using the choreographic process and experience as a way to enhance and further understand technique and performance. This class is designed specifically for the Dance Studies Minor student to enhance the efficient and expressive use of the body as a vehicle for expression. The student will not only develop greater flexibility, strength, and alignment, but also gain ability for self-awareness and increase in personal dance vocabulary. Contemporary Movement Lab III will meet four hours a week, with a minimum additional 1-hour studio lab for personal discovery. CML III is designed to further expose the advanced level dancer to the choreographic process as a means of expression of modern dance as it influences the discovery of personal style and communication. The advanced level dancer will be further developed through higher levels of movement requirements: floor work, and strengthening experiences while exploring the connections of movement as a goal for communication and performance. Each class period will allow time to be spent in the traditional aspects of an advanced modern dance technique class: floor warm up and connection to center of weight, center floor balance and strengthening technique exercises and combinations, traveling sequences across the floor, and final accumulative combination. An equal amount of time will be spent in discovering the choreographic process utilizing the tools of composition from Dance 366 and improvisation from Dance 365 to successfully communicate personal ideas or themes through fully explored dances. Students will be expected to create a number of dances/studies throughout the semester with the goal of producing one for the concert stage. Outside reading and follow up discussions will further support their experience in the studio. Discussion, journals, goal setting and writing assignments will allow for opportunities to express levels of comfort and personal discoveries with various experiences.

**Prerequisite:** DANCE365, DANCE366

**DANCE 472: Introduction to Laban Movement Analysis**

3 Credits

Observe and analyze movement elements by exploring concepts of Body, Effort, Shape, and Space to increase personal communication and expression. DANCE 472 Introduction to Laban Movement Analysis (3) Laban Movement Analysis (LMA) is a method and language for describing, visualizing, interpreting and documenting all varieties of human movement. It is one type of Laban Movement Study originating from the work of Rudolf Laban. In addition many derived practices have developed with great emphasis on LMA methods. This course focuses on elements known as Laban/Bartenieff Movement Analysis, which uses a multidisciplinary approach, incorporating contributions from anatomy, kinesiology, psychology, Labanotation and many other fields. It is used as a tool by dancers, actors, musicians, athletes, physical and occupational therapists, psychotherapy, peace studies, anthropology, business consulting, leadership development, health wellness and is one of the most widely used systems of human movement analysis today. In this course, students will study and practice the basic categories of LMA: Body (Bartenieff Fundamentals, total-body connectivity), Effort (Energetic dynamics), Shape, and Space (Space Harmony). In addition students will discover how LMA looks at the categories in terms of Phrasing and themes of opposites. The themes are: Mobility/Stability, Inner/Outer, Function/Expression, and Exertion/Recuperation.

**Prerequisite:** DANCE261

**DANCE 480: Choreographic Projects**

2 Credits

Choreographic practicum experiences for concert performances. DANCE 480 Choreographic Projects (2) This course is a forum for choreographic practicum experiences for concert performances. This course will provide an opportunity to students to develop their artistic and creative abilities in the field of dance. The student will create a group choreographic work to be presented in concert dance. This course will cover skills for advanced group dances, the creative process, selection of music of dance, costuming for dance, lighting for dance, rehearsal techniques, performance techniques, and organizational/leadership skills. Each student will submit a written proposal of the dance s/he intends to create, specifying the number of dancers, choreographic intent, and movement phrases as well as ideas for music, costumes, and lighting. The student will complete one choreographic dance to be performed in concert, which is presented each semester. The student must attend technical week prior to the concert, use past choreographic experiences gained from compositional study and be responsible for organizing weekly rehearsals. The student is required to hand in a self-evaluation paper reflecting on the original proposal and completed dance, and to maintain a journal throughout the semester documenting the choreographic process. This course will be offered fall semester with an enrollment of 10 students.

**Prerequisite:** DANCE381
DANCE 485: Contemporary Dance Repertory

1-2 Credits/Maximum of 12

An advanced dance course in the choreographic process with emphasis on original choreography in performance. DANCE 485 Contemporary Dance Repertory (1-2) This is an advanced dance course in the choreographic process with emphasis on original choreography. The instructor will create an original dance on students enrolled in this course which will provide the student with performance experience in a live dance concert. The student will learn original choreography, experience and assist in the choreographic process, participate in discussions concerning choreography, performance and style. The student will keep a journal and complete written assignments which demonstrate cognitive understanding of the artistic process. Each student will demonstrate proper rehearsal protocol and behavior, execute the choreography at a level suitable for concert performance, show an understanding of the choreographic process through written work, demonstrate growth as a dancer and artist through performance and written work and participate fully in a concert performance of the dance work created in class.

Prerequisite: permission of the program

DANCE 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

DANCE 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Data Sciences (DS)

DS 97: SPECIAL TOPICS

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

DS 99: Foreign Studies

1-12 Credits/Maximum of 999

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

DS 120: Scripting for Data Sciences

1 Credits

Introductory course in computer-based scripting languages for use in data analyses. DS 120 Scripting for Data Sciences (1) This introductory course aims to teach practical skills in data manipulation and preprocessing scripting, including the fundamentals of an interpreted programming language for use in the data sciences. The goal of the course is to provide an accessible (no pre-requisites) and brief (1 credit) introduction, preparing students for hands-on data analytics assignments in DS 200 Introduction to Data Sciences. This practical course teaches fast manipulation of datasets on the Unix command line, scripting in spreadsheets, and fundamental control structures and data manipulation in a modern interpreted programming language. It is expected that students gain an overview of the available tools and techniques that allows them to acquire basic proficiency in select techniques in the course of applications in most other courses in Data Sciences.

DS 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

DS 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

DS 200: Introduction to Data Sciences

3 Credits

Introduction to Data Sciences is an introductory survey course appropriate to a wide range of students. The course provides an overview of topics covered in more detail in advanced Data Sciences Courses. The course is multidisciplinary in nature, covering technical subjects such as basic aspects of machine learning, analyzing Big Data and visual analytics, but also examining the managerial aspects of data including data management and decision making, in addition to organizational and societal implications of increasing data collection and processing and their implications for privacy and security.

DS 220: Data Management for Data Sciences

3 Credits

This course has two components: (1) advancing students¿ knowledge on relational database and (2) introducing NoSQL databases. In the first component, the course will review the techniques learned in IST 210, strengthen students¿ skills in using SQL queries and introduce students about indexing and scalability issue in relational database. While relational database is still frequently used, the emergence of storage for big data and various types of data has driven a new of class of non-relational databases commonly referred to NoSQL database. This course will introduce the real-world needs for NoSQL databases and the characteristics that distinguish them from relational database. We will introduce both the concepts of NoSQL databases and how the concepts are implemented in the database systems. We will focus on three main NoSQL data models: key-value, column family, and document. Students will learn the concepts of these data models and know how to use them in the database systems. We will also introduce the concepts on graph database, hadoop system, and warehousing. Finally, we will present criteria that decision makers should consider when choosing between relationship between relational and non-relational databases and techniques for selecting the NoSQL database that best addresses specific use cases.

Enforced Prerequisite: CMPSC 121 and IST 210
DS 294: Research Project
1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

DS 296: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

DS 297: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

DS 299: Foreign Studies
1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

DS 300: Privacy and Security for Data Sciences
3 Credits

The course provides students with the knowledge and skills to analyze and implement protection strategies for data privacy and security.

Enforced Prerequisite: DS 220

DS 310: Machine Learning for Data Analytics
3 Credits

The course teaches students the principles of machine learning (and data mining) and their applications in the data sciences. DS 310 Machine Learning for Data Analytics (3) The course introduces the principles of machine learning (and data mining), representative machine learning algorithms and their applications to real-world problems. Topics to be covered include: principled approaches to clustering, classification, and function approximation from data, feature selection and dimensionality reduction, assessing the performance of alternative models, and relative strengths and weaknesses of alternative approaches. The course will include a laboratory component to provide students with hands-on experience with applications of the algorithms to problems from several domains. Prerequisites for the course include basic proficiency in programming, elementary probability theory and statistics, and discrete mathematics.

Enforced Prerequisite: CMPSC 121 and STAT 318

DS 320: Data Integration
3 Credits

Recommended Preparations: DS 310 Modern data-intensive applications (healthcare, security, public policy, science, commerce, crisis management, education, among others) increasingly call for integration of multiple types of data from disparate sources. This course introduces students to the principles and the practice of data integration, with particular emphasis on relational, knowledge-based, graph-based, and probabilistic methods. Carefully crafted assignments will help enhance the students’ mastery of both the theoretical underpinnings as well as practical aspects of data integration. The students will work in teams to solve representative data integration problems drawn from real-world applications. Upon completion of the course, students should be able design, implement, and evaluate data integration solutions to support data intensive applications.

Enforced Prerequisite: DS 220 and STAT 318. Recommended Preparation: DS 310

DS 330: Visual Analytics for Data Sciences
3 Credits

The course introduces visual analytics methods and techniques that are designed to support human analytical reasoning with data. DS 330 Visual Analytics for Data Sciences (3) Visual analytics is the science of combining interactive visual interfaces and information visualization techniques with automatic algorithms to support analytical reasoning through human-computer interaction. People use visual analytics tools and techniques to synthesize information and derive insight from massive, dynamic, ambiguous, and often conflicting data, and to communicate their findings effectively for decision-making. This course will serve as an introduction to the science and technology of visual analytics and will include lectures on both theoretical foundations and application methodologies. The goals of this course are for students to (1) develop a comprehensive understanding of this emerging, multidisciplinary field, and (2) apply that understanding toward a focused research problem in a real-world application or a domain of personal interest.

Enforced Prerequisite: DS 220

DS 340W: Applied Data Sciences
3 Credits/Maximum of 3

This course builds up the students’ understanding of data sciences by discussing the fundamental principles in the context of real-world examples, and then shows specifically how the principles can provide understanding of many of the most common methods and techniques covered in previous data science courses. The course features three individual projects as well as a team project spanning the entire course. After taking this course, the students should be able to cover the entire pipeline of a data science project, from problem formulation to data science solutions. That is, start from a data driven problem, identify pertinent datasets to the problem and collect data, reason about the best techniques that should be used to solve the problem, implement algorithms and models, assess performance, and communicate actionable insights through both written reports and oral presentations. As one example, a fundamental principle of data science is that solutions for extracting useful knowledge from data must carefully consider the problem in the real world scenarios. This may sound obvious at first, but the notion underlies many choices that must be made in the process of data analytics, including problem formulation, method choice, solution evaluation, and general strategy formulation. Another fundamental principle is that predictive modeling can both inform and be informed by relevant knowledge (including theories, models, frameworks) of the relevant domains. This principle manifests itself throughout data science: in the specific design of many particular data sciences applications, and more generally as the basis for all intelligent solutions. In this course, this principle will be highlighted by case studies from multiple domains.
so that students can be inspired to apply this principle to their term projects. Lastly, as most data science projects are delivered as solutions as opposed to software deliverables, the ability for data scientists to communicate their results through concise and actionable insights plays a critical role in a data science project. This course places a particular focus on developing student writing abilities, through formal project reports and presentations. The individual projects will offer an interactive experience for students through feedbacks on their reports provided by the instructor. The term-long project will also train students in writing in a collaborative environment.

**Enforced Prerequisite:** DS 300 and DS 310 or CMPSC 448. Recommended Preparation: DS 330.

**Writing Across the Curriculum**

DS 396: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

DS 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

DS 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

DS 402: Emerging Trends in the Data Sciences

3 Credits/Maximum of 9

This course exposes and trains students in the analysis of emerging trends in data sciences. DS 402 Emerging Trends in the Data Sciences (3) Data sciences is a rapidly evolving field affected by innovations in a variety of technical domains, including data generation, capture, storage, and processing. Staying abreast of new developments can be a daunting task but is critical for success. This course provides an in-depth analysis of a particular innovation, but starts with developing generally applicable skills for analyzing new technologies. In particular, the analytic framework considers the innovation's technical aspects and potential for widespread adoption, but also its social, organizational and policy implications. As a course focused on a new data sciences technology or analytic innovation, it is repeatable. As such, the course enables students to be exposed to the cutting edge of data sciences, supporting a forward looking view of the field for students across the university.

**Enforced Prerequisite:** DS 220

DS 410: Programming Models for Big Data

3 Credits

Recommended Preparations: DS 310; CMPSC 448 This course introduces modern programming models and related software stacks for performing scalable data analytics and discovery tasks over massive and/or high dimensional datasets. The learning objectives of the course are that the students are able to choose appropriate programming models for a big data application, understand the tradeoff of such choice, and be able to leverage state-of-the art cyber infrastructures to develop scalable data analytic models for massive datasets.

**Enforced Prerequisite:** CMPSC 122 and DS 220. Recommended Preparation: DS 310 or CMPSC 448.

**DS 440: Data Sciences Capstone Course**

3 Credits/Maximum of 3

This course provides a data sciences problem-solving experience, addressing realistic data science dilemmas for which solutions require teamwork and collaboration.

**Enforced Prerequisite:** DS 220. Recommended preparation: DS 310 or CMPSC 448.

DS 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

DS 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

DS 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

**Dietetic Food Systems Management (DSM)**

DSM 295A: Field Experience in Foodservice Management

1-4 Credits/Maximum of 4

D S M 295A Field Experience in Foodservice Management (1-4) DSM 295A is designed to provide an opportunity for students to apply theories and knowledge learned in D S M 260 Management Analysis of Quantity Food in a real life setting in order to develop the competencies related to managing the preparation and service of quality food in a non-commercial setting. The course objectives include: 1. gaining experience in supervising the production and service of food that meets nutrition guidelines, cost parameters, and consumer acceptance; 2. participating
in facility management including equipment selection and design of work units; 3. conducting a food preference survey and evaluating results in order to assess consumer needs and wants; 4. translating nutrition guidelines into menus for a target population; 5. participating in the procurement and inventory management of food and supplies for a food service unit; 6. participating in quality improvement, including systems and customer satisfaction for dietetic service; 7. participating in organizational change and planning and goal-setting processes. To complete the DSM 295A assignments students must be working in a hospital, nursing home, retirement facility or a school foodservice operation where they complete directed assignments under the supervision of a Registered Dietitian or a qualified mentor approved by the Dietetic Food Systems Management Program. The foodservice operation serves as the learning environment where students develop skills related to the planning, operation, and evaluation of a foodservice operation in an institutional setting. The course assignments are designed to develop problem solving and critical thinking skills as well. Students will complete a minimum of 40 hours of supervised practice in the foodservice setting and complete a minimum of six written assignments per credit. Students enrolled for 2-4 credits will spend 40 hours per credit in the practice setting and complete more in-depth projects and written reports related to the course objectives. Evaluation methods: students will be required to submit a written report, using guidelines provided by the course instructor, at the completion of each module/assignment. These written reports will be evaluated by the course instructor. In addition, the student’s mentor will evaluate the student’s performance using an evaluation form designed by the course instructor.

Prerequisite: D S M 195 ; NUTR 251

DSM 295W: Professional Staff Field Experience

4 Credits

Methods of, and practice in, the client-oriented dietetic systems.

Prerequisite: D S M 195 ; NUTR 251

Writing Across the Curriculum

Digital Media, Arts, and Technology (DIGIT)

DIGIT 100: Introduction to Digital Humanities

3 Credits/Maximum of 3

DIGIT 100 students will study the ways computation is shaping literary, political, and historical discourses.

General Education: Humanities (GH)

DIGIT 110: Text Encoding Fundamentals

3 Credits

DIGIT 110 teaches students standardized encoding techniques for archival quality data creation, storage, and analysis.
In DMD 300 Digital Multimedia Design Studio, students synthesize the concepts, theories, and applications acquired in the introductory courses and begin to think critically about their professional objectives. Students will work on projects aimed to help them understand available learning pathways and real world applications based on their scholarly and professional interests. Students will work collaboratively to investigate a problem space, conduct a needs assessment, write a design plan or proposal, develop deliverables, and implement and evaluate the final product(s). Students will develop a sense of stewardship over the project development process by completing project milestones that reinforce time management behaviors, participating in team building activities that facilitate discussion and interaction, co-authoring project proposals that prompt critical analysis, and distributing production tasks to encourage ownership in completing both defined and open-ended assignments. Students will also be required to thoroughly document and reflect on the production process and project impact through blogging and discussions. Through the duration of the course, students are encouraged to interact with industry advisors for feedback and direction as they work through real-world challenges in their selected digital tools and methodologies.

Prerequisite: DMD 100

DMD 400: Digital Multimedia Design Capstone

3 Credits

In this capstone, students develop portfolio projects by applying creative production concepts, tools, and approaches to a contemporary issue. DMD 400 Digital Multimedia Design Capstone is an advanced, senior-level capstone course that allows students to design, complete, and present an independent digitally based project.

Prerequisite: DMD 100, DMD 300

Digital Multimedia Design (DMD)

DMD 100: Digital Multimedia Design Foundations

3 Credits

This course introduces students to concepts, skills, language and principles of practice in art and design, communication, and information sciences. DMD 100 Digital Multimedia Design Foundations sets a strong foundation of design process and thinking skills to support and facilitate creative and reasoned approaches to ambiguous and ill-defined problem spaces related to the fields of art and design, communication, and information sciences. Design leadership balances design management with creative vision to guide creative teams, frame complex issues, and effectively communicate. To prepare students for transformative design leadership roles, students will think, evaluate, and respond to local and global issues leveraging the digital medium and peer collaboration. In this course, students are exposed to basic concepts, skills, ethics, language, and other principles of practice by engaging in critical discussions, activities, projects, writing, and work presentation. Students will be introduced to a basic historical perspective of art and design, technology, and communications through case studies and readings. They will write critical reflections on current and historical issues, ethical quandaries, and social impacts in blog posts to generate peer discussion. Independent and collaborative activities will guide students through skill mastery and research-based design projects will reinforce a breadth of concepts including universal design principles, research methods, reasoning and decision making strategies, speculative design and forecasting, curation and remix, narrative and communication, community, tools and technology, and professionalism.

DMD 300: Digital Multimedia Design Studio

3 Credits

Students adapt skills and knowledge of digital media to solve problems and communicate ideas in producing collaborative multimedia projects. In DMD 300 Digital Multimedia Design Studio, students synthesize the concepts, theories, and applications acquired in the introductory courses and begin to think critically about their professional objectives. Students will work on projects aimed to help them understand available learning pathways and real world applications based on their scholarly and professional interests. Students will work collaboratively to investigate a problem space, conduct a needs assessment, write a design plan or proposal, develop deliverables, and implement and evaluate the final product(s). Students will develop a sense of stewardship over the project development process by completing project milestones that reinforce time management behaviors, participating in team building activities that facilitate discussion and interaction, co-authoring project proposals that prompt critical analysis, and distributing production tasks to encourage ownership in completing both defined and open-ended assignments. Students will also be required to thoroughly document and reflect on the production process and project impact through blogging and discussions. Through the duration of the course, students are encouraged to interact with industry advisors for feedback and direction as they work through real-world challenges in their selected digital tools and methodologies.

Prerequisite: DMD 100, DMD 300

Earth and Mineral Sciences (EMSC)

EMSC 100S: Earth and Mineral Sciences First-Year Seminar

3 Credits

Writing, speaking, and critical thinking skills applied to topics of general interest in Environmental and Materials Science. EM SC 100S Earth and Mineral Sciences First-Year Seminar (3) (GWS;FYS) The EMS First-Year Seminar is designed to encourage students to begin the important
process of “thinking for a living.” The primary focus of the seminar is to promote critical reading and thinking skills, and to help students develop effective written and oral arguments. Students learn the importance of reading, sharing ideas and collaborating, through independent and group research, discussion and debate. We want our students to think about some of the major issues facing the world today, the role that science and technology have played in defining and addressing these issues, the way in which present-day thinking has been shaped by the past, and the development of scientific thought. The Seminar’s content focuses on communication skills, but these are addressed within the context of issues relevant to the disciplines represented in EMS. As such, the discussions range across topics such as the Earth and its resources; scientific and technical aspects of global habitability; development of the advanced materials necessary for sustaining and advancing civilization in the 21st century; and the social, economic, and political factors that shape and constrain society’s view of the Earth system. Students undertake three to five major writing projects throughout the semester, as well as several smaller one to two paragraph written assignments. Grades are determined from their performance on the written papers, oral presentations, and in-class participation. The Seminar is a required course for all EMS first-year students at the University Park campus and, together with English 015 and either English 202 or Speech Communications 100, will satisfy the Writing and Speaking requirements of General Education.

First-Year Seminar
General Education: Writing/Speaking (GWS)

EMSC 101: Resource Wars
3 Credits

Resource Wars* presents an analysis of natural resources and how competition for them shapes national and international cultures and geopolitics. EM SC 101 Resource Wars (3) (US;IL) The faculty of the College of Earth and Mineral Sciences are uniquely qualified to teach ldquo;Resource Warsrdquo;, a course that presents an analysis of natural resources and how competition for them shapes contemporary and historical culture and geopolitics. ldquo;Resource warsrdquo; will examine the extent to which the Gulf War of 1991, the explosive conflict between the United States and Islamic extremists, and present engagement in Iraq are manifestations of a foreign policy that comes from a desire for resource security. While the current Iraq war is the most recent manifestation of the clash between US and IL cultures, there are many examples of past resource wars in world history. Although the present conflict in the Middle East is about petroleum, past conflicts involve the entire spectrum of natural resources from gold and diamonds to rubber and tea to water, clean air, and living space. Class discussion will meld the technical aspects of discovery and extraction with its impact on society from a cultural and geopolitical points of view (US IL). Technical analysis starts with the geology of the natural resource. The extraction, harnessing, or mining of that natural resource and resource transportation come next. The use of that natural resource as a material follows. Of course, short term and long climatic instability may play roles. The human elements (US IL) involved in the trading and development of the resource lead to both armed interstate conflicts and intrastate disputes. Cultural questions might include how the digital age impact resource control and trade, how global resource distribution impacts energy security and utilization, and how international resource competition impacts the climate. Ultimately, the class is led to an understanding about how scarcity has impacted cultures throughout human history (US IL). The tentative plan is that each lecture period consists of two parts starting with a moderator (the lead faculty member throughout the entire semester) who summarizes the resource under discussion in a 10-15 minute introduction. Then, appropriate EMS faculty will offer detailed accounts of their particular expertise. This format requires two 75-minute classes per week (30 per semester). The moderator shall be responsible for grading the class including the discussion and written responses in a large classroom format (50+ students) taught in one lecture hall. Active learning shall include discussion sessions with a wireless response pad technology for in-class interaction between student and instructor.

International Cultures (IL)
United States Cultures (US)

EMSC 121: Minerals and Modern Society
3 Credits

Production and use of mineral resources in modern society with an emphasis on the interrelationships and their effect on the Earth system.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

EMSC 150: Out of the Fiery Furnace
3 Credits

A history of materials, energy and man, with emphasis on their interrelationships. For nontechnical students.

Cross-listed with: STS 150
Bachelor of Arts: Humanities
Bachelor of Arts: Natural Sciences
International Cultures (IL)
General Education: Natural Sciences (GN)

EMSC 240N: Energy and Sustainability in Contemporary Culture
3 Credits/Maximum of 3

In this course students are guided through an engaging exploration and the critical evaluation of selected media (e.g., books, film) in contemporary culture on topics related to energy and sustainability. Three selections are used each term, typically two books and one film. Students consider the subject matter in light of humanistic values, where the science, ideas and history presented in the selected media are critically evaluated relative to the viability of our planet’s ability to support life. Opening lessons cover the foundational science of energy and sustainability, with a global perspective and consideration of the human dimension. The science is presented without technical jargon or advanced mathematics, to promote a genuine and sound understanding of these essential concepts for college-level students of all academic backgrounds. Learning units are devoted to each media selection, with all content, activities and assessments within the unit contributing to this concentrated focus. After completing this course, students will possess the foundational science knowledge necessary to evaluate contemporary topics related to energy and sustainability, from the perspective of universal humanity on a planet of finite resources. This knowledge prepares students to develop observations, questions and opinions on topics related to energy and sustainability and to self-express them, in both written and oral presentations, to others with different backgrounds and points of view. Students will have the foundational knowledge necessary to be skilled critical readers of energy and sustainability
subject matter, knowing how to raise (and answer) questions related to scientific clarity and soundness and how to test assumptions and scope of arguments, especially as related to inclusion of humanistic values and planetary limits. This knowledge prepares students to be willing and able to avoid entrenched ideology-based positions on issues related to energy and sustainability and to develop, instead, a personal position based in science and data with a humanistic perspective. Students will gain the knowledge of credible resources and organizations for ongoing research related to energy and sustainability and be prepared to participate in public dialogue on some of the most challenging and complicated issues of our time, including activities such as letters to the editor, online commenting, political engagement, and public advocacy.

Bachelor of Arts: Humanities
Bachelor of Arts: Natural Sciences
General Education: Humanities (GH)
General Education: Natural Sciences (GN)
General Education - Integrative: Interdomain
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Soc Resp and Ethic Reason

EMSC 296: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

EMSC 302: Orientation to Energy and Sustainability Policy
1 Credits

Orientation to goals of the Energy and Sustainability Policy program and resources available to help students succeed. EM SC 302 Orientation to Energy and Sustainability Policy (1) EM SC 302 provides an orientation to the goals of the Energy and Sustainability Policy (ESP) degree program, helping students to successfully prepare for the five program learning outcomes. The course is conducted as a group seminar, with topics that are designed to provide an initial understanding of program outcomes: energy industry knowledge, global perspective, analytical skills, communication skills, and sustainability ethics. Students are expected to actively participate in discussions and work hands-on with online tools in activities that will allow them to gain an understanding of what it means to successfully participate as an ESP student in different educational and course contexts. Students are evaluated based on active class participation, written assignments, and class presentations. This course is intended to be taken during the first semester after being admitted to the ESP program.

EMSC 420: Energy and Modern Society
3 Credits

Technology and economics of energy resources, production, and consumption; environmental factors, exhaustion, new technology.

Prerequisite: 3 credits in Sociology
Cross-listed with: SOC 420, STS 420
Bachelor of Arts: Social and Behavioral Sciences

EMSC 440: Science Diving
4 Credits

Advanced scuba diving skills applied to underwater research. EM SC 440 Science Diving (4) EM SC 440 is a four credit intermediate science diving course for students already holding a basic open water scuba diving certification from an internationally recognized certification agency (e.g. PADI, NAUI, CMAS, YMCA, SSI etc.). Scientific diving is concerned with the observation of underwater phenomena and the acquisition of scientific data. This course introduces students to advanced scuba diving skills following the standards established by the American Academy of Underwater Sciences (AAUS) – with a significant emphasis on diver safety. The course covers theoretical aspects of the physics of diving, dive physiology, and underwater environments. There is a strong emphasis on diver safety with theoretical and practical training in cardiopulmonary resuscitation, diving-related first aid, accident management and dive rescue. The course will cover advanced recreational diving techniques, including deep diving and enriched air (nitrox) diving. A significant component of the course will involve scuba diving accident analysis, the focus of the course textbook. The course will also include an introduction of advanced underwater sign language. The course will include classroom sessions, pool sessions, and open water dives focusing on underwater skills development for eventual application in research settings. Each government or university underwater research program certifies its own divers based on standards that, at a minimum, conform to those of the AAUS. Successful completion of the course will allow the student diver in training to enroll in EM SC 441, Advanced Science Diving. Successful completion of EM SC 441 will allow the student diver in training to apply for science diver certification from the Penn State Science Diving Program. Certification is also dependant on a medical examination and is at the discretion of the University Dive Safety Officer; it is not automatically offered on completion of the course. The course is usually offered once a year in the spring semester and will involve several day trips (usually at weekends) to various river, lake, and quarry locations within the state. There will be an additional fee charged to cover the costs of the open water dives and administrative charges for recreational dive certifications.

Prerequisite: basic open water SCUBA certification and approval of program

EMSC 441: Advanced Science Diving
4 Credits

Advanced scuba diving skills applied to underwater data collection and research. EM SC 441 Advanced Science Diving (4) EM SC 441 is a four credit advanced science diving course for students who have completed EM SC 440 (Science Diving), an equivalent course at a recognized AAUS member institution, or have been approved by the University Dive Safety Officer based on acceptable demonstration of practical and academic dive experience. Students must have a minimum of 20 logged dives beyond their basic open water certification dives by the start of the course. Scientific diving is concerned with the observation of underwater phenomena and the acquisition of scientific data. This course introduces students to some of the basic skills and techniques used in scientific diving, following the standards established by the American Academy of Underwater Sciences (AAUS) – with a significant emphasis on diver safety. The course covers theoretical aspects of science diving techniques. The course will focus on advanced techniques in underwater ecology, geology, paleontology and archaeology, leveraging expertise from PSU faculty in these disciplines. The course will include classroom
sessions, pool sessions, and open water dives. The classroom and pool sessions and the open water dives will involve skills development and their application in research settings. Research will involve a variety of projects (e.g. fish surveys, lake sediment sampling for climate reconstruction, underwater mapping) ndash; the exact nature of which will vary depending on the areas of expertise of the faculty and students involved. Each government or university underwater research program certifies its own divers based on standards that, at a minimum, conform to those of the AAUS. Successful completion of the course will allow the student diver in training to apply for science diver certification from the Penn State Science Diving Program. Certification is also dependant on a medical examination and is at the discretion of the University Dive Safety Officer; it is not automatically offered on completion of the course. The course is usually offered once a year in the fall semester and will involve several day trips (usually at weekends) to various river, lake, and quarry locations within the northeastern United States. There will be an additional fee charged to cover the costs of the open water dives and administrative charges for recreational dive certifications.

**Prerequisite:** successful completion of EM SC440 or waiver by University Dive Safety Officer based on acceptable demonstration of practical and academic dive experience.

**EMSC 470:** Undergraduate Collaborative Research in Earth and Materials Sciences

1-6 Credits/Maximum of 6

Interdisciplinary research seminar involving students in the process of discovery, writing, and debate on issues of broad interest to Earth and Materials Sciences.

**Writing Across the Curriculum**

**EMSC 494:** Research Project Courses

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

**EMSC 494H:** Research Project Courses

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

**Honors**

**EMSC 496:** Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

**EMSC 497G:** **SPECIAL TOPICS**

1 Credits/Maximum of 1

---

**Earth Sciences (EARTH)**

**EARTH 2: The Earth System and Global Change**

3 Credits

An interdisciplinary introduction to the processes, interactions and evolution of the earth's biosphere, geosphere and hydrosphere. EARTH 002 Gaia - The Earth System (3) (GN) (BA) This course meets the Bachelor of Arts degree requirements. EARTH 002 is a broad introduction to the Earth and to the forces and processes that shape the present-day global environment. The course focuses on global-scale changes, both natural and human-induced. These include: global climate change, destruction of stratospheric ozone, and tropical deforestation, species extinction, and the loss of biodiversity. The discussion of these modern environmental issues occupies about 40% of the course. Unlike other "environmental" courses, this one sets these issues in the context of the long-term evolution and natural variability of the Earth systems. Thus, the course is structured around three major themes—the issues of global change, time scales of change, and understanding the Earth as a system. By the end of this course, we expect students to: 1) Recognize that: the Earth operates as a complex system, there is considerable interaction between the different components of this system (e.g. atmosphere, oceans, solid Earth, and biota), changes in one part of the system can be expected to impact all others to a greater of lesser degree. 2) Develop an understanding of how the Earth system operates at the global scale, and the consequences this has for regional variability. 3) Understand how this system has evolved through time. 4) Understand how to use systems and graphical analyses to predict system response to perturbations. As a result of this course, we expect students to: 1) Synthesize this information to better appreciate the complexity of modern global change issues. 2) Be in a position to make more informed judgments on the nature and seriousness of these issues.

**Bachelor of Arts: Natural Sciences**

General Education: Natural Sciences (GN)

**EARTH 100: Environment Earth**

3 Credits

Natural processes and their relationship to anthropogenic influences. General principles of global cycles and the role they play in natural hazards, global warming, ozone depletion, etc. EARTH 100 Environmental Earth Science (3) (GN) (BA) This course meets the Bachelor of Arts degree requirements. “Environment Earth” is designed to generate a student’s interest in natural processes and the effects humans have on these processes. In addition, students are encouraged to think critically about environmental problems and discover the complexity of these issues. An emphasis on the discrepancies between political rhetoric, media reporting and scientific data provides students the opportunity to evaluate conflicting arguments for themselves. The goals of this course are (1) to develop students’ understanding about our Earth and human effects on natural resources, (2) to foster the ability to critically evaluate scientific arguments, and (3) to practice expressing reasoned opinions on complex problems. To achieve these goals, grades are based on examinations, homework assignments, written reports and oral presentations. Exams use a traditional multiple choice format and are based on the lecture and readings. However, questions are designed to test a student’s knowledge of the principles and interrelationships discussed rather on memorization of facts and terms. Homework assignments are given on approximately a weekly basis. Questions cover
the most important concepts of the text and lecture and encourage consistent reading to complement lectures. These exercises have two purposes. First, the short answer nature of questions provides practice in writing logical, concise paragraphs while ensuring the student understands key concepts. Second, assurance that students are reading chapters concurrent with the lecture topics allows the instructor to interact with the class more effectively during class discussions. Two written reports are given to test a student's ability to comprehend scientific articles and explain the science and its implications for environmental policy. A wide variety of topics are suggested based mainly on newspaper and magazine articles on environmental issues, but students can select almost any topic related to the environment with prior instructor approval. Students must then research the science behind the media coverage via library and web-based resources. The class web site (http://www.geosc.psu.edu/People/Faculty/FacultyPages/Kubicki/ear100.html) is designed to facilitate searches related to course topics. Papers are judged based on the clarity of writing, the quality of scientific data included, and discussion of the implications of the research. Oral presentations debating two sides of environmental issues will be conducted. Small teams (4-5 students) will be assigned one side of an issue and each member will participate in a debate against another team. These debates will develop students' speaking and team-building skills. Although each student will be responsible for a section of the debate, factual research will be carried out as a group to present the best overall case.

Bachelor of Arts: Natural Sciences General Education: Natural Sciences (GN)

EARTH 101: Natural Disasters: Hollywood vs. Reality 3 Credits

Analysis of the causes and consequences of natural disasters; comparison of popular media portrayal of disasters with perspective from scientific research. EARTH 101 Natural Disasters: Hollywood vs. Reality (3) (GN;US) (BA) This course meets the Bachelor of Arts degree requirements. This course investigates a variety of natural hazards and disasters. We will use the popular media as a starting point for discussions and development of tools for analyzing the causes of disasters. Using excerpted segments of "disaster films" in conjunction with scientific treatments, we can identify the causes, consequences and public perceptions of natural hazards. Small group discussions and cooperative research held "real time" in the classroom will be a major component of this course. The goal is to help students develop both an understanding of natural hazards and disasters, and enhance their understanding of scientific approaches to problem solving. During the course approximately four to five topics selected from the list of volcanoes, earthquakes, hurricanes, tornadoes, flooding, bolloid (e.g., asteroid) impacts, and tsunami (tidal waves) will be covered. For each topic, we will incorporate the following activities: (a) short edited excerpts from disaster movies (or equivalent) of approximately 10 minutes each; (b) discussions by small groups of students (approximately 10 per group) to identify scientific issues to be addressed; (c) development of scientific background and tools via faculty lectures, tutorials, and library or web-based activities; (d) cooperative learning activities by small student groups—each group working together to address one of the identified scientific issues; (e) group presentations of results of the cooperative learning activity; and (f) individual writing activities producing focused reports on specific scientific issues. A typical topic will be covered in three weeks (six class meetings) with approximately 50 percent of the time (in class) allotted to group activities and discussion; lecturing by the faculty will involve approximately 25 percent of the time, with the remaining 25 percent of the time used for video and Web-based presentations. Grades will be based on participation in "breakout" group discussions and cooperative activities, writing assignments (two to three pages each) associated with each topic, and an annotated "disaster diary" of natural disasters which have occurred during the course. Each writing assignment will be aimed at a client audience (e.g., municipal government, businesses, or the general public) and written to explain the exposure to natural hazards or potential for disaster faced by the client. This course has no prerequisites and should be accessible to all students. Through cooperative activities students can benefit from the range of expertise brought to the course by their colleagues and thus address scientific issues beyond the reach of any individual.

Bachelor of Arts: Natural Sciences United States Cultures (US)
General Education: Natural Sciences (GN)

EARTH 100H: Environment Earth: Environment and Energy 3 Credits

Examination of climate change and energy issues. EARTH 100H Environment Earth: Environment and Energy (3) (GN) In this course, students will be asked to investigate the natural processes that affect the Earth's climate and their effects on life on Earth. Once a fundamental understanding of natural processes is developed, then an examination of the anthropogenic atmospheric changes covers the increases in greenhouse gases mainly due to fossil fuel use and agriculture. After discussing the potential environmental and economic impacts of increased greenhouse gases on Man and Nature, the major energy sources will be studied for their potential to meet increasing energy needs and their possible ability to mitigate climate change.

General Education: Natural Sciences (GN) Honors

EARTH 103: Earth in the Future: Predicting Climate Change and Its Impacts Over the Next Century 3 Credits

Climate predictions for the coming century are utilized to examine potential impacts on regions, sectors of society, and natural ecosystems. EARTH 103 Earth in the Future: Predicting Climate Change and Its Impacts Over the Next Century (3) (GN) (BA) This course meets the Bachelor of Arts degree requirements. The United States is actively working on national assessment of the impacts of the climate change predicted to occur over the next century. The U.S. National Assessment has developed three major documents, an Overview written for Congress, a Foundation document giving the sources of information and their interpretation, and a series of regional (e.g. Northeast, Midwest, etc) and sector (water, health, agriculture, forests, and coastlines) reports. These reports present an exceptional opportunity to connect advances in the natural sciences to society. The course has four major objectives: (1) to gain an understanding of climate science and of the possible scenarios of how climate may change in the future. [the basis for these scenarios and their limitations will be an important element]; (2) to analyze the linkages between climate and major human and natural systems (e.g. agriculture, human health, water, coastal ecosystems, and forests), necessary to assess the potential impacts of climate change; (3) to demonstrate that the impacts of climate change, and
the way in which society responds, is dependent on factors such as age, economic capability, lifestyle (e.g. urban vs. rural), generational differences, and cultural differences; and (4) to understand the different types of responses that humans may have to climate change, including adaptations to change and possible mechanisms to mitigate the factors that are forcing change to occur. The course includes smaller enrollment computer laboratory/discussion sessions designed to (1) provide hands-on data analysis and interpretation and the exploration of climate linkages to natural and human systems; (2) promote discussion and formal debate around key issues; and (3) develop tools to assess class perceptions of vulnerabilities and appropriate responses. Several of these elements will be developed with a team or group approach. Grading will be based primarily on a student record, or portfolio, stemming from a combination of lab exercises, written material, and debate materials. Tests on lecture material will be a secondary evaluation mechanism. This course fulfills a Natural Sciences General Education requirement, as well as course requirements for the Earth major. It provides a natural partner to Earth-as-a-System (Earth 002) that focuses on Earth system concepts and the scientific evidence for a changing planet throughout Earth history and into the future.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

EARTH 104: Climate, Energy and Our Future
3 Credits

This course presents the past, present, and possible future response of Earth's climate to human energy use. EARTH 104 Climate, Energy and Our Future (3) (GN) This class explores how we can shift our society to a sustainable energy system that improves our quality of life, our economy, and our natural environment. Energy provides well-being, jobs and about 10% of our economy, while powering the rest. But, energy is also the least sustainable part of our economy—we rely on fossil fuels that are burning about a million times faster than nature saved them for us. These fossil fuels, mostly coal, oil and gas, help us grow food and avoid some environmental disasters, but the limited fossil-fuel supplies mean we must move toward a more sustainable system. And, we will be better off by avoiding damaging climate changes from fossil-fuel CO2 if we move before all of the fossil fuels are gone. The warming influence of fossil-fuel CO2 is shown by physics known for more than a century and really refined by the US Air Force after WWII. History, data, and models confirm the physics, giving us high confidence that burning much of the remaining fossil-fuel resource and releasing the CO2 will cause much larger climate changes than we have experienced so far. This class will explore the big issues in energy, including the value of burning oil rather than whales, and other historical insights. Then, after looking at the basic science and engineering of our energy system and how it affects climate, we will examine the multitude of options for the future, including alternative energy sources, conservation, and intentionally manipulating the climate. The economics, policies and ethics of these options will help us consider how to build a sustainable energy system that will encourage economic growth and improved quality of life, while at the same time defending against potentially catastrophic future climate change.

General Education: Natural Sciences (GN)

EARTH 105: Environments of Africa: Geology and Climate Change
3 Credits

Significant natural features of Africa as related to human endeavor; case studies include the Nile, climate change, and natural resources. EARTH 105 / AFR 105 Environments of Africa: Geology and Climate History (3) (GN;IL)(BA) This course meets the Bachelor of Arts degree requirements. "Environments of African: Geology and Climate History" investigates the interrelationships between geology, hydrology, land use and human development in several areas of Africa. We focus primarily on regions north of the equator, although there is a brief segment on South Africa mining. Specific topics include the Nile River (sources of the Nile, agricultural practices, effects of damming the Nile, hydropolitics), the Sahara and Sahel (salt mines, climate change, drought, water resources), and natural resources and their roles in politics (gold, diamonds, oil, and gas). The theme of climate change cuts across the entire semester. The qualitative and analytical components of the course involve working through a combination of map exercises and data manipulations (flood stage, groundwater age, rainfall and temperature records). Writing exercises are conducted both individually (essays, analysis of readings) and in collaborative teams (climate change analysis). Readings for the course come from the popular scientific literature; current refereed research journals, and transcribed oral histories of African people. Faculty lectures will comprise ~30% of the course, and student presentations ~20%, with the remainder of the time devoted to in-class collaborative exercises. There are no pre-requisites for this course. It will be offered annually with a maximum enrollment of 100 students. The goals of the course are to (1) introduce the scientific study of Africa; (2) develop quantitative and scientific reasoning skills; (3) explore the relationship between human society and the natural world. The topics that we explore (e.g., global climate change, allocation of limited water resources) are important political issues that affect people in developed and developing countries throughout the world. It is crucial that the next generation of citizens be informed as to how scientific data is obtained, presented, and interpreted by scientists as well as politicians. Students will work individually and (more commonly) in teams to analyze real data from natural African systems, and will then report their findings to the class both orally and in writing. Examples of the data sets include 100-year records of monthly rainfall and temperature from stations throughout the continent, fossil suites from ancient lake cores in the modern Sahara, and historical writings of Nile flood levels from pre-Biblical times. Through these exercises students will gain an appreciation of the scope of geological time and change, and will be able to incorporate this new long-term perspective into identification and resolution of modern questions.

EARTH 106: The African Continent: Earthquakes, Tectonics and Geology
3 Credits

Study of earthquakes and seismic waves to learn about the geology and plate tectonics of the African continent. EARTH 106 Shaking Up Africa: The Geology and Tectonics of Africa (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. Earthquakes are natural phenomena that can cause immense human suffering because of intense ground shaking, and are consequently of great societal importance.
Earthquakes are also important because the seismic waves that generate the ground shaking provide scientists with important information about Plate Tectonics and geology, in particular information about the structure and composition of our planet and how the insides of the planet are deforming. In this course, earthquakes in Africa and the seismic waves they generate are used to help students learn about the geology of Africa and how the earth beneath the African continent is being deformed by Plate Tectonics. EARTH 106 is designed in four modules. Modules, in turn, are divided into weekly lessons. Offered in a "hybrid" format, each weekly lesson includes a single face-to-face class meeting, complemented by online reading assignments, self-check learning activities, and discussions. The online, hands-on learning activities are similar to the labs conducted in similar courses that are offered solely in face-to-face environment, including the manipulation of geographic data, map reading exercises, and rock and mineral identification activities. They are designed to help students learn skills and knowledge that they then apply to a course project. While the weekly lesson activities involve working with seismic data from East Africa, the course project requires students, working in small groups, to apply their skills and knowledge to another geographic area of the African continent. In addition to the weekly lesson activities and the course project, students are required to complete weekly quizzes that assess comprehension of the online reading assignments. Quizzes that come at the end of a module also assess the skills and knowledge addressed in the lesson learning activities for that module. This course is a general education offering in natural sciences (GN) and is open to all students regardless of academic major.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

EARTH 107: Coastal Processes, Hazards and Society

3 Credits

Processes responsible for formation, diversity, and evolution of coastal landscapes; socioeconomic and policy responses to changes in coastal regions. EARTH 107 Coastal Processes, Hazards and Society (3) (GN) Ten percent of the world’s population or approximately 600 million people live on land that is within 10 meters of sea level. This low elevation coastal zone includes some of the world’s most populous cities including New York, London, Miami, Calcutta, Tokyo, and Cairo. This zone is threatened by a host of environmental challenges, none less daunting than sea level rise. The overarching goal of the proposed blended course is to provide students with a global perspective of coastal landscapes, the processes responsible for their formation, diversity and change over time, as well as socioeconomic and policy responses to current biophysical changes in the coastal zones around the world. Students will use real-world coastal data sets to evaluate hazards such as hurricanes and tsunamis and effects on coastal populations. Coastal processes to be considered include eustatic effects, effects of glaciation, sediment supply, and wave and tidal energy. The impacts of sea level rise and its local effects on communities will be a focus. Engineering solutions to projected sea level rise impacts such as coastal flooding and habitat loss in coastal areas will also be examined. The students taking the course will participate in a student-centered active learning process, including analyzing real data sets such as sea level rise records, shoreline erosion rates along barriers, comparison of wave data for Hawaii versus the East Coast and other major influences affecting coastal evolution. Students will also be asked to apply critical thinking and problem solving skills to real-world coastal issues that affect human populations. An example is how communities can effectively plan for emergencies such as catastrophic flooding of densely populated low-lying areas such as the Ganges delta. Active learning elements include analyzing real data sets and applying critical thinking and problem-solving skills to real-world coastal issues that affect human populations. Students will complete a capstone project in which they consider a real-world coastal issue. The course will comprise twelve modules, each lasting 1-2 weeks. The course will initially be offered in blended format and later in 100% online format.

General Education: Natural Sciences (GN)

EARTH 111: Water: Science and Society

3 Credits

Investigation of water behavior and occurrence, its relevance to life, human activities, politics, and society. EARTH 111 Water: Science and Society (3) (GN;US) The Earth is often called "The Blue Planet", a reference to the fact that over two-thirds of its surface is covered by water. Despite its apparent abundance, water is a valuable and limited resource; less than 2.5% of the water on the planet is fresh, and only one third of that is potable. And that’s not all - the small fraction of Earth's water that is usable to humans is distributed very unevenly. As a result, conflicts over water occur from the local level, for example: pitting rancher against developer - to the global level, at which nations square off against one-another in war and use water as a mechanism for imposing sanctions. The dire situation in some regions has spurred numerous research and technological endeavors, such as water desalination, genetic engineering of crops, and major overhauls of agricultural practice. In this course, we will explore the relationships between water and human populations, with emphasis on water resources and quality in the Western U.S., and how these have shaped history and modern politics. We will focus first on developing the scientific underpinnings of water's unique properties, behavior, movement, occurrence, and quality. With this background, we will then discuss key issues relating to modern and historical conflicts, human impacts on the natural world, and human engineering accomplishments driven by our thirst for this valuable resource. We will discuss historical examples from the American West, specifically the development of water resources in Colorado and California. We will also explore modern and historical conflicts between stakeholders. Major themes will include political and economic conflicts over (1) water resources - for example, balancing agricultural and urban demands in the American West in the Denver and Los Angeles metropolitan areas, (2) water quality - for example, considering the impact of economically profitable human activities on water quality and transmission of disease, and (3) human impacts on natural processes, specifically connecting human activity with our cultural history of water use and exploration in the American West. Our approach is to include a substantial component of student-initiated learning. The course will include critical evaluation and discussion of assigned reading and films, a series of laboratory exercises and field trips to illustrate concepts and stimulate discussion, and a major research paper.

United States Cultures (US)
General Education: Natural Sciences (GN)

EARTH 112: Climate Science for Educators

3 Credits

Concepts of climate sciences highlighted by evidence-based explanations and scientific discourse in preparation for K-6 science teaching. This introductory, multidisciplinary course will focus on the interactions among physical science concepts, earth science concepts,
and scientific practices to develop understandings about Earth’s climate system. The course is primarily intended for prospective elementary school teachers (Childhood and Early Adolescent Education, PK-4 and 4-8 majors), although it is available to other non-science majors. The development of models is an integral part of the course as a means to facilitate climate systems thinking by serving as a means to explain phenomena and predict outcomes. In addition, students in the course consider how they are learning applies to teaching by offering opportunities to think about how they might extend their knowledge to teaching contexts. This course consists of integrated lectures and laboratory investigations in class meetings each week, with work on collaborative projects outside of class.

Cross-listed with: SCIED 112

EARTH 150: Dinosaur Extinctions and Other Controversies

3 Credits

Dinosaur extinctions and other major and controversial events in the history of life. EARTH 150 Dinosaur Extinctions and Other Controversies (3) (GN) (BA) This course meets the Bachelor of Arts degree requirements. One of the most dramatic developments in the Earth sciences is the suggestion that extinction of the dinosaurs was caused by a meteorite impact. Evidence for and against this controversial idea is just one of the subjects addressed by this course, dealing broadly with the history of our planet, the evolution of life upon it, and the sometimes rocky development of our understanding of Earth history. In addition to dinosaur extinction, we will discuss issues relating to catastrophic vs. gradual theories about the Earth's history, fossils and the history of life, and mass extinctions, including whether or not we're in the middle of one now. How are scientific discoveries made? What distinguishes a scientific argument from a non-scientific one? What roles do social and historical factors play in the construction and acceptance of scientific theories? Questions such as these will permeate the course. Readings will include selected texts by leading scientists, with supplements from the primary scientific literature, including current discoveries published in Science and Nature.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)

EARTH 240: Coral Reef Systems

4 Credits

The geography, geology, biology ecology and chemistry of coral reef ecosystems; threats to reef environments; and techniques for reef surveying and monitoring; with local geologic and distant modern field studies. EARTH 240 Coral Reef Systems (4) (GN) The course introduces students to coral reef environments, past and present. It describes the processes that control the distribution, growth, and morphology of reefs and introduces students to the complexity of the coral reef ecosystem. The course emphasizes the role that reefs play in the natural environment and examines their importance to society both globally (e.g. in terms of biodiversity and its potential benefits) and locally in terms of, for example, food supply and tourism. We then look at the natural disturbances (such as disease, storms, sea surface temperature variations) that affect the reef, as well as ways in which reefs are threatened from human impacts, with an emphasis on global climate change and the long-term outlook for reef survival. Students will work in groups to research elements of the system, first at a global scale, and then focusing specifically on one region – the Bahamas platform. Students will look at the history of the Bahamas platform and its relationship to the present nature and distribution of coral reefs. They will then examine these in the context of their social, cultural, and economic importance to local communities. A third component of the course will concentrate on the identification of vertebrate and invertebrate species and substrate conditions that are important indicators of reef health. There will then be a one-week field trip to a coral reef system to conduct reef surveys. The surveys follow the Reef Check protocol (a volunteer, community-based monitoring protocol designed to measure the health of coral reefs on a global scale). Reef Check is administered out of the University of California at Los Angeles. The coral reef surveys will be conducted on scuba and the field trip and participation in the survey are required elements of the course. Students who are not scuba certified will be given the opportunity to obtain open water scuba certification as part of the course, through Penn State's Science Diving Program. The PSU Science Diving Program is a member of the American Academy of Underwater Sciences. There will be an additional charge for the scuba certification course and the field trip. Student assessment will be through group presentations, term papers, 3 exams and their contribution to the field program. The course satisfies part of the field requirement for the University's Marine Science Minor and serves as an introduction to the Science Diving Program.

Prerequisite: Prerequisite or concurrent: KINES 045 or Nationally Recognized Scuba Certification

General Education: Natural Sciences (GN)

EARTH 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

EARTH 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

EARTH 400: Earth Sciences Seminar

3 Credits

Interdisciplinary study of environmental problems in the earth sciences.

Prerequisite: seventh-semester standing in the Earth major

EARTH 402: Modeling the Earth System

3 Credits

Earth 402 is a course that focuses on modeling Earth systems with a focus on the climate system, including the economic and policy aspects of energy and carbon emissions. By building and experimenting with numerical models of these systems, students gain insight into the dynamics of these systems, including the future consequences of different policy decisions that impact the climate system.

Prerequisite: EARTH 2; EARTH 103 MATH 140; MATH 110; MATH 83; CHEM 110
ECON 102: Introductory Microeconomic Analysis and Policy

3 Credits

Analysis of the American economy, emphasizing the nature and interrelationships of such groups as consumers, business, governments, labor, and financial institutions. Students who have passed ECON 002 or 004 or are registered in the College of Business Administration may not schedule this course. Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)

ECON 102H: Introductory Microeconomic Analysis and Policy, Honors (3)

3 Credits

ECON 102H Introductory Microeconomic Analysis and Policy, Honors (3)(GS)(BA) This course meets the Bachelor of Arts degree requirements. Economics is the study of how people satisfy their wants in the face of limited resources. One way to think about economics is that it is a consistent set of methods and tools that is valuable in analyzing certain types of problems related to decision-making, resource allocation, and the production and distribution of goods and services. There are two main branches of economics, microeconomics, and macroeconomics. Macroeconomics is concerned with economy-wide factors such as inflation, unemployment, and overall economic growth. Microeconomics deals with the behavior of individual households and firms and how government influences that behavior; it is the subject of this course. More specifically, ECON 102 is an introduction to microeconomic analysis and policy. The principal objective of this course is to enable students to analyze major microeconomic issues clearly and critically. Students will be introduced to the methods and tools of economic analysis, and these analytical tools will be applied to questions of current policy interest. Learning these methods and tools and applying them to interesting policy questions and issues is sometimes called “thinking like an economist.” An important goal of this course is to take each student as far down the road of “thinking like an economist” as possible. A variety of mechanisms are used to assess student performance. These evaluation methods typically include exams, quizzes, homework assignments, and group projects. ECON 102 is an introductory course in economics and as such, serves as a prerequisite for several microeconomics-oriented 300-level courses. It is also a required course for all majors and minors in economics, and meets requirements for a General Education (GS) or Bachelor of Arts social science course.

Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)

ECON 102H: Introductory Microeconomic Analysis and Policy (Honors)

3 Credits

General Education: Social and Behavioral Scien (GS) Honors
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies
ECON 104: Introductory Macroeconomic Analysis and Policy

3 Credits

National income measurement; aggregate economic models; money and income; policy problems. ECON 104 Introductory Macroeconomic Analysis and Policy (3)(GS)(BA) This course meets the Bachelor of Arts degree requirements. Economics is the study of how people satisfy their wants in the face of limited resources. One way to think about economics is that it is a consistent set of methods and tools that is valuable in analyzing certain types of problems related to decision-making, resource allocation, and the production and distribution of goods and services. There are two main branches of economics, microeconomics, and macroeconomics. Microeconomics deals with the behavior of individual households and firms and how that behavior is influenced by government. Macroeconomics is concerned with economy-wide factors such as inflation, unemployment, and overall economic growth; it is the subject of this course. More specifically, ECON 104 is an introduction to macroeconomic analysis and policy. The principal objective of the course is to enable students to analyze major macroeconomic issues clearly and critically. Students will be introduced to the methods and tools of economic analysis, and these analytical tools will be applied to questions of current policy interest. Broadly, the course focuses on the determination of national income, on unemployment, inflation, and economic growth in the context of a global economy, and on how monetary and fiscal policy, in particular, influence the economy. Learning the methods and tools of economics and applying them to interesting policy questions and issues is sometimes called "thinking like an economist." An important goal of this course is to take each student as far down the road of "thinking like an economist" as possible. A variety of mechanisms is used to assess student performance. These evaluation methods typically include exams, quizzes, homework assignments, and group projects. ECON 104 is an introductory course in economics, and as such, serves as a prerequisite for 300-level courses in intermediate macroeconomic analysis, international economics, and money and banking. It is also a required course for all majors and minors in economics, and meets requirements for a General Education or Bachelor of Arts Social Science (GS) course.

Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Sciences

ECON 104H: Introductory Macroeconomic Analysis and Policy (Honors)

3 Credits

ECON 104H Introductory Macroeconomic Analysis and Policy (3)(GS)(BA) This course meets the Bachelor of Arts degree requirements. Economics is the study of how people satisfy their wants in the face of limited resources. ECON 106: Statistical Foundations for Econometrics

3 Credits

Basic statistical concepts used in economics. Topics include probability distributions, expectations, estimation, hypothesis testing, correlation, and simple regression. Students who have completed ECON 306 may not schedule this course.

Bachelor of Arts: Social and Behavioral Sciences

ECON 106H: Statistical Foundations for Econometrics (Honors)

3 Credits

Statistical Foundations for Econometrics Honors (ECON106H) teaches basic statistical concepts used in economics, specifically in the area of econometrics. Econometrics is a field of economics where quantitative methods are used to study economic data. Topics studied in this course include probability distributions, expectations, estimation, hypothesis testing, correlation, and simple regression. Since probability and statistics is a mathematical subject, it is nearly impossible to study it without using mathematical tools such as sets and functions. Therefore, students are expected to be comfortable with, or at the minimum open to, using algebra and mathematical arguments. Some concepts from calculus (e.g. derivatives and integrals) are important to understand continuous probability distributions such as the famous normal distribution. Therefore, the course will spend some time reviewing important concepts and results from calculus as needed. Students will also learn and other probability distributions and density functions, and be able to apply them in practice. Students will use computer programs to model randomized experiments and run regressions on datasets for analysis. Interpreting the findings of the regressions are key to understanding what the data shows, and depending on the data, the results may also have important policy implications. ECON106 is a required course for all majors in economics. This honors version of the course is designed to provide the opportunity to pursue this course at a more in-depth and mathematically rigorous level. It is a natural preparation for taking an honors section of Econometrics (ECON306),
Students will learn, at a deeper level than that covered in the beginning microeconomics course (ECON 002), and with extensive use of calculus, about supply and demand, consumer theory, the theory of the firm, market structure and market power, factor markets, and extensions to consider uncertainty, missing markets, and limited information. Students will develop their analytical skills for analysis of microeconomic issues. These skills, in turn, will be required for a substantial number of 400-level microeconomics-oriented courses. This course is a follow-on to the introductory course in microeconomic analysis, its prerequisite, going more deeply into the material covered in that introductory course in microeconomic analysis, and making extensive use of calculus. It is, in turn, a prerequisite for a large number of microeconomics-oriented courses at the 400 level. This honors version is designed to provide the opportunity for stronger students to pursue this key course at a more rigorous and in-depth level.

**Prerequisite:** ECON 102 and MATH 110 or MATH 140
Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Sciences (GS)
Honors

ECON 304: Intermediate Macroeconomic Analysis

3 Credits

Analysis of forces that determine the level of aggregate economic activity.

**Prerequisite:** ECON 104
Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Sciences (GS)

ECON 304H: Intermediate Macroeconomic Analysis (Honors)

3 Credits

Analysis of forces that determine the level of aggregate economic activity. ECON 304H Intermediate Macroeconomic Analysis (Honors) (3) (GS) (BA) This course meets the Bachelor of Arts degree requirements. There are two branches within the discipline of economics: microeconomics, focused on the behavior of individual economic actors (consumers, firms, and government) and macroeconomics, focused on economic aggregates (e.g., inflation, unemployment, aggregate economic growth). There are four core courses in economics that are required of all majors and minors: introductory and intermediate courses in microeconomics and macroeconomics. This course is the upper-level core course in macroeconomic analysis. Students will learn, at a deeper level than that covered in the beginning macroeconomics course (ECON 004), and with extensive use of calculus and economic models, about the measurement and structure of the national economy, long-run economic performance and the factors that influence it, business cycles and macroeconomic policy, and the environment and institutions that are pertinent to macroeconomic policy. Students will develop their analytical skills for analysis of macroeconomic issues. These skills, in turn, will be required for several 400-level macroeconomics-oriented courses. This course is a follow-on to the introductory course in macroeconomic analysis, its prerequisite going more deeply into the material covered in that introductory course in macroeconomic analysis, and making extensive use of calculus and formal models. It is, in turn, a prerequisite for a number of macroeconomics-oriented courses at the 400 level. This honors version is designed to provide the opportunity for stronger students to pursue this key course at a more rigorous and in-depth level.
ECON 323: Public Finance
3 Credits
Contemporary fiscal institutions in the United States; public expenditures; public revenues; incidence of major tax types; intergovernmental fiscal relations; public credit.

Prerequisite: ECON 102
Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)

ECON 333: International Economics
3 Credits
Why nations trade, barriers to trade, balance of payments adjustment and exchange rate determination, eurocurrency markets, and trade-related institutions.

Prerequisite: ECON 102, ECON 104, or ECON 014
Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)

ECON 342: Industrial Organization
3 Credits
Industrial concentration, size, and efficiency of business firms, market structure and performance, competitive behavior, public policy and antitrust issues.

Prerequisite: ECON 102
Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)

ECON 351: Money and Banking
3 Credits
Money, credit, commercial and central banking, financial intermediaries, treasury operations, monetary policy. Students who have already taken ECON 451 may not schedule this course. ECON 351 Money and Banking (3)(BA) This course meets the Bachelor of Arts degree requirements. In this course, students learn all about the Federal Reserve and the conduct of monetary policy: both conventional and unconventional. Students will examine many different interest rates and learn how they are determined. Students will study the importance of the Federal Reserve's dual mandate and become familiar with business cycles in the US economy since 1970 and the associated Fed policy during these episodes. Term structures of interest rates are analyzed as well as the risk structure of interest rates. The Taylor Rule and various specifications of the Taylor Rule are applied to these topics. Students also study the efficient market theory and the determination of stock and bond prices. The course finishes by engaging students in the topics of futures, options, and futures options and hedging with futures and options. The objective of the course is help students get a better understanding of macroeconomic and monetary topics and policy. Upon successful completion of this course, students will be able to contribute to any discussion about the U.S. economy and Federal Reserve policy, analyze real world events as they relate to U.S. monetary policy, and share their newly acquired human capital with others. The prerequisite for this course is ECON 104. Students who have taken ECON 451 cannot schedule ECON 351.
Prerequisite: ECON 104
Bachelor of Arts: Social and Behavioral Sciences
ECON 395: Internship
1-18 Credits/Maximum of 18
Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor
Bachelor of Arts: Social and Behavioral Sciences
ECON 399: Foreign Studies
1-12 Credits/Maximum of 12
Courses offered in foreign countries by individual or group instruction.
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
ECON 400: Honors Seminar in Economics
3-12 Credits/Maximum of 12
Readings, discussion, and oral and written reports on selected topics in economics.

Prerequisite: ECON 302, ECON 304, fifth-semester standing, admission into Honors program
Bachelor of Arts: Social and Behavioral Sciences
Honors
Writing Across the Curriculum
ECON 401: History of Economic Thought
3 Credits
Survey of economic ideas from Greco-Roman times to the present.

Prerequisite: ECON 302 or ECON 304
Bachelor of Arts: Social and Behavioral Sciences
ECON 402: Decision Making and Strategy in Economics
3 Credits
Development and application of the tools for decision making under uncertainty and for game theoretic analysis of economic problems.

Prerequisite: ECON 302 AND ECON 106 OR SCM 200 OR STAT 200
Bachelor of Arts: Social and Behavioral Sciences
ECON 404: Current Economic Issues
3 Credits
An analytical survey of significant problems of current economic policy and the application of economic analysis to important social issues. This course is designed to give students a more in-depth study of various special topics and current events. Considerable analysis will focus on the economics behind these issues, including studying (where relevant) firm and consumer behavior related to the topics. Students will be expected to use intermediate and advanced economic methods and models while analyzing these issues. The specific topics chosen will reflect the academic and research interests of the instructor who will be qualified to provide an extremely detailed course and lesson plan related to the issues.

Prerequisite: ECON 302 or ECON 304
ECON 404W: Current Economic Issues
3 Credits
An analytical survey of significant problems of current economic policy and the application of economic analysis to important social issues.

Prerequisite: ECON 302 or ECON 304
Bachelor of Arts: Social and Behavioral Sciences
Writing Across the Curriculum
ECON 406: The Economics of Social Conflict
3 Credits
Economic theory of the resolution of social conflicts: social choice theory, voting, noncooperative games, voluntary trade, and allocation by force.

Prerequisite: ECON 402, and MATH 110 or MATH 140
ECON 406W: The Economics of Social Conflict
3 Credits
Economic theory of the resolution of social conflicts: social choice theory, voting, noncooperative games, voluntary trade, and allocation by force. ECON 406W The Economics of Social Conflict (3) This course is devoted to the economic theory of the resolution of social conflicts. The first two-thirds of the course will cover economic models of social choice, majority rule, and voluntary trade. The latter part of the course will focus on the emerging theory of allocation by force. The course is an advanced writing-intensive seminar in which students will learn about economic theories of social conflict. It is one of a series of 400-level seminars in each of seven broad areas of economics, and this course constitutes a seminar in microeconomic theory. The course counts toward both the major and the minor in economics.

Prerequisite: ECON 402 and MATH 110 or MATH 140
Writing Across the Curriculum
ECON 407: Political Economy
3 Credits
Applications of the tools of game theory to analyze topics in collective decision making.

Prerequisite: ECON 302
ECON 407W: Political Economy
3 Credits
Applications of the tools of game theory to analyze topics in collective decision making. ECON 407W Political Economy (3) The course covers two main topics. First, the course will analyze elections as a mechanism to aggregate preferences of the electorate. It will be shown that elections provide a good tool to strike a compromise between all members of the electorate if the scope of disagreement in the electorate is one-dimensional. A simple model of taxation in which citizens’ preferences over tax rates are “one-dimensional” in the above sense will be developed. This model will be used to predict how tax rates in
There are five specific areas of note: patent races, poorly constructed incentives, standards, licenses, and an examination of costs. There are three factors relevant to the costs of providing legal protection to some particular sort of intellectual property. One is how easy it is to define and defend property in that sort of idea. Another is the degree in which someone who creates and claims ownership in that particular sort of intellectual property reduces, by so doing, the options available to other people. The more serious these problems are, the less the gains from defining and enforcing property rights in ideas. Where they are sufficiently serious, we are better off with an intellectual commons—a legal regime in which certain classes of ideas are free for all to use without intellectual property. These three costs must be balanced against the benefits—production of more and better intellectual property and better coordination of intellectual property once produced. The larger these benefits are likely to be, the greater the costs we are willing to bear in order to get them. The course objectives are to apply the framework of comparative and cost-benefit analysis to the study of intellectual property. The course will examine the empirical evidence, and also consider policy issues in this area.

**Prerequisite:** ECON 402 or ECON 444

Writing Across the Curriculum

**ECON 409W: Economics of Terrorism**

3 Credits

Terrorism throughout history; economic causes, costs, sources, and consequences.

**Prerequisite:** ECON 402

**ECON 409W: Economics of Terrorism**

3 Credits

Terrorism throughout history; economic causes, costs, sources, and consequences. ECON 409W Economics of Terrorism (3)This microeconomics seminar examines the economics of terrorism. Beginning with a survey of terrorism through history and extending to terrorism in the 21st century, economic tools are deployed to better understand the causes and sources of terror. Terrorism imposes substantial economic costs, but there are also significant costs with policies to combat terrorism. A society is better off if the threat of terrorism can be reduced, or even eliminated, just as it is better off if the threat of crime can be reduced or eliminated. There are some economic roots of terrorism, but these have more to do with the incentives and constraints that individuals and organizations face than with any specific set of easily quantifiable factors that push people toward involvement in terrorist organizations. This suggest that policy responses to terrorism need to multi-faceted and flexible. Security policies, for example, need to be more cost effective, in order for both to achieve results and to limit the negative consequences of devoting excessive resources to security purposes. Similarly, aid policies need to concentrate on achievable objectives, both to obtain positive results and to provide a more representative and optimistic outlook on the future. Policies need to be targeted at filling in the voids left by weak states and shifting incentive structures within societies away from the use of violence.

**Prerequisite:** ECON 402

Writing Across the Curriculum
ECON 410: Economics of Labor Markets
3 Credits
Economic analysis of the employment relationship from the microeconomic perspective, with emphasis on current labor-market problems and public policy issues.

Prerequisite: ECON 102

ECON 411: Behavioral Economics
3 Credits
Topics in behavioral economics; selected games; evolutionary models of social behavior, herding, overconfidence.

Prerequisite: ECON 402 or ECON 444

ECON 411W: Behavioral Economics
3 Credits
Topics in behavioral economics; selected games; evolutionary models of social behavior; culture and social behavior; herding; overconfidence. ECON 411W Behavioral Economics (3)Behavioral economics examines recent evidence from experiments that seems to violate the hypotheses of economic rationality in traditional microeconomic theory. The course considers, among others, the following three topics: (1) Altruism in human behavior, as demonstrated, for example, in public goods experiments where people typically contribute some positive amount, even with the individually optimal strategy being to contribute nothing. (2) The prevalence of co-operative behavior in societies, which seems essential to their functioning, but which is hard (but not impossible) to explain on the basis of the actions of purely self-interested individuals. (3) Fairness in distribution: for example, people do not try to extract everything that their partners or opponents can give even when they are in a position of power (as in being the proposer of a take-it-or-leave-it offer). Students play some well-known games with each other to generate examples of their own behavior in multi-person interaction contexts; the results of the games are analyzed to detect regularities in the observed behavior; and the class discusses possible explanations drawn from economics, evolutionary biology and psychology as to why people (specifically the students) played the way they did in these games. Overall, then, students will learn about various aspects of behavioral economics, including several games and evolutionary models of social behavior, and how these aspects square with conventional economic theory. Students will develop the skill of analyzing behavior from a behavioral economics perspective. This course is a 400-level seminar, part of the Economics Department's offerings, many of them writing-intensive, for our advanced students in each of seven broad areas of economics. This writing-intensive seminar is in the area of microeconomic theory. The course will count toward both the major and the minor in economics.

Prerequisite: ECON 402 or ECON 444

Writing Across the Curriculum

3 Credits
Advanced topics in labor economics: theory, empirical evidence, and policy. ECON 412 Labor Economics and Labor Markets: Theory, Evidence, and Policy(3)This course is an advanced course in labor economics. Its coverage of topics overlaps somewhat with the topics covered in ECON 315, but typically the treatment of the topics considered will be distinctly more rigorous for this 400-level course. The broad areas that will be focused on in the course include labor supply, investment in human capital, labor demand, wage determination, search and unemployment, and earnings inequality. The objective of this course is to introduce students to topics in labor economics with a rigorous and advanced analytical approach. For each topic, the course will consider the underlying theory, pertinent empirical evidence, and implications for public policy. The instructional and educational objectives are to provide students with a strong background in labor economics. This will allow them to take advanced seminar courses in the labor field. This course is an advanced introduction to labor economics, and as such has a prerequisite of either ECON 302 or ECON 315. In turn, this course will serve as a gateway to advanced seminar courses in labor economics at the 400 level that the Economics Department is in the midst of creating. The course will count toward both the major and the minor in economics.

Prerequisite: ECON 306 AND ECON 302 OR ECON 315
Bachelor of Arts: Social and Behavioral Sciences

ECON 413: Economic Growth and the Challenges of World Poverty
3 Credits
Challenges imposed by poverty; growth; growth rates; microfinance; foreign aid.

Prerequisite: ECON 304

ECON 413W: Economic Growth and the Challenge of World Poverty
3 Credits
Economic prosperity in historical perspective; recent successes (East Asia, China, India); ongoing challenges (the bottom billion; sub-Saharan Africa). ECON 413W The Challenge of World Poverty (3)This course will first consider economic growth and the spread of economic prosperity in historical perspective. Then contemporary success stories, including the East Asian miracle and growth in China and India, will be studied. The last part of the course focuses on the poor worldwide, and examines poverty traps in Africa, why aid doesn't work, and why globalization hasn't helped. Students are expected to learn about the barriers to reducing world poverty and proposals aimed at alleviating poverty. Students will also learn about the growth and diffusion of economic prosperity, with both historical and contemporary examples. Students will develop analytical skills as well as writing skills. This course is one of a series of 400-level seminars, many of them writing-intensive, for our advanced students in each of seven broad areas of economics. This writing-intensive seminar is in the area of economic growth and development. The course will count toward both the major and the minor in economics. Students will read four books about world poverty, write short book summaries, and write a term paper focuses on one feasible solution to alleviating poverty in Africa. In addition, there will be a midterm exam and a final exam.

Prerequisite: ECON 471
Writing Across the Curriculum
ECON 414: The Economic Way of Looking at Life
3 Credits
Economics/life according to Gary Becker: criminal behavior; economics of the family (marriage, divorce, intrahousehold resource allocation, bequests), policy issues.
Prerequisite: ECON 302 or ECON 315

ECON 415: The Economics of Global Climate Change
3 Credits
Evidence on climate change; economic models of the environment and market failure; cost-benefit analysis of policy options; carbon markets.
Prerequisite: ECON 302 and ECON 306

ECON 415W: The Economics of Global Climate Change
3 Credits
Evidence on climate change; economic models of the environment and market failure; cost-benefit analysis of policy options; carbon markets. ECON 415W The Economics of Global Climate Change (3) The first part of the course reviews the scientific evidence on global climate change (IPCC studies). This is followed by an analysis of market failure in the production of greenhouse gas emissions, and consideration of carbon markets as a policy response. A cost-benefit study of the control of greenhouse gases (the Stern Report) is examined, and the concluding part of the course looks at a computer model of economic activity and the environment. Students will learn about the scientific evidence on global climate change, and the associated economic implications, market failures, and policy options to mitigate those market failures. Students will develop skills to assess policy options in this area, and they will become conversant with applied cost-benefit analysis and a computer model of economic activity and the environment. This course is one in a series of 400-level seminars, many of them writing-intensive, for advanced economics students in each of seven broad areas of economics. This writing-intensive seminar is in the area of applied microeconomics. The course will count toward both the major and the minor in economics.
Prerequisite: ECON 428
Writing Across the Curriculum

ECON 417: The Economics of Uncertainty
3 Credits
Uncertainty and Risk as related to finance, insurance, health, labor, industrial organization, and macroeconomics.
Prerequisite: ECON 302

ECON 417W: The Economics of Uncertainty
3 Credits
Uncertainty is examined in contracts, with an emphasis on limited liability. Asymmetric information and economic puzzles are also considered. ECON 417W The Economics of Uncertainty (3) This course studies the allocation of resources under uncertainty. Decisions without perfect information require the use of probability theory and expected utility preferences. The seminal work of Arrow and Debreu is used as a starting point. Probability and utility theory are then used to interpret insurance contracts. Limited liability is introduced and the Modigliani-Miller Theorem is applied to loan guarantees, deposit insurance, and insurance claims. Finally, asymmetric information is discussed and the resulting problems of moral hazard and adverse selection are addressed. The course objectives are to introduce students to the theoretical framework used by economists to study uncertainty and to apply that framework in order to explain various regularities observed when decisions are made without complete information, to examine the empirical evidence, and to consider policy issues in this area. The course will count toward both the major and a minor in economics.
Prerequisite: ECON 402 or ECON 444
Writing Across the Curriculum

ECON 421: Analysis of Economic Data
3 Credits
There are many data sets but the information contained within them for economic analysis is often unclear without substantial investigation. The broad course objectives are 1) to familiarize students with the deficiencies of real-world data and 2) teach students how to address those deficiencies. Specific topics addressed include the reliability of data sources, the ambiguity in variable definitions, the miscoding of variables, and missing data. In addition, truncation and censoring from the data collection methodologies are examined. The econometric methods of linear regressions and instrumental variables are used to analyze the results of a model with and without the data errors. The results are studied to predict how the missing data can alter model outcomes and policy choices. Several economic data sets are examined to illustrate the concepts. Specific examples of datasets include microeconomic data such as industry growth and profits, elasticity and revenue estimates from pricing choices, output of homogenous goods such as gold and oil, consumer subscription rates to services such as cell phone and internet service and discount memberships, and the efficacy of new drugs in tests. Macroeconomic data topics include discussions regarding unemployment and job data forecasts and how this can relate to future monetary and fiscal policy. Other topics discussed include sample bias and low response rates to surveys, in which the numerical values of dataset itself were not manipulated, but gathered from samples which will give an inaccurate result. These issues can affect polling and predictions in elections. This course is an applied course in the field of econometrics and will seek to provide students with the analytical methods for understanding the economic content of data. The instructional and educational objectives are to expose students to the practical details of analyzing economic data in the context of an advanced seminar. The course will count toward both the major and minor in economics.
Prerequisite: ECON 402 AND ECON 306

ECON 422: Applying Monetary Theory and Monetary History
3 Credits
This course provides a framework for the analysis of monetary history. The course objectives are to introduce students to the theoretical framework used by economists to study monetary theory, and to apply that framework in order to explain various monetary systems that have existed in the past. We will examine the empirical evidence, and also consider policy issues in this area. There is scope for re-examining existing analyses of many of those historical systems. Topics discussed in the course include the Federal Reserve control of the money stock, the demand for money, money as part of economic activity, economic
indicators and monetary policy, the Lucas critique, interest rates and the frequency at which they are changed, the creation and purpose of central banking, and private banking regulations. Historical monetary events to be discussed include monetary policy before and during the Great Depression, monetary policy during the Great Recession of 2007 - 2009, the gold standard monetary system, the Bretton Woods system, and the termination of these standards. Among all topics, both current and historical, we will examine the incentives of individuals, firms, banks, borrowers, and lenders, and governments as responses to monetary policy changes. Finally, advances in monetary theory based on macroeconomic events, both national and global, will be analyzed. The course will count toward both the major and minor in economics.

**Prerequisite:** ECON 302

**ECON 422W: Applying Monetary Theory to Monetary History**

3 Credits

Monetary history is examined. Special attention is paid to commodity-based systems, private money, and government monopolies on currency. This course provides a framework for the analysis of monetary history. In the past, there have been many advances in monetary theory. Some of the advances are directly inspired by the varieties of monetary systems that have existed in the past - for example, systems in which private banks issue currency (bank-notes). There is scope for reexamining existing analyses of many of those historical systems in the light of advances in monetary theory. The course objectives are to introduce students to the theoretical framework used by economists to study monetary theory, and to apply that framework in order to explain various monetary systems the have existed in the past. We will examine the empirical evidence, and also consider policy issues in this area.

**Prerequisite:** ECON 451

**Writing Across the Curriculum**

ECON 424: Income Distribution

3 Credits

Inequality and poverty in the United States, measurement problems, determinants of inequality, arguments for and against equality, impact of redistributive policies.

**Prerequisite:** ECON 302, ECON 315, or ECON 323 Bachelor of Arts: Social and Behavioral Sciences

ECON 425: Economics of Public Expenditures

3 Credits

Analytic and policy aspects of public expenditure decisions; applications from areas of contemporary public interest.

**Prerequisite:** ECON 302 or ECON 323 Bachelor of Arts: Social and Behavioral Sciences

ECON 427: Economics of Energy and Energy Security

3 Credits

Energy economics studies topics related to the supply, energy markets, and environmental impacts of energy use.

**Prerequisite:** ECON 302
ECON 436: Economics of Discrimination

3 Credits

Analysis of the economic characteristics of women and minorities; with examination of race and sex discrimination and related government policies.

**Prerequisite:** ECON 302 or ECON 315

ECON 436W: Economics of Discrimination

3 Credits

Analysis of the economic characteristics of women and minorities, with examination of race and sex discrimination and related government policies. ECON 436W Economics of Discrimination (3) (US) (BA) This course meets the Bachelor of Arts degree requirements. This course constitutes an examination of the economics of discrimination. More precisely, the course will focus on economic theories of discrimination and on efforts by economists to measure the extent of labor market discrimination. An important objective of the course is thus to learn how economists conceptualize and study discrimination. This, in turn, requires that we examine how economists view and study economic differences by race, ethnicity, and gender (these are the types of discrimination that will be focused on in the course, although we will also consider other types of discrimination). Following the existing economic literature, much of our emphasis will be on labor market discrimination, but we will also consider discrimination in education and in housing. The first substantive section of the course outline below involves examination of data on the economic characteristics of women and blacks in relation to white males, considering both the current situation and recent trends. Data on Hispanics will also be presented. This work will be done by the students, working in groups. We will look at how mainstream economists conceptualize economic differences by gender and by race/ethnicity, respectively. Then we will focus on formal models of discrimination and empirical issues in attempting to measure discrimination, and we will also examine an alternative approach to understanding economic inequality. The concluding section of the course will examine public policy issues related to discrimination. The course will count toward either a major or a minor in economics, and will meet the writing requirement for students in economics.

**Prerequisite:** ECON 302 or ECON 315

Bachelor of Arts: Social and Behavioral Sciences

United States Cultures (US)

Writing Across the Curriculum

ECON 437: Multinationals and the Globalization of Production

3 Credits

Globalization entails many dimensions: trade, migration, FDI, offshoring, cross-border licensing of technologies.

**Prerequisite:** ECON 302 OR ECON 333

ECON 437W: Multinationals and the Globalization of Production

3 Credits

This course will focus on trade, multinationals and offshoring, and explore their implications for the U.S. and developing countries.

ECON 437W Multinationals and the Globalization of Production (3) This seminar examines the international economy and the effects of multinational activity on globalization. Some of the key questions that will be examined include: Is globalization really a new phenomenon? Is it irreversible? What are the effects on wages and inequality? What are the effects on production and innovation? These questions will be addressed through a careful reading of the historical timeline, an extensive analysis of capital flows, multinational enterprises and development. Students are expected to synthesize their findings into a final paper and present what they have learned to the class. The Economics Department seeks to provide students with a series of seminar courses in each of seven broad fields in the discipline; this is a course in the field of Trade.

**Prerequisite:** ECON 433

Writing Across the Curriculum

ECON 438: Winners and Losers from Globalization

3 Credits

**Prerequisite:** ECON 306, ECON 302 or ECON 333

Writing Across the Curriculum

ECON 438W: Winners and Losers from Globalization

3 Credits

The economic effects of globalization on individuals, governments, nation-states and business. ECON 438W Winners and Losers from Globalization (3) This seminar explores the various effects of globalization on individuals in the United States and abroad. It integrates material from a variety of sub-disciplines in economics, including international trade, international finance, growth theory, labor economics, industrial organization, and political economy. Discussion of each core topic is model-based and informed by empirical evidence from the recent economic literature. The objectives of the course are to (1) deepen students' understanding of the basic forces at play as globalization takes place, and their implications for individuals' well-being; (2) sharpen students' ability to critically evaluate policy issues, both theoretically and empirically; and (3) develop students' ability to craft tightly reasoned economic reports. This course is an applied seminar in international economics. The impact of globalization is explored from a cost-benefit perspective. Winners and losers are identified using the tools and framework of economics. The instructional and educational objectives are to provide in-depth analysis of the consequences of globalization in the context of an advanced seminar. The course objectives are to analyze the winners and losers from globalization. This is a course in the field of international economics. The course will count toward both the major and minor in economics.

**Prerequisite:** ECON 433 and ECON 490

Writing Across the Curriculum

ECON 442: Managerial Economics

3 Credits

Application of economic theory to managerial decision making; risk, uncertainty; models and statistical techniques.

**Prerequisite:** ECON 102
ECON 443: Economics of Law and Regulation
3 Credits
An economic analysis of property rights, contractual arrangements, illegal activities, and regulation; competitive problems due to externalities and market failure.
Prerequisite: ECON 302 or ECON 342
Bachelor of Arts: Social and Behavioral Sciences

ECON 444: Economics of the Corporation
3 Credits
Coordination and incentive issues within a corporation. Topics include employment contracts, performance incentives and pricing of financial assets.
Prerequisite: ECON 302
Bachelor of Arts: Social and Behavioral Sciences

ECON 445: Health Economics
3 Credits
Economic analysis of U.S. health care system; planning, organization, and financing; current public policy issues and alternatives.
Prerequisite: ECON 302, ECON 315, or ECON 323
Cross-listed with: HPA 445
Bachelor of Arts: Social and Behavioral Sciences

ECON 445W: Health Economics
3 Credits
Economic analysis of U.S. health care system; planning, organization, and financing; current public policy issues and alternatives. ECON (HPA) 445W Health Economics (3)The healthcare sector comprises a set of markets that differ in some significant ways from the textbook model. In the US, this sector performs well in some respects and questionably in others. Notably, there has been sustained improvement over time in life expectancy and other indicators of the effectiveness of health care for most people, but the resources devoted to producing this improvement have been growing considerably faster than GDP. The goal of this course is to examine several broad questions raised by these facts. The course begins with an overview of evidence on wealth, health expenditure, and life expectancy across countries, and then examines increasing life expectancy and medical expenditures in the US and their causes. Issues in measuring the value of medical expenditures are addressed, and an overview of the industrial organization of health care is provided. A major component of the course covers the economics of health insurance, and the course also examines medical RD and the pharmaceutical industry as well as issues in the financing of medical care for the elderly. The course seeks to introduce students to the economic analysis of health care. It is in the area of applied microeconomics, and deals with issues relating to labor markets and public finance, in particular. This writing-intensive course will be one of several 400-level W seminars that the Economics Department is seeking to establish, with the broad objective of exposing our advanced undergraduate students to economic analysis in a seminar setting requiring significant writing by the students. The course counts toward the major and the minor in economics, as a 400-level course, In addition, it also counts toward a “module” (area of concentration) in human resource and public economics. Student performance in the course will be evaluated based on three papers.
Prerequisite: ECON 302, ECON 315, or ECON 323
Cross-listed with: HPA 445W
Writing Across the Curriculum

ECON 446: Economics of Industry Evolution
3 Credits
Dynamics of industry evolution; empirical evidence and theoretical modeling of firm entry, growth, and exit; entrepreneurship; investment and strategic behavior.
Prerequisite: ECON 302 and ECON 306

ECON 446W: Economics of Industry Evolution
3 Credits
Dynamics of industry evolution; empirical evidence and theoretical modeling of firm entry, growth, and exit; entrepreneurship; investment and strategic behavior. ECON 446W Economics of Industry Evolution (3)Industries are not static entities. They continually evolve as new products and production techniques are developed. In response to changes in demand and technology, new firms enter while existing firms grow, decline, and exit. This course studies the dynamics of industry evolution using both empirical tools and theoretical models of firm decisions to analyze the following broad questions: How does a new entrant establish a foothold in an industry? How does the entry process differ between industries built around new products versus industries for well-established products? What is the role of entrepreneurship and human capital? How do firms affect their growth and survival prospects by investing in RD and other types of innovation? How does the life-cycle of high-tech industries differ from consumer products or capital-intensive manufacturing or services? The roles of antitrust policy and regulation in affecting firm turnover and industry evolution are also addressed. This course will seek to provide students with both theoretical and empirical methods to analyze the economic forces underlying the evolution of industries. Students will develop analytical and writing skills in the course. This course is one of a series of advanced, writing-intensive seminars in each of seven broad fields in economics; this is a course in the field of industrial organization. The course will count toward both the major and the minor in economics.
Prerequisite: ECON 444 and ECON 490
Writing Across the Curriculum

ECON 447: Economics of Sports
3 Credits
Topics in sports; demand, owners, ticket resale, leagues, markets, efficiency, antitrust, discrimination, collegiate sports.
Prerequisite: ECON 302 or ECON 306
Bachelor of Arts: Social and Behavioral Sciences

ECON 447W: Economics of Sports
3 Credits
Examination of economic issues pertaining to professional and collegiate sports, including analysis of industrial organization, labor markets, and local economies. ECON 447W Economics of Sports (3)Sports play a
pervasive role in life in these United States, and this course examines a wide-ranging set of issues in considering the economics of sports. Students will learn about various aspects of sports in the United States, including the "players" (players, owners, fans), the institutional settings (sports leagues), and the effects of sports on the cities in which they are played. Students will develop the skills to analyze a wide variety of issues in sports economics. The course will touch on aspects of three distinct fields in economics: labor economics, industrial organization, and urban economics. This course proposal is one of a series of 400-level seminars, many of them writing-intensive, for advanced students in economics in each of seven broad areas of the discipline. This writing-intensive seminar is in the area of applied microeconomics. The course will count toward both the major and the minor in economics.

Prerequisite: ECON 302 and ECON 490
Bachelor of Arts: Social and Behavioral Sciences
Writing Across the Curriculum
ECON 448: Economics of Auctions and Procurements
3 Credits
Theoretical and empirical analyses of auctions and procurements; different modeling environments; econometric analysis of auction and procurement data.

Prerequisite: ECON 302 AND ECON 306
ECON 448W: Economics of Auctions and Procurements
3 Credits
Theoretical and empirical analyses of auctions and procurements; different modeling environments; econometric analysis of auction and procurement data. ECON 448W Economics of Auctions and Procurements (3)This course provides the basic framework for theoretical and empirical analyses of auctions and procurements. The course begins with the foundations of game theory. Both complete and incomplete information models are emphasized. The main auction and procurement modeling environments are then covered. Included among these are the independent private value model, common value model, affiliated private value model, and basic forms of asymmetry. Several data sets are provided for discussion and analysis including FCC spectrum auction data, timber auction data, and road procurement data. Empirical models are proposed for the econometric analysis of the auction and procurement data. This course seeks to provide students with the analytical methods of both the theoretical and empirical analysis of auctions and procurements. Students should develop their analytical skills pertinent to the economics of auctions and procurements, and they will also develop their skills in writing in economics. This course is part of a series of advanced writing-intensive seminars in each of seven broad fields in economics. This is a course in the field of applied microeconomics. The course will count toward both the major and a minor in economics.

Prerequisite: ECON 402 or ECON 444 and ECON 490
Writing Across the Curriculum
ECON 449: Economics of Collusion
3 Credits/Maximum of 3
Collusion, Bidding Rings, Antitrust, Price Fixing, Incentives, Law

Prerequisite: ECON 302 or ECON 342 , and ECON 306
ECON 449W: Economics of Collusion
3 Credits
Theoretical and empirical analysis of collusion among firms, case studies of cartel behavior, bidding behavior at auctions and procurements. ECON 449W Economics of Collusion (3)Collusion by firms -- the explicit suppression of interfirm rivalry -- is profitable. However, it is often difficult to accomplish meaningfully. This course provides frameworks to analyze interfirm interactions, both theoretically and empirically. In addition, several case studies of cartel behavior in the U.S., Europe, and elsewhere are presented. Bidder behavior at auctions and procurements will also be examined to understand some of the underlying issues of collusion. Following an introductory section, the course examines first the law regarding collusion and then the history of collusion, focusing on notable cases in the U.S. and Europe. Economic models of collusion are then reviewed, along with the distinction between tacit and explicit collusion. The final substantive section of the course examines issues encountered in prosecuting collusion. The broad objective of the course is to use the tools of economics to analyze the interactions of firms in settings where collusion may occur. Educationally, then, the course seeks to expose students to the application of economic analysis in a context with major economic and legal implications. This is an advanced undergraduate course in the field of Industrial Organization (IO), and hence will add to our offerings in the IO field (our beginning IO course is ECON 342). Econometrics (ECON 490) is also a prerequisite because of the empirical analyses that will be an important component of the course. The course is one that may be used to satisfy requirements for the major and the minor in economics, as a 400-level course. It may also be used to complete a module (area of specialization) in the Economics of Business and Law. And it will serve as one of the Economics Department's writing-intensive 400-level seminars. Student performance will be evaluated via two midterm exams and a substantial term paper. The exams will each count for 15% of the overall course grade, and the term paper will count for the remaining 70% of the course grade.

Prerequisite: ECON 302 or ECON 342 , and ECON 490 or permission of instructor
Writing Across the Curriculum
ECON 451: Monetary Theory and Policy
3 Credits
Monetary and income theory; monetary and fiscal policy.

Prerequisite: ECON 304 or ECON 351
Bachelor of Arts: Social and Behavioral Sciences
ECON 452: Economics of the Financial Crisis
3 Credits
This course studies the economics of financial crises with special emphasis on 2008.

Prerequisite: ECON 304
ECON 452W: Financial Crises
3 Credits
Examination of causes and consequences of financial crises; asset pricing theory; market efficiency; speculative bubbles; policy considerations. ECON 452W Financial Crises (3)This course focuses on the causes and consequences of financial crises. We study famous
crashes from the South Sea Bubble to Long-Term Capital Management, as well as international financial crises such as the Asian Crisis of 1997-98 and the Argentine Crisis of 2001. We examine both the history of the crises and the economic factors that are the fundamental causes, in part with a view to determining if these crises were the inevitable outcome of speculative markets, or the result of regulatory error. The instructional and educational objectives of the course are to provide students with the opportunity to explore financial crises in a small, advanced seminar setting. The course objectives are to provide students with a theoretical framework for examining financial crises, to examine evidence on historical and more recent financial crises using that theoretical framework, and to consider policies aimed at avoiding and/or alleviating the effects of financial crises in light of the theoretical framework and the empirical evidence. The course is part of a curriculum overhaul of 400-level courses in economics, in which advanced seminar courses are being created in seven broad areas of economics. This seminar is in the area of macroeconomics. This course may be used to meet major or minor requirements.

**Prerequisite:** ECON 451

**Writing Across the Curriculum**

ECON 454: Economics of Mergers

*3 Credits*

It is not uncommon for two separate and distinct corporate entities within an industry to merge and become one firm. This course includes topics that examine the economics of mergers as well as economic policy with regard to mergers. There are often both pro-competitive and anti-competitive effects of mergers. In the U.S. the Federal Trade Commission has primary responsibility for assessing the balance between effects. Along with the FTC, the antitrust division of the department of justice can analyze potential mergers using economic data and forecasts with tools such as the HHI and four-firm concentration ratio. Legality of non-competitive markets and mergers is also analyzed using the Clayton and Sherman antitrust acts. Topics discussed related to pro-merger economic effects include reduction in the duplication of costly capital, economies of scale, reducing costs by cutting management, human resources, payroll, and other jobs not directly related to production of output. Further, some firms may contend that they are non-viable as a small business, but can survive as a larger competitor as the result of a merger. Finally, mergers may have positive implications for shareholders who effectively own the company. Negative effects of mergers topics are discussed, including a reduction in the number of competing firms, increase in market power, higher prices, reduction in consumer choice, and increased lobbying power of larger firms. This course examines unilateral effects and coordinated effects as identified in the horizontal merger guidelines. Vertical mergers are analyzed as well, where multiple parts of the production process of a final good come under the same ownership. Econometric issues associated with the measurement of unilateral and coordinated effects are discussed. The course concludes with ex-post merger reviews. This course is an applied microeconomics seminar in the field of industrial organization and will seek to provide students with the analytical methods of both the theoretical and empirical analysis of mergers. The course will count toward both the major and the minor in economics.

**Prerequisite:** ECON 302 AND ECON 306

ECON 455: Economics of the Internet

*3 Credits/
Maximum of 3*

Economics of the Internet; electronic commerce and network economics; pricing issues; intellectual property.

**Prerequisite:** ECON 402 or ECON 444

ECON 455W: Economics of the Internet

*3 Credits*

Economics of the Internet; electronic commerce and network economics; pricing issues; intellectual property. ECON 455W Economics of the Internet (3) The Internet has become an important part of the economy in the United States and worldwide. Often we think of the information available on the Internet as a free good, much like the air we breathe. However, the Internet is an active marketplace with unique characteristics. Internet access providers sell keywords and advertising space by means of special auction and exchange mechanisms. Intellectual property is an important and evolving concept within the Internet, especially given its worldwide application. This course is an applied microeconomics course and will seek to provide students with the analytical methods of both the theoretical and empirical analysis of the economics of the Internet. The course will count toward both the major and minor in economics. This proposal is part of a broader curriculum overhaul to 400-level economics courses. The Economics Department seeks to provide students with a series of advanced seminar courses in each of seven broad fields in the discipline; this is a course in the field of applied microeconomics.

**Prerequisite:** ECON 402 or ECON 444

**Writing Across the Curriculum**

ECON 457: Economics of Organizations

*3 Credits*

Consumers, Firms, Utility Maximization, Profit Function, Equilibrium, Firm Distribution.

**Prerequisite:** ECON 302 or ECON

ECON 457W: Economics of Organizations

*3 Credits*

An advanced course in the economics of organizations. The focus is on coordination, incentives, contracts, and information in corporations. ECON 457W Economics of Organizations (3) An advanced course in the economics of organizations. The focus is on coordination, incentives, contracts, and information in corporations. The goal of the course is to analyze coordination, incentives, contracts, and information in corporations. The formal tools used in the course will be drawn from game theory, contract theory, mechanism design, and information economics. All students are required to have taken Strategy prior to enrollment.

**Prerequisite:** ECON 402 or ECON 444

**Writing Across the Curriculum**
ECON 460: Issues in Sports Economics
3 Credits
Economic analysis of professional and collegiate sports: organization, input and output markets, the public sector, decision-making, and public policy. ECON 460 Issues in Sports Economics (3) This course is designed to provide students the opportunity to examine and understand the sports industry. The course integrates the perspectives of various economic areas (i.e., industrial organization, managerial economics, labor economics, public economics) with those of marketing, finance, and accounting into a single approach to industry analysis. It provides students with an appreciation for the unique realities of the professional and amateur sports enterprise. Case studies and assignments are developed so students can apply theoretical and statistical concepts to real sports activities and/or policies. Students have the opportunity to complete case analyses in teams, present their results and suggestions to the class, and respond to questions and critical reviews by their peers.

**Prerequisite:** ECON 102 or ECON 460 but not both

ECON 463: Economic Demography
3 Credits
Microeconomics of demographic behavior; interrelationships between demographic and economic factors, in developing and industrialized economies; economic welfare and policy implications.

**Prerequisite:** ECON 302 or ECON 304, or 9 credits in demography Bachelor of Arts: Social and Behavioral Sciences International Cultures (IL)

ECON 463W: Economic Demography
3 Credits
Microeconomics of demographic behavior; interrelationships between demographic and economic factors, in developing and industrialized economies; economic welfare and policy implications. ECON 463W Economic Demography (3) Economic demography is concerned with the interrelationships between economic phenomena and demographic phenomena. Fundamental demographic variables - fertility, mortality, migration, age composition - are related to economic factors, as both consequences and determinants. This course uses an economic perspective to study population phenomena and issues, with a focus on both theoretical and empirical analysis of demographic questions. Indeed, a major objective of the course is to provide you with the analytical tools from economics that are useful in analyzing issues in demography. The instructional and educational objectives of this course are to teach students about economic demography in an advanced, writing-intensive seminar. The objective of the course is to provide a disciplinary perspective from economics on numerous issues in the multidisciplinary field of demography. This course is an advanced course that touches on topics in two different fields of economics: labor economics and growth and development. The course will count toward both the major and the minor in economics.

**Prerequisite:** ECON 412 or ECON 471 or 9 credits in demography

Writing Across the Curriculum

ECON 465: Cross Sectional Econometrics
3 Credits
Econometrics, simultaneous equations, discrete choice, sample selection.

**Prerequisite:** ECON 106 and ECON 306

ECON 465W: Cross Sectional Econometrics
3 Credits
Discrete choice models, censored and truncated regression models, longitudinal models, applications. ECON 465W Cross Sectional Econometrics (3) This course extends the econometric analysis of Introduction to Econometrics (ECON 490) to consider three broad categories of models: discrete choice models, censored and truncated regression models, and longitudinal models. Approximately three-quarters of the course will consist of examination of models in these three areas and the issues that those models address. The last four weeks of the course will then focus on applications of these models. Discrete choice models are used for the analysis of decisions by economic agents facing a fixed number of choices (whether to work or not, which are to buy, etc.). Students will learn how economists model such decision problems and how they can be analyzed empirically. Censored and truncated regression models can arise for multiple reasons, e.g., because economic agents are generally constrained to consume a nonnegative amount of a given product, which introduces nonlinearities into the relationship of interest. Students will learn how economists model such problems and how they can be analyzed empirically. Longitudinal models are, e.g., used to analyze durations of (un)employment spells. Students will learn how to analyze such data sets empirically. Overall, then, students will learn advanced econometric techniques for dealing with discrete choice models, censored and truncated regression models, and longitudinal models. The skills to be developed consist in being able to apply these techniques in practical applications of data analysis. This course is one of a series of 400-level seminars, many of them writing-intensive, for our advanced students in each of seven broad areas of economics. This writing-intensive seminar is in the area of econometrics. The course will count toward both the major and the minor in economics.

**Prerequisite:** ECON 302 and ECON 490

Writing Across the Curriculum

ECON 466: Panel Data Models
3 Credits
Random and fixed effects, endogeneity, balanced and unbalanced panels, censoring of spells, differences in differences, applications.

**Prerequisite:** ECON 302 and ECON 306

ECON 466W: Panel Data Models
3 Credits
Random and fixed effects, endogeneity, balanced and unbalanced panels, censoring of spells, differences in differences, applications. ECON 466W Panel Data Models (3) Panel data sets, consisting of repeated interviews over time of a panel of individuals (in effect, a time series of cross-sectional data on the same individuals) offer multiple opportunities for sophisticated econometric analyses, while at the same time posing some unique problems. This course will cover advanced
The broad objectives of the course are to provide students with economic analyses of the wide range of issues that arise in considering economies in transition, and to assess the record on transition. The course will examine the following topics: the legacy of central planning; how to organize transition; macroeconomic stabilization in transition economies; privatization; restructuring, ownership change, and improvements in performance; and institutional development and transition. In addition, the concluding section of the course will examine the record transition. As a 400-level course in economics, this course may be used to meet requirements for the major and for the minor in economics. It requires ECON 302 or ECON 304 (intermediate microeconomic theory and intermediate macroeconomic theory, respectively) as a prerequisite. And the course may be used toward completing a module (area of concentration) in economics in the area of International, Development, and Transition Economics.

**Prerequisite:** ECON 302 or ECON 304
Bachelor of Arts: Social and Behavioral Sciences

ECON 471: Growth and Development

3 Credits

Analysis of China's role in the global economy and the impact on U.S. as well as global business and society.

**Prerequisite:** ECON 102 or ECON 104 or permission of program International Cultures (IL)

ECON 474: Experimental and Behavioral Economics

3 Credits

Econometric techniques for dealing with panel data. Random- and fixed-effects models are addressed initially, followed by consideration of endogeneity, balanced and unbalanced panels, censoring of spells, and differences in differences. The objective of the course is to provide students with exposure to models and techniques designed to deal with panel data (e.g., data on a set of individuals at various points in time), and to equip them with the skills to utilize those techniques in practical applications of data analysis. In particular, students will learn to exploit the panel nature of a data set to allow for individual-specific heterogeneity (e.g., random and fixed effects). They will learn how to address endogeneity problems, which can arise for various reasons including forward-looking behavior of individuals. Because data are often not available for the same set of (e.g.) individuals at all points in time, care must be taken to deal with such unbalanced panels, especially when such data are absent because of actions of the individuals. In addition, since this is a writing-intensive course, an additional objective is to provide students with the opportunity to develop their skills in writing in economics. This course is one of a series of 400-level seminars, many of them writing-intensive, for advanced students in each of seven broad areas of economics. This writing-intense seminar is in the area of econometrics. The course will count toward both the major and the minor in economics.

**Prerequisite:** ECON 302 and ECON 490
Writing Across the Curriculum

ECON 470: International Trade and Finance

3 Credits

Economic analysis of why nations trade, barriers to trade, the international monetary system, and macroeconomic policy in an open economy.

**Prerequisite:** ECON 102 or ECON 104
International Cultures (IL)

ECON 471: Growth and Development

3 Credits

Problems of capital formation, institutional considerations, theories of economic growth.

**Prerequisite:** ECON 302 or ECON 304
Bachelor of Arts: Social and Behavioral Sciences

ECON 472: Transition to Market Economies

3 Credits

Economics of transition to a market economy; problems of former Soviet-type economies; privatization, stabilization, and institutional change. ECON 472 Transition to Market Economies (3) (BA) This course meets the Bachelor of Arts degree requirements. With the demise of communism in Central and Eastern Europe, former socialist economies are in the process of transition from centrally-planned to market economies. Transition is a comprehensive change, involving all aspects of the economy, including labor markets, capital markets, and the organization of industry, especially privatization. The focus of this course is on the experience of economies in transition and the problems encountered. Special emphasis will be given to the experience of Russia and the other countries of the former Soviet Union. In addition to Central Europe and the former Soviet Union, we will also examine the experience of China. The broad objectives of the course are to provide students with economic
ECON 475W: Migration and Development

3 Credits

Human Capital Approach to Migration; Economics of Family Migration; Evidence: Micro and Macro Perspectives; Migration Policies. ECON 475W Migration and Development (3)This course introduces students to migration in the developing world. What factors influence such migration, and how does migration affect economic development? The course provides a theoretical framework for examining migration (a human capital approach), and takes into consideration aspects specific to migration in the developing world, family considerations, and different types of migration. Immigration and remittances are also considered. The course examines empirical evidence on migration, and considers public policies that seek to influence migration and development. The course objectives are to provide students with a theoretical framework for examining human mobility and economic development, to examine evidence on migration using that theoretical framework, and to consider policies aimed at influencing migration and development in light of the theoretical framework and the empirical evidence. The integration of these three activities will develop student's skills in economic analysis and the writing aspect of the course will enhance their writing skills. This course is one of a series of writing-intensive seminars in seven broad areas of economics. This seminar is in the area of economic development, with relevance as well to labor economics. This course may be used to meet major or minor requirements.

Prerequisite: ECON 471 or ECON 412; ECON 490

Writing Across the Curriculum

ECON 477: Labor Markets in Developing Countries

3 Credits

In the system of economic development, labor markets emerge and evolve. While some elements of standard labor market analysis, such as the emphasis on demand for labor and supply of labor, remain most relevant here, there are also institutional aspects that are specific to developing countries. The course begins with a short review of the traditional labor market variables (labor force participation, employment and unemployment, earnings) before viewing specific topics relevant to developing countries. These topics include rural vs. urban labor markets and the factors that influence individuals in each setting, industry regulation by national and international law, efficiency wages in growing industries, worker safety, compensating wage differentials, and comparative advantage. Particular emphasis will be placed on the unique aspects that each of these issues may face in developing countries compared to developed countries. These unique issues include microloans, mercantilism, economic nationalism, the effects on conflict on economic growth, growth models exhibiting high marginal productivity of capital and technology, growth indicators, sector-specific growth, industrialization and deindustrialization, balanced growth theory (Ragnar Nurkse), foreign investment, trade barriers, tariffs, and exchange rates. The course is an advanced seminar in the broad area of development economics. The course objectives are to enable students to learn about labor markets in developing countries, how they are different from as well as similar to those in industrialized countries, and the problems and policy issues that pertain to these labor markets. Students will develop their analytical skills in this area. Students will study these topics and learn with theory and case studies why some countries become industrialized why others remain in developing status. The course will count toward both the major and the minor in economics.

Prerequisite: ECON 302 or ECON 315 AND ECON 306

ECON 479: Economics of Matching

3 Credits

There are many resource allocations that are not unilateral decisions but instead require approval from two sides of the market. This course provides the theoretical constructs for the analysis of matching in market environments. Following a review of game theory, the course develops the theory of matching. The topic at large is introduced by the seminal paper in matching "College Admissions and the Stability of Marriage" by Gale and Shapley. Other peer-reviewed literature on the topic will be discussed. Topics that follow include economic applications in the areas of employment, marriage, college admissions, human organ donations, medical residents, and other current topics. Within each of these topics, analysis is performed to study the following questions: 1) What are the preferences and incentives of all of the market participants involved in the matching market? 2) What was the method in which matching occurred? 3) Is this end result Pareto efficient and stable? 4) If the result isn't Pareto efficient, could another method or algorithm be used to improve efficiency? 5) Does the efficient outcome yield equal (or near equal) gains to all market participants involved, or is there a large discrepancy in the utility of the participants post-matching? For example, in a marriage matching algorithm, do women end up much happier than men? In medical residencies, do hospitals end up with larger gains than the doctors? Within certain topics, specific models are also discussed, including the Beveridge curve, Cobb-Douglas matching functions, labor market frictions, Nash bargaining games, feasibility sets, disagreement points, egalitarian and non-egalitarian bargaining solutions, and risk aversion. This course is an applied economics course with relevance to the areas of microeconomics, macroeconomics, and labor economics. The course objective is for students to learn the analytical methods for understanding the economics of matching. Students will develop skills in applying matching models and analysis to practical situations. The course will count toward both the major and minor in economics.

Prerequisite: ECON 302

ECON 479W: Economics of Matching

3 Credits

Economic application of matching to employment, marriage, organ markets, and medical residents. ECON 479W Economics of Matching (3)There are many resource allocations that are not unilateral decisions but instead require approval from two sides of the market. Examples include employment and marriage. This course provides the theoretical constructs for the analysis of matching in market environments. Two applications of current interest - human organ allocations and medical resident employment - are given special attention. Following a review of game theory, the course develops the theory of matching. This is followed by economic applications, in the areas of employment, marriage, human organs, and medical residents. This course is an applied economics course with relevance to the areas of microeconomics, macroeconomics, and labor economics. The course objectives is for students to learn the analytical methods for understanding the economics of matching. Students will develop skills in applying matching models and analysis to practical situations. The course is one of a series of 400-level writing-intensive seminars in each of seven broad fields in economics; this is a course with relevance to microeconomics, macroeconomics, and labor economics. The course will count toward both the major and minor in economics.
Prerequisite: ECON 402 or ECON 412 or ECON 444

ECON 480: Mathematical Economics
3 Credits

Mathematical techniques employed in economic analysis; formal development of economic relationships.

Prerequisite: ECON 302, ECON 304, MATH 110
Bachelor of Arts: Social and Behavioral Sciences

ECON 481: Business Forecasting Techniques
3 Credits

A survey of contemporary business forecasting techniques, with emphasis on smoothing, decomposition, and regression techniques.

Prerequisite: SCM 200 or STAT 200

ECON 483: Economic Forecasting
3 Credits

Forecasting time series, using linear regression models and econometric software; useful forecasting models; financial and seasonal time series; trends. ECON 483 Economic Forecasting (3)

This course is an applied econometrics course, and will seek to provide students with hands-on experience in forecasting. The goal of this course is to teach the students how to forecast time series, using econometric software, and what kinds of models are useful for that purpose. Topics to be covered include a review of regression analysis, with applications to forecasting; introduction to an econometric software package; introduction to time series regression analysis, with applications; the Box-Jenkins approach to time series modeling and forecasting; modeling and forecasting seasonal time series; deterministic and random trends, and how to distinguish them; and modeling and forecasting volatility of financial time series. The course will count toward both the major and the minor in economics. This course is one of a series of 400-level seminars in each of seven broad areas of economics; this is a seminar in econometrics.

Prerequisite: ECON 306

ECON 485: Econometric Techniques
3 Credits

Applying statistical techniques to test and explain economic relationships; integration of economic theory with observed economic phenomena.

Prerequisite: ECON 102 or ECON 104, SCM 200 or STAT 200

ECON 489: Honors Thesis
1-6 Credits/Maximum of 6

No description.

Prerequisite: ECON 302, ECON 304, and admission into the departmental honors program
Bachelor of Arts: Social and Behavioral Sciences
Honors
Writing Across the Curriculum

ECON 490: Introduction to Econometrics
3 Credits

Use of simple and multiple regression models in measuring and testing economic relationships. Problems including multicollinearity, heteroskedasticity, and serial correlation. ECON 490 Introduction to Econometrics (3)(BA) This course meets the Bachelor of Arts degree requirements. This course is designed for a wide range of students, including those interested in a variety of fields in business (e.g. finance and management studies) and economics, to those in the sciences and engineering who are interested in learning about data analysis and regression techniques. The course is also a good starting point for learning about empirical economics, and may thus be useful for those intending to pursue graduate studies in economics and business. Economics 490 is designed to reach a large audience, and the ultimate goal of the course is to show students that the “application of statistics to the study of economics” is not only fun, but also indispensable for a well rounded economics education. Put another way, the primary focus of the course is on applied or empirical economics. Learning about empirical methods in this course entails extensive computer work which focuses on the analysis of economic data using currently available software packages (some completely mouse driven), such as SAS, EASYREG, GAUSS, STATA, and EVIEW5. Computer analysis ranges from constructing and interpreting plots of economic data, to forming, fitting, and interpreting regression models. In addition to the computational component of the course, students are familiarized with numerous tools used in applied work, such as mean and variance, hypothesis testing (using statistics with t-, F-, and Chi-Squared distributions), regression model building, regression model estimation, and coefficient analysis. All of the tools learned throughout the course are used in the computational exercises. Completion of this course is useful particularly for students pursuing careers in business, economics, government, banking, insurance, finance, management, consulting, and academics, for example.

Prerequisite: MATH 110, ECON 390

Bachelor of Arts: Social and Behavioral Sciences

ECON 494: Research Project
1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Social and Behavioral Sciences

ECON 494A: Research Project
1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Social and Behavioral Sciences

ECON 494H: Research Project
1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Social and Behavioral Sciences
Honors

ECON 495: Internship
1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor
Bachelor of Arts: Social and Behavioral Sciences
Full-Time Equivalent Course

ECON 496: Independent Studies
1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.
Bachelor of Arts: Social and Behavioral Sciences

ECON 496A: **SPECIAL TOPICS**
1-6 Credits
Bachelor of Arts: Social and Behavioral Sciences

ECON 497: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.
Bachelor of Arts: Social and Behavioral Sciences

Education (EDUC)

EDUC 100: First-Year Seminar in Education
1-3 Credits

This seminar explores theories of teaching and learning, the education of teachers and other school employees, issues of professional practice, and selected topics in national educational policy. The seminar also supports students’ transition to college through small group discussions and other activities. Class sizes are limited; the frequency of offering and evaluation methods vary by location and instructor.

First-Year Seminar
EDUC 197: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.
EDUC 199: Foreign Studies
1-12 Credits/Maximum of 12

Study of educational topics in a country other than the United States.
International Cultures (IL)

EDUC 205N: Critical Race Theory in the Humanities and Social Sciences
3 Credits

This course closely examines the place and power of race in America. By tracing the history of how race works in particular American institutions, such as public education, criminal justice, and federal housing, students will gain a deep sense of how social categories and understandings shape material conditions and human welfare. Through the study of policies, court cases, memoirs, documentary films, and freedom struggles, this course will interrogate the many “Americas” that race has created and their implications for democracy and justice. Not only will this course focus on making race visible, but also the many ways that race intersects with class, gender, and sexuality, and how these concepts empower and marginalize at the same time. All the while, students will use Critical Race Theory methods to reach empathy and strengthen social (GS) and historical (GH) literacies. Discussion, writing, critical reading, and primary source analysis will be integral to this class. Class sessions will include whole- and small-group discussion where active listening and thoughtful participation will be taught and required. Students will be encouraged to explore their own conceptions of race and how those ideas shape knowledge and experience. Ultimately, this is a course that will weave data, theory, and story as we encourage students to move toward empathy through comprehensive understandings of race. This course therefore examines race as both deeply personal and structural.

Recommended Preparations: ENGL 15, CAS 100
Cross-listed with: CRIMJ 205N, SOC 205N
General Education: Humanities (GH)
General Education: Social and Behavioral Scien (GS)
General Education - Integrative: Interdomain
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Soc Resp and Ethic Reason

EDUC 294: Research Project Courses
1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.
EDUC 297: Special Topics
1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.
EDUC 302: Basic Preparation for Teaching
3 Credits

Philosophical, psychological issues in education; instructional objectives, lesson planning; evaluation, grading procedures; assessment, instruction of individual children. Field experience.

Prerequisite: admission into Elementary Education Major
EDUC 303: Inclusive Practices in General Education Classrooms
3 Credits
