W, M, X, and Y are the suffixes at the end of a course number used to designate courses that satisfy University Writing Across the Curriculum requirement.
GWS, GQ, GHW, GN, GA, GH, and GS are abbreviations used to identify General Education program courses. General Education includes Foundations (GWS and GQ) and Knowledge Domains (GHW, GN, GA, GH, GS, and Integrative Studies). Foundations courses (GWS and GQ) require a grade of 'C' or better.
Integrative Studies courses are required for the General Education program. N is the suffix at the end of a course number used to designate an Inter-Domain course and Z is the suffix at the end of a course number used to designate a Linked course.

Bachelor of Arts Requirements:
Bachelor of Arts students must take 9 credits in Bachelor of Arts (B.A.) Fields (Humanities; Social and Behavioral Sciences; Arts; World Languages [2nd language or beyond the 12th credit level of proficiency in the 1st]; Natural Sciences; Quantification). The B.A. Fields courses may not be taken in the area of the student’s primary major. See your adviser and the Degree Requirements section (p. 2517) of this Bulletin.

Bachelor of Arts students must take 3 credits in Other Cultures. See your adviser and the full list of courses approved as Other Cultures courses (p. 2565).

Advising Notes:
- Students must work with the LAS program coordinator to develop an academic plan for this degree. Entrance to this major requires an approved proposal, a GPA of 2.0 or higher, and a minimum of 27.5 credits. Students who have completed 91 credits may not enter this major. The five 400-level courses required for this major must be in a minimum of three different disciplines. Nine of the credits for the major must be from the humanities and social sciences.
- A student enrolled in an associate degree should contact the LAS program coordinator to develop and submit the academic plan before completing the associate degree. LASUC_BA can serve as a complement to the associate degree or as bridge from the associate degree to graduate studies (in physical therapy, occupational therapy, physician assistant, and more).
- With careful planning, students can complete a minor (examples: BIOL, BUS, CRIMJ, HDFS, HPA, and PSYCH). Minors require 6 credits unique from the courses required by the major, increasing the total degree credits from 120 to 126. Read more about planning a minor at https://handbook.psu.edu/content/minors.

Scranton Campus
The course series listed below provides only one of the many possible ways to move through this curriculum. The University may make changes in policies, procedures, educational offerings, and requirements at any time. This plan should be used in conjunction with your degree audit (accessible in LionPATH as either an Academic Requirements or What If report). Please consult with a Penn State academic adviser on a regular basis to develop and refine an academic plan that is appropriate for you.

Integrative Studies courses are required for the General Education program. N is the suffix at the end of a course number used to designate an Inter-Domain course and Z is the suffix at the end of a course number used to designate a Linked course.

### Bachelor of Arts Requirements:

- Bachelor of Arts students must take 9 credits in Bachelor of Arts (B.A.) Fields (Humanities; Social and Behavioral Sciences; Arts; World Languages [2nd language or beyond the 12th credit level of proficiency in the 1st]; Natural Sciences; Quantification). The B.A. Fields courses may not be taken in the area of the student’s primary major. See your adviser and the Degree Requirements section (p. 2517) of this Bulletin.

- Bachelor of Arts students must take 3 credits in Other Cultures. See your adviser and the full list of courses approved as Other Cultures courses (p. 2565).

### Advising Notes:

- LAS majors must take 3 credits in each of the following areas: Research Methods/Projects, Communication Skills, Theory/Application, Critical Analysis. See adviser for course recommendations.
- At least 3 different disciplinary areas must be included in the 24 credit option area. Fifteen (15) credits must be at the 400-level including the 400-level capstone course. In addition, at least 9 credits must be from the humanities and/or social and behavioral sciences. See adviser for course recommendations.
- After completing the 4th semester, students intending to major in LAS must write a proposal outlining the selection of courses they plan to take, demonstrating how those courses work together to prepare them for their intended career choice. This proposal must be approved by LAS Program Coordinator at Worthington Scranton.
- At least 3 credits must be taken in US cultures; at least 3 credits must be taken in IL cultures; at least 3 credits must be taken in Other Cultures.
- At least one lab course is required in General Education Natural Sciences (GN)
- At least 3 credits must be taken in Writing Across the Curriculum ("W" suffix course).
- A total of 123 credits is required for graduation.

Manufacturing Engineering Technology I, Certificate

Begin Campus: York
End Campus: York

Program Description
This series of engineering courses is designed for the working adult who would like to augment their knowledge in the workplace with practical engineering courses. This certificate is designed to teach critical skills and knowledge needed to function effectively in today’s manufacturing workplace.

What is Manufacturing Engineering Technology?
Manufacturing engineering is a field that covers the many processes involved in the production of a particular object.

You Might Like This Program If...
• You enjoy working with processes and materials.
• You want to add this knowledge and skills to your engineering portfolio.

Program Requirements
To earn an undergraduate certificate in Manufacturing Engineering Technology I, a minimum of 15 credits is required.

It is recommended that participants take the following classes in order.

<table>

No Prerequisites Required.

Academic Advising
The objectives of the university’s academic advising program are to help advisees identify and achieve their academic goals, to promote their intellectual discovery, and to encourage students to take advantage of both in-and-out of class educational opportunities in order that they become self-directed learners and decision makers.

Both advisers and advisees share responsibility for making the advising relationship succeed. By encouraging their advisees to become engaged in their education, to meet their educational goals, and to develop the...
The Medical Laboratory Technology Program at Penn State Hazleton is fully accredited by the National Accrediting Agency for Clinical Laboratory Sciences

NAACLS,
5600 N. River Rd, Suite 720,
Rosemont, IL 60018-5119,
Phone 773-714-8880
Website: http://www.nacls.org

Graduates of this accredited MLT program are eligible to take national certification examinations such as the American Society of Clinical Pathology (ASCP) Board of Certification exam, to become certified as an MLT (ASCP).

What is Medical Laboratory Technology?
A Medical Laboratory Technician (MLT) works with a team of pathologists, technologists, and technicians to analyze patient samples to provide information to the patient’s physician to detect illness, enable treatment, and ensure that the treatment will benefit the patient. The MLT works in all areas of the medical laboratory such as microbiology, chemistry, hematology, and transfusion services. MLTs are qualified to perform routine tests as well as more complex procedures including analyzing blood for chemical components, typing blood to ensure safe transfusion, and identifying bacteria and other microorganisms. MLTs also prepare specimens for examination, count cells, and look for abnormal cells in blood and body fluids. They use microscopes, cell counters, and automated equipment and computerized instruments to test specimens. After testing and verifying the results, they relay the results to physicians.

MORE INFORMATION (http://hazleton.psu.edu/associate-science-medical-laboratory-technology)

You Might Like This Program If...
You might like this major if you are interested in science and enjoy working in a laboratory setting. MLTs are problem solvers and are accurate and reliable. They want to help patients in a medical setting but prefer not to have direct patient contact. They enjoy working with their hands and using technical instruments. Their work is interesting, challenging, and requires a love of life-long learning.

MORE INFORMATION (https://www.ascp.org/content/careers)

Entrance to Major
Students must have a minimum 2.0 GPA to change to this Associate degree after admission to the University.

Additional Information
Before beginning the clinical experience rotations at hospitals, students must meet the requirements listed at http://hazleton.psu.edu/program-clinical-prerequisites

Degree Requirements
For the Associate in Science degree in Medical Laboratory Technology, a minimum of 72 credits is required:

<table>

Scheduling of courses in summer session depends on campus location.

**General Education**

Connecting career and curiosity, the General Education curriculum provides the opportunity for students to acquire transferable skills necessary to be successful in the future and to thrive while living in interconnected contexts. General Education aids students in developing intellectual curiosity, a strengthened ability to think, and a deeper sense of aesthetic appreciation. These are requirements for all baccalaureate students and are often partially incorporated into the requirements of a program. For additional information, see the General Education Requirements (p. 2540) section of the Bulletin and consult your academic adviser.

**Foundations (grade of C or better is required.)**
- Quantification (GQ): 3 credits
- Writing and Speaking (GWS): 3 credits

**Knowledge Domains**
- Arts (GA): 3 credits
- Humanities (GH): 3 credits
- Social and Behavioral Sciences (GS): 3 credits
- Natural Sciences (GN): 3 credits

**Foundations or Knowledge Domains**
- A General Education course selected from GWS, GQ, GN, GA, GH, or GS, and may include Integrative Studies (Inter-domain or Linked) courses: 6 credits

The keystone symbol appears next to the title of any course that is designated as a General Education course. Program requirements may also satisfy General Education requirements and vary for each program.

12 of the 21 credits are included in the Requirements for the Major.

**University Degree Requirements**

**Cultures Requirement**
3 credits of United States (US) or International (IL) cultures coursework are required and may satisfy other requirements

**Writing Across the Curriculum**
3 credits required from the college of graduation and likely prescribed as part of major requirements.

**Total Minimum Credits**
A minimum of 60 degree credits must be earned for a associates degree. The requirements for some programs may exceed 60 credits. Students should consult with their college or department adviser for information on specific credit requirements.

**Quality of Work**
Candidates must complete the degree requirements for their major and earn at least a 2.00 grade-point average for all courses completed within their degree program.

**Limitations on Source and Time for Credit Acquisition**
Credit used toward degree programs may need to be earned from a particular source or within time constraints (see Senate Policy 83-80 (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/82-00-and-83-00-degree-requirements/#83-80)). For more information, check the Suggested Academic Plan for your intended program.

**Requirements for the Major**
This includes 12 credits of General Education courses: 3 credits of GWS courses; 6 credits of GN courses; 3 credits of GQ courses.

To graduate, a student enrolled in the major must earn a grade of C or better in each course designated by the major as a C-required course, as specified by Senate Policy 82-44 (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/82-00-and-83-00-degree-requirements/#82-44).

**Academic Advising**
The objectives of the university’s academic advising program are to help advisees identify and achieve their academic goals, to promote their intellectual discovery, and to encourage students to take advantage of
both in-and-out-of class educational opportunities in order that they become self-directed learners and decision makers.

Both advisers and advisees share responsibility for making the advising relationship succeed. By encouraging their advisees to become engaged in their education, to meet their educational goals, and to develop the habit of learning, advisers assume a significant educational role. The advisee’s unit of enrollment will provide each advisee with a primary academic adviser, the information need to plan the chosen program of study, and referrals to other specialized resources.

READ SENATE POLICY 32-00: ADVISING POLICY (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/32-00-advising-policy)

**Hazleton Campus**

**Suggested Academic Plan**

The course series listed below provides only one of the many possible ways to move through this curriculum. The University may make changes in policies, procedures, educational offerings, and requirements at any time. This plan should be used in conjunction with your degree audit (accessible in LionPATH as either an Academic Requirements or What If report). Please consult with a Penn State academic adviser on a regular basis to develop and refine an academic plan that is appropriate for you.

‡ Course satisfies General Education and degree requirement

**University Requirements and General Education Notes:**

US and IL are abbreviations used to designate courses that satisfy University Requirements (United States and International Cultures).

W, M, X, and Y are the suffixes at the end of a course number used to designate courses that satisfy University Writing Across the Curriculum requirement.

GWS, GQ, GN, GA, GH, and GS are abbreviations used to identify General Education program courses. General Education includes Foundations (GWS and GQ) and Knowledge Domains (GN, GA, GH, and GS). Foundations courses (GWS and GQ) require a grade of ‘C’ or better.

Integrative Studies courses can be completed for the General Education program. N is the suffix at the end of a course number used to designate an Inter-Domain course and Z is the suffix at the end of a course number used to designate a Linked course.

1. Choose one course from approved list: MATH 21, MATH 22, MATH 26, MATH 40 MATH 81, MATH 110, MATH 140, STAT 200, STAT 250
2. MICRB 150, and MICRB 151 practicum courses include experience at affiliated medical laboratory (total of 540 hours). Require admission into MLT Program.
3. These courses should be taken in summer session 1.
4. These courses should be taken in summer session 2.

**Program Notes:**

A minimum of 72 credits is required for graduation

**Career Paths**

The two-year MLT program includes a two-semester clinical practicum experience in affiliated hospital laboratories. The MLT learns the most current laboratory techniques in a real laboratory setting.

**Careers**

You can find a career in a hospital laboratory, food processing industry, veterinary lab, state police or federal forensics lab, public health lab, cancer clinic, chemical company, pharmaceutical company, and more. You can choose to work in a medical lab or non-medical setting.

**Opportunities for Graduate Studies**

If an MLT graduate chooses to continue his/her education, the first year’s courses will transfer to a major in Microbiology, Medical Laboratory Science, Biology or related disciplines. Once an MLT graduate passes a national certification exam and is certified as MLT, earns a BS or BA in any major, and works in a hospital laboratory for at least two years, they can qualify to take a Medical Laboratory Scientist (MLS) certification exam. Bachelor’s degrees earned prior to MLT certification count toward
the MLS qualification. This opens the door to careers as an educator, laboratory manager and specialist positions.

**Professional Resources**
- American Society for Clinical Laboratory Science (http://www.ascls.org)
- American Society for Clinical Pathology (https://www.ascp.org/content)
- American Association of Clinical Chemistry (https://www.aacc.org/global-health-outreach/lab-tests-online)
- American Society of Hematology (http://www.hematology.org)
- American Association of Blood Banks (http://www.aabb.org)
- National Accrediting Agency for Clinical Laboratory Sciences (http://www.naacls.org)
- Centers for Disease Control and Prevention (https://www.cdc.gov)

**Accreditation**
The Medical Laboratory Technology Program at Penn State Hazleton is fully accredited by National Accrediting Agency for Clinical Laboratory Sciences (NAACLS) 5600 N. River Rd., Suite 720 Rosemont, IL 60018-5119 or 773-714-8880. Graduates of this accredited MLT program are eligible to take national certification examinations, such as the American Society of Clinical Pathology (ASCP) Board of Certification exam, to become certified as an MLT (ASCP).

Penn State Hazleton program outcome measures are available at http://hazleton.psu.edu/program-outcome-measures

**Medical Sciences, Certificate**

**Begin Campus:** Brandywine

**End Campus:** Brandywine

**Program Description**
The medical sciences certificate program is a one-year program designed for a select group of academically talented, highly motivated college graduates who do not have a science background. Courses are offered in a fixed-sequence, and students progress through as a part of a cohort. Students will work in a blended learning environment the majority of coursework will be completed through the Internet and self-study and come to the Penn State Delaware County campus approximately twice a month for laboratory work and exams. Upon completion, students will have the required science coursework to apply for admission to medical, dental, optometry, veterinary science, podiatry, physical therapy, physician.

**Program Requirements**
To earn an undergraduate certificate in Medical Sciences, a minimum of 39 credits is required.

**Academic Advising**
The objectives of the university’s academic advising program are to help advisees identify and achieve their academic goals, to promote their intellectual discovery, and to encourage students to take advantage of both in-and out-of class educational opportunities in order that they become self-directed learners and decision makers.

Both advisers and advisees share responsibility for making the advising relationship succeed. By encouraging their advisees to become engaged in their education, to meet their educational goals, and to develop the habit of learning, advisers assume a significant educational role. The advisee’s unit of enrollment will provide each advisee with a primary academic adviser, the information need to plan the chosen program of study, and referrals to other specialized resources.

Mining Technology, A.S.

Begin Campus: Fayette
End Campus: Fayette

PROGRAM CURRENTLY ON HOLD; NOT ACCEPTING NEW STUDENTS
Begin Date of Enrollment Hold: February 9, 2018

Program Description
The Associate of Science degree in Mining Technology blends basic sciences, mathematics, principles and practices of management, and applied courses in Mining Technology to prepare students for supervisory roles in the Mining industry. This major helps prepare students for either a production-oriented or a maintenance-oriented position in the mining industry. Graduates of this major, after serving the required apprenticeship, should be qualified to become certified managers in their field. All students complete a common core of classes, but must also choose to enroll in one of two emphases, Maintenance or Production.

Maintenance Emphasis
The maintenance emphasis prepares students to become maintenance supervisors. Initially, graduates may work as apprentice electricians or mechanics to gain experience in repairs and planned maintenance. After certification is obtained, they may become involved with maintenance planning, working as or with the chief mine mechanic or chief mine electrician.

Production Emphasis
The production emphasis helps prepare students to become mine supervisors or engineering aides. Initially, some of the duties are to run transit and act as survey party chief, keep mine maps up to date and make projections, take samples and run analyses, make time studies, and assist with materials handling layouts.

What is Mining Technology?
The Mining Technology program prepares students for either a production-oriented or a maintenance-oriented position in the mining industry. Graduates of the major, after serving the required apprenticeship, can be qualified to become certified managers in their field.

You Might Like This Major If...

• You have a strong interest in science, especially geology.
• You like to study mathematics and solve problems.
• You are hardworking and enjoy collaboration with others.
• Hands-on coursework is of interest to you.
• You are interested in the mining industry.
• You care about the environment.
• You are interested in employee safety and the laws and regulations that impact safety.

Entrance to Major
Students must have a minimum 2.0 GPA to change to this Associate degree after admission to the University.

Degree Requirements
For the Associate of Science degree in Mining Technology, a minimum of 67 credits is required:

<table>
<thead>
<tr>

</thead>
<tbody>
<tr>
<td>General Education</td>
<td>21</td>
</tr>
<tr>
<td>Requirements for the Major</td>
<td>58-59</td>
</tr>
</tbody>
</table>

General Education
Connecting career and curiosity, the General Education curriculum provides the opportunity for students to acquire transferable skills necessary to be successful in the future and to thrive while living in interconnected contexts. General Education aids students in developing intellectual curiosity, a strengthened ability to think, and a deeper sense of aesthetic appreciation. These are requirements for all baccalaureate students and are often partially incorporated into the requirements of a program. For additional information, see the General Education Requirements (p. 2540) section of the Bulletin and consult your academic adviser.

Foundations (grade of C or better is required.)
• Quantification (GQ): 3 credits
• Writing and Speaking (GWS): 3 credits

Knowledge Domains
• Arts (GA): 3 credits
• Humanities (GH): 3 credits
• Social and Behavioral Sciences (GS): 3 credits
• Natural Sciences (GN): 3 credits

Foundations or Knowledge Domains
• A General Education course selected from GWS, GQ, GN, GA, GH, or GS, and may include Integrative Studies (Inter-domain or Linked) courses: 6 credits

The keystone symbol appears next to the title of any course that is designated as a General Education course. Program requirements may also satisfy General Education requirements and vary for each program.

12 of these 21 credits are included in the Requirements for the Major.

University Degree Requirements
Cultures Requirement
3 credits of United States (US) or International (IL) cultures coursework are required and may satisfy other requirements

Writing Across the Curriculum
3 credits required from the college of graduation and likely prescribed as part of major requirements.

Total Minimum Credits
A minimum of 60 degree credits must be earned for a associates degree. The requirements for some programs may exceed 60 credits. Students should consult with their college or department adviser for information on specific credit requirements.

Quality of Work
Candidates must complete the degree requirements for their major and earn at least a 2.00 grade-point average for all courses completed within their degree program.
Limitations on Source and Time for Credit Acquisition
Credit used toward degree programs may need to be earned from a particular source or within time constraints (see Senate Policy 83-80 (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/82-00-and-83-00-degree-requirements/#83-80)). For more information, check the Suggested Academic Plan for your intended program.

Requirements for the Major
This includes 12 credits of General Education courses: 6 credits of GWS courses; 3 credits of GN courses; 3 credits of GQ courses.

To graduate, a student enrolled in the major must earn a grade of C or better in each course designated by the major as a C-required course, as specified by Senate Policy 82-44 (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/82-00-and-83-00-degree-requirements/#82-44).

Mining Technology, Certificate

Begin Campus: Fayette

End Campus: Fayette

What is Mining Technology?
The certificate in Mining Technology blends basic sciences, principles and practices of management, and applied courses in mining technology.

You Might Like This Program If...
• You know your primary field of interest is in the mining industry and you have at least two years of related work experience in mining.
• You want to pursue a career as a supervisor in the mining industry. This certificate prepares you for supervisory roles in the mining industry.

Program Requirements
To earn an undergraduate certificate in Mining Technology, a minimum of 18 credits is required.

Natural Resources, Minor
Requirements for a minor may be completed at any campus location offering the specified courses for the minor. Students may not change from a campus that offers their major to a campus that does not offer their major for the purpose of completing a minor.

Program Description
The Natural Resources minor can complement majors in the earth sciences and life sciences, and provides an introduction to field techniques and technical writing. Areas of specialized study can include, but are not limited to, environmental assessment, forest and wetland evaluation and management, and wildlife management. Professional opportunities include work in environmental monitoring, such as endangered species and wetland delineation, restoration of disturbed land, and management of forested lands and wildlife areas.

What is Natural Resources?
The Natural Resources minor is designed for students studying Earth Sciences and includes topics related to wildlife and forest technology.

You Might Like This Major If...
• You are interested in forests and wildlife topics.
• You enjoy watching Planet Earth.
• You prefer to be outside.
• You care about the environment and desire to preserve it.
• You prefer to study science and have strong analytical skills.
• You want to complement your program of study with a unique focus.

Occupational Therapy, A.S. (University College)

Begin Campus: DuBois, Mont Alto, Shenango
End Campus: DuBois, Mont Alto, Shenango

Program Description

This major helps graduates prepare to be occupational therapy assistants who are qualified to be employed by agencies that provide occupational therapy and related services. The goal of occupational therapy is to enable the client to be as independent as possible in the daily performance of self-care, productive, and leisure occupations. General education, basic science, and occupational therapy courses are followed by supervised field experience. Upon successful graduation from the program, students must sit for and successfully pass the National Board for Certification in Occupational Therapy (NBCOT) national certification examination to practice. Most states also require licensure as a condition for employment. A felony conviction may affect a graduate’s ability to sit for the NBCOT certification examination and obtain licensure. NBCOT may be contacted at:

NBCOT
One Bank Street #300
Gaithersburg, MD 20878
301-990-7979 or on the Web at www.NBCOT.org (http://www.NBCOT.org)

To enter this major, students must have a high school diploma or its equivalent. To be admitted to degree candidacy, the applicant must have completed educational background requirements called Carnegie Units or Secondary School Units. Students are responsible for proof of liability insurance and other requirements specified by the facility providing supervised field experience.

The size of each entering class is limited so that optimal clinical experiences and practical application situations can be maintained. Students are expected to progress through the program in the prescribed manner. Fieldwork affiliations are maintained over a wide geographical area. Students may be required to make special housing and transportation arrangements during the fieldwork phase. Students must complete all Level II fieldwork within eighteen months of successful completion of OTA didactic course work. The 2OTCC and 2OTBL curricula are delivered in five semesters.

What is Occupational Therapy?

Occupational therapy is a practice informed by physical, psychological, and occupational science. It is with these skills and knowledge; occupational therapy assistants employ intervention plans that engage people in maintaining or reclaiming independence. A physical or psychological challenge may hinder an individual, group, and/or community from participating fully in meaningful occupations. When this occurs an occupational therapy assistant works with the client(s) to design a plan to Live Life to its Fullest™. As a certified occupational therapy assistant, you will work in numerous practice settings, guided by the supervision of occupational therapists. Most importantly, by choosing a career in occupational therapy, you will be at the forefront in making a difference in people’s lives by way of therapeutic use of self and an intentional relationship.

You Might Like This Program If...

You want to work in a variety of practice settings with individuals and groups across the lifespan. Physical, mental health, emotional, and other challenges prevent people from participating fully in the job of living. Occupational therapy makes it possible for people to regain independence and to enjoy life. By choosing a career in occupational therapy, you will make a difference in lives of people and groups in your community.
Entrance to Major
Students must have a minimum 2.0 GPA to change to this Associate degree after admission to the University.

Additional Information
Students are responsible for proof of liability insurance and other requirements, including criminal background checks and health information specified by the facility providing supervised field experience.

A felony conviction on record may impact a student's ability to sit for the certification examination administered by NBCOT after graduation; this can subsequently impact a graduate's ability to attain state licensure. Before applying to the OTA program, students can contact NBCOT for information on their early determination program to assess examination eligibility. Contact NBCOT at https://www.nbcot.org/ for more information.

Degree Requirements
For the Associate in Science degree in Occupational Therapy, a minimum of 69 credits is required:

Academic Advising

The objectives of the university's academic advising program are to help advisees identify and achieve their academic goals, to promote their intellectual discovery, and to encourage students to take advantage of both in-and out-of class educational opportunities in order that they become self-directed learners and decision makers.

Both advisers and advisees share responsibility for making the advising relationship succeed. By encouraging their advisees to become engaged in their education, to meet their educational goals, and to develop the habit of learning, advisers assume a significant educational role. The advisee’s unit of enrollment will provide each advisee with a primary academic adviser, the information need to plan the chosen program of study, and referrals to other specialized resources.

Total Credits 69

[†] GQ - Recommended GQ = MATH 17, MATH 21, STAT 100 or STAT 200.

**Advising Notes:**

- OT courses must be taken in the semester designated on this Suggested Academic Plan.
- Students must complete BIOL129, BIOL141, and BIOL142 prior to completing OT105, OT107 & OT109 (3rd semester).
- Students must complete ENGL015, PSYCH100, and HDFS129 prior to completing the 3rd semester.
- Courses meeting the GQ, GH, or GA requirements may be taken during any semester; however, it is recommended they are completed prior to the 4th semester. The OTA Program recommendations for GQ are as follows: MATH 17, MATH 21, STAT 100 or STAT 200. Discuss options with your adviser.
- Students must earn a C or better in all OT courses, BIOL129, BIOL141 & BIOL142.
- All didactic degree requirements must be completed prior to enrolling in OT295A/B.
- OT195A, OT195B, OT295A, and OT295B dates and place of experience will be scheduled by the Academic Fieldwork Coordinator. Academic advising is required to establish all placements.
- OT295A/B must be completed within 18 months of completing the didactic requirements.

**Program Notes**

Students must complete a 3-credit course in "United States Cultures (US)" or a 3-credit course in "International Cultures (IL)."

**Career Paths**

Certified Occupational Therapy Assistants (COTA’s) work in numerous practice settings. Across the lifespan, individuals engage in meaningful occupations. Learning, playing, working, resting, and caring for self and others are among the occupations of life. A physical or psychological challenge may hinder an individual, group, and/or community from participating fully in meaningful occupations. Occupational therapy makes it possible for people to maintain or reclaim independence. Following graduation from the nationally accredited program, students are eligible to take the National Board for Certification in Occupational Therapy (NBCOT) exam.

**Careers**

A Certified Occupational Therapy Assistant (COTA) supports individuals of all ages develop, recover, improve, or maintain the skills necessary for daily living, leisure, play, and work. COTA’s work in public and private schools, early intervention programs, general, psychiatric, and pediatric hospitals, day treatment centers, hospices and home health agencies, rehabilitation hospitals and centers, skilled and intermediate care facilities, community living programs, community wellness centers, and/or hand therapy clinics.

**Contact**

DuBois
1 College Place
DuBois, PA 15801
814-375-4748

[2431] Penn State University

**Opportunities for Graduate Studies**

Once you have completed the associate in science in occupational therapy and become a Certified Occupational Therapy Assistant you can further your studies by obtaining a baccalaureate degree in psychology, occupational science, biobehavioral health, health and human development or another related degree. From this point, students can apply to an entry-level master’s or doctoral program in occupational therapy.

**Professional Resources**

- American Occupational Therapy Association, Inc. (AOTA) (http://www.aota.org)
- Accreditation Council for Occupational Therapy Education (ACOTE) (http://www.acoteonline.org)
- National Board for the Certification of Occupational Therapy, Inc. (NBCOT) (http://www.nbcot.org)

**Accreditation**

The Penn State Occupational Therapy Assistant programs are fully accredited by ACOTE, which can be reached at:

**Accreditation Council for Occupational Therapy Education**
4720 Montgomery Lane
Suite 200
Bethesda, MD 20814-3449
ACOTE’s telephone number, c/o AOTA, is 301-652-6611 @ extension 2042
www.acoteonline.org (http://www.acoteonline.org)

ACOTE is recognized as the accrediting agency for occupational therapy education by the United States Department of Education (USDE) and the Council on Higher Education Accreditation (CHEA).

Peace and Conflict Studies, Minor

Requirements for a minor may be completed at any campus location offering the specified courses for the minor. Students may not change from a campus that offers their major to a campus that does not offer their major for the purpose of completing a minor.

Program Description

This minor may be pursued by students in any major. It is designed to help students take a coherent set of courses organized around the study of the sources of international conflict, peace movements, and peace building. The minor requires 18 credits, of which at least nine must be upper division, including six credits at the 400 level. Students will be required to take two prescribed courses, one introductory and one capstone. They also will take three credits of additional courses with an international focus and nine credits from a list of supporting courses, which includes the study of conflict in race relations, family, community, and the development of personal peace as a precursor to peace building. The full requirements with the lists of additional and supporting courses are available in the Peace and Conflict Studies program office. Substitutions for requirements require the permission of the Peace and Conflict Studies minor adviser at Penn State Brandywine.

What is Peace and Conflict Studies?

Conflicts can range from interpersonal to a global level. Peace and Conflict Studies is an interdisciplinary program designed to give students in any program of study the skills and knowledge to understand and resolve conflicts peacefully. It may include the study of philosophy, political science, geography, economics, psychology, sociology, international relations, history, anthropology, religious studies, and gender studies, as well as a variety of others.

You Might Like This Program If...

- You enjoy studying and thinking about human behavior.
- You are interested in history and especially periods of conflict.
- You are a problem solver.
- You enjoy reading about issues from different perspectives.
- You want to add a unique skill set to your program of study.

Academic Advising

The objectives of the university's academic advising program are to help advisees identify and achieve their academic goals, to promote their intellectual discovery, and to encourage students to take advantage of both in-and out-of class educational opportunities in order that they become self-directed learners and decision makers.

Both advisers and advisees share responsibility for making the advising relationship succeed. By encouraging their advisees to become engaged in their education, to meet their educational goals, and to develop the habit of learning, advisers assume a significant educational role. The advisee's unit of enrollment will provide each advisee with a primary academic adviser, the information need to plan the chosen program of study, and referrals to other specialized resources.

REED SENATE POLICY 32-00: ADVISING POLICY (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/32-00-advising-policy)

Brandywine

Paul Greene
Associate Professor of Ethnomusicology and Integrative Arts
25 Yearsley Mill Road
Career Paths
Through peace studies you can learn strategies to build trust and peacefully resolve conflict. These skills may be applied to all settings including families, organizations, communities and nations.

Careers
You might apply peace and conflict management skills if your goal includes a career in human service agencies, corporate negotiation, government, public relations, non-profit management or education.

Opportunities for Graduate Studies
You might find these skills helpful in graduate study in many areas, in addition to research or law school.

Physical Therapist Assistant, A.S.

Begin Campus: DuBois, Fayette, Hazleton, Mont Alto, Shenango

End Campus: DuBois, Fayette, Hazleton, Mont Alto, Shenango

Program Description
This major helps prepare individuals to provide physical therapy services under the direction of a physical therapist in an ethical, safe and effective manner. Students develop knowledge and skills in data collection and the appropriate use of equipment and exercise associated with various physical therapy treatment modalities. In order to accomplish these tasks, the major utilizes a combination of basic science and non-science course work coupled with courses specifically designed for the physical therapist assistant student. Students must progress through the program as prescribed by the recommended academic plan for their campus of admission. The program culminates with full-time clinical experiences.

The size of each entering class is limited so that optimal clinical experiences and practical application situations can be maintained. Clinical affiliations are maintained over a wide geographical area, and students may be required to make special housing and transportation arrangements for the clinical phase. Prior to the beginning of the clinical practicum, PTA students are required to complete clinical requirements that may include, but are not limited to: health examination, immunizations, FBI fingerprint check, child abuse clearance, state background check and drug screening. Students will be responsible for completion and purchase of the necessary checks/clearances through a University approved vendor and providing results to the clinical sites. In addition to a PTA certification/licensure, many state licensing boards and clinical facilities require a criminal background check, child abuse clearance, and a drug screening. Students with criminal records should contact the physical therapy licensing board in the state they plan to practice prior to applying for admission to the PTA Program to inquire about potential restrictions for licensure.

What is a Physical Therapist Assistant?
Physical Therapist Assistants (PTAs) work as part of a team providing physical therapy services under the direction and supervision of a licensed physical therapist. PTAs implement treatments outlined in the physical therapist’s plan of care, collect data related to interventions, and modify selected interventions to progress patients to meet their individual goals. Individual treatment goals are designed to reduce pain, restore function, improve mobility and prevent disability. An Associate in Science Degree in Physical Therapist Assistant requires 5-semesters of study including three full-time clinical practicums. The PTA Program prepares graduates to take a national examination for certification/licensure as a PTA.

You Might Like This Major If...
You might like this major if you are interested in working with people of all ages who have medical problems or other health-related conditions that limit their ability to move and perform functional activities in their daily lives. PTAs work under the direction and supervision of a licensed physical therapist to provide meaningful interventions, such as exercise, training for walking and other activities, and the use of physical agents and electrotherapy.

Entrance to Major
Students must request a Dean’s review to change to this Associate degree after admission to the University.

Additional Information
In addition to a PTA certification/licensure, many state licensing boards and clinical facilities require a criminal background check, child abuse clearance, and a drug screening. PTA students are required to complete clinical requirements that may include FBI fingerprint check, child abuse clearance, state background check and drug screening prior to the beginning of the clinical practicum. Students will be responsible for completion and purchase of the necessary checks/clearances through a University approved vendor and providing results to the clinical sites. Students with criminal records should contact the physical therapy licensing board in the state they plan to practice prior to applying for admission to the PTA Program to inquire about potential restrictions for licensure.

Degree Requirements
For the Associate in Science degree in Physical Therapist Assistant, a minimum of 70 credits is required:

<table>

General Education
Connecting career and curiosity, the General Education curriculum provides the opportunity for students to acquire transferable skills necessary to be successful in the future and to thrive while living in interconnected contexts. General Education aids students in developing intellectual curiosity, a strengthened ability to think, and a deeper sense of aesthetic appreciation. These are requirements for all baccalaureate
students and are often partially incorporated into the requirements of a program. For additional information, see the General Education Requirements (p. 2540) section of the Bulletin and consult your academic adviser.

**Foundations (grade of C or better is required.)**
- Quantification (GQ): 3 credits
- Writing and Speaking (GWS): 3 credits

**Knowledge Domains**
- Arts (GA): 3 credits
- Humanities (GH): 3 credits
- Social and Behavioral Sciences (GS): 3 credits
- Natural Sciences (GN): 3 credits

**Foundations or Knowledge Domains**
- A General Education course selected from GWS, GQ, GN, GA, GH, or GS, and may include Integrative Studies (Inter-domain or Linked) courses: 6 credits

The keystone symbol appears next to the title of any course that is designated as a General Education course. Program requirements may also satisfy General Education requirements and vary for each program. 9-12 of these 21 credits are included in the Requirements for the Major.

**University Degree Requirements**

**Cultures Requirement**
3 credits of United States (US) or International (IL) cultures coursework are required and may satisfy other requirements.

**Writing Across the Curriculum**
3 credits required from the college of graduation and likely prescribed as part of major requirements.

**Total Minimum Credits**
A minimum of 60 degree credits must be earned for a associates degree. The requirements for some programs may exceed 60 credits. Students should consult with their college or department adviser for information on specific credit requirements.

**Quality of Work**
Candidates must complete the degree requirements for their major and earn at least a 2.00 grade-point average for all courses completed within their degree program.

**Limitations on Source and Time for Credit Acquisition**
Credit used toward degree programs may need to be earned from a particular source or within time constraints (see Senate Policy 83-80). For more information, check the Suggested Academic Plan for your intended program.

**Requirements for the Major**
This includes 9-12 credits of General Education courses: 3-6 credits of GWS courses; 3 credits of GN courses; 3-6 credits of GS courses.

To graduate, a student enrolled in the major must earn a grade of C or better in each course designated by the major as a C-required course, as specified by Senate Policy 82-44. For more information, check the Suggested Academic Plan for your intended program.

**Academic Advising**
The objectives of the university’s academic advising program are to help advisees identify and achieve their academic goals, to promote their intellectual discovery, and to encourage students to take advantage of...
both in-and out-of class educational opportunities in order that they become self-directed learners and decision makers.

Both advisers and advisees share responsibility for making the advising relationship succeed. By encouraging their advisees to become engaged in their education, to meet their educational goals, and to develop the habit of learning, advisers assume a significant educational role. The advisee’s unit of enrollment will provide each advisee with a primary academic adviser, the information need to plan the chosen program of study, and referrals to other specialized resources.

1  This course satisfies the University United States/International Cultures requirement.
2  This course satisfies the University Writing Across the Curriculum requirement. The clinical practicum component of this course is a three week full-time experience in a physical therapy practice setting.
3  This is a six week clinical practicum that is a full-time experience in a physical therapy practice setting.

Additional Notes:

Program Notes
Students are required to take a total of 3 credits in ARTS and 3 credits in HUM during the first 2 semesters.

Students are allowed to attend graduation ceremonies, but officially do not receive diploma until August, upon successful completion of their summer practicums.

A student’s career/graduate school plans should be considered in developing an individual academic plan. Be sure to consult an adviser in this department when scheduling courses.

Mont Alto Campus

Total Credits 69

1  PT 100 · Students are required to complete eight observation hours at two different clinical facilities in preparation for this course. See http://www.ma.psu.edu/Academics/Degrees/31395.htm for more information.
2  PT 395E · This course satisfies the University Writing Across the Curriculum requirement. The clinical practicum component of this course is a three week full-time experience in a physical therapy practice setting.
3  ENGL 202C, PSYCH 212, HDFS 229, PSYCH 270 · Students will select ONE of the following: ENGL 202C · Technical Writing (requires 4th semester standing), Psychology 212 Introduction to Developmental Psychology, HDFS 229 · Infant and Child Development, or PSYCH 270 · Introduction to Abnormal Psychology. Not all of these courses are offered each semester at the Mont Alto campus.
4  PT 395F · This is a six week clinical practicum that is a full-time experience in a physical therapy practice setting.
5  PT 395G · This is a six week clinical practicum that is a full-time experience in a physical therapy practice setting.

Advising Notes:

• A student’s career/graduate school plans should be considered in developing an individual academic plan. Be sure to consult with an adviser in this department when scheduling courses.

• Humanities or Arts: It is highly recommended the Arts, Humanities, and General Quantification courses be taken in the first two semesters of the PTA Program curriculum. The sequence in which these courses are taken is per student selection.

• Quantification: Choose any Quantification (GQ) course that is available at Mont Alto of the World Campus. Typically students elect to take one of the following: MATH 17 Finite Math, MATH 21 College Algebra, STAT 100 Statistical Concepts and Reasoning, STAT 200 Elementary Statistics (4 credits), PHIL 12 Symbolic Logic. Note that not all Quantification courses are available every semester at the Mont Alto campus. Other General Quantification courses may be available that will satisfy this General Education requirement of Associate Degree programs. It is highly recommended that the Arts, Humanities, and General Quantification courses be taken in the first two semesters of the PTA Program curriculum. The sequence in which these courses are taken is per student selection.

### University Requirements and General Education Notes:

US and IL are abbreviations used to designate courses that satisfy University Requirements (United States and International Cultures).

W, M, X, and Y are the suffixes at the end of a course number used to designate courses that satisfy University Writing Across the Curriculum requirement.

GWS, GQ, GN, GA, GH, and GS are abbreviations used to identify General Education program courses. General Education includes Foundations (GWS and GQ) and Knowledge Domains (GN, GA, GH, and GS). Foundations courses (GWS and GQ) require a grade of 'C' or better.

Integrative Studies courses can be completed for the General Education program. N is the suffix at the end of a course number used to designate an Inter-Domain course and Z is the suffix at the end of a course number used to designate a Linked course.

### Program Notes

Students must complete a 3-credit course in "United States Cultures (US)" or a 3-credit course in "International Cultures (IL)."

### Career Paths

The Physical Therapist Assistant program prepares its graduates for positions in a number of traditional and non-traditional career settings and for opportunities for higher education.

### Careers

Physical Therapist Assistants provide health care services to patients of all ages and health conditions in a variety of settings, including: outpatient clinics, hospitals, inpatient rehabilitation facilities, skilled nursing, extended care or sub-acute facilities, home, education or research centers, schools, hospices, industrial, workplace or other occupational environments, fitness center and sports training facilities. PTAs must graduate from a CAPTE-accredited program and are required to obtain licensure in most states to work. Students seeking licensure as a PTA must apply to the licensing authority of the jurisdiction (state) in which the graduate is seeking licensure and then register for the National Physical Therapy Examination for PTAs administered by the Federation of State Boards of Physical Therapy.

### Opportunities for Graduate Studies

Many students choose to continue their education at Penn State and complete bachelor's degrees in a variety of disciplines, including: Rehabilitation and Human Services; Letters, Arts and Sciences; Human Development and Family Studies; or other related field of study. Advisers assist interested students in completing bachelor's degrees and meeting prerequisite qualifications to apply for doctoral degrees in physical therapy (DPT) or other field of graduate study.

### Professional Resources

- American Physical Therapy Association (http://www.apta.org)
- Pennsylvania Physical Therapy Association (http://www.ppta.org)
- Federation of State Boards of Physical Therapy (http://www.fsbpt.org)

### Accreditation

The Associate of Science degree in Physical Therapist Assistant at Penn State is accredited by the:
Graduation from a physical therapist assistant education program accredited by CAPTE is necessary for eligibility to sit for the licensure examination, which is required in all states.

Accreditation by Campus

Penn State DuBois
The Physical Therapist Assistant Program at Penn State DuBois is accredited by the Commission on Accreditation in Physical Therapy Education (CAPTE), 1111 North Fairfax Street, Alexandria, VA 22314, 703-706-3245, accreditation@apta.org.

Penn State Fayette
The Physical Therapist Assistant Program at Penn State Fayette, The Eberly Campus is accredited by the Commission on Accreditation in Physical Therapy Education (CAPTE), 1111 North Fairfax Street, Alexandria, VA 22314, 703-706-3245, accreditation@apta.org.

Penn State Hazleton
The Physical Therapist Assistant Program at Penn State Hazleton is accredited by the Commission on Accreditation in Physical Therapy Education (CAPTE), 1111 North Fairfax Street, Alexandria, VA 22314, 703-706-3245, accreditation@apta.org.

Penn State Mont Alto
The Physical Therapist Assistant Program at the Penn State Mont Alto is accredited by the Commission on Accreditation in Physical Therapy Education (CAPTE), 1111 North Fairfax Street, Alexandria, VA 22314, 703-706-3245, accreditation@apta.org.

Penn State Shenango
The Physical Therapist Assistant Program at Penn State Shenango is accredited by the Commission on Accreditation in Physical Therapy Education (CAPTE), 1111 North Fairfax Street, Alexandria, VA 22314, 703-706-3245, accreditation@apta.org.

Project and Supply Chain Management, B.S. (University College)

Begin Campus: Any Penn State Campus
End Campus: Beaver, Beaver, Greater Allegheny, Lehigh Valley, New Kensington, Shenango, Hazleton, Schuylkill, Wilkes-Barre, Worthington Scranton

Program Description

The Project and Supply Chain Management major concentrates on developing knowledge, skills, and abilities in both project and supply chain management, dynamic and important disciplines in modern corporations. Project management skills include the development of new projects, and coordinating procurement and project delivery systems. Supply chain management emphasizes the integration of manufacturing and service operations, logistics, purchasing, and distribution that enable organizations to develop value-creating supply chain networks. The major provides students with an opportunity to develop the quantitative and people skills necessary to design and operate today's complex management systems. Students learn how to manage critical components in organizational supply chains, and apply business analytic methods for organizing and fully integrating supply chain practices throughout the organization.

Graduates are uniquely well-prepared for careers in some of the highest in-demand professions in the modern business and government environments, managing the supply chain and project initiatives in world-class business firms, public sector organizations, construction, IT organizations, third-party logistics providers, and goods and services distribution operations.

What is Project and Supply Chain Management?

It has been estimated that well over half of all activities in modern corporations are project-based. From developing a new product to
constructing a new building, the list of efforts that organizations must plan, manage, and deliver (ideally on time and under budget) is nearly endless. At the same time, globalization creates a growing need for professionals who can effectively manage complex supply chains. The study of project and supply chain management emphasizes the integration of manufacturing and service operations, logistics, purchasing, and distribution—the functions that enable organizations to cultivate value-creating supply chain networks.

You Might Like This Major If...

• You're not intimidated by large projects, or ones that have many moving parts.
• You are detail oriented.
• You are looking for a versatile, in-demand business degree.
• You are interested in pursuing a concurrent certificate in Enterprise Resource Planning (ERP) with SAP (available at Erie, the Behrend College and University College campuses, Beaver, Fayette, Greater Allegheny, Lehigh Valley, New Kensington, Schuylkill, Shenango, Wilkes-Barre and Scranton).

Entrance to Major

Entry to the Management major requires the completion of 5 entry-to-major courses: ACCTG 211, ECON 102, ENGL 15 or ENGL 30, MATH 110 or MATH 140, STAT 200 or SCM 200 and a 2.00 or higher cumulative grade-point average.

Degree Requirements

For the Bachelor of Science degree in Project and Supply Chain Management, a minimum of 120 credits is required:

</tbody>
</table>

General Education

Connecting career and curiosity, the General Education curriculum provides the opportunity for students to acquire transferable skills necessary to be successful in the future and to thrive while living in interconnected contexts. General Education aids students in developing intellectual curiosity, a strengthened ability to think, and a deeper sense of aesthetic appreciation. These are requirements for all baccalaureate students and are often partially incorporated into the requirements of a program. For additional information, see the General Education Requirements (p. 2540) section of the Bulletin and consult your academic adviser.

The keystone symbol appears next to the title of any course that is designated as a General Education course. Program requirements may also satisfy General Education requirements and vary for each program.

Foundations (grade of C or better is required.)

• Quantification (GQ): 6 credits
• Writing and Speaking (GWS): 9 credits

Knowledge Domains

• Arts (GA): 6 credits
• Health and Wellness (GHW): 3 credits
• Humanities (GH): 6 credits

• Social and Behavioral Sciences(GS): 6 credits
• Natural Sciences (GN): 9 credits

Integrative Studies (may also complete a Knowledge Domain requirement)

• Inter-Domain or Approved Linked Courses: 6 credits

15 of these 45 credits are included in the Requirements for the Major.

University Degree Requirements

First Year Engagement

All students enrolled in a college or the Division of Undergraduate Studies at University Park, and the World Campus are required to take 1 to 3 credits of the First-Year Seminar, as specified by their college First-Year Engagement Plan.

Other Penn State colleges and campuses may require the First-Year Seminar; colleges and campuses that do not require a First-Year Seminar provide students with a first-year engagement experience.

First-year baccalaureate students entering Penn State should consult their academic adviser for these requirements.

Cultures Requirement

6 credits are required and may satisfy other requirements

• United States Cultures: 3 credits
• International Cultures: 3 credits

Writing Across the Curriculum

3 credits required from the college of graduation and likely prescribed as part of major requirements.

Total Minimum Credits

A minimum of 120 degree credits must be earned for a baccalaureate degree. The requirements for some programs may exceed 120 credits. Students should consult with their college or department adviser for information on specific credit requirements.

Quality of Work

Candidates must complete the degree requirements for their major and earn at least a 2.00 grade-point average for all courses completed within their degree program.

Limitations on Source and Time for Credit Acquisition

The college dean or campus chancellor and program faculty may require up to 24 credits of course work in the major to be taken at the location or in the college or program where the degree is earned. Credit used toward degree programs may need to be earned from a particular source or within time constraints (see Senate Policy 83-80 (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/83-00-and-83-00-degree-requirements/#83-80)). For more information, check the Suggested Academic Plan for your intended program.

Requirements for the Major

This includes 15 credits of General Education courses: 6 credits of GQ courses; 6 credits of GS courses; 3 credits of GWS courses.

Each student must earn at least a grade of C in each 300- and 400-level course in the major field.

To graduate, a student enrolled in the major must earn a grade of C or better in each course designated by the major as a C-required course, as specified by Senate Policy 82-44 (http://senate.psu.edu/policies-and-
rules-for-undergraduate-students/82-00-and-83-00-degree-requirements/#82-44).

**Supporting Courses and Related Areas**

Select 12 credits of approved electives courses from any area (see school list of suggested courses) 1

1 See the admission section in the general information section in this bulletin for the placement policy for Penn State foreign language courses.

**Academic Advising**

The objectives of the university’s academic advising program are to help advisees identify and achieve their academic goals, to promote their intellectual discovery, and to encourage students to take advantage of both in-and out-of-class educational opportunities in order that they become self-directed learners and decision makers.

Both advisers and advisees share responsibility for making the advising relationship succeed. By encouraging their advisees to become engaged in their education, to meet their educational goals, and to develop the habit of learning, advisers assume a significant educational role. The advisee’s unit of enrollment will provide each advisee with a primary academic adviser, the information need to plan the chosen program of study, and referrals to other specialized resources.

† Course satisfies General Education and degree requirement

University Requirements and General Education Notes:

US and IL are abbreviations used to designate courses that satisfy University Requirements (United States and International Cultures).

W, M, X, and Y are the suffixes at the end of a course number used to designate courses that satisfy University Writing Across the Curriculum requirement.

GWS, GQ, GHW, GN, GA, GH, and GS are abbreviations used to identify General Education program courses. General Education includes Foundations (GWS and GQ) and Knowledge Domains (GHW, GN, GA, GH, GS, and Integrative Studies). Foundations courses (GWS and GQ) require a grade of ‘C’ or better.

Integrative Studies courses are required for the General Education program. N is the suffix at the end of a course number used to designate
an Inter-Domain course and Z is the suffix at the end of a course number used to designate a Linked course.

* Course requires a grade of C or better for the major
† Course requires a grade of C or better for General Education
‡ Course is an Entrance to Major requirement
*1 BA 321 and BA 322 qualify for 6 credits towards the Business Supporting Area for the degree. MIS 404 also fulfills the requirements for the Business Supporting Courses or Approved Electives and students take this course for the ERP certificate with SAP. Students will need 9 more credits of Approved Elective Courses (consult with an adviser); any course at the 300-400 level requires a grade of C or higher.

University Requirements and General Education Notes:

US and IL are abbreviations used to designate courses that satisfy University Requirements (United States and International Cultures).

University Requirements and General Education Notes:

US and IL are abbreviations used to designate courses that satisfy University Requirements (United States and International Cultures).

W, M, X, and Y are the suffixes at the end of a course number used to designate courses that satisfy University Writing Across the Curriculum requirement.

GWS, GQ, GHW, GN, GA, GH, and GS are abbreviations used to identify General Education program courses. General Education includes Foundations (GWS and GQ) and Knowledge Domains (GHW, GN, GA, GH, GS, and Integrative Studies). Foundations courses (GWS and GQ) require a grade of C or better.

Integrative Studies courses are required for the General Education program. N is the suffix at the end of a course number used to designate an Inter-Domain course and Z is the suffix at the end of a course number used to designate a Linked course.
an Inter-Domain course and Z is the suffix at the end of a course number used to designate a Linked course.

Program Notes:

- A minimum of 120 credits is required for graduation. Three PSCM courses (MIS 404, SCM 445, SCM 460) also satisfy requirements to earn the ERP with SAP Certificate.
- **STAT 200:** Students must not delay taking STAT 200 past semester 4, as it is a prerequisite for FIN 301 and SCM 301. It is also part of the criteria for entrance into the PSCM major.
- BA 321 and BA 322 count as this degree's 6 credits in a business-supporting area. This degree's 12 credits of supporting courses/related areas (sometimes called PSCM electives) reside in MIS 404 (3 credits), BA 495A (6 credits), and one other course (3 credits) of the student’s choosing in coordination with adviser.
- A student’s career/graduate school plans should be considered in developing an individualized academic plan. Be sure to consult an adviser in this department and your Degree Audit when scheduling courses. The Degree Audit in LionPATH is your official check of graduation requirements.

**Lehigh Valley Campus**

### University Requirements and General Education Notes:

US and IL are abbreviations used to designate courses that satisfy University Requirements (United States and International Cultures).

W, M, X, and Y are the suffixes at the end of a course number used to designate courses that satisfy University Writing Across the Curriculum requirement.

GWS, GQ, GHW, GN, GA, GH, and GS are abbreviations used to identify General Education program courses. General Education includes Foundations (GWS and GQ) and Knowledge Domains (GHW, GN, GA, GH, GS, and Integrative Studies). Foundations courses (GWS and GQ) require a grade of ‘C’ or better.

Integrative Studies courses are required for the General Education program. N is the suffix at the end of a course number used to designate an Inter-Domain course and Z is the suffix at the end of a course number used to designate a Linked course.

### Academic Advising Notes:

- A minimum of 120 credits is required for graduation. Three PSCM courses (MIS 404, SCM 445, SCM 460) also satisfy requirements to earn the ERP with SAP Certificate.
- STAT 200: Students must not delay taking STAT 200 past semester 4, as it is a prerequisite for FIN 301 and SCM 301. It is also part of the criteria for entrance into the PSCM major.
- BA 321 and BA 322 count as this degree’s 6 credits in a business-supporting area. This degree’s 12 credits of supporting courses/related areas (sometimes called PSCM electives) reside in MIS 404 (3 credits), BA 495A (6 credits), and one other course (3 credits) of the student’s choosing in coordination with adviser.
- A student’s career/graduate school plans should be considered in developing an individualized academic plan. Be sure to consult an adviser in this department and your Degree Audit when scheduling courses. The Degree Audit in LionPATH is your official check of graduation requirements.

### Shenango Campus

The course series listed below provides only one of the many possible ways to move through this curriculum. The University may make changes in policies, procedures, educational offerings, and requirements at any time. This plan should be used in conjunction with your degree audit (accessible in LionPATH as either an Academic Requirements or What If report). Please consult with a Penn State academic adviser on a regular basis to develop and refine an academic plan that is appropriate for you.

* Course requires a grade of C or better for the major
‡ Course requires a grade of C or better for General Education
# Course is an Entrance to Major requirement
† Course satisfies General Education and degree requirement

**University Requirements and General Education Notes:**
US and IL are abbreviations used to designate courses that satisfy University Requirements (United States and International Cultures).
W, M, X, and Y are the suffixes at the end of a course number used to designate courses that satisfy University Writing Across the Curriculum requirement.
GWS, GQ, GHW, GN, GA, GH, and GS are abbreviations used to identify General Education program courses. General Education includes Foundations (GWS and GQ) and Knowledge Domains (GHW, GN, GA, GH, GS, and Integrative Studies). Foundations courses (GWS and GQ) require a grade of 'C' or better.

Integrative Studies courses are required for the General Education program. N is the suffix at the end of a course number used to designate an Inter-Domain course and Z is the suffix at the end of a course number used to designate a Linked course.

**Career Paths**
The B.S. in Project and Supply Chain Management is one of only a handful of undergraduate degree programs in this field. Graduates are uniquely prepared to work in project-intensive industries such as construction, insurance, information services and information technology, manufacturing, utilities, pharmaceuticals, third-party logistics, and goods and services distribution operations.

**Careers**
Employers of recent B.S. in Project and Supply Chain Management graduates include Frito Lay, Fairpoint Communications, Pitney Bowes, Spyne, General Electric, Webtec Railway Electronics, Business Resource Group, Modern Industries, Eddie Bauer, Ferguson Enterprises, Unisys, Eastman Kodak, Tyco Electronics, and IBM.

**Opportunities for Graduate Studies**
The B.S. in Project and Supply Chain Management can be a starting point for master’s- and doctoral-level study of business administration, law, organizational behavior, corporate strategy, enterprise architecture, information technology, or another specialized discipline.

**Professional Resources**
- Project Management Institute ([https://www.pmi.org](https://www.pmi.org))

**Accreditation**
The B.S. in Project and Supply Chain Management offered by the Black School of Business at Penn State Erie, The Behrend College, is accredited by AACSB International—The Association to Advance Collegiate Schools of Business. As the world’s largest business education alliance, AACSB connects educators, students, and business to achieve a common
goal: to create the next generation of great leaders. Synonymous with the highest standards of excellence since 1916, AACSB provides quality assurance, business education intelligence, and professional development services to over 1,500 member organizations and more than 785 accredited business schools worldwide. AACSB's mission is to foster engagement, accelerate innovation, and amplify impact in business education. For more information, visit: http://aacsb.edu.

Psychology, B.A. (University College)

End Campus: Beaver, Brandywine, Fayette, Greater Allegheny, Hazleton, Lehigh Valley, Mont Alto, New Kensington, Schuylkill, Worthington

Program Description
The Psychology major will combine the knowledge, skills, and values of psychology with a liberal arts foundation. Students should:

• develop a knowledge base consisting of concepts, theory, empirical findings, and trends within psychology;
• understand and apply basic research methods in psychology;
• use critical thinking and the scientific approach to solve problems related to behavior and mental processes;
• apply psychological principles to personal and social issues;
• and be able to understand the gender, sexual orientation, race, ethnicity, culture, and class issues in psychological theory, research, and practice.

Students should also develop information and computer competence, communication skills, and develop realistic ideas about how to implement their psychology education in occupational pursuits in a variety of settings. The major may lead to either a Bachelor of Arts or a Bachelor of Science degree. The B.A. degree incorporates a broad exposure to the many facets of the field of psychology, in addition to the B.A. requirements. The B.S. degree provides the same exposure to the field of psychology and adds options in Science and Business to prepare students for more specific career directions. Students in both degree programs may also prepare for graduate school; research experience with faculty members is encouraged for such students.

What is Psychology?
Psychology is the scientific study of thought, behavior, and experience. Many people associate psychology with psychological therapy and the practice of clinical psychology. There are also many other important areas of scientific psychology, such as cognitive, developmental, industrial/organizational, and social psychology. What these subfields of psychology have in common is the use of the scientific method to understand human behavior and apply that understanding to the development of theory and practice. Psychologists are increasingly making use of neuroscience methods and theories to understand psychological phenomena. As a profession, psychology is related to fields such as health, education, marketing, human resources, social work, and more. The principles of psychology are relevant to almost all areas of human endeavor, and the career paths of psychology students reflect this wealth of possibilities.
You Might Like This Program If...
You are interested in people and in learning to use science to better understand them. As a major, you'll have opportunities to do research with faculty and to work in career-relevant settings.

MORE INFORMATION (http://altoona.psu.edu/academics/bachelors-degrees/psychology)

Entrance to Major
In order to be eligible for entrance to this major, a student must:

1. attain at least a C (2.00) cumulative grade-point average for all courses taken at the University; and
2. have third-semester classification (http://www.registrar.psu.edu/registration/semester_classification.cfm).

READ SENATE POLICY 37-30: ENTRANCE TO AND CHANGES IN MAJOR PROGRAMS OF STUDY (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/37-00-entrance-to-a-college-or-major)

Degree Requirements
For the Bachelor of Arts degree in Psychology, a minimum of 124 credits is required:

<table>

General Education
Connecting career and curiosity, the General Education curriculum provides the opportunity for students to acquire transferable skills necessary to be successful in the future and to thrive while living in interconnected contexts. General Education aids students in developing intellectual curiosity, a strengthened ability to think, and a deeper sense of aesthetic appreciation. These are requirements for all baccalaureate students and are often partially incorporated into the requirements of a program. For additional information, see the General Education Requirements (p. 2540) section of the Bulletin and consult your academic adviser.

The keystone symbol appears next to the title of any course that is designated as a General Education course. Program requirements may also satisfy General Education requirements and vary for each program.

Foundations (grade of C or better is required.)
- Quantification (GQ): 6 credits
- Writing and Speaking (GWS): 9 credits

Knowledge Domains
- Arts (GA): 6 credits
- Health and Wellness (GHW): 3 credits
- Humanities (GH): 6 credits
- Social and Behavioral Sciences(GS): 6 credits
- Natural Sciences (GN): 9 credits

Integrative Studies (may also complete a Knowledge Domain requirement)
- Inter-Domain or Approved Linked Courses: 6 credits
0-4 of these 45 credits are included in the Requirements for the Major.

University Degree Requirements
First Year Engagement
All students enrolled in a college or the Division of Undergraduate Studies at University Park, and the World Campus are required to take 1 to 3 credits of the First-Year Seminar, as specified by their college First-Year Engagement Plan.

Other Penn State colleges and campuses may require the First-Year Seminar; colleges and campuses that do not require a First-Year Seminar provide students with a first-year engagement experience.

First-year baccalaureate students entering Penn State should consult their academic adviser for these requirements.

Cultures Requirement
6 credits are required and may satisfy other requirements
- United States Cultures: 3 credits
- International Cultures: 3 credits

Writing Across the Curriculum
3 credits required from the college of graduation and likely prescribed as part of major requirements.

Total Minimum Credits
A minimum of 120 degree credits must be earned for a baccalaureate degree. The requirements for some programs may exceed 120 credits. Students should consult with their college or department adviser for information on specific credit requirements.

Quality of Work
Candidates must complete the degree requirements for their major and earn at least a 2.00 grade-point average for all courses completed within their degree program.

Limitations on Source and Time for Credit Acquisition
The college dean or campus chancellor and program faculty may require up to 24 credits of course work in the major to be taken at the location or in the college or program where the degree is earned. Credit used toward degree programs may need to be earned from a particular source or within time constraints (see Senate Policy 83-80 (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/82-00-and-83-00-degree-requirements/#83-80)). For more information, check the Suggested Academic Plan for your intended program.

B.A. Degree Requirements
Foreign Language (0-12 credits): Student must attain 12th credit level of proficiency in one foreign language. See the Placement Policy for Penn State Foreign Language Courses (p. 2534).

B.A. Fields (9 credits): Humanities, Social and Behavioral Sciences, Arts, Foreign Languages, Natural Sciences, Quantification (may not be taken in the area of the student's primary major; foreign language credits in this category must be in a second foreign language or beyond the 12th credit level of proficiency in the first language)

Other Cultures (0-3 credits): Select 3 credits from approved list. Students may count courses in this category in order to meet other major, minor,
elective, or General Education requirements, except for the General Education US/IL requirement.

3 of these 24 credits are included in the Requirements for the Major, General Education, or Electives and 0-12 credits are included in Electives if foreign language proficiency is demonstrated by examination.

**Requirements for the Major**

This includes 0-4 credits of General Education GQ courses.

A grade of C or better is required for all courses in the major. To graduate, a student enrolled in the major must earn at least a C grade in each course designated by the major as a C-required course, as specified by Senate Policy 82-44 [http://senate.psu.edu/policies-and-rules-for-undergraduate-students/82-00-and-83-00-degree-requirements/#82-44](http://senate.psu.edu/policies-and-rules-for-undergraduate-students/82-00-and-83-00-degree-requirements/#82-44).

Program Learning Objectives
Beaver, Brandywine, greater allegheny, hazleton, and Scranton Campuses

Content Knowledge:
1. Students will demonstrate knowledge of major psychological concepts, theories, and empirical findings
2. Students will demonstrate the ability to apply psychological concepts and theories to empirical and real life situations.

Thinking Skills:
1. Students will use critical and creative thinking, skeptical inquiry, and the scientific approach to solve problems related to behavior and mental processes.
2. Students will demonstrate critical thinking in the analysis and evaluation of information to distinguish the scientific from the nonscientific.

Communication Skills:
1. Students will communicate effectively (in writing and/or orally) the results of a project or internship.
2. Students will demonstrate the ability to effectively extract central points and summarize psychological research literature and to write in the format of psychological research.

Research Skills:
1. Students will differentiate among the research methods used in psychology and apply the designs in evaluation or development of a research study.
2. Students will demonstrate the ability to analyze and interpret quantitative psychological data using the statistics and graphs.
3. Students will demonstrate understanding of qualitative research approaches in psychology.

Diversity and Ethical Considerations:
1. Students will show evidence of knowledge and appreciation for cultural diversity and relativity in human experience and for the complexity of human behavior and interactions.
2. Students will demonstrate knowledge, and the application of, basic principles of scientific and professional ethics.
3. Students will demonstrate sensitivity to ethical concerns and professionalism (including cultural considerations) in settings where applications of psychology and/or psychological research occur.

Career-Related Skills:
1. Students will demonstrate knowledge of professional options and required training for careers in the major subfields of psychology.
2. Students will demonstrate the ability to identify personally-relevant career options to implement their psychological knowledge, skills, and values in occupational pursuits in a variety of settings.

Alumni Success:
1. Students will demonstrate the ability to secure a job in their desired area and/or enter a graduate program in psychology or a related field

York Campus
1. Knowledge and Application: Demonstrate knowledge and application of major concepts and theories.
2. Critical Thinking: Use critical thinking to solve problems & distinguish scientific from non-scientific.
3. Effective Communication: Demonstrate competence in comprehending, reading, writing, and orally communicating research.
4. Research Competence: Differentiate among the research methods.
5. Data Analysis and Problem-Solving: Demonstrate the ability to analyze and interpret quantitative and qualitative data.
6. Ethical Awareness: Demonstrate knowledge and the application of professional ethics.

Academic Advising
The objectives of the university's academic advising program are to help advisees identify and achieve their academic goals, to promote their intellectual discovery, and to encourage students to take advantage of both in-and out-of class educational opportunities in order that they become self-directed learners and decision makers.

Both advisers and advisees share responsibility for making the advising relationship succeed. By encouraging their advisees to become engaged in their education, to meet their educational goals, and to develop the habit of learning, advisers assume a significant educational role. The advisee's unit of enrollment will provide each advisee with a primary academic adviser, the information need to plan the chosen program of study, and referrals to other specialized resources.

* Course requires a grade of C or better for the major
† Course requires a grade of C or better for General Education
# Course is an Entrance to Major requirement
‡ Course satisfies General Education and degree requirement

### University Requirements and General Education Notes:

US and IL are abbreviations used to designate courses that satisfy University Requirements (United States and International Cultures).
W, M, X, and Y are the suffixes at the end of a course number used to designate courses that satisfy University Writing Across the Curriculum requirement.

GWS, GQ, GHW, GN, GA, GH, and GS are abbreviations used to identify General Education program courses. General Education includes Foundations (GWS and GQ) and Knowledge Domains (GHW, GN, GA, GH, GS, and Integrative Studies). Foundations courses (GWS and GQ) require a grade of ‘C’ or better.

Integrative Studies courses are required for the General Education program. N is the suffix at the end of a course number used to designate an Inter-Domain course and Z is the suffix at the end of a course number used to designate a Linked course.

**Bachelor of Arts Requirements:**

Bachelor of Arts students must take 9 credits in Bachelor of Arts (B.A.) Fields (Humanities; Social and Behavioral Sciences; Arts; World Languages [2nd language or beyond the 12th credit level of proficiency in the 1st]; Natural Sciences; Quantification). The B.A. Fields courses may not be taken in the area of the student’s primary major. See your adviser and the Degree Requirements section (p. 2517) of this Bulletin.

Bachelor of Arts students must take 3 credits in Other Cultures. See your adviser and the full list of courses approved as Other Cultures courses (p. 2565).

**Brandywine Campus**

The course series listed below provides only one of the many possible ways to move through this curriculum. The University may make changes in policies, procedures, educational offerings, and requirements at any time. This plan should be used in conjunction with your degree audit (accessible in LionPATH as either an Academic Requirements or What If report). Please consult with a Penn State academic adviser on a regular basis to develop and refine an academic plan that is appropriate for you.

W, M, X, and Y are the suffixes at the end of a course number used to designate courses that satisfy University Writing Across the Curriculum requirement.

GWS, GQ, GHW, GN, GA, GH, and GS are abbreviations used to identify General Education program courses. General Education includes Foundations (GWS and GQ) and Knowledge Domains (GHW, GN, GA, GH, GS, and Integrative Studies). Foundations courses (GWS and GQ) require a grade of ‘C’ or better.

Integrative Studies courses are required for the General Education program. N is the suffix at the end of a course number used to designate an Inter-Domain course and Z is the suffix at the end of a course number used to designate a Linked course.

**Bachelor of Arts Requirements:**

Bachelor of Arts students must take 9 credits in Bachelor of Arts (B.A.) Fields (Humanities; Social and Behavioral Sciences; Arts; World Languages [2nd language or beyond the 12th credit level of proficiency in the 1st]; Natural Sciences; Quantification). The B.A. Fields courses may not be taken in the area of the student’s primary major. See your adviser and the Degree Requirements section (p. 2517) of this Bulletin.

Bachelor of Arts students must take 3 credits in Other Cultures. See your adviser and the full list of courses approved as Other Cultures courses (p. 2565).

Integrative Studies courses are required for the General Education program. N is the suffix at the end of a course number used to designate an Inter-Domain course and Z is the suffix at the end of a course number used to designate a Linked course.

**Bachelor of Arts Requirements:**

Bachelor of Arts students must take 9 credits in Bachelor of Arts (B.A.) Fields (Humanities; Social and Behavioral Sciences; Arts; World Languages [2nd language or beyond the 12th credit level of proficiency in the 1st]; Natural Sciences; Quantification). The B.A. Fields courses may not be taken in the area of the student’s primary major. See your adviser and the Degree Requirements section (p. 2517) of this Bulletin.

Bachelor of Arts students must take 3 credits in Other Cultures. See your adviser and the full list of courses approved as Other Cultures courses (p. 2565).

1. Students must demonstrate or complete the third level of proficiency in one world language. Scheduling of world language course work follows the World Language Placement Policy.

2. Students must take 30 credits in PSYCH. Among these, students must take at least 15 credits at the 400-level and at least 3 credits in each of six categories: Learning and Cognition; Social and Personality Psychology; Biological Bases of Behavior; Developmental Psychology; Applied and Clinical Psychology; Capstone Experience. Consult the Psychology Program Coordinator for specific course options.

3. During the fourth year, students must choose one capstone course from 5 options: PSYCH 490 Senior Seminar in Psychology, PSYCH 493 Senior Thesis, PSYCH 494 Research Projects, PSYCH 495 Internship, or PSYCH 496 Independent Studies. Students must consult the Psychology Program Coordinator about prerequisites and requirements for these courses before registering. PSYCH 495 Internship requires planning one semester in advance of starting the internship.

4. PSYCH 301 satisfies the Writing Across the Curriculum requirement.

**Lehigh Valley Campus**

### Bachelor of Arts Requirements:

Bachelor of Arts students must take 9 credits in Bachelor of Arts (B.A.) Fields (Humanities; Social and Behavioral Sciences; Arts; World Languages [2nd language or beyond the 12th credit level of proficiency in the 1st]; Natural Sciences; Quantification). The B.A. Fields courses may not be taken in the area of the student’s primary major. See your adviser and the Degree Requirements section (p. 2517) of this Bulletin.

Bachelor of Arts students must take 3 credits in Other Cultures. See your adviser and the full list of courses approved as Other Cultures courses (p. 2565).

### New Kensington Campus

The course series listed below provides only one of the many possible ways to move through this curriculum. The University may make changes in policies, procedures, educational offerings, and requirements at any time. This plan should be used in conjunction with your degree audit accessible in LionPATH as either an Academic Requirements or What If report. Please consult with a Penn State academic adviser on a regular basis to develop and refine an academic plan that is appropriate for you.

* Course requires a grade of C or better for the major
‡ Course requires a grade of C or better for General Education
# Course is an Entrance to Major requirement
† Course satisfies General Education and degree requirement

**University Requirements and General Education Notes:**

US and IL are abbreviations used to designate courses that satisfy University Requirements (United States and International Cultures).

W, M, X, and Y are the suffixes at the end of a course number used to designate courses that satisfy University Writing Across the Curriculum requirement.

GWS, GQ, GHW, GN, GA, GH, and GS are abbreviations used to identify General Education program courses. General Education includes Foundations (GWS and GQ) and Knowledge Domains (GHW, GN, GA, GH, GS, and Integrative Studies). Foundations courses (GWS and GQ) require a grade of ‘C’ or better.

Integrative Studies courses are required for the General Education program. N is the suffix at the end of a course number used to designate an Inter-Domain course and Z is the suffix at the end of a course number used to designate a Linked course.

**Bachelor of Arts Requirements:**

Bachelor of Arts students must take 9 credits in Bachelor of Arts (B.A.) Fields (Humanities; Social and Behavioral Sciences; Arts; World Languages [2nd language or beyond the 12th credit level of proficiency in the 1st]; Natural Sciences; Quantification). The B.A. Fields courses may not be taken in the area of the student’s primary major. See your adviser and the Degree Requirements section (p. 2517) of this Bulletin.

Bachelor of Arts students must take 3 credits in Other Cultures. See your adviser and the full list of courses approved as Other Cultures courses (p. 2565).

**University Requirements and General Education Notes:**

US and IL are abbreviations used to designate courses that satisfy University Requirements (United States and International Cultures).

W, M, X, and Y are the suffixes at the end of a course number used to designate courses that satisfy University Writing Across the Curriculum requirement.

GWS, GQ, GHW, GN, GA, GH, and GS are abbreviations used to identify General Education program courses. General Education includes Foundations (GWS and GQ) and Knowledge Domains (GHW, GN, GA, GH, GS, and Integrative Studies). Foundations courses (GWS and GQ) require a grade of ‘C’ or better.
GS, and Integrative Studies). Foundations courses (GWS and GQ) require a grade of 'C' or better.

Integrative Studies courses are required for the General Education program. N is the suffix at the end of a course number used to designate an Inter-Domain course and Z is the suffix at the end of a course number used to designate a Linked course.

Bachelor of Arts Requirements:

Bachelor of Arts students must take 9 credits in Bachelor of Arts (B.A.) Fields (Humanities; Social and Behavioral Sciences; Arts; World Languages [2nd language or beyond the 12th credit level of proficiency in the 1st]; Natural Sciences; Quantification). The B.A. Fields courses may not be taken in the area of the student's primary major. See your adviser and the Degree Requirements section (p. 2517) of this Bulletin.

Bachelor of Arts students must take 3 credits in Other Cultures. See your adviser and the full list of courses approved as Other Cultures courses (p. 2565).

Integrative Studies (either Inter-domain or Linked Courses)

Integrative Studies may be completed within the 30 Knowledge Domain credits and must be completed with either Inter-domain or Linked courses, not a combination of both. For Inter-domain courses, credit may apply to both Knowledge Domain designations but does not reduce the total number of credits within the Knowledge Domains and at least 3 credits of single-domain coursework are required in each of the 5 Knowledge Domains. Linked courses used for the Integrative Studies requirement must represent two different Knowledge Domains.

Scranton Campus

University Requirements and General Education Notes:

US and IL are abbreviations used to designate courses that satisfy University Requirements (United States and International Cultures).

W, M, X, and Y are the suffixes at the end of a course number used to designate courses that satisfy University Writing Across the Curriculum requirement.

GWS, GQ, GHW, GN, GA, GH, and GS are abbreviations used to identify General Education program courses. General Education includes Foundations (GWS and GQ) and Knowledge Domains (GHW, GN, GA, GH, GS, and Integrative Studies). Foundations courses (GWS and GQ) require a grade of ‘C’ or better.

Integrative Studies courses are required for the General Education program. N is the suffix at the end of a course number used to designate an Inter-Domain course and Z is the suffix at the end of a course number used to designate a Linked course.

Bachelor of Arts Requirements:

Bachelor of Arts students must take 9 credits in Bachelor of Arts (B.A.) Fields (Humanities; Social and Behavioral Sciences; Arts; World Languages [2nd language or beyond the 12th credit level of proficiency in the 1st]; Natural Sciences; Quantification). The B.A. Fields courses may not be taken in the area of the student’s primary major. See your adviser and the Degree Requirements section (p. 2517) of this Bulletin.

Bachelor of Arts students must take 3 credits in Other Cultures. See your adviser and the full list of courses approved as Other Cultures courses (p. 2565).

Program Notes:

The 12th credit level is required for the World Language. The amount of foreign language you completed in high school, results of advanced placement exams, and the results of optional proficiency exams determine what level of language you will take. See your academic advisor for details.

York Campus

The course series listed below provides only one of the many possible ways to move through this curriculum. The University may make changes in policies, procedures, educational offerings, and requirements at any time. This plan should be used in conjunction with your degree audit (accessible in LionPATH as either an Academic Requirements or What If report). Please consult with a Penn State academic adviser on a regular basis to develop and refine an academic plan that is appropriate for you.
W, M, X, and Y are the suffixes at the end of a course number used to designate courses that satisfy University Writing Across the Curriculum requirement.

GWS, GQ, GHW, GN, GA, GH, and GS are abbreviations used to identify General Education program courses. General Education includes Foundations (GWS and GQ) and Knowledge Domains (GHW, GN, GA, GH, GS, and Integrative Studies). Foundations courses (GWS and GQ) require a grade of 'C' or better.

Integrative Studies courses are required for the General Education program. N is the suffix at the end of a course number used to designate an Inter-Domain course and Z is the suffix at the end of a course number used to designate a Linked course.

Bachelor of Arts Requirements:

Bachelor of Arts students must take 9 credits in Bachelor of Arts (B.A.) Fields (Humanities; Social and Behavioral Sciences; Arts; World Languages [2nd language or beyond the 12th credit level of proficiency in the 1st]; Natural Sciences; Quantification). The B.A. Fields courses may not be taken in the area of the student's primary major. See your adviser and the Degree Requirements section (p. 2517) of this Bulletin.

Bachelor of Arts students must take 3 credits in Other Cultures. See your adviser and the full list of courses approved as Other Cultures courses (p. 2565).

1. Students must demonstrate or complete the third level of proficiency in one world language. Scheduling of world language course work follows the World Language Policy: http://www.psu.edu/dus/handbook/lang.html#policy

2. Students must take 30 credits in PSYCH beyond PSYCH 100 and PSYCH 301W. Among these, students must take at least 15 credits at the 400-level and at least 3 credits in each of six categories: Learning and Cognition; Social and Personality Psychology; Biological Bases of Behavior; Developmental Psychology; Applied and Clinical Psychology; Clapstone Experience. Consult the Psychology Program Coordinator for specific course options.

3. BA students must take 9 credits in *BA requirement courses (Humanities, Social and Behavior Sciences [except psychology], Arts, World Languages, [2nd language or beyond the 12th credit level of proficiency in the first], Natural Sciences, Quantification). See your adviser.

4. BA students must take 3 credits in other cultures courses. See your adviser.

5. During the fourth year, students must choose one capstone course from 5 options: PSYCH 490 Senior Seminar, PSYCH 493 Senior Thesis, PSYCH 494 Research project, PSYCH 495 Psychology Practicum (internship), or PSYCH 496 Independent Studies. Students must consult the Psychology Program Coordinator about prerequisites and requirements for these courses before registering. PSYCH 495 Psychology Practicum requires planning one semester in advance of starting the internship.

Career Paths

Graduates of our program enter the workforce or pursue additional education in a variety of programs, including both Master's and PhD programs in experimental, counseling, school, and clinical psychology.

Many people associate psychology with psychological therapy and the practice of clinical psychology. There are also many other important areas of scientific psychology, such as cognitive, developmental, industrial/organizational, and social psychology. What these subfields of psychology have in common is the use of the scientific method to understand human behavior and apply that understanding to the development of theory and practice. Psychologists are increasingly making use of neuroscience methods and theories to understand psychological phenomena. As a profession, psychology is related to fields such as health, education, marketing, human resources, social work, and more. The principles of psychology are relevant to almost all areas of human endeavor, and the career paths of psychology students reflect this wealth of possibilities.

**You Might Like This Program If...**

You are interested in people and in learning to use science to better understand them. As a major, you'll have opportunities to do research with faculty and to work in career-relevant settings.

**MORE INFORMATION** (http://altoona.psu.edu/academics/bachelors-degrees/psychology)

**Entrance to Major**

In order to be eligible for entrance to this major, a student must:

1. attain at least a C (2.00) cumulative grade-point average for all courses taken at the University; and

2. have third-semester classification (http://www.registrar.psu.edu/registration/semester_classification.cfm).

**READ SENATE POLICY 37-30: ENTRANCE TO AND CHANGES IN MAJOR PROGRAMS OF STUDY** (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/37-00-entrance-to-a-college-or-major)

**Degree Requirements**

For the Bachelor of Science degree in Psychology, a minimum of 124 credits is required:

<table>
<thead>
<tr>
<th>Requirement</th>

</tbody>
</table>

**General Education**

Connecting career and curiosity, the General Education curriculum provides the opportunity for students to acquire transferable skills necessary to be successful in the future and to thrive while living in interconnected contexts. General Education aids students in developing intellectual curiosity, a strengthened ability to think, and a deeper sense of aesthetic appreciation. These are requirements for all baccalaureate students and are often partially incorporated into the requirements of a program. For additional information, see the General Education Requirements (p. 2540) section of the Bulletin and consult your academic adviser.

The keystone symbol appears next to the title of any course that is designated as a General Education course. Program requirements may also satisfy General Education requirements and vary for each program.

**Foundations (grade of C or better is required.)**

- Quantification (GQ): 6 credits
- Writing and Speaking (GWS): 9 credits
Knowledge Domains
- Arts (GA): 6 credits
- Health and Wellness (GHW): 3 credits
- Humanities (GH): 6 credits
- Social and Behavioral Sciences (GS): 6 credits
- Natural Sciences (GN): 9 credits

Integrative Studies (may also complete a Knowledge Domain requirement)
- Inter-Domain or Approved Linked Courses: 6 credits

0-4 of these 45 credits are included in the Requirements for the Major.

University Degree Requirements

First Year Engagement
All students enrolled in a college or the Division of Undergraduate Studies at University Park, and the World Campus are required to take 1 to 3 credits of the First-Year Seminar, as specified by their college First-Year Engagement Plan.

Other Penn State colleges and campuses may require the First-Year Seminar; colleges and campuses that do not require a First-Year Seminar provide students with a first-year engagement experience.

First-year baccalaureate students entering Penn State should consult their academic adviser for these requirements.

Cultures Requirement
6 credits are required and may satisfy other requirements
- United States Cultures: 3 credits
- International Cultures: 3 credits

Writing Across the Curriculum
3 credits required from the college of graduation and likely prescribed as part of major requirements.

Total Minimum Credits
A minimum of 120 degree credits must be earned for a baccalaureate degree. The requirements for some programs may exceed 120 credits. Students should consult with their college or department adviser for information on specific credit requirements.

Quality of Work
Candidates must complete the degree requirements for their major and earn at least a 2.00 grade-point average for all courses completed within their degree program.

Limitations on Source and Time for Credit Acquisition
The college dean or campus chancellor and program faculty may require up to 24 credits of course work in the major to be taken at the location or in the college or program where the degree is earned. Credit used toward degree programs may need to be earned from a particular source or within time constraints (see Senate Policy 83-80 (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/82-00-and-83-00-degree-requirements/#83-80)). For more information, check the Suggested Academic Plan for your intended program.

Requirements for the Major
This includes 0-4 credits of General Education GQ courses.

A grade of C or better is required for all courses in the major. To graduate, a student enrolled in the major must earn at least a C grade in each course designated by the major as a C-required course, as specified by Senate Policy 82-44 (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/82-00-and-83-00-degree-requirements/#82-44).

### Additional Courses

**Additional Courses: Require a grade of C or better**

Select 15 credits of the following:

- Any ACCTG course
- Any ECON course
- Any HPA course
- Any IB course
- Any MKTG course
- Any SCM course except SCM 200

### Supporting Courses

**Supporting Courses: Require a grade of C or better**

Select 6 credits in natural sciences/quantification from department list. Select 3 credits in social and behavioral sciences from department list.

### Program Learning Objectives

**Beaver, Brandywine, Greater Allegheny, Hazleton, and Scranton Campuses**

**Content Knowledge:**

1. Students will demonstrate knowledge of major psychological concepts, theories, and empirical findings.
2. Students will demonstrate the ability to apply psychological concepts and theories to empirical and real life situations.

**Thinking Skills:**

1. Students will use critical and creative thinking, skeptical inquiry, and the scientific approach to solve problems related to behavior and mental processes.
2. Students will demonstrate critical thinking in the analysis and evaluation of information to distinguish the scientific from the nonscientific.

Communication Skills:
1. Students will communicate effectively (in writing and/or orally) the results of a project or internship.
2. Students will demonstrate the ability to effectively extract central points and summarize psychological research literature and to write in the format of psychological research.

Research Skills:
1. Students will differentiate among the research methods used in psychology and apply the designs in evaluation or development of a research study.
2. Students will demonstrate the ability to analyze and interpret quantitative psychological data using the statistics and graphs.
3. Students will demonstrate understanding of qualitative research approaches in psychology.

Diversity and Ethical Considerations:
1. Students will show evidence of knowledge and appreciation for cultural diversity and relativity in human experience and for the complexity of human behavior and interactions.
2. Students will demonstrate knowledge, and the application of, basic principles of scientific and professional ethics.
3. Students will demonstrate sensitivity to ethical concerns and professionalism (including cultural considerations) in settings where applications of psychology and/or psychological research occur.

Career-Related Skills:
1. Students will demonstrate knowledge of professional options and required training for careers in the major subfields of psychology.
2. Students will demonstrate the ability to identify personally-relevant career options to implement their psychological knowledge, skills, and values in occupational pursuits in a variety of settings.

Alumni Success:
1. Students will demonstrate the ability to secure a job in their desired area and/or enter a graduate program in psychology or a related field.

York Campus
1. Knowledge and Application: Demonstrate knowledge and application of major concepts and theories.
2. Critical Thinking: Use critical thinking to solve problems & distinguish scientific from non-scientific.
3. Effective Communication: Demonstrate competence in comprehending, reading, writing, and orally communicating research.
4. Research Competence: Differentiate among the research methods.
5. Data Analysis and Problem-Solving: Demonstrate the ability to analyze and interpret quantitative and qualitative data.
6. Ethical Awareness: Demonstrate knowledge and the application of professional ethics.

Academic Advising
The objectives of the university's academic advising program are to help advisees identify and achieve their academic goals, to promote their intellectual discovery, and to encourage students to take advantage of both in-and out-of-class educational opportunities in order that they become self-directed learners and decision makers.

Both advisers and advisees share responsibility for making the advising relationship succeed. By encouraging their advisees to become engaged in their education, to meet their educational goals, and to develop the habit of learning, advisers assume a significant educational role. The advisee's unit of enrollment will provide each advisee with a primary academic adviser, the information need to plan the chosen program of study, and referrals to other specialized resources.

* Course requires a grade of C or better for the major
† Course requires a grade of C or better for General Education
# Course is an Entrance to Major requirement
†† Course satisfies General Education and degree requirement

University Requirements and General Education Notes:

US and IL are abbreviations used to designate courses that satisfy University Requirements (United States and International Cultures).

W, M, X, and Y are the suffixes at the end of a course number used to designate courses that satisfy University Writing Across the Curriculum requirement.

GWS, GQ, GHW, GN, GA, GH, and GS are abbreviations used to identify General Education program courses. General Education includes Foundations (GWS and GQ) and Knowledge Domains (GHG, GN, GA, GH, GS, and Integrative Studies). Foundations courses (GWS and GQ) require a grade of 'C' or better.

Integrative Studies courses are required for the General Education program. N is the suffix at the end of a course number used to designate an Inter-Domain course and Z is the suffix at the end of a course number used to designate a Linked course.

Science Option

The course series listed below provides only one of the many possible ways to move through this curriculum. The University may make changes in policies, procedures, educational offerings, and requirements at any time. This plan should be used in conjunction with your degree audit (accessible in LionPATH as either an Academic Requirements or What If report). Please consult with a Penn State academic adviser on a regular basis to develop and refine an academic plan that is appropriate for you.

University Requirements and General Education Notes:

US and IL are abbreviations used to designate courses that satisfy University Requirements (United States and International Cultures).

W, M, X, and Y are the suffixes at the end of a course number used to designate courses that satisfy University Writing Across the Curriculum requirement.

GWS, GQ, GHW, GN, GA, GH, and GS are abbreviations used to identify General Education program courses. General Education includes Foundations (GWS and GQ) and Knowledge Domains (GHW, GN, GA, GH, GS, and Integrative Studies). Foundations courses (GWS and GQ) require a grade of 'C' or better.

Integrative Studies courses are required for the General Education program. N is the suffix at the end of a course number used to designate an Inter-Domain course and Z is the suffix at the end of a course number used to designate a Linked course.
PSYCH 200 recommended but STAT 200 will fulfill this requirement if PSYCH 200 is not available.

Advising Notes

Students interested in completing this program with the intention of preparing for medical school are encouraged to complete the following General Education Natural Science and Science Option selections: BIOL 110, BIOL 141/142, BIOL 230, CHEM 110/111, CHEM 112/113, CHEM 210, PHYS 250, PHYS 251, BMB 401, BMB 402. These courses have specific prerequisites that must be completed prior to enrollment. Students should consult with their adviser to discuss appropriate course sequencing.

Total Credits 126-127

* Course requires a grade of C or better for the major
‡ Course requires a grade of C or better for General Education
# Course is an Entrance to Major requirement
† Course satisfies General Education and degree requirement

**University Requirements and General Education Notes:**

US and IL are abbreviations used to designate courses that satisfy University Requirements (United States and International Cultures).

W, M, X, and Y are the suffixes at the end of a course number used to designate courses that satisfy University Writing Across the Curriculum requirement.

GWS, GQ, GHW, GN, GA, GH, and GS are abbreviations used to identify General Education program courses. General Education includes Foundations (GWS and GQ) and Knowledge Domains (GHW, GN, GA, GH, GS, and Integrative Studies). Foundations courses (GWS and GQ) require a grade of ‘C’ or better.

Integrative Studies courses are required for the General Education program. N is the suffix at the end of a course number used to designate an Inter-Domain course and Z is the suffix at the end of a course number used to designate a Linked course.

1 Students must take 30 credits in PSYCH. Among these, students must take at least 15 credits at the 400-level and at least 3 credits in each of six categories: Learning and Cognition; Social and Personality Psychology; Biological Bases of Behavior; Developmental Psychology; Applied and Clinical Psychology; Capstone Experience. Consult the Psychology Program Coordinator for specific course options.

2 BS Business Option students must take 24 credits in business option courses. Consult Psychology Program Coordinator for a list of course selections.

3 During the fourth year, students must choose one capstone course from 5 options: PSYCH 490 Senior Seminar, PSYCH 493 Senior Thesis, PSYCH 494 Research Project, PSYCH 495 Psychology Practicum (internship), or PSYCH 496 Independent Studies. Students must consult the Psychology Program Coordinator about prerequisites and requirements for these courses before registering. PSYCH 495 Psychology Practicum requires planning one semester in advance of starting the internship.

4 PSYCH 301 satisfies the Writing Across the Curriculum requirement

**Science Option**

The course series listed below provides only one of the many possible ways to move through this curriculum. The University may make changes in policies, procedures, educational offerings, and requirements at any time. This plan should be used in conjunction with your degree audit (accessible in LionPATH as either an Academic Requirements or What If report).

Total Credits 126

1 Students must take 30 credits in PSYCH beyond PSYCH 100 and PSYCH 301W. Among these, students must take at least 15 credits at the 400-level and at least 3 credits in each of six categories: Learning and Cognition; Individual Differences, Personality, and Social Processes; Biological Bases of Behavior and Mental Processes; Development Changes in Behavior and Mental Processes Across the Life Span; History of Psychology, Socio-cultural Contexts, and Diversity Issues; Capstone Experience. Consult the psychology Program Coordinator for specific course selection.

2 BS Science Option students must take 24 credits of option-specific courses. Consult Psychology Program Coordinator for a list of course selections.
During the fourth year, students must choose one capstone course from 5 options: PSYCH 490 Senior Seminar, PSYCH 493 Senior Thesis, PSYCH 494 Research Project, PSYCH 495 Psychology Practicum internship, or PSYCH 496 Independent Studies. Students must consult the Psychology Program Coordinator about prerequisites and requirements for these courses before registering. PSYCH 495 Psychology Practicum requires planning one semester in advance of starting internship.

* Course requires a grade of C or better for the major
‡ Course requires a grade of C or better for General Education
# Course is an Entrance to Major requirement
† Course satisfies General Education and degree requirement

**University Requirements and General Education Notes:**

US and IL are abbreviations used to designate courses that satisfy University Requirements (United States and International Cultures).

W, M, X, and Y are the suffixes at the end of a course number used to designate courses that satisfy University Writing Across the Curriculum requirement.

GWS, GQ, GHW, GN, GA, GH, and GS are abbreviations used to identify General Education program courses. General Education includes Foundations (GWS and GQ) and Knowledge Domains (GHW, GN, GA, GH, GS, and Integrative Studies). Foundations courses (GWS and GQ) require a grade of ‘C’ or better.

Integrative Studies courses are required for the General Education program. N is the suffix at the end of a course number used to designate an Inter-Domain course and Z is the suffix at the end of a course number used to designate a Linked course.

**New Kensington Campus**
The course series listed below provides only one of the many possible ways to move through this curriculum. The University may make changes in policies, procedures, educational offerings, and requirements at any time. This plan should be used in conjunction with your degree audit (accessible in LionPATH as either an Academic Requirements or What If report). Please consult with a Penn State academic adviser on a regular basis to develop and refine an academic plan that is appropriate for you.

* Course requires a grade of C or better for the major
‡ Course requires a grade of C or better for General Education
# Course is an Entrance to Major requirement
† Course satisfies General Education and degree requirement

**University Requirements and General Education Notes:**

US and IL are abbreviations used to designate courses that satisfy University Requirements (United States and International Cultures).

W, M, X, and Y are the suffixes at the end of a course number used to designate courses that satisfy University Writing Across the Curriculum requirement.

GWS, GQ, GHW, GN, GA, GH, and GS are abbreviations used to identify General Education program courses. General Education includes Foundations (GWS and GQ) and Knowledge Domains (GHW, GN, GA, GH, GS, and Integrative Studies). Foundations courses (GWS and GQ) require a grade of 'C' or better.

Integrative Studies courses are required for the General Education program. N is the suffix at the end of a course number used to designate an Inter-Domain course and Z is the suffix at the end of a course number used to designate a Linked course.

1 Students must take 30 credits in PSYCH beyond PSYCH 100 and PSYCH 301W. Among these, students must take at least 15 credits at the 400-level and at least 3 credits in each of six categories: Learning and Cognition; Individual Differences; Personality, and Social Processes; Biological Bases of Behavior and Mental Processes; Development Changes in Behavior and Mental Processes Across the Life Span; History of Psychology, Socio-cultural Contexts, and Diversity Issues; Capstone Experience. Consult the Psychology Program Coordinator for specific course options.

2 BS Business Option students must take 24 credits of option-specific courses. Consult Psychology Program Coordinator for a list of course selections.

During the fourth year, students must choose one capstone course from 5 options: PSYCH 490 Senior Seminar, PSYCH 493 Senior Thesis, PSYCH 494 Research project, PSYCH 495 Psychology Practicum (internship), or PSYCH 496 Independent Studies. Students must consult the Psychology Program Coordinator about prerequisites and requirements for these courses before registering. PSYCH 495 Psychology Practicum requires planning one semester in advance of starting the internship. During the fourth year, students must choose one capstone course from 5 options: PSYCH 490 Senior Seminar, PSYCH 493 Senior Thesis, PSYCH 494 Research project, PSYCH 495 Psychology Practicum (internship), or PSYCH 496 Independent Studies. Students must consult the Psychology Program Coordinator about prerequisites and requirements for these courses before registering. PSYCH 495 Psychology Practicum requires planning one semester in advance of starting the internship.

**Career Paths**
Graduates of our program enter the workforce or pursue additional education in a variety of programs, including both Master’s and PhD programs in experimental, counseling, school, and clinical psychology.

Radiological Sciences, A.S.

For students interested in pursuing an education in the paramedical field of radiography (radiologic technology), the radiological sciences major meets the educational and clinical requirements for the graduate to function as an entry-level radiographer. Required course work is divided into three interrelated areas including general education, radiography specific, and clinical education components. During the clinical education component, students perform radiographic exams under the directed supervision of certified radiographers at multiple area clinical education settings. The clinical component emphasizes the concepts of team practice and patient-centered care. Both the radiography-specific course work and the clinical component are structured sequentially over six or seven consecutive semesters, commencing each fall semester. Upon successful completion of the 72-credit associate degree, the graduate will be eligible to attempt the American Registry of Radiologic Technologists (ARRT) examination for certification.

What is Radiological Sciences?
Radiography is a science combining medical imaging technology with human compassion. Radiologic technologists, often referred to as radiographers, apply their knowledge of physics, human anatomy and physiology to create permanent radiographic images that assist in the examination, diagnosis, and treatment of medical conditions in the body. These imaging professionals provide a wide range of services using technology founded on theoretical knowledge and scientific concepts. As a part of the healthcare team, the radiographers provide patient care using safe radiation practices; operate sophisticated technical equipment; exercise independent judgment; and make informed decisions daily. All program graduates are prepared, both academically and clinically, to join a healthcare team.

You Might Like This Program If...
- You have a desire to help people and a passion for patient care.
- You want to pursue a career that includes math and sciences.
- You want to be a part of diagnosis and treatment of patients.
- You want to pursue a career in the health field.
- You thrive in a field where technology is ever evolving.
- You have a passion for lifelong learning.

Entrance to Major
Students must have a minimum 2.0 GPA to change to this Associate degree after admission to the University.

Additional Information
Radiologic Science students are required to submit criminal background records, must have a complete physical, including documentation of required immunizations, Hepatitis B vaccine, current Tuberculosis (TB) screening test, routine drug testing and other medical tests as required by clinical facilities. Students are required to purchase liability insurance.

Degree Requirements
For the Associate in Science degree in Radiological Sciences, a minimum of 72 credits is required:

<table>

intellectual curiosity, a strengthened ability to think, and a deeper sense of aesthetic appreciation. These are requirements for all baccalaureate students and are often partially incorporated into the requirements of a program. For additional information, see the General Education Requirements (p. 2540) section of the Bulletin and consult your academic adviser.

**Foundations (grade of C or better is required.)**
- Quantification (GQ): 3 credits
- Writing and Speaking (GWS): 3 credits

**Knowledge Domains**
- Arts (GA): 3 credits
- Humanities (GH): 3 credits
- Social and Behavioral Sciences(GS): 3 credits
- Natural Sciences (GN): 3 credits

**Foundations or Knowledge Domains**
- A General Education course selected from GWS, GQ, GN, GA, GH, or GS, and may include Integrative Studies (Inter-domain or Linked) courses: 6 credits

The keystone symbol appears next to the title of any course that is designated as a General Education course. Program requirements may also satisfy General Education requirements and vary for each program.

15 of these 21 credits are included in the Requirements for the Major.

**University Degree Requirements**

**Cultures Requirement**
3 credits of United States (US) or International (IL) cultures coursework are required and may satisfy other requirements

**Writing Across the Curriculum**
3 credits required from the college of graduation and likely prescribed as part of major requirements.

**Total Minimum Credits**
A minimum of 60 degree credits must be earned for a associates degree. The requirements for some programs may exceed 60 credits. Students should consult with their college or department adviser for information on specific credit requirements.

**Quality of Work**
Candidates must complete the degree requirements for their major and earn at least a 2.00 grade-point average for all courses completed within their degree program.

**Limitations on Source and Time for Credit Acquisition**
Credit used toward degree programs may need to be earned from a particular source or within time constraints (see Senate Policy 83-80 (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/82-00-and-83-00-degree-requirements/#83-80)). For more information, check the Suggested Academic Plan for your intended program.

**Requirements for the Major**
This includes 15 credits of General Education courses: 3 credits of GH courses; 3 credits of GN courses; 3 credits of GQ courses; 3 credits of GS; 3 credits of GWS courses.

To graduate, a student enrolled in the major must earn a grade of C or better in each course designated by the major as a C-required course, as specified by Senate Policy 82-44 (http://senate.psu.edu/policies-and-

---

**Program Learning Objectives**

**New Kensington Campus**

**Practice as Entry Level Technologists**
1. The student will provide proper radiation protection.
2. The student will demonstrate proper positioning skills.
3. The student will evaluate diagnostic images.

**Effectively Communicate in the Healthcare Environment**
1. The student will demonstrate effective written communication skills.
2. The student will provide effective oral communication skills.
3. The student will treat patients with compassion.
Think Critically and Apply Problem Solving Skills in the Healthcare Environment

1. The student will manipulate technical factors to produce diagnostic images.
2. The student will modify procedures to meet patient needs.

Understand and Promote the Importance of Professional Growth and Development

1. The student will demonstrate professional behavior and participate in professional organizations.
2. The student will develop a career portfolio and plan for compliance within the profession.

Academic Advising

The objectives of the university’s academic advising program are to help advisees identify and achieve their academic goals, to promote their intellectual discovery, and to encourage students to take advantage of both in-and out-of class educational opportunities in order that they become self-directed learners and decision makers.

Both advisers and advisees share responsibility for making the advising relationship succeed. By encouraging their advisees to become engaged in their education, to meet their educational goals, and to develop the habit of learning, advisers assume a significant educational role. The advisee’s unit of enrollment will provide each advisee with a primary academic adviser, the information need to plan the chosen program of study, and referrals to other specialized resources.

Suggested Academic Plan

New Kensington Campus

The course series listed below provides only one of the many possible ways to move through this curriculum. The University may make changes in policies, procedures, educational offerings, and requirements at any time. This plan should be used in conjunction with your degree audit (accessible in LionPATH as either an Academic Requirements or What If report). Please consult with a Penn State academic adviser on a regular basis to develop and refine an academic plan that is appropriate for you.

Schuylkill Campus

The course series listed below provides only one of the many possible ways to move through this curriculum. The University may make changes in policies, procedures, educational offerings, and requirements at any time. This plan should be used in conjunction with your degree audit (accessible in LionPATH as either an Academic Requirements or What If report). Please consult with a Penn State academic adviser on a regular basis to develop and refine an academic plan that is appropriate for you.
Penn State recognizes the need for continuous program assessment. The Radiologic Sciences program is fully accredited by the Joint Review Committee on Education in Radiologic Technology (JRCERT). The JRCERT provides programmatic accreditation and ensures the Radiological Sciences Program follows established standards. The JRCERT is the only agency recognized by the United States Department of Education (USDE) and the Council for Higher Education Accreditation (CHEA), for the accreditation of traditional and distance delivery educational programs in radiography, radiation therapy, magnetic resonance, and medical dosimetry. JRCERT can be contacted at: The Joint Review Committee on Education in Radiologic Technology 20 N. Wacker Drive, Suite 2850 Chicago, IL 60606-3182, Phone: 312-704-5300.

**Opportunities for Graduate Studies**

Students graduating from this program may apply their credits earned toward a bachelor’s of science degree in Applied Health Studies at the Pennsylvania College of Technology, which will help further their careers in management or education.

### Report

Please consult with a Penn State academic adviser on a regular basis to develop and refine an academic plan that is appropriate for you.

**Career Paths**

Radiologic technologists are needed in a variety of professional settings, including hospitals, healthcare facilities, physician offices, and research centers. Radiologic technologists may also pursue career opportunities in equipment sales and education. Careers in radiography offer flexible work schedules that accommodate various lifestyles and employment needs. Opportunities exist to pursue advanced degrees. Program coordinators often assist students in their quest to identify potential schools and programs to continue their studies and further their professional development.

**Careers**

Upon program completion, graduates are eligible to apply to take the American Registry of Radiologic Technologists certification examination in radiography. Registered radiologic technologists may pursue various career options and complete advanced training to perform sonography, MRI and CT.

### University Requirements and General Education Notes:

US and IL are abbreviations used to designate courses that satisfy University Requirements (United States and International Cultures).

W, M, X, and Y are the suffixes at the end of a course number used to designate courses that satisfy University Writing Across the Curriculum requirement.

GWS, GQ, GN, GA, GH, and GS are abbreviations used to identify General Education program courses. General Education includes Foundations (GWS and GQ) and Knowledge Domains (GN, GA, GH, and GS). Foundations courses (GWS and GQ) require a grade of ‘C’ or better.

Integrative Studies courses can be completed for the General Education program. N is the suffix at the end of a course number used to designate an Inter-Domain course and Z is the suffix at the end of a course number used to designate a Linked course.

‡ Course satisfies General Education and degree requirement

Wacker Drive, Suite 2850 Chicago, IL 60606-3182, Phone: 312-704-5300.
Rehabilitation and Human Services, B.S. (University College)

Begin Campus: Any Penn State Campus

End Campus: Lehigh Valley, Hazleton, Wilkes-Barre

Program Description
This major helps prepare students for entry-level positions in a variety of human service settings, particularly settings that provide services to persons with physical, emotional, or mental disabilities. Graduates pursue employment in a variety of settings including rehabilitation centers, drug and alcohol programs, senior citizens centers, community mental health programs, programs for people with intellectual disabilities, corrections systems, and hospitals.

Increasing opportunities are available in private for-profit insurance programs for the industrially injured, and in employee assistance programs within business and industry. Well-planned use of electives and internships allows for specialization. The full-semester (15-credit) internship is provided under the supervision of professionals in human service agencies. These intensive "hands-on" experiences are frequently avenues for employment since the internship is completed during the senior year. Students may not go on internship until they have successfully completed all other course work. Students are encouraged to participate in volunteer experiences that provide opportunities to work with people with disabilities. Students are encouraged to declare a minor in a related area and should be discussed with the student's adviser. The major also helps prepare students for graduate study in many human service professional disciplines such as rehabilitation counseling, school counseling, occupational therapy, physical therapy and social work.

You Might Like This Program If...
You enjoy learning about human development, diversity, health and disability, treatment interventions, advocating and working directly with people, and solving individual problems using applied interpersonal skills.

Entrance to Major
Baccalaureate degree candidates must have a minimum 2.0 GPA to be admitted to the Rehabilitation and Human Services (RHS) major; thereafter, students must earn a C or better in all RHS required courses.

Degree Requirements
For the Bachelor of Science degree in Rehabilitation and Human Services, a minimum of 120 credits is required:

General Education
Connecting career and curiosity, the General Education curriculum provides the opportunity for students to acquire transferable skills necessary to be successful in the future and to thrive while living in interconnected contexts. General Education aids students in developing intellectual curiosity, a strengthened ability to think, and a deeper sense of aesthetic appreciation. These are requirements for all baccalaureate students and are often partially incorporated into the requirements of a program. For additional information, see the General Education Requirements (p. 2540) section of the Bulletin and consult your academic adviser.

The keystone symbol appears next to the title of any course that is designated as a General Education course. Program requirements may also satisfy General Education requirements and vary for each program.

Foundations (grade of C or better is required.)
- Quantification (GQ): 6 credits
- Writing and Speaking (GWS): 9 credits

Knowledge Domains
- Arts (GA): 6 credits
- Health and Wellness (GHW): 3 credits
- Humanities (GH): 6 credits
- Social and Behavioral Sciences (GS): 6 credits
- Natural Sciences (GN): 9 credits

Integrative Studies (may also complete a Knowledge Domain requirement)
- Inter-Domain or Approved Linked Courses: 6 credits

12-14 of these 45 credits are included in the Requirements for the Major.

University Degree Requirements
First Year Engagement
All students enrolled in a college or the Division of Undergraduate Studies at University Park, and the World Campus are required to take 1 to 3 credits of the First-Year Seminar, as specified by their college First-Year Engagement Plan.

Other Penn State colleges and campuses may require the First-Year Seminar; colleges and campuses that do not require a First-Year Seminar provide students with a first-year engagement experience.

First-year baccalaureate students entering Penn State should consult their academic adviser for these requirements.

Cultures Requirement
6 credits are required and may satisfy other requirements
- United States Cultures: 3 credits
- International Cultures: 3 credits

Writing Across the Curriculum
3 credits required from the college of graduation and likely prescribed as part of major requirements.

Total Minimum Credits
A minimum of 120 degree credits must be earned for a baccalaureate degree. The requirements for some programs may exceed 120 credits. Students should consult with their college or department adviser for information on specific credit requirements.

Quality of Work
Candidates must complete the degree requirements for their major and earn at least a 2.00 grade-point average for all courses completed within their degree program.

Limitations on Source and Time for Credit Acquisition
The college dean or campus chancellor and program faculty may require up to 24 credits of course work in the major to be taken at the location or in the college or program where the degree is earned. Credit used toward
degree programs may need to be earned from a particular source or within time constraints (see Senate Policy 83-80 (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/82-00-and-83-00-degree-requirements/#83-80)). For more information, check the Suggested Academic Plan for your intended program.

Requirements for the Major
This includes 12-14 credits of General Education courses: 6 credits of GS courses; 3-4 credits of GQ courses; 3-4 credits of GN courses.

To graduate, a student enrolled in the major must earn a grade of C or better in each course designated by the major as a C-required course, as specified by Senate Policy 82-44 (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/82-00-and-83-00-degree-requirements/#82-44).

Program Learning Objectives
Hazleton and Wilkes-Barre Campuses
1. Accomplish mastery in theoretical models of disability, definitions of disability, barriers present to people with disabilities, systemic challenges and economic disadvantages caused by disability, effects on employment on disabled individuals and the effects of trauma.
2. Demonstrate working knowledge of vocational rehabilitation systems, centers for independent living, transition programs, substance abuse and addiction treatment programs, mental health programs, and other community-based support programs.
3. Apply the appropriate principles for community inclusion and integration including, but not limited to, rehabilitation philosophy, client exploration on resources, and collaboration with agencies and related professionals.
4. Produce lucid documents, deliver effective presentations, communicate effectively in a professional manner and possess effective group facilitation skills.
5. Build and use effective teamwork skills and understand culture diversity within professional ranks.
6. Understand the professional, ethical and social responsibilities of their professional actions, and produce evidence of valuing diversity.
7. Demonstrate knowledge of discrimination against individuals with disabilities, legislative efforts to curtail such discrimination and an understanding of advocacy techniques and resources.
8. Demonstrate a working knowledge of ethical codes, malpractice, and the appropriate federal and state regulations.
9. Possess the adequate field experience and provide evidence of professional growth during this experience.
10. Have a respect for diversity and knowledge of contemporary, professional, societal and global issues.
11. Appreciate the value and necessity for sustained learning within and beyond their discipline.
12. Possess knowledge of the various aspects of counseling, including background information on the diverse theoretical orientations, interventions used, populations served, and research in which it is grounded.
13. Demonstrate an understanding of essential elements and dynamics for conducting groups and various team-related activities. Apply a foundational understanding of group work and experiences within RHS settings.
14. Develop knowledge of both professional and popular theories regarding mental illness and abnormal behavior. Explore and possess knowledge concerning abnormal behavior theories from the medical/biological, behavioral, cognitive, humanistic, existential, psychoanalytic, and social models of mental health disorders.

Lehigh Valley Campus
Disciplinary Knowledge and Application
1. Demonstrate knowledge of theoretical models of disability, definitions of disability, barriers that exist for people with disabilities (inc. employment barriers), systemic challenges and economic disadvantages caused by disability.
2. Demonstrate working knowledge and locate appropriate resources for individuals and families with a variety of needs (e.g., vocational
rehabilitation systems, centers for independent living, transition programs substance abuse and addiction treatment programs and other community-based support programs to address client needs).

3. Appropriately, systematically, and accurately assess clients for a range of strengths and needs and make recommendations for services to address those needs and increase client self-sufficiency and empowerment.

4. Develop and monitor treatment plans by applying principles for community inclusion and integration including, but not limited to, rehabilitation and recovery philosophy, client exploration of resources, and collaboration with agencies and related professionals.

5. Demonstrate knowledge of discrimination against individuals with disabilities, legislative efforts to curtail such discrimination and advocacy resources.

Professional Communication

1. Communicate effectively in a professional manner by producing articulate and well-researched documents and delivering effective presentations.

2. Interact productively and professionally with a team of stakeholders as both a leader and a member.

3. Develop a facilitative relationship with clients and their families through individual and group sessions.

Professional Ethics

1. Practice professional, ethical, and social behaviors, which demonstrate non-discrimination, empathy and respect for diversity and knowledge of contemporary professional and societal issues.

2. Demonstrate knowledge of ethical codes and professional conduct, and the applicable federal and state regulations.

Academic Advising

The objectives of the university’s academic advising program are to help advisees identify and achieve their academic goals, to promote their intellectual discovery, and to encourage students to take advantage of both in-and out-of class educational opportunities in order that they become self-directed learners and decision makers.

Both advisers and advisees share responsibility for making the advising relationship succeed. By encouraging their advisees to become engaged in their education, to meet their educational goals, and to develop the habit of learning, advisers assume a significant educational role. The advisee’s unit of enrollment will provide each advisee with a primary academic adviser, the information need to plan the chosen program of study, and referrals to other specialized resources.

Suggested Academic Plan

Lehigh Valley Campus

The course series listed below provides only one of the many possible ways to move through this curriculum. The University may make changes in policies, procedures, educational offerings, and requirements at any time. This plan should be used in conjunction with your degree audit (accessible in LionPATH as either an Academic Requirements or What If report). Please consult with a Penn State academic adviser on a regular basis to develop and refine an academic plan that is appropriate for you.

University Requirements and General Education Notes:

US and IL are abbreviations used to designate courses that satisfy University Requirements (United States and International Cultures).

W, M, X, and Y are the suffixes at the end of a course number used to designate courses that satisfy University Writing Across the Curriculum requirement.

GWS, GQ, GHW, GN, GA, GH, and GS are abbreviations used to identify General Education program courses. General Education includes Foundations (GWS and GQ) and Knowledge Domains (GHW, GN, GA, GH, GS, and Integrative Studies). Foundations courses (GWS and GQ) require a grade of "C" or better.

Integrative Studies courses are required for the General Education program. N is the suffix at the end of a course number used to designate an Inter-Domain course and Z is the suffix at the end of a course number used to designate a Linked course.

**Career Paths**

The RHS major provides excellent preparation specifically for graduate programs leading to professions such as occupational therapy, counseling, social work, and physical therapy. Advising of courses outside the major for electives are provided in order to enhance competitiveness of graduate school applications.

MORE INFORMATION (https://ed.psu.edu/epcse/rhs/resources/rhsinterestareas)

**Careers**

RHS allows students to pursue a variety of employment options as case workers and direct service providers in alcohol and other drug treatment centers, correctional facilities, mental health agencies, private non-profit rehabilitation centers, private-for-profit rehabilitation agencies, human resources, programs for children and youth, programs for older adults, public welfare agencies, rehabilitation hospitals, schools, social service agencies, and vocational rehabilitation programs.

MORE INFORMATION (https://ed.psu.edu/epcse/rhs/resources/careers-in-rehabilitation)

**Opportunities for Graduate Studies**

To prepare students for graduate studies, students can work with faculty on independent studies and can petition to take graduate courses within the department. For qualified students, we also offer the Schreyer Honors Program (https://www.shc.psu.edu).

MORE INFORMATION (https://ed.psu.edu/epcse/rhs/resources/careers-in-rehabilitation)

**Accreditation**

The College of Education educator preparation program is currently NCATE accredited and is seeking accreditation by the Council for the Accreditation of Education Preparation (CAEP) in Spring 2019. CAEP advances excellence in educator preparation through evidence-based accreditation that assures quality and supports continuous improvement to strengthen P-12 student learning.

Wilkes-Barre
P. O. Box PSU
the B.S. Science degree allows for the most flexibility. Achievement in a
professional program such as medical, dental, or pharmacy schools. The General Science option of
chemical, medical, and agricultural industries. The degree can also be
prepare students for various careers in pharmaceutical, biotechnical,
familiar with both the theory and the practice of science. It can help
students to readily include significant breadth or specialization into their
undergraduate curriculum. Some examples include minors in business,
providing the opportunity for students to acquire transferable skills
achieving in a more specialized set of goals can be met by selecting one of the other
B.S. options offered:
• Biological Sciences and Health Professions Option
• Legal Studies, Government Service, Public Policy Option
• Life Sciences Option
• Mathematical Sciences Option
• Physical Sciences Option
Not all of these options are available at all locations, and there are minor
distinctions of the core curriculum at some locations, so see the Science
program director at your College for further details.

Two-Year Preprofessional Preparation
The first two years of the Science major (62 credits) can meet the pre
professional needs of those interested in admission to some schools
of pharmacy, physical therapy, optometry, nursing, and physician
assistant training. Successful students can then transfer after two years
of undergraduate study to the professional school to which they are
admitted. Note, however, that no Penn State degree can be awarded after
only two years (62 credits) of study in the Science major. Also, note that
the abbreviated two-year curriculum alone does not prepare students
for admission to professional schools of general medicine, veterinary
medicine, or dental medicine. Consult with your college's health sciences
professional adviser for additional information.

What is Science?
The Science major provides a broad and interdisciplinary foundation
in the natural sciences. The Science BS program uses the principles of
chemistry, physics, and life sciences to understand how these integrate
ger over general areas including biological sciences and health professions,
public policy, and science research and development.

You Might Like This Program If...
• You like learning by doing hands-on experiments.
• You are curious about the natural world and how science disciplines
come together to explore and understand it.
• You are intrigued by science and desire a career in current and
emerging interdisciplinary science disciplines, health professions, or
melding science with law, policy or business.

In order to be eligible for entrance to the Science major, a student at any
location must have:
1. attained at least a 2.00 cumulative grade-point average;
2. completed MATH 140 with a grade of C or better;
3. completed at least two of the following courses, BIOL 110;
   CHEM 110; PHYS 211 or PHYS 250, with a grade of C or better.

Degree Requirements
For the Bachelor of Science degree in Science, a minimum of 124 credits
is required, with at least 15 credits at the 400 level:

<table>

General Education
Connecting career and curiosity, the General Education curriculum
provides the opportunity for students to acquire transferable skills
necessary to be successful in the future and to thrive while living in interconnected contexts. General Education aids students in developing intellectual curiosity, a strengthened ability to think, and a deeper sense of aesthetic appreciation. These are requirements for all baccalaureate students and are often partially incorporated into the requirements of a program. For additional information, see the General Education Requirements (p. 2540) section of the Bulletin and consult your academic adviser.

The keystone symbol appears next to the title of any course that is designated as a General Education course. Program requirements may also satisfy General Education requirements and vary for each program.

**Foundations (grade of C or better is required.)**
- Quantification (GQ): 6 credits
- Writing and Speaking (GWS): 9 credits

**Knowledge Domains**
- Arts (GA): 6 credits
- Health and Wellness (GHW): 3 credits
- Humanities (GH): 6 credits
- Social and Behavioral Sciences (GS): 6 credits
- Natural Sciences (GN): 9 credits

**Integrative Studies (may also complete a Knowledge Domain requirement)**
- Inter-Domain or Approved Linked Courses: 6 credits

15 of these 45 credits are included in the Requirements for the Major.

**University Degree Requirements**

**First Year Engagement**

All students enrolled in a college or the Division of Undergraduate Studies at University Park, and the World Campus are required to take 1 to 3 credits of the First-Year Seminar, as specified by their college First-Year Engagement Plan.

Other Penn State colleges and campuses may require the First-Year Seminar; colleges and campuses that do not require a First-Year Seminar provide students with a first-year engagement experience.

First-year baccalaureate students entering Penn State should consult their academic adviser for these requirements.

**Cultures Requirement**

6 credits are required and may satisfy other requirements

- United States Cultures: 3 credits
- International Cultures: 3 credits

**Writing Across the Curriculum**

3 credits required from the college of graduation and likely prescribed as part of major requirements.

**Total Minimum Credits**

A minimum of 120 degree credits must be earned for a baccalaureate degree. The requirements for some programs may exceed 120 credits. Students should consult with their college or department adviser for information on specific credit requirements.

**Quality of Work**

Candidates must complete the degree requirements for their major and earn at least a 2.00 grade-point average for all courses completed within their degree program.

**Limitations on Source and Time for Credit Acquisition**

The college dean or campus chancellor and program faculty may require up to 24 credits of course work in the major to be taken at the location or in the college or program where the degree is earned. Credit used toward degree programs may need to be earned from a particular source or within time constraints (see Senate Policy 83-80 (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/82-00-and-83-00-degree-requirements/#83-80)). For more information, check the Suggested Academic Plan for your intended program.

**Requirements for the Major**

This includes 15 credits of General Education courses: 9 credits of GN courses, 6 credits of GQ courses.

To graduate, a student enrolled in the major must earn a grade of C or better in each course designated by the major as a C-required course, as specified by Senate Policy 82-44 (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/82-00-and-83-00-degree-requirements/#82-44).

Select 3 credits in Teamwork and Interpersonal Communication

Supporting Courses and Related Areas: Require a grade of C or better
Select 9 credits of 400-level ASTRO, CHEM, or PHYS courses

Accelerated Science B.S./M.B.A. Program (SCBUS_BS)

Students must begin and complete the Accelerated Science B.S./M.B.A. Program at the University Park campus.

Students admitted to this special cooperative program between the Eberly College of Science and The Smeal College of Business will be able to combine a Bachelor of Science degree in the Science major, with a Master of Business Administration degree. Highly motivated students, who enter the University with a sufficient number and proper distribution of AP credits, will have the opportunity to complete the requirements for both programs within five years.

What is the Accelerated Science B.S./M.B.A. Program?
The Accelerated Science B.S./M.B.A. Program is designed to educate the leaders in scientific industry, by providing students with a rigorous science background and undergraduate degree along with a graduate degree in business administration.

You Might Like This Program If...
- You love studying science, but don't necessarily want a career in a laboratory.  
- You enjoy coursework in multiple science disciplines and in business.  
- You aspire to leadership roles.  
- You enjoy working with others on a daily basis.  
- You want the opportunity to move into a leadership role early in your career.

Program Requirements
The B.S. degree in the Science major General Science option, will be conferred upon satisfactory completion of:

1. The first semester of course work in The Smeal College of Business M.B.A. program (i.e., a minimum of 12 graduate credits).
2. A minimum of 112 acceptable undergraduate credits, which must include:

Select supporting courses and related areas selected from the program list  

4-23
The University's General Education requirements in the areas of Writing and Speaking (9), Health and Physical Activity (3), Arts (6), Humanities (6). The University's General Education requirements in the areas of Quantification, Natural Sciences, and Social and Behavioral Sciences will be satisfied by course work listed under headings "c" and "f." These requirements may be double counted in order to satisfy other requirements in the program.

Students must complete three Eberly College of Science Cooperative Education experiences, including at least one experience which is a full semester in length.

Career Paths
Graduates with a B.S. in Science and a Master's degree in Business Administration have successfully established careers in the science and business industries. Graduates of this unique integrated undergraduate-graduate program (IUG) are equipped to step into leadership roles instead of the more common entry-level positions of their peers. This accelerates the careers of our graduates, which leads to greater impact and higher earning potential over a lifetime.

Careers
Graduates of the B.S./M.B.A. program have pursued careers in a number of industries including, but not limited to the following:

- Consulting
- Finance
- Healthcare
- Manufacturing
- Marketing
- Medical Devices
- Pharmaceuticals
- Technology

Opportunities for Graduate Studies
For more information on the M.B.A curriculum, please visit the Smeal College of Business website (https://mba.smeal.psu.edu).

Program Learning Objectives
After completing this degree, students should be able to:

1. Use the scientific method to formulate and test hypotheses
2. Effectively communicate scientific findings to an interdisciplinary audience in written and oral formats.
3. Understand the interdisciplinary nature of science.
4. Use quantitative reasoning.
5. Understand the relationship between science and society.

Academic Advising
The objectives of the university's academic advising program are to help advisees identify and achieve their academic goals, to promote their intellectual discovery, and to encourage students to take advantage of both in-and out-of class educational opportunities in order that they become self-directed learners and decision makers.

Both advisers and advisees share responsibility for making the advising relationship succeed. By encouraging their advisees to become engaged in their education, to meet their educational goals, and to develop the habit of learning, advisers assume a significant educational role. The advisee's unit of enrollment will provide each advisee with a primary academic adviser, the information need to plan the chosen program of study, and referrals to other specialized resources.

Suggested Academic Plan

### Scranton Campus

#### General Science Option

The course series listed below provides only one of the many possible ways to move through this curriculum. The University may make changes in policies, procedures, educational offerings, and requirements at any time. This plan should be used in conjunction with your degree audit (accessible in LionPATH as either an Academic Requirements or What If report). Please consult with a Penn State academic adviser on a regular basis to develop and refine an academic plan that is appropriate for you.

* Course requires a grade of C or better for the major
‡ Course requires a grade of C or better for General Education
# Course is an Entrance to Major requirement
† Course satisfies General Education and degree requirement

University Requirements and General Education Notes:
US and IL are abbreviations used to designate courses that satisfy University Requirements (United States and International Cultures).
W, M, X, and Y are the suffixes at the end of a course number used to designate courses that satisfy University Writing Across the Curriculum requirement.
GWS, GQ, GHW, GN, GA, GH, and GS are abbreviations used to identify General Education program courses. General Education includes Foundations (GWS and GQ) and Knowledge Domains (GHW, GN, GA, GH, GS, and Integrative Studies). Foundations courses (GWS and GQ) require a grade of ‘C’ or better.

Integrative Studies courses are required for the General Education program. N is the suffix at the end of a course number used to designate an Inter-Domain course and Z is the suffix at the end of a course number used to designate a Linked course.

Program Notes
Biology: Molecules and Cells (BIOL 230W) is offered alternating spring semesters
Biology: Function and Development of Organisms (BIOL 240W) is offered alternating spring semesters
Students may take General Physics: Mechanics (PHYS 211), General Physics: Electricity and Magnetism (PHYS 212), General Physics: Fluids and Thermal Physics (PHYS 213), & General Physics: Wave Motion and Quantum Physics (PHYS 214) in place of Introductory Physics I (PHYS 250) & Introductory Physics II (PHYS 251)

Life Science Option
The course series listed below provides only one of the many possible ways to move through this curriculum. The University may make changes in policies, procedures, educational offerings, and requirements at any time. This plan should be used in conjunction with your degree audit (accessible in LionPATH as either an Academic Requirements or What If report). Please consult with a Penn State academic adviser on a regular basis to develop and refine an academic plan that is appropriate for you.

First Year
Fall | Credits
--- | ---
ENGL 15 (GWS) | 3
BIOL 110 (GN) | 4

Career Paths
Penn State students with a BS in Science are prepared for a broad range of careers and graduate programs. The solid foundation of science and math prepares students to think critically and scientifically in a range of industries and professions.

Careers
This program often leads to careers in all healthcare professions, including physicians and physician assistants, dentists, optometrists, and podiatrists; laboratory research associates; scientific product representatives and science-based consulting.

Opportunities for Graduate Studies
Many graduates of the Science B.S. program choose to pursue graduate studies (MS and PhD) in the natural sciences. Most often, students gravitate to medically-related fields and life science sub-disciplines for focused graduate training. Students in the legal studies and public policy options may choose law school or master’s in public policy programs.

Spatial Analysis and Engineering Design Principles, Certificate

Begin Campus: DuBois
End Campus: DuBois

Program Description
This certificate provides innovative instruction about the application of new design methods and processes in a variety of engineering disciplines. The certificate emphasizes how to use CAD software to create concise drawings to develop an effective design system to provide solutions for specific products, systems, components, or services. Contact Diana Ricotta at Penn State DuBois, 814-375-4718 or dricotta@psu.edu.

What is Spatial Analysis and Engineering Design Principles?
Spatial analysis and design combines technical and design skills to solve engineering problems.

You Might Like This Program If...
You are good with technology and systems and enjoy complex challenges.

Program Requirements
To earn an undergraduate certificate in Spatial Analysis and Engineering Design Principles, a minimum of 7 credits is required.

Academic Advising
The objectives of the university’s academic advising program are to help advisees identify and achieve their academic goals, to promote their intellectual discovery, and to encourage students to take advantage of both in-and out-of class educational opportunities in order that they become self-directed learners and decision makers.

Both advisers and advisees share responsibility for making the advising relationship succeed. By encouraging their advisees to become engaged in their education, to meet their educational goals, and to develop the habit of learning, advisers assume a significant educational role. The advisee’s unit of enrollment will provide each advisee with a primary academic adviser, the information need to plan the chosen program of study, and referrals to other specialized resources.

Sports Administration, Certificate

Begin Campus: Greater Allegheny
End Campus: Greater Allegheny

Program Description
This 15-credit interdisciplinary program offers students an introduction to different aspects of sports administration careers, broadly defined. Students who complete this certificate will enhance their portfolios and career opportunities to include working in the fields of sports management, business/retail, media, sporting teams, and recreational programs.

What is Sports Administration?
Sport management is the broad field of business associated with athletics, sports teams and recreation.

You Might Like This Program If...
• You enjoy sports and recreation.
• You desire to add this knowledge to your major program of study.
Admission Requirements

Students should be aware of possible course prerequisites for some of the listed courses.

Program Requirements

To earn an undergraduate certificate in Sports Administration, a minimum of 15 credits is required.

Students are required to complete:

- 3 credits of internship (from list A) with a sports administration-related organization;
- 6 credits from two different discipline codes of 100- and/or 200-level courses from list B;
- and 6 credits from two different discipline codes of 300- and/or 400-level courses from list C.

Supply Chain and Operations, Certificate

Begin Campus: Hazleton, Worthington Scranton, Wilkes-Barre
End Campus: Hazleton, Worthington Scranton, Wilkes-Barre

Program Description
This 9 credit certificate program is for those individuals with exposure and experience in the Production Directorate and other departments at Tobyhanna Army Depot (TYAD), Tobyhanna, PA. This program should enhance the participants knowledge in Supply Chain Management, Demand Fulfillment and Strategic Procurement as it applies to the depot's mission within the DOD.

Admission Requirements
Participants must be employees of Tobyhanna Army Depot (TYAD) and have some college experience.

Program Requirements
To earn an undergraduate certificate in Supply Chain and Operations, a minimum of 9 credits is required.

Supply Chain Management, Certificate

Program Description
The certificate program in logistics and supply chain management introduces you to key concepts in the field, such as systems analysis, trade-off analysis, transport systems, procurement, inventory management, and supply chain integration and strategy. The program provides an overview of logistics and supply chain management and addresses the needs of manufacturers, wholesalers, retailers, merchandisers, transportation and warehousing firms, and government agencies. The implications of e-commerce in relation to supply chain management are also explored.

What is Supply Chain Management?
Supply chain management pertains to the flow of goods and services. It includes the movement and storage of raw materials, work-in-process inventory, and finished goods from point of origin to point of consumption.

You Might Like This Program If...
- You enjoy thinking about process and organization within business.
- You want an introduction to supply chain management that you can earn in a short time.
- You want to add supply chain skills to your major program of study.

Program Requirements
To earn an undergraduate certificate in Supply Chain Management, a minimum of 12 credits is required.

Both advisers and advisees share responsibility for making the advising relationship succeed. By encouraging their advisees to become engaged in their education, to meet their educational goals, and to develop the habit of learning, advisers assume a significant educational role. The advisee's unit of enrollment will provide each advisee with a primary academic adviser, the information need to plan the chosen program of study, and referrals to other specialized resources.
Youth Development and Social Justice, Certificate

You Might Like This Program If...

- You want to become more informed citizens and community leaders.
- You're interested in professional work in various social justice related occupations (e.g. an educational setting for young adults who identify within the LGBTQ community, a human rights advocacy group, youth programming in urban areas, a non-governmental organization dedicated to community development).

Admission Requirements

To register for the certificate program, participants are required to have previously earned at least 60 credits.

Program Requirements

To earn an undergraduate certificate in Youth Development and Social Justice, a minimum of 18 credits is required.

Prerequisites Required.

Academic Advising

The objectives of the university's academic advising program are to help advisees identify and achieve their academic goals, to promote their intellectual discovery, and to encourage students to take advantage of both in-and out-of class educational opportunities in order that they become self-directed learners and decision makers.

Both advisers and advisees share responsibility for making the advising relationship succeed. By encouraging their advisees to become engaged in their education, to meet their educational goals, and to develop the habit of learning, advisers assume a significant educational role. The advisee's unit of enrollment will provide each advisee with a primary academic adviser, the information need to plan the chosen program of study, and referrals to other specialized resources.

GENERAL INFORMATION

Using this Bulletin
The six General Information sections in the Undergraduate Bulletin are designed to help you understand Penn State academic requirements and policies, as well as how to discover opportunities, as you pursue your academic goals. Information about the University structure and leadership, as well as tuition and financial aid information, will assist you in making informed decisions during your time at Penn State.

Click on topics of interest below or the tabs to the right to explore different information areas. In addition, General Information sections can be accessed from any page in the Bulletin from the navigation bar.

Using this Bulletin (p. 2512)  
Academic Information (p. 2517)  
General Education (p. 2539)  
About Penn State (p. 2613)  
Admissions (p. 2616)  
Tuition and Financial Aid (p. 2620)

Using this Bulletin

Introduction
The Undergraduate Bulletin is Penn State’s comprehensive source for undergraduate academic information and program requirements.

Use this section and navigation tools throughout the site to become familiar with general Bulletin information and discover new ways to explore academic opportunities across Pennsylvania and the world.

Students should follow the edition of the Bulletin that is active on their first day of class at the University. Past versions can be found on the Archive (p. 17) page.

New Features

Program Page Layout
• Consistent layout of program information organized within the following tabs:
  • Overview
  • How to Get In
  • Program Requirements (University Degree, Bachelor of Arts Degree, General Education, and Major requirements)
  • Integrated Undergrad-Grad Program
  • Learning Outcomes
  • Academic Advising
  • Suggested Academic Plan
  • Career Paths
  • Contact

Begin and End Campus
At the top each program page, you will find a box that indicates where you can begin and end a program. Programs may have different begin and end campuses, so it is important to use this information to determine program availability at each campus.

How to Get In
This section describes requirements on how to enter your major. Common examples include, but are not limited to, minimum GPA and/or successful completion of a skills test, coursework, or preparation programs.

Suggested Academic Plan
The course series provided in the Suggested Academic Plan provides only one of many possible ways to move through the curriculum. To create a personalized academic plan, begin by taking the following steps:

• Consult with a Penn State academic adviser on a regular basis to develop and refine your academic plan.
• Use the Suggested Academic Plan in conjunction with your degree audit (accessible in LionPATH as either an Academic Requirements or What If report).
• Familiarize yourself with information available in this Bulletin to learn about academic opportunities.
• Explore resources available on your college and campus websites.

Please note that the University may make changes in policies, procedures, educational offerings, and requirements.

Changes Page
• Real-time amendments to information in the Bulletin will be tracked on the Changes (p. 2517) page.
• Currently or previously enrolled students should consult the Bulletin Archive (p. 17), their adviser, and degree audit reports for specific requirements.

Course Bubble
When a course link is clicked, a course bubble will appear with important course information including, but not limited to:

• course title, description, and credits;
• prerequisites;
• course attributes and General Education learning objectives;
• if the course is repeatable;
• if the course is cross-listed;
• if the course can be counted towards General Education requirements.

Statement of Nondiscrimination
The University is committed to equal access to programs, facilities, admission, and employment for all persons. It is the policy of the University to maintain an environment free of harassment and free of discrimination against any person because of age, race, color, ancestry, national origin, religion, creed, service in the uniformed services (as defined in state and federal law), veteran status, sex, sexual orientation, marital or family status, pregnancy, pregnancy-related conditions, physical or mental disability, gender, perceived gender, gender identity, genetic information, or political ideas. Discriminatory conduct and harassment, as well as sexual misconduct and relationship violence, violates the dignity of individuals, impedes the realization of the University’s educational mission, and will not be tolerated. Direct all inquiries regarding the nondiscrimination policy to the Affirmative Action Office, The Pennsylvania State University, 328 Boucke Building, University Park, PA 16802-5901; Email: kfl2@psu.edu; Tel 814-863-0471.

Penn State encourages qualified persons with disabilities to participate in its programs and activities. If you anticipate needing any type of
accommodation or have questions about the physical access provided, please contact the Office for Disability Services, 814-863-1807, in advance of your participation or visit.

Start Exploring
The Undergraduate Bulletin is Penn State’s comprehensive source for undergraduate academic information and program requirements. Using the search features, explore options to design your own, unique academic path at one of the world’s leading research institutions. Discover new opportunities as you pursue your academic passion. Search boxes are located on the Undergraduate Bulletin landing page and throughout the website.

Narrow your search by using the following fields:

Degree Type
Choose the degree type to begin your search. Information on the following degrees are included in the Undergraduate Bulletin:

- **Associate Degree**
  Two-year majors that, with few exceptions, provide concentrated instruction to prepare graduates for specialized occupational assignments.

- **Baccalaureate Degree**
  Baccalaureate programs of study consist of no less than 120 credits and typically take four years to complete.

- **Minor**
  An academic program of at least 18 credits that supplements a major. A minor program may consist of course work in a single area or from several disciplines.

- **Undergraduate Certificate**
  Undergraduate certificates can reflect emerging academic areas, necessary professional development requirements, or groups of courses that do not constitute a degree program.

Learn more in the Definitions and Abbreviations (p. 2513) section.

Campus
Penn State has over 20 campuses across Pennsylvania. Visit the Campus (p. 18) page to see the full listing and a brief description of each campus.

Interest
Search broad topics to discover programs associated with your interests. From helping people, to science, or business, select an area to help narrow down your academic choices.

College
Academic colleges at Penn State grant degrees and are generally organized around a subject matter. All Penn State majors are divided among academic colleges, which are the units from which students receive their degrees. Visit the College (p. 21) page to see the full listing.

Academic Authority
The University Faculty Senate has responsibility for, and authority over, all academic information contained in the Undergraduate Bulletin.

Each step of the educational process, from admission through graduation, requires continual review and approval by University officials. The University, therefore, reserves the right to change the requirements and regulations contained in this Bulletin and to determine whether a student has satisfactorily met its requirements for admission or graduation, and to reject any applicant for any reason the University determines to be material to the applicant’s qualifications to pursue higher education.

MORE INFORMATION ABOUT ACADEMIC AUTHORITY (http://undergrad.psu.edu/aapm/P-8-program-descriptions-catalog.html)

Definitions and Abbreviations
Described below are definitions referring to degrees, majors, options, minors, concurrent or sequential majors programs, and integrated undergraduate-graduate degree programs:

**Associate Degree**
Two-year majors that, with few exceptions, provide concentrated instruction to prepare graduates for specialized occupational assignments.

**Baccalaureate Degree**
Penn State offers more than 160 majors with four-year baccalaureate degrees. A baccalaureate program of study shall consist of no less than 120 credits. Students may elect to take courses beyond the minimum requirements of a degree program. Particular types of baccalaureate degrees identify educational programs having common objectives and requirements. Degree programs may provide academic, pre-professional, or professional experiences and preparation. Majors lead to a baccalaureate degree. Each student must select a major within a baccalaureate degree type. If options are offered within a major, a student selects one. The student may also elect to enroll in a minor to supplement the major. Alternatively, the student may seek to enroll in multiple majors within the same type of baccalaureate degree or to enroll in a simultaneous degree program.

Undergraduate majors offered at Penn State lead to one or more of the following baccalaureate degrees: Bachelor of Arts, Bachelor of Science, Bachelor of Architectural Engineering (five-year program), Bachelor of Architecture (five-year program), Bachelor of Design, Bachelor of Fine Arts, Bachelor of Humanities, Bachelor of Landscape Architecture (five-year program), Bachelor of Music, Bachelor of Musical Arts, and Bachelor of Philosophy.

Not all degrees are offered at every location. Baccalaureate degrees offered at Penn State include both those that are designed to provide an academic (including pre-professional) experience and those that are specifically designed to provide professional preparation.

To ensure excellence, all professionally oriented degree majors provide a strong academic base. The Bachelor of Arts degree (with a given major) is an academic degree; the Bachelor of Science degree (with a given major) and the bachelor’s degree in any subject area (e.g., Bachelor of Architecture) are professional degrees. The Bachelor of Philosophy degree, described in the Intercollege Undergraduate Programs section of this Bulletin, is planned individually and may be designed to serve either academic or professional purposes.

**Major**
A major is a plan of study in a field of concentration within a type of baccalaureate degree. Colleges and other degree-granting units may have common requirements for all of their majors. Each major may have requirements identified in prescribed, additional, and supporting courses
and related areas categories. Elective credits are not considered part of
the major.

MORE INFORMATION ABOUT MAJORS (http://senate.psu.edu/
curriculum/guide-to-curricular-procedures/baccalaureate-degree-
curriculum)

Option
An option is a specialization within a major that should involve at least
one-third of the course work credits required for the major, but need not
be more than 18 credits. All options within a major must have in common
at least one-fourth of the required course work credits in the major. A
student can only be enrolled in an option within their own major.

Minor
A minor is defined as an academic program of at least 18 credits that
supplements a major. A minor program may consist of course work in a
single area or from several disciplines, with at least 6 but ordinarily not
more than half of the credits at the 400-course level. Total requirements
are to be specified and generally limited to 18 to 21 credits. Entrance to
some minors may require the completion of a number of prerequisites,
including courses, portfolios, auditions, or other forms of documentation
that are not included in the total requirements for the minor. All courses
for a minor require a grade of C or above.

Concurrent and Sequential Majors Programs
At the baccalaureate or associate degree level, students may be approved
for admission to more than one major under the Concurrent Majors
Program. A Concurrent Majors Program is one in which students take
courses to concurrently meet the requirements of at least two majors,
with graduation for all majors in the program occurring during the
same semester. Concurrent majors must all be at the baccalaureate
or associate degree level. Under the Sequential Majors Program, upon
graduation from an associate or baccalaureate degree program, a student
may apply for re-enrollment in another undergraduate degree program.

Integrated Undergraduate-Graduate (IUG) Degree
Program
An Integrated Undergraduate-Graduate (IUG) degree program combines a
Penn State baccalaureate degree with a master’s degree as a continuous
program of study. An IUG program allows qualifying students to:
• create a cohesive plan for baccalaureate and master’s degree studies,
  with advising informed by requirements for both degree programs;
• complete the combined degree program in less time than it would
take to complete each program separately;
• become familiar with the expectations of graduate studies in their
  programs;
• access the resources of the Graduate School;
• learn from current graduate students who share academic interests.

Abbreviations, Acronyms, and Codes
Described below are common codes, abbreviations, acronyms, and other
types of academic shorthand used at Penn State, along with a brief
explanation of each.

FAQs

1. Where can I find a list of General Education courses and information about requirements?
   • For information about General Education requirements, please see the General Education (p. 2539) section in this Bulletin.

2. The General Education requirements have changed. Do the new requirements apply to me?
   • The new General Education requirements apply to students who start at Penn State in Summer 2018 and later. Requirements have not changed for students who began at Penn State before this semester. The older set of requirements can be found in the General Education course descriptions online.

3. What does the blue keystone symbol mean?
   • The keystone indicates that the course is designated as a General Education course. See the degree requirements for your program to identify the General Education courses that are required. Not all courses marked with the keystone count as meeting General Education requirements when required within your program. See the program requirements and speak to an adviser regarding General Education courses that count or do not count toward the General Education requirements.

4. Where can I find bachelor of arts degree requirements?
   • Bachelor of arts degree requirements are included in the program requirements section for B.A. programs. You may also see the B.A. requirements in the Academic Information (p. 2517) section.

5. Where can I find a list of courses and course descriptions?
   • You may find courses and descriptions several different ways within the Bulletin. You may navigate to the full listing of courses and descriptions from the Courses (p. 2628) link in the top navigation menu. You may also scroll over any course number within the Bulletin to see the course description in a course bubble. Search for specific courses through the search option on the homepage or in the search functions throughout the Bulletin.

6. What does a red box around a credit number mean?
   • Updates to courses and programs may become effective at various times throughout the year. A red box indicates that a change to the course may have occurred and/or a program update is in progress. You must speak with your adviser regarding the amendments to learn how this affects your academic plan.

7. Which Undergraduate Bulletin should I use?
   • Your official record of General Education (p. 2539) requirements are found in the Bulletin year that matches the semester in which you enrolled at Penn State. The program requirements are found in the Bulletin year for the semester in which you were admitted into the major program. See the Archive (p. 17) page to find past Bulletins.

8. Where can I find past Bulletins?
   • Past Bulletins can be found on the Archive (p. 2539) page, which can be accessed from any page in the Bulletin's top navigation menu.

9. When will the Undergraduate Bulletin be updated?
   • The Bulletin will be updated at the beginning of each semester (fall, spring, and summer). Changes that occur between updates are identified on the Changes (fall, spring, and summer). Changes that occur between updates are identified on the Changes (p. 2517) page.

10. Where can I find information about minors?
    • Minors are a specific type of program and may be found through the search process by filtering by minor (http://bulletins.psu.edu/programs/#filter=filter_24).

11. Where can I find the Graduate Bulletin?
    • The Graduate Bulletin is located at bulletins.psu.edu/graduate (http://bulletins.psu.edu/graduate).

Have a question we didn’t include? Please let us know by emailing bulletins@psu.edu.

Academic Information
Degree and Program Types

Baccalaureate Degrees
An award signifying a rank or level of educational attainment. Particular types of baccalaureate degrees identify educational programs having common objectives and requirements. Degree programs may provide academic, preprofessional, or professional experiences and preparation. Majors lead to a baccalaureate degree. Each student must select a major within a baccalaureate degree type. If options are offered within a major, a student selects one. The student may also elect to enroll in a minor to supplement the major. Alternatively, the student may seek to enroll in multiple majors within the same type of baccalaureate degree or to enroll in a simultaneous degree program. A baccalaureate program of study shall consist of no less than 120 credits. Students may elect to take courses beyond the minimum requirements of a degree program.

Filter by DEGREE to view baccalaureate degree options.

Major
A plan of study in a field of concentration within a type of baccalaureate degree. Colleges and other degree-granting units may have common requirements for all of their majors. Each major may have requirements identified in Prescribed, Additional, and Supporting Courses and Related Areas categories. Elective credits are not considered part of the major.

READ SENATE RECORD: 1/23/90, Appendix IV (http://senate.psu.edu/curriculum/guide-to-curricular-procedures/glossary)

Option
A specialization within a major that should involve at least one-third of the course work credits required for the major, but need not be more than 18 credits. All options within a major must have in common at least one-fourth of the required course work credits in the major. A student can only be enrolled in an option within his/her own major.

Minor
A minor is defined as an academic program of at least 18 credits that supplements a major. A minor program may consist of course work in a single area or from several disciplines, with at least 6 but ordinarily not more than half of the credits at the 400 course level. Total requirements are to be specified and generally limited to 18 to 21 credits. Entrance to some minors may require the completion of a number of prerequisites, including courses, portfolios, auditions, or other forms of documentation that are not included in the total requirements for the minor. All courses for a minor require a grade of C or above.

When a student graduates, completion of a minor is recorded on his/her transcript by the Registrar, and the student receives an official certificate certifying completion of the minor. (The certificate is given with the diploma.)

Concurrent Majors/Sequential Majors
At the baccalaureate or associate degree level, students may be approved for admission to more than one major under the Concurrent Majors program. A Concurrent Majors program is one in which students take courses to concurrently meet the requirements of at least two majors, with graduation for all majors in the program occurring during the same semester. Concurrent majors must all be at the baccalaureate or associate degree level. Under the Sequential Majors program, upon graduation from an associate or baccalaureate degree program, a student may apply for re-enrollment in another undergraduate degree program.

Any student requesting more than one major program shall, for each major, meet the same acceptance standards and graduation requirements as met by all other students. Colleges and departments may identify and should publish any combinations of majors that would not be approved for more than one major program. In general, an undergraduate student may not combine a general major with a departmental major within the same college.

READ SENATE POLICY 60-00: Completing More Than One Undergraduate Major Program (Concurrent Majors and Sequential Majors) (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/60-00-completing-more-than-one-undergraduate-program/#60-00)

READ SENATE POLICY 60-10: Concurrent Majors Program (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/60-00-completing-more-than-one-undergraduate-program/#60-10)

READ SENATE POLICY 60-20: Sequential Majors Program (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/60-00-completing-more-than-one-undergraduate-program/#60-20)

Associate Degrees
Majors that lead to two-year associate degrees are available at most of Penn State’s undergraduate locations. These majors provide concentrated instruction to prepare graduates for specialized occupational assignments, except for the Letters, Arts, and Sciences major, which provides graduates with a general education and some specialization in their fields of interest.

More than twenty associate degree majors lead to either the Associate in Arts degree, the Associate in Engineering Technology degree, or the Associate in Science degree. Credits received for Penn State associate degree program courses may be applicable to a particular baccalaureate degree program at the discretion of the appropriate college and department. World Campus also offers two-year degrees.

Filter by DEGREE to view associate degree options.

Certificates
An undergraduate certificate, a formal award showing the satisfactory completion of a postsecondary educational curriculum, is designed primarily for students who are typically beyond the compulsory age for high school. Certificates are awarded in academic, vocational, and continuing professional education. Penn State does not offer certificates for avocational and adult basic education. Certificates are not certifications. Certifications are awarded by governmental and professional agencies. Certificates reflect emerging academic areas, necessary professional development requirements, or requirements that do not constitute a degree program. They may be supplements or enhancements to existing degree programs or may be stand-alone. For credit, certificates often provide “step-up” opportunities to degree programs allowing for milestones of progress.

Credit or noncredit certificates are offered. A certificate consists of a group of courses, typically 9-15 credits, developed, supervised, and evaluated by the offering academic unit(s). At least two-thirds (2/3) of the credits used to complete a certificate must be earned at Penn State. In exceptional circumstances, a certificate may have fewer than 9 credits or more than 15 credits, provided adequate justification is given to explain why. Credit courses offered for a certificate require a grade of C or higher. Noncredit courses require satisfactory completion, as defined by the unit offering the certificate. Requirements for a certificate may be completed at any campus location offering the specified courses for the certificate.
All students who enroll in certificates must be defined as Penn State students.

READ POLICY M-12: GUIDELINES FOR UNDERGRADUATE CREDIT CERTIFICATES (http://undergrad.psu.edu/aappm/M-12-guidelines-undergraduate-credit-certificates.html)

**Degree Requirements**

All programs have specific requirements described on the program page. Some common requirements that apply broadly across the university are described here.

**General Education**

General Education is the heart of the undergraduate experience. From the sciences to the arts and humanities, General Education at Penn State prepares students to thrive personally and professionally in our diverse global society. Through General Education, students acquire skills, knowledge, and experiences for living in interconnected contexts, making life better for themselves, others, and the larger world. As professions become more dynamic and career paths less predictable, the ability to place information into context through critical thinking and the ability to develop solutions to complex problems and make ethical decisions become essential skills for a resilient workforce. Creative and analytical practice prepares students of all disciplines to be resourceful in the application of their knowledge towards complex problem solving, and to communicate that knowledge in a variety of forms.

MORE INFORMATION ABOUT GENERAL EDUCATION (p. 2539)

**Bachelor of Arts Degree Requirements (9-24 credits)**

Courses with a Bachelor of Arts attribute satisfy these requirements.

**Foreign Language (0-12 credits)**

Student must attain 12th credit level of proficiency in one foreign language. See the Placement Policy for Penn State Foreign Language Courses (p. 2534).

**B.A. Fields (9 credits)**

Humanities, Social and Behavioral Sciences, Arts, Foreign Languages, Natural Sciences, Quantification (may not be taken in the area of the student's primary major; foreign language credits in this category must be in a second foreign language or beyond the 12th credit level of proficiency in the first language).

**Other Cultures (0-3 credits)**

Select 3 credits from approved list. Students may count courses in this category in order to meet other major, minor, elective, or General Education requirements, except for the General Education US/IL requirement.

**Other University Requirements**

The First Year Engagement, Cultural Diversity and Writing Across the Curriculum requirements can be found on the Other University Requirements page.

MORE INFORMATION ABOUT OTHER UNIVERSITY REQUIREMENTS (p. 2544)

**Total Minimum Credits**

A minimum of 120 degree credits must be earned for a baccalaureate degree. The requirements for some programs may exceed 120 credits.

Students should consult with their college or department adviser for information on specific credit requirements.

READ SENATE POLICY 82-20: GENERAL REQUIREMENTS (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/82-00-and-83-00-degree-requirements/#82-20)

**Quality of Work**

Candidates must complete the degree requirements for their major and earn at least a 2.00 grade-point average for all courses completed within their degree program.

READ SENATE POLICY 82-40: CUMULATIVE GRADE-POINT AVERAGE REQUIREMENTS (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/82-00-and-83-00-degree-requirements/#82-40)

**Limitations on Source and Time for Credit Acquisition**

The college dean or campus chancellor and program faculty may require up to 24 credits of course work in the major to be taken at the location or in the college or program where the degree is earned. Credit used toward degree programs may need to be earned from a particular source or within time constraints. For more information, check the Suggested Academic Plan for your intended program.

READ SENATE POLICY 83-80: LIMITATIONS ON SOURCE AND TIME FOR CREDIT ACQUISITION (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/82-00-and-83-00-degree-requirements/#83-80a)

**Opportunities for Credit Acquisition**

Credits are awarded on the semester-hour basis. The distribution of time between class activities and outside preparation varies from course to course; for the average student, however, at least forty-five hours of work per semester planned and arranged by the University faculty are required to gain 1 credit.

Course credits may be acquired by instruction as defined in Policy 42-23 (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/42-00-acquisition-of-credit/#42-23) in Policies and Rules; by examination as discussed below; by transfer from other regionally accredited colleges and universities as discussed under the heading Admission with Advanced Standing; by transfer from colleges and universities outside the United States as defined in Policy 42-84 (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/42-00-acquisition-of-credit/#42-84) in Policies and Rules; by validation from colleges and universities that are not regionally accredited but award associate degrees or higher as defined in Policy 42-86 (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/42-00-acquisition-of-credit/#42-86) in Policies and Rules; by educational experiences in the Armed Services as defined in Policy 42-98 (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/42-00-acquisition-of-credit/#42-98) in Policies and Rules; and by educational credit for Training Programs in Non-collegiate Organizations as defined in Policy 42-99 (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/42-00-acquisition-of-credit/#42-99) in Policies and Rules. Additional information about credit acquisition can be obtained by contacting the Undergraduate Admissions Office, The Pennsylvania State University, 201 Shields Building, Box 3000, University Park, PA 16804-3000; 814-865-5471, or by contacting an admissions officer at any University location.
READ SENATE POLICY: POLICIES AND RULES FOR UNDERGRADUATE STUDENTS (http://senate.psu.edu/policies-and-rules-for-undergraduate-students)

**Bachelor of Humanities**

Bachelor of Humanities degree majors are required to take 18 credits (referenced below). In addition, students are expected to complete credits required by their college and major.

**SUPPORTING COURSES AND RELATED AREAS**

Select 1 course each from four different major/program offerings: 12

A&A, AMST, ART, ART H, CAMS, COMM, CMLIT, ENGL, HIST, INART, MUSIC, PHIL, RL ST, THEA, or courses from the School of Humanities (Penn State Harrisburg, the Capital College) approved list

**Total Credits** 18

**Bachelor of Philosophy**

The Bachelor of Philosophy degree is the only one not offered through any college or school but rather on a University-wide basis. This degree allows students to plan their own programs, in conjunction with a faculty preceptor, within the framework of the academic program of the University. A description of this degree is found in the Intercollege-Undergraduate Programs section of this bulletin.

**Entrance to Major**

When first-semester baccalaureate degree students are admitted to the University, most are enrolled in either a specific college or in the Division of Undergraduate Studies. Typically, students do not enter a specific major within the college until sometime between their third and fifth semesters.

Upon entrance to the University, students are assigned a selection pool semester, which typically is the spring of their sophomore year. Students are eligible to enter a major once they have gained third-semester standing, have a 2.0 or higher cumulative grade point average, and met all other entrance requirements. Please note, some majors may have more restrictive academic requirements or administrative enrollment controls (http://www.registrar.psu.edu/programs_majors/admin_enrollment_controls.cfm). The criteria students must meet for entry to all majors are available on the Entrance-to-Major Requirements listing (https://advising.psu.edu/entrance-major-requirements) on the Academic Advising Portal.

The Office of the University Registrar will notify students when they have gained third-semester classification. This notification will include confirmation that the student has achieved the minimum eligibility requirements for some majors, as well as links to the full list of entrance requirements for all majors and a link to LionPATH (http://launch.lionpath.psu.edu) "Update Academics," where students can submit their request to enter a major.

Students who meet the entry-to-major criteria for their choice of major can apply for entrance to that major by using LionPATH (http://launch.lionpath.psu.edu) "Update Academics."

**Criteria**

Entrance-to-Major Criteria are determined for every entering class within an academic year (summer, fall, and spring). Students who meet a major’s entry criteria are guaranteed entry to the major. The criteria students must meet for entry to all majors are available at Entrance to Major Requirements on each program page. When deemed academically appropriate, the dean of the college may approve exceptions for individual students. For additional information, contact the appropriate advising center (https://dus.psu.edu/advising-centers).

**Procedures**

Students who meet entry-to-major criteria may apply using LionPATH’s Update Academics function. A student who wishes to enter a major with Administrative Enrollment Controls (http://advising.psu.edu/administrative-enrollment-controls) will use LionPATH’s Update Academics to request entrance to the major. To participate in this process, students will actively request entrance to administratively controlled majors when they are within an established credit window, have completed specified courses, and have earned the stated grade-point average.

Students with questions about entering a major should contact the appropriate advising center (https://dus.psu.edu/advising-centers).

READ SENATE POLICY 37-30: ENTRANCE TO AND CHANGES IN MAJOR PROGRAMS OF STUDY (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/37-00-entrance-to-a-college-or-major/#37-30)

READ SENATE POLICY 54-56: DROPS BY COLLEGE (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/54-00-academic-progress/#54-56APPM%20P-5%20http://undergradpsuedu/aappm/P-5-administrative-enrollment-controls-for-undergraduate-majors.html)

**Administrative Enrollment Controls**

Administrative Enrollment Controls are initiated when limitations of space, faculty, or other resources in a major prevent accommodating all students who request them. Due to changing resources and demands, administrative enrollment controls (http://advising.psu.edu/administrative-enrollment-controls) are approved annually by the Office of Undergraduate Education. Examples include Accounting and Advertising/Public Relations. Entrance-to-Major Criteria must be met and Entrance-to-Major Procedures must be followed, as described in the following two paragraphs.

READ SENATE POLICY 37-30: ENTRANCE TO AND CHANGES IN MAJOR PROGRAMS OF STUDY (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/37-00-entrance-to-a-college-or-major/#37-30)

**Entrance to Majors with Administrative Controls**

**Course Work**

Certain courses may be required for entry to a major with administrative controls. A specific grade-point average may be required in some or all of these courses. Generally, students must complete specified courses by the end of their fourth semester of enrollment.

**Performance**

Applicants are considered for entrance to a controlled major on the basis of their cumulative Penn State grade-point average (GPA) at the end of the fall semester prior to their pool semester (typically the spring semester of their sophomore year). Generally, students who have a cumulative grade-point average of 3.00 or higher cannot be denied entry.

MORE INFORMATION ABOUT THE ENTRANCE TO MAJOR (http://www.registrar.psu.edu/programs_majors/entrance_major.cfm)
to the major provided that all of the other requirements for entrance have been met. However, certain controlled majors have approval for higher GPA guarantees. After all of these students have been accommodated, if there is still space, selections are made from the remaining students in the pool of applicants, starting with the highest GPA, until the approved maximum number of students to enter the major is reached. No student with less than a 2.00 cumulative GPA is accepted.

College of Enrollment
Students who apply for entrance to a controlled major must be enrolled in the college offering that major or in the Division of Undergraduate Studies (DUS). Students who want to be considered for controlled majors in more than one college should enroll in DUS to be eligible for consideration.

Exceptions
Exceptions may be considered based on the individual student’s situation. Students who have concerns about entry to a major should speak to an adviser in the appropriate college or campus academic advising and information center.

Enrollment Process
If accepted for a major, the student is enrolled in that major; no additional processing is required. If rejected from all the choices that were listed on the application to major form, the student must explore other alternatives. For assistance in this process, the student may confer with advisers in appropriate academic advising centers (https://dus.psu.edu/advising-centers) or the Division of Undergraduate Studies. (https://dus.psu.edu)

Graduation

Declare Intent to Graduate
To graduate, you must satisfy all the University, college, and major requirements that were in effect at the time of your most recent admission, or re-enrollment, as a degree candidate to the University.

Process
1. It is your responsibility to notify the University of your intent to graduate.
2. Confirm the activation period on the Academic Calendar (http://www.registrar.psu.edu/academic_calendar/calendar_.html) for the dates when you can activate your intent to graduate.
3. Using the “Apply for Graduation” link within the My Academics page in the LionPATH Student Center (http://launch.lionpath.psu.edu), you can set your intent to graduate.
   a. View LionPATH Video Tutorial on How to Apply for Graduation (https://tutorials.lionpath.psu.edu/public/S_ApplyGrad).
   b. Download LionPATH Tutorial in Microsoft Word on How to Apply for Graduation (https://tutorials.lionpath.psu.edu/public/Docs/S_ApplyGraduation.docx).
4. After the activation period expires you must contact the appropriate college office to activate or remove your intent to graduate.

Unofficial programs are distributed at the commencement ceremony. If your intent to graduate is activated after the student information has been sent to the publisher, your name will not appear in the program. For fall and spring ceremonies the data is sent during the tenth week of the semester. For the summer ceremony the data is sent during the fifth week.

READ SENATE POLICY 86-00: CANDIDATE RESPONSIBILITIES AND OPTIONS (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/86-00-candidate-responsibilities-and-options)

Graduation Requirements
At the start of the semester in which a student expects to complete the degree requirements listed below, they should follow graduation procedures.

1. A student must satisfy all University degree requirements (https://handbook.psu.edu/content/degree-requirements) that were in effect when the student first scheduled a class after their admission or most recent re-entry as a degree candidate. Requirements for a program (such as major, minor, option, honors) are those in effect at the time the student most recently entered that program. The degree audit provides students with a summary of progress toward meeting the requirements of their degree program. The audit indicates the graduation requirements that have been completed as well as those requirements that still must be satisfied.

2. Every candidate for a degree must earn a specified number of credits as a degree candidate in courses offered by the University or in approved cooperative programs established by the University Faculty Senate. For a baccalaureate degree, the minimum is 36 of a student’s last 60 credits; for an associate degree, the minimum is 18 of a student’s last 30 credits.

3. The last 60 credits required for a candidate’s first baccalaureate degree must be earned within five calendar years. An extension of time is granted for intervening military service.

4. If a student takes course(s) at another institution prior to graduating, an official transcript listing the grades and credits earned must be received by Undergraduate Admissions, 201 Shields Building, University Park, PA 16802-1294, before commencement.

5. Cumulative grade-point average must be at least a C (2.00) or better.

6. Students must complete their courses; students with Deferred Grades (DF) or No Grades (NG) will not be allowed to graduate.

7. A student must earn at least a C grade in each course designated as a C-required course in their major.

MORE INFORMATION ABOUT GRADUATION REQUIREMENTS (https://handbook.psu.edu/content/graduation-procedures)

Course Substitution
A student is expected to satisfy all University degree requirements (such as General Education (p. 2539), First-Year Seminar and Engagement (p. 2544), United States Cultures and International Cultures (p. 2544), Writing Across the Curriculum (p. 2544)) that were in effect when the student first scheduled a class after their admission or most recent re-enrollment as a degree candidate. Requirements for a program (such as major, minor, option, honors) are those in effect at the time of the student’s admission or most recent re-enrollment into that program.

A student wishing permission to deviate in any way from program requirements must have permission from the appropriate college dean.

Guidelines for Considering Course Substitution Requests
1. The course to be substituted should be in the same area as the required course or in a closely related area.
2. Substitution of a course for a previously failed required course is seldom granted.
3. Failure to schedule a required course is not sufficient reason for granting permission for a course substitution.

Student Action

1. When working on your academic plans, discuss the possibility of a substitution with an adviser. Ideally, permission for a substitution should be obtained before you enroll in the course you wish to substitute.
2. Schedule the course to be substituted. After scheduling it, obtain pertinent forms and directions in the appropriate college dean’s office to request the substitution. A course must be scheduled or completed before the substitution can be officially approved and entered on your degree audit.
3. When a substitution is approved, check your audit to verify that the substitution has been made.

MORE INFORMATION ABOUT COURSE SUBSTITUTION (https://handbook.psu.edu/content/course-substitution)

Classification of Undergraduate Students

Nondegree Students

A person enrolled in a course who is not a degree candidate or provisional student is classified as a nondegree student. A nondegree student must either hold a high school diploma or its equivalent to take undergraduate courses. Exceptions may be made by the Undergraduate Admissions Office for students currently enrolled in high school (dual-enrollment students).

A nondegree student who has not been dropped from degree or provisional status by this University or any other college or university for unsatisfactory scholarship will be listed as a nondegree regular student and may enroll in any number of credits, not to exceed the typical credit load of a full-time student per semester if criteria 1, 2, and 3 below are met. Students who have changed from degree candidates to nondegree regular or nondegree students who intend to become degree candidates must also meet criterion 4.

A nondegree student who has been dropped from degree or provisional status by this University or any other college or university because of unsatisfactory scholarship will be listed as a nondegree conditional student and may enroll in a maximum of 12 credits per semester if criteria 1, 2, 3, and 4 (on the following list) are met.

1. The student has completed the prerequisite for the courses to be scheduled or has obtained permission from the instructor to schedule the course.
2. Space is available after degree candidates and provisional students have been accommodated.
3. The student has not been dismissed or suspended for nonacademic reasons from any college or university. An applicant not in good standing at another college or university for disciplinary reasons must consult the director of the Office of Judicial Affairs for admission clearance.
4. The student has obtained academic advising/counseling from an adviser/counselor designated by the academic unit to which admission, or reinstatement and re-enrollment, is desired.

Limitations to Enrollment as a Nondegree Student

A student in nondegree status (regular or conditional) may remain in that status for a maximum of 30 credits, at which time the student must be accepted into a degree program to continue taking credit courses. Nondegree conditional students must achieve a semester grade point average of 2.01 or higher every semester or will be dismissed from the University and may only re-enter through the academic renewal process. Students in nondegree status who are not eligible for a degree program after completing 30 credits may continue to take credit courses provided a semester grade-point average of more than 2.00 continues to be earned and they have written support from their intended major. Students who do not meet these provisions will be dropped and may only reenter Penn State through the academic renewal process. Nondegree regular students who are in good academic standing and do not intend to earn a degree may continue taking credit courses as long as a cumulative grade point average of 2.00 is maintained.

NOTE: A student must be admitted, or reinstated and re-enrolled, as a degree candidate to apply the credits earned as a nondegree student toward fulfilling the requirements for a degree. The dean of the college or school of enrollment shall decide which credits may be used to fulfill the degree requirements.

Obtaining an Application

A nondegree application can be obtained from the Office of the University Registrar (http://www.registrar.psu.edu) or by contacting the Registrar’s office at any University location.

Admission of Nondegree Student as a Degree Candidate

A nondegree student may apply for admission as a baccalaureate degree candidate with advanced standing to a college or school of the University, or to the Division of Undergraduate Studies, upon completion of at least 18 credits earned at this University with at least a 2.00 cumulative grade-point average. An applicant who has completed at least the equivalent of two years of baccalaureate degree work before applying for admission as a baccalaureate degree candidate must have the approval of either the dean of the college or school in which enrollment is desired or of the director of the Division of Undergraduate Studies if the student wants to enroll in that division. To be eligible for degree admission, the nondegree student must meet the academic requirements of the University and the college or school in effect at the time of application.

Provisional Students (Degree Seeking)

An applicant seeking to pursue a degree program and holding a high school diploma or its equivalent but without the criteria required for admission as a degree candidate may be accepted as a provisional student and enroll in credit courses, if space is available, to pursue a program leading to either a baccalaureate or associate degree if the following criteria are met:

1. The student is making satisfactory progress toward admission as a degree candidate. Progress is satisfactory if a student has completed 18 credits with a minimum cumulative grade-point average of 2.00 (on a 4.00 scale). If a student has completed 18 credits with less than a 2.00, then he or she is given a warning. A student who has completed 27 credits with a cumulative grade-point average of less than 2.00 will not be permitted to enroll as a provisional student in any subsequent semester unless the student has earned more than a 2.0 grade-point average in the most recently completed semester. No student, regardless of cumulative grade-point average, who has completed 36 credits will be permitted to enroll as a provisional student in any subsequent semester.
2. There is space available after degree candidates have been accommodated.
3. The student has not been dropped for unsatisfactory scholarship from any college or university previously attended. If a provisional
applicant attended another college or university and attempted 18 or more semester credits within the last four calendar years, the applicant must have at least a 2.0 (on a 4.0 scale) cumulative collegiate average. However, if it has been four or more calendar years since the applicant attended the other college or university and the cumulative grade-point average is less than 2.0, the applicant is eligible for provisional admission consideration.

4. The student has not been dismissed or suspended for nonacademic reasons from any college or university. An applicant not in good standing at another accredited college or university for disciplinary reasons must consult with the director of the Office of Judicial Affairs for admissions clearance.

NOTE: An applicant holding a baccalaureate degree or higher is not eligible to enroll as a provisional student. The applicant is referred to the graduate nondegree program.

**Admission of Provisional Student as a Degree Candidate**
A provisional student may apply for admission as a baccalaureate degree candidate with advanced standing to a college or school of the University, or to the Division of Undergraduate Studies, upon completion of at least 18 credits with at least a 2.00 cumulative grade-point average. All these credits must be earned at this University. To be eligible for admission, the provisional student must satisfy the academic requirements of the University and the college of enrollment.

**Academic Progress**

**Academic Progress**
To graduate, a degree candidate must complete the requirements for the candidate’s major and earn at least a C (2.00) average for all courses taken at this University as stated in 82-40, subject to the conditions of 51-00. When a student fails to make adequate progress towards meeting and maintaining this 2.00 grade-point average, various academic progress statuses are used to serve as notification of such failure and to assist the student in correcting his/her academic difficulties. These statuses include academic warning (54-20) and academic suspension (54-40).

READ SENATE POLICY 54-00: ACADÉMIC PROGRESS (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/54-00-academic-progress)

**Good Standing**
A student must have a cumulative grade-point average of 2.00 or higher to be considered in good standing to declare a major and to graduate from the University. A student will receive notification at the end of each semester when his/her semester grade-point average drops below a 2.00.

READ SENATE POLICY 54-10: GOOD STANDING (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/54-00-academic-progress/#54-10)

**Academic Warning**
Academic warning serves as official notification that the student has failed to earn a 2.00 cumulative grade-point average. A student placed on academic warning will have a hold placed on registration and will be required to meet with an academic adviser in order for this registration hold to be removed.

A student in academic warning status may continue to enroll for classes as long as the semester grade-point average continues at a 2.00 or higher. To remove academic warning, the cumulative grade-point average must be 2.00 or higher. A student in academic warning who fails to maintain a semester grade-point average of 2.00 or higher will be academically suspended (54-40).

READ SENATE POLICY 54-20: ACADEMIC WARNING (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/54-00-academic-progress/#54-20)

**Academic Suspension**
Academic suspension is an official notification that a student has earned a semester grade-point average of less than 2.00 while on academic warning. A student who has been academically suspended may not schedule courses at the University for two consecutive semesters (Note: Summer session is equal to one semester and includes all courses offered after Spring semester and before Fall semester). A student returning from academic suspension must apply for re-enrollment as defined in policy 58-00 (or admission, if he/she is a degree-seeking student conditionally enrolled in DUS) and returns to the University in warning status, with his/her former cumulative grade-point average, and with a hold placed on the registration. The student must receive written support obtained in the college/major (or DUS) the student intends to pursue.

A student can be academically suspended from the University two times. If, after two suspensions the student fails to achieve at least a 2.00 semester GPA, the student is subject to academic dismissal (54-50). A student may apply for academic renewal four years after academic dismissal.

READ SENATE POLICY 54-40: ACADEMIC SUSPENSION (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/54-00-academic-progress/#54-40)

**Academic Dismissal**
A student who has been placed on academic suspension two times and fails to achieve at least a 2.00 semester GPA is subject to academic dismissal and is no longer permitted to take courses at the University. After a period of four calendar years, a student who has been academically dismissed from the University may seek re-enrollment to the University by requesting academic renewal (54-90).

READ SENATE POLICY 54-50: ACADEMIC DISMISSAL (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/54-00-academic-progress/#54-50)

**Drops by Colleges**
1. The dean of the college, subject to the review of the faculty of the college, may require that a candidate be disenrolled from a major in the college or from the college for failure to meet academic retention standards of the major or the college. Academic retention standards applicable to any student shall be those in effect at the time of the student’s most recent admission to the major or college. A student required to disenroll from a major may transfer directly to another major subject to Section (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/37-00-entrance-to-a-college-or-major) 37-00 (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/37-00-entrance-to-a-college-or-major) or may be admitted to the Division of Undergraduate Studies subject to Section 39-00 (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/39-00-division-of-undergraduate-studies), expecting transfer to another major later. If not accepted for enrollment in another major or in the Division of Undergraduate Studies, the candidate will be dropped from degree status. A candidate who is disenrolled from a
major and who previously has completed the allowed enrollment time limit of the Division of Undergraduate Studies, as specified in Section 39-50 (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/39-00-division-of-undergraduate-studies/#39-50), may be allowed one additional semester of enrollment in that division. Failure to relocate into another major in the specified time will cause the candidate to be dropped from degree candidacy under Section 39-80 (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/39-00-division-of-undergraduate-studies/#39-80) unless Section 54-52 applies.

2. The dean of the college, subject to the review of the faculty of the college, may at any time recommend to the President that a candidate enrolled in that college be dropped as a degree candidate at the University if the candidate is, in the opinion of the faculty, not adaptive to the work of the college.

READ SENATE POLICY 54-56: DROPS BY COLLEGE (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/54-00-academic-progress/#54-56)

**Academic Renewal**

Students, including those who have been academically warned, suspended, or dismissed, may request approval for Academic Renewal and Re-enrollment if:

- They have a cumulative grade-point average less than 2.00 and
- They have been absent from Penn State for at least four calendar years during which they have not been enrolled in any Penn State credit courses.

If Academic Renewal is granted:

- The student’s cumulative average will start over at 0.00.
- All prior courses and grades remain unchanged on the student’s academic record.
- The notation of Academic Renewal will be recorded on the student’s transcript.
- Courses passed with a grade of “C” or better during the earlier enrollment and approved by the dean of the college may be used to fulfill graduation requirements.
- Courses taken prior to Academic Renewal will not count towards the repeated courses limit as specified in Policy 47-80.

READ SENATE POLICY 54-90: ACADEMIC RENEWAL (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/54-00-academic-progress/#54-90)

**Options for Undergraduate Study**

The undergraduate degree programs of the University provide students with opportunities to increase their knowledge and understanding of the world and to grow in their individual skills and capabilities for learning, analyzing, creating, communicating, and forming good judgments. All undergraduate degree programs and courses offered by the colleges and other degree-granting units of the University are under the academic sponsorship of a faculty committed to scholarship and are implemented under the academic policies and student rules established by the University Faculty Senate. They are intended to be flexible in accommodating students interested in learning, whether through traditional or nontraditional offerings, while enrolled on either a part-time or a full-time basis. The degree programs and courses of the colleges and other degree-granting units are offered through resident or distance education. Credit courses are available to degree candidates on University campuses as well as through off-campus credit-granting activities such as internships, practicums, field trips, and foreign studies, as well as via continuing and distance education mechanisms, such as the World Campus. Students not formally admitted to degree candidacy (including provisional and nondegree students) may participate in resident offerings as time and space permit, as well as in continuing and distance education.

**Special Academic Programs**

**Environmental Emphasis Programs**

The University offers a wide range of opportunities in undergraduate programs with an environmental emphasis. Programs with an emphasis on the natural world include:

- Agriculture (various fields)
- Biology (various fields)
- Earth Sciences
- Environmental Engineering
- Environmental Systems Engineering
- Geography
- Geosciences
- Meteorology

Programs stressing human use of and impact on the natural world are offered individually or jointly by various colleges. Descriptions of individual programs and related courses emphasizing study in environmental areas can be found under these listings:

**College of Agricultural Sciences**

- Agricultural and Extension Education, Environmental Science option
- Agroecosystems Science
- Environmental and Renewable Resource Economics
- Environmental Resource Management
- Environmental Soil Science
- Forest Science
- Landscape Contracting
- Wildlife and Fisheries Science

**Penn State Altoona**

- Environmental Studies

**College of Arts and Architecture**

School of Architecture and Landscape Architecture:

- Architecture
- Landscape Architecture

**College of Earth and Mineral Sciences**

- Climatology
- Earth Sciences
- Earth Systems
- Energy, Environmental, and Mineral Economics
- Environmental Systems Engineering
- Geography
- Geosciences
- Industrial Health and Safety
• Materials Science and Engineering
• Mining Engineering
• Petroleum and Natural Gas Engineering
• Watersheds and Water Resources

College of Education
• Environmental Education Teacher Certificate (contact 228 Chambers Building, University Park campus)

College of Engineering
• Aerospace Engineering
• Agricultural and Biological Engineering
• Architectural Engineering—Environmental Option
• Chemical Engineering
• Civil and Environmental Engineering
• Electrical Engineering
• Engineering Science
• Industrial and Manufacturing Engineering
• Mechanical and Nuclear Engineering
• Science, Technology, and Society

College of Health and Human Development
• Recreation and Park Management

Intercollege Undergraduate Programs
• Environmental Inquiry
• Marine Sciences

International Programs

Reserve Officers’ Training Corps (ROTC)
The ROTC Programs were established to develop cadets and midshipmen mentally, morally, and physically and to imbue them with the highest ideals of duty and loyalty, in order to commission college graduates as officers of character who possess a basic professional background and are motivated toward careers in military service.

MORE INFORMATION ABOUT ROTC (p. 2623)
READ SENATE POLICY 82-40: ROTC CREDIT (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/82-00-and-83-00-degree-requirements/#83-40)

Classification of Students by Semester
Semester classification (i.e., semester standing) is determined by a student’s total credits earned. It is used by the University to establish how early a student may register, assign classes with a prerequisite semester classification, determine eligibility for change of campus, calculate tuition, and eligibility for parking on campus.

A degree candidate’s semester classification is based upon the following table of total credits earned:

<table>
<thead>
<tr>
<th>Total Credits Earned</th>
<th>Semester Classification</th>
<th>Status</th>
</tr>
</thead>
<tbody>
<tr>
<td>14.0 or fewer</td>
<td>1</td>
<td>First-Year Student</td>
</tr>
<tr>
<td>14.1 to 29</td>
<td>2</td>
<td></td>
</tr>
<tr>
<td>29.1 to 44</td>
<td>3</td>
<td>Sophomore</td>
</tr>
<tr>
<td>44.1 to 59</td>
<td>4</td>
<td></td>

READ SENATE POLICY 37-70: ENTRANCE TO AND CHANGES IN MAJOR PROGRAM OF STUDY (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/37-00-entrance-to-a-college-or-major/#37-70)

Cumulative Credits/Total Credits
Total credits earned are used to determine a student’s semester classification. Cumulative credits are used to calculate a student’s grade points when grade-point average is determined. Total credits and cumulative credits are calculated every semester and reported on the student’s grade report and transcript. Academic renewal requires a student’s total credits and cumulative credits to be recalculated.

Total Credits
Total credits earned include Penn State credits successfully completed and indicated on the student’s record by letter grades A, A-, B+, B, B-, C+, C, or D; as well as courses satisfactorily completed under the satisfactory/unsatisfactory grading system, credits earned by examination, and research credits. Total credits also include credits accepted at Penn State that have been earned in other ways, for example, credits transferred to Penn State from another institution and credits earned through the Advanced Placement Program of the College Board.

Total credits exclude courses in which a grade of F was earned and audited courses.

Cumulative Credits
Cumulative credits include the number of credits taken at Penn State and retained on the student’s schedule for a letter grade, even if a grade of F was earned.

Cumulative credits exclude credits earned by other means, for example, courses that were scheduled for satisfactory/unsatisfactory grading, credits earned by examination, credits earned with a research grade, credits earned at any other institution and transferred to Penn State, credits earned through the Advanced Placement Program of the College Board, and audited courses.

READ SENATE POLICY 37-70: ACADEMIC CLASSIFICATION OF STUDENTS BY SEMESTER (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/37-00-entrance-to-a-college-or-major/#37-70)

READ SENATE POLICY 51-00: GRADE-POINT AVERAGE (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/51-00-grade-point-average)
Registration Process

Registration Timetable
The Registration Timetable provides a schedule of when students can begin registering for classes for a specific semester. The timetable provides a chart with the minimum credits and the corresponding first date to register for each student level (e.g., undergraduate, graduate, law, nondegree). Students can determine their "minimum credits to register" by adding their total credits earned to the number of credits for which they are currently enrolled. Enrollment appointments are set in LionPATH when shopping carts open for a given semester and are not adjusted after that date.

MORE INFORMATION (http://www.registrar.psu.edu/Reg_Timetable/RegTimetable_Main.cfm)

Academic Registration Holds
When other means of communication with a student have failed, an academic registration hold may be activated to ensure the student is in communication with the appropriate person/office regarding his/her academic decisions. A hold can be placed when a student is violating a University or college policy or if the student’s academic decisions appear to be counterproductive to his/her academic success. In addition, a hold can be used to support the operation and well-being of the academic community as a whole.

Along with not allowing students to use the registration system, an academic hold also prevents any requests for an official transcript to be processed by the Office of the University Registrar.

Types of Holds
• Academic (College, enrollment unit, or campus designate) to help students fully understand the implications of their academic decisions and help them resolve outstanding academic issues. (Academic registration holds are activated as soon as a student is in academic warning or suspension.)
• Conduct (Office of Student Conduct) as a consequence of a disciplinary proceeding and failure on the student’s part to follow through with required actions for resolving an incident.
• Financial (Office of the Bursar, Housing) as a result of outstanding financial obligations with the university.
• Global Programs (International Students and Study Abroad) for an international student to ensure that proper immigration documents are completed and filed with the office as required by Department of Homeland Security regulations.
• Medical (University Health Services) due to health-related issues including insurance.

READ SENATE POLICY 34-30: ACADEMIC REGISTRATION HOLD (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/34-00-course-scheduling/#34-30)

Schedule of Courses
Registration is a continuous process at Penn State, beginning with the student’s first day to register and continuing until the first day of classes for the semester. Prior to the beginning of a new registration period, the University will release the Schedule of Courses for the upcoming semester. Students and view course offerings using the LionPATH Class Search. (https://public.lionpath.psu.edu/psp/CSPRD/EMPLOYEE/HRMS/h/?tab=PE_PT_NVT_PUBLIC_HOME)

MORE INFORMATION (http://www.registrar.psu.edu/soc)

Registering for Courses
Prior to the beginning of each semester’s registration period, students are required to complete the Pre-Registration Activity Guide in the LionPATH Student Center in order to be able to register for courses. The Activity Guide includes verification of emergency contact information as well as the Financial Responsibility Agreement (FRA), which confirms the student’s commitment and understanding to pay all tuition charges and fees associated with registering for courses. An FRA hold will remain on a student’s account and prevent him/her from registering for classes until he/she completes the Pre-Registration Activity Guide.

Once the Schedule of Courses for the upcoming semester is released, students can begin viewing the available courses using the LionPATH Class Search (https://public.lionpath.psu.edu/psp/CSPRD/EMPLOYEE/HRMS/h/?tab=PE_PT_NVT_PUBLIC_HOME). Students can find their first day to register for a given semester by using the Registration Timetable (http://www.registrar.psu.edu/Reg_Timetable/RegTimetable_Main.cfm) or viewing their Enrollment Appointment Date in the LionPATH Student Center. Before registering for courses in LionPATH, students are encouraged to meet with their academic adviser to review their plan of study and progress toward fulfilling all graduation requirements.

Courses and Credits

Course-Numbering System
These course descriptions are arranged alphabetically. If any course cannot be located readily, refer to the index. Courses are numbered as follows:

Undergraduate Courses (1 to 399): General courses accepted in fulfillment of requirements for the bachelor’s degrees.

Advanced Undergraduate Courses (400 to 499): Courses open to graduate students and to juniors and seniors and, with the special written permission of the head of the department or the chair of the program sponsoring the course, to qualified students in earlier semesters.

Graduate Courses (500 to 699; 800 to 899): Courses restricted to students registered in the Graduate School, seniors with an average of at least 3.50 (500- and 800-level only; excludes 600-level), and other students who have been granted permission to enroll by the dean of the Graduate School. These courses are described in the Penn State Graduate Degree Programs Bulletin.

Medical Courses (700-799): Courses restricted to students registered in the College of Medicine. These courses are described in the Penn State College of Medicine Programs Bulletin.

Law Courses (900-999): Courses restricted to students registered in Penn State Law and Dickinson Law. These courses are described in the Penn State Law and Dickinson Law Programs Bulletins.

Common Course Numbers
The following course numbers for which students may register have been set up for common use by major programs, with University Senate approval, to encourage innovation and provide flexibility in designing programs, but in no case may a course be scheduled for 0 credits.

First-Year Seminar 187. Listed under some liberal art-related academic headings, this course has prerequisites of first-semester standing and enrollment in the College of the Liberal Arts.
Research Project Courses 294, 494. 1-12 credits. Supervised student activities on research projects identified on an individual or small-group basis. A specific title may be used in each instance and will be entered on the student’s transcript.

Internship 295, 395, 495. 1-18 credits. Supervised off-campus, non-group instruction including field experiences, practica, or internships. Written and oral critique of activity required. A specific title may be used in each instance and will be entered on the student’s transcript.

Independent Studies 296, 496. 1-18 credits. Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses. A specific title may be used in each instance and will be entered on the student’s transcript.

Special Topics 97, 197, 297, 397, 497; 98, 198, 298, 398, 498. 1-9 credits. Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest. Several different topics may be taught in one year or semester. A specific title may be used in each instance and will be entered on the student’s transcript.

Foreign Studies 99, 199, 299, 399, 499. 1-12 credits. Courses offered in foreign countries by individual or group instruction. A specific title may be used in each instance and will be entered on the student’s transcript. These courses typically carry the International Cultures (IL) attribute.

Course Attributes and Suffixes
Attributes and attribute values are course designations that are used to define specific characteristics for courses. The search for specific types of courses uses attributes and attributes are the most important notation for a course to satisfy a given requirement.

Suffixes are letters that follow a course number and allow for easier identification of a course’s characteristics. Not all attributes and characteristics are captured in available suffixes and suffixes are not the feature used to determine if a course satisfies a requirement. The degree audit and what-if reports use attributes, not suffixes, to determine applicability of a course to a requirement.

Bachelor of Arts
Attributes
- BA: Arts
- BA: Humanities
- BA: Natural Science
- BA: Other Cultures
- BA: Quantification
- BA: Social and Behavioral Sci
- World Lang (12th unit)
- World Language (all)

Cultural Diversity
Attributes
- International Cultures (IL)
- United States Cultures (US)

Suffixes
- U: United States Cultures and/or International Cultures and Honors
- Y: United States Cultures and/or International Cultures and Writing Across the Curriculum

General Education
Attributes
- GenEd: Writing/Speaking (GWS)
- GenEd: Quantification (GQ)
- GenEd: Arts (GA)
- GenEd: Health Wellness (GHW)
- GenEd: Humanities (GH)
- GenEd: Natural Sciences (GN)
- GenEd: Social & Beh Sci (GS)
- GenEd Integrative: Interdomain
- GenEd Integrative: Linked

Suffixes
- N: Inter-Domain
- Q: Inter-Domain and Honors
- Z: Linked Course. Approved Linked Course pairs must be confirmed by the Linked Course search feature in LionPATH.

First-Year Engagement Program
Attribute
- First Year Seminar

Course Subject
- PSU: First-Year Seminar

Suffixes
- S: First-Year Seminar
- T: First-Year Seminar and Honors
- X: First-Year Seminar and Writing Across the Curriculum

Writing Across the Curriculum
Attribute
- Writing Across the Curriculum

Suffixes
- M: Writing Across the Curriculum and Honors
- W: Writing Across the Curriculum
- X: Writing Across the Curriculum and First-Year Seminar
- Y: Writing Across the Curriculum and United States Cultures and/or International Cultures

Honors Courses
Attribute
- Honors

Suffixes
- H: Honors
- M: Writing Across the Curriculum and Honors
- Q: Inter-Domain and Honors
- T: First-Year Seminar and Honors
- U: United States Cultures and/or International Cultures and Honors

Repeatable and Variable Credit Courses
If a course may be repeated, the words “per semester” follow the number of credits—for example (3 credits per semester). These courses may be repeated indefinitely unless the credits are followed by the maximum number of credits allowed, such as (3 per semester, maximum of 12).
Courses may have variable credits, such as (1-3), (2-6), or (3-10). Here, the larger number signifies the total credits that can be accumulated for the course over an indefinite number of semesters, unless otherwise specified. For example, a course listed with (1-6) could be taken six semesters for 1 credit each semester, or two semesters for 3 credits each semester, or once for 6 credits, etc.

In some courses with variable credits, students may be permitted to accumulate more than the larger number shown. Such courses will be listed as, for example, (1-3 per semester, maximum of 12).

Prerequisites, Concurrent Courses, Co-Requisite Courses, and Recommended Preparation

Prerequisites, concurrent courses, and co-requisite courses approximate the necessary specific coursework or general academic knowledge, background, or semester classification required to succeed academically in a given course.

- Prerequisites are courses or other requirements that must be completed prior to the start of a given course.
- Concurrent Courses are similar to prerequisites except that they may be taken prior to, or in the same semester as, the given course.
- Co-requisite Courses are pairs of courses required to be taken together in the same semester.

Registration in a given course is limited to students who have satisfied the stated prerequisite, concurrent, or co-requisite requirements. The course instructor has the right to permit students to take the course without having the stated prerequisite, concurrent, or co-requisite requirements if the student demonstrates mastery of the material through some other means.

Recommended Preparation relates to preparatory skills or companion courses deemed useful, but not necessary, for successful completion of a course. Recommended preparation has no bearing on registration in a given course.

READ SENATE POLICY 34-60: PREREQUISITES, CONCURRENT COURSES, CO-REQUISITE COURSES, AND RECOMMENDED PREPARATION (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/34-00-course-scheduling/#34-60)

Combined Section Classes

Multiple departments sometimes offer the same course; in LionPATH this is called a combined section class. These classes appear with the following note in the LionPATH Class Search: "This is a combined section class" and are listed with all of the departments offering the class. When a student is fulfilling the requirements of a major or a minor, a course that is cross-listed with a course required for the academic program will satisfy the requirement. A student majoring in an area of Natural Sciences, Arts, Humanities, or Social and Behavioral Sciences may not use a course in these areas that is combined with a course offered by his/her major department to satisfy a General Education requirement. A student earning a Bachelor of Arts degree may not use a course that is combined with a course offered by the department of his/her major to satisfy a B.A. requirement.

Auditing and Visiting Courses

Auditing

If a student wishes to audit a course officially and to have this fact appear on the academic record, that course must be entered on the student’s schedule with the symbol AU shown under “credits.” When a student audits a course, the credits become part of that semester’s credit load but are not used in the determination of full-time status (section 34-52). In addition, tuition must be paid for the audit. Audits are not considered in the determination of the credit standard for financial aid. No course may be added for audit if dropped for credit, or vice versa, after the add period. A student enrolled for official audit may be required to participate in class discussion, do practicum work, submit written work, and take examinations. See also Section 48-80, symbols for Course Audit.

Visiting

Students who wish to visit a course may do so, even though they are not officially enrolled for credit or for audit in that course. To visit a course, currently registered full-time students must obtain permission in advance from the course instructor. No tuition is paid for a visit. Course credits do not become part of the semester’s credit load and are not entered on the student’s academic record. Paragraph 1 relating to official audit is not applicable to the student who visits a course.

READ SENATE POLICY 34-68: AUDITING AND VISITING COURSES (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/34-00-course-scheduling/#34-68)

Credit and Credit Load

Definition of a Credit

For the typical student, a total of forty-five (45) hours of work is required to earn one credit. Course credits are earned in a variety of educational experiences. Course credit by instruction may be achieved by a variety of educational experiences that allow the student to work toward mastery of the course objectives. The Federal definition of a credit hour (used for awarding Federal student aid) provides minimum requirements that should be consistent for all credit earned by instruction regardless of delivery method. More than the minimum may be required for mastery of course objectives.

The distribution of time between class activities and outside preparation varies from course to course regardless of the type of instruction (in person, electronic, pre-recorded content delivered through resident, online, or hybrid).

READ SENATE POLICY 42-23: CREDIT REQUIREMENTS BY TYPES OF INSTRUCTION (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/42-00-acquisition-of-credit/#42-23)

Enrollment Status (Semester Credit Load)

A student’s credit load is one factor that determines his/her tuition costs. The Tuition and College Cost Estimator (https://cce.ais.psu.edu/tuition-calculator-ui/#) can be used to determine tuition based on a student’s credit load (as well as other factors: residency, semester/session, campus, college, major, and credits achieved).

Definition of Full-Time Credit Load

The University considers a student full-time if he/she schedules a total of 12 or more credits, excluding course audits, from any combination of credit courses through resident instruction, Continuing Education, or World Campus. However, different programs and agencies may have different definitions of full-time status. Students should check with the appropriate office(s) for information on their policies.

Definition and Implications of a Part-Time Credit Load

A student is considered part-time if he/she schedules less than 12 credits per semester. When considering part-time enrollment, students should be aware that a full-time credit load may be required by certain programs and agencies. Before scheduling less than 12 credits, students should
check with the appropriate office(s) (e.g., Student Aid, Intercollegiate Athletics, International Students, Schreyer Honors College, etc.), for information on their policies.

**Maintaining a Certain Credit Load (Courses with Alternative Time Frames)**

**Part-Semester Courses:** Scheduling a part-semester course that begins after the start of the semester may allow a student to maintain full-time status.

**Individualized Experiences for Credit:** A student may arrange an experience such as an independent study, internship, or research project. To discuss this alternative, the student should contact a faculty member with whom he/she would like to work.

**Credit Overload, more than 19 Credits**

To schedule more than 19 credits, a student must add the overload (https://handbook.psu.edu/content/schedule-adjustment/#overload) credits during the drop/add period (https://handbook.psu.edu/content/schedule-adjustment/#dropadd). No additional tuition is charged. When determining an overload, the Office of the University Registrar counts audit credits (https://handbook.psu.edu/content/auditing-a-course) as part of a semester credit load.

**Prior Learning Assessment, Opportunities for Earning Penn State Credit**

In addition to taking Penn State course work, students with prior college-level learning—at another college or university, in the military, in the workplace, through self-study, or in high school—may earn credits that may be applicable to their degree requirements.

Credits are awarded on the semester-hour basis. The distribution of time between class activities and outside preparation varies from course to course; for the average student, however, at least forty-five hours of work per semester planned and arranged by the University faculty are required to gain 1 credit.

The Faculty Senate's Policies and Rules for Undergraduate Students (http://senate.psu.edu/policies-and-rules-for-undergraduate-students) explains the various ways students may earn course credits. Those methods are as follows:

- Instruction, as defined in Policy 42-23 (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/42-00-acquisition-of-credit/#42-23)
- Examination, as defined in Policy 42-50 (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/42-00-acquisition-of-credit/#42-50) and discussed below
- Portfolio Assessment, as defined in Policy 42-97 (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/42-00-acquisition-of-credit/#42-97) and discussed below
- Transfer from other regionally accredited colleges and universities as defined in Policy 42-82 (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/42-00-acquisition-of-credit/#42-82) and as discussed under the heading Admission with Advanced Standing
- Transfer from colleges and universities outside the United States as defined in Policy 42-84 (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/42-00-acquisition-of-credit/#42-84)
- Validation from colleges and universities that are not regionally accredited but award associate degrees or higher as defined in Policy 42-86 (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/42-00-acquisition-of-credit/#42-86)
- Educational experiences in the Armed Services as defined in Policy 42-98 (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/42-00-acquisition-of-credit/#42-98)
- Educational credit for Training Programs in Non-collegiate Organizations as defined in Policy 42-99 (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/42-00-acquisition-of-credit/#42-99)

Additional information about earning credit can be obtained at Undergraduate Admissions Office (https://admissions.psu.edu) or Prior Learning Assessment (http://priorlearning.psu.edu).

**Advanced Placement Program of the College Entrance Examination Board**

The University cooperates with the College Board in this program. Credit may be awarded for Advanced Placement Examinations depending upon the grade earned on the examination and other factors as indicated in the following paragraphs.

A student who does advanced work in high school may take Advanced Placement Examinations that are based on college-level studies. For some examinations, the amount of credit awarded varies with an earned grade of three, four, or five. If credit is awarded, a student’s University record will carry a notation of credit, but no grade will be recorded. Credit acquired in this manner does not affect a student’s grade-point average at the University.

Limitations of credit earned through the Advanced Placement (AP) Examinations are as follows:

1. Degree programs determine whether the credits earned may be used to meet degree requirements.
2. A student who has earned credit for a particular course through AP examinations may elect to take the same course at Penn State (unless restricted by placement policies of the unit offering the course), but the duplicate credit cannot be used to meet any additional degree requirements. However, the grade earned in the Penn State course will count towards the student’s grade point average.
3. Credit(s) will be posted to the student’s record but will not appear on the student’s official transcript until the student has completed a credit-bearing course at Penn State.

General credit may be awarded for an AP examination covering material that is not the substantial equivalent of material covered in a specific University course. General credits may be used to fulfill degree requirements in any area; their use is not necessarily limited to general education or elective requirements. General credits are applied to a student’s program of study in accordance with the procedures established by the college or other degree-granting unit of enrollment. Information about the use of general credits or specific course credits earned by AP examinations in individual programs of study may be obtained from a student’s academic adviser or from the office of the dean of a student’s college.

Undergraduate students interested in receiving credit for AP examinations should arrange for their official grade reports to be sent directly from Educational Testing Service (ETS) to the Undergraduate Admissions Office, The Pennsylvania State University, 201 Shields Building, Box 3000, University Park PA 16804-3000; which is responsible for evaluating such reports and awarding credit.
The schedule of credit awarded for AP examinations may be revised as a result of a periodic review by the faculty.

Current information about AP credit awarded by Penn State can be obtained from the Undergraduate Admissions Office (https://admissions.psu.edu), advanced placement opportunities (http://admissions.psu.edu/academics/credit/ap), and test credit for prior learning (http://priorlearning.psu.edu/first-year-students).

The College-Level Examination Program of the College Board
The University cooperates with the College Board in this program, referred to as CLEP. Credit may be awarded for the CLEP examinations depending upon the score earned on the examination and other factors as indicated in the following paragraphs.

An undergraduate student who is a candidate for a degree at the University and who has earned a score equivalent to the fiftieth percentile or higher for performance on a CLEP examination, taken before or after admission to degree candidacy, may receive credit as indicated in the schedule of credits linked below. If credit is awarded, a student’s University record will carry notation of credit, but no grade will be recorded. Credit acquired in this manner does not affect a student’s grade-point average at the University.

Limitations of credit earned through the CLEP examinations are as follows:

1. Degree programs determine whether the credits earned may be used to meet degree requirements.
2. A student who has earned credit for a particular course through CLEP examinations may elect to take the same course at Penn State (unless restricted by placement policies of the unit offering the course), but the duplicate credit cannot be used to meet any additional degree requirements. However, the grade earned in the Penn State course will count towards the student’s grade point average.
3. Credit(s) will be posted to the student’s record but will not appear on the student’s official transcript until the student has completed a credit-bearing course at Penn State.
4. The total number of credits that may be awarded from CLEP examinations is limited to 60 credits.

General credit may be awarded for a CLEP examination covering material that is not the substantial equivalent of material covered in a specific University course. General credits may be used to fulfill degree requirements in any area; their use is not necessarily limited to General Education or elective requirements. General credits are applied to a student’s program of study in accordance with the procedure established by the college or school of enrollment. Information about the use of general credits or specific course credits earned by CLEP examinations in individual programs of study can be obtained from a student’s academic adviser or from the office of the dean of a student’s college or school.

Undergraduate students interested in receiving credit for CLEP examinations should arrange for their official score reports to be sent directly from Educational Testing Service (ETS) to the Undergraduate Admissions Office, The Pennsylvania State University, 201 Shields Building, Box 3000, University Park, PA 16804-3000, which is responsible for evaluating such reports and awarding credit.

The schedule of credit awarded for CLEP examinations may be revised as a result of periodic review by the faculty.

Current information about CLEP credit awarded by Penn State can be obtained from the Undergraduate Admissions Office (https://admissions.psu.edu). The schedule of credit awarded for CLEP examinations also can be obtained from College-Level Examination Placement (http://admissions.psu.edu/academics/credit/clep) and test credit for prior learning (http://priorlearning.psu.edu/earn-credit/testing).

International Secondary Schooling and International Baccalaureate
International Secondary Schooling—A student who does advanced work in a secondary school in another country may receive consideration for transfer credit when the examinations taken are based on college-level studies.

Credit may be awarded for advanced work in international secondary schools. The World Education Series, published by the American Association of Collegiate Registrars and Admissions Officers, shall be used as a guide in making decisions on the awarding of credit for course work completed at an advanced level in international secondary schools. The number of credits awarded will reflect the introductory sequence in that subject at Penn State. If credit is awarded, a student’s University record will carry a notation of credit, but no grade will be recorded. Credit acquired in this manner does not affect a student’s grade-point average at the University.

Limitations of credit earned through review of advanced-level international secondary schooling are as follows:

1. Degree programs determine whether the credits earned may be used to meet degree requirements.
2. A student who has earned credit for a particular course through advanced-level international secondary schooling may elect to take the same course at Penn State (unless restricted by placement policies of the unit offering the course), but the duplicate credit cannot be used to meet any additional degree requirements. However, the grade earned in the Penn State course will count towards the student’s grade point average.
3. Credit(s) will be posted to the student’s record but will not appear on the student’s official transcript until the student has completed a credit-bearing course at Penn State.
4. The total number of credits that may be awarded from International Secondary Schooling is limited to 60 credits.

A student interested in receiving credit for advanced-level international secondary schooling should arrange for an official grade report to be sent directly from the secondary school or the examining board to the Undergraduate Admissions Office. The Undergraduate Admissions Office is responsible for evaluating such reports and awarding credit.

International Baccalaureate — A student who does work based on college-level studies in an International Baccalaureate program in a secondary school may take the Higher Level examinations.

Credit may be awarded for Higher Level examinations of the International Baccalaureate depending upon the grades earned on the examination. Subjects examined at the Higher Level with an earned grade of 5 or higher will be considered for transfer credit. The number of credits awarded will reflect the introductory sequence in that subject at Penn State. If credit is awarded, a student’s University record will carry notation of credit, but no grade will be recorded. Credit acquired in this manner does not affect a student’s grade-point average at the University.

Limitations of credit earned through the Higher Level examinations are as follows:

1. Degree programs determine whether the credits earned may be used to meet degree requirements.
2. A student who has earned credit for a particular course through International Baccalaureate examinations may elect to take the same course at Penn State (unless restricted by placement policies of the unit offering the course), but the duplicate credit cannot be used to meet any additional degree requirements. However, the grade earned in the Penn State course will count towards the student's grade point average.

3. Credit(s) will be posted to the student's record but will not appear on the student’s official transcript until the student has completed a credit-bearing course at Penn State.

A student interested in receiving credit for the Higher Level examinations of the International Baccalaureate program should arrange for an official grade report to be sent directly from the secondary school to the Undergraduate Admissions Office. The Undergraduate Admissions Office is responsible for evaluating such reports and awarding credit.

Current information about Advanced-Level exam credit or International Baccalaureate credit awarded by Penn State can be obtained from the Undergraduate Admissions Office (https://admissions.psu.edu), credit awarded by A-Level exam (http://admissions.psu.edu/academics/credit/a-levels), credit awarded by IB exam (http://admissions.psu.edu/academics/credit/ib), and test credit for prior learning (http://priorlearning.psu.edu/first-year-students).

Credit by Examination
If students have acquired substantial knowledge in a specific subject area, in some circumstances credits may be earned through successful completion of comprehensive examinations made available by the Penn State academic units that offer particular courses.

When such an examination serves as a substitute for completing all the usual requirements of a Penn State course, the credits received are described as “Credit by Examination” and are accepted as fulfilling degree requirements. Students may initiate a request for Credit by Examination for a course, although the academic department or program offering the course determines whether it will make Credit by Examination available. A grade of “C” or higher must be earned in the examination for such credit to be awarded and to appear on the student’s transcript. Credit by Examination does not result in a quality grade (A, A-, etc.) and is not included in the calculation of the student’s grade point average. Any credits earned in this manner will appear on the student transcript with the notation CRX and without a reported grade. A fee may be assessed to cover the costs of the procedure.

Current information about credit by examination credit awarded by Penn State can be obtained at earning portfolio credit (http://priorlearning.psu.edu/earn-credit/portfolio).

Penn State students may elect to schedule courses at another institution and transfer the credits to Penn State in order to meet degree requirements. Before a student schedules course work at another institution, he/she should have the credits approved for transfer and should work with an advisor to determine how the credits will apply to their academic program.

MORE INFORMATION (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/42-00-acquisition-of-credit/#42-80)
READ SENATE POLICY 42-00: ACQUISITION OF CREDIT (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/42-00-acquisition-of-credit)

Grading System
Grades for undergraduate and graduate students are reported by the following letters: A, A-, B, B+, B-, C+, C, D, or F. In addition, the symbols of SA (Satisfactory) and UN (Unsatisfactory) may be recorded on a student’s transcript in accordance with Senate Policy 49-60 (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/47-00-48-00-49-00-grades/#47-60). Courses that do not carry credit shall be graded NCP if passed and NCF if failed. The symbols of W, LD (Late Drop), R (Research) (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/47-00-48-00-49-00-grades/#49-40), DF (Deferred Grade) (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/47-00-48-00-49-00-grades/#49-40), A (Audited) (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/47-00-48-00-49-00-grades/#49-40), AUS (Audited, Regular/Satisfactory Attendance) (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/47-00-48-00-49-00-grades/#49-40), AUUJ (Audited, Unsatisfactory Attendance) (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/47-00-48-00-49-00-grades/#49-40), and CRX (Credit by Examination) (http://senate.psu.edu/policies-
Grades and Grade Points

Grades are assigned to individual students on the basis of the instructor's professional judgment of the student's scholastic achievement. Instructors should provide written (paper or electronic form) notification of the basis for grades to students on or before the first class meeting.

MORE INFORMATION (http://www.registrar.psu.edu/grades/grading_system.cfm)

READ SENATE POLICIES 47-00, 48-00, AND 49-00: GRADING SYSTEM (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/47-00-48-00-and-49-00-grades/#47-20%20http://senate.psu.edu/policies-and-rules-for-undergraduate-students/47-00-48-00-and-49-00-grades)

GPA

The number of grade points obtained by a student in any course is computed by multiplying the number of credits in the course by the grade-point equivalent of the grade received in the course. Courses taken under the satisfactory/unsatisfactory grading system are not used in computing grade points.

READ SENATE POLICY 51-30: METHOD OF CALCULATION OF GRADE POINTS (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/51-00-grade-point-average/#51-30)

Semester GPA

Semester GPA applies to courses completed in a specific semester.

Cumulative GPA

A student's cumulative grade-point average is the weighted mean value of all grade points earned either by enrollment or examinations in courses at the University. The cumulative GPA for a student who is completing more than one undergraduate major program, either a sequential or concurrent degree, will be computed using the grades earned in all courses taken at the University, except for the following: (Note: the words student and undergraduate student are used to designate a baccalaureate or associate degree candidate, or a nondegree student.)

1. a baccalaureate degree candidate who has completed associate degree 800-level courses – cumulative grade-point average will be based on all courses completed, other than associate degree 800-level;

2. a student who has been approved for academic renewal–cumulative grade-point average will be computed in accordance with Senate Policy 54-90 (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/54-00-academic-progress/#54-90).

READ SENATE POLICY 51-50: CUMULATIVE GRADE-POINT AVERAGE (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/51-00-grade-point-average/#51-50)

Deferred Grades

If, for reasons beyond the student’s control, a student is prevented from completing a course within the prescribed amount of time, it is possible to have the grade for that course deferred for completion at a later date. In order to receive a deferred grade: 1) permission must be requested by the student and granted by the instructor before the beginning of the final exam period of the semester in which the course is taken; and 2) approval must be given by the instructor of the course. In an emergency situation in which the instructor is not available, a student may obtain authorization for a deferred grade from the dean of the college in which the student is enrolled.

If permission for a deferred grade is granted, the symbol DF will appear on the student’s transcript until the course has been completed. Courses with a deferred grade will not be included in the grade-point average calculations.

MORE INFORMATION (http://www.registrar.psu.edu/grades/deferred.cfm)

No Grade

If an instructor does not submit a grade for a student by the grade-reporting deadline and a deferred grade was not requested and approved, the symbol NG (no grade) appears on the student’s transcript until a grade is submitted. If a student receives an "NG" in place of a permanent grade, the grade-point average is calculated and appears with the letter "I" (incomplete) printed next to the course on the grade report and transcript. Students should contact their instructor (or the department offering the course) as soon as possible to determine what needs to be done so that a grade can be assigned.

The NG must be reconciled within five weeks following the grade reporting deadline. If a grade is not forthcoming by that deadline, the Office of the University Registrar will automatically change the NG to an F.

A NG grade that is automatically converted to an F can later be corrected in accordance with Senate Policy 48-30 (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/47-00-48-00-and-49-00-grades/#48-30). Students with NG on their transcripts will not be allowed to graduate.

MORE INFORMATION (http://www.registrar.psu.edu/grades/no_grade_reported.cfm)

READ SENATE POLICY 48-50: NO GRADE (NG) (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/47-00-48-00-and-49-00-grades/#48-50)

Satisfactory/Unsatisfactory Grades

Students who do not want to receive a letter grade for a credit course may choose the satisfactory/unsatisfactory "SA/UN" grading system subject to the regulations of the University (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/47-00-48-00-and-49-00-
Final examinations fulfill two important academic objectives; student integration of instructional material and end-of-semester evaluation of student achievement. However, valid means other than the final examination exist for accomplishing these objectives (e.g., term paper, final project report, take-home examinations, etc.). Course instructors determine which of these methods is most appropriate and effective in each undergraduate credit course taught.

MORE INFORMATION (http://www.registrar.psu.edu/exams/final.cfm)

Re-Enrollment
The University recognizes that a student’s progress toward an undergraduate degree may be interrupted for a variety of reasons. A student who was once admitted or enrolled as a degree candidate and wants to resume study is required to apply for re-enrollment consideration. Re-enrollment is appropriate for students who:

- withdrew from the University;
- interrupted continuous degree enrollment during fall/spring semester;
- were dismissed or suspended for non-academic reasons;
- invalidated a leave of absence;
- plan to return for a second associate or baccalaureate degree;
- plan to return for graduation;
- voluntarily changed your enrollment status to nondegree.

To apply for re-enrollment, students should visit the Office of the University Registrar website to complete and submit the Undergraduate Re-Enrollment Form (http://www.registrar.psu.edu/returning_university/re_enrollment.cfm). Students who left in good standing and who are re-enrolling in their previous major (providing the major is not controlled) will be approved to re-enroll. Every re-enrollment request will be reviewed and a decision letter will be sent to the student.

The deadline to submit a re-enrollment application for a given semester is 5:00 p.m. on the Friday before the first day of classes of that semester.

MORE INFORMATION (http://www.registrar.psu.edu/returning_university/re_enrollment.cfm)

READ SENATE POLICY 58-00: RE-ENROLLMENT AS A CANDIDATE (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/58-00-re-enrollment-as-a-degree-candidate)

Withdrawal
A student who is unable to complete a schedule of courses for a given semester may withdraw from enrollment in all courses at the University. Students may withdraw any time up to and including the last day of classes, before the final examination period begins. Withdrawal will terminate enrollment in credit courses for current and future semesters except in the use of summer-only withdrawal. Withdrawal results in the symbol W being recorded as the course grade on a student’s official transcript.

If a student is a degree candidate, then at the time of withdrawal from enrollment in courses the student also withdraws from the university as a degree candidate. Thus, to enroll in courses at a later time as a degree candidate, a request for re-enrollment as a degree candidate must be made in accordance with the policies and procedures for re-enrollment (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/58-00-re-enrollment-as-a-degree-candidate). If the person is a nondegree student who wishes to enroll in courses at a later time, the policies and procedures given in Senate Policy 14-00 (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/14-00-non-degree-students) must be followed. It is important to note that
withdrawals will delay normal degree progress and may have financial implications. Students are encouraged to contact their academic adviser to discuss alternatives.

To initiate a withdrawal, students should visit the Office of the University Registrar website, and complete and submit the Withdrawal Form (http://www.registrar.psu.edu/leaving_university/withdrawal.cfm).

**Summer-Only Withdrawal**

If a student wants to withdraw from summer classes but retain his/her fall class schedule, then the student should enter "Summer Only" as the effective semester on the Withdrawal Form. Re-enrollment is not required following a summer-only withdrawal. Please note, a summer-only withdrawal is not available for newly admitted undergraduate students during their summer of admission. New summer admits must process a regular withdrawal as outlined above.

MORE INFORMATION (http://www.registrar.psu.edu/leaving_university/withdrawal.cfm)

**Military Withdrawal**

Military withdrawal only is available to students who:

1. are actively serving members (Active Duty and Reserve Duty Components) of the U.S. armed services (not a contractor or civilian working for the military), and
2. are ordered to relocate and, as a result, are unable to meet class attendance and other participation requirements, including web-based activities.

Students called to active duty during a semester or session should initiate a military withdrawal. Students should contact the campus Registrar and present a copy of the military orders with formal correspondence on unit letterhead signed by the commander requesting military withdrawal from Penn State due to orders. The formal correspondence must include the Unit commander contact information and verification of the duration and location of the pending assignment.

Students who process a military withdrawal:

- will not be charged tuition for the semester of withdrawal.
- will be charged a housing assessment to cover expenses already incurred in university housing.
- will have unused meal plan points refunded.
- are eligible for "military re-enrollment" to the University, assuring the student access to the same major and location as was assigned at the time of withdrawal.
- will have the re-enrollment fee waived if they are an undergraduate student. There is no re-enrollment fee for graduate students.
- will have a notation placed in the Special Actions and Notes section of their transcript indicating a "military" withdrawal.

MORE INFORMATION (http://www.registrar.psu.edu/leaving_university/withdrawal.cfm)
are offered by the University. Though each campus cannot offer every academic program or every course, academic advisers can help students to understand their options for completing degree programs across the University. In some instances, admission to some academic programs is restricted, and students must meet specific requirements once at Penn State to gain entrance. In other cases, admission to certain academic programs must be approved when a first-year student first enters the University; transfer into these programs at a later point in a student’s career is not possible. For these reasons, it is imperative that a student understands both program and course limitations at the campus of enrollment.

Though many programs at Penn State allow varying degrees of flexibility, it is important for students to engage academic advising on a regular basis to discuss their academic plan. An early decision to pursue a highly structured program enables the student to complete the program in the optimum length of time by taking the required courses in a sequence that allows the smoothest progression from one level to the next. Even the most regulated programs, however, allow choices within given boundaries. Other programs allow a considerable range of choices in the completion of the requirements. Students should be aware of possible difficulties in transferring from a flexible program to a more highly structured program. Whether a program is highly structured or quite flexible, it is extremely important that the student understand program requirements when enrolling in the University.

New Student Orientation

Penn State provides all new students the opportunity to attend a comprehensive orientation program, which is organized by the Office for Student Orientation and Transition Programs (SOTP). SOTP partners with the Division of Undergraduate Studies and other units to offer new students a thorough introduction to life on campus, an overview of General Education requirements, and the opportunity to actively discuss individual academic plans with an academic adviser. In addition to providing students an opportunity to register for appropriate classes, the overall objective of New Student Orientation (http://orientation.psu.edu) is to establish the academic expectations and community standards that shape and inform the learning environment at Penn State.

Information for New Students

The Office for Student Orientation and Transition Programs provides first-year students, advanced standing, and change-of-campus students at the University Park campus with comprehensive information regarding the essential academic and student development opportunities of the campus and the University in general beginning with a new student’s acceptance to a campus and continuing through completion of their first semester.

Through programs offered in cooperation with the colleges’ academic units and various student service operations, new students are introduced to the intellectual and scholarly expectations of the University, to the skills needed for advanced study and lifelong learning, and to the student development opportunities with academic merit. In addition, this office helps inform students of the required procedures for matriculation and offers a perspective on college life, including practical information about important dates, times, and locations (e.g., arrival day, first day of classes, course drop/add).

During Welcome Week each semester, new students receive instruction and advice about their courses of study, including help with registration and class schedule adjustments, and they participate in special activities.

Course Placements
Placement in Mathematics, Chemistry, and English

During New Student Orientation (NSO), academic advisers assist new students in evaluating their educational plans by providing them, prior to initial registration, with a review of placement test results along with individualized educational planning and academic advising. The testing component of NSO is used for educational planning and academic advising purposes, to determine a student’s appropriate starting levels in mathematics and chemistry course sequences. English composition course placement is determined by the SAT-W score.

All students admitted to Penn State have demonstrated the ability to succeed academically. Academic success depends on students developing new study skills, refining time management strategies, and actively use learning resources. In addition to these factors, students are more successful in collegiate-level mathematics, chemistry, and English courses when they begin in courses that match their readiness.

Entering first-year students plan their first-semester schedules as part of NSO, with assistance from academic advisers in their unit of enrollment. Course selections are guided by a student’s academic goals, their prior academic experiences, highest SAT-Evidence-Based Reading score, and highest ALEKS Math Assessment score.

Mathematics Placement

As part of General Education, all Penn State baccalaureate degree programs require a minimum of six credits in quantification; associate degree programs require a minimum of three credits. General Education quantification courses have the suffix "GQ." GQ courses are available in mathematics, statistics, computer science, and philosophy.

When choosing GQ courses, students should consider their interests, background in mathematics, the focus of majors being considered, and the results of mathematics assessment. Most science/engineering programs require MATH 140, while some liberal arts/professional programs (particularly business-focused programs) require MATH 110.

All new first-year students are required to take a web-based, artificially intelligent mathematics assessment called ALEKS as part of their preparation for NSO. If a student has not yet earned college credit for the pre-requisite course, the ALEKS score is used to determine placement in calculus-sequence MATH courses. Students who wish to improve their placement can use ALEKS prior to the start of their first semester to complete online learning modules and re-test. Students are not permitted to take a course that is above their demonstrated readiness level.

The chart below shows the required ALEKS placement for GQ courses. Decisions about appropriate quantification (GQ) courses should be discussed with an academic adviser.

*Course not offered at all Penn State campuses.

For courses not listed above, choose any appropriate GQ course for your intended major and for which you have met the pre-requisite.

Chemistry Placement

Many science, engineering, and health-focused programs require CHEM 110. CHEM 110 is a rigorous course involving significant mathematical manipulation and algebra proficiency. Success in CHEM 110 depends on a student’s chemistry experience and algebra proficiency. Therefore, placement into introductory chemistry courses is based on a student’s prior background in chemistry and results of the mathematics placement test as indicated by their ALEKS score. Additional evaluation may be done during the beginning of the semester.

*Any students who feel their chemistry preparation may be weak should consider also scheduling CHEM 108.

English Placement

All majors require a first-year English composition course. ENGL 15 (Rhetoric and Composition), ESL 15 (Composition for American Academic Communication II), ENGL 30 (Honors Rhetoric and Composition), or ENGL/CAS 137H (Rhetoric and Civic Life I) all satisfy that requirement.

Initial English composition placement is based on the SAT-Evidence-Based Reading exam score and may be adjusted after a conversation with an academic adviser. Most students will take ENGL 15. Students with strong writing preparation may choose an honors composition course. Students whose SAT-READ scores suggest gaps may need some extra support to be successful in ENGL 15.

*Students with scores that are near placement cutoffs should use the guide below and consult with an academic adviser.

Guide to Course Selection to help students choose the most appropriate English composition course

Guide to course selection

![Guide to course selection](chart.png)
3. What were your grades in English in your junior and senior years of high school?        Mostly C or less + and B-
Mostly between C Mostly B or higher

4. To what extent are you familiar with basic writing tasks such as planning, editing, composing, and revising?
I am unfamiliar with these tasks or not confident I can perform these tasks with a fair degree of competence I possess the skills needed to perform these tasks with competence

5. If you had a job that required writing, how successful were your writing efforts?
Need substantial improvements Moderately successful to successful Highly successful

6. Do you consider yourself a confident and competent writer? No Yes Very much so

**ENGL 4 is not available at University Park campus. In place of ENGL 4, University Park students should schedule ENGL 15 Enhanced or may consider scheduling ENGL 15 and ENGL 5.

Placement Policy for World Language Courses

Placement Policy

Students who have studied a world language within four years immediately before admission to Penn State may enroll in that language for credit based on the number of Carnegie units prior to admission. (A Carnegie "unit" refers to one course level of a world language — French 1, French 2, French 3, etc. — equivalent to one year of study and accredited as such by the school.) If a period of four or more years has elapsed between a student’s graduation from high school and admission to college, he/she may be eligible to enroll in level 1 of the language studied in high school.

Units of Study Prior to Admission to Penn State Language Level
Fewer than two Course Level 001 (4 cr.)
Two or three Course Level 002 (4 cr.)
Four or more Course Level 003 (4 cr.)

Students may choose to audit a lower-level course but may not receive credit for it. Students who feel they are qualified for a more advanced course, or students seeking proficiency certification or credit by examination, if available, should contact the appropriate language department for details. For more information, see College of the Liberal Arts policies (http://slil.psu.edu/language-portal).

Non-Course Work Knowledge of World Languages

Students who have acquired a knowledge of a world language by means other than course work (e.g., family background, travel or study in a foreign country, participation in noncredit summer language programs, etc.) may enroll in elementary and intermediate courses in that language only with permission of the course coordinator or department head. Once students have been placed in a skills course, they may not receive credit for a lower-level skills course.

Students whose native language is not English may not receive credit (through course work or examination) for elementary and intermediate courses in their native language. Enrollment in skills courses beyond intermediate level (e.g., conversation, composition) must be approved by the department head.

Accelerated and Intensive Courses

Students may choose to enroll in accelerated courses such as French 111 and 112, German 11 and 12, or in Penn State’s Summer Intensive Language Institute courses. Because the objectives of these courses are somewhat different, students may schedule them for full credit even if they have studied the language previously.

Credit by examination (fee charged), when available, is offered to the extent allowed by the placement policy. For example, a student who has two units of secondary school foreign language and chooses to begin study of that language at the third level instead of the second (Course Level 003, 4 cr.), may receive credits for the second level (Course Level 002, 4 cr.), but not for the first level (Course Level 001, 4 cr.). See the appropriate department for details.

QUESTIONS

Questions should be addressed to the course coordinator or department head of the particular language department concerned.

First-Year Seminars and Engagement Plan Rules/Regulations

A student’s campus of enrollment determines whether or not he/she is required to complete a first-year seminar (FYS). Campuses that do not require an FYS provide students with a first-year engagement experience. If a student changes their campus location, the student’s degree audit will be changed to indicate whether the student needs to fulfill this requirement based on established criteria.

View Approved First-Year and Campus Engagement Plans (http://senate.psu.edu/faculty/resources-for-first-year-engagement-plans/approved-first-year-engagement-plans).

Degree Audit

A degree audit is an analysis that enables the student and their adviser to assess the student’s academic progress and unfulfilled baccalaureate, associate degree, or minor requirements. The audit is a valuable tool for academic planning and course selection because it matches the courses that the student has taken with the requirements of their degree program or anticipated program.

Academic Integrity

Definitions and Expectations

Academic integrity is the pursuit of scholarly activity in an open, honest and responsible manner. Academic integrity is a basic guiding principle for all academic activity at The Pennsylvania State University, and all members of the University community are expected to act in accordance with this principle. Consistent with this expectation, the University’s Code
of Conduct states that all students should act with personal integrity, respect other students’ dignity, rights and property, and help create and maintain an environment in which all can succeed through the fruits of their efforts.

Academic integrity includes a commitment by all members of the University community not to engage in or tolerate acts of falsification, misrepresentation or deception. Such acts of dishonesty violate the fundamental ethical principles of the University community and compromise the worth of work completed by others.

To protect the rights and maintain the trust of honest students and support appropriate behavior, faculty and administrators should regularly communicate high standards of integrity and reinforce them by taking reasonable steps to anticipate and deter acts of dishonesty in all assignments. At the beginning of each course, it is the responsibility of the instructor to provide students with a statement clarifying the application of University and College academic integrity policies to that course.

READ SENATE POLICY 49-20: ACADEMIC INTEGRITY (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/47-00-48-00-and-49-00-grades/#49-20)

Confidentiality of Student Records
The Federal Family Educational Rights and Privacy Act (FERPA (http://www2.ed.gov/policy/gen/guid/fpco/ferpa)) is a federal regulation enacted in 1974 that protects the privacy and confidentiality of student education records. Under FERPA, institutions may not release a student’s education record without prior consent of the student, except in limited circumstances. FERPA applies to all schools that receive funds under an applicable program of the U.S. Department of Education.

At Penn State, educational records are kept by University offices to facilitate the educational development of students. Faculty and staff members may also keep informal records relating to their functional responsibilities with individual students.

Student Rights under FERPA
FERPA (https://www2.ed.gov/policy/gen/guid/fpco/ferpa) affords students certain rights with respect to their educational records (https://policy.psu.edu/policies/AD11/#C). These rights include:

• The right to inspect and review the student’s educational records. A student should submit to the University Registrar a written request that identifies the record(s) the student wishes to inspect. The University Registrar will make arrangements for access and notify the student of the time and place where the records may be inspected.

If the records are not maintained by the University Registrar, the University Registrar will advise the student of the correct official to whom the request should be addressed.

• The right to request the amendment of the student’s educational records that the student believes are inaccurate, misleading, or otherwise in violation of the student’s privacy rights under FERPA.

A student who wishes to ask the University to amend a record should write the University official responsible for the record, clearly identify the part of the record the student wants to be changed, and specify why it should be changed.

If the University decides not to amend the record as requested, the student has the right to place a written response in the student’s educational record. If the University decides not to amend the record as requested, the student will be notified of the decision and advised of the right to a hearing. The student will be provided with the correct official to whom the request should be addressed.

The right to provide written consent before the University discloses personally identifiable information from the student’s educational records, except to the extent that FERPA authorizes disclosure without consent.

One exception which permits disclosure without consent, is the disclosure to University officials with legitimate educational interests. University officials (https://policy.psu.edu/policies/AD11/#B) are University employees with general or specific responsibility for promoting the educational objectives of the University or third parties under contract with the University to provide professional, business and similar administrative services related to the University’s educational mission. Legitimate educational interests (https://policy.psu.edu/policies/AD11/#B) are defined as interests that are essential to the general process of higher education prescribed by the body of policy adopted by the governing board.

OTHER EXCEPTIONS (http://www.registrar.psu.edu/confidentiality/other_exceptions.cfm)

The right to file a complaint with the U.S. Department of Education concerning alleged failures by the University to comply with the requirements of FERPA. The name and address of the Office that administers FERPA is:

Family Policy Compliance Office
U.S. Department of Education
400 Maryland Avenue, SW
Washington, DC 20202-5901

Parents Rights Relating to Educational Records
When a student reaches the age of 18 or begins attending a postsecondary institution, regardless of age, FERPA (http://www2.ed.gov/policy/gen/guid/fpco/ferpa) rights transfer from the parent to the student. This means that parents may not obtain any of their student’s education records without the written consent of the student.

Since student grades are part of the education record, they are protected under FERPA (http://www2.ed.gov/policy/gen/guid/fpco/ferpa) and, therefore, may not be released to parents. Students may provide consent for their parent to view grades and other portions of their education record by setting up LionPATH Delegated Access (http://www.registrar.psu.edu/confidentiality/parent_rights.cfm).

It is important to note that Penn State does not have a means for students to unilaterally waive their FERPA rights. Penn State’s procedure requires each release of any portion of the student’s education record to a person or entity outside of the University to be individually approved by the student by working with the releasing department.

MORE INFORMATION FROM THE OFFICE OF THE UNIVERSITY REGISTRAR (http://www.registrar.psu.edu/confidentiality/confidentiality.cfm)

READ POLICY AD 11: UNIVERSITY POLICY ON CONFIDENTIALITY OF STUDENT RECORDS (https://policy.psu.edu/policies/AD11)

Nondiscrimination Statement
The University is committed to equal access to programs, facilities, admission, and employment for all persons. It is the policy of the University to maintain an environment free of harassment and free of
discrimination against any person because of age, race, color, ancestry, national origin, religion, creed, service in the uniformed services (as defined in state and federal law), veteran status, sex, sexual orientation, marital or family status, pregnancy, pregnancy-related conditions, physical or mental disability, gender, perceived gender, gender identity, genetic information, or political ideas. Discriminatory conduct and harassment, as well as sexual misconduct and relationship violence, violates the dignity of individuals, impedes the realization of the University’s educational mission, and will not be tolerated. Direct all inquiries regarding the nondiscrimination policy to the Affirmative Action Office, The Pennsylvania State University, 328 Boucke Building, University Park, PA 16802-5901; Email: kfl2@psu.edu; Tel 814-863-0471.

Penn State encourages qualified persons with disabilities to participate in its programs and activities. If you anticipate needing any type of accommodation or have questions about the physical access provided, please contact the Office for Disability Services, 814-863-1807, in advance of your participation or visit.

**Code of Conduct**

The Code of Conduct outlines the standard procedures and practices of the University conduct process. To be fully aware of their individual and organizational rights and responsibilities in this process, individuals and student organizations are encouraged to review the Student Code of Conduct [here](https://studentaffairs.psu.edu/support-safety-conduct/student-conduct/code-conduct).

**General Education**

General Education is the heart of the undergraduate experience. From the sciences to the arts and humanities, General Education at Penn State prepares students to thrive personally and professionally in our diverse global society. Through General Education, students acquire skills, knowledge, and experiences for living in interconnected contexts, making life better for themselves, others, and the world. As professions become more dynamic and career paths less predictable, the ability to place information into context through critical thinking, develop solutions to complex problems, and make ethical decisions become essential skills for a resilient workforce. Creative and analytical practice prepares students of all disciplines to be resourceful in the application of their knowledge towards complex problem solving and to communicate that knowledge in a variety of forms.

MORE INFORMATION [here](http://gened.psu.edu)

We invite students to challenge themselves in General Education and encourage them to make intentional course decisions that create:

**Strong Foundations**

Develop and improve upon the skills that enable you to achieve your goals.

**Transformative Exploration**

Explore unfamiliar and challenging topics and viewpoints to prepare yourself for a dynamic future.

**Integrative Learning**

Identify meaningful and useful connections to generate new ideas.

**General Education Learning Objectives**

The General Education curriculum will enable students to acquire skills, knowledge, and experiences for living in interconnected contexts, so they can contribute to making life better for others, themselves, and the world. General Education encompasses the breadth of knowledge involving the major intellectual and aesthetic skills and achievements of humanity. This must include understanding and appreciation of the pluralistic nature of knowledge epitomized by the natural sciences, quantitative skills, social and behavioral sciences, humanities, and arts. To achieve and share such an understanding and appreciation, skills in self-expression, quantitative analysis, information literacy, and collaborative interaction are necessary. General Education aids students in developing intellectual curiosity, a strengthened ability to think, and a deeper sense of aesthetic appreciation. General Education, in essence, aims to cultivate a knowledgeable, informed, literate human being.

An effective General Education curriculum shall facilitate teaching and learning through seven key objectives:

**Effective Communication**

The ability to exchange information and ideas in oral, written, and visual form in ways that allow for informed and persuasive discourse that builds trust and respect among those engaged in that exchange, and helps create environments where creative ideas and problem-solving flourish.

**Key Literacies**

The ability to identify, interpret, create, communicate, and compute using materials in a variety of media and contexts. Literacy acquired in multiple areas, such as textual, quantitative, information/technology, health, intercultural, historical, aesthetic, linguistic (world languages), and scientific, enables individuals to achieve their goals, to develop their knowledge and potential, to lead healthy and productive lives, and to participate fully in their community and wider society.

**Critical and Analytical Thinking**

The habit of mind characterized by comprehensive exploration of issues, ideas, artifacts, and events before accepting or formulating a conclusion. It is the intellectually disciplined process of conceptualizing, applying, analyzing, synthesizing, and/or evaluating information gathered from, or generated by, observation, experience, reflection, reasoning, or communication, as a guide to belief and action.

**Integrative Thinking**

The ability to synthesize knowledge across multiple domains, modes of inquiry, historical periods, and perspectives, as well as the ability to identify linkages between existing knowledge and new information. Individuals who engage in integrative thinking are able to transfer knowledge within and beyond their current contexts.

**Creative Thinking**

The capacity to synthesize existing ideas, images, or expertise in original ways and the experience of performing, making, thinking, or acting in an imaginative way that may be characterized by innovation, divergent thinking, and intellectual risk taking.
Global Learning
The intellectually disciplined abilities to analyze similarities and differences among cultures; evaluate natural, physical, social, cultural, historical, and economic legacies and hierarchies; and engage as community members and leaders who will continue to deal with the intricacies of an ever-changing world. Individuals should acquire the ability to analyze power; identify and critique interdependent global, regional, and local cultures and systems; and evaluate the implications for people’s lives.

Social Responsibility and Ethical Reasoning
The ability to assess one’s own values within the social context of problems, recognize ethical issues in a variety of settings, describe how different perspectives might be applied to ethical dilemmas, and consider the ramifications of alternative actions. Individuals should acquire the self-knowledge and leadership skills needed to play a role in creating and maintaining healthy, civil, safe, and thriving communities.

Associate Degree General Education Requirements
The associate degree General Education program consists of 21 credits that are distributed among two General Education components:

- Foundations courses in writing, speaking, and quantification (6 credits)
- Knowledge Domains in the Arts, Humanities, Natural Sciences, and Social and Behavioral Sciences (15 credits).

A summary of the applicable attributes to determine if a course satisfies a requirement is available on the University Course Description (p. 2628) page. The keystone symbol appears by the title of any course that is designated as a General Education course. Program requirements that may also satisfy General Education requirements vary for each program and are detailed on each degree requirements page.

A restriction is placed on students in majors that are closely linked to the Knowledge Domains areas of Natural Sciences, Arts, Humanities, and Social and Behavioral Sciences, in order to ensure that they participate in the full breadth of General Education. These students may not use a course in their academic major to satisfy one of the Knowledge Domains area requirements. For example, an ECON major may not use an ECON course to fulfill their social and behavioral sciences requirement.

The General Education requirements for students who enrolled at Penn State prior to Summer 2018 can be found in the Archive (p. 17).

<td>3</td>
</tr>
</tbody>
</table>

Flexibility of the Associate Degree Requirements
The General Education program extends the concept of flexibility to all aspects of the degree program. Penn State wants students to use General Education as an opportunity to experiment and explore, to take academic risks, to discover things they did not know before, and to learn to do things they have not done before.

To these ends, students may, with the permission of their adviser and dean’s representative, substitute a 200- to 499-level course for an Arts, Humanities, Natural Sciences, or Social and Behavioral Sciences course found on the General Education list. For example, a student may take a 400-level course in history and use it to meet the General Education requirement satisfied by a comparable lower level history course.

Additional University Requirements
These requirements may be completed by designated courses that also meet other degree or General Education requirements.

Total 6 credits

‡ Students may, with the permission of their adviser and dean’s representative, meet the United States Cultures (US) and International Cultures (IL) requirement through completion of an experiential learning program or practicum (one-semester or year long) approved by their college dean’s Office. Approved Penn State Education Abroad Programs may be used to satisfy the International Cultures (IL) requirement.

Baccalaureate Degree General Education Requirements
The baccalaureate degree General Education program consists of 45 credits that are distributed among three General Education components:

- foundations courses in writing, speaking and quantification (15 credits)
- knowledge Domains in the Arts, Humanities, Natural Sciences, Social and Behavioral Sciences, and Health and Wellness (30 credits)
• integrative Studies that bridges commonality and intersections between the Knowledge Domains

A summary of the applicable attributes to determine if a course satisfies a requirement is available on the University Course Description (p. 2628) page. The keystone symbol appears by the title of any course that is designated as a General Education course. Program requirements that may also satisfy General Education requirements vary for each program and is detailed on each degree requirements page.

A restriction is placed on students in majors that are closely linked to the Knowledge Domains of Natural Sciences, Arts, Humanities, and Social and Behavioral Sciences to ensure that they participate in the full breadth of General Education. These students may not use a course in their academic major to satisfy one of the Knowledge Domains requirements. For example, an Economics major may not use an economics course to fulfill their social and behavioral sciences requirement. Also, students may not count courses cross-listed with courses in their major to fulfill one of the General Education Knowledge Domain, e.g., a Theatre major may not register for / Workshop: Theatre in Diverse Cultures (THEA 208)/Workshop: Theatre in Diverse Cultures (AFAM 208) and have it count in the Arts requirement.

The General Education requirements for students who enrolled at Penn State prior to Summer 2018 can be found in the Archive (p. 17).

§ Students must complete at least 3 credits of Single Domain coursework in each of the Knowledge Domains (GA, GH, GHW, GN, GS). A student’s use of Inter-Domain courses, substitutions, or other flexibility options cannot replace this requirement.

**Flexibility of the Baccalaureate Degree Requirements**

Penn State wants students to use General Education to experiment and explore, to take academic risks, to discover things they did not know before, and to learn to do things they have not done before. To that end, the General Education program extends the concept of flexibility to all aspects of the degree program.

Students may, with the permission of their adviser and dean’s representative:

1. Substitute a 200- to 499-level course in an area of General Education for a course found on the General Education list. For example, a student may take a 400-level course in history and use it to meet the General Education requirement satisfied by a comparable lower-level history course.

2. Substitute a world language at the twelfth credit level of proficiency, as measured by the Penn State foreign language offerings, for 3 credits in any of the categories of General Education. Baccalaureate degree students may substitute study in a world/second language at the twelfth credit level of proficiency or higher for any 3 credits in any of the categories of general education only if those 3 credits are in language study beyond their degree requirements.

3. Substitute a course in one of the Knowledge Domains areas of Arts, Humanities, or Social and Behavioral Sciences, Natural Sciences, or Health and Wellness for a course in one of the other areas. For example, a student might take three courses in the Arts, and only one course in the Social and Behavioral Sciences. In another example, a student might take two courses in the Natural Sciences and two courses in Health and Wellness; or a student might take two courses in the Natural Sciences and three courses in the Humanities. This substitution is referred to as the Move 3 substitution.

4. The use of these substitutions (No. 2 and No. 3 above), either alone or in combination, may not lead to the complete elimination of any area in the Foundations or Knowledge Domains categories in the student’s general education program, nor may they be applied to reduction of credits in the same domain.

**Additional University Requirements**

± May include a First-Year Seminar; a student’s campus of enrollment determines whether or not a First-Year Seminar is required. Students at the University Park campus are required to complete at least 1 credit of first-year seminar and meet any other first-year requirements specified by their home college. Students at the Commonwealth campuses are required to complete the first-year experiences specified by their campus. First-year baccalaureate students entering Penn State should consult their enrollment home for these requirements.
‡ Students may, with the permission of their adviser and dean’s representative, meet the United States Cultures (US) and International Cultures (IL) requirement through completion of an experiential learning program or practicum (one-semester or year long) approved by their College Dean’s Office. Approved Penn State Education Abroad Programs may be used to satisfy the International Cultures (IL) requirement.

Foundations and Knowledge Domains

Descriptions and learning criteria for each of the Foundation and Knowledge Domain areas within General Education are listed here.

Foundations

Writing and Speaking (GWS)

In Writing and Speaking (GWS) courses, students do more than improve their abilities to communicate information clearly. They learn to set forth arguments persuasively and well, both orally and in writing. Students should emerge from their GWS courses as more accomplished writers and speakers, competent in a wide variety of settings.

To help students achieve GWS goals, the University provides GWS courses and an appropriate learning environment that will:

• provide opportunities for students to become increasingly effective communicators as they enter new contexts and address new audiences;
• provide opportunities for students to become increasingly accomplished in written, oral, digital, and visual communication.

GWS Student Learning Criteria

Upon successful completion of the General Education Writing and Speaking requirements, students will have increased their abilities to:

• demonstrate rhetorical and analytical skills as they explore, compose, interpret, and present a variety of texts;
• communicate effectively and persuasively to a range of audiences;
• demonstrate capacities for critical thinking, listening, and generating ideas;
• demonstrate proficiency in composing processes;
• employ the conventions of both spoken and written communication with sensitivity to context and venue.

Quantification (GQ)

In Quantification (GQ) fields, students practice and master basic mathematical and statistical skills of lifelong value in solving real-world problems. Students should learn to apply mathematical skills appropriate to solve such problems.

To help students achieve GQ goals and master foundational quantification skills, the university provides GQ coursework and an appropriate learning environment that will:

• provide experience in assessing and interpreting quantitative data and information;
• guide students to recognize patterns, establish relations, exercise conceptual thinking, develop problem-solving skills, and think logically and critically;
• support students in their efforts to draw accurate and useful conclusions; make informed decisions based on quantitative analysis; and use basic mathematical and statistical skills to solve conceptual problems.

GQ Student Learning Criteria

Upon successful completion of the General Education Quantification (GQ) requirement, students should have increased their abilities to:

• use mathematical, statistical, or computational models, principles, and processes to integrate, synthesize, generalize, or make judgments about real-world problems;
• recognize patterns, establish mathematical relations, apply problem-solving skills, and think logically and critically;
• develop, explore, analyze, and reason about multi-variable relationships using quantitative tools;
• use probability to reason and make judgments based on data that exhibit variability;
• communicate and explain mathematical and statistical ideas.

Knowledge Domains

Arts (GA)

In Arts fields (GA), students focus on exploring or creating works of art. Students should become familiar with the importance of significant creative works, the traditions and history associated with those works, and the important role that the arts play as expressions of the cultural values of society and the human condition.

To help students achieve GA goals, the University provides GA courses and an appropriate learning environment with purposeful engagement with the arts and creative works for students to:

• encounter and become conversant with the terminologies, techniques, practices, knowledge, and skills employed by the arts;
• gain a comprehension of the role that the arts play as expressions of the cultural values of society and the human condition;
• expand their knowledge of the variety of expressions and experiences that are provided through the arts;
• develop competencies in interpreting and critically evaluating diverse expressions in the arts.

GA Student Learning Criteria

Upon successful completion of the General Education Arts (GA) requirement, students should be able to:

• explain the methods of inquiry in arts fields and describe how the contributions of these fields complement inquiry in other areas;
• demonstrate expanded knowledge and comprehension of the role that the arts play in various aspects of human endeavor;
• demonstrate competence in the creation of works of art and design;
• demonstrate competence in analysis, critical thinking and interpretive reasoning through the exploration of creative works;
• identify and explain the aesthetic, historical, social, and cultural significance of important works of art and critically assess creative works, their own or others’, through evaluative processes of analysis and interpretation.

Humanities (GH)

In Humanities (GH) fields, students focus on exploring important works of literature, history, religion, philosophy, and other closely related forms of cultural expression, thereby broadening their understanding of diverse ways of seeing, thinking about, and experiencing the self and
society. Students will enlarge their intellectual horizons and knowledge of the world through encountering humanistic representations of both lived experiences and imaginative or speculative constructions, past or present. Students thus become increasingly prepared to live as thoughtfully engaged members of multiple communities, whether local, regional, or global.

To help students achieve GH goals, the University provides GH courses and an appropriate learning environment for students to:

• engage in the qualitative study of the humanities;
• expand their knowledge of the variety of human experiences;
• gain access to various intellectual traditions and their changes through time;
• probe the foundations of communication and thought and become aware of the scope and limitations of human communication;
• encounter concepts and traditions that attempt to bring sense to human existence;
• develop their competency in interpreting and critically evaluating diverse ways of life, traditions, and shared or individual values, including their own.

GH Student Learning Criteria
Upon successful completion of the General Education Humanities (GH) requirement, students should have increased their abilities to:

• explain the methods of inquiry in humanities fields and describe how the contributions of these fields complement inquiry in other areas;
• demonstrate competence in critical thinking about topics and texts in the humanities through clear and well-reasoned responses;
• critically evaluate texts in the humanities — whether verbal, visual, or digital — and identify and explain moral or ethical dimensions within the disciplines of the humanities;
• demonstrate knowledge of major cultural currents, issues, and developments through time, including evidence of exposure to unfamiliar material that challenges their curiosity and stretches their intellectual range;
• become familiar with groups, individuals, ideas, or events that have influenced the experiences and values of different communities.

Health and Wellness (GHW)
In Health and Wellness (GHW) fields, students focus on the physical and psychosocial well-being of individuals and communities. They expand their theoretical and practical knowledge about health and wellness — concepts that are multidimensional and culturally defined. The University provides opportunities for students to study such diverse topics as nutrition, physical activity, stress, sleep, healthy leisure, alcohol, tobacco, and other substance use, sexual health, and safety — all useful in maintaining lifelong health and wellness and in creating healthy work and community environments.

To help students achieve GHW goals, the University provides GHW courses and an appropriate learning environment for students to:

• Identify and practice skills, attitudes, and behaviors that should enable them to better maintain health and wellness across their lifespans
• Identify wellness as a positive state of well-being, not merely the absence of disease or illness
• Recognize the importance of social, emotional, and physical health and wellness for communities as well as for individuals.

GHW Student Learning Criteria
Upon successful completion of the General Education Health and Wellness (GHW) requirement, students should have increased their abilities to:

• explain the methods of inquiry in Health and Wellness fields and describe how the contributions of these fields complement inquiry in other areas;
• describe multiple perceptions and dimensions of health and wellness (emotional, spiritual, environmental, physical, social, intellectual, and occupational);
• identify and explain ways individuals and/or communities can achieve and maintain health and wellness;
• describe health-related risk factors and explain changes in knowledge, attitudes, behaviors, activities or skills that have the potential of improving health and wellness;
• disseminate knowledge about health and wellness and demonstrate behavioral practices needed to engage in healthy living across the lifespan.

Natural Sciences (GN)
In Natural Science (GN) fields, students develop the skills necessary to make informed judgments about scientific information and arguments. Along with building knowledge of foundational scientific principles, students expand their understanding of how and why science works, why it is an effective tool for knowledge generation, and how it can address contemporary questions and challenges.

To help students achieve GN goals and develop this scientific literacy, the University provides GN courses and an appropriate learning environment for students to:

• encounter the order, diversity, and beauty of nature;
• sample some of the ways which science offers additional lens through which to view the human condition;
• gain practice in recognizing the nature of scientific process and discovery, in identifying what science can and cannot achieve, and analyzing why scientific arguments may lead to different conclusions than other forms of intellectual discourse.

GN Student Learning Criteria
Upon successful completion of the General Education (GN) requirement, students should have increased their abilities to:

• explain the methods of inquiry in the natural science fields and describe how the contributions of these fields complement inquiry in other areas;
• construct evidence-based explanations of natural phenomena;
• demonstrate informed understandings of scientific phenomena;
• evaluate the quality of the data, methods, and inferences used to generate scientific knowledge;
• identify societal or philosophical implications of discoveries in the natural sciences, as well as their potential to address contemporary problems.

Social and Behavioral Sciences (GS)
In Social and Behavioral Science (GS) fields, students focus on analyzing the forces that influence behaviors, values, habits, attitudes,
Integrative Studies

Integrative Studies courses have a distinctive intellectual dimension. Because these courses ask the student to consider a topic from the perspective of two different General Education Knowledge Domains, they aim to advance the student’s ability to comprehend things from multiple perspectives, to see connections, and to grasp the concept that one must employ different modes of thinking, different epistemologies to understand more adequately the nature of things; one domain is not fully equal to the task of understanding the world around us. Each Linked Course provides sustained focus on a single Knowledge Domain, with connections to another course in a different Knowledge Domain; while each Inter-Domain course provides the immediacy of incorporating two Knowledge Domains in the same course.

Inter-Domain Courses

Inter-Domain courses each demonstrate how two Knowledge Domains speak to one another and how knowledge in one Domain relates to knowledge in another. Inter-Domain courses are each approved for two Knowledge Domains and demonstrate consistently how knowledge is integrated across these two Domains. Each Inter-Domain course integrates and meets the criteria of two Knowledge Domains (GA, GH, GHW, GN, GS).

Linked Courses

Linked Courses, each approved for a single Knowledge Domain, demonstrate how the various disciplines within the General Education Knowledge Domains speak to one another and how knowledge in one Domain relates to knowledge in another. Courses are usually linked purposefully by subject matter, but they may be linked by some other common interest, such as an engaged scholarship project, shared assignments, shared readings, etc. Linkages must include courses from different General Education Knowledge Domains (GA, GH, GHW, GN, GS).

Students must complete 6 credits of Inter-Domain coursework in order to fulfill the Integrative Studies requirement, if they select this pathway. Because these courses integrate two Knowledge Domains, and need time to do so, they will each carry at least 3 credits. Although students will usually take two 3-credit courses to fulfill this Pathway, students can also use Inter-Domain courses carrying more than 3 credits, if available. Each of the two Knowledge Domains in an Inter-Domain course will receive approximately equal attention (in course topics, assignments, or other course components). Although each Inter-Domain course will satisfy a Domain requirement in both of the Knowledge Domains for which it is approved, the number of credits it contributes towards the total of 30 credits required in the Knowledge Domains is not doubled. For example, a 3-credit course approved as both Natural Science and Social Science will satisfy a Domain requirement in both of those categories; however, this course will contribute 3 credits, not 6, to the total of 30 needed.

Other University Requirements

There are several university-level requirements that are designed to help students succeed both academically and professionally.

First-Year Engagement Program

The First-Year Engagement Programs are designed to actively involve students in learning, acquaint them with the learning tools and resources available at Penn State and orient them to the scholarly community from the outset of their undergraduate studies in a way that will bridge to later experiences in their chosen majors. In addition, the First-Year Engagement Programs facilitate students’ adjustment to the high expectations, demanding workload, increased academic liberties, and other aspects of the transition to college life and introduce them to their responsibilities as members of the University community.

All incoming first-year baccalaureate students are required to complete a First-Year Engagement Program, with a student’s campus of enrollment determining whether or not this includes a First-Year Seminar (FYS). All students enrolled in a University Park college, the Division of Undergraduate Studies at University Park, and the World Campus are
required to take 1 to 3 credits of the First-Year Seminar, as specified by their college First-Year Engagement Plan. Other campuses may require the First-Year Seminar; campuses that no longer require a First-Year Seminar provide students with a first-year engagement experience. First-year baccalaureate students entering Penn State should consult their enrollment home for these requirements.

Courses that have the First Year Seminar attribute satisfy this requirement. Some courses may also have an identifying suffix (S or T) after the course number. The degree audit and what-if reports in LionPATH use attributes, not suffixes, to determine the applicability of a course to a requirement.

**Cultural Diversity**

Baccalaureate students are required to complete 3 credits each in United States and International Cultures.

Associate degree students are required to complete 3 credits in United States or International Cultures

**United States Cultures**

A course that fulfills the United States Cultures requirement must strive to increase students’ understanding of contemporary United States society. Such a course need not focus exclusively on the present and may concern a historical subject.

Courses with the United States Cultures designation will include two or more of the following components and will include those components in the graded evaluation of student performance:

1. cultivate student knowledge of issues of social identity such as ethnicity, race, class, religion, gender, physical/mental disability, age, or sexual orientation;
2. convey to students knowledge of different United States values, traditions, beliefs, and customs;
3. increase student knowledge of the range of United States cultural achievements and human conditions through time;
4. increase student knowledge of United States social identities not in isolation, but in relation to one another (for example, the interaction of race or gender with socioeconomic status);
5. introduce students to interpersonal communication and interaction issues among United States cultures;
6. increase student understanding of the nature of societal justice, and equity in the United States at the societal, institutional, and individual levels.

Courses with the United States Cultures attribute satisfy this requirement. It is also common to abbreviate this course designation as U.S.

**International Cultures**

A course that fulfills the International Cultures requirement must strive to increase student knowledge of the variety of international societies and may deal to some extent with U.S. culture in its international connections. It need not focus exclusively on the present and may, indeed, be a historical subject. Courses with the International Cultures designation will do two or more of the following:

1. cultivate student knowledge of the similarities and differences among international cultures;
2. convey to students knowledge of other nations’ cultural values, traditions, beliefs, and customs;
3. increase students’ knowledge of the range of international cultural achievements and human conditions through time;
4. increase students’ knowledge of nations and cultures not in isolation, but in relation to one another;
5. introduce students to interpersonal communication and interaction issues among international cultures.
6. increase student understanding of the nature of societal justice, and equity in international nations at the societal, institutional, and individual levels.

Courses with the International Cultures attribute satisfy this requirement. It is also common to abbreviate this course designation as Intl.

**Writing Across the Curriculum**

Developing the skill to communicate by means of the written word is extremely important. Courses other than General Education English Composition courses emphasize the ability of students to write. Colleges and/or departments have established Writing Across the Curriculum courses in specific programs. Students are required to complete at least 3 credits of writing-intensive courses offered within their major or college of enrollment.

Typically, Writing Across the Curriculum courses include writing assignments that relate clearly to the course objectives and serve as effective instruments for learning the subject matter of the course. In writing-intensive courses, assignments are designed to help students investigate the course subject matter, gain experience in interpreting data or the results of research, shape writing for a particular audience, or practice the type of writing associated with a given profession or discipline.

Opportunities for students to receive written feedback from the instructor and to apply the instructor’s feedback to their future writing are built into the writing courses. A writing-intensive course may also include peer review of written work, tutorial assistance, instructor conferences, group writing projects, the use of writing or learning centers, teaching assistant feedback, and classroom discussions of assigned readings about writing.

Courses with the Writing Across the Curriculum attribute satisfy this requirement. Some courses may also have an identifying suffix (W, M, X, or Y) after the course number. The degree audit and what-if reports in LionPATH use attributes, not suffixes, to determine the applicability of a course to a requirement. Both baccalaureate and associate degree students complete 3 credits in this area.

**Course Lists**

**General Education Foundations and Knowledge Domains**

- Arts Courses (p. 2546)
- Health and Wellness Courses (p. 2578)
- Humanities Courses (p. 2579)
- Natural Sciences Courses (p. 2598)
- Quantification Courses (p. 2600)
- Social and Behavioral Sciences Courses (p. 2600)
- Writing and Speaking Courses (p. 2613)
Integrative Studies
  • Inter-Domain Courses (p. 2585)
  • Linked Courses (p. 2586)

About Penn State

This is Penn State

Penn State is in the top 1 percent of universities worldwide and has the largest alumni network in the nation. Founded in 1855, the University combines academic rigor with a vibrant campus life as it carries out its mission of teaching, research, and service with pride and focuses on the future throughout Pennsylvania and the world. Granted the highest rating for research universities by the Carnegie Foundation, Penn State teaches students to be leaders with a global perspective.

Our leadership in administration, faculty, and staff make our mission come alive every day. The Board of Trustees reviews and approves the budget of the University and guides general goals, policies, and procedures from a big-picture perspective. The President’s office ensures that all aspects of the University are running smoothly and promotes overall principles that students, faculty, and staff abide by for the long term. The University Faculty Senate represents the Penn State faculty with legislative authority on all matters regarding the University’s educational interests.

Penn State strives to celebrate diversity in all aspects of its educational and operational activities and the University’s strategic plans are designed to result in ongoing improvements that help prepare future generations of leaders.

Board of Trustees

The Board of Trustees of The Pennsylvania State University is the corporate body established by the charter with complete responsibility for the government and welfare of the University and all the interests pertaining thereto including students, faculty, staff, and alumni.

In the exercise of this responsibility, the Board is guided by the following policies:

1. The authority for day-to-day management and control of the University, and the establishment of policies and procedures for the educational program and other operations of the University, shall be delegated to the President, and by him/her, either by delegation to or consultation with the faculty and the student body in accordance with a general directive of the Board.

   This delegation of authority requires that the Board rely on the judgment and decisions of those who operate under its authority. However, this reliance of the Board must be based upon its continuing awareness of the operations of the University. Therefore, the Board shall receive and consider thorough and forthright reports on the affairs of the University by the President or those designated by the President. It has a continuing obligation to require information or answers on any University matter with which it is concerned.

   Finally, upon request, the Board shall advise the President on any University matter of concern to him/her.

2. The Board of Trustees shall carry out certain responsibilities as a Board, without delegation. These responsibilities are:
   a. The selection of the President of the University
   b. The determination of the major goals of the University and the approval of the policies and procedures for implementation of such goals.
   c. The review and approval of the operating and capital budget of the University.
d. Such other responsibilities as law, governmental directives, or custom require the Board to act upon.

3. The Board of Trustees shall inform the citizens of the Commonwealth of Pennsylvania of the University's performance of its role in the education of the youth of Pennsylvania.

4. The Board of Trustees shall assist the President in the development of effective relationships between the University and the various agencies of the Commonwealth of Pennsylvania and the United States of America which provide to the University assistance and direction.

MORE INFORMATION (http://www.psu.edu/this-is-penn-state/leadership-and-mission/our-administration)

**Mission**

The Pennsylvania State University is a multi-campus, land-grant, public research University that educates students from around the world, and supports individuals and communities through integrated programs of teaching, research, and service.

Our instructional mission includes undergraduate, graduate, professional, continuing, and extension education, offered through both resident instruction and distance learning. Our educational programs are enriched by the talent, knowledge, diversity, creativity, and teaching and research acumen of our faculty, students, and staff.

Our discovery-oriented, collaborative, and interdisciplinary research and scholarship promote human and economic development, global understanding, and advancement in professional practice through the expansion of knowledge and its applications in the natural and applied sciences, social and behavioral sciences, engineering, technology, arts and humanities, and myriad professions.

As Pennsylvania’s land-grant university, we provide unparalleled access to education and public service to support the citizens of the Commonwealth and beyond. We engage in collaborative activities with private sector, educational, and governmental partners worldwide to generate, integrate, apply, and disseminate knowledge that is valuable to society.

**History**

As Pennsylvania’s only land-grant university, Penn State has a broad mission of teaching, research, and public service. But that mission was not so grandly conceived in 1855, when the Commonwealth chartered it as one of the nation’s first colleges of agricultural science, with a goal to apply scientific principles to farming.

Centre County became the site of the new college in response to a gift of 200 acres from gentleman farmer and ironmaster James Irvin of Bellefonte. Founding President Evan Pugh drew on the scientific education he had received in Europe to plan a curriculum that combined theoretical studies with practical applications.

Pugh and similar visionaries in other states championed Congressional passage of the Morrill Land-Grant Act in 1862. The act enabled states to sell federal land, invest the proceeds, and use the income to support colleges “where the leading object shall be, without excluding scientific and classical studies ... to teach agriculture and the mechanic arts [engineering] ... in order to promote the liberal and practical education of the industrial classes in all the pursuits and professions of life.” The state legislature designated Penn State the land-grant institution of Pennsylvania.

But not until the 1880s, under the leadership of President George W. Atherton, did the college expand its curriculum to match the Land-Grant Act’s broad mandate. From that time onward, curricula in engineering, the sciences, the liberal arts, and more began to flourish. In the early 1900s, Penn State introduced cooperative extension and additional outreach programming, extending the reach of its academic mission.

An even greater segment of the Commonwealth’s population had opportunities for engagement in the 1930s when Penn State established a series of undergraduate branch campuses, primarily to meet the needs of students who were location-bound during the Great Depression.
Those campuses were predecessors of today’s system of 24 Penn State campuses located throughout the Commonwealth.

Penn State began offering systematic advanced-degree work in 1922 with the formation of the Graduate School. Graduate education and research evolved hand in hand. By 1950 the University had won international distinction for investigations in dairy science, building insulation, diesel engines, and acoustics, and other specialized fields.

A college of medicine and teaching hospital were established in 1967 with a $50 million gift from the charitable trusts of renowned chocolate magnate Milton S. Hershey. In 1989 the Pennsylvania College of Technology in Williamsport became an affiliate of the University. Penn State’s online World Campus graduated its first students in 2000 and now enrolls more than 12,000. Also in 2000, Penn State and the Dickinson School of Law merged. In 2015, two Penn State law schools, Dickinson Law (in Carlisle, Pennsylvania) and Penn State Law (on University Park campus) were established.

MORE INFORMATION (http://www.psu.edu/this-is-penn-state/our-history)

Accreditation Notice
The Pennsylvania State University is accredited by the Middle States Commission on Higher Education, 3624 Market Street, Philadelphia, PA 19104 (267-284-5000). The Middle States Commission on Higher Education (MSCHE) is a regional accrediting agency recognized by the U.S. Secretary of Education and the Council for Higher Education Accreditation.

The Pennsylvania State University was first accredited in 1921 and accreditation was reaffirmed in June 2015.

The next Annual Institutional Update will be submitted in spring 2018. The Midpoint Peer Review will occur in 2020 and the next Self-Study evaluation is scheduled for 2023-2024.

According to MSCHE’s policy statement, Accreditation Review Cycle and Monitoring, “The Commission’s eight-year cycle of review of accredited institutions begins with an in-depth institutional self-study that is reviewed by peer evaluators during an on-site evaluation visit. The self-study and on-site review are used to assess the institution’s compliance with Commission standards and requirements of affiliation, verify compliance with accreditation-relevant federal regulations, and identify areas needing improvement. The review process results in an accreditation decision in accordance with the Commission Policy Accreditation actions. Institutions submit annually an update of institutional data and other information requested by the Commission. In the fourth year following the self-study visit, the Commission conducts an off-site mid-point peer review based on the cumulative information provided by the institution. Institutions are provided a report on the institution’s performance with respect to student achievement and financial sustainability.”

MORE INFORMATION (http://middlestates.psu.edu)

Research
The Office of the Vice President for Research is responsible for facilitating the $863-million-per-year research enterprise at Penn State by working with a broad range of units across the University.

The mission of the Office of the Vice President for Research is to support a rigorous program of faculty and student research and creative accomplishments by enhancing the environment for scholarly and artistic endeavors, encouraging the highest standards of quality, and fostering ethical conduct in research.

The office is responsible for:
- the effective administration of sponsored programs which provide the financial support for a substantial share of the research activity at the University;
- serving as the University’s advocate and spokesperson on research issues, and as a representative in activities that may produce major new programs and facilities for research;
- facilitating strong programs for interdisciplinary research.

MORE INFORMATION (https://www.research.psu.edu)

University Structure
Campuses
Penn State has more than twenty campuses across Pennsylvania that serve students and communities through teaching, research, and service. Through its network of undergraduate campuses and World Campus, Penn State provides students the opportunity to begin and complete a Penn State degree at one campus, transition to complete a degree at another campus or complete a program completely online—this is the hallmark of Penn State’s unique one University concept.

The University Park campus, the administrative and research hub of the University is the largest of Penn State’s campuses. Across Pennsylvania, Penn State campuses play a critical role in the land-grant mission of the University, by providing access and opportunity—a commitment that remains at the core of each campus’s mission. In addition to providing the first two years of more than 160 Penn State majors, campuses confer some 5,000 Penn State degrees annually to students who complete their academic programs at a Penn State campus.

MORE INFORMATION (p. 18)

Colleges
Penn State’s majors are divided among academic colleges, which are the units from which students receive their degrees. Examples of colleges are Arts and Architecture, Eberly College of Science, and Education, among others. In addition to the 12 academic colleges at the University Park campus, Penn State has six academic colleges across Pennsylvania that allow students to finish their degrees at a campus other than University Park.

With the exception of a few specialized programs, students interested in majors offered by the above academic colleges can start their education at any Penn State campus and then transition to University Park following their second year to complete their degree as part of the 2+2 Plan.

In addition, the Pennsylvania College of Technology in Williamsport offers enrollments in selected degree programs.

For a list of academic colleges, enrollment units, and special academic programs visit the Undergraduate Bulletin Colleges (p. 21) page.
Academic Colleges at Campuses
Six Penn State colleges, located throughout the state, offer majors that are typically completed at campuses other than University Park. These colleges are:

- Abington College, at the Penn State Abington campus
- Altoona College, at the Penn State Altoona campus
- Behrend College, at the Penn State Erie campus
- Berks College, at the Penn State Berks campus
- Capital College, at the Penn State Harrisburg campus
- University College, is comprised of the following 14 campuses:
  - Penn State Beaver
  - Penn State Brandywine
  - Penn State DuBois
  - Penn State Fayette, The Eberly Campus
  - Penn State Greater Allegheny
  - Penn State Hazleton
  - Penn State Lehigh Valley
  - Penn State Mont Alto
  - Penn State New Kensington
  - Penn State Schuylkill
  - Penn State Shenango
  - Penn State Wilkes-Barre
  - Penn State Scranton
  - Penn State York

Students interested in majors offered by these colleges can typically start at one campus and finish at another through the 2+2 plan, or they can choose to stay at one campus for all four years if their campus of choice offers the major they want. To see the specific majors available at each campus, search majors by campus.

Student Services and Programs
Penn State offers thousands of resources to support students, faculty, staff, and alumni both locally and around the world. This partial list of centers, offices, and programs was developed based on past inquiries from Bulletins users.

To discover additional services explore Penn State’s home page (http://www.psu.edu), the Office of Student Affairs (https://studentaffairs.psu.edu), and the Office of Undergraduate Education (http://undergrad.psu.edu).

Admissions

Admission to Penn State
Penn State’s tradition of academic excellence, investment in student success, and commitment to providing unrivaled opportunities make the University a great place to study, but it is the dedication of our students, faculty, and staff that make it truly exceptional.

We are looking for students that want to share in the passions and talents of our Penn State community. Discover how your Penn State years will not only shape your academic and career pursuits, but will broaden your perspective, establish life-long connections, and set the stage for your future.

Find your place at Penn State.

Steps to Apply
Learn the first steps to apply to Penn State and more about the University on the Undergraduate Admissions (https://admissions.psu.edu) website.

Statement of Basic Academic Admission Policies
Admission to credit courses or degree candidacy at Penn State is governed by policies established by the University Faculty Senate. Although specific applications of these policies may vary from year to year, from location to location, and from program to program, all University admissions are governed by the following general policies:
As an institution of higher education, Penn State is committed to making post-high school education available to all who possess a high school diploma or its equivalent without regard to personal characteristics not related to ability, performance, or qualifications. Penn State does not discriminate against any person because of age, ancestry, color, disability, national origin, race, religious creed, sex, sexual orientation, or veteran status.

The primary responsibility of the University is to residents of the Commonwealth of Pennsylvania. Consequently, within limits expressed from time to time by the Board of Trustees of the University, preference shall be given to Pennsylvania residents in the various admissions processes.

In order to meet the variety of goals and objectives of the population, the spectrum of offerings is designed to enable persons with a variety of objectives—both degree and non-degree—to receive a higher education. Although access to educational opportunities of the University is open to all, courses offered for credit are available to those holding a high school diploma or its equivalent. Policies governing admission to degree candidacy are established by the University Faculty Senate (with a delegation of policies governing admissions to graduate programs to the Graduate Faculty of the University) under a general policy of offering admission to those whose past academic performance indicates a reasonable probability of success.

Undergraduate students are admitted to either baccalaureate degree candidacy or associate degree candidacy. To be admitted to degree candidacy, the individual must present an academic performance record that indicates a reasonable probability of their success in their chosen program. In the case of first-year student admission to undergraduate degree candidacy, performance is measured through a holistic assessment. In the case of advanced standing admission, performance is measured either through success in non-degree programs and courses of the University or by success at some other institution of higher education.

Within the space available in particular programs and at particular locations, admission shall be offered preferentially to those whose performance record indicates the highest probability of success in the chosen program—with this process continuing until all available spaces are filled. Although exceptions to this policy may be made from time to time (for example, recipients of scholarships with restricting qualifications), these exceptions may be made only for applicants who meet at least the minimum admission and entrance requirements.

If a college or school requires restrictions on its baccalaureate admissions, the priorities or targets established must include provisions to consider qualified students in each of these groups:

- Admissions Group I - First-year Admissions: Applicants who hold a high school diploma or equivalent, who present fewer than 18 semester credits of baccalaureate work (from Penn State or another regionally accredited institution), who meet minimum college or school entrance requirements, and who meet minimum college or school admission standards.

- Admissions Group II - Penn State Advanced Standing Admissions: Applicants who (1) request baccalaureate degree re-enrollment, presenting 18 or more semester credits; (2) request a change from Penn State associate degree to baccalaureate degree status, presenting 18 or more applicable semester credits; (3) request a change from Penn State provisional degree to baccalaureate degree status, presenting 18 or more applicable semester credits; or (4) request a change from Penn State non-degree to baccalaureate degree status, presenting 18 or more applicable semester credits. In all advanced standing admissions at Penn State, the student must have a grade-point average of at least 2.00 and must meet the minimum entrance and advanced standing requirements of the college or school. However, a Penn State student who has had an interruption in enrollment of no fewer than four calendar years and whose cumulative grade-point average is less than 2.00 may petition for re-enrollment with academic renewal in accordance with Senate Policy 57-00.

- Admissions Group III - Other Advanced Standing Admissions: Applicants who have not been students at Penn State and request baccalaureate degree status at Penn State, presenting 18 or more applicable semester credits from a regionally accredited institution. In all advanced standing admissions, it is understood that the applicant must have a cumulative grade-point average of 2.00 as computed at Penn State and meet the minimum entrance and advanced standing requirements of the college or school. However, a student who has not met the entrance requirements or achieved a cumulative grade-point average of 2.00 (on a 4.00 scale) for all graded courses taken at all institutions previously attended, and who has had a four-calendar-year absence from the institution(s), may apply to enroll in credit courses as a provisional student in accordance with Senate Policy 10-00. An applicant who has had an absence from the institution(s) of fewer than four calendar years, and who has not met the entrance requirements or has achieved a cumulative grade-point average of less than 2.00, may apply to enroll in credit courses as a non-degree student in accordance with Senate Policy 14-00.

- Within these three groups, no special consideration will be given to any group; applicants will be admitted to the college or school on the basis of academic competition (e.g., SAT I scores, grade-point averages, grades in required courses in the college or other degree-granting units, and other evidence predictive of baccalaureate degree performance where available, valid, and reliable).

To ensure a proper educational mix of students and to further broaden the educational opportunities offered by the University, the University Faculty Senate and the University administration from time to time may authorize various specialized programs. These programs may permit applicants who do not meet the basic qualifications for admission to degree candidacy to be admitted to such candidacy. These programs may also permit, in selected situations, exceptional students who have not earned a high school diploma or its equivalent to enroll in University credit courses. Such specialized programs may include up to 10 percent of the total admissions group for the University in any one year and up to the maximum of 15 percent of the admissions to any geographic location of the University.

Within this general policy, the colleges and school of the University, with the concurrence of the University Faculty Senate, may impose certain educational background requirements (Carnegie Units) that must be completed by an individual before being admitted to degree candidacy.

**Admission Requirements**

**Minimum Requirements for Admission to Degree Candidacy**

To be eligible for admission consideration to the University as a degree candidate, either as a beginning student or as a student with advanced standing, an applicant must meet the following minimum requirements:
1. Graduation from an accredited secondary school. Penn State requires proof of graduation or a GED for admission to four-year degree programs.

2. Completion of the required units of preparatory work as indicated under the heading Minimum Carnegie Units.

A secondary school diploma issued by the Pennsylvania Department of Education, or appropriate authority in another state, may be accepted as equivalent to graduation from an accredited secondary school and as equivalent to the minimum secondary school units required for admission, as indicated under the Minimum Carnegie Units heading, with the exception of math and world language.

The University accepts the definition of a secondary school unit as established by the Carnegie Foundation. A unit represents a year of work in a subject in a preparatory school or secondary school, provided that the work done in that subject is approximately one-fourth of the total amount of work regularly required in a year in the school.

The University reserves the right to deny admission to any applicant for admission for any reason the University determines to be material to the applicant's qualifications to pursue higher education.

Admission to degree candidacy is specified in terms of enrollment in a college or school of the University or in the Division of Undergraduate Studies. Entrance to a baccalaureate major is a subsequent step that normally occurs near the end of the second year of study. Both for admission to a college or school and for entrance to a major, a student must satisfy the requirements of the University, of the particular college or school, and of the major area. In special circumstances, the University may need to further restrict admissions to a college or school and entrance to majors because of space limitations.

Baccalaureate and Associate Degree Programs

Review the basic requirements for two-year and four-year degrees, as well as the additional requirements for special programs.

See the minimum number of secondary school units required for admission consideration to a baccalaureate degree program on the Admission Requirements page (https://admissions.psu.edu/apply/requirements/4year).

See the minimum number of secondary school units required for admission consideration to an associate degree program on the Admission Requirements page (https://admissions.psu.edu/apply/requirements/2year).

First-Year Admission

An applicant for admission as a beginning student in the first-year class must meet the minimum requirements for admission to degree candidacy prior to the time of matriculation. All offers of admission are conditional until these requirements have been met.

Each applicant is evaluated on the basis of a holistic assessment. Admission decisions are made on the basis of this holistic assessment in relation to the requested area of enrollment (academic program), space availability, the quality of the credentials presented by other applicants, and such other academically relevant information deemed appropriate by the Undergraduate Admissions Office and approved by the Senate Committee on Admission, Records, Scheduling, and Student Aid.

When openings at the requested location or in the requested program of the University are filled, qualified applicants will be offered admission to their alternate choice of program or location or notified of campuses where openings still exist.

College Entrance Tests

Applicants for first-year admission to the University are required to submit scores of the Scholastic Assessment Test (SAT) of the College Entrance Examination Board or the American College Test (ACT). SAT or ACT results of the junior-year testing periods are recommended. Exceptions to the requirement for scholastic assessment test scores will be granted to adult learners who have been out of high school for five or more years or are veterans with four or more years of service. Exceptions to the required courses completed also may be granted. Adults may be requested to submit a statement of personal goals or to participate in an interview.

Selection of the Area of Enrollment

It is necessary for an applicant to indicate one of the academic units of the University in which they want to study. If an applicant is undecided about the choice of an academic unit, they may seek enrollment in the Division of Undergraduate Studies.

Changing the Area of Enrollment

An applicant who has been admitted to an academic college or unit of the University may not change to another without satisfying entrance requirements of the college or other academic unit of the University.

Previous Attendance at Another College

An applicant must state on their application whether they have ever attended any other college or university. Failure to indicate, at the time of application, previous registration at another college or university may result in refusal or cancellation of admission. An applicant who has attempted fewer than 18 semester credits at another regionally accredited college or university will be considered as a first-year applicant. An applicant who has attempted 18 or more semester credits at another regionally accredited college or university subsequent to high school graduation will be evaluated as an advanced standing applicant.

MORE INFORMATION (https://admissions.psu.edu/apply)

Advanced Standing (Transfer) Admission

An applicant who has attended any regionally accredited college or institution on the college level and attempted 18 or more semester credits subsequent to high school graduation may be considered for admission with advanced standing. Attendance at any and all other institutions must be reported at the time of application. Failure to indicate, at the time of application, previous registration at another college or university can result in refusal or cancellation of admission.

An applicant for admission with advanced standing must meet the minimum secondary school requirements for admission to degree candidacy prior to the time of matriculation. Advanced standing applicants are considered for admission on the basis of the applicant's requested academic program, space availability, and the academic quality of their work at the previously attended institution(s). A minimum cumulative grade-point average of at least 2.00 (C) out of 4.00, as computed for Penn State students, is required, although certain areas of study may have additional requirements. In addition, an applicant must be in good academic and nonacademic standing. An applicant whose overall grade-point average is less than 2.00 (on a 4.00 scale) but has a grade-point average of at least 2.00 (on a 4.00 scale) at all institutions attended in the four years prior to the requested enrollment
semester may apply for admission as an advanced standing student with forgiveness. An applicant who has not attempted any collegiate level course work four years prior to the requested enrollment semester may also apply for advanced standing with forgiveness. An applicant who does not meet the minimum requirement of a grade-point average of at least 2.00 and does not meet the criteria for advanced standing with forgiveness may enroll in credit courses as a non-degree student in accordance with applicable policies and procedures.

Advanced standing credits may be awarded for college-level work taken at regionally accredited institutions provided Penn State offers a similar class and the course grade earned is equivalent to a grade of A, B, or C at this University. The credits also must be useful to the student’s program of study. An academic adviser determines which of the transferable credits are applicable to the program of study at Penn State. Credits are transferred, but grades and grade-point average are not. Advanced standing students enter the University without an average and their average begins with the completion of their first semester of study at Penn State.

Under certain circumstances, the University may need to restrict advanced standing admissions to a particular college or school because of space limitations.

Entrance to a major is an additional step beyond admission to a college or school. It involves additional academic requirements and may be subject to additional restrictions because of space limitations.

Application Procedure
In all cases where work has been taken at other institutions, an official transcript from each place of attendance must be submitted directly to the Undergraduate Admissions Office by the registrar of the institution attended. An applicant currently attending another institution also must provide a schedule of courses in progress or to be completed before enrollment at Penn State, including course name, number, description, and number of credits. The applicant’s secondary school record must be submitted directly to the Undergraduate Admissions Office by the secondary school. The Undergraduate Admissions Office may require the applicant to send a description of the courses that they have taken at the college previously attended. All credentials become part of the permanent records of the University.

Entrance to a Major
An advanced standing degree candidate may be admitted to a college or school of the University. To be eligible for entrance to a major, a student must meet the entrance-to-major requirements of the University, of the college or school, and of the program area. Under certain circumstances, further restrictions or exceptions on entrance to majors may be required because of space limitations. Students are expected to work with advisers and to utilize current information about entrance requirements and restrictions when exploring academic program alternatives and making program and course selections.

Changing the Area of Enrollment
An applicant who has been admitted to an academic college, school, or major of the University may not change to another without satisfying entrance requirements of the college/school and major to which they want to transfer.

Provisional Students (Degree Seeking)
An applicant seeking to pursue a degree program and holding a high school diploma or its equivalent but without the criteria required for admission as a degree candidate may be accepted as a provisional student and enroll in credit courses, if space is available, to pursue a program leading to either a baccalaureate or associate degree if the following criteria are met:

1. The student is making satisfactory progress toward admission as a degree candidate. Progress is satisfactory if a student has completed 18 credits with a minimum cumulative grade-point average of 2.00 on a 4.00 scale. If a student has completed 18 credits with less than a 2.00, then they are given a warning. A student who has completed more credits with a cumulative grade-point average of less than 2.00 will not be permitted to enroll as a provisional student in any subsequent semester unless the student has earned more than a 2.00 grade-point average in the most recently completed semester. No student regardless of cumulative grade-point average, who has completed 36 credits will be permitted to enroll as a provisional student in any subsequent semester.

2. There is space available after degree candidates have been accommodated.

3. The student has not been dropped for unsatisfactory scholarship from any college or university previously attended. If a provisional applicant attended another college or university and attempted 18 or more semester credits within the last four calendar years, the applicant must have at least a 2.00 cumulative grade-point average. However, if it has been four or more calendar years since the applicant attended the other college or university and the cumulative grade-point average is less than 2.00, the applicant is eligible for provisional admission consideration.

4. The student has not been dismissed or suspended for nonacademic reasons from any college or university. An applicant not in good standing at another accredited college or university for disciplinary reasons must consult with the director of the Office of Judicial Affairs for admissions clearance.

NOTE: An applicant holding a baccalaureate degree or higher is not eligible to enroll as a provisional student. The applicant is referred to the graduate non-degree program.

Admission of Provisional Student as a Degree Candidate
A provisional student may apply for admission as a baccalaureate degree candidate with advanced standing to a college or school of the University, or to the Division of Undergraduate Studies, upon completion of at least 18 credits with at least a 2.00 cumulative grade-point average. All these credits must be earned at this University. To be eligible for admission, the provisional student must satisfy the academic requirements of the University and the college of enrollment.

Nondegree Students
A person enrolled in a course who is not a degree candidate or provisional student is classified as a nondegree student. A nondegree student must either hold a high school diploma or its equivalent to take undergraduate courses. Exceptions may be made by the Undergraduate Admissions Office for students currently enrolled in high school (dual-enrollment students).

A nondegree student who has not been dropped from degree or provisional status by this University or any other college or university for unsatisfactory scholarship will be listed as a nondegree regular student and may enroll in any number of credits, not to exceed the typical credit load of a full-time student per semester if criteria 1, 2, and 3 below are met. Students who have changed from degree candidates to nondegree
regular or nondegree students who intend to become degree candidates must also meet criterion 4.

A nondegree student who has been dropped from degree or provisional status by this university or any other college or university because of unsatisfactory scholarship will be listed as a nondegree-conditional student and may enroll in a maximum of 12 credits per semester if criteria 1, 2, 3, and 4 (on the following list) are met.

1. The student has completed the prerequisite for the courses to be scheduled or has obtained permission from the instructor to schedule the course.
2. Space is available after degree candidates and provisional students have been accommodated.
3. The student has not been dismissed or suspended for nonacademic reasons from any college or university. An applicant not in good standing at another college or university for disciplinary reasons must consult the director of the Office of Judicial Affairs for admission clearance.
4. The student has obtained academic advising/counseling from an adviser/counselor designated by the academic unit to which admission, or reinstatement and re-enrollment, is desired.

Limitations to Enrollment as a Nondegree Student

A student in nondegree status (regular or conditional) may remain in that status for a maximum of 30 credits, at which time the student must be accepted into a degree program to continue taking credit courses. Nondegree conditional students must achieve a semester grade point average of 2.01 or higher every semester or will be dismissed from the University and may only re-enter through the academic renewal process.

Students in nondegree status who are not eligible for a degree program after completing 30 credits may continue to take credit courses provided a semester grade-point average of more than 2.00 continues to be earned and they have written support from their intended major. Students who do not meet these provisions will be dropped and may only re-enter Penn State through the academic renewal process. Nondegree regular students who are in good academic standing and do not intend to earn a degree may continue taking credit courses as long as a cumulative grade point average of 2.00 is maintained.

A student must be admitted, or reinstated and re-enrolled, as a degree candidate to apply the credits earned as a non-degree student toward fulfilling the requirements for a degree. The dean of the college or school of enrollment shall decide which credits may be used to fulfill the degree requirements.

A non-degree application can be obtained at registrar.psu.edu (http://registrar.psu.edu).

Admission of Nondegree Student as a Degree Candidate

A nondegree student may apply for admission as a baccalaureate degree candidate with advanced standing to a college or school of the University, or to the Division of Undergraduate Studies, upon completion of at least 18 credits earned at this University with at least a 2.00 cumulative grade-point average. An applicant who has completed at least the equivalent of two years of baccalaureate degree work before applying for admission as a baccalaureate degree candidate must have the approval of either the dean of the college or school in which enrollment is desired or of the director of the Division of Undergraduate Studies if the student wants to enroll in that division. To be eligible for degree admission, the nondegree student must meet the academic requirements of the University and the college or school in effect at the time of application.

Tuition and Financial Aid

Introduction

Penn State participates in the major federal and state grant, loan, and work-study programs. These funding sources make up the majority of all student aid funding with education loans the largest program. Eligibility is determined based on information on the Free Application for Federal Student Aid (FAFSA) (https://fafsa.gov). Student aid funds are awarded based on each applicant’s relative financial need until all funds are exhausted. Program regulations limit the University’s ability to make exceptions to the eligibility criteria.

Student Aid and Scholarships Policy

As a public university, Penn State receives limited support from the state. Undergraduate enrollment across all Penn State campuses exceeds 90,000 a year. An outstanding academic experience for our students comes at a cost, and the University recognizes that Penn State may not be affordable to all who wish to enroll.

While Penn State continues to build its scholarship endowment, available funds do not yet reach all deserving students. Student aid, including education loans, can help defray some costs, but students and parents have the primary responsibility of paying educational expenses. Students and their families are encouraged to devise a financial plan for this important investment and to determine the level of education loan debt that both student and families are willing to incur.

Tuition and Costs

To view the most current costs for attending Penn State, including tuition and associated expenses, visit the Office of Student Aid (https://studentaid.psu.edu) website.

MORE INFORMATION (https://studentaid.psu.edu/tuition-costs)

Residency Classification for Tuition Purposes

Effective March 1, 2015

Pennsylvania Classification

A student shall be classified as a Pennsylvania resident for tuition purposes if that student has a Pennsylvania domicile and that student’s presence in Pennsylvania is not primarily for educational purposes. Domicile is a person’s existing and intended fixed, permanent, and principal place of residence. A student whose presence in the Commonwealth is primarily for educational purposes shall be presumed to be a non-Pennsylvania resident for tuition purposes. Thus, most non-residents who come to Pennsylvania for the primary purpose of attending the University will ordinarily continue to be classified as non-residents for purposes of tuition throughout their attendance at the University. The following are considerations that may be used by the University in determining whether a student is a resident for tuition purposes:

1. A student under the age of 21 is presumed to have the domicile of his/her parent(s) or legal guardian(s), unless the student has maintained continuous residence in the Commonwealth for other than educational purposes for a period of at least 12 months.
immediately prior to his/her initial enrollment at The Pennsylvania State University, and, the student continues to maintain such separate residence.

2. A student who has resided in the Commonwealth for other than educational purposes for at least a period of 12 months immediately preceding his/her initial enrollment at The Pennsylvania State University is presumed to have a Pennsylvania domicile.

3. A student who has not resided continually in Pennsylvania for a period of 12 months immediately preceding his/her initial enrollment at The Pennsylvania State University is presumed to have a non-Pennsylvania domicile.

4. A student requesting to be classified as a Pennsylvania resident for tuition purposes must be a citizen of the United States or a permanent resident. Permanent residents must have received the I-551 stamp approving their permanent resident status. An individual in a nonimmigrant status with the USCIS is not eligible for classification as a Pennsylvania resident for tuition purposes. Other extraordinary circumstances, which may qualify a student as a Pennsylvania resident for tuition purposes, will be considered on a case-by-case basis.

5. A United States government employee or member of the armed forces who was a resident of Pennsylvania immediately preceding his/her entry into government service and who has continuously maintained Pennsylvania as his/her domicile will be presumed to have a Pennsylvania domicile.

6. Military personnel and their dependents who are assigned to an active duty station in Pennsylvania and who reside in Pennsylvania shall be charged in-state tuition rates.

7. A student receiving a scholarship, guaranteed loan, grant, or other form of financial assistance dependent upon residence in a state other than Pennsylvania is not a Pennsylvania resident for tuition purposes.

Reclassification as Pennsylvania Resident
A student requesting reclassification as a Pennsylvania resident for tuition purposes must demonstrate by clear and convincing evidence that his/her domicile is in Pennsylvania, and that his/her presence in Pennsylvania is not primarily for educational purposes. Each request shall be decided individually on the basis of all facts submitted by the petitioner. Accordingly, it is not possible to list a specific combination of factors or set of circumstances which, if met, would ensure reclassification for tuition purposes.

Reclassification Procedure
1. A student may challenge his/her residence classification by filing a written petition with the person or committee designated to consider such challenges at the University. Such person or committee shall consider such petition and render a timely decision that shall constitute an exhaustion of administrative remedies.
   a. The University reserves the right to require transcripts of tax filings from the Internal Revenue Service or Commonwealth of Pennsylvania rather than taxpayers’ copies of those returns and also to require notarized statements as needed.

2. Any reclassification resulting from a student’s challenge or appeal shall be effective at the beginning of the semester or session during which the challenge or appeal was filed or at the beginning of the following semester or session. The decision as to which semester or session becomes the effective date shall rest with the person or committee rendering the decision on reclassification.

3. A student who changes his/her place of residence from Pennsylvania to another state is required to give prompt written notice of this change to the University and shall be considered for reclassification as a non-Pennsylvanian for tuition purposes effective with the date of such change.

4. A dependent resident student whose parent(s) or legal guardian(s) move outside of the Commonwealth may remain a Pennsylvania resident for tuition purposes if he/she continues to maintain a separate domicile within the Commonwealth.

Nonresident Student Classification
1. A student is initially classified as a nonresident based on information provided by the student when applying for admission to the University. The initial classification is made as follows:
   1. Undergraduate Student
      1. Penn State Harrisburg — Penn State Harrisburg Academic Services Officer
      2. All other locations — Undergraduate Admissions Office, The Pennsylvania State University, University Park, PA 16804-3000
   2. Graduate Student
      1. Penn State Harrisburg — Penn State Harrisburg Academic Services Officer
      2. All other locations — Dean of the Graduate School
   3. Medical Student
      1. Office of Student Affairs, The Milton S. Hershey Medical Center

2. A student may challenge his/her residency classification by filing a written petition as follows:
   1. Undergraduate Student
      1. Penn State Harrisburg — Penn State Harrisburg Financial Officer
      2. All other locations — Residency Appeal Officer, University Park
   2. Graduate Student
      1. Penn State Harrisburg — Penn State Harrisburg Financial Officer
      2. All other locations — Residency Appeal Officer, University Park
   3. Medical Student
      1. Controller, The Milton S. Hershey Medical Center

3. The appropriate University official reviews the student’s petition and makes a decision.

4. The student may appeal that officer’s residency decision to the University Appeals Committee on Residence Classification having representation from the Corporate Controller’s Office, Undergraduate Admissions Office, and the Graduate School. The committee’s decision on appeal shall be final.

False Statements
Any student who provides false or misleading information or deliberately conceals or omits relevant facts in connection with a residency application or appeal will be subject to disciplinary action. In addition, such students will be subject to retroactive reclassification as a non-residents and will be responsible for the payment of non-resident tuition and fees for the period during which he/she was classified as a resident.

Please Note: A page of frequently asked questions concerning residency classification for tuition purposes can be found on the Office of the
Bursar website (http://www.bursar.psu.edu/faq.cfm). Type the word "Residency" on the Search FAQ box.

**How to Apply for Financial Aid**
Submission of the Free Application for Federal Student Aid (FAFSA) (https://fafsa.ed.gov) is the only action required to apply for most financial aid at Penn State, however, some private scholarships and Penn State scholarships require separate applications.
SPECIAL ACADEMIC PROGRAMS

• Joint Service ROTC
• Schreyer Honors College

Joint Service ROTC

About Joint Service ROTC
Richard Scott Young, Joint Service Coordinator, ROTC

The ROTC Programs were established to develop cadets and midshipmen mentally, morally, and physically and to imbue them with the highest ideals of duty and loyalty, in order to commission college graduates as officers of character who possess a basic professional background and are motivated toward careers in military service.

Registering for Courses
Air Force ROTC students attending Penn State Altoona should visit the Air Force ROTC website (http://www.airforce.psu.edu/registering-for-afrotc-courses) for instructions on registering for AFROTC courses.

Military Studies Minor
This interdisciplinary minor is designed for all students with special interests in military and national security affairs. Military emphasis is provided in one of three areas: Aerospace Studies, Military Science, or Naval Science. American military forces have played an important role in our domestic and international history and will continue to have significant involvement in policy arenas relating to national security and international relations. Students elect one military service branch for their prescribed courses and select two additional courses from appropriate history and political science courses emphasizing national security policy. At least 6 credits must be taken at the 400 level.

ROTC Programs
• Air Force ROTC
• Army ROTC
• Naval Science/Naval Reserve Officer Training Corps (NROTC)

Resources

Project GO!
The Project Global Officers’ (Project GO!) goal is to develop future military officers within all of the U.S. Armed Forces with the necessary linguistic and cross-cultural communication skills required for effective leadership in the 21st century operational environment. Any member, scholarship/contracted or not, can apply to attend.

Military Honor Cords
Undergraduate and graduate students who have honorably served, are serving, or are commissioned to serve in the U.S. military will be awarded an honor cord to wear at their commencement ceremony in recognition of their duty and sacrifice. The red, white and blue cords will be given to eligible graduating students, including associate degree recipients, in the following groups: active duty, reserve and National Guard service members; veterans; and graduates receiving a commission through Reserve Officers’ Training Corps (ROTC) and official U.S. Armed Forces recruiting programs. Penn State faculty members who meet the eligibility criteria also may receive a military honor cord.

Air Force ROTC

Program Description

The Air Force ROTC program trains qualified young men and women for service as commissioned officers in the United States Air Force.

The program is offered at the University Park campus and by special arrangement as follows: students attending Penn State Scranton, Penn State Hazleton, or Penn State Wilkes-Barre may complete freshman and sophomore requirements at Wilkes College, Wilkes-Barre, Pa.; students attending Penn State Abington or Penn State Brandywine may complete freshman and sophomore requirements at St. Joseph’s University, Philadelphia, Pa.; students attending Penn State Altoona may complete freshman and sophomore requirements at the University Park campus. The junior and senior requirements may then be completed upon relocation to University Park campus.

Four-, three-, two-, and one-year (limited) scholarships are available to selected applicants. These scholarships provide $250-$400 per month along with full tuition and textbook allowance. Also, all cadets in the junior and senior courses are paid at the rate of $350 to $400 per month (tax free), respectively, even if not on scholarship. Uniforms and ROTC textbooks are provided for free by the Air Force.

What is the Air Force ROTC?

Air Force ROTC is a 4-year program that inspires, develops, and trains future officers of the United States Air Force. AFROTC is a pathway to grow mentally and physically as you acquire leadership skills. The opportunity to pay for school is available through scholarships. Plus, you’ll have a position waiting for you after graduation at one of the world’s top high-tech organizations - the U.S. Air Force.

You Might Like This Program If...

- You are of good moral character.
- You are an undergraduate student with two or more years remaining of college.
- You are physically fit or willing to be.
- You are in good academic standing.
- You are ready for a challenge.

MORE INFORMATION (http://www.airforce.psu.edu/home/future-students)

Program Requirements

The instruction consists of a General Military Course (freshmen and sophomores) and a Professional Officer Course (juniors and seniors) of four semesters each. Subjects and credits appear under course descriptions (ROTC) in this bulletin. Students have an opportunity to visit Air Force bases throughout the school year and summer months, where they may receive instruction on parachuting, flying gliders, and other Air Force-related activities.

Completion of eight semesters and one four-week summer training period confers eligibility for a commission in the Air Force Reserve and assignment to active duty in the USAF with the rank of second lieutenant. For students graduating in fewer than four years, there is also a two-year program in which a six-week summer training period replaces both the General Military Course and the normal four-week summer training period. Those students not participating in the four-year program but who will have four or more full academic semesters available, either undergraduate or graduate, after completion of the six-week summer training period are eligible for this two-year program, which leads to an Air Force commission.

Career Paths

AFROTC commissions Penn State graduates as Second Lieutenants for every AF officer career field in every part of the world.

Careers

- Aircraft: pilot, navigator, maintenance
- Space and Missiles: operations, maintenance, ground support
- Intelligence: Office of Special Investigations, Foreign Area Officer
- Engineering: research, development or technical management in virtually all fields of engineering
- Scientific: mathematics, nuclear physics, meteorology
- Computer Science: cyberwarfare operations, development, programming systems analysis
- Management: personnel, intelligence, communications and electronics, public relations, logistics, finance, security forces, information, munitions, air traffic control

Opportunities for Graduate Studies

All students graduating on or before September 30, 2020 and interested in participating in the program are welcome to apply. Minimum requirements are four semesters as a full-time student (bachelors or graduate work), a 2.0 GPA, passing fitness and medical standards, and good character. Graduating before that date or already have your
You enjoy being a member or leader of a team with a common goal.

You are looking for the best version of yourself.

You want more, and aren’t afraid of the challenge it takes to get it.

Army ROTC

Program Description

The Army Reserve Officers’ Training Corps (Army ROTC) is an elective program of instruction and training that offers qualified students the opportunity to earn a commission as an officer (Second Lieutenant) and to serve in the United States Army, Army National Guard, or United States Army Reserve while working toward a baccalaureate degree as a full-time student. The program emphasizes student learning and participation in applied leadership, leadership theory, decision making, management skills, time management, and military knowledge and skills. The four-year program is conducted in two successive phases—the Basic Course and Advanced Course (20 total credits). At least 6 Army ROTC credits may be applied toward baccalaureate degree requirements in all majors, usually as elective credits. Course subjects and credits appear under ROTC course descriptions in this Bulletin.

Penn State Army ROTC is one of the largest and most successful ROTC programs in the United States. Army ROTC is offered at the following campuses: Abington, Altoona, Hazleton, and University Park. However, only the University Park campus offers the complete four-year program within the Penn State Army ROTC system. Army ROTC is also available at most other campuses through cross-enrollment agreements with other colleges and universities. For additional information on Army ROTC, see the enrollment officer at 212 Wagner Building on the University Park campus or call 814-865-0368 (toll free: 1-866-558-3513) or visit our the Penn State ROTC website. (http://www.psu.edu/dept/armyrotc)

What is Army ROTC?

Army ROTC’s mission is to educate, train, and inspire participants to become officers and leaders of character for the United States Army and the Nation. A large majority of Penn State Army ROTC graduates obtain a full-tuition scholarship, prior to graduation.

MORE INFORMATION

You Might Like This Program If...

• You want to acquire professional flexibility and proven leadership skills that every industry desperately seeks.

• You seek an organization willing to invest risk in your potential, while setting the conditions for your success.

• You enjoy being a member or leader of a team with a common goal.

MORE INFORMATION (https://www.goarmy.com/rotc)

Program Requirements

The Basic Course is a four-course series, usually taken in the freshman and sophomore years. Freshman and sophomore courses are 2 credits each. The Basic Course trains the student in a variety of topics, including the national defense structure, leadership theory and principles, land navigation, small-unit operations and tactics, military history, and basic military skills and knowledge. The student incurs no military service obligation while enrolled in the Basic Course, and may dis-enroll at any time (except for sophomores on Army ROTC scholarships). Enrollment in the Basic Course is open to all Penn State full-time students. Also, uniforms, textbooks, and most equipment are furnished at no charge by the government to all enrolled students.

The Army ROTC program is much more than just taking classes. Each semester, the Army ROTC program consists of five activity segments: classroom lectures (one or two fifty-minute classes per week), a 100-minute Leadership Laboratory, Physical Training sessions, day trips and field training exercises, and extracurricular activities that include numerous clubs and social events. While the latter three activities are generally optional for enrolled Basic Course students, most students become progressively involved to enhance their training, develop esprit de corps, and take part for the social and fun aspects of the program.

The Advanced Course consists of a series of four courses, each for 3 credits. The Advanced Course instructs and evaluates in such areas as leadership and management, tactical operations, strategy, personnel administration, logistics, military justice, and ethics. Advanced Course students incur a service obligation when contracted, after which they receive a cash stipend of up to $400 per month (tax-free) up to $4,000 per academic year. Normally, in the summer between the junior and senior years, students attend a five-to six-week National Advanced Leader’s Course, for which salary and travel expenses are paid for the student. National Advanced Leader’s Course is a critical hurdle that students must pass to receive a commission. In addition, students must complete at least one University course in each of five areas prior to commissioning: written communications, human behavior, computer literacy, mathematical reasoning, and American military history. These courses may also fulfill the student’s General Education or academic major curriculum requirements.

Three-year Army ROTC scholarships are available to students on a competitive basis. These merit scholarships pay full tuition, a book allowance ($600 per year), and a tax-free subsistence stipend of up to $400 per month up to $4,000 per academic year. Four-year scholarships are available only through competition in the high school senior year. Army ROTC scholarships are awarded in five major categories: engineering, analytic/physical sciences, nursing, technical/management, and generalists (all other majors except theology). In particular, Army ROTC has a strong program for Nursing majors with numerous scholarship and enrollment options.

Entrance to Army ROTC

Students may enter Army ROTC during their baccalaureate studies up until the start of their junior year via several lateral entry methods. These methods include compressing the Basic Course into one year (for sophomores), attending a four-week summer training program called Army ROTC Leader’s Training Course, or by receiving constructive credit.
Navy, the Navy Nurse Corps, or the Marine Corps.

The Naval ROTC trains qualified young men and women at the University Park campus for service as commissioned officers in the Navy, the Navy Nurse Corps, or the Marine Corps. Navy, Nurse, and Marine Corps scholarships provide full tuition, book allotment, laboratory and instructional fees, and a $250-350 per month subsistence allowance. In addition, Nurse scholarship students are issued special equipment required by the BSN curriculum.

Students who receive the baccalaureate degree and complete the NROTC program receive commissions as ensigns or second lieutenants. College Program commissionees are required to serve at least three years of active duty. Scholarship Program commissionees are committed to four years of active duty.

What is Naval Science?
Navy Science is a field of study that offers university students an introduction to the operations, technology and culture of the United States Navy and Marine Corps. Navy Science courses are available for all university students but are designed to operate in tandem with the Pennsylvania State University Naval Reserve Officer Training Corps (NROTC) unit. The Naval ROTC unit trains qualified young men and women at the University Park campus for service as commissioned officers in the Navy, the Navy Nurse Corps, or the Marine Corps. Naval Science courses can also be utilized to fulfill prescribed course requirements for the Military Studies minor.

You Might Like This Program If...
- You are enrolled in the NROTC program at Penn State (Required).
- You are enrolled or considering enrolling in the Military Studies minor at Penn State.
- You are interested in learning about Naval operations, technology and culture.

Program Requirements
All students must complete at least 18 credits of Naval Science (NAVSC) courses; subjects and credits appear under course descriptions (ROTC/NAVSC) later in this bulletin. College Program students must participate in one active duty training period (cruise) during the summer between junior and senior years. Scholarship students are required to participate in either two (Nurse) or three (Navy and Marine Corps) summer cruises prior to commissioning.

In addition, all Navy scholarship students must complete University courses in calculus, physics, national security policy, and American military affairs. Requirements for Nurse and Marine Corps scholarship students are somewhat less. College Program students must complete University courses in national security policy and American military affairs.

Career Paths
Students who receive their baccalaureate degree and complete the NROTC Program are commissioned as either Navy Ensigns or Marine Corps Second Lieutenants. Post-commission career paths for Navy option students include Surface Warfare Officer, Submarine Warfare
Officer, Naval Aviator, Naval Flight Officer, or Special Operations Warfare Officer. Marine Corps option students can serve as either Ground or Aviation Marine Corps Officers. All students are obligated to serve a minimum of four years of active duty, though select career paths may require a greater minimum service time.

Schreyer Honors College
About the College
Peggy A. Johnson, Dean, Schreyer Honors College

The Schreyer Honors College, regarded as one of the nation’s top programs of its kind, promotes achieving academic excellence with integrity, building a global perspective, and creating opportunities for leadership and civic engagement. Schreyer Scholars, including Gateway Scholars admitted after their first or second year of enrollment, are a diverse and motivated group of approximately 2,000 students at University Park and 20 Commonwealth campuses. The College strives to educate students who will have an important and ethical influence in the world, to improve educational practice, and to continue to be recognized as a leading force in honors education nationwide.

MORE INFORMATION (http://www.shc.psu.edu)

College Procedures
Academic Warning

Failure to attain a GPA of at least 3.40 in one full-time semester places a student in warning status for the following semester and removes them from good academic standing in the College. Students on Academic Warning will continue to receive honors scholarships but will not be eligible for grants.

MORE INFORMATION (https://www.shc.psu.edu/academic/resources/handbook)

Change of Campus

Schreyer Scholars may start at any of Penn State’s undergraduate campuses but must complete their junior and senior years at Abington, Altoona, Behrend, Berks, Brandywine, Harrisburg, or University Park. Current Penn State students may be admitted into the Schreyer Honors College through the Gateway admission process.

MORE INFORMATION (https://www.shc.psu.edu/academic/resources/handbook)

Honors Courses

First-year and sophomore students should expect to fulfill most or all of their honors requirements via honors courses, with limited exceptions by major and campus. A grade of C or higher is required for an honors course to meet honors credit requirements. With approval of the instructor and their honors adviser, students may take honors option courses that are typically not honors courses. A list of honors courses can be found via LionPATH (https://lionpath.psu.edu).

Resources

Academic

The College’s Academic Team holds various events throughout the year to help Scholars with their theses. Scholars may also schedule one-on-one appointments with the College’s academic staff. Weekly digital newsletters help keep Scholars up-to-date on important academic deadlines.

MORE INFORMATION (https://www.shc.psu.edu/academic/resources)

Study Abroad

Scholars’ options to study abroad include signature travel programs; international service learning; Schreyer Ambassador Travel Grants; and International Thesis Research Grants. Travel grant funding is available only to Scholars in good standing.

MORE INFORMATION (https://www.shc.psu.edu/academic/abroad)

Honors Advising

Honors advisers serve as principal resources for students for helping them choose majors, which enrichment and professional development opportunities should be pursued in addition to their coursework, and thesis preparation. Advisers can be faculty members or full-time academic advisers, depending on the academic college.

MORE INFORMATION (https://www.shc.psu.edu/academic/resources/advising.cfm)

Career Services

Schreyer Scholars interact with alumni or other university guests in seminars and career information sessions on campus, join mentoring programs that pair them with alumni, and travel to cities like New York and Washington, D.C., to meet with Scholar alumni.

UNIVERSITY COURSE DESCRIPTIONS

Definitions for various components of a course description.

Course-Numbering System
These course descriptions are arranged alphabetically. If any course cannot be located readily, refer to the index. Courses are numbered as follows:

Undergraduate Courses (1 to 399): General courses accepted in fulfillment of requirements for the bachelor’s degrees.

Advanced Undergraduate Courses (400 to 499): Courses open to graduate students and to juniors and seniors and, with the special written permission of the head of the department or the chair of the program sponsoring the course, to qualified students in earlier semesters.

Graduate Courses (500 to 699; 800 to 899): Courses restricted to students registered in the Graduate School, seniors with an average of at least 3.50 (500- and 800-level only; excludes 600-level), and other students who have been granted permission to enroll by the dean of the Graduate School. These courses are described in the Penn State Graduate Degree Programs Bulletin.

Medical Courses (700-799): Courses restricted to students registered in the College of Medicine. These courses are described in the Penn State College of Medicine Programs Bulletin.

Law Courses (900-999): Courses restricted to students registered in Penn State Law and Dickinson Law. These courses are described in the Penn State Law and Dickinson Law Programs Bulletins.

Common Course Numbers
The following course numbers for which students may register have been set up for common use by major programs, with University Senate approval, to encourage innovation and provide flexibility in designing programs, but in no case may a course be scheduled for 0 credits.

First-Year Seminar 187. Listed under some liberal art-related academic headings, this course has prerequisites of first-semester standing and enrollment in the College of the Liberal Arts.

Research Project Courses 294, 494. 1-12 credits. Supervised student activities on research projects identified on an individual or small-group basis. A specific title may be used in each instance and will be entered on the student’s transcript.

Internship 295, 395, 495. 1-18 credits. Supervised off-campus, non-group instruction including field experiences, practica, or internships. Written and oral critique of activity required. A specific title may be used in each instance and will be entered on the student’s transcript.

Independent Studies 296, 496. 1-18 credits. Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses. A specific title may be used in each instance and will be entered on the student’s transcript.

Special Topics 97, 197, 297, 397, 497; 98, 198, 298, 398, 498. 1-9 credits. Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest. Several different topics may be taught in one year or semester. A specific title may be used in each instance and will be entered on the student’s transcript.

Foreign Studies 99, 199, 299, 399, 499. 1-12 credits. Courses offered in foreign countries by individual or group instruction. A specific title may be used in each instance and will be entered on the student’s transcript. These courses typically carry the International Cultures (IL) attribute.

COURSE ATTRIBUTES AND SUFFIXES
Attributes and attribute values are course designations that are used to define specific characteristics for courses. The search for specific types of courses uses attributes and attributes are the most important notation for a course to satisfy a given requirement.

Suffixes are letters that follow a course number and allow for easier identification of a course’s characteristics. Not all attributes and characteristics are captured in available suffixes and suffixes are not the feature used to determine if a course satisfies a requirement. The degree audit and what-if reports use attributes, not suffixes, to determine applicability of a course to a requirement.

BACHELOR OF ARTS
Attributes
• BA: Arts
• BA: Humanities
• BA: Natural Science
• BA: Other Cultures

Suffixes
• H: Honors
• M: Writing Across the Curriculum and Honors
• Q: Inter-Domain and Honors
• T: First-Year Seminar and Honors
• U: United States Cultures and/or International Cultures and Honors

COURSE Credits

In accordance with Senate Policy 42-23 (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/42-00-acquisition-of-credit/#42-20), for the typical student, a total of forty-five (45) hours of work planned and arranged by the University faculty is required to gain 1 credit. While the distribution of time varies from course to course, generally one-third of the time is devoted to formal instruction and two-thirds of the time to outside preparation. Course credit by instruction may be achieved by a variety of educational experiences that allow the student to work toward mastery of the course objectives. With the acknowledged goal of educational excellence, more than the minimum established here may be required for mastery of course objectives.

The number of credits for each course is indicated in parentheses and can be earned with classroom, practicum, or laboratory work as designated in LionPATH.

A department may schedule an entire section in an undergraduate course for fewer credits than the maximum authorized. In 400-level courses, a department may schedule an individual student for fewer credits than the maximum authorized. In no case, however, may the course be scheduled for 0 credit, or may the total credits scheduled for any student exceed the maximum number authorized for the course.

Repeatable and Variable Credit Courses

Some courses are designated as repeatable; they may be taken more than once for credit. These courses may be repeated indefinitely unless the department stipulates a maximum number of credits allowed. These courses appear with the maximum number of credits allowed following the number of credits for the course—for example (1.5 credits/maximum of 3).

Courses may have variable credits, such as (1-3), (2-6), or (3-10). Here, the larger number signifies the total credits that can be accumulated for the course over an indefinite number of semesters, unless otherwise specified. For example, a course listed with (1-6) could be taken six semesters for 1 credit each semester, or two semesters for 3 credits each semester, or once for 6 credits, etc.

In some courses with variable credits, students may be permitted to accumulate more than the larger number shown. Such courses will be listed as, for example, (1-3 per semester, maximum of 12).

Any special departmental limitations are indicated by footnotes.

Prerequisites, Concurrent Courses, Co-requisite Courses, and Recommended Preparation

See also: Senate Policy 34-60 (http://senate.psu.edu/policies-and-rules-for-undergraduate-students/34-00-course-scheduling/#34-60).

Prerequisites, concurrent courses, and co-requisite courses approximate the necessary specific coursework or general academic knowledge, background, or semester classification required to succeed academically in a given course.

• Prerequisites are courses or other requirements that must be completed prior to the start of a given course.
• Concurrent Courses are similar to prerequisites except that they may be taken prior to, or in the same semester as, the given course.
• Co-requisite Courses are pairs of courses required to be taken together in the same semester.

Registration in a given course is limited to students who have satisfied the stated prerequisite, concurrent, or co-requisite requirements. The course instructor has the right to permit students to take the course without having the stated prerequisite, concurrent, or co-requisite requirements, if the student demonstrates mastery of the material through some other means.

Recommended Preparation relates to preparatory skills or companion courses deemed useful, but not necessary, for successful completion of a course. Recommended preparation has no bearing on registration in a given course.

Accounting (ACCTG)

ACCTG 501: Research Methods in Accounting
3 Credits
An introduction to the methods and techniques of contemporary research in accounting.
Prerequisite: ACCTG507, a course in statistical inference

ACCTG 511: Financial and Managerial Accounting
3 Credits
Fundamental financial and managerial accounting concepts and issues from the viewpoint of the report user.

ACCTG 512: Financial Accounting Theory and Reporting Problems
3 Credits
Measurement and reporting of financial information for external purposes, with particular attention to current problems in asset and income measurement.
Prerequisite: ACCTG511

ACCTG 524: Managerial Accounting
3 Credits
CONCEPTS AND TECHNIQUES OF ACCOUNTING FOR PLANNING, CONTROL, AND MOTIVATION.
Prerequisite: ACCTG511

Statistics (STAT) (p. 3045)
Supply Chain and Information Systems (SCIS) (p. 3049)
Supply Chain Management (SCM) (p. 3052)
Systems Engineering (SYSEN) (p. 3055)

ACCTG 560: Accounting and Business Analysis
2 Credits
Develop ability to assess the relation between accounting data in financial statements and the economic fundamentals represented.

**Prerequisite:** B A 521

ACCTG 566: Corporate Disclosure in the Capital Markets
3 Credits
ACCTG 566 provides a broad perspective of accounting that spans beyond the Generally Accepted Accounting Principles (GAAP) by exploring the role of financial accounting (and more broadly, corporate disclosure) in the capital markets. This includes discussions about (i) how accounting information flows in the capital markets and why it is so crucial to a well-functioning economy, (ii) key capital market stakeholders, their incentives, and their relation with corporate disclosure, (iii) various disclosure types and venues and their decision usefulness, (iv) the role of corporate governance in ensuring the provision of useful accounting information, (v) earnings management types, incentives, and settings, (vi) the standard setting process, and (vii) the role of emerging technologies in shaping corporate communications with the market. The course will also expose students to the history of accounting to provide insight into how and why accounting has morphed into its current state. Finally, throughout the course, there will be discussion and tie-ins to academic research on capital markets with an emphasis on corporate disclosure research.

**Prerequisite:** ACCTG 472, BA 840

ACCTG 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

ACCTG 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

ACCTG 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

ACCTG 597C: **SPECIAL TOPICS**
2-4 Credits

ACCTG 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

ACCTG 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

ACCTG 803: Forensic Accounting and Litigation Support
3 Credits
Study of investigative accounting, consulting and litigation support activities undertaken in forensic accounting engagements.

**Prerequisite:** ACCTG403W and ACCTG472 Prerequisite or concurrent: ACCTG881

ACCTG 806: Taxes and Business Planning
3 Credits
Effects of tax regimes on decision-making, tax planning and market outcomes. Also, ethics, tax research, and policy.

**Prerequisite:** ACCTG405

ACCTG 811: Financial Accounting
3 Credits
Accounting rules, practices and applications that characterize the accounting presentations that for-profit organizations provide to the public. ACCTG 811 is part of a series of four accounting courses designed to provide students with the core accounting knowledge needed for an accounting career in industry. This course introduces students to the basic principles, procedures, and objectives of financial accounting that govern the reporting of information about a business to individuals, institutions and other external groups. Course content focuses on: upon (1) conveying the conventions and institutional framework that define accounting rules and practice, including basic exposure to Generally Accepted Accounting Principles; (2) developing familiarity with financial statements; (3) teaching fundamental accounting transactions; and (4) training students in rudimentary analysis of the financial statements.

ACCTG 812: TAXATION
3 Credits/Maximum of 999
Introduction to U.S. federal income tax, covering the basics of taxation of individuals, corporations, flow-through entities and property transactions. ACCTG 812 is part of a series of four accounting courses designed to provide students with the core accounting knowledge needed for an accounting career in industry. This course introduces students to the U.S. federal income tax system. It discusses the pervasive nature of taxation in the U.S. economy and teaches students how to recognize major tax issues, with an emphasis on understanding how they impact economic decision-making. Course content focuses on: (1) developing familiarity with the tax research process and the basic principles of tax planning, (2) the taxation of individuals, and (3) the taxation of business entities including corporations and partnerships.

**Prerequisite:** ACCTG 811
ACCTG 813: Auditing
3 Credits/Maximum of 999
Principal of the risk-based approach to the audit of financial statements, with special focus on financial information systems.
**Prerequisite:** ACCTG 811

ACCTG 814: Managerial Accounting
3 Credits/Maximum of 999
Examination of the internal organizational accounting procedures that establish accountability within organizations.
**Prerequisite:** ACCTG 811

ACCTG 821: Analysis and Interpretation of Tax Law
3 Credits
ACCTG 821 provides accounting and law students who are interested in the practice of taxation with an overview of U.S. federal income tax system research. The course focuses on resolving tax law questions in support of economic decision making and tax return position defense. Students learn to conduct and document in-depth legal research and analysis within the domain of tax law. This writing intensive course hones students\' writing skills within the domain of tax law and business decision making. Additionally, the course provides an in-depth understanding of the ethical constructs that guide and limit the practice of taxation.
**Prerequisite:** ACCTG 405

ACCTG 822: Corporate Taxation and Financial Reporting
3 Credits
ACCTG 822 provides accounting students with knowledge about the taxation of corporations. The course focuses on the tax law treatment of corporate formations, operations, distributions, mergers, and acquisitions. Additionally, students learn about Accounting Standards Codification Topic 740–Income Tax, planning for corporate structure classification, and related ethical considerations.
**Prerequisite:** ACCTG 821

ACCTG 823: Survey of Tax Topics
3 Credits
ACCTG 823 provides accounting students who are interested in the practice of taxation a survey of the law defining the taxation of pass-through entities including partnerships, S-corporations, limited liability companies, and trusts. The course focuses on the tax law treatment of formation, operations, distributions, mergers, and acquisitions to the entity and its owners. Planning for structure classification and limitations thereof are embellishments to the basic tax law applicable to pass-through entities. This course also provides an overview of State and Local Taxation (SALT) and taxation of international operations.
**Prerequisite:** ACCTG 821

ACCTG 831: Advanced Auditing
3 Credits
The goal of this course is to advance knowledge in contemporary issues in auditing and in auditing research and case analysis. The focus includes implementing the auditing principles, standards, procedures, and practices, and applying them in case analysis. Topics comprise integrated auditing of financial statements and internal controls; continuous auditing; assurance services on nonfinancial information; auditing of computer-based systems; emphasis on auditing software and computer auditing techniques used to evaluate accounting systems controls and test accounting data integrity; forensic accounting and fraud detection; and the nature and use of expert systems in accounting with emphasis on their use as an audit tool.
**Prerequisite:** BLAW 444, ACCTG 873, ACCT 550, ACCTG 806, ACCTG 803

ACCTG 873: Advanced Topics in Financial Reporting
3 Credits
Financial disclosure and reporting for complex business enterprises and activities; current issues in financial reporting.
**Prerequisite:** ACCTG471 and ACCTG472

ACCT 501: Financial Statement Analysis
3 Credits
Study of financial reporting, financial statement analysis, capital markets, asset pricing and impact of ethical, legal, regulatory and environmental concerns.
**Prerequisite:** admission to M.B.A. or MS/IS Program

ACCT 504: Auditing Theory and Practice
3 Credits
Auditing theory pertaining to the regulatory environment, risk assessment, internal controls, materiality, computerization, analytical procedures, sampling, fraud, ethics, and professional responsibilities. ACCT 504 Auditing Theory and Practice (3) This course provides in-depth coverage of the theory and practice of auditing. Topics may include the regulatory environment, risk assessment and planning, internal controls, materiality, computerized auditing, analytical procedures and
sampling, accounting fraud, ethics and professional responsibilities. Students are expected to apply professional judgment in practical applications of course concepts, building on technical knowledge acquired in undergraduate accounting coursework.

Prerequisite: ACCTG403

ACCT 510: Business Tax Planning Theory and Practice
3 Credits

Tax theory pertaining to corporations, partnerships and conduit entities, estates, trusts, ethics, and professional tax responsibilities. ACCT 510 Business Tax Planning Theory and Practice (3) This course provides in-depth coverage of the theory and practice of tax planning for corporations, partnerships and other related pass-through entities. Topics will include tax research, corporate formation and capital structure, corporate non-liquidating distributions, corporate acquisitions and reorganizations, consolidated tax returns, partnership formation and operation, special partnership issues, S corporations, taxation of gifts, estates and trusts, and professional responsibilities and ethics.

ACCT 532: Accounting Information and Decision Systems
3 Credits

The study of business processes, transactions cycles, and internal control structure with an emphasis on computerized accounting information systems. ACCT 532 Accounting Information and Decision Systems (3) The course includes the study of business processes, transactions cycles, and internal control structure with an emphasis on computerized accounting information systems. The course explores the need for communication of information across functional areas to meet an organization’s contemporary auditing, professional and legal considerations. The role of information systems is demonstrated by a focus on reporting objectives, management needs, transaction trails, documentation, security, internal controls, and the integration of accounting systems in the evaluation and selection of software.

ACCT 540: Accounting for Managerial Decisions
3 Credits

Application of accounting to monitoring and improving the internal operation of an organization. ACCT 540ACCT 540 Managerial Accounting (3) Accounting is the language of economic activity. Managers in all organizations - business, government, and not-for-profit - use accounting information to make decisions. As such, managerial accounting is an important competency area for MBA graduates. Managerial Accounting addresses resource-related questions from a cost perspective. Relevant issues include resources consumed and the related cost of producing goods and providing services, and the effectiveness and efficiency of resource usage.

Prerequisite: ACCT 501

ACCT 545: Strategic Cost Management
3 Credits

Current managerial accounting topics such as activity-based costing, theory of constraints, performance measures and their use in organizations.

Prerequisite: ACCT 540

ACCT 550: Professional Responsibilities and Ethics in Accounting
3 Credits

The study of ethical systems and ethical decision making and their application in Accounting. ACCT 550 Professional Responsibilities and Ethics in Accounting (3) This course provides students with a foundation in professional codes of conduct and ethics adopted by professional associations and licensing boards for accountants, auditors, and fraud examiners. Topics include research into and discussions of selected historical and contemporary ethical cases and issues as they relate to accounting and business. The course includes an introduction to the concepts of ethical reasoning, integrity, objectivity, independence, core values, and professional issues in accounting. The course provides a working knowledge of ethical and justice theories on which students will be able to build as their careers progress. Some of the ethical issues that they may have to address include corporate social responsibility, distributive justice, accounting and economic development, accounting and the environment, professionalism, whistleblowing, and tax avoidance and evasion. Students will gain an understanding of the ethical foundations from which they can address the ethical issues that they will face as a professional.

ACCT 561: Financial Statement Analysis II
3 Credits

The exploration of conventional and advanced methods of analyzing financial statements, including earnings quality and financial distress assessment. ACCT 561ACCT 561 Financial Statement Analysis II (3) The objective of this course is to explore conventional and advanced analytical methods of analyzing financial statements. Expanding on the material covered in a financial accounting or financial statement analysis course and using actual financial statements, students: review and apply the traditional methods for analyzing financial statements, such as ratio analysis, trend analysis, and common-size analysis; apply advanced tools for analyzing financial statements, such as financial distress prediction models and earning manipulation prediction models; evaluate accounting policies and disclosures and their impact on the financial statements through the assessment of earnings quality; Evaluation methods include case studies of actual companies and a comprehensive project to analyze the financial statements of a publicly-traded company. This course typically will be offered once a year.

Prerequisite: ACCT 501

ACCT 571: Strategic Tax Planning
3 Credits

Study of strategic aspects of tax for planning business operations, growth, expansion, capital transactions, and transfer of wealth. ACCT 571ACCT 571 Strategic Tax Planning (3) The objective of this course is to provide a framework for understanding the strategic impacts of tax-related decisions for new and existing businesses. Emphasis is placed on the managerial implications of tax planning and decisions with respect to operations, growth and expansion, capital transactions and the transfer of wealth. Six topics will be covered. These areas are as follows: (1) Strategic Tax Planning - Review of net present value and impact of taxation on maximization of wealth. (2) Tax Strategies for New Businesses - Exploration of choice of organizational form and compensation arrangements. (3) Business Operating Strategies - Study of the impact on the routine conduct of business of tax and accounting issues such as obtaining tax incentives, use of conduit

**Prerequisite:** ACCT 501

**ACCT 572: Financial Reporting I**

3 Credits

Accounting theory and practice for reporting consolidations, foreign currency transactions, and preparing financial reports for governmental and NGOs. ACCT 572 Financial Reporting I (3) This course covers accounting theories and procedures as they pertain (a) to the preparation of financial statements for consolidated entities, (b) to the use of foreign currency and (c) to the financial reporting of activities of governmental and of not-for-profit entities. Contemporary reporting issues are reviewed and explored. This course may utilize textbooks, lectures and/or cases. It is guided by financial reports. It explores the means of preparing certain financial statements and the ways of interpreting them. This course is recommended for students who did not take Advanced Accounting and/or Governmental Accounting at the undergraduate level.

**Prerequisite:** ACCTG472

**ACCT 573: Financial Reporting II**

3 Credits

Topics involving consolidated financial statements, special purpose entities, derivative financial instruments, and use of the Financial Accounting Research System (FARS). ACCT 573 Financial Reporting II (3) This course covers (a) advanced topics related to the preparation of consolidated financial statements, (b) accounting for derivative financial instruments, (c) accounting for off-balance sheet financing and special purpose entities, and (d) the use of the Financial Accounting Research System (FARS) to explore advanced financial reporting issues. This course relies upon textbooks-based, lecture-based, and case-based learning. It is guided by financial reports. It explores the means of preparing certain financial statements and the ways of interpreting them. It is assumed that students taking this course have either completed ACCT 572 or have completed courses providing significant coverage of consolidations, foreign currency transactions, governmental accounting and not-for-profit accounting at either the undergraduate or graduate level.

**Prerequisite:** ACCTG572

**ACCT 590: Colloquium**

1-3 Credits/Maximum of 3

Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

ACCT 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including research and design, that are supervised on an individual basis and which fall outside the scope of formal courses.

ACCT 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

**Acoustics (ACS)**

ACS 501: Elements of Acoustics and Vibration

3 Credits

Vibrational acoustics including mechanical oscillation, forced and damped response, vibration of strings, membranes, rods, bars, and plates. ACS 501 Elements of Acoustics and Vibration (3) Acoustics is a broad subject that crosses and interacts with many engineering, science, mathematics, medical, and artistic disciplines. This course provides a thorough foundation necessary for studying structural acoustics and vibration problems and the exploration of acoustic waves in solids. A detailed analysis of the single-degree-of-freedom mechanical mass-spring system provides the building block for exploring lumped-element models of more complicated acoustic systems and the phenomena of resonance for forced and damped systems. Multiple-degree-of-freedom mechanical systems are used to investigate the coupled oscillation between oscillating systems, the design of vibration absorbers, and methods for modeling the low frequency behavior of guitars, violins, and vented-boxed loudspeakers. Extending the mass-spring model to an infinite number of degrees-of-freedom leads to a development of the wave equation and its solutions for longitudinal acoustic waves in elastic solids. Boundary conditions and the concept of mechanical impedance are used to explore standing waves in a bounded elastic medium and the transmission of waves between media with different elastic properties. Transverse waves on an elastic string, while fundamentally different from longitudinal waves, obey the same differential equation of motion and the same application of boundary conditions and mechanical impedance. For both longitudinal and transverse wave systems, the mechanical impedance approach and the method of separation of variables are used to study systems with specified boundary conditions. Longitudinal and transverse waves in structures with varying cross-section, density, or elastic properties are also explored. Torsional waves in elastic solids are explored with application to systems with various cross-sectional shapes. Membranes serve as a two-dimensional extension of transverse waves on an elastic string, and provide mode shapes which may be described using rectangular and cylindrical coordinates (with Bessel function solutions). The fourth-order differential equation of motion for flexural bending vibrations of thin beams is derived and solutions are explored using the separation of variables approach for boundary value problems. Finally, the flexural vibration of two-dimensional rectangular and circular plates are investigated. Homework problem sets will illustrate theory and applications to real world problems.
ACS 502: Elements of Waves in Fluids

3 Credits

Thermodynamic and hydrodynamic foundations of linear acoustics in fluids with applications to lumped-elements, reflection, refraction, radiation, attenuation, enclosures, and waveguides. ACS 502 Elements of Waves in Fluids (3) The purpose of this course is to provide the foundation for understanding the behavior of waves in fluids in the linear acoustic limit; limit for first-year graduate students entering the Graduate Program in Acoustics. The course provides a common ground for students coming from a broad range of varying undergraduate programs in sciences, engineering, mathematics, and the arts. This self-consistent foundation will be built upon an understanding of thermodynamics and the consequences for the behavior of gases and gas mixtures (i.e., ideal gas equations-of-state, heat capacity), and hydrodynamics (both dissipative and non-dissipative) as expressed from the Eulerian perspective. This perspective will be used to develop techniques for understanding oscillations in lumped-element acoustical networks that are smaller than the wavelength of sound and will be applied to extended media in which waves propagate, are reflected and transmitted through interfaces between media with different acoustical properties, and are refracted through media with continuously-varying acoustical properties. The same equations will be applied to the excitation of sound waves that propagate in 3-dimensions by vibrating bodies that are smaller than the wavelength of sound. Those results will be extended by superposition of such compact sources to produce both discrete and continuous one- and two-dimensional arrays. The directional properties and strength of such extended sources will be examined. The behavior of sound within 3-dimensional rectangular enclosures is studied via the method of separation of variables; to identify the sound modes in such enclosures, their characteristic frequencies, and the selective excitation and detection of such modes. The frequency dependence of the density of modes is introduced to motivate the relationship between the modal and ray-tracing (i.e., ballistic) perspectives. The techniques of the statistical energy analysis will be applied such enclosures to quantify architectural phenomena such as reverberation time and critical distance. Those results will be extended to non-rectangular enclosures and to rectangular and cylindrical waveguides, focusing on the concept of group phase speed and the coupling of sources to planewave and higher-order waveguide modes. Attenuation of sound waves is also treated from the hydrodynamic perspective and results are derived for boundary-layer dissipation, classical thermo-viscous sound absorption within bulk fluids, and the relaxation-time approximation is applied for sound absorption by chemical association-dissociation in seawater and the effects of humidity on collision-times in air. Problem sets that illustrate the theory and applications are a central component of this course.

ACS 505: Experimental Techniques in Acoustics

2 Credits

Properties of acoustical and vibrational transducers, electronic and other instrumentation used in fundamental data measurement, acquisition and analysis.

Prerequisite: ACS 501, ACS 502

ACS 513: Digital Signal Processing

1-3 Credits

Discrete linear systems, transforms, digital filter design and applications, discrete fourier transforms, spectrum analysis.

Prerequisite: PHYS 443

ACS 515: Acoustics in Fluid Media

3 Credits

Wave propagation in stationary and moving fluids; acoustic radiation and scattering; standing waves in ducts and cavities.

Prerequisite: E MCH524A; PHYS 443

ACS 516: Acoustical Data Measurement and Analysis

2-3 Credits/Maximum of 3

Presents the engineering applications of recent developments in correlation and spectral analysis to acoustical measurement problems.

ACS 519: Sound-Structure Interaction

3 Credits

Acoustic radiation from and effects of fluid-loading on vibrating infinite and finite plates and shells. Acoustic transmission through and reflection from elastic plates and shells, acoustic excitation of elastic plates and coupling between panels and acoustic spaces.

Prerequisite: ACS 501, ACS 502, E MCH524B

ACS 521: Stress Waves in Solids

3 Credits

Recent advances in Ultrasonic Nondestructive Evaluation: waves; reflection and refraction; horizontal shear; multi-layer structures; stress; viscoelastic media; testing principles.

Prerequisite: E MCH524A, E MCH524B

ACS 530: Flow-Induced Noise

3 Credits

Introduction to the basic and applied aspects of flow-induced noise created by subsonic flows of various complexities. ACS 530 Flow-Induced Noise (3) The objective of this course is to introduce the basic and applied aspects of flow noise created by subsonic flows of various complexities. Basic concepts of noise and pressure fluctuations induced by unsteady fluid flows are discussed, including theoretical as well as experimental approaches. For a given class of flow, mechanisms for the creation of unsteady wall pressures and forces, radiated sound, and fluid-structure interactions are detailed. Various prediction schemes are presented which range from purely theoretical to empirical. The
intent is to keep the material practical while at the same time introducing
the student to a wide variety of specific topics. Some of the topics
to be presented include: basic fluid mechanics, fundamental flow
noise theory, flow noise measurement issues including wave vector-
frequency spectral estimates of unsteady pressures and forces, compact
Green’s functions, unsteady forces and noise created by bluff bodies in
flow, vortex shedding noise, wall pressure fluctuations and acoustics
associated with turbulent boundary layers, including separated layers
and transition zones, unsteady forces and noise due to flow over lifting
surfaces, edge acoustic scattering mechanisms, axial-flow fan noise,
rotor/flow interactions, turbulence ingestion, centrifugal blower noise,
and noise generated by flow in pipes. The prerequisite for this course is a
solid understanding of the fundamentals of acoustics, as demonstrated
by successful completions of ACS 501 and 502. Students with a minor
in Acoustics from accredited universities may also have the proper
background to take this course. Although basic fluid mechanics is
covered in the course, any previous courses or experience in this area
will be beneficial. Homework problems will be assigned weekly and
graded. Some of the homework may involve reading technical papers
and providing a written synopsis. The average of all homework grades
will constitute one-third of the final course grade. Another third will come
from the mid-term exam and the final third from the final exam.

Prerequisite: ACS 501 and ACS 502

ACS 537: Noise Control Engineering I

3 Credits

As the first of three courses, this course provides an orientation to the
program and covers fundamentals of noise control. ACS 537 Noise
Control Engineering I (3) This course will introduce students to the
application of acoustic and vibration fundamentals to the analysis and
reduction of noise and vibration problems in industrial and residential
settings. Topics will include: source-path-receiver model, human hearing
and psychoacoustics, human response to noise and vibration, sound
quality metrics and criteria for quantifying noise, acoustic standards
related to noise and vibration control, instrumentation for measuring and
analyzing noise and vibration, noise sources (distributed sources, impact
sources, flow noise), absorption (materials, measurement, placement),
control of sound in large and small rooms, partitions and barriers,
mufflers, and vibration control techniques. Homework will combine
problem solving with analysis of case studies. Group projects may be
used to encourage collaborative approaches to problem solving.

Prerequisite: BS in engineering or related field, or instructor approval

ACS 542: Physical Principles in Biomedical Ultrasonics

3 Credits

Physical principles of advanced ultrasonic imaging and quantitative
data acquisition techniques in fields of biology and medicine. E MCH
(ACS) 542 Physical Principles in Biomedical Ultrasonics (3) This course
focuses on the phenomenon of ultrasound in the context of medical and
biological applications, systematically discussing physical principles
and concepts. Concepts of wave acoustics are examined and practical
implications are explored - first, the generation and nature of acoustic
fields and then their formal descriptions and measurement. Real
tissues attenuate and scatter ultrasound in ways that have interesting
relationships to their physical chemistry, and the course includes
coverage of these topics. This course also includes critical accounts
and discussions of the wide variety of diagnostic and investigative
applications of ultrasound that are available in medicine and biology.
The course encompasses the biophysics of ultrasound and its practical
applications to therapeutic and surgical objectives. The course utilizes
finite element methods for simulation.

Cross-listed with: EMCH 542

ACS 580: Contemporary Research in Acoustics

1 Credits

Contemporary research activities in acoustics: major research thrusts,
including current research methodologies and their limitations.

Prerequisite: ACS 501, ACS 502, ACS 505, ACS 590, ACS 594 or equivalent

ACS 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by
faculty, students, or outside speakers.

ACS 594: Research Topics

1-15 Credits/Maximum of 15

Supervised student activities on research projects identified on an
individual or small-group basis.

ACS 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on
an individual basis and which fall outside the scope of formal courses.

ACS 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may
be offered infrequently; several different topics may be taught in one year
or term.

ACS 598: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may
be offered infrequently; several different topics may be taught in one year
or semester.

ACS 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

ACS 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

ACS 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.
ACS 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

Adult Education (ADTED)

ADTED 501: Foundations of Medical Education

3 Credits

This course provides an overview of medical education, and considers how it operates as a specific form of adult education. ADTED 501 Foundations of Medical Education (3) The primary focus of this course is to explore the foundations of medical education by providing an overview of medical education, and considering how medical education operates as a specific form of adult education. It is especially relevant to educators working with adult learners in medical education, nursing education, or health education. More specifically, the course will focus on how insights from adult learning theory can contribute to the theory and practice of medical education in designing curriculum and developing an appropriate pedagogy in both classroom and clinical teaching contexts. It will examine recent and future trends in US medical education in light of the context of: the guidelines of the American Association of Medical Colleges (AAMC); the current health care system; and comparative trends in medical education in other countries. The course will examine research in medical education, and help students connect the research and educational philosophy/theory with developing their own teaching practice in medical education in classroom settings (face to face and online), and in clinical teaching settings. Finally, it will briefly explore trends in medical education assessment, and issues in continuing medical education. Objectives are: 1. To provide an overview of the foundations of Medical Education as Adult Education. 2. To consider the development of medical education in light of its history and recent trends in health care in both a U.S. and international context. 3. To analyze and discuss adult learning theory as related to medical education in both classroom and clinical settings. 4. To examine some of the research in medical education assessment strategies used in evaluating medical education. 5. To develop a philosophy of medical education that guides the development of curriculum and pedagogy in different medical education settings. 6. To develop specific strategies for medical education teaching practice for both classroom and clinical contexts. In addition to ongoing participation, evaluation is predominantly based on the following: 1. A paper where students discuss their philosophy of medical education and what it suggests for curriculum development in light of course readings and class discussion. 2. A collaborative book review and presentation of a recent book in medical education. 3. A final paper or project exploring an issue in medical education in depth.

Prerequisite: ADTED 460

ADTED 502: Program and Instructional Design in Medical Education

3 Credits

This course focuses on program planning and instructional design in a medical setting with an emphasis on teaching with simulation. ADTED 502 Program and Instructional Design in Medical Education (3) Participants of this course will explore a variety of program and curriculum planning and instructional design approaches to teaching in a medical setting, with a particular emphasis on the use of simulation as an instructional design. Program planning is informed by models from the adult education literature and curriculum planning informed by the field of medical education which will provide a framework for preparing participants in the assessing, planning, developing and evaluating simulations as an instructional design. The course will provide participants with the both theoretical understanding and direct practical experience so they are able to effectively plan and develop effective simulations for teaching in a medical setting. In addition, this course is taught in six sessions (9-5pm) which is a suitable format for teaching the content and the work schedule of medical students/faculty who will be taking this course.

Prerequisite: ADTED 460

ADTED 505: The Teaching of Adults

3 Credits

Examination of direct and indirect teaching; contracts, application of current technology, andragogy, motivation, evaluation; knowledge of research.

Prerequisite: ADTED 460

ADTED 506: Program Planning in Adult Education

3 Credits

Intensive study of theoretical foundations, policies, evaluation models, methods, and materials in program planning in adult education.

Prerequisite: ADTED 460, ADTED 505

ADTED 507: Research and Evaluation in Adult Education

3 Credits

Guided discussion and reading in selected research and evaluation methods and trends as applied in adult education settings.

Prerequisite: ADTED 460; introductory statistics course; introductory research design course

ADTED 508: Globalization and Lifelong Learning

3 Credits

Examination of globalization discourses and their relationships, implications and impacts on lifelong learning processes and contexts. ADTED 508 ADTED (CI ED) 508 Globalization and Lifelong Learning (3) The course is designed to help students to critically examine the nature and impacts of globalization on lifelong learning. The main goal is to enhance the students' ability to learn and work in a globalizing world and to challenge traditional perspectives about globalization and lifelong learning. As such, the course will adopt a critical perspective on globalization while helping the students to develop a reflective stance on the theory and practice of lifelong learning. A central focus of the course will be to develop a critical analysis that contributes to the building of a more active and socially responsible adult learner. Students will be evaluated using a number of assignments/projects. The major research paper, class presentation, two critiques of theories of lifelong learning, country profile of lifelong and a short reaction paper will count for 90% of the course grade. Class participation will be awarded 10%.

Cross-listed with: CI ED 508
ADTED 509: Language, Literacy, Identity, and Culture in a Global Context

3 Credits

Examines the relationship between issues of language, identity and culture for adult learners in an increasingly global context. ADTED 509 ADTED (CI ED) 509 Language, Literacy, Identity, and Culture in a Global Context (3)This core required course provides graduate students in the ADTED Ph.D. program a critical overview of the literature, theories, and scholarship examining the complexities inherent in an increasingly diverse global and post-colonial sphere. Explorations of historical, theoretical, postcolonial perspectives will be the focus, as will the daily portrayals of diverse peoples by the media. Participants in the course will be expected to familiarize themselves with the readings portraying the complexities of ethnicity, indigeneity, race, gender, and social class. Evaluation will focus primarily on writing a scholarly paper, preparing video materials that illustrate the issues, writing their personal educational histories, and participating in class.

Prerequisite: ADTED508
Cross-listed with: CIED 509

ADTED 510: Historical and Social Issues in Adult Education

3 Credits

Social and historical foundations of adult education in the United States and selected nations.

Prerequisite: ADTED460

ADTED 515: Foundations of Educational Research

3 Credits/Maximum of 999

Students read the philosophical foundations of education research, study how philosophies influence methodologies, and analyze current educational problems. This course is designed for students entering doctoral programs in the College of Education. Our students are studying to become education researchers within a highly politicized environment. For example, particular definitions of education research and government policies that favor some types of research practices over others provide opportunities for and set limits upon the work of education researchers. Public controversies likewise contribute to challenges faced by education researchers who find their work affirmed or discounted by particular definitions and policies. In order to explore these controversies and to allow students to begin identifying their own "positionality" with regard to research, this course begins with a reading of the history and philosophies of education research (primarily focusing on the United States). The course goals are: - to identify underlying assumptions of competing forms of social inquiry, each determined to uncover new knowledge; - to bring those assumptions to bear on education research in chosen fields of study; and - to begin to develop one's own positions in order to direct further study and research. Specifically, through instructor facilitation and group discussions, students will come to understand major philosophical perspectives that permeate and drive research methodologies in education: positivism, postpositivism, interpretivism, critical theory, poststructuralism, and pragmatism. These understandings allow students to recognize the methodological assumptions that inform published research studies and to discover how methodologies might inform the research they wish to conduct as students and practitioners. Although the course is not required by any particular doctoral program in the College of Education, it is suggested for students who consider research important to their future careers and who see benefits in exploring the methodological options available.

Cross-listed with: CI 515, EDPSY 515, HIED 515

ADTED 521: Doctoral Proseminar

3 Credits/Maximum of 999

An orientation to the field of adult education and to doctoral study in the Adult Education Program at Penn State. This course provides both an orientation to the field of adult education as an area of study for doctoral students to understand the process of graduate study in this program. It prepares practitioners who have experience working with adult learners and people with little or no interest in learning about the field. We will take a broad view of adult education and will accommodate the interests of persons concerned with nonformal education, informal learning, and formal learning in diverse settings. The principal aim is to develop a basic understanding of adult education in a global context, preparing students for candidacy. The focus of the course will be on the sociohistorical context of its methods, agencies, programs, and issues.

ADTED 531: Course Design and Development in Distance Education

3 Credits

In depth study of the practices of designing courses taught by print, broadcast, and telecommunications media to adult distance learners.

Prerequisite: ADTED470, INSYS415

ADTED 532: Research and Evaluation in Distance Education

3 Credits

Study of previous, current, and needed research strategies, and issues concerning evaluation in distance education.

ADTED 533: Global Online and Distance Education

3 Credits

Students will explore the historical and current developments of online and distance education in different regions of the world.

ADTED 541: Women and Minorities in Adult Education

3 Credits

Seminar on women and minority adults as learners and leaders in the various contexts of adult education.

Prerequisite: ADTED460
Cross-Listed

ADTED 542: Perspectives on Adult Learning Theory

3 Credits

Introduction to adult education learning theory, principles, and models of adult learning by adults alone, in groups, and in communities.

ADTED 543: Comparative and International Trends in Adult Literacy Education

3 Credits

This course critically examines the broad contemporary issues and interdisciplinary trends of literacy education with an international and
comparative framework. CI ED (ADTED/AFR) 543 Comparative and International Trends in Adult Literacy Education (3) This course provides a comparative synthesis of what is known about literacy education and adult learning and what it will mean for the 21st century: the context in which literacy takes place; who participates; what they learn and why; the nature of the learning processes; new approaches to adult learning; social media and mobile devices; development theory in adult learning; and other issues relevant to understanding literacy education and adult learning in sociocultural, political, and international contexts. It also examines the newer approaches to adult learning: embodied, spiritual and narrative learning; learning and knowing in non-western perspectives; and cultural theory, poststructural and feminist perspectives. This course investigates questions such as: What does it mean to be literate in the 21st century? Why are teachers experiencing difficulty teaching students skills needed to understand and produce written work? Can schools in the 21st century inundated with digital technologies help students navigate the new literacies? How should adult literacy participants deal with the reality of new media and new literacies? What is the role of non-governmental organizations in this crisis? Overall, this course challenges graduate students to engage other international and non-western frameworks of learning and knowing to think about the purpose of education and learning as well as question the nature of knowledge production itself.

Cross-listed with: AFR 543, CIED 543
ADTED 549: Community Junior College and the Technical Institute
2-3 Credits/Maximum of 3

Distinctive contributions to meeting the need for postsecondary education; development, functions, curriculum and instruction, government, administration, and finance.

Cross-listed with: HIED 549
ADTED 550: Qualitative Research in Adult Education
3 Credits

Introduction to the theory, principles, and practice of qualitative research.

ADTED 551: Qualitative Data Analysis
3 Credits

Students learn to analyze data qualitatively by engaging in, and continuously reflecting on the process. ADTED 551 ADTED 551 Qualitative Data Analysis (3) The course is designed for graduate students wishing to gain competencies in qualitative data analysis. It is especially suitable for students needing guidance in completing the data analysis phase of their masters’ or doctoral research. The course takes a thoroughly hands-on, inductive approach. Students learn the skills and principles of qualitative data analysis by engaging in, and reflecting on, the process. Texts will be consulted, as needed, but only as resources to assist in the students’ on-going work, not as blue prints to follow. Using their own data, the instructor will guide students in selecting and using appropriate strategies and techniques for qualitatively analyzing data. Students will work in teams. Each work team will make periodic progress reports - in the form of oral class presentations. It is expected that students will actively participate in class discussions and in their work teams. Each student will also submit a diskette that contains samples of the work he or she has generated while using qualitative data analysis computer programs. Each student will also submit a final paper that articulates what he or she learned about the qualitative data analysis process.

Prerequisite: ADTED 550 and LDT 574
ADTED 552: Participatory Action Research
3 Credits

Examines origins, historical development, main characteristics, methodological assumptions and models, practice of participatory action research adult education and community development. ADTED 552 ADTED 552 Participatory Action Research (3) This course is designed to provide students with a critical overview of the theory and practice of participatory action research (PAR). The course begins with an examination of the meaning and nature of participatory action research. Related issues such as the major differences between PAR and the orthodox, traditional research paradigm will be discussed. This will be followed with a discussion of the historical roots of PAR and a critical examination of its epistemological assumptions and philosophical roots. The course will explore the various models of doing PAR with particular reference to the guidelines, phases, methods, and techniques. Finally, the course will critically examine a selected number of case studies from various regions. Students will be evaluated using a variety of assignments. The scholarly paper, a case study of PAR practice, annotated bibliography and three reaction papers will count for 90% of the course grade. Class participation will be awarded 10%.

ADTED 560: Teaching Reading to College Students and Adults
3 Credits

Reading literacy for adults, including college reading, Adult Basic Education (ABE), and General Educational Development (GED) programs.

Prerequisite: LL ED440 or teaching experience
ADTED 561: Family Literacy
3 Credits

Examines the research related to the four components of family literacy, program effectiveness, and theoretical underpinnings. ADTED 561 ADTED 561 Family Literacy (3) Open to graduate students who are interested in literacy, adult education, early childhood education, family studies, communication, and related fields, this 3-credit course provides a research-based study of family literacy. Family literacy comprises four components: Adult literacy instruction, early childhood education, parenting education, and parent - child interaction. Research about the four components and the program as implemented in the USA (primarily under the Goodflying Even Start Act) and internationally will be studied in addition to the theoretical underpinnings of the concept of family literacy. Students will be required to conduct original or library research related to family literacy and present their findings both in class and in a written paper that could be publishable. Students may choose to do research related to the projects of the Goodflying Institute for Research in Family Literacy in the College of Education; students’ papers may have the opportunity to be disseminated through the Institute. The research project, presentation, and paper will be counted as 50% of the course grade. Class participation (including email discussion groups) will be awarded 20% of the course grade while the remaining 30% will be awarded to short reaction papers to the assigned readings.
ADTED 562: Politics, Language and Pedagogy: Applying Paulo Freire today
3 Credits
Examines the work of Paulo Freire as it applies to community action projects. ADTED 562 / CIED 562 Politics, Languages and Pedagogy: Applying Paulo Freire Today (3) The life and work of Paulo Freire will be the focus of this advanced graduate seminar. Freire was one of the foremost adult educators of our time. Graduate students participating in the course will read and reflect on his vision and how it evolved over time, critiques of Freire, the ways in which his ideas have been applied in diverse geographic and practice settings (e.g., education, community development), and implications for research, policy, and practice. Students will explore how elements related to Freire's work, such as conscientization, transformative action, and pedagogy for liberation, influence pedagogy and community action projects. Readings will include Freire's books, scholarship on Freire, and case studies of Freirean projects, among others.

Cross-listed with: CIED 562

ADTED 564: Social and Cultural Contexts of Learning and Work
3 Credits
Examines the relationship between learning and work with special attention given to how certain forms of learning are legitimized. ADTED 564 Social and Cultural Contexts of Learning and Work (3) This course is designed to provide students with the knowledge and skills required to critically examine the concepts and meanings of learning and work and their relationship to community. The course focuses on formal, nonformal, informal, and incidental learning, with particular emphasis given to how different types of knowledge and different forms of learning are legitimized. The course will allow students to develop and understand the social context in which learning and work operate and how those concepts shape and impact the community. Students will write critiques of readings as well as a major literature review, participate in class discussion, and do a class presentation.

Prerequisite: CI ED500, ADTED 542
Cross-Listed

ADTED 570: Comparative and International Adult Education
3 Credits
Critical and comparative analysis of adult education theory and practice outside North America, including international agency involvement.

Prerequisite: ADTED 460
Cross-listed with: CIED 570

ADTED 575: Administration of Adult Education
3 Credits
Organization of a program of adult education; legal status, finances, selection of teachers, learning personnel, housing; other administrative problems.

Prerequisite: ADTED 506 or EDLDR 480
Cross-Listed

ADTED 580: Adult Education Research Seminar
1-3 Credits/Maximum of 3
A seminar dealing with specific research topics and methods in adult education. Open to advanced students in adult education.

Prerequisite: ADTED 507, EDPSY 400, EDPSY 475

ADTED 581: Social Theory and Lifelong Learning
3 Credits
In-depth coverage of social theory, especially as it intersects with research in adult education and lifelong learning. This course will cover the historical and contemporary development of lifelong learning as both a concept and a world historical phenomenon. Examples of potential research-based content include, but are not limited to, globalization and lifelong learning, lifelong learning and the United Nations, lifelong learning and UNESCO, lifelong learning, adult education, and the global movement to eradicate poverty, lifelong learning and adult basic education, lifelong learning and development in the global south, lifelong learning in Western Europe, Asia, Africa, North America, and South America respectively, lifelong learning and higher education, lifelong learning and workplace education, global agreements on lifelong learning, the policy of lifelong learning, lifelong learning and political engagement, the theory and practice of lifelong learning and adult education. Within the broad purview of lifelong learning and adult education history, research, practice, and theory, this course will bring the tools of social theory to bear on particular concepts to illustrate the role it plays in understanding those phenomena. In this process, specific social theorists, approaches to social theory, and the usefulness of social theory in empirical research will be covered.

ADTED 588: Professional Seminar: Research and Adult Education
3 Credits
Review of research in adult education, current and past, with analysis of its directions, effects, methodology, quality, financing, and prospects.

Prerequisite: ADTED 460, ADTED 507

ADTED 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

ADTED 594: Research Topics
1-18 Credits/Maximum of 18
Supervised student activities on research projects identified on an individual or small-group basis.

ADTED 595: Internship in Adult Education
3-9 Credits/Maximum of 9
Supervised student internship in adult education agency.

Prerequisite: ADTED 460
ADTED 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects including non-thesis research, supervised on an individual basis and which fall outside the scope of formal courses.

ADTED 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently.

ADTED 597A: **SPECIAL TOPICS**
3 Credits
Cross-Listed
ADTED 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

ADTED 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
Ph.D. Dissertation research.
Prerequisite: passing score on the Ph.D. comprehensive examination

ADTED 602: College Teaching
1-3 Credits
Experience in teaching in the Adult Education Program.
Prerequisite: Advanced standing in the Adult Education graduate program.

ADTED 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

Aerospace Engineering (AERSP)

AERSP 504: Aerodynamics of V/STOL Aircraft
3 Credits
Jet wings, high lift devices, propellers and ducted propellers, circulation and boundary layer control, unsteady airfoil theory.
Prerequisite: AERSP407

AERSP 505: Aero- and Hydroelasticity
3 Credits
Interaction of elastic systems having several degrees of freedom with fluid flows in various configurations.

AERSP 506: Rotorcraft Dynamics
3 Credits
Prerequisite: AERSP504, E MCH571

AERSP 507: Theory and Design of Turbomachinery
3 Credits
Theory and principles of machinery design: compressors, turbines, pumps, and rotating propulsors; opportunity to work out design examples.

AERSP 508: Foundations of Fluid Mechanics
3 Credits
Mathematical review, fluid properties, kinematics, conservation laws, constitutive relations, similarity principles, the boundary layer, inviscid flow, vorticity dynamics, wave motion.

AERSP 509: Dynamics of Ideal Fluids
3 Credits
Irrotational flow theory, two-dimensional and axisymmetric flows, airfoil theory, complex variables, unsteady phenomena; flow with vorticity, finite wing theory.
Prerequisite: AERSP508

AERSP 511: Aerodynamically Induced Noise
3 Credits

AERSP 514: Stability of Laminar Flows
3 Credits
The stability of laminar motions in various geometries as influenced by boundary conditions and body forces of various kinds.

AERSP 518: Dynamics and Control of Aerospace Vehicles
3 Credits
Dynamical problems of aircraft and missiles, including launch, trajectory, optimization, orbiting, reentry, stability and control, and automatic control.
Prerequisite: AERSP413 or AERSP450

AERSP 524: Turbulence and Applications to CFD: DNS and LES
3 Credits
First of two courses: Scalings, decompositions, turbulence equations; scale representations, Direct and Large-Eddy Simulation modeling; pseudo-spectral methods; 3 computer projects.
Prerequisite: AERSP508 or M E 521
Cross-listed with: ME 524
AERSP 525: Turbulence and Applications to CFD: RANS
3 Credits
Second in two courses: Scalings, decomposition, turbulence equations; Reynolds Averaged Navier Stokes (RANS) modeling; phenomenological models; 3 computer projects.
Prerequisite: AERSP508 or M E 521
Cross-listed with: ME 525
AERSP 530: Aerothermochemistry of Advanced Propulsion Systems
3 Credits
Physics and chemistry needed to analyze high performance rocket propulsion systems including reacting high temperature radiating gas and plasma flows.
Prerequisite: AERSP312 or M E 420
AERSP 535: Physics of Gases
3 Credits
An introduction to kinetic theory, statistical mechanics, quantum mechanics, atomic and molecular structure, chemical thermodynamics, and chemical kinetics of gases.
Cross-listed with: ME 535
AERSP 540: Theory of Plasma Waves
3 Credits
Solutions of the Boltzmann equation; waves in bounded and unbounded plasmas; radiation and scattering from plasmas.
Prerequisite: E E 471
Cross-listed with: NUCE 540
AERSP 550: Astrodynamics
3 Credits
Applications of classical celestial mechanics to space flight planning. Determination and construction of orbital parameters by approximation methods. Perturbation techniques. AERSP 550 Astrodynamics (3) This course covers the mathematics and practices in orbital mechanics as applied to space mission analysis, design and operation. The major topics are: the n-body problem, the two-body problem, Keplerian orbits, the Kepler problem (position as a function of time), three-dimensional specifications of Keplerian orbits (orbital elements), Lambert’s problem (determining the trajectory between two specified points with a given time of flight), impulsive transfers, the Hohmann transfer and its extension to other problems, the sphere of influence, the patched-conic approximation, the restricted three-body problem, linear orbit theory (relative motion between vehicles in neighboring orbits), gravitational modeling, perturbation methods (Encke’s method and variation of elements), orbit determination, tracking kinematics, and time systems.
Prerequisite: AERSP450 or E MCH409 or PHYS 419
AERSP 560: Finite Element Method in Fluid Mechanics and Heat Transfer
3 Credits
Application of finite element techniques to viscous/unsteady fluid flow/heat transfer problems.
Prerequisite: AERSP312, AERSP313
AERSP 571: Foundations of Structural Dynamics and Vibration
3 Credits
Modeling approaches and analysis methods of structural dynamics and vibration.
Prerequisite: AERSP304, E MCH470, M E 450, or M E 570
Cross-listed with: EMCH 571, ME 571
AERSP 583: Wind Turbine Aerodynamics
3 Credits
Analysis of wind turbine performance, aeroacoustics, and loads; turbine selection for site-specific application.
AERSP 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.
AERSP 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.
AERSP 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.
AERSP 597A: **SPECIAL TOPICS**
3 Credits
AERSP 597F: **SPECIAL TOPICS**
3 Credits
Cross-Listed
AERSP 597J: **SPECIAL TOPICS**
3 Credits
AERSP 600: Thesis Research
1-15 Credits/Maximum of 999
No description.
AERSP 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.
AERSP 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
Provides an opportunity for supervised and graded teaching experience in aerospace engineering courses.
AERSP 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.
AERSP 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999
No description.
AERSP 880: Wind Turbine Systems
3 Credits
Wind turbine technology and the critical elements of turbine systems design.
AERSP 886: Engineering of Wind Project Development
3 Credits
An overview of the wind project development process and technical considerations for onshore and offshore applications.

African American Studies (AFAM)
AFAM 501: Seminar in African American Studies
3 Credits
A survey of the academic field of African American Studies.
AFAM 502: Blacks and African Diaspora
3 Credits
Seminar in the theory and history of Blacks in the African Diaspora.
AFAM 503: Sexual and Gender Politics in the African Diaspora
3 Credits
A seminar in the theory and history of sexual and gender politics in the Black Diaspora from the Colonial Era forward.
Prerequisite: AF AMS501
AFAM 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.
AFAM 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently.

African Studies (AFR)
AFR 501: Key Issues in African Studies
3 Credits
A seminar to review leading issues in African Studies and African development.
AFR 527: Migration, Urbanization, and Policy in the Developing World
3 Credits
This course examines the dynamics of migration and urbanization processes, as well as their policy implications, in non-industrialized regions of the world.
Cross-listed with: SOC 527
AFR 534: Political Economy of Energy and Extractive Industries in Africa (Oil and Mining)
3 Credits
Students will examine how the expansion of petroleum and mining industries has impacted Africa's political economies and external relations.
Cross-listed with: PLSC 534
AFR 537: Gender, Sexuality and Islam in Africa: Exploring Contemporary Feminist Scholarship
3 Credits
A course about discourses of sexuality and gender in studies of Islam in Africa, with South Africa as a case study.
Cross-listed with: WMNST 537
AFR 543: Comparative and International Trends in Adult Literacy Education
3 Credits
This course critically examines the broad contemporary issues and interdisciplinary trends of literacy education with an international and comparative framework. CI ED (ADTED/AFR) 543 Comparative and International Trends in Adult Literacy Education (3) This course provides a comparative synthesis of what is known about literacy education and adult learning and what it will mean for the 21st century: the context in which literacy takes place; who participates; what they learn and why; the nature of the learning processes; new approaches to adult learning; social media and mobile devices; development theory in adult learning; and other issues relevant to understanding literacy education and adult learning in sociocultural, political, and international contexts. It also examines the newer approaches to adult learning: embodied, spiritual and narrative learning; learning and knowing in non-western perspectives; and cultural theory, poststructural and feminist perspectives. This course investigates questions such as: What does it mean to be literate in the
21st century? Why are teachers experiencing difficulty teaching students skills needed to understand and produce written work? Can schools in the 21st century inundated with digital technologies help students navigate the new literacies? How should adult literacy participants deal with the reality of new media and new literacies? What is the role of non-governmental organizations in this crisis? Overall, this course challenges graduate students to engage other international and non-western frameworks of learning and knowing to think about the purpose of education and learning as well as question the nature of knowledge production itself.

Cross-listed with: ADTED 543, CIED 543

AFR 550: African Feminisms

3 Credits

African feminisms are deeply rooted in the continent’s rich historical traditions and diverse cultural contexts. In this interdisciplinary graduate seminar, students will become familiar with the theoretical frameworks that guide African feminist scholarship, as well as the activist histories from which they emerged. This course will consider the epistemological foundations of African feminist thought and how they differ from feminisms in other parts of the world. This course will also examine key areas of conjuncture - how African feminisms map on to larger transnational movements. Particular emphasis will be placed on the fluidity of African gender systems, the ways in which African women have negotiated politics, religion, militarism, sexuality, and violence, and the role of creativity, art, and beauty in nurturing and sustaining activist momentum. Students in the course can expect to engage with a number of different types of texts: documentaries, feature films, memoirs, novels, newspapers, scholarly books, and articles.

Cross-listed with: WMNST 550

AFR 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

AFR 597: Special Topics

1-9 Credits

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

Agricultural and Biological Engineering (ABE)

ABE 500: Research Methods

3 Credits

Foundation in research philosophies, methodologies, issues and policies; measures of research quality; critical thinking and discourse; research report writing; professional development; research ethics. A B E (BRS) 500 Research Methods (3) A B E/BRS 500 is a course designed to assist students entering and advancing in their research career to: better investigate and practice the art of scientific investigation; openly explore and discuss what it means to be a part of the scientific and research enterprise at a major academic setting; gain skills and experiences in critical evaluation and discourse; learn the process of developing and preparing a research proposal from initial concept to near-final written product; better understand the expectations for responsible and ethical conduct as a scientist/student/individual; and further develop their philosophies and capabilities as future scientists and professionals. During this course students will continually read, think, discuss, write, critique, re-read, re-think, re-write, and communicate with other students, faculty, and professionals. The course will provide a setting to allow them to further develop their personal, professional, academic, and scientific goals and capabilities.

Cross-listed with: BRS 500

ABE 504: Mechanics and Properties of Particulate Materials

3 Credits

Constitutive equations for cohesionless and cohesive particulate materials; measurement of properties; application to storage, flow, and consolidation.

ABE 513: Applied Finite Element, Finite Difference, and Boundary Element Methods

3 Credits

Applications of numerical methods in the areas of structures, fluid dynamics, heat and mass transfer, and machine design.

ABE 517: Surface Transport of Agricultural Pollutants

3 Credits

Understanding and modeling the surface transport processes of agricultural pollutants; particularly erosion, sediment transport, and movement of sediment-attached constituents.

ABE 559: Biological and Agricultural Systems Simulation

3 Credits

Continuous simulation modeling of biological and physical systems, numerical simulation techniques, validation and verification, difference measures, sensitivity analysis. A B E 559 A B E 559 Biological and Agricultural Systems Simulation (3) This course enables the student to better understand system behavior and prediction, with a focus on biological and physical systems. Using a diagramming-based model development package and standard spreadsheet programs, the student will be able to: identify a system, labeling components, boundaries, and environment; represent a system in mathematical terms; develop a working simulation model; evaluate a model through statistical means. The applications used within this course are oriented towards graduate students in the Colleges of Agricultural Sciences and Engineering. The course is offered every Fall semester, with an expected enrollment of 10 students. Grading is based on homework and in-class assignments, and a final project.

Prerequisite: MATH 111 or MATH 141

ABE 562: Boundary Element Analysis

3 Credits

Numerical solution of boundary value problems using fundamental solutions; application to problems in potential theory, diffusion, and elastostatics.
Prerequisite: ABE 513 or EMCH 461 or EMCH 560
Cross-Listed

ABE 568: Food Safety Engineering

3 Credits

Predictive microbiology and modeling, conventional and novel detection and enumeration methods, conventional and novel processing methods, applied to plant layout, construction materials, and equipment design for microbial food safety. ABE 568 ABE 568 Food Safety Engineering

(3) This course introduces diverse topics in microbial food safety from an engineering perspective. Topics include the following: the roles of engineering, plant layout, construction materials, equipment design, predictive microbiology and modeling, conventional and novel detection and enumeration methods, conventional and novel processing methods, emergency contingency plans, and current responsibilities and regulations of federal agencies for food safety. Students will be evaluated through homework, exams, design project reports and presentations. The course will be offered every other Fall semester with expected enrollment of 10-15.

Prerequisite: ABE 308

ABE 589: Management and Design of Renewable Energy and Sustainability Systems

3 Credits

Real-world renewable energy systems projects using a systems analysis and case-study approach.

Prerequisite: EME 504, EME 801, EME 802, and BIOET 533

ABE 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

ABE 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

ABE 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

ABE 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

ABE 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

Supervised experience in development of instructional materials, organizing and conducting lectures, laboratories, and evaluating students in undergraduate Agricultural Engineering courses (1-499).

ABE 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

ABE 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

ABE 884: Biomass Energy Systems

3 Credits

Theories and applied technologies for production and conversion of biomass into energy and co-products.

ABE 885: Biomass Harvesting and Logistics

3 Credits

Biomass harvesting and handling scenarios and relevant cost analysis and systematic considerations.

Prerequisite: ABE 884

ABE 888: Conversion Technologies for Bioenergy Production

3 Credits

Applications of chemical, biochemical, thermochemical, and bioseparation technologies for the production of bioenergy.

Prerequisite: ABE 884

Agricultural and Extension Education (AEE)

AEE 501: Foundations of Agricultural and Extension Education

3 Credits

Historical development, social and philosophical foundations, and current status in relation to the total vocational-technical education program.

AEE 505: Leadership Development

3 Credits

Exploration, understanding, and application of leadership roles, strategies, and principles in group and community settings.

Cross-listed with: CEDEV 505
AEE 508: Administration and Supervision of Agricultural and Extension Education

3 Credits/Maximum of 3

Basics of vocational funding, supervision, leadership, and management for agricultural education.

AEE 509: Contemporary Research in Agricultural and Extension Education

1-6 Credits/Maximum of 6

Analysis of contemporary research issues in agricultural education and extension education through lecture, review of literature, discussion, speakers, and active participation.

AEE 511: Youth Leadership Development in the Agricultural and Life Sciences

3 Credits

This course will address youth leadership development theories and emphasize formal and nonformal youth programs in agricultural and life sciences. AEE 511 AEE 511 Youth Leadership Development in the Agricultural and Life Sciences (3) The course will provide learners with an understanding of how adolescents develop and emerge as leaders in their families, schools, organizations, and communities. The overall objective for this course is to provide future and current leaders of youth organizations in the agricultural, natural resource, and/or life sciences the knowledge, skills, and experiences to develop and enhance the leadership skills and behaviors of the youth in their organizations. This will be accomplished through a variety of educational methods and techniques. Exposure to theories of youth leadership development will be shared within the context of adolescent development, group dynamics, and opportunities for growth and self-development. A variety of youth organizations and their respective leadership based programs, curricula, and philosophies will be shared and analyzed. Assignments and evaluative-based activities will focus on investigating and comparing youth organizations, analyzing leadership-based resources, analyzing youth/adolescent development theory, and developing a proposal to secure extramural funding to support youth leadership development.

AEE 515: Engagement Through Outreach Scholarship in Higher Education

3 Credits

To develop an understanding of outreach scholarship as a nonformal educational system and its relationship to relevant social systems. AEE 515 AEE 515. Engagement Through Outreach Scholarship in Higher Education (3) Through this course, students will develop an understanding of outreach scholarship as a nonformal educational system and its relationship to relevant domestic and international social systems. Students will explore the historical and legislative history of how higher education evolved. Drawing from both contemporary as well as historical resources, students will understand the "land-grant" philosophy and outreach scholarship in higher education in order to define an engaged university. Using their definitions, students then critique outreach scholarship as it is carried out through specific institutions of higher education, both in the United States and around the world. Alternative institutional missions, organizational policies and procedures as well as organizational structures and financial arrangements will be explored to demonstrate how distinct approaches to outreach scholarship evolve and their perceived value within an institution. Within this framework, students explore today's definition for scholarship and appropriate standards for scholarly performance through outreach. Case studies, interviews, and guest lectures supplement the current and historical literature. Students carry out individual capstone projects in order to allow each of them to synthesize course content in terms of their own professional interests within an engaged university. Given the visibility of outreach scholarship in higher education today and the fluidity of its definition, implementation, and perceived value within institutions, this course reflects contemporary thought in addition to its historical underpinnings.

Prerequisite: 9 credits in education, communication, and/or social sciences

Cross-Listed

AEE 520: Scientific Method in the Study of Agricultural and Extension Education

1-4 Credits/Maximum of 4

Methods of procedure in investigation and experimentation in education, accompanied by a critical examination of studies made in agricultural education.

AEE 521: Basic Applied Data Analysis in Agricultural and Extension Education

1-4 Credits/Maximum of 4

Continuation of AEE 520; emphasis upon statistical techniques for students' individual problems.

AEE 524: Change in Education

1-3 Credits/Maximum of 3

Analysis of occupational needs of students and employment prospects; organization of courses of study and other activities of teachers.

AEE 530: Teaching and Learning in Agricultural Science

3-4 Credits/Maximum of 4

Organization, planning and delivery of effective college teaching methods, matching/learning styles, evaluation of instruction and learning.

AEE 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

AEE 595: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor

AEE 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects including non-thesis research, supervised on an individual basis and which fall outside the scope of formal courses.
AEE 596C: **SPECIAL TOPICS**
1-3 Credits
AEE 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.
AEE 600: Thesis Research
1-15 Credits/Maximum of 999
No description.
AEE 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.
AEE 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
Involves experience in teaching undergraduate agricultural education courses under the supervision of the faculty.
AEE 610: Thesis Research Off-Campus
1-15 Credits/Maximum of 999
No description.
AEE 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999
No description.

**Agricultural Biosecurity (AGBIO)**

AGBIO 520: Agricultural Biosecurity: Protecting a Key Infrastructure
3 Credits
Course will explore intentional and unintentional threats to the agriculture-food system, history and current approaches for safeguarding this key infrastructure.
**Prerequisite:** permission of the instructor
AGBIO 521: Food Defense: Prevention Planning for Food Processors
3 Credits
Course prepares current and aspiring professionals to learn, recognize and apply measures to prevent intentional contamination of the food supply. FD SC (AGBIO) 521 Food Defense: Prevention Planning for Food Processors (3)This course will not only provide participants with knowledge of the domestic and international food industry, but it also provides tools for food industry and homeland security professionals to develop food defense programs to protect the food supply from terroristic activities leading to intentional contamination. The course will introduce and apply examples where intentional contamination has been used in the food industry, biological, chemical and physical hazards of primary concern in the food industry; methods for detecting hazards in the food supply; systems employed to monitor foodborne illness in the general public; management practices employed in food production to deal with recalls and other crises; vulnerabilities and mitigation procedures unique to food production; as well as agencies, resources, and tools needed to protect, prepare, and respond to intentional contamination incidents. This course is a required course for the certificate program in Agricultural Biosecurity as well as the Master of Professional Studies in Homeland Security/Agricultural Biosecurity Option. These principles also will be incorporated into a food defense plan, recall plan, and emergency preparedness plan for an assigned food establishment.
Cross-listed with: FDSC 521
AGBIO 594: Agricultural Biosecurity and Food Defense Capstone Experience
3 Credits
Culminating experience in the iMPS-HLS for the online Agricultural Biosecurity and Food Defense option.
**Prerequisite:** AGBIO520 , AGBIO521 , AGBIO801 , and AGBIO802
AGBIO 801: Veterinary Infectious Disease Diagnostic and Surveillance Systems
3 Credits
This course provides knowledge of diagnostic and surveillance systems used to detect infectious diseases and protect against animal agricultural biological attack.
**Prerequisite:** AGBIO 520
Cross-listed with: PATH 801
AGBIO 802: Plant Protection: Responding to Introductions of Threatening Pests and Pathogens
3 Credits
This course provides knowledge of plant biosecurity, plant disease, regulations, and technologies using case study examples.
Cross-listed with: PPATH 802

**Agricultural Economics and Rural Sociology (AEREC)**

AEREC 510: Econometrics I
3 Credits
General linear model, multicolinearity, specification error, autocorrelation, heteroskedasticity, restricted least squares, functional form, dummy variables, limited dependent variables.
**Prerequisite:** ECON 490 or STAT 462 or STAT 501
Cross-Listed
AEREC 511: Econometrics II
3 Credits
Stochastic regressors, distributed lag models, pooling cross-section and time-series data, simultaneous equation models.

Cross-Listed
AEREC 512: Applied Microeconomic Theory I
3 Credits
Principles of microeconomic theory and models that economists use to explain the behavior of consumers, firms, and markets, and how those principles may be applied to real-world problems. Principles and models are developed using calculus. The emphasis is on applied theory and problem solving, rather than formal proofs and derivations.

AEREC 519: Resource and Environmental Economics I
3 Credits
Theories and methods for economic analysis of natural resource and environmental policies with applications to current issues.

Prerequisite: ECON 502

AEREC 527: Quantitative Methods I
3 Credits
Quantitative techniques applied to agricultural economic issues.

Prerequisite: ECON 502
Cross-Listed
AEREC 531: Applied Microeconometrics I
3 Credits
Recommended Preparations: Graduate course in microeconomic theory; multivariate calculus; graduate-level econometrics covering linear and nonlinear estimation of single and multiple equation systems. In this course, we will study microeconometrics, a subfield that encompasses specification as well as a variety of estimation, computational, and simulation methods that allow us to pursue specification and parameterization of econometric models suitable for analyzing micro-level data. We will see that these methods support an enriched basis for examining the validity of microeconomic theory, and also extend the analytics feasibly tackled by microeconomics. At the micro-level of empirical analysis, we will see our theory predicts high frequencies of corner solutions, abrupt switching, and discontinuities. In each case, these predictions are also apparent in micro data. Together, these conditions call for methods that go beyond simple continuous choice functions and equilibria often found adequate for aggregate static and dynamic modeling. Knowledge of these new methods is essential to empirical learning in most areas of contemporary applied microeconomics. These methods evolved to support the active application of microeconomic theories of micro-level behavior (e.g. discrete choice, corner solutions, cusps in dynamic paths) as well as to address peculiar features of micro-level data such as error-in-measurement, availability of only binary or polychotomous indicators of continuous variables, and substantial heterogeneity. Theory is relied upon to specify models prior to estimation, to specify characteristics of data sets, and to interpret results.

ECON 502 AND ( AEREC 510; ECON 501 ) AND ( AEREC 511; ECON 510 )

AEREC 532: Applied Computational Economics
3 Credits
Economists often find themselves in situations where closed-form solutions do not exist or econometric estimation is inappropriate due to data limitations or the nature of the problem. In these cases, numerical approaches, using computer-based methods, may be an economist's best option. In this course, we will explore four topics in the field of computational economics: computable general equilibrium modeling, growth modeling, uncertainty and formal monte carlo analysis, and agent-based modeling. This course will combine formal lecture covering the theory of computational economics with model building exercises where students will be required to build on this theoretical foundation to develop and implement novel computational methods to solve complex economic problems. The overall goal of this course is to provide students with an in-depth understanding of computational economics so that they are prepared to build unique mathematical models to address complex situations that have not yet been encountered. Students should have successfully completed a graduate-level course in microeconomic theory prior to enrolling in this course.

Prerequisite: AEREC 512

AEREC 533: Rural Development Research Methods and Topics
3 Credits
Advanced theories and methods for rural economic development research.

Prerequisite: ECON 521
Cross-listed with: CEDEV 533

AEREC 536: Agricultural Commodity Markets
3 Credits
Specification, identification, and estimation of models for use in the evaluation and control of agricultural market behavior.

Prerequisite: AERC510 or AERC511 or ECON 521
Cross-Listed
AEREC 541: Resource and Environmental Economics II
3 Credits
Key theories and analytical methods of resource and environmental economics.

Prerequisite: AERC511, AERC519, ECON 521
Cross-Listed
AEREC 550: International Economic Development and Agriculture
3 Credits
The economic development process with particular emphasis on agriculture.

Prerequisite: ECON 502
Cross-Listed
AEREC 590: Colloquium
1-3 Credits
Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.
Cross-Listed
AEREC 595: Internship
1-18 Credits/Maximum of 18
Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.
AEREC 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and fall outside the scope of formal courses.
Cross-Listed
AEREC 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of specific interest.
AEREC 597A: **SPECIAL TOPICS**
3 Credits
AEREC 597B: **SPECIAL TOPICS**
1-3 Credits
AEREC 600: Thesis Research
1-15 Credits/Maximum of 999
No description.
AEREC 601: Thesis Preparation
0 Credits/Maximum of 999
No description.
AEREC 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 3
No description.
AEREC 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

Agronomy (AGRO)

AGRO 501: Graduate Student Dialogue
1 Credits
Orientation discussion group for incoming graduate students. Review departmental policies and learn about the diverse faculty programs in the department. AGRO 501 Graduate Student Dialogue (1) The objectives of this course are to (i) provide orientation on departmental policies and procedures to incoming graduate students, (ii) introduce students to the wide array of faculty research programs in the department, and (iii) build camaraderie among the cohort of students. This course is required of new graduate students in the department, yet inapplicable to '500-level major field' credit requirement. The course is graded pass/fail with emphasis on weekly classroom participation.
Cross-Listed
AGRO 510: Ecology of Agricultural Systems
3 Credits
Examination of ecological concepts and research on agroecosystem processes and dynamics via discussion and analysis of review and research papers. AGRO 510 AGRO 510 Ecology of Agricultural Systems (3) This course covers agroecological components, processes, and dynamics. Emphasis is placed on learning via reading and discussing the recent agroecological research literature. Students also gain experience interpreting and critically analyzing scientific papers and theories. Students lead some of the class discussions on the assigned readings. They identify one or two articles that are relevant to their graduate research subject to read and discuss with the class. Students write review papers on the course themes and on agroecology research that is relevant to their graduate research topic. The course is offered in alternative years during spring semesters.
Prerequisite: BIOL 546 or HORT 445 or the equivalent (Classic Ecology, Population Ecology or Plant Ecology)
AGRO 518: Responses of Crop Plants to Environmental Stress
3 Credits
Physiological and ecological aspects of the response of crop plants to environmental stresses in establishment, persistence, and reproduction.
Prerequisite: AGRO 410W
AGRO 555: Effective Scientific Communications
2 Credits
Instruction and practice in verbal communication of scientific information to technical and non-technical audiences through realistic exercises with invited audiences. AGRO 555 Effective Scientific Communications (2) The overall course objective is discovery of methods to effectively communicate scientific information to both fellow scientists and the lay community. A majority of the course will be devoted to preparing students to deliver oral and poster presentations technically appropriate for their target audience. Specifically, students will learn to present information in oral and poster formats used for scientific meetings, seminars, and proposal hearings. Additional emphasis will be placed on techniques for handling questions from the audience. Students will also determine appropriate scientific paper formats, and realize how outlines
facilitate organized technical writing. Students will improve their critical listening, thinking, and interpersonal skills by participating in weekly topical discussions as well as peer reviews. This course is unlike others in the Crop and Soil Sciences curriculum in that it teaches students how to communicate what they have learned during their research and academic endeavors. Enrollees will make two formal presentations based on their research, present their research as a scientific poster and conduct an exercise in writing a scientific journal article. Students will be evaluated on five criteria: participation, scientific poster presentation, technical oral presentation, non-technical oral presentation, and a scientific journal writing exercise.

AGRO 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

Cross-Listed
AGRO 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

AGRO 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

AGRO 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

AGRO 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

AGRO 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 3
Supervised training in teaching methodology for classroom and laboratory type instruction. Supervision provided by faculty member responsible for course.

AGRO 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

AGRO 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999
No description.

AGRO 808: Applied Computational Analysis
3 Credits/Maximum of 999
Comprehensive appraisal of designs for field, greenhouse, and growth-chamber experiments; and techniques for data collection, analysis, inference, and presentation. This course provides practical guidance in effective design, management, and interpretation of parametric experimentation by agricultural, environmental, and/or horticultural researchers. Upon course completion, students will be able to: define and specify appropriate experimental designs for field, greenhouse, and growth chamber research with consideration of the planned hypotheses, methodologies, and available resources; interpret/classify types of response data, describe components of experimental error and develop sampling/data collection strategies for control of error, bias, and confounding. Students will demonstrate proficiency in data organization and pre-processing for computational analysis; distinguish the required assumptions of analysis of variance (ANOVA), describe procedures to assess and resolve initially noncompliant data sets; implement software code for data analysis by experimental design; invoke appropriate mean separations, contrast statements, covariate structures, and linear estimators as necessary to optimize inference; employ software output to construct tables/figures that clearly depict sources/parameters/statistics; and construct line-, bar-, or scatter-plot graphs to describe mean response and/or significant trends/differences. The objective of Applied Computational Analysis is furtherance of thesis research quality through proficient experimental design, methodology, data analysis, and results inference.

AGRO 851: Applied Plant Population Biology
3 Credits
Lectures and exercises designed to develop student competency in plant selection to promote ecological diversity and genetically superior plants. AGRO 851 Applied Plant Population Biology (3)Even though the emphasis of this course will be on the applied aspects of plant population biology, students nevertheless require a fundamental understanding of the underlying science and theory on which to guide their land management decisions, with particular emphasis on plant materials. This course is designed to give potential superintendents and managers of large land holdings (such as golf courses, highway roadsides, game lands, and military installations) the skills necessary for making sound ecological decisions regarding the choice and management of plant materials utilized in land restoration and revegetation. Emphasis will be made on the applied aspects of plant population biology.
AMST 510: U.S. Literature and Culture
3 Credits
Studies exploring the relationship between literature and culture in American Studies.

AMST 511: Pivotal Books
3-9 Credits
Exploration of a number of books which have been particularly influential in shaping thinking about American civilization.

AMST 520: Topics in Popular Culture
3 Credits
A detailed exploration of aspects of American popular culture, including popular culture's relationship to society and scholarship.

AMST 530: Topics in American Folklore
3 Credits
A detailed exploration of aspects of folklore and folklife in America.

AMST 531: Material Culture and Folklife
3 Credits
Investigation of American material culture and folklife, including topics such as traditional design, cultural landscape, architecture, art, craft and food.

AMST 532: American Civilization in the Eighteenth Century
3-9 Credits
Detailed investigation of specific topics in eighteenth-century American civilization.

AMST 533: American Civilization in the Nineteenth Century
3-9 Credits
Representative interdisciplinary investigation of social, historical, economic, and aesthetic forces predominant in nineteenth-century America.

AMST 534: American Civilization in the Twentieth Century
3-9 Credits
Detailed investigation of specific periods or topics in twentieth-century American civilization.

AMST 535: American Civilization in the Twenty-first Century
3 Credits
Detailed investigation of specific topics in twenty-first century American civilization.

AMST 540: Ethnography and Society
3 Credits
An advanced course on ethnographic theories, methods, and case studies, emphasizing current controversies and new strategies in field work.

AMST 541: Ethnography of Technology and Media in the United States
3 Credits
Applied widely across the humanities and social sciences, ethnographic approaches to the study of culture encompass a wide variety of qualitative research methods that range from intimate personal interviews to participation in large group events. This seminar presents a detailed study of how the integration of technologies into the fabric of everyday life in the United State has both enabled the creation of new cultural forms and redefined existing social and cultural life. Students will engage with foundational and emerging works that apply the theories and methods of ethnography to the close study of technology and media use and culture, as well as works that demonstrate how emerging technologies may be applied in ethnographic research. In addition to presenting the relevant literature, this seminar will provide students with rigorous training in the requisite skills and concepts that define ethnographic practice, and offer opportunities for students to apply these skills and concepts to produce significant field research. Examples of technological forms considered could include video games, 3D printing and maker technologies, genetic technologies, mobile phones and devices, and a variety of internet technologies.

AMST 550: Seminar in Public Heritage
3 Credits
A study of the ways Americans use and understand heritage in public settings.

Prerequisite: AMSTD482

AMST 551: Seminar in Local and Regional Studies
3 Credits
Detailed investigation of local and regional historical themes and topics, emphasizing research methods.

AMST 560: Seminar in Race and Ethnicity
3 Credits
Studies exploring issues of race and ethnicity in America that can be addressed with theories and methods of American Studies.

AMST 561: Seminar in Gender and Culture
3 Credits
Thematic study of gender issues in American history and culture.

AMST 562: Topics in Religion and American Culture
3 Credits/Maximum of 6
Contrary to notions about the secularization of American society, a large number of Americans continue to report that religion plays an important role in their everyday lives. At the same time, changing demographic,
political, and cultural environments in the United States have contributed to a massive reorganization of the American religious landscape since 1970. Thus religion, it seems, is a timely issue in the study of American culture, one which will doubtless open up new avenues of American Studies research in the future. This seminar is a detailed study of aspects of religious history and culture in the United States. It will offer students an overview of the current engagement of American Studies with the study of religion and ask students to consider new pathways in this research for the future.

AMST 570: Topics in American Art
1-6 Credits
Various themes within the American arts will be explored under this rubric.

AMST 575: Museum Internship
3 Credits
A supervised museum internship experience featuring a "hands on" introduction into aspects of the curatorial profession.

AMST 579: Readings in American Studies
3-9 Credits
Directed readings in selected areas of American Studies. AM ST 579 Readings in American Studies (3-9)This course will cover major readings in a selected area of American Studies. The readings are designed to represent past and current scholarship in an area of research undertaken by a student or students. The selection of readings will be directed by a faculty member in consultation with the student(s). The readings typically cover areas that are not covered in depth within other American Studies offerings. Outcomes of the course include historiographies and theoretical essays, annotated bibliographies, and book reviews.

Prerequisite: AM ST500

AMST 580: Projects in American Studies
1-6 Credits/Maximum of 6
Independent exploration within American Studies; evidenced by major paper, film, exhibition or specialized examination.

AMST 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

AMST 591: Seminar in American Studies
3 Credits
An advanced seminar covering particular themes and issues in American Studies.

Prerequisite: AM ST500

AMST 595: Internship
1-12 Credits/Maximum of 12
Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

AMST 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

AMST 600: Thesis in American Studies
1-15 Credits/Maximum of 999
A thesis supervised by the American Studies Program.

Prerequisite: AMSTD500

AMST 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

AMST 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
Supervised experience in teaching and orientation to other selected aspects of the profession at The Pennsylvania State University.

Prerequisite: AM ST500 and permission of the doctoral program director

AMST 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

AMST 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999
No description.

Anatomy - MD (ANAT)

ANAT 503: Gross Anatomy
6 Credits
Gross structure, organization, and function of the human body with laboratories devoted to dissection of the human body.

ANAT 505: Histology and Embryology I
2 Credits
Light and electron microscopic structure of cells, specialized tissues, organization, basic organogenesis, correlation between cellular structure and physiological function.
ANAT 506: Histology and Embryology II
2 Credits
Continuation of ANAT 505; microscopic structure of cells, specialized tissues, organization, basic organogenesis, correlation between cellular structure and physiological function.
Prerequisite: ANAT 505

ANAT 512: Human Embryology and Teratology
2 Credits
Study of developing human embryo including gamete production and fusion, implantation, organogenesis and major abnormalities of organ systems.

ANAT 515: Developmental Neurobiology
2 Credits
Development of the nervous system in all its aspects.
Cross-listed with: NEURO 515

ANAT 585: Human Anatomy and Development B: Human Development
1 Credits
Explores human embryology and organogenesis beginning at the third week of gestation through parturition. ANAT 585 ANAT (PHARM) 585 Human Anatomy and Development B: Human Development (1) This course will provide a concise but thorough description of embryology of the major systems in the human. It will provide an awareness of how genetics, environment, and maternal-fetal relationships impact on normal human development, and the importance of understanding embryology for biomedical and translational research. An emphasis will be placed on the role of molecular biology in normal embryology and human development. Primary literature will be consulted for a description of major signaling pathways and key signaling molecules associated with each system. Some discussion of abnormal development will be included.
Cross-Listed

ANAT 586: Human Anatomy and Development C: Stem Cell Biology and Regenerative Medicine
1 Credits
Exploration of stem cell biology and the role of stem cells in regenerative medicine. ANAT 586 ANAT (PHARM) 586 Human Anatomy and Development C: Stem Cell Biology and Regenerative Medicine (1) This course will provide an evaluation of stem cell biology and regenerative medicine. In particular, discussions will focus on the five sources of embryonic stem cells (adult stem cells, amniotic fluid-derived stem cells, embryonic stem cells derived using in vitro fertilization technologies, somatic cell nuclear transfer cloning-derived stem cells, and stem cells derived by parthenogenetically-activating oocytes). In addition to providing detailed information on the biology underlying stem cells, group discussions will focus on ethical advantages and disadvantages for each of the five distinct types of stem cells. Work will then turn to current understanding of changes in transcriptome and proteome control of differentiation. As well, discussions will focus on attempts to use stem cells in regenerative medicine. This course will be designed as a mixture of didactic lectures with a particular focus on the current literature. This latter aspect of the course is essential in that much of our current understanding of stem cells has not yet made it into any common text books.

Cross-Listed
ANAT 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

ANAT 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

ANAT 597: Special Topics
1-9 Credits/Maximum of 999
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

ANAT 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

ANAT 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

ANAT 602: Supervised Experience in College Teaching
1-6 Credits/Maximum of 99
Supervised experience in the development of instructional materials, the organization and conduct of lectures/laboratories, the evaluation and counseling of students.

ANAT 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

ANAT 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999
No description.

Animal Science (ANSC)
ANSC 500: Foundation Readings in Animal Science
1-2 Credits/Maximum of 2
Scientific articles that have significantly impacted the animal sciences will be read and discussed. AN SC 500 Foundation Readings in Animal
Science (1 per semester/maximum of 2) This course is intended for graduate students in the animal sciences. The Course Objectives are: 1. To discuss the attributes of a "classic" or foundation paper; 2. To discuss papers that, in hindsight, affected our thinking and practice in the animal sciences and industries; 3. To encourage students to gain insight into a variety of sub-disciplines within the animal sciences. The class will meet for one period each week. Class format is a guided discussion. Selected guest instructors will be invited some weeks based upon the selected topic, and to add a broad perspective. The final grade will be based upon class participation (50%) and student performance on a final exam covering the class discussions (50%).

ANSC 502: Scientific Scholarship
2 Credits
Consideration of the scientific method and thinking relative to scholarship, grantsmanship, and the mechanism of grantsmanship.

ANSC 506: Ruminology
3 Credits
Physiological, biochemical, and microbiological activities occurring within the rumen and the relation of rumen function to animal response.
Prerequisite: at least one course in each of the following areas: animal nutrition, physiology, microbiology, and biochemistry
Cross-listed with: NUTR 506

ANSC 515: Advanced Physiology of Reproduction in Farm Animals
1-6 Credits
Advanced physiology of reproduction in farm animals.
Prerequisite: 3 credits each of reproductive physiology, systemic physiology, and endocrinology

ANSC 543: Animal Genomics
3 Credits
Foundations in genomics, proteomics, epigenomics, and basic bioinformatics, and their applications in animal breeding, health, production, reproduction, nutrition, and medicine. AN SC 543 Animal Genomics (3) Genomics is a branch of genetics concerned with the study of genome sequence, assembly, and analysis of the structure and function of genomes. It is an interdisciplinary field involving the marriage of molecular biology, robotics, and computing. The course is designed to foster an appreciation for the importance of genomics as applied to animal agriculture and medicine and to provide a knowledge base that enables students to successfully move on and master advanced topics in genomics. Additionally, the course will introduce students to approaches and techniques used to sequence and analyze animal genomes and provide a hands-on learning environment to familiarize students with genome databases and basic bioinformatics tools. The course will combine lecture discussion of current literature with hands-on genomic analysis with focus on genome structure organization, genome sequencing annotation, animal genome projects comparative mapping, single nucleotide polymorphism (SNP) discovery genome-wide association study (GWAS), genomic selection, non-coding RNA, microarray analysis, proteomics, epigenomics, phylogenomics, and systems biology. Each topic will have one or more computer-based lab sections that are designed to provide students with further information related to the topic, with a particular focus on how to navigate genome databases and how to carry out basic bioinformatics analysis for their research projects. This course is suitable for graduate students, professional research scientists, and any student who has a BS in life science and wants to learn more about animal genomics and its sub-disciplines.

ANSC 590: Colloquium
1-9 Credits/Maximum of 9
Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

ANSC 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

ANSC 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

ANSC 598: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

ANSC 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

ANSC 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

ANSC 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
Experience in developing, organizing, and conducting lectures/laboratories; evaluation and counseling students and related resident education activities.

ANSC 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

ANSC 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999
No description.
Anthropology (ANTH)

ANTH 508: Visualizing Anthropological Data
3 Credits

Recommended Preparations: STAT 500; STAT 511; Or a standard introductory statistics course or an equivalent course at the student's previous institution. Anthropology is a four-field discipline comprising dozens of sub-disciplines, each one characterized by particular theoretical and methodological approaches. As a consequence, the data that anthropologists regularly collect, analyze, and display are diverse in nature, scale and complexity. The purpose of this course is to expose anthropology graduate students to the field's wide range of approaches for managing and visualizing anthropological data. Course content will focus on ways of organizing, analyzing, and representing anthropological datasets. Lectures, practicums, and discussion will center on the criteria and rationale behind visual representations and how these are related to research questions, hypotheses, models, and goals.

ANTH 509: Proposal Writing
3 Credits

This course provides practical training and experience in proposal writing and revisions for graduate students in anthropology and related disciplines.

Prerequisite: STAT 451

ANTH 521: Current Literature in Archaeology
1 Credits/Maximum of 1

Seminar designed to expand general knowledge of archaeology through exposure to current research and related issues in contemporary archaeology. ANTH 521/ANTH 521 Current Literature in Archaeology

This seminar is designed to expand general knowledge of archaeology through exposure to current research and related issues in contemporary archaeology. We accomplish this by examining the best of recent journal literature. We may also occasionally read a chapter from an edited book. We will normally read and discuss one article per week, although we might increase that number in cases where articles have been followed by published debates. Articles should be selected from a list of approved journals that will be supplied in class. Each article must be approved in advance by the course professor. The presenter should follow the standard outline for article discussion that will also be supplied in class. Faculty: Frances Hayashida, Kenneth Hirth, George Milner, Dean Snow, and David Webster

ANTH 541: Current Literature in Integrative Anthropology
1 Credits/Maximum of 6

This course (Journal Club) is a survey and discussion of recent, cutting-edge research papers across anthropology, including human ecology, archaeology, biological anthropology, and especially on work that is integrative among these areas of research and/or connects to other disciplines. This course will provide students with experience in making critical evaluations of the use of theory, method, and analysis in the field of anthropology.

ANTH 545: Seminar in Anthropology
1-9 Credits/Maximum of 9

Critical analysis of research in selected areas of anthropology.

ANTH 556: Social Organization of Traditional Societies
3 Credits

Cultural bases of social organization of traditional societies.

ANTH 559: Human Ecology
3 Credits

Within the anthropological and environmental sciences, human ecology (incorporating environmental anthropology, ecological anthropology, cultural ecology, behavioral ecology and evolutionary ecology) is the study of dynamic interactions between people and the environment, past and present. The readings are designed to give students an overview of the fundamental ecological processes that pattern human behavioral responses to environmental variability and how and why human behavior recursively shapes environmental variability. These incorporate a wide range of topics with an emphasis on how human social behavior and resource use are integrated into ecological processes and their services at multiple scales. In so doing, the course takes a holistic perspective of the human experience; one that views cultural, biological, environmental, demographic, and technological processes as interconnected phenomena, and human behavior and practices as components of complex adaptive systems. The topics covered are especially timely in our contemporary political and environmental context, and will explore the relevance of human ecology for these on-going debates.

ANTH 560: Ecology, Evolution, and Human Behavior
3 Credits

This course provides fundamental theory to understand the nature of the dynamic relationship between human decision-making and the natural and social environment. We focus on ecological anthropological theory operating at multiple scales, from the individual to the population, to the community. We will learn how such theory has been applied in the development of a wide range of questions in ecological anthropology, with a focus on key empirical studies of resource use and reproduction, population growth, subsistence and social intensification, disturbance dynamics, niche construction, and cooperation.

ANTH 563: Current Literature in Biological Anthropology
1 Credits/Maximum of 1

Seminar designed to expand general knowledge of Biological Anthropology through exposure to current research and issues in contemporary Biological Anthropology.

ANTH 571: Principles of Human Evolutionary Biology
3 Credits

Mechanisms and quantification of human genetic variation and survey of evolutionary aspects of human ecology, life cycle, and population biology.
ANTH 572: Advances in Anthropological Methods

3 Credits

This lecture-based course will provide exposure to current data collection methods and analyses in integrative anthropology research, and offer specific examples of application. The course will focus especially on the creative application of newly available technologies to help address major outstanding issues in biological anthropology, or on how the combination of traditional approaches and modes of data collection with advances in computational or statistical analysis can advance the field. Research design issues, data limitations and computational analysis requirements, and anticipated future developments will be considered for each method and subject area combination. Students will be exposed to the challenges, limitations, and processes of ultimately successful research studies and programs, to provide a practical awareness and guidance towards the development of their own research projects and careers in anthropology.

ANTH 573: Anthropology Research Practicum

3 Credits

This course provides a structured overview of graduate-level anthropological research. Students will identify and complete a small research project while also reviewing progress regularly with the instructor and the whole class and receiving important information on the mechanics of the research and publication process for dissertation research and beyond.

ANTH 575: Population, Food, and Traditional Farming

3 Credits

This course explores the relationship between demographic processes (fertility, mortality, migration) and traditional farming, especially farming near the subsistence level. ANTH 575 Population, Food, and Traditional Farming (3)This course explores the complex relationship between demographic processes and traditional agriculture. It starts with the premise that traditional agriculture, at least agriculture near the subsistence level, is primarily demographic in its motivation: the main purpose of a small-scale, preindustrial family farm is to create and support a family — i.e. produce children (fertility) and keep them alive (survival). This idea will be the starting point for re-examining existing theories about population and agriculture, and for formulating new models of the traditional farming household as a demographic enterprise. Some of the topics to be addressed include: (1) the slippery concepts of population pressure, over-population, and carrying capacity; and sustainability; (2) some basic ecology and economics of subsistence production and consumption; (3) the debate over agricultural intensification; (4) the effects of under-nutrition on fertility and mortality; (5) the nature of the household labor force; (6) the household demographic life cycle and its economic implications; (7) seasonality and the allocation of household labor; (8) the demography of the hungry season; (9) risk management and food shortages; and (10) household wealth differentials and their demographic implications. The first half of the course will be in lecture format, the second will be more like a seminar. At about the mid-point of the semester, students will split into groups of 2-4 (depending on class size). Each group will select an ethnographic/demographic/economic monograph on traditional agriculture from a list provided by the instructor, prepare and present a PowerPoint presentation on it, and lead an extended classroom discussion of it. Each presentation ought to take up at least two or three class periods. The course grade will be based on the presentation and on general seminar participation (approximately 80 percent presentation and 20 percent participation, including doing the required readings). This course should appeal to graduate students and advanced undergraduates in anthropology, geography, crop and soil science, demography, rural sociology, agricultural economics, and behavioral ecology.

Prerequisite: ANTH 408

ANTH 579: Spatial Demography

3 Credits

This graduate course will expose students to spatial analysis tools and analytical methods applied to demographic research. ANTH (SOC) 579 Spatial Demography (3)The improved application of spatial data and methods to demographic research is a critical methodological challenge facing demographers today. This graduate seminar is designed to focus on substantive demographic research topics while exposing sociologists and demographers to challenges in, and opportunities for, using geographic information systems (GIS), spatial analysis, and spatial statistics in their own research. Substantive foci will include readings and discussions of spatial perspectives on topics such as racial/ethnic segregation, spatial mismatch/entrapment, poverty, crime/delinquency, migration, health inequalities, wellbeing, maternal and child health, environmental justice, and population and environment relations. Similarly, the seminar will highlight connections between spatial concepts and data availability (e.g., Modifiable Areal Unit Problem - MAUP; data privacy), other emerging methodological approaches to studying society (e.g., contextual modeling, multi-level modeling and the area of neighborhood effects) as well as the integration of different types of data (e.g. qualitative data and quantitative data). Throughout the course lectures and discussions will be complemented with lab sessions introducing spatial analysis methods and GIS and spatial analysis software. The lab sessions will include the use of among other software GeoDa, CrimeStat, R, and ArcGIS (including Geostatistical Analyst and Spatial Analyst extensions). These lab sessions will introduce many methodological and technical issues relevant to spatial analysis (e.g., error, data validation, data integration, cartography, exploratory spatial data analysis, spatial regression modeling, geographically weighted regression, point pattern analysis and geostatistics). Assignments for the courses include up to two writing assignments, up to four lab assignments, and a final project which will be presented as a short 15-minute presentation as well as submitted as a term paper. The writing assignments will include an annotated bibliography/brief literature review within a selected demographic theme area and a profile of a well-known demographer and their adoption of spatial thinking/perspectives/methods. The lab assignments will focus on building geospatial databases, basic spatial analysis, exploratory spatial data analysis, and spatial regression modeling. The courses will include other labs and assignments that will be completed for no grade; these are intended as mechanisms/opportunities for developing and enhancing familiarity with selected software, data resources, and analytic methods.

Prerequisite: Graduate course in statistics, i.e., SOC 574 or ANTH 509 Cross-listed with: SOC 579
ANTH 588: Method and Theory in Archaeology
3 Credits
Methodological strategies and tactics in archaeological research; major
theories in cultural anthropology as applied to archaeological data.

ANTH 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars which consist of a series of individual lectures by
faculty, students, or outside speakers.

ANTH 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on
an individual basis and which fall outside the scope of formal courses.
Prerequisite: prior approval of proposed assignment by instructor

ANTH 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may
be offered infrequently; several different topics may be taught in one year
or term.

ANTH 597A: **SPECIAL TOPICS**
1-6 Credits

ANTH 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

ANTH 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

ANTH 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
Supervised experience in teaching and orientation to other selected
aspects of the profession at the Pennsylvania State University.

ANTH 603: Foreign Academic Experience
1-12 Credits/Maximum of 12
Foreign study and/or research constituting progress toward the degree at
a foreign university.

Applied Behavior Analysis (ABA)

ABA 500: Experimental Analysis of Behavior
3 Credits
This course covers the scientific, conceptual, theoretical, and
philosophical roots of the experimental analysis of behavior. ABA 500

ABA 511: Behavior Modification
3 Credits
Provides an overview of principles and procedures and use of behavior
modification with individuals in diverse settings. ABA 511 Behavior
Modification (3) This course provides students with the principles and
procedures of behavior modification. The course teaches students
how to analyze, interpret, and develop programs for a wide range of
clinical and educational populations. The course provides advanced
discussion on the empirical and theoretical underpinning of behavior
modification. This course is divided into six parts. Part 1 introduces
behavior modification and its major areas of application. Part 2 covers
the basic principles and procedures of behavior modification. Part 3
discusses motivation operations and ways in which to combine and
apply principles. Part 4 presents detailed procedures for assessing,
recording, and graphing behavior and methods for conducting functional
assessments and behavioral research. Part 5 covers the history of
behavior modification and discuss some of the ethical issues in the field. ABA 511 is a required course for graduate students of the
Applied Behavior Analysis Masters Program.

ABA 522: Single Subject Research
3 Credits
This course aims to teach how to critique, design, and analyze single
subject research.

ABA 533: Applied Analysis of Behavior
3 Credits
Overview of the application of behavior analysis in education,
rehabilitation, medicine, business, counseling, and therapy across the age
range. ABA 533 ABA 533 Applied Analysis of Behavior (3) This course
will provide students with a basic understanding of the application
of behavior analysis to a wide variety of human conditions. The
characteristics and history of applied behavior analysis will be covered
as well as the use of behavioral principles to increase and decrease
behavior. The role of assessment and generalization and maintenance
issues will be stressed. Some applications that are highlighted include
self-control, token economies, systematic desensitization, and stimulus
control and modeling. Populations covered include geriatrics, children, adults, and individuals with special needs. ABA 533 is a required course for graduate students of the Applied Behavior Analysis Masters Program. The class will be offered annually with an enrollment limit of 20 students.

**Prerequisite:** enrollment in the Applied Behavior Analysis program

ABA 555: Behavioral Intervention in Autism

3 Credits

Overview of the use of Behavior Analysis in the education, assessment, and treatment of individuals with autism. ABA 555 ABA 555 Behavioral Intervention in Autism (3) Behavior analysis has had significant contributions to autism over the past 40 plus years. Its success in early intervention efforts has created a great need for individuals trained in behavior analysis with special knowledge of the unique aspects of autism. This course will provide students with the knowledge and skills needed to work with individuals with autism not only in early intervention efforts but across the entire spectrum of settings, age ranges, and developmental levels. Autism will be addressed in terms of assessment, education, and treatment. Some specific areas targeted that are characteristic of autism will include language, social skills, self-injury, sleep disorders, and self-stimulatory behavior. Some specific educational strategies emphasized will include discrete trial training, incidental teaching, prompting and fading. The students will gain a knowledge of the major issues related to the use of behavior analysis with individuals with autism including education issues such as due process and inclusion and legal and ethical issues surrounding the certification of behavior analysts. Students also will learn how to evaluate the various treatments and educational practices for autism. Competency-based methods of caregiver training will be covered. ABA 555 is an elective course for graduate students of the Applied Behavior Analysis Masters Program. The class will be offered annually with an enrollment limit of 15 students.

**Prerequisite:** enrollment in the Applied Behavior Analysis program

ABA 566: Behavioral Pediatrics

3 Credits

Overview of behavioral pediatrics and discusses the role of Behavior Analysis within this field. ABA 566 ABA 566 Behavioral Pediatrics (3) Behavior analysis has had significant contributions to the field of behavioral pediatrics. This course will provide an overview of behavioral pediatrics and discuss the role of the behavior analyst in pediatric healthcare. Pediatric problems commonly addressed by behavior analysts will be discussed in terms of both assessment and treatment. These pediatric problems will include pediatric feeding problems, disorders of elimination, gastrointestinal disorders, sleep problems, and childhood obesity. This course also will cover the integration of behavior analysis in the areas of adherence to medical procedures, pain management, medical rehabilitation, and brain injury rehabilitation. Behavioral approaches to health promotion and injury prevention will be discussed. The management of common childhood behavioral issues and competency-based methods of caregiver training will be covered. The course will explain the use of behavior analysis in a range of pediatric healthcare settings. ABA 566 is an elective course for graduate students of the Applied Behavior Analysis Masters Program. The class will be offered annually with an enrollment limit of 10 students.

**Prerequisite:** enrollment in the Applied Behavior Analysis program

ABA 577: Behavioral Assessment and Treatment of Behavior Disorders

3 Credits

Overview of the use of Applied Behavior Analysis in the assessment and treatment of individuals with behavior and emotional disorders. ABA 577 ABA 577 Behavioral Assessment and Treatment of Behavior Disorders (3) Behavior analysis has had significant contributions to treating children with a wide variety of behavioral and emotional disorders. This course will provide students with the knowledge and skills needed to work with people with behavioral and emotional problems across all environments, age ranges, and developmental levels. Behavior disorders throughout the age ranges will be addressed. Students will be taught to use applied behavior analysis for the assessment, intervention, and understanding of these problems. The students will gain knowledge of the major issues related to the use of behavior analysis including legal and ethical issues. Students also will learn how to evaluate the various treatments for behavior and emotional problems. ABA 577 is a elective course for graduate students of the Applied Behavior Analysis Masters Program. The class will be offered annually with an enrollment limit of 15 students.

**Prerequisite:** enrollment in the Applied Behavior Analysis program

ABA 588: Ethics and Legal Issues in Applied Behavior Analysis

3 Credits

This course will cover ethical and legal issues related to applied behavior analysis research and practice. ABA 588 ABA 588 Ethics and Legal Issues in Applied Behavior Analysis (3) The purpose of ABA 588 Ethics and Legal Issues in Applied Behavior Analysis is 1) to teach the Ethical Principles of the American Psychological Association (adopted by the Association for Behavior Analysis). Students will be presented with the ethical codes, the application of the codes, and the possible dilemmas involved in following the codes. Students will be responsible for applying the ethical codes by evaluating ethical dilemmas. 2) to teach the legal issues related to applied research with humans. Federal and State treatment and Educational Laws and issues related to the practice of Applied Behavior Analysis will be covered. Actual cases covering a variety of populations, locations and issues will be presented. Students will learn how to identify and avoid litigious situations. ABA 588 Ethics and Legal Issues in Applied Behavior Analysis is a required course for graduate students of the Applied Behavioral Analysis Masters program and a prerequisite for ABA 594A and ABA 595. This class will be offered annually with an enrollment limit of 25 students. The frequency will be adjusted if enrollment trends suggest an adjustment is necessary.

**Prerequisite:** enrollment in the Applied Behavior Analysis program or permission of instructor

ABA 594: Research Topics

1-15 Credits/Maximum of 18

Supervised student activities on research projects identified on an individual or small-group basis.

ABA 595: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

**Prerequisite:** prior approval of proposed assignment by instructor
Applied Demography (APDEM)

APDEM 801: Principles of Demography

3 Credits

This course examines fundamental concepts and ideas in Demography, and U.S. and world population trends associated with these concepts. APDEM 801 Principles of Demography (3) This course provides an overview of demographic research and scholarship as a basis for the Applied Demography certificate and the Masters in Professional Studies degree in Applied Demography. The scope of the course content is broad, rather than in-depth, covering central disciplinary concepts and associated key theoretical ideas and empirical population trends. In particular the course investigates topics such as population growth, transitions in family patterns, fertility patterns and policy, immigration and growing population diversity, race and ethnic population inequality, internal migration and residential segregation, health and mortality patterns, population aging, and economic well-being and the environment. Building on insights from the study of the above topics, students conduct a comparative population analysis of a developed vs. developing country or of two regionally dispersed U.S. states using census and vital statistics demographic data to document five or more key over-time population trends. Results from this analysis are then used to address applied demography questions about the relationships with outcomes for either business demography or public policy demography. Students will learn fundamental disciplinary concepts, central theoretical scholarship ideas, major empirical U.S. and world population trends, and experience a hands-on skill-enhancing population data analysis project which integrates knowledge and application learning.

APDEM 802: Data, GIS, and Applied Demography

3 Credits

This course provides an overview of key demographic data sets, and promotes familiarity with, and appropriate use of, these data. APDEM 802 Data, GIS, and Applied Demography (3) This course offers a comprehensive introduction to the wide variety of different government (and commercial) data sets that are among the most frequently utilized by practicing applied demographers. While US data sets are emphasized throughout the course international data products also will be discussed. Raw population data needed for demographic research comes from a variety of sources. The course will introduce students to the fundamental principles and design considerations of the different types of data collection systems that are used: censuses, surveys; censuses, surveys, vital statistics and administrative records. While contemporary issues are often studied using the latest available data many demographic questions necessitate the inclusion of a historical perspective (e.g., studies of population change) and as such linking and analyzing data across time also will be discussed. The analytical sections of the course will focus on the strengths and limitations of data products (e.g., including issues of data reliability and appropriate data use). A review and discussion of future directions in data collection and data sources wraps up the course. Enormous amounts of demographic data are now made available in aggregate form for geographical units (neighborhoods, cities, counties, states). These aggregate data are of interest in their own right but also are increasingly relevant to questions related to the role of geographic context on individual-level demographic outcomes. In this course students will learn about nested and non-nested geographical hierarchies of different data products and fundamental principles for handling and analyzing geospatial demographic data (e.g., how and when data sets can be linked together, how to visualize demographic data, spatial coverage, the influence of scale, and how to detect, and the consequences of, spatial dependence). This is a hands-on applied course in which students will be expected to access, understand, manage, and analyze different kinds of demographic data sets. The emphasis on data interpretation and analysis will be on descriptive statistical analysis, data visualization, and exploratory spatial data analysis using open source and/or available software.

APDEM 803: Applications in Applied Demography

3 Credits

This course provides an overview of applications in applied demography in business, government and public policy, health, and non-profit organizations. Prerequisite: APDEM 801 and either APDEM 802 or SOC 573

APDEM 804: Business Demography

3 Credits/Maximum of 999

This course provides an overview of important impacts of demographic dynamics, data, and methods on issues in business decision making. Prerequisite: APDEM 801 and either APDEM 803 or SOC 573

APDEM 805: Public Sector Demography

3 Credits/Maximum of 999

This course provides an overview of important impacts of demographic dynamics, data, and methods on public sector, non-profit, and public policy issues. Prerequisite: APDEM 801 and either APDEM 803 or SOC 573

APDEM 806: Applied Demography and Health

3 Credits

This course provides an overview of data, methods, and techniques in applied demography used to help address public health questions. This course provides a wide-ranging coverage of substantive health questions that draw upon data and analytical methods closely associated with applied demography. The course opens with an overview of the substantive connections between health and applied demography. The remainder of the course is divided up into three main parts: (1) Local/Regional Health Assessments; (2) Methods and Case Studies in Morbidity and Mortality; and (3) Emerging Trends in Applied Demography and Health. Part 1 focuses on data needs and commonly used methods (and their limitations) related to local/regional community health assessments - including diverse contexts (rural-urban, developed and developing countries). These data and methods are utilized to examine health disparities, health service planning (based on catchment area analysis and location-allocation modeling as well as methods for measuring accessibility and utilization of health services), environmental pollution, and emergency/disaster response. Part 2 introduces the
connections between demographics and the epidemiological transition. This section includes a broad focus on a specific classification of human health and disease (i.e., provisioning care and disease prevention, communicable disease, non-communicable disease, and accidents and other causes of injury and death). Across each classification of health and disease the heterogeneity of data needs, time scales, spatial scales, and population at risk is wide. Applications of methods and use of case studies will facilitate the discussion of these different kinds of contemporary health challenges. Part 3 focuses briefly on the future, including an examination of global health questions (broad processes and forecasts associated with migration, urbanization, and environmental change) and new types of data and methods (including challenges and opportunities) that applied demographers will likely use in the next decade. This course covers a diverse set of topics related to human health. Some of the most important health problems of the early 21st Century (in the U.S. and globally) relate to health inequalities in access to resources (e.g., access/use of health services) and in the variation in individual exposure to risks (e.g., environmental pollution, neighborhood deprivation, obesogenic environments, and crime), and how both access to resources and exposure to risk are associated with health disparities across populations (by race, socioeconomic status, gender, age, and other forms of social stratification). This course will provide students with an understanding of key health topics, and specific data and analytical tools that can be used to address them. Prerequisite: APDEM 803 or SOC 573

**Prerequisite:** APDEM 803 and SOC 573

**APDEM 808: Convex Optimization**

3 Credits/Maximum of 999

Recognizing and solving convex optimization problems that arise in real life applications. This course is designed to provide students with necessary skills to recognize or build convex optimization problems coming from diverse application areas and to solve them efficiently. It consists of five parts: 1) convex sets, 2) convex functions, 3) convex optimization, 4) algorithms and 5) real life applications. In the first part, important examples of convex sets will be given and the operations that preserve convexity of sets will be discussed. The second part will focus on convex functions, their basic properties, and the operations that preserve convexity of functions. In the third part, which is built on the first two parts, convex optimization problems will be formally introduced along with important examples ranging from linear and quadratic to semi-definite programming; second, Lagrange duality and optimality conditions will be covered. The fourth part will focus on the algorithms to solve convex problems and on their computational complexity. In the fifth part, various applications will be covered through paper discussions. Assignments will be used to reinforce learning and supplement extra information for each section. A final course project will allow students to integrate all the first four course sections to solve a practical problem. **Prerequisite:** APDEM 801, APDEM 802, APDEM 803, SOC 573

**Applied Linguistics (APLNG)**

**APLNG 500: Practice Teaching in ESL**

3 Credits

Provides instructional support and professional mentoring for second language teachers during the practice teaching experience.

**APLNG 510: Health and Aging in Multilingual Contexts**

3 Credits

This course focuses on anthropological approaches to health and aging in multilingual contexts.

**APLNG 512: Language and Adult Lifespan Development**

3 Credits

The effects of adult cognitive development and decline on the production and comprehension of language in mono- and multilinguals. APLNG 512 APLNG 512 Language and Adult Lifespan Development (3) This graduate seminar is designed to provide a theoretical and practical introduction to research on adult lifespan development and language processing among multilinguals. It will be offered every other year as one of the course options in language in society, an area of concentration for both the MA TESL and PhD in APLNG degree programs in LALS. This course is also part of a LALS sequence in Language, Health, and Aging. While the main draw will be graduate students in LALS, the course may be of interest to graduate students in bio-behavioral health, gerontology, and human development and family studies. The expected total enrollment is 15. Topics covered in course readings and activities include: theories of adult lifespan development and cognition; language processing among monolingual young, middle-aged, and older adults; multilingualism and adult lifespan development, with particular attention to the effects of aging on bilingual processing, second language acquisition, and language attrition; and research methods proper to cross-sectional and longitudinal studies of language development over time. Over the course of the semester, students will also plan, prepare, and conduct a quantitative experiment or qualitative study on one of these topics. Through participation in a variety of activities, students will 1) become familiar with the research literature on language processing and adult lifespan development, with particular attention to multilingualism, 2) develop critical skills in interpreting and comparing cross-sectional and longitudinal research designs in adult development studies, 3) develop practical skills in conducting such research and analyzing the results. Evaluation of students includes three components: 1) weekly presentation of results from required readings, 2) participation in an empirical research project conducted by the group, 3) summary paper describing the results of that research project.

**APLNG 570: Second Language Reading**

3 Credits

Theoretical and practical introduction to concepts, methods and practices of research and instruction of second language reading development. APLNG 570 APLNG 570 Second Language Reading (3) This graduate seminar is designed to provide a theoretical and practical introduction to the assumptions underlying and principles embodying a variety of approaches to second language reading development and instruction. In addition, it seeks to explicate the role of second language reading in the larger context of second language development. It will be offered every other year as one of the course options in language learning and teaching, an area of concentration for both the MA TESL and PhD in APLNG degree programs in LALS. While the main draw will be graduate students in LALS, the course may be of interest to graduate students in the foreign language departments and linguistics. The expected total enrollment is 15. Topics addressed in course readings and activities include: 1) the epistemological underpinnings of the notion of second language literacies; 2) psycholinguistic, critical and sociocultural approaches towards second language reading; 3) variables affecting
second language reading performance; 4) strategies and instruction to influence second language reading development; 5) assessment of second language learners' reading performance, and 6) critical evaluation of instructional materials for a variety of second language learning contexts. Through participation in a variety of activities, it is expected that students will: 1) develop an understanding of second language literacies, 2) develop critical understanding of the variables and processes involved in L2 reading, 3) develop a principled conception of L2 reading instruction, 4) integrate L2 reading into the broader disciplinary area of second language learning and L2 proficiency, and 5) develop practical skills of designing and evaluating L2 instructional materials. Evaluation of students learning includes the following components: 1) completion and discussion of required readings; 2) presentation of key instructional approaches; and 3) completion of a paper addressing a theoretical, instructional or research issue in second language reading.

APLNG 571: Usage-Based Approaches to Second Language Learning and Teaching

3 Credits

This course provides a broad exploration of usage-based approaches to second language learning and teaching. It considers the roles played by cognition, usage, and communication in shaping how we acquire, process, and use language and builds an awareness of language as a complex adaptive system that emerges gradually through usage. Building on these insights, participants will explore and critique foundations to contemporary research about the cognitive processes underlying language structure, language learning, and language teaching.

APLNG 572: Communication in Second Language Classrooms

3 Credits

The study of communication in second language classrooms. APLNG 572APLNG 572 Communication in Second-Language Classrooms (3)This course focuses on investigating and understanding the dynamics of communication in second/foreign language instructional settings. Students will examine different variables that influence the nature of communication in second/foreign language classrooms including: teachers' control over the patterns of classroom communication, students' perceptions of the patterns of classroom communication, students' knowledge and use of language, and students' use of language for learning and second language acquisition. Each variable will be evaluated for its theoretical and pedagogical contribution to communication, learning, and second language development. In addition, through understanding the basic theoretical tenets of and actively participating in reflective teaching, students will examine, frame, and manage the dilemmas of classroom practice, become aware of and question the assumptions and values they bring to teaching, become attentive to the institutional and cultural contexts in which they teach, and recognize their responsibilities for their own professional development. Finally, students will be exposed to sociocultural perspectives on mediated language and literacy instruction and recognize their relevance for second language teaching, learning, and classroom communication. Faculty: Karen E. Johnson

APLNG 574: World Englishes: Pluralizing Policy, Pedagogy, and Proficiency

3 Credits

This course explores the global spread of English, the diversification of its norms, and their pedagogical and policy implications. APLNG 574 World Englishes: Pluralizing Policy, Pedagogy, and Proficiency (3) This course analyzes how the English language aids globalization and how globalization changes English. English now features multiple grammatical systems and norms in diverse speech communities, adopts new modes of literacy and discourse practices, and enters into fluid relationships with other languages and cultures. These changes call for a reconceptualization of language standards, linguistic identities, literacy practices, and English language teaching. After studying the historical and geopolitical bases for the rise of English, the course explores the implications of contemporary forms of transnational relations, digital technology, and popular culture for diversifying the structure, norms, and usage of the English language. The course aims to develop in students a sensitivity to the changing norms in English, provide pedagogical resources for teaching English according to local repertoires, examine strategies for facilitating intercultural communication, and articulate policies on the role of English in a multilingual world. While students specializing in teaching English as a second language (TESL) will find this course useful to inform their teaching of English worldwide, doctoral candidates in applied linguistics will find it important to understand how the plural norms of English invite new research on issues such as language acquisition, discourse analysis, and sociolinguistic identities. The course will be of interest to students of English who are increasingly interested in the way World Englishes affect multilingual creative writing and composition practices. In addition, the course will be of interest to students in Education who have to address the diversification of English in the changing demography of students in national and international classrooms.

APLNG 575: Language Ideology

3 Credits

This course is designed to offer a range of perspectives on language ideology as an analytical construct.

APLNG 576: Language Socialization across Home, School, and Community Contexts

3 Credits

A survey of research on language socialization from a variety of sociocultural groups across a range of sociolinguistic contexts.

APLNG 577: Language Analysis

3 Credits

An overview of cognitive/conceptual/functional approaches to language analysis with applications to research, second language acquisition, and language pedagogy.

APLNG 578: Computational and Statistical Methods for Corpus Analysis

3 Credits

A hands-on introduction to the core and advanced computational and statistical methods for analyzing corpus data. APLNG 578 Computational and Statistical Methods for Corpus Analysis (3) This course will provide a hands-on introduction to the core and advanced computational and statistical methods for analyzing corpus data. Topics to be covered include basic UNIX tools and python scripting for text processing; state-of-the-art computational tools for automatic and computer-assisted corpus compilation and annotation; computational tools for querying and analyzing raw and linguistically annotated corpora; and statistical methods used in interpreting information extracted from
text corpora. Prior experience in computational and statistical analysis is not assumed. By the end of the course, students will be expected to have a good grasp of the computational and statistical techniques necessary for processing, annotating and analyzing corpus data, and to be able to implement these methods in their own corpus-based research projects. This course will be highly applied, and there will be substantial opportunities for demonstrations, exercises, and discussions. Students will be evaluated on participation in in-class activities and discussions, completion of a series of lab assignments designed to help them practice the computational and statistical techniques introduced, and a final research project. This course serves as the methods component of the two-course sequence in corpus linguistics offered in the Department of Applied Linguistics.

APLNG 580: Proseminar in Applied Linguistics

1 Credits

This team-taught seminar introduces PhD students to the scholarly areas and research perspectives in Applied Linguistics represented by department faculty. APLNG 580 Proseminar in Applied Linguistics (1) This team-taught pro-seminar is the cornerstone of the PhD program in Applied Linguistics. Its aims are to foster an intellectual community among incoming PhD students and department faculty and to provide the students with an overview of the scholarly expertise and research perspectives in Applied Linguistics represented by department faculty. The areas to be covered include: second and foreign language and literacy development and pedagogy; technology and language learning; language testing and assessment; language policy and planning; language uses in community, workplace, professional and academic settings from local, national, and international perspectives; language and identity; language and health; sociocultural theory; discourse and conversation analysis; and corpus linguistics. This is a required course for those entering the PhD program in Applied Linguistics and will be offered every fall. The enrollment will depend on the number of admitted students to the PhD program with a maximum number of 10. Through participation in discussions with individual faculty members, and readings when appropriate, it is expected that students will become familiar with 1) the scholarly expertise of the participating faculty members and 2) key concepts and research perspectives associated with their areas of specialization in the field of Applied Linguistics. Evaluation of student learning includes completion and discussion of readings. The department’s Director of Graduate Studies will be responsible for scheduling the weekly meetings, for collecting feedback from individual faculty members on student contributions/performance and for assigning grades to students.

APLNG 581: Discourse Analysis

3 Credits

Overview of theories and approaches to the analysis of spoken and/or written discourse. APLNG 581 APLNG (CAS) 581 Discourse Analysis (3) This course is designed to provide an overview of the various theories of and approaches to the analysis of spoken and written discourse, e.g., speech act theory, conversation analysis, pragmatics, contextual analysis, functional/cognitive grammar, grammar and interaction. These and other approaches are intended to serve as analytic tools and frameworks for students to ultimately design and carry out their own research projects within the course of the semester. Research projects may focus on any aspect of language use, such as language and grammar, language and interaction, language and culture, language socialization, language and cognition; projects may center on some phenomenon of English or may involve other languages, as long as the student is capable of conducting an in-depth analysis of the particular phenomenon under investigation in that language.

Cross-listed with: CAS 581

APLNG 582: Seminar in Approaches to Language Use

3 Credits

Examines the historical and contemporary landscape of research on language use.

APLNG 583: Methods of Language Assessment

3 Credits

Introduces methodology for selecting, developing, applying, and analyzing tests and questionnaires for research and evaluation in communication and language education. APLNG 583 APLNG 583 Methods of Language Assessment (3) This course introduces standard methodology for selecting, writing, and analyzing language tests and research questionnaires. Major focus will be given to reliability and validity issues and the study of current testing research paradigms. Course activities will include reading texts and articles, completing assigned exercises, writing and analyzing a testing/questionnaire instrument, and the preparation and presentation of a research paper reporting test development findings or addressing an approved assessment issue. The course is aimed at promoting the skills necessary to be effective judges and developers of language tests. This will involve learning to conduct item analyses, to understand principles of classical and item response measurement theory, to appreciate current and past language assessment issues, to carry out appropriate statistical analyses by computer or calculator, and to produce assessment research of publishable quality. In addition, the course will provide introduction to issues in latent trait/item response theory, item banking, computer adaptive testing, and instructional program evaluation. Faculty: Karen Johnson

APLNG 584: Sociocultural Theory and Second Language Learning

3 Credits

The course is an introduction to research on second language learning from a sociocultural theoretic perspective. APLNG 584 APLNG 584 Sociocultural Theory and Second Language Learning (3) The course is designed to be a graduate level introduction to research on second language learning and teaching informed by sociocultural theory of mind and cognitive development. The course will initially focus on the general principles of the theory as laid out in the writing of L. S. Vygotsky, his colleagues and modern interpreters of the theory. It will then consider in detail the research that has been carried out over the past 15 years on L2 learning and teaching from a sociocultural perspective. Topics to be covered include the following: a brief history of cultural psychology; mind as a mediated cultural construct; activity theory; the genetic method; internalization and appropriation; the zone of proximal development; inner and private speech (including gesture); collaborative learning, prolepsis, and scaffolding; the role of artifacts and social relationships in development; interface between sociocultural research and language pedagogy; language testing from a sociocultural perspective; regulation in a first and other languages; metacognition in a first and other languages; identity in a first and other languages; the relationship of sociocultural theory to other theories of second language acquisition. The course has two primary objectives: to
provide students with a solid foundational and critical understanding of the principles of sociocultural theory and for them to carry out a research project on second language learning using the genetic method and sociocultural theory principles to interpret data. Given that second language acquisition has become a dominant paradigm within applied linguistics, developmental psychology, and educational psychology, the course is particularly relevant for students not only in the graduate program in Linguistics and Applied Language Studies (LALS), but also to those working in psychology and education, as well as those pursuing the applied linguistics concentration in the language departments. It also serves as a complement to the other courses in applied linguistics offered by LALS in that it exposes students to a very theoretical perspective from what is often encountered in graduate courses in applied linguistics. As such, it challenges them to think in different ways about mind, learning, development, teaching, and assessment. The requirements for the course are: completion of required readings; in-class presentation of one research study selected from the L2 literature; submission of two brief (4-5 pages maximum) critical analyses of two research studies drawn from the relevant research literature; completion of a significant research project (topic to be negotiated with the professor). Course to be offered every other year beginning 2003-04. Maximum enrollment 12.

APLNG 585: Pragmatics in Language Learning and Teaching
3 Credits
Survey of literature on teaching and learning of second language pragmatics.

APLNG 586: Analyzing Classroom Discourse
3 Credits
A theoretical and practical introduction to concepts and methods associated with the analysis of classroom discourse.

APLNG 587: Theory & Research in L2 Teacher Education
3 Credits
Examines the historical and contemporary landscape of theory and research in second language teacher education.

APLNG 588: Design and Research of Technology-Mediated Language Learning
3 Credits
Using computer and multimedia technologies to support materials development and second language acquisition research.

APLNG 589: Technology in Foreign Language Education: An Overview
3 Credits
Approaches to the uses and research applications of multimedia and other educational technologies applied to the teaching of foreign languages. (also crosslisted with SPAN 589)

Cross-listed with: CMLIT 589, FR 589, GER 589, SPAN 589

APLNG 591: Seminar in Second Language Acquisition
3 Credits
Seminar in second language acquisition by second/foreign language learners and implications for language pedagogy and assessment.

APLNG 591APLNG 591 Seminar in Second-Language Acquisition
3 Credits
This course focuses on the foundational research and theories of second language acquisition. Course content covers the theoretical underpinnings of models and research on the acquisition of second languages and communicative competence with direct implications for language pedagogy and assessment. Faculty: Sandra Savignon

APLNG 592: Qualitative Research in Applied Linguistics
3 Credits
This course offers an introduction to qualitative research methods in applied linguistics. APLNG 592 APLNG 592 Introduction to Qualitative Research in Applied Linguistics (3) This course is designed to acquaint students with the background, methods, and current status of qualitative research in the field of applied linguistics. The main goals of the course are: 1) to familiarize students with a range of contemporary qualitative approaches to second language research; 2) to develop students’ ability to select appropriate methods for particular research questions, 3) to develop critical awareness of issues related to validity and ethics in research design and writing; 4) to enhance students’ skill in the collection and analysis of qualitative data. The class will review a range of approaches to qualitative research (e.g., ethnography, conversation analysis, diary study, case study) as well as issues of ethics and quality in research design, implementation and presentation. Students will be evaluated on reading and discussion (20%), assignments (30%), book and article reviews (20%), and final project (30%). APLNG 592 is a required course for the Ph.D. in Applied Linguistics, one of two courses on research methods contributing to the core curriculum. In addition, this course will be beneficial to students in Applied Linguistics options in the foreign languages (French, Spanish, and German).

APLNG 593: Experimental Research on Language
3 Credits
Standard methodologies for planning, conducting, interpreting, and reporting research in Applied Linguistics. APLNG 593 Research Design and Methodology in Applied Linguistics (3) This course introduces standard methodologies for planning, conducting, interpreting, and reporting research in Applied Linguistics. Course activities will include reading texts and articles, completing assigned exercises, participating in group discussions, critiquing research articles, and conducting formal research projects. Students are encouraged, but not required, to focus the research project around their individual thesis or dissertation research and/or to target the research project for publication in a professional journal. The course is aimed at promoting the skills necessary to being effective consumers and producers of research. This will involve learning to formulate research questions, to select appropriate research designs, to appropriate statistical analyses by computer and/or calculator, and to interpret and report the results of studies.

APLNG 595: Internship
1-18 Credits/Maximum of 18
Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor
Develops an understanding of the various domains of the English language as relevant for adult English language learning and teaching. APLNG 802 Focus on English: Teaching Form, Meaning, and Use (3) This course explores various domains of the English language (phonological, lexical, grammatical, pragmatics) in relation to adult English language learning and teaching. Attention is paid to the various components (form, meaning, and function) of these domains and how each component works within larger stretches of discourse. Students will come to understand: language as communication, meaning-making, social practice; grammar as both structure, arrangement, rules and choices; and language teaching concerned with both language form and language use. The major topics covered include the sound system, lexicon, grammar, tense aspect, modality, spoken written texts, discourse genre, and pragmatics. Students will engage in a variety of data analysis activities that assess their knowledge of the various domains of language and engage in practical activities that require them to apply these understandings to adult English language teaching. This course is one of four required courses that make up the Post-Baccalaureate Credit Certificate in Teaching English to Speakers of Other Languages (TESOL).

APLNG 804: Focus on Learners: Identity, Community and Language Learning

3 Credits

Explores how individual identities shaped by cultural differences, social positioning, institutional roles and structures influence English language learning and teaching. APLNG 804 Focus on Learners: Identity, Community, and Language (3) This course explores how individual identities shaped by cultural differences, social positioning, and institutional roles and structures influence the learning and teaching of English in an increasingly globalized world. This course will enable students to: a) recognize the multiple dimensions of one's cultural, linguistic, and educational backgrounds, b) understand the roles and values associated with varieties of English, c) become sensitive to the complex social, cultural, political, and institutional factors that affect adult English language teaching and learners' language learning in diverse instructional settings, d) create culturally responsive curricula that is appropriate for adult English language learning communities in diverse instructional settings. The major topics covered include: developing an understanding of language identities; recognizing diverse instructional settings as cultural contexts of learning; and applying these understandings to adult English language teaching. Students will engage in a variety of practical activities in which they reflect on their own language learning and cultural experiences, conduct an exploration of a bi/multilingual/cultural community and its related instructional settings, and write a final reflective paper that examines learners'; identity, community and English language learning in diverse instructional settings. This course is one of four required courses in the Post-Baccalaureate Credit Certificate in Teaching English to Speakers of Other Languages (TESOL).

APLNG 806: Focus on Classrooms: Planning and Supporting Language Learning

3 Credits

Develops a critical awareness of one's teaching practice and highlights instructional planning and classroom interactions with adult English language learners. APLNG 806 Focus on Classrooms: Planning and Support Language (3) This course will guide candidates to analyze the interactional patterns and discourse of diverse instructional settings and the factors that impinge upon planning and supporting effective instruction for adult English language learners. Students will: a) examine their own beliefs and knowledge about language learning and language teaching and become aware of the impact of such knowledge and beliefs on instructional practices; b) recognize the highly situated nature of teachers'; instructional decisions and practices and develop an awareness of instructional language classroom discourse that supports English language development; c) devise, select, and/or adapt a wide range of curricular resources to meet the linguistic, social, cultural and educational needs and goals of English language learners; d) develop lesson plans, evaluate curricular units and write teaching objectives; e) connect instruction to local and global activities and problem-solving using the imagination, collaboration, computer and other technological resources. Students will observe several English language instructional settings, recognize instructional models and classroom interactional patterns, review and adapt textbooks, and develop their own materials using authentic language texts. A focus will be on writing clear teaching objectives and lesson plans and the use of new technologies to support
adult English language learning. This course is one of four required courses in the Post-Baccalaureate Credit Certificate in Teaching English to Speakers of Other Languages (TESOL).

APLNG 808: Focus on Instruction: Teaching and Assessing Language Learning

3 Credits

Develops an understanding of and ability to use effective teaching and assessment practices that support adult English language learning. APLNG 808 Focus on Instruction: Teaching and Assessing Language Learning (3) This course facilitates the candidates’ understanding of and ability to use effective teaching and assessment practices that support adult English language learning. Students will: a) recognize the highly situated and interpretative processes involved in English language learning and teaching and be able to reflect on, critically analyze, and evaluate their own instructional practices; b) understand subject matter content from an instructional perspective, learn to anticipate areas that may require additional instructional support, and carry out a range of appropriate instructional strategies and activities that support English language development; c) demonstrate an understanding of the central issues and current approaches to the teaching of English language speaking, listening, reading, writing, grammar, as well as approaches to language instruction that are content-based and focused on English for specific purposes; d) recognize the interconnectedness of teaching and assessment, assess students’ knowledge using multiple forms of assessment, and address students’ diverse needs, backgrounds, and English proficiency as they plan instruction. Major topics will include concepts surrounding second language assessment as well as classroom strategies to evaluate and monitor adult learners’ English language learning. Also, students will explore the central issues and techniques for teaching oral communication (listening and speaking), literacy (reading and writing), and grammar. Students will complete a curricular development project, teach and videotape classroom lessons for mentor instructor feedback. A focus will be on guiding students to develop their own teaching practices appropriate to a group of adult English language learners in the specific context in which they live and work. This course is one of four required courses that make up the Post-Baccalaureate Credit Certificate in Teaching English to Speakers of Other Languages (TESOL).

Applied Youth, Family and Community Education (AYFCE)

AYFCE 535: Youth Civic Development

3 Credits

This course critically examines processes enabling youth to become members of local communities and “citizens” of nations and global societies.

AYFCE 550: Program Development and Evaluation in Youth, Families and Communities

3 Credits

Examination of concepts, theories, models, and procedures relative to program development and evaluation in youth, families and communities. 

Prerequisite: AEE 450 ; AEE 520

AYFCE 555: Volunteer Program Management

3 Credits

The study and application of concepts and principles of volunteerism and administration relevant to volunteer program management.

AYFCE 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

AYFCE 595: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor

AYFCE 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

AYFCE 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

AYFCE 840: Applied Youth Development

3 Credits

Background and current issues related to youth development programs in their application to actual youth programs in community settings.

AYFCE 845: Intergenerational Programs and Practices

3 Credits

Background, intervention strategies, and issues related to developing intergenerational programs and practices aimed at addressing vital social and community issues.

Cross-listed with: CIED 845

Architectural Engineering (AE)

AE 530: Computer Modeling of Building Structures

3 Credits

Theory and application of structural analysis using the direct stiffness method. Modeling assumptions, validation, interpretation of computer output. AE 530 Computer Modeling of Building Structures (3) This course addresses the theory and application of structural analysis using the direct stiffness method with matrix formulation, applying computer programs to the analysis of two- and three-dimensional structures. Topics include validation and interpretation of results from computer analyses, as well as practical analysis techniques and the design of building structures to satisfy building code requirements. The course is
AE 535: Historical Structural Design Methods
3 Credits
Qualitative, graphical, and quantitative methods of structural design as practiced from ancient Rome through the nineteenth century. This course will explore, qualitatively and quantitatively, methods of structural analysis and design used from 100 BC through the end of the nineteenth century, with an emphasis on nineteenth century design methods. The course will increase students’ appreciation for the effectiveness of obsolete structural analysis and design methods. Participation in the course will prepare students for successful preservation of historic structures by introducing the process by which these structures were conceived and designed.

AE 537: Building Performance Failures and Forensic Techniques
3 Credits
This course provides a background in identification, evaluation, and analysis of a broad set of architectural and structural performance failures.

Prerequisite: A E 401, A E 402, A E 430

AE 538: Earthquake Resistant Design of Buildings
3 Credits
Introductory engineering seismology, basic principles of structural dynamics, application of earthquake design provisions of model building codes to design of buildings. A E (C E) 538 Earthquake Resistant Design of Buildings (3) The main objective of this course is to familiarize students with basic principles of design of buildings to resist earthquake effects. Since building design is governed by the Building Code, currently, International Building Code that adopts American Society of Civil Engineers (ASCE) document ASCE-7 for load determination, the seismic provisions of ASCE-7 will be used as the basis for design. The course starts by introducing earthquake phenomenon and engineering seismology concepts. The basic principles of structural dynamics are then covered for single degree of freedom systems starting from free vibration to random loading so that students learn how a ground acceleration time-history subjected to the base of a building can be converted to a time varying effective seismic load on the mass. After introduction of response spectrum, introductory material on multi-degree of freedom systems is introduced so that students can determine natural frequencies and mode shapes for multi-story buildings and perform modal superposition analysis to determine displacement and force responses. Next, the principles of earthquake resisting design related to energy dissipation, ductility, over-strength, and redundancy followed by seismic provision of the building code are discussed. The main design principles related to the two main materials for building construction consisting of reinforced concrete and structural steel are next discussed. The focus will be to illustrate how lateral load resisting systems such as shear walls, moment resisting frames, or braced frames made with such materials as appropriate are designed to resist earthquake effects based on respective material code provisions, that is, American Concrete Institute (ACI) for concrete and American Institute of Steel Construction (AISC) for steel. The last part of the course will introduce seismic retrofit, base isolation systems and the concept of performance based design.

Prerequisite: A E 401, A E 402, A E 430
Cross-listed with: CE 538
The building enclosure: nature, importance, loadings; building science: control of heat, moisture, air, hygrothermal analysis; design: walls, windows, roofs, joints. A E 542 A E (C E) 542 Building Enclosure Science and Design (3) The building enclosure, or envelope, is the environmental separator in any building and is, like the superstructure and the service systems, one of the major physical components of the building. The primary objective of this course is to develop an understanding of the nature, importance, functions, and performance of the building envelope in general. The necessary building science—concerning primarily heat, moisture, and air—is covered, and hygrothermal analysis procedures are developed. A generalized categorization system for enclosure elements, i.e., walls (both above- and below-grade), roofs, and other enclosure sub-assemblies is proposed. General design strategies are developed. The design of specific wall systems (both above- and below-grade), roof systems, base floors, windows, and their joints is then addressed in some detail. The integration of structures (composite action, restraints, etc.), service systems (especially energy consumption), and finish (interior and exterior) is considered in some detail. Evaluation is based on an equal combination of assignments (6) and examinations (2). This course complements courses in architecture, civil engineering, architectural engineering, and mechanical engineering.

Cross-listed with: CE 542

AE 543: Research Methods in Architectural Engineering

3 Credits

Research skills, critical thinking, academic writing, presentations, use of electronic media, and experimental design applied to AE research topics. A E 543 Research Methods in Architectural Engineering (3) This is a course intended primarily for graduate students in Architectural Engineering. Other students interested in Architectural Engineering research may also take the course. The main objective of the course is to build research skills for students pursuing an M.S. or Ph.D. degree in Architectural Engineering. The research skills to be targeted are critical thinking, academic writing, presentation, oral communication, and use of electronic media, based on materials from architectural engineering projects and literature. These skills will be developed through a series of lectures and exercises to include architectural engineering research topics, such as novel building physical characteristics and occupant performance/environmental perceptions. Lectures in academic writing will cover proposal, report, paper, and thesis writing requirements for Architectural Engineering students. Students will write several assigned essays and term project to gain experience in different academic writing forms as well as architectural engineering research topics. Students are encouraged to use their actual research for the semester project. Based on the project content, each student will then be required to develop an in-class presentation. This part of the course will cover presentation preparation and the critical thinking that is embedded into oral communication skills. The electronic media portion of the course will cover topics such as electronic databases relevant to architectural engineering research topics, search engines, publishing, use of web materials, ethics, and legal considerations. All of the assignments are designed to develop critical thinking through instructor and peer feedback. In addition to the three major targeted areas of research skills development, this course will begin and end with a focus on architectural engineering research topics. The introductory part of the course covers the topics and methods for the four focus areas within the Architectural Engineering program, while the closing portion emphasizes interdisciplinary research efforts and encourages students to thinking in that direction. For example, while experimental design is directly applicable to each individual focus area, the specific instrumentation is area (focus) dependent. Nevertheless, knowledge of different specific data collection methodologies from multiple Architectural Engineering options can enhance the understanding of integrated architectural engineering research topics. Overall, the communication established in all of the course assignments can be used to help develop new architectural engineering research ideas and polish existing ones, which will be helpful to students who are taking the course during their first or second semester in residence.

AE 551: Combined Heat and Power System Design for Buildings

3 Credits

Thermodynamic and thermo-economic analyses methods for determination of optimal, on-site, total energy systems for commercial buildings. A E 551 Combined Heat and Power System Design for Buildings (3) Building systems consume about 40% of the primary energy resources utilized in the United States each year and are responsible for a proportional fraction of air contaminants (NOx, SO2, fine particulates, CO) and greenhouse gas, CO2. A conventional energy mix is about 50% primary fuel energy utilization. Advances in scaleable, low emissions, electric power generating devices are leading to incorporating on-site power production into the building design. The “waste heat” general is of such a quality that it can be utilized at the site in heating, hot water, absorption cooling, and dehumidification applications. The simultaneous utilization of a primary fuel to generate both the electrical and thermal components in Building Combined Heat and Power (BCHP) can result in total primary fuel utilization values of 85% or greater; electric power reliability increases and significantly reduced emissions, particularly greenhouse gases. This course examines the underlying thermodynamic principles involved in BCHP, pollutant and greenhouse emission mechanisms and levels associated with both Separate Heat and Power (SHP) and BCHP designs for a given building site. Economic and regulatory principles that govern the application feasibility of a BCHP design for a given building configuration are examined. At the end of the course, students will have the skills and tools necessary to perform an assessment of the feasibility of a BCHP application to a given building site. Specific combinations of distributed, electric power generation equipment (micro-turbines, fuel cells, diesel engines, wind- power) and thermal “waste” utilization from these generating systems will be discussed and analyzed. Case studies are utilized to illustrate the evaluation processes. Using the SHP design methods and principles (ducted air supply systems, hydronic heating and cooling systems, etc.) covered in A E 454 (Advanced HVAC) and central system methods covered in A E 557 (Centralized Cooling Production and Distribution Systems) or A E 558 (Centralized Heating Production and Distribution Systems) for commercial buildings, students will learn how to achieve and establish the same building performance objectives using Combined Heat and Power (CHP) technologies. Since the use of CHP for various building types requires reducing transients in thermal and electric load profiles, the relationship of the structural characteristics of the building (thermal mass) and the use of combinations of artificial lighting vs. daylighting to the utilization of CHP is investigated.

Prerequisite: A E 454; A E 557 or A E 558
AE 552: Air Quality in Buildings
3 Credits
Indoor air pollutants, their sources and health effects; transport of pollutants; modelling of pollutant concentration in buildings.
Prerequisite: A E 454, A E 455, M E 410

AE 553: Building Energy Analysis
3 Credits
Fundamentals of building energy dynamics and the simulation of energy flows in a building; validation of programs; practical applications.
Prerequisite: A E 454, A E 455 and M E 410

AE 555: Building Automation and Control Systems
3 Credits
Advanced techniques in the theoretical analysis and practical design of the automatic comfort controls used in building thermal systems. A E 555 Building Automation and Control Systems (3) A E 555 complements and expands upon the material covered in the undergraduate HVAC control systems course. The objectives of this course are to provide students with an enhanced capability to design advanced building control systems and to ensure proper operation through the use of comprehensive design and analysis tools and evaluation methods. Particular emphasis will be placed on systems integration, fault detection, diagnosis and correction, optimization and performance monitoring. Reference materials will be drawn from recent technical papers and conference proceedings and cover both model-based predictive control and data-driven modeling and control. Students will develop skills to stimulate building control system performance for a wide range of system designs and to implement advanced control strategies and sequences relevant to modern integrated building systems.
Prerequisite: A E 457

AE 556: Solar Engineering of Thermal Processes
3 Credits
Advanced quantitative methods of predicting transient active and passive solar process performance with an emphasis on building solar applications.
Prerequisite: M E 410

AE 557: Centralized Cooling Production and Distribution Systems
3 Credits
Central cooling plant and distribution components and systems; thermal, hydraulic, and economic modeling for planning and design.
Prerequisite: A E 454, or M E 411 and M E 410

AE 558: Centralized Heating Production and Distribution Systems
3 Credits
Description and analysis of central heating plant and distribution components and systems; thermal and economic modeling for planning and design.

AE 559: Computational Fluid Dynamics in Building Design
3 Credits
Theory and applications of building environmental modeling with Computational Fluid Dynamics (CFD). A E 559 A E 559 Computational Fluid Dynamics in Building Design (3) This course will be a primary interest to Architectural Engineering graduate students in the Mechanical Systems emphasis. Other students interested in the application of Computational Fluid Dynamics (CFD) to Architectural Engineering may schedule the course if they have satisfied the prerequisites. The main objective of this course is to build the knowledge necessary for successful simulations of building indoor and outdoor environments using CFD. The skills developed in the course build on the knowledge of fluid mechanics and building mechanical systems. The course will also add to the available pool of electives for students in the integrated BAE/MAE program. The first part of the course covers general CFD topics on the solution of Navier-Stokes partial differential equations. Different concepts necessary for the solution of the partial differential equations expressing the conservation laws will be introduced along with a CFD software package. In this phase, the course focus will be on the derivation of different equations and their solutions. Analytical solutions will be derived when possible, while most of the problems will require use of numerical solutions. Several homework assignments will require development of small computer programs. The introduced CFD software package will prepare students for the second part of the course that is more applied. The use of CFD in building design is different from its use for other engineering applications because of the domain size and specific boundary conditions such as diffuser airflow, wind, or solar radiation. Most of the time, appropriate boundary conditions distinguish successful from unsuccessful applications of CFD. To address the issues of quality control in CFD simulations, the American Society of Heating, Refrigerating, and Air Conditioning Engineers (ASHRAE) recently developed CFD guidelines that the course will follow from the beginning. The actual guidelines will be introduced to fortify everything learned during the course. Evaluation will be based primarily on analytical homework assignments (30%), two projects (30%), a mid-semester quiz (20%), and a final examination (20%). This course will be offered each Spring, with an anticipated enrollment of 10 students.
Prerequisite: A E 454, M E 410

AE 561: Science of Light Sources
3 Credits
In-depth scientific principles of light generation in modern electric light sources, and the resultant characteristics that influence their use for buildings.
Prerequisite: A E 461

AE 562: Luminous Flux Transfer
3 Credits
Radiative transfer applied to lighting analysis; methods for computing direct and interreflected illumination; nearfield photometry.
Prerequisite: A E 461, CMPSC201 or CMPSC202
AE 563: Luminaire Optics

3 Credits

Optical design of reflectors and refractors for lighting systems; manufacturing methods.

Prerequisite: A E 464

AE 565: Daylighting

3 Credits

Design concepts, solar position, sky luminance distribution models, integration of daylighting and electric lighting controls, physical modeling, computer analysis techniques.

Prerequisite: A E 461

AE 569: Research Topics in Illumination Engineering

3 Credits

Seminar on prior and current research in illumination engineering which define current recommendations and design practice.

Prerequisite: or concurrent: A E 461

AE 570: Production Management in Construction

3 Credits

Applications of production management tools to capital facility projects; theory of production systems in construction; development of production control manual. A E 570 A E 570 Production Management in Construction (3) A E 570 explores the use of production management to efficiently manage the delivery processes of capital facility projects. Students will learn about fundamental models of managing project processes and about tools to manage projects as production systems. The procurement, design, and construction processes that are used in capital facility projects are not usually through of in production process terms. Yet, doing so can develop a deeper understanding of the complexities of capital facility projects and enable project production to be efficiently managed. Production management emphasizes managing projects as complex wholes focusing on the relationships between the parties and tasks to optimize total process performance.A E 570 analyzes the latest production thinking and management tools to manage capital facility projects. The learning objectives of this course are for students to: a) recognize that capital facility projects are complex production systems and understand how principles of production relate to construction projects; b) understand the principles and methods of new production management methods like lean construction; c) be able to apply specific production management tools to specific problems identified on projects, especially those encountered on high performance sustainable building projects; and, d) understand how to use the latest production management planning and control tools to improve the management of capital facilities projects. A E 570 will be offered each spring with an anticipated enrollment of 25 students. This course uses classroom demonstration, case-based materials, in-class game simulation, and computer software to demonstrate key concepts and production tool applications. Assessment is conducted through out-of-class assignments, homework exercises, and a major project requiring appropriate tool to remedy the problem. The final grade for this course will be based on: Construction process analysis assignment - 15% Experiment design assignment - 25% Homework exercises and classroom participation - 25% Major project, including class presentation - 35%

Students entering this course are expected to have knowledge of the construction industry, project delivery processes, and construction means and methods.

Prerequisite: A E 475, A E 476 or C E 432

AE 571: International Construction Management and Planning

3 Credits

Evaluation of international project environments and participants, modeling and planning international projects.

Prerequisite: A E 570

AE 572: Project Development and Delivery Planning

3 Credits

Methods employed by owners and developers to initiate capital facility projects; defining project objectives, constraints, participants, financing, and delivery methods. A E 572 A E 572 Project Development and Delivery Planning (3) The course explores the methods used by capital facility owners and developers to initiate a project. Many vital decisions are made and critical activities performed early in a project that have major bearing on how the project is completed. These include defining the project objectives, identifying constraints, recognizing stakeholders, and selecting financing and delivery methods. The course explores the latest project development and delivery techniques used to support these decisions. Students will learn how early development activities shape a project, and how building industry professionals are helping to support these activities. Students will develop knowledge and perspective to help their decision-making skills. As the course title implies, special focus will be on high performance delivery planning. The learning objectives of the course are for students to: 1) Understand what occurs in the early stages of project formation as capital facility owners and developers initiate a project; 2) Understand the methods owners and developers use to progress through the capital facility process; 3) Understand the different types of acquisition strategies, project delivery methods, and contractual systems to achieving capital facility owner objectives; and, 4) Understand the decision-making needs of high performance sustainable building projects. Offered in the Fall semester, the course uses case-based materials, hands-on computer simulation, and other classroom demonstration. Case study projects assigned by the instructor, individual homework exercises, and a group project requiring students to apply development techniques to a current downtown State College capital facility development site from the assessment for the course. Students entering this course are expected to know how the construction industry operates, including project delivery methods, engineering economics, preconstruction, and construction means and methods.

Prerequisite: A E 475, A E 476 or C E 432

AE 579: Leadership

3 Credits/Maximum of 999

Examinations leadership skill sets, team competencies, and strategic methods for leading sustainable building construction projects and retrofits. AE 579 is focused on the cultivation of leadership competencies that enable the evolution of sustainable methods for design, construction, and operation of buildings. It is intended for students with backgrounds in design, construction, engineering, building operations, and facilities management. AE 579 focuses on the processes and analysis techniques required to lead sustainable projects. The course is intended to
support the career advancement of building design and construction professionals, developers, operators, and energy managers. An emphasis is placed on the integrative processes required to design healthy and productive buildings and that promote regenerative effects on site, energy, materials, water, occupant health, and society. The goal of the course is to cultivate leadership and integration skills needed to spearhead the design, construction, commissioning, and operation of sustainable buildings. Course topics include the business case for high performance buildings; guiding metrics and frameworks, analysis tools; integrative team competency requirements, design and delivery methods, and recent research topics that have advanced the practices of high performance building delivery. The course is intended to build upon specialized programs of study in architectural engineering, architecture, and facilities management, and to provide students with an interdisciplinary and integrative perspective of building delivery.

AE 581: Facilities Management Information Systems
3 Credits
Examines the information systems necessary to effectively lead and manage a facility management organization. Facilities Management Information Systems is designed to give students a foundation in information systems that are necessary to effectively manage a facility management organization. This course provides the students with the knowledge, tools, and understanding of the information systems necessary to effectively lead a facility management organization within the framework of facilities data, analytics, and benchmarking procedures, and knowledge management systems. The course delves into information visualization, space planning and management, procurement and management of information systems, and legal issues of these systems. Upon completion of the course, students will be able to assess current and potential information systems and technologies required to effectively lead a facility management organization. Students are strongly encouraged to have a working knowledge of the design and construction industry and a general understanding of the operation and maintenance of a building before taking this course.

AE 596: Individual Studies
1-9 Credits/Maximum of 9
CREATIVE PROJECTS, INCLUDING NONTHESES RESEARCH, WHICH ARE SUPERVISED ON AN INDIVIDUAL BASIS AND WHICH FALL OUTSIDE THE SCOPE OF FORMAL COURSES.

AE 597: Special Topics
1-9 Credits/Maximum of 9
FORMAL COURSES GIVEN ON A TOPICAL OR SPECIAL INTEREST SUBJECT WHICH MAY BE OFFERED INFREQUENTLY; SEVERAL DIFFERENT TOPICS MAY BE TAUGHT IN ONE YEAR OR SEMESTER.

AE 598: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently.

AE 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

AE 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

AE 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
Supervised experience in teaching and orientation to other selected aspects of the professional at the Pennsylvania State University.

AE 603: Foreign Academic Experience
1-12 Credits/Maximum of 999
Foreign study and/or research constituting progress toward the degree at a foreign university.

AE 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

AE 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999
No description.

AE 862: Distributed Energy Planning and Management
3 Credits
Theories and practices of distributed energy production and management in the context of regional and integrated energy grid structures.

AE 868: Commercial Solar Electric Systems
3 Credits
Theories and practices of solar electric systems including component selection, performance simulation, grid interconnection, codes, and design documentation.

AE 878: Solar Project Development and Finance
3 Credits
Economic analysis of solar energy projects, project development process, energy policies, finance methods, and economic analysis tools.

AE 880: Facility Energy Management
3 Credits
Course examines fundamentals of energy supply, use and management related to the operation of buildings.
AE 881: Effective Facility Management and Planning

3 Credits

Course examines management skills necessary to effectively lead and manage a facility management organization.

AE 897: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

Architecture (ARCH)

ARCH 501: Analysis of Architectural Precedents: Ancient Industrial Revolution

3 Credits

Analysis of architectural precedents from antiquity to the turn of the twentieth century through methodologies emphasizing research and critical inquiry. ARCH 501 Analysis of Architectural Precedents: Ancient to Industrial Revolution (3) The 20th century Italian architectural historian and theorist Manfredo Tafuri argued that architecture was intrinsically forward-looking and utopian; "project" in both the sense of "a design project" and a leap into the future, like l'overview;projectierdquo; or l'overview;projection.rdquo; However, he also argued that architectural history, understood deeply and critically, is indispensable if that leap is to make the world a better place. For any new building to make a positive and meaningful contribution to the physical and human world, architects must not only know what they can build, but what has been built, and what architects' positive and negative impact has been in the past. This course will introduce the history of architecture from antiquity to the turn of the 20th century through (1) ten selected buildings, one covered each week, and (2) a methodology emphasizing research and critical inquiry. Borrowing from the "l'overview;problem-based learning" approach that is central to studio education, this class will present "l'overview;question-driven history." Students will learn how to find, use, and critique architectural history resources by attempting to answer six fundamental questions for each of the studied buildings.

Concurrent: ARCH 531

ARCH 502: Analysis of Architectural Precedents: Modernism

3 Credits

Analysis of architectural precedents of modernism from its multiple, disputed points of origin through the late twentieth century. ARCH 502 Analysis of Architectural Precedents: Modernism (3) What is "l'overview;modern" in modern architecture? What conditions gave rise to the various movements that have come to dominate design since the industrial revolution? What sort of design did these theoretical works and movements produce, and how did it contribute to architecture's development? An understanding of modernism and its legacy is crucial to a thorough understanding of the architectural culture of the 21st century. By examining buildings from early modernism to today, this course will introduce the theory of modern architecture from its multiple, disputed points of origin through the late twentieth century. Our operative term will be modernisms, in the plural. "l'overview;Modernism" is a convenient and important label, but its suggestion of unity can camouflage the complexity of a phenomenon that spans decades, cultures, continents, and ideas.

Prerequisite: ARCH 501; Concurrent: ARCH 532

ARCH 503: Materials and Building Construction I

3 Credits

Examination of fundamental and advanced building materials, systems and construction technologies associated with their architectural use.

Concurrent: ARCH 531, AE 421

ARCH 504: Materials and Building Construction II

3 Credits

Continuing examination of fundamentals and advanced building materials, systems and construction technologies associated with their architectural use. ARCH 504 Materials and Building Construction II (3) This first-year graduate seminar course will continue to present students with information on fundamental and advanced building materials and systems and on construction technologies associated with their architectural use. Students will also consider the advancements in architectural materials and technologies. It is the second part of a two-semester sequence preceded by ARCH 503. Recurrent course themes include 1) architecture as a product of culture (wisdom, abilities, aspirations), 2) architecture as a product of place (materials, tools, topography, climate), the relationship between architectural appearance presented and the mode of construction employed, 3) materials and making as an expression of an idea and 4) the relationship of a building whole to a detail. This course is motivated by these concerns: a firm belief that architects must know and engage the age they are living in, so as to design and represent it with extreme appropriateness. The course explicitly addresses engagement with society/culture and its appropriate representation by asking students to form opinions about the architectural potential of contemporary and emerging technologies. Their opinions are informed by the presentation of architectural materials and associated construction methods as they evolved - contextualized by human history and by their application in the built environment. In this class students are seeing the material and technological means of making architecture continuously altered by shifting human cultural desires and artistic/scientific/industrial developments. They are simultaneously receiving instruction in their application and use. Through assignments, students also work directly with materials at full scale and learn to represent construction systems through the conventions of drawing and modeling.

Prerequisite: ARCH 503; Concurrent: ARCH 532, AE 422

ARCH 510: Contemporary Architecture and Planning Theories

3 Credits

Examination of core architectural and urban theories through a critical analysis of key concepts from antiquity to the present.

Prerequisite: ARCH 502; Concurrent: ARCH 533
ARCH 511: Theoretical Perspectives in Architecture

3 Credits

The impact of rationalism and romanticism on contemporary developments and theoretical postures in architectural design.

ARCH 512: Critical Theory in Architecture

6 Credits

Inquiry into paradigms of critical theory in architecture theory, practice, and teaching. Evaluation of central texts, methods, theories, and outcomes. ARCH 512 Critical Theory in Architecture (6)ARCH 512 is composed of six chronologically arranged units of study that examine the major developments in the evolution of discursive practices that ground architecture theory, teaching, and practice. Modern and post-Modern critical theories in architecture have borrowed from a number of tangent disciplines, such as Phenomenology, Positivism, Existentialism, Narratology, Structuralism, Deconstruction, Grounded Theory (social sciences), Cognitive-Behaviorism, Neo-Kantianism, Psychoanalysis, Reception Theory, etc. Historical methodology, Archaeology, Anthropology Art History, and other disciplines have also had their impact. As a result, critical theory in architecture typically lacks uniform methodologies and stable definitions. In recent years, many disciplines have undergone attempts to consolidate discourse around the influence of language and culture within the historical context of evolving world ideologies and their effect on communication, material culture, and the physical environment. Architecture has responded to this general trend in a number of ways that invite cross-disciplinary comparisons and methodological adaptations. The course will take advantage of featuring visiting scholars whose expertise in diverse areas of study will provide participants with direct contact with the widest possible range of theoretical perspectives. The strategy of the course will be a comparison and critical evaluation of what appear to be the most effective research methods within the pressing concerns of environment, population growth, material resource depletion, and international conflict. The aim will be to establish relevance as well as research competence and effective expression.

Prerequisite: admission into Ph.D. Program in Architecture or permission of instructor

ARCH 512A: Doctoral Research Theory

3 Credits

Inquiry into paradigms of theory in architecture and landscape architecture, as pertain to doctoral level research, practice, and teaching.

ARCH 512B: Doctoral Research Design

3 Credits

Research design and methods, sampling strategies, potential biases, confounding problems, and the limits of inference in architecture and landscape architecture research.

Prerequisite: ARCH 512A

ARCH 520: Methods of Inquiry in Architecture and Urban Design

3 Credits

Introduction to the methods of research and inquiry commonly used in architecture and urban design.

Prerequisite: ARCH 530; Concurrent: ARCH 503, ARCH 521
ARCH 532: Architecture Design II
6 Credits
Studio focusing on the design of small to medium scale architecture that addresses the complexity of a total work.

Prerequisite: ARCH 503, ARCH 531, A E 421; Concurrent: ARCH 504, ARCH 522, A E 422

ARCH 533: Architectural Design III
6 Credits
Studio emphasizing the design of multi-functional buildings, and stress the creative synergy among building design, structure, site, and context.

Prerequisite: ARCH 504, ARCH 532, A E 422; Concurrent: ARCH 510, A E 211

ARCH 534: Architectural Design IV
6 Credits
Studio developing advanced designs for comprehensive buildings responding to human needs in terms of cultural meaning, context, and technical requirements.

ARCH 536: Design-Inquiry
1-12 Credits/Maximum of 12
Integration of research with the designing of architectural and urban settings.

Prerequisite: ARCH 520 and approval of advisor

ARCH 541: Topics in Theory
3 Credits
A series of presentations on the development of contemporary architectural theory.

Prerequisite: ARCH 511

ARCH 542: Topics in Community and Urban Design
3 Credits
Community and urban design as an area of design inquiry and interdisciplinary practice. ARCH 542 ARCH 542. Topics in Community and Urban Design (3) The intention of this course is to introduce students to the fundamental elements of community and urban design practice within the fields of architecture, landscape architecture, and planning. An investigation into the diverse traditions of design practice--technical, aesthetic, and theoretical--will highlight the role that design plays in the urban and community context and also serve as a powerful medium for analyzing the confluence of the social, economic, political, and ecological dimensions that give form to cities and communities. An objective of the course will be to develop a critical perspective in architectural design vis-a-vis the restructuring of urban and community space. Topics to be covered in the course include: history of the discipline, contemporary urban and community issues, methodologies and techniques in community action research and participatory design, and introduction to the case study method of analysis. It is expected that students will actively participate in class discussions, present a case study of a project related to the topics covered in the class, and submit a research paper on the selected case study. ARCH 542 will be offered as a 3-credit course on an annual basis during the spring semester. Students with graduate standing in architecture and landscape architecture will be given priority for enrollment. However, a limited number of other students may enroll pending consent of the instructor.

Prerequisite: graduate standing or consent of instructor

ARCH 543: Topics in Digital Design
3 Credits
Inquiry into digital design paradigms of architecture and related disciplines; exploration design principles and operations supported in digital/virtual design environments.

Prerequisite: graduate standing or consent of instructor

ARCH 550: Ethics in Architecture: Green to Post-Green
3 Credits
GREEN to POST-GREEN - Environmental thinking in the Twenty-first Century. ARCH 550 Ethics in Architecture (3) The intention of this seminar will be to look at the legacy of sustainable design (providing the topical substance for a series of class presentations) and engage students in an interdisciplinary dialogue. The research and work assignment will require each student to write an essay and/or develop a design project, based on the cutting edge of creativity in an important field other than architecture. By pursuing this approach, students in the seminar will be expected to identify a major thinker in the arts, sciences, or humanities, research why this intellectual leader's theories are significant, and then translate what they have learned into a written paper and/or design project. The class discussions will relate information delivered by diverse speakers to the subjects of "environmental thinking," origins of green architecture, examples of good and bad LEED qualified buildings, site-specific art, social and psychological concerns in urban planning, breakthroughs in science that impact on design and, as a fundamental mission of the entire course, the potential value of visionary ideas from other fields in shaping public policy for sustainable buildings and cities.

ARCH 591: Architectural Research
2-12 Credits/Maximum of 12
Guided research project.

ARCH 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

ARCH 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently.
ARCH 597A: **SPECIAL TOPICS**
1-9 Credits

ARCH 597B: **SPECIAL TOPICS**
1-9 Credits

ARCH 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

ARCH 601: Ph.D. Dissertation
0 Credits/Maximum of 999
Ph.D. Dissertation Full-Time

ARCH 603: Foreign Academic Experience
1-12 Credits/Maximum of 12
Foreign study and/or research constituting progress toward the degree at a foreign university.

ARCH 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

Art (ART)

ART 501: Art Research
2-6 Credits/Maximum of 6
Original study and practice in art relating to material, concept, or technique.

ART 505: Graduate Seminar
2 Credits/Maximum of 8
Seminar covering special topics at the graduate level, emphasizing interdisciplinary discourse including criticism and review of graduate work.

ART 511: Issues in Contemporary Art
1-3 Credits/Maximum of 6
A critical survey of issues in contemporary art.

ART 515: New Media Art I
1-7 Credits/Maximum of 14
Individual problems in new media arts practice leading to development of a body of work representative of the artist.

ART 516: New Media Art II
1-7 Credits/Maximum of 14
Individual problems in new media arts practice leading to development of a body of work representative of the artist.

Prerequisite: ART 515

ART 530: Sculpture I
1-7 Credits/Maximum of 14
Individual problems in sculpture leading to the development of a collection or body of work representative of the artist.

ART 531: Sculpture II
1-7 Credits/Maximum of 14
Individual problems in sculpture leading to the resolution of a collection or body of work representative of the artist.

Prerequisite: ART 530

ART 545: Printmaking I
1-7 Credits/Maximum of 14
Individual problems in printmaking leading to the development of a collection or body of work representative of the artist.

ART 546: Printmaking II
1-7 Credits/Maximum of 14
Individual problems in printmaking leading to the resolution of a collection or body of work representative of the artist.

Prerequisite: ART 545

ART 550: Painting I
1-7 Credits/Maximum of 14
Individual problems in painting leading to the development of a collection or body of work representative of the artist.

ART 551: Painting II
1-7 Credits/Maximum of 14
Individual problems in painting leading to the resolution of a collection or body of work representative of the artist.

Prerequisite: ART 550

ART 570: Graphic Design I
1-7 Credits/Maximum of 14
Individual projects in design with special emphasis on specialized topics of graphic design.

ART 571: Graphic Design II
1-7 Credits/Maximum of 14
Individual problems in design, with special emphasis on professional practice in the area of graphic design.

Prerequisite: ART 570
Art Education (AED)

AED 502: Research in Art Education
3 Credits
Examination of past and present research in art education, an introduction to general methods of research, and critical evaluation of research in art education.

AED 505: Foundations of Art Education
3 Credits
An examination of classic theories in art education and their relevance to current developments.

AED 513: Summer Institute on Contemporary Art
3 Credits
A blended summer course with on-campus and online components and a focus on intersections among contemporary art, curriculum, and pedagogy. A ED 513 Summer Institute on Contemporary Art (3) This course is a summer session offering with a focus on intersections between contemporary art and curriculum. A collaborative effort between the Palmer Museum of Art and the Art Education Program, the course employs an innovative instructional approach that combines an intensive one-week intensive on-campus experience followed by correspondence, discussion, and presentation of final student projects using an online course management system during the ensuing five weeks. The course is designed to appeal to practicing K-12 educators, art educators, art education graduate students, and interested students from other disciplines as a forum in which to strengthen their focus on interdisciplinary curriculum theory and design constructed from collaborative interpretations of contemporary works of art and visual culture. As a critically challenging learning experience, this course will prepare students to thrive in a global environment by providing principles of interpretation as the foundation for encounters with beliefs, issues, and practices informed by and evidenced in contemporary works of art and visual culture. Due to the interdisciplinary interpretations and curriculum projects that will result from meaningful engagement with contemporary works of art, the course will promote interdisciplinary teaching and program development. The innovative format—a one-week intensive experience followed by discussion and presentation of final projects supported by an online course management system—challenges conventional approaches to instruction and presentation of evidence of student learning, thereby responding to and requiring new ways to assess and improve student learning outcomes in and through contemporary visual art.

AED 522: Participatory Visual Inquiry in the Public Sphere
3 Credits
Theory and praxis seminar to consider contemporary practices of participatory inquiry and public action with an emphasis on visual methodologies. A ED 522 Participatory Visual Inquiry in the Public Sphere (3) Students will analyze practices of participatory inquiry in response to social and cultural issues, situations, and challenges taken up by visual artists and interdisciplinary collectives who intend their work to construct new knowledge and positive change through collective action. Students will discuss and identify societal situations and propose possible responses as sites for participatory inquiry. A key focus of the course is the exploration of theories and practices of collaborative inquiry in the public sphere with emphasis on visual methodologies. The course revolves around related and overlapping concepts such as participatory democracy, participatory culture, ideas to actions, collaborative inquiry, collaborative design, community-based research, public pedagogy, and action research. The course is intended to function as a discursive space to broaden perceptions about contemporary art and inquiry practices; informal and public pedagogies; the interdisciplinary roles of art and artists in society, community-based projects and inquiry; and ways collaborative artmaking and cultural production can function as forms of research. Course content focuses on community artworks, interdisciplinary creative projects, and other forms of cultural production created for and existing within the public sphere in response to specific issues, challenges, and conditions. Examples of such work include public murals, public performance interventions, environmental responses,
community health and change interventions, and social media activism, among others.

AED 524: Arts Education Policy and Advocacy

3 Credits

Critical examination of current and emerging arts education policies in the United States in relation to federal, state, and local education and cultural policies. A E D 524 Arts Education Policy and Advocacy (3)

Students who are going to become leaders in arts education should understand social and political forces that shape the landscape where they work. Although art educators were identifying policy needs and submitting resolutions with policy recommendations to national agencies during the interwar years, arts education policy gained importance during the 1960s with the founding of The National Endowments for the Humanities and Arts. Arts education—as opposed to art, dance, music, or theatre education—is a political construct forged in order to successfully advocate for inclusion of visual and performing arts in National Educational Goals during the late twentieth century. In this course, students will explore what counts as policy for arts education and how policy discourse is framed; who constitutes stakeholders and policy makers; contexts where policy is advocated and created; and how advocates develop and communicate proposals for needed policies. Working in small groups, students will examine recent issues related to arts education policy, presenting those issues in class.

AED 536: Curriculum Development in Art Education

3 Credits

Factors affecting art curriculum decisions, analysis, selection, organization, preparation of curriculum. Evaluation and sources of art curriculum improvement and innovation.

Prerequisite: 6 credits of methods

AED 541: Theories of Child Art

3 Credits

Study of current theories of child art; application of recent psychological and anthropological theories to understanding child art.

Prerequisite: A E D 486

AED 570: Artistic Creation and Theories of Knowing

3 Credits

A thematically organized course that makes connections between artmaking and art as a way of knowing and inquiry.

AED 588: History of Art Education

3 Credits

Historical development of philosophies in art education in the United States and abroad.

AED 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

AED 594: Research Topics

1-18 Credits/Maximum of 18

Supervised student activities on research projects identified on an individual or small-group basis.

AED 595: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

AED 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

AED 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

AED 597B: **SPECIAL TOPICS**

3 Credits

AED 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

AED 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

AED 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

Teaching of undergraduate art education classes under the supervision of two members of the graduate faculty.

Prerequisite: doctoral candidate status in Art Education and program head permission

AED 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

AED 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.
AED 811: New Media and Pedagogy

3 Credits

Exploration of relationships between communication technologies and beliefs about the nature of knowledge and the nature of art. A ED 811 New Media and Pedagogy (3)Due, in part, to contemporary processes of globalization and the development of digital technologies and the Webmdash;new issues, possibilities, and opportunities regarding media communities and art pedagogy emerge in the field of art education. This is the focus of this course. Course participants have the opportunity to explore the aesthetic communicative and pedagogical implications of intertextual Webs, hypertext and hypermedia, blogs, wikis, simulations, the body interfaced in virtual reality, threaded dialogue, WebQuests, online games, media communities, adaptive and assistive technologies, and media-rich essays. Learning activities will be in the form of explorations and creation with the links and resources provided, and focused discussions about these explorations and how to teach this content at participantrsquo; teaching sites. Following 5 thematic explorations, course participants write a capstone essay to construct a speculative fiction of a teaching scenario based on the content of the course imagined in a future teaching site. The main priorities in Exploration 1 are to imagine possibilities of human-technology interfaces for creating and critiquing art. In Exploration 2, participants select a social networking tool from the course's resources to conduct a collaborative mini-project concerning self-representation online and power relational networks of social, physical, technological, and discursive inscriptions or conditions. Exploration 3, involves using the Internet as a primary medium for art creation and involves developing criteria to critique interactive Net art. The focus of Exploration 4 is free, downloadable authoring programs outside of a commercial economy, which enables the creation of interactive experiences without the need for specialized programming knowledge or database support. Exploration 5 involves participants creating a socially responsive visual culture WebQuest, which is an inquiry-oriented activity in which learners construct knowledge through interacting with, evaluating, and connecting diverse, and sometimes contradictory, resources on the Internet in order to form new insights that they share in a tangible form intended to make a difference in the world. This is one of the required courses for the M.P.S. in Art Education. There is no prescribed sequence and no prerequisites for art education courses in the M.P.S. program.

AED 812: Diversity, Visual Culture, and Pedagogy

3 Credits

Diversity issues in museum and K-12 art education contexts. A ED 812 Diversity, Visual Culture, and Pedagogy (3)This course examines diversity, visual culture, and pedagogy in various settings: the artworld, popular media, and cultural settings such as schools and museums. Diversity pertains to gender, sexual identity, social class, ethnicity, ability, age, and other attributes that shape our identities. This course pays special attention to issues of power and privilege in relation to diversity and visual culture. It examines ways that various forms of visual culture, situated in various social contexts, teach us who we are, what is ldquo;normalrdquo; in our society, and how we might change oppressive social conditions that currently exist. As defined in the course, visual culture includes paintings, sculptures, prints, and other forms of fine art as well as advertisements, news images, scientific images, television programs, and films. It includes toys, comic books, childrenrsquo;s artmdash;and more. Visual culture includes all manifestations of cultural life that are significant for their visual features. Pedagogy refers not only to formal methods of instruction, such as teaching and learning in classrooms. It also includes informal instruction through the arts, the media, popular forms of entertainment, and other social practices. Pedagogy includes being positioned by, or addressed in certain ways by various forms of visual culture. It includes the ways we actively interpret, use, and recreate forms of visual culture in our lives. Objectives of the course include understanding diversity as defined in relation to various forms of visual culture; understanding the complex interactions of ethnicity, class, gender, sexual identity, and other aspects of diversity in visual culture; understanding issues of power and privilege in relation to visual culture; and understanding pedagogical issues related to visual culture, including forms of address and interpretation, as well as pedagogical practices such as teaching and learning in classrooms. By the end of the course, participants should be able to critically examine social constructions of race, class, gender, sexual identity, and other aspects of diversity in visual culture through both written and visual analyses. Participants should also be able to develop and implement units of instruction related to visual culture, and reflect on their own and othersrsquo; teaching practices in schools and museums. This is one of the required courses for the M.P.S. in Art Education. It is offered every other year with a maximum enrollment of 15 students.

AED 813: Public Pedagogy

3 Credits

Inquiry into the public pedagogy of contemporary visual culture for relevancy to museum and K-12 art education contexts. A ED 813 Public Pedagogy (3)This course prepares art teachers to become producers of a sociallyjust world by becoming critical public art pedagogues who extend their teaching environment. As defined in the course, critical publicpedagogy of art, as an educational and artistic practice, is a critical stance concerning socio-pervasive artifacts, processes, and interfacesth that acculturate and assimilate values, beliefs, and sensibilities. Public pedagogy is the use of a public medium and/or space such as the Internet, films, television, magazines, shopping malls, and sports arenas to influence behaviors and beliefs. Public pedagogy enactsthe curricula that are easily consumed because of its ubiquitous nature. Awareness of consumption of public pedagogy is important because of its global reach. Educators need to be versed in how to facilitate investigations of public pedagogy and how to guide studentsto develop critical public pedagogical practices. From spheres of influence radiating from art to a multidirectional layered matrix of sensibility, this course explores contemporary art that addresses andenacts public pedagogy through (inter)actions of cultural interfaces such as humans, technologies, localities, and politics. Such artworks are performed networks of relations. Contemporary artistsrsquo; praxis involving intertextuality, palimpsest, remix, code-switching, doublecoding, subversion, and hypersignification is explored through video, installation, performance, and other contemporary art forms. Objectives of the course include understanding processes of consumption and production of public pedagogy, and understanding contemporary art practices. By the end of the course, participants should be able to develop and implement units of instruction related to contemporary art and public pedagogy and reflect on their own and othersrsquo; teaching practices in schools and museums. This is one of the required courses for the M.P.S. in Art Education. It is offered every other fall semester with a maximum enrollment of 15 students.
AED 814: Informal Learning

3 Credits

Pedagogy and contexts for learning in museums and other cultural institutions. AED 814 Informal Learning (3) The course introduces participants to theories and practices of informal learning, and to the possible contexts including museums, schools and other cultural institutions in which informal, free choice learning may occur. These provide a framework for participants to use in preparing, implementing, and evaluating a learning project or other intervention in their own institutions or communities. The course includes a strategic and policy analysis of the contexts in which free choice learning projects may occur, a review of the social and economic significance of informal, free choice learning in an information age and global economy, an introduction and critical discussion of constructivist theories of informal learning, a review of specific pedagogical practices that may be effective in implementing informal learning for school-age students, adults, and senior citizens, an introduction to tools for evaluating the effectiveness of these practices, and the development, implementation and assessment of informal learning project or intervention by each participant using other participants as consultants in the process. This is one of the required courses for the M.P.S. in Art Education. It is offered every other year with a maximum enrollment of 15 students.

AED 815: Action Research in Art Education

3 Credits

Develop a reflective process to improve strategies, practices, and knowledge of the environments within which art education is practiced. AED 815 Action Research in Art Education (3) This course prepares M.P.S. in Art Education candidates to conduct action research in their teaching context as part of a community of practice by recognizing and sharing existing tacit knowledge about teaching and learning conceptualized in specific social and physical environments. Action research is a reflective and iterative inquiry process with the aim of improving strategies, practices, and knowledge of the environments within which one teaches. Course participants will learn how to conduct research that develops, leads to, implements, and assesses a genuinely well-informed social action in the midst of an emerging teaching and learning landscape. The course uses a blend of Web technology, print, and other media to maximize flexibility without sacrificing professor and student interaction. Communication tools, including bulletin boards and e-mail, are used to foster a collaborative environment, providing participants with the opportunity to learn from one another about the unique schools and cultural institutions each comes from and as well as their varied professional experiences. AED 815 will be offered via World Campus as an online course will be offered every spring semester. Enrollment will be limited to 15 students.

Art History (ARTH)

ARTH 511: Seminar in Ancient Art

3-12 Credits

Selected topics from the history of Greek and Roman Art.

ARTH 512: Seminar in Medieval Art

3-12 Credits

Original research into problems dealing with the art of the Middle Ages.

ARTH 513: Seminar in Renaissance Art

3-12 Credits

Investigations in the area of Renaissance art, centering around major masters and monuments.

ARTH 514: Seminar in Baroque Art

3-12 Credits

Investigations in the area of baroque art, centering around major masters and monuments.

ARTH 515: Seminar in Modern Art

3-12 Credits

Lectures, readings, reports, and discussions in the field of modern art.

ARTH 551: Historiography of Art History

1-6 Credits

The relationship between the definition of, and approach to, art-historical problems from Vasari to the present.

ARTH 560: Methods of Research in Art History

3 Credits

Preparation of graduate students for professional careers in academia and museum work, involving creation of publishable articles and grant writing. ART H 560 Methods of Research in Art History (3) In the academic world, and particularly in the humanities, the publication of articles and books is understood to be a marker of success and, along with teaching skills, the basis on which appointments are made and tenure granted. Essential to this body of production is the execution and placement of one’s research undertakings, skills that the “Methods Seminar” is designed to hone. No less valued by those who make appointments and offer promotion are the grants and fellowships that a candidate has won. Indeed, since research in art history involves travel to and residence at museum, library and archive sites—whether these be in North America or abroad; financial support is a necessity for most aspiring professionals and is regarded as evidence of external validation of their investigations. Training in “grant writing” is also covered in the seminar. Even before field work is undertaken, the investigator must be aware of the “state of research,” work normally undertaken at one’s own university library. In this domain there are better and worse ways of taking notes. The seminar discusses these methods and goes beyond them to consider the optimum means by which such records are organized and assembled prior to the delivery of papers and the production of articles. The nature of an oral presentation and a publishable paper are distinct activities and this difference needs to be learned. The more complex skills involved in the writing of articles, the securing of photographs and concomitant permissions, and the choice of the journal to which the “finished” piece should be submitted are dealt with at even greater length.

ARTH 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.
Asian Studies (ASIA)

ASIA 501: Proseminar in Asian Studies I
1-3 Credits
A seminar for graduate students in the Asian Studies dual-degree PhD programs.

ASIA 502: Proseminar in Asian Studies II
1-3 Credits
Introduction to theories, methods, and disciplines of Asian Studies.

ASIA 577: Critical Perspectives on Modern Chinese Literature
3 Credits
This course provides students with an overview of the core texts and main critical paradigms of modern Chinese literary studies. This course provides students with a comprehensive overview of the main critical approaches to modern Chinese literature, by placing these paradigms into historical perspective and linking them with key texts that illuminate the authors’ arguments and demonstrate exemplary readings that have proven influential in the field, past and present. The particular focus of the course may vary according to the instructor (e.g. themes, genres, regions etc.), but the course will generally cover critical interventions and debates, helping students to understand the emergence of the field in its present form; they will also scrutinize major trends that are providing new directions for the study of modern Chinese literature. In addition to the critical literature, students will read a range of key literary texts, from the late Qing to the twenty-first century, that provide insights into the forces (aesthetic and intellectual, as well as social and historical) that have shaped the canon of modern Chinese literature. Critical analyses and literary texts are chosen in a way so as to illuminate each other. At the end of the class, students will have gained a sound grasp of the field and its literary and historical dimensions, and develop a critical understanding of the current challenges and directions of the study of modern Chinese literature. Cross Listings: CMLIT 577 will be added as a cross-listed course.

Cross-listed with: CMLIT 577

ASIA 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

ASIA 597A: Digital Humanities
3 Credits
This seminar will function as a workshop and laboratory for sampling, exploring, and experimenting with a variety of computer-based technologies that are currently being applied to (typically) large corpuses for the purposes of algorithmic criticism. Our focus will be hands-on experimentation with software for network analysis (gephi); stylitics (R); topic modeling (mallet), and mapping, with attention paid to foundational ideas of information theory, visualization, spatial humanities, etc. Exploration of further topics and methods according to student interests, preparation, and usefulness for specific research agendas.

Cross-Listed

Astrobiology (ABIOL)

ABIOL 570: Astrobiology Field Experience
2 Credits
Geological field excursions to sites where the early evolution of life and the environment is revealed and to modern analogues. ABIOL 570 ABIOL 570 Astrobiology Field Experience (2)Astrobiology is a new, multidisciplinary field of science encompassing astronomy, biology, biochemistry, genomics, chemistry, chemistry, atmospheric chemistry, geochemistry, paleontology, geology, and many other fields of science and technology. Astrobiology includes the study of the origin of life, the connections between the evolution of life and of environments, the potential for life and life’s actual distribution in our solar system and beyond, and future of life on Earth and in space. This course is intended to expose students to a variety of rock units (paleosols, sedimentary rocks, glacier deposits, ore deposits, and igneous rocks) formed under a variety of environments during the period between 3 billion years and 400 million years ago in order to give them some ideas about the environments of the early Earth. Students will also be exposed to a variety of geochemical, paleontological, and geological methods to investigate these ancient rocks in order to obtain information about the biological and chemical environments of the early Earth. The field excursion will be held for about two weeks during the Summer semester. It will be preceded by a short series of seminar-style meetings late in Spring semester to discuss the objectives of the excursion and to outline the major features of the field sites to be examined. Possible sites for the excursion will be selected from the Precambrian rocks in Ontario - Quebec, Canada, Michigan, Minnesota, Wisconsin, New York, Virginia, West Virginia, and Maryland and modern microbial ecosystems in the Bahamas and Green Lake (NY). One to three days will be spent at each of the major sites.This
Astrobiology is a new, multidisciplinary field of science encompassing astronomy, biology, microbiology, biochemistry, genomics, chemistry, atmospheric chemistry, geochemistry, paleontology, geology, and many other fields of science and technology. Astrobiology includes the study of the origin of habitable planets, origin of life, the connections between the evolution of life and of environments, the potential for life and life's actual distribution in our solar system and beyond, and future of life on Earth and in space. Students will expand their knowledge base beyond their discipline while considering such issues as the origins of stars and planets, environmental conditions of the prebiotic Earth, the origin of life on Earth, the nature of the universal "tree of life", the establishment of evolutionary patterns and rates, the causes of global glaciations and their use as analogues for life on planets or moons such as Europa, how life survives in extreme environments on Earth, what determines planetary habitability, how planets in other solar systems are detected, and how we might detect life on other planets. This is a required course for all students in Dual-Title Degree Program in Astrobiology, but is open to any qualified undergraduate or graduate student. There is no specific prerequisite. Grading will be based on participation and performance on a midterm and final examination, problem sets, and laboratory exercises.

ABIOL 590: Astrobiology Seminar

2 Credits

Student-led presentations and discussions of current and classic literatures relevant to the themes of Astrobiology. ABIOL 590 ABIOL 574 Planetary Habitability (3)This course introduces graduate students to the foundations of the field of Astrobiology. Astrobiology is a new, multidisciplinary field of science encompassing astronomy, biology, microbiology, biochemistry, genomics, chemistry, atmospheric chemistry, geochemistry, paleontology, geology, and many other fields of science and technology. Astrobiology includes the study of the origin of habitable planets, origin of life, the connections between the evolution of life and of environments, the potential for life and life's actual distribution in our solar system and beyond, and future of life on Earth and in space. Students will expand their knowledge base beyond their discipline while considering such issues as the origins of stars and planets, environmental conditions of the prebiotic Earth, the origin of life on Earth, the nature of the universal "tree of life", the establishment of evolutionary patterns and rates, the causes of global glaciations and their use as analogues for life on planets or moons such as Europa, how life survives in extreme environments on Earth, what determines planetary habitability, how planets in other solar systems are detected, and how we might detect life on other planets. This is a required course for all students in Dual-Title Degree Program in Astrobiology, but is open to any qualified undergraduate or graduate student. There is no specific prerequisite. Grading will be based on participation and performance on a midterm and final examination, problem sets, and laboratory exercises.

ABIOL 574: Planetary Habitability

3 Credits

Aspects of star and planet formation, habitable zones, biospheric evolution, life in extreme environments, planet and life detection.

ASTRO 501: Fundamental Astronomy

3 Credits

Concepts, tools and techniques, and essential background in stellar, Galactic, extragalactic astronomy and cosmology.

ASTRO 502: Fundamental Astrophysics

3 Credits

Fundamental tools and results of modern astrophysical theory, Gravitation; gas dynamics; radiation processes; radiative transfer; atomic structure and transitions.

ASTRO 504: Extragalactic Astronomy

3 Credits

Properties and evolution of galaxies including their stellar, interstellar, black hole and Dark Matter components.

Prerequisite: ASTRO501 , ASTRO502

ASTRO 513: Observational Techniques in Astronomy

3 Credits

Theoretical and practical aspects of modern multiwavelength observational astrophysics including detector physics, imaging techniques, spectroscopic techniques, and data analysis principles.

Prerequisite: ASTRO501 , ASTRO502

ASTRO 515: Astrostatistics

3 Credits

Modern astronomical research – the study of planets, stars, galaxies and the Universe – and the linking of observational data to astrophysical theory encounter a wide array of challenges falling under the rubric of statistical inference. Cosmology, for example, addresses spatial clustering of galaxies, nonlinear regression of Big Bang astrophysical models, supervised regression of galaxy photometric redshifts, multiple hypothesis tests for faint source detection in images, multivariate classification, and time series analysis of billion-object multi-epoch surveys. Big Data arising from large-scale astronomical surveys and Bayesian modeling of astrophysical models are propelling astrostatisics into greater importance than in the past. Yet the curriculum for young astronomers typically includes no courses in statistical methodology. This course is designed to fill this gap. The course progresses through three stages. First, basic principles in statistical inference are presented and discussed including elements of probability theory, point and interval estimation, and probability distributions. The techniques of least squares, maximum likelihood, and Bayesian inference are outlined here and exercised later in the course. Second, central fields of applied statistics are investigated including nonparametric statistics and density estimation, regression (including nonlinear models from astrophysical theory), and multivariate analysis (including unsupervised clustering and supervised classification). Specific statistical methods are linked to specific astronomical problems at each step. Third, the instructor and students choose topics for study, such as time series analysis, spatial
point processes, censoring and truncation, Bayesian computation, and scientific visualization. Common characteristics of astronomical data that are not treated in standard statistical presentations are discussed in detail, including heteroscedastic measurement errors, irregularly-spaced time series, and nonlinear astrophysical models. A crucial element of the course is practical training in the implementation of these statistical methods using sophisticated public-domain software environments. Software tutorials in class and text help educate the student to a level where data and science analysis can proceed at a mature level.

ASTRO 527: Computational Physics and Astrophysics

3 Credits

Introduction to numerical methods for modeling physical phenomena in condensed matter, atomic and high energy physics, gravitation, cosmology and astrophysics. ASTRO (PHYS) 527 Computational Physics and Astrophysics (3)This course provides an introduction to applications of numerical methods and computer programming to physics and astrophysics. Numerical calculations provide a powerful tool for understanding physical phenomena, complementing laboratory experiment and analytical mathematics. The main objectives of the course are: to survey of the computational methods used for modeling concrete physical and astrophysical systems; to assess the reliability of numerical results using convergence tests and error estimates; and to use scientific visualization as a tool for computer programming development and for physical understanding of numerical results.

Cross-listed with: PHYS 527

ASTRO 528: High-Performance Scientific Computing for Astrophysics

3 Credits/Maximum of 999

Training in software development for performing astrophysical simulations and analyzing astronomical data, including attention to reproducibility, parallelization, and computing architectures.

CONCURRENT COURSE: ASTRO 501

ASTRO 530: Stellar Atmospheres

3 Credits

The structure, physics and observational manifestations of atmospheres of stars.

Prerequisite: ASTRO501, ASTRO502

ASTRO 534: Stellar Structure and Evolution

3 Credits

Physics of stellar interiors, stellar structure, and evolutionary changes of stars from pre-main sequence through final states.

Prerequisite: ASTRO501, ASTRO502

ASTRO 542: Interstellar Medium and Star Formation

3 Credits

Theory and observation of the interstellar medium of our Galaxy and the process of star and planet formation.

ASTRO 545: Cosmology

3 Credits

Modern cosmology of the early universe, including inflation, the cosmic microwave background, nucleosynthesis, dark matter and energy.

ASTRO (PHYS) 545 Cosmology (3)Cosmology is the scientific study of the universe as a whole: its physical contents, principal physical processes, and evolution through time. Modern cosmology, which began in the early 20th century, is undergoing a renaissance as a precision science as powerful ground- and space-based telescopes allow us to observe the formation of the first stars, galaxies and galaxy clusters; the echoes of the inflationary epoch as they are impressed upon the cosmic microwave background; and evidence for and clues to the nature of the mysterious dark energy, which is driving the accelerating expansion of the universe. This course will introduce students to the key observations and the theoretical framework through which we understand the physical cosmology of the early universe.

Cross-listed with: PHYS 545

ASTRO 550: High Energy Astrophysics

3 Credits

Theory and observations of X-rays, gamma-rays and other high energy radiation from Galactic and extragalactic sources.

ASTRO 577: Exoplanets

3 Credits

Recommended Preparations: Some assignments will require programming in the student’s programming language of choice. Since the early 1990s, thousands of exoplanets have been discovered orbiting other stars beyond our solar system. The properties of these planets have challenged our understanding of how planetary systems form and evolve. This course will cover theories of exoplanets’ formation and evolution, the discovery and characterization of exoplanets via exoplanet signals, and the physical properties of exoplanets, including prospects for habitability.

ASTRO 585: Topics in Astronomy and Astrophysics

3 Credits

Advanced study of issues in planetary, stellar, galactic, extragalactic and theoretical astronomy and astrophysics. ASTRO 585 Topics in Astronomy and Astrophysics (3)This 3-credit topics course will be offered as part of the regular sequence of graduate offerings, and can be used to fulfill the graduate degree course requirements on an equal basis with ASTRO 501-580 3 credit courses. The purpose here is to provide a flexible environment for full courses on subjects that are not covered in the courses with fixed curricular content and are important to Penn State faculty, research Centers, and students.

Prerequisite: ASTRO501, ASTRO502

ASTRO 589: Seminar in Current Astronomical Research

1 Credits

Contemporary issues in instrumental, observational and theoretical astronomy and astrophysics. ASTRO 589 Seminar in Current Astronomical Research (1)This seminar will be offered as part of the regular sequence of graduate offerings, and is also used to fulfill the graduate degree course requirements for 1-credit seminars. Their purpose
have taken inventory of the stars in the Milky Way Galaxy and galaxies thousands of Kuiper Belt Objects, including Pluto. Large area sky surveys of the Universe. The Solar System contains only 8 planets but has many observations have fueled significant changes in our understanding of the Universe. Appropriately, the study of the stars and their environments. The overarching goal of the course is to provide secondary science teachers with the necessary content background to convey the astronomy topics required by their mandated state standards. The ASTRO 801 students will be provided with materials for presenting the course content in their classrooms and will be granted license to use the courseware developed for this course in their own secondary classrooms. Students will be required to complete weekly assignments. There are 12 lessons in ASTRO 801, plus a course introduction and orientation. Each lesson contains interactive exercises, links, animations, movies, and novel explanations of the basic scientific principles related to the objects in the Universe and their environments. Each lesson will conclude with an open book, on-line assessment, which will rely on a variety of types of exercises. These exercises will include brief math problems and short essay questions, some of which will require additional internet research to complete. Several simulated lab exercises will also be required, which will allow the students to enrich their understanding of the concepts through inquiry-based, active learning. Students will also complete a capstone project, where they will use the content knowledge and skills to create material for their classroom. There will be several options for this project, but one example is that students will create a set of 3-5 laboratory exercises, including instructions, data sheets, and lists of materials that teach content from the course.

ASTRO 897A: **SPECIAL TOPICS**

2 Credits

ASTRO 897B: **SPECIAL TOPICS**

2 Credits

**Biobehavioral Health (BBH)**

BBH 501: Biobehavioral Systems in Health and Development: Theory and Processes

3 Credits

Examination of theories and basic processes for understanding individuals as dynamic biobehavioral complex systems functioning through continual inter-actions. BB H 501 BB H 501 Biobehavioral Systems in Health and Development: Theory and Processes (3) Understanding the etiology of illness and the design of intervention...
strategies for promoting healthy development, preventing illness, and accomplishing remediation and rehabilitation require a multidisciplinary understanding of the theoretical basis of normal healthy human development and the complex biological processes that form the basis of health and development. This course (BB H 501) presents the theoretical framework of humans as complex dynamic systems, followed by modules on processes of cell biology and genetics as complex systems. The second course (BB H 503) continues with modules of the processes of neurobiology, endocrinology, immunology, and pharmacology followed by a section on integrative biology and health. The modules of biological processes are developed from the perspective of how the physiological aspects of the area of biology is relevant to behavioral development and on what aspect of this area of biology is linked to behavior. These processes are considered in the context of their role in the comprehensive theoretical models developed in the first section of the course. Similar integration with a primary emphasis on behavioral processes is offered in other courses that form the core graduate curriculum in Biobehavioral Health. Evaluation of the theories section will be by written exam, oral presentation, and seminar participation. Evaluation of the cell biology, genetics, and neurobiology components will be by written exam for each component. This initial required course in the biobehavioral health sequence is designed to provide a multidisciplinary framework of theory and knowledge of biobehavioral processes and their implications for health and illness on which other biobehavioral health courses can build. It is the first of a two-course sequence (BB H 501 and BB H 503). It will be required by all graduate majors in Biobehavioral Health. It will be available to students in other doctoral programs. It could be a part of a Biobehavioral Health minor for other students. This course will be offered every fall semester beginning with the first fall semester after approval and will enroll a maximum of twenty students. Faculty: George Vogler and Byron Jones

**Prerequisite:** graduate status

**BBH 502: Health: Biobehavioral Perspectives**
3 Credits

Introduction to the role of psychology in maintaining health and in treating nonpsychiatric disorders.

Cross-listed with: PSY 502

**BBH 503: Biobehavioral Systems in Health and Development: Processes and Integration**
3 Credits

Examination and integration of basic processes for understanding individuals as dynamic biobehavioral complex systems functioning through continual interactions. BB H 503BB H 503 Biobehavioral Systems in Health and Development: Processes and Integration (3)Understanding the etiology of illness and the design of intervention strategies for promoting healthy development, preventing illness, and accomplishing remediation and rehabilitation require a multidisciplinary understanding of the theoretical basis of normal healthy human development and the complex biological processes that form the basis of health and development. This course is the second course in a two-course sequence (BB H 501 and BB H 503) that is designed to provide first-year graduate students with a multidisciplinary understanding of the biobehavioral health perspective. This views humans as complex dynamic systems of integrated component processes that interact with the environment to influence development and health. The first course (BB H 501) presents the theoretical framework of humans as complex dynamic systems, followed by modules on processes of cell biology and genetics as complex systems. This course (BB H 503) continues with modules of the processes of neurobiology, endocrinology, immunology, and pharmacology followed by a section on integrative biology and health. The modules of biological processes are developed from the perspective of how the physiological aspects of the area of biology are relevant to behavioral development and what aspect of this area of biology is linked to behavior. Similar integration with a primary emphasis on behavioral processes is offered in other courses that form the core graduate curriculum. These processes are considered in the context of their role in the comprehensive theoretical models developed in the first section of the two-course sequence. Evaluation of each of the five modules will be by written exam. This required course in the biobehavioral health sequence is designed to provide a multidisciplinary framework of theory and knowledge of biobehavioral processes and their implications for health and illness on which other biobehavioral health courses can build. It is the second of a two-course sequence (BB H 501 and BB H 503). This course will be required by all graduate majors in Biobehavioral Health.

It will be available to students in other doctoral programs. It could be a part of a Biobehavioral Health minor for other students. This course will be offered every spring semester beginning with the first spring semester after approval and will enroll a maximum of twenty students. Faculty: George Vogler and Byron Jones

**Prerequisite:** or concurrent: BB H 501

**BBH 504: Behavioral Health Intervention Strategies**
3 Credits

Evaluation of intervention strategies from a biobehavioral health context. Theories of change processes as they pertain to health are analyzed.

**Prerequisite:** BB H 502, BB H 503

**BBH 505: Behavioral Health Research Strategies**
3 Credits

Research strategies in behavioral health investigations are examined. Designs and data analytic models relevant to biobehavioral research are included.

**Prerequisite:** coursework in research design and/or introductory statistics

**BBH 521: Structural Equation Modeling**
3 Credits

Structural Equation Modeling with LISREL and Amos. Confirmatory factor analysis; regression and path analysis with manifest/latent variables; special applications.

**Prerequisite:** HD FS519, HD FS526

**BBH 551: World Health Promotion**
3 Credits

Analysis of the various health problems that affect humans throughout the world; emphasis will be placed on personal health issues.
BBH 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

BBH 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

BBH 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently.

BBH 600: Thesis Research
1-15 Credits/Maximum of 999
NO DESCRIPTION.

BBH 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
NO DESCRIPTION.

BBH 602: Supervised Experience In College Teaching
1-3 Credits/Maximum of 3
NO DESCRIPTION.

BBH 610: Thesis Research Off-Campus
1-15 Credits/Maximum of 999
No description.

BBH 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999
NO DESCRIPTION.

Bioch, Micrb and Molecular Biology (BMMB)

BMMB 501: Core Concepts in Biomolecular Science
5 Credits
Introduction to broaden one's understanding of biochemical and biophysical principles and the basic aspects of eukaryotic and prokaryotic cell biology. BMMB 501 BMMB 501 Core Concepts in Biomolecular Science (5) This is a required course to be taken by all BMMB graduate students during their first fall semester. It will be team taught with a mixed textbook/literature approach. Material will be presented primarily in the form of lectures. The objective is to provide training in core concepts that will be essential for the students to pursue more specialized areas of study in Biomolecular Science. The course will prepare students for taking graduate electives in more specialized areas, it is not intended to be a comprehensive survey of all of the topics relevant to all of the program options in BMMB. Topics will include: acid/base theory, thermodynamics, chemical equilibrium, electron transfer, electrochemistry, and sizes and shapes of molecules, protein and nucleic acid structure, enzyme kinetics and catalysis, chromosome structure, DNA replication, cell cycle, recombination, transcription, RNA processing, and translation, intracellular compartmentalization and trafficking and cell signaling. Each student's mastery of the material will be evaluated by written examinations.

Prerequisite: Graduate standing

BMMB 502: Critical Analysis of the Biochemical, Microbial, and Molecular Biology Scientific Literature
1 Credits
A course focusing on critical reading, understanding and evaluation of primary literature in Biochemistry, Microbiology and Molecular Biology.

Prerequisite: BMMB 501

BMMB 503: Critical Elements of Genetics and Molecular and Cellular Biology
4 Credits
Foundational topics and critical analysis in evolution, genetics, molecular and cellular biology and cell differentiation. BIOL (BMMB/MCIBS/ VB SC) 503 Critical Elements of Genetics and Molecular and Cellular Biology (4) Central elements in genetics, genomics and molecular and cell biology will be covered. The course will focus on foundational principles and concepts that will allow students to understand the behavior of proteins and organelles within cells, and to appreciate how intracellular events influence interactions of cells with one another in multicellular systems and during development. Another major focus will be genome architecture, both in the context of evolution and gene expression. Students will also learn how genetic approaches can be used to understand cell and molecular biology, and will develop critical thinking skills through the analysis of the primary scientific literature. The course will include lecture and discussion sessions.

Cross-listed with: BIOL 503, MCIBS 503, VBSC 503

BMMB 507: Seminar in Biochemistry, Microbiology, and Molecular Biology
2 Credits/Maximum of 4
No description.

BMMB 509: Ethics in Biomedical Science
1 Credits
Discussion of ethical issues relevant to scientific research in the biomedical sciences.

BMMB 510: Current Literature in Molecular Biology
1 Credits
Discussion and analysis of recent scientific papers that form the core of current literature in molecular biology and related disciplines.
BMMB 511: Molecular Immunology

2 Credits

The study of molecular and biochemical events that influence immune responses and define current questions in immunology. BMMB 511 / MCIBS 511 / VBSC 511 Molecular Immunology (2) The goals of the course are to integrate the current questions of immunology with other disciplines, in particular cell biology and biochemistry, and to provide training in critical thinking and evaluation of data and experiments. The course will be approximately 2/3 lecture by the instructor and 1/3 student presentations of papers related to the material. In addition, written critical reviews of recently published papers and a short research proposal will be assigned. By focusing on the mechanisms involved in immunity and disease, this course complements several existing courses on immunology, virology, and biochemistry. The prerequisites of MICRB 410 and BMB 400 assure that the students enrolling in the course have a general understanding of immunology and biochemistry. This course is projected as an elective for the Molecular Medicine and Immunobiology focus areas in the MCIBS graduate program and for the Pathobiology and BMB graduate programs. The course will be offered in the fall semester with an enrollment limit of 20 students

Prerequisite: B M B400, MICRB410
Cross-listed with: MCIBS 511, VBSC 511

BMMB 521: Microbial Biology I

4 Credits

Survey of cutting-edge aspects of microbial ecology, phylogenetics, physiology, molecular biology, pathogenesis and genomics.

Prerequisite: B M B401 or B M B442

BMMB 525: Analytical Separations

3 Credits

Fundamentals and applications of modern chromatographic separations.

Cross-listed with: CHEM 525

BMMB 531: Biomolecular Structure

2 Credits

Crystal structure determination and analysis of protein and nucleic acid three-dimensional structures. BMMB 531 Biomolecular Structure (2) This course is taught in two parts. In the first part, students will learn the fundamentals of X-ray crystallography of bio-molecules. Topics covered include: What X-rays are and how to produce and use them safely, how protein crystals are grown, how X-rays interact with crystals to yield 3-dimensional diffraction data, how to solve a crystal structure and how to refine the structure. Basic mathematics and physics involved in this technique will be discussed. The students will also learn how to analyze a published crystal structure and how a crystallography laboratory works. The second part will focus on understanding how protein and DNA structure relate to the function of these macromolecules. The students will visualize macromolecular structures in class using videos and using interactive molecular graphics software on their own to develop an understanding of three-dimensional structures. Particular topics include: fundamentals of protein structure, enzymes, signal transduction molecules, immune molecules, protein-DNA interactions, and other related topics.

Prerequisite: B M B401

BMMB 533: Protein Evolution

2 Credits

Consequences of evolution of protein-coding sequences: structures and functions. BMMB 533 Protein Evolution (2) Most biological functions are carried out by proteins, and evolutionary logic can be used to infer functions. This course will focus on evolution of protein-coding sequences, conformations and functions of proteins. Different species show varying characteristics of structure, metabolism, and regulatory control networks. Most of these differences are the product of the evolution of protein-coding sequences. DNA mutations can change amino acid sequences, protein structures and protein functions; and favorable mutations are selected, in ways that are integrated to form an organism adapted at both macroscopic and molecular levels. The availability of large databanks of protein amino acid sequences, and protein three-dimensional structures, and the annotation of protein function in the entries in these databanks, has allowed investigation of evolutionary changes that impact proteins. One of the goals of the course will be to describe these databanks and the computational tools available to apply them in research in molecular biology. Many students will find these tools useful in their own research projects. The evolutionary divergence of proteins has shown several types of effects. In some cases, related proteins in different species retain similar functions, but show differences in amino acid sequence and structure. The nature of observed changes in sequence and structure will be described and the relationship between sequence changes and structural changes examined in several well-documented examples, including globins, and serine proteases. In some cases, proteins diverge within a single species to form large families of related molecules with specialized functions. For example, the human genome encodes hundreds of odorant receptors. The comparison of related proteins that have adopted novel functions reveals how cells can expand their functional repertoire. In most cases it is easier to adapt an existing structure to a new function than to create a new protein "from scratch". For example, the proteolytic enzymes of the chymotrypsin family are related to haptoglobin, an iron scavenger that has lost its enzymatic activity. Beyond the description of individual proteins and individual protein families, there is the more general question of how changes in functions of individual proteins are integrated to create a smoothly-running cellular "operating system". The evolution of sequences encoding regulatory proteins to achieve this will be discussed. Methods of bioinformatics to address these questions will be presented, with emphasis on study and comparison of structures with computer graphics.

Prerequisite: B M B401

BMMB 536: Medicinal Chemistry and Chemical Biology

3 Credits

The goal of this course is to provide a foundation in development and application of chemical technologies to the understanding and manipulation of biological systems. Chemical biology is a relatively new field that spans the traditional fields of chemistry and biology by applying chemical technologies to the understanding and manipulation of biological systems. As such, this course should be accessible and provide benefit to students working in both chemical and biological areas. Lectures include higher-level biological chemistry (assuming prior knowledge of biological chemistry at an undergraduate level, such as CHEM 476 or BMB 401) and synthetic chemistry and biology principles along with current literature in the field of chemical biology.
Prerequisite: CHEM 476 or B M B401

BMMB 538: Spectroscopic Methods in Bioinorganic Chemistry

3 Credits

Foundations in spectroscopic methods employed for the determination of the geometric and electronic structure of transition metal clusters in nature.

Cross-listed with: CHEM 538

BMMB 539: Biochemical Reaction Mechanisms

3 Credits

Mechanisms of the most important biochemical reactions, with emphasis on enzyme catalysis.

Prerequisite: CHEM 476 or B M B401

Cross-listed with: CHEM 539

BMMB 541: Molecular Biology of Animal Development

3 Credits

The course emphasizes comparative molecular genetic analyses of developmental gene networks using vertebrate and Drosophila model systems. BMMB 541 BMMB 541 Molecular Biology of Animal Development (3) This is a required course for graduate students in the IBIOS Cell and Developmental Biology Program. Approximately half of the class sessions will consist of lectures and class discussions related to lecture material. The other half will consist of primary literature presentations by the students and class discussion pursuant to these. The course will provide students with a broad overview of essential signaling pathways and gene regulatory networks that coordinate cellular activities to establish and maintain the complex communities of cells that comprise animal tissues.

BMMB 542: Eukaryotic Cell Biology

3 Credits

This course covers current areas of cell biology research, focusing on processes affecting the cell as a whole. BMMB 542 Eukaryotic Cell Biology (3) This course in eukaryotic cell biology will provide a foundation for those students whose thesis research focuses on cell biology or the cellular aspects of development. The primary focus will be to understand how the cell functions as a unit. Areas to be covered include compartmentalization of the cell and transport between different subcellular compartments; the control of cell shape and how cell shape and polarity changes drive cell movement and tissue shape; the life cycle of cells; and the regulation of these processes by extracellular signals. We will also investigate current research techniques and tools that are used to investigate these processes.

BMMB 543: Current Topics in Gene Regulation

3 Credits

This course explores structural, biochemical and genetic approaches in gene regulation. BMMB 543 Current Topics in Gene Regulation (3) This course is intended to bring students up to the leading edge of research in gene regulation. It will explore structural, biochemical and genetic approaches in this field of research, covering processes from nuclear structure to RNA decay. It will also illustrate progress from many different model organisms including: prokaryotes, yeast, Drosophila, and humans. This course will include introductory lectures by faculty and student presentations of recent literature.

Prerequisite: B M B400

BMMB 551: Genomics

3 Credits

Structure and function of genomes including use of some current web-based tools and resources for studies and research in genomics. BMMB 551 / MCIBS 551 Genomics (3) This course will deal with the structure and function of genomes including the use of some current web-based tools and resources for studies and research in genomics. The overall objective is to learn current information about the structure and function of genomes, to develop facility in the many web-based tools and resources for further studies and research in genomics, and to appreciate the power and limitations of current resources and knowledge. This course is designed as a basic course for any student in the life sciences who needs to exploit the developments and tools in genomics in their own research and who wants to broaden their understanding of the current knowledge and research in the life sciences that are increasingly drawing on genomics advances. The course will be taught by a team of faculty (members active in genomics research and will be video-conferenced. Students’ grades will be based on take home exams or assignments that require their understanding of the concepts in genomics and the hands-on use of web-based analysis tools, as well as on class discussion participation. Students will be assigned one or more projects, tutorials, problem sets or essays to complete. Reading assignments will further help students explore the materials, do the assignments and participate in classroom discussions.

Cross-listed with: MCIBS 551

BMMB 554: Foundations in Data Driven Life Sciences

3 Credits

Expanded overview of current developments and technique in computational biology and genomics. BMMB (MCIBS) 554 Foundations in Data Driven Life Sciences (3) The successful progression of data-driven biomedical research is obscured by a wide-range of logistical problems related to data handling and processing, a widespread disconnect between developers and consumers of biomedical analysis software, and lack of accessible, well-developed curricula and active learning opportunities necessary for the development of key data analysis skills in the next generation of researchers and clinicians. This course aims to fill these gaps. Topics include fundamental concepts that underpin analysis of sequence data, design of complex experiments, research transparency and reproducibility, as well as result disseminations practices relevant to presentations and publications.

Cross-listed with: IBIOS 554, MCIBS 554

BMMB 566: Algorithms and Data Structures in Bioinformatics

3 Credits

This course covers elegant algorithmic and data structure techniques that underpin modern biological data analysis. Bioinformatics is a growing field with immediate implications for our understanding of biology and treatment of disease. This course covers elegant algorithmic and data structure techniques and their use in bioinformatics. The emphasis is on recurrent ideas that underpin modern biological data
analysis, presented in conjunction with their biological applications. The course is suitable both for students interested in doing bioinformatics research and those interested in applications of algorithms to the natural sciences. Some of the algorithms/data-structures that may be covered include exact string matching, suffix trees, suffix arrays, de Bruijn graphs, hidden Markov models, breakpoint graphs, succinct data structures, the Burrows-Wheeler transform, the FM-index, network flow, and bidirected graphs. Some of the biological applications will include sequence alignment and assembly, cancer genomics, phylogeny, gene finding, and variation detection. No prior biological or bioinformatics knowledge is required. A basic understanding of data structures and algorithms (equivalent to CMPSC465) is a prerequisite; however, exceptionally motivated students can contact the instructor to discuss their options. This course is complementary to existing bioinformatics courses offered through other programs on campus. These courses may be taken concurrently but are not prerequisites. Prerequisites: CMPSC465

Prerequisite: CMPSC465
Cross-listed with: CSE 566

BMMB 572: Nucleic Acids Chemistry
3 Credits

Biophysical and biochemical approaches for studying structure-function relationships in nucleic acids. BMMB (CHEM) 572 Nucleic Acids Chemistry (3) The goal of this course is to provide a foundation in biophysical approaches for studying the quantitative and structure-function relationships in nucleic acid systems, including DNA, RNA, and their interactions with proteins, salt, and water. Lectures include basic physical chemistry and statistical mechanics principles along with current literature in the biochemical sciences. At the end of the course, you should be able to meaningfully dissect molecular biological papers at the level of the physical chemistry of these processes. Current topics are introduced through reading and presenting papers from the literature.

Prerequisite: CHEM 212, CHEM 450
Cross-listed with: CHEM 572

BMMB 573: NMR Spectroscopy for Synthetic and Biological Chemistry
3 Credits

Nuclear magnetic resonance approaches for characterizing the structure and dynamics of synthetic compounds, natural products, and biological macromolecules.

Prerequisite: CHEM 452
Cross-listed with: CHEM 573

BMMB 590: Colloquium
1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

BMMB 598: Special Topics
1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

BMMB 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

BMMB 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

BMMB 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
Teaching of biochemistry undergraduate laboratory and recitation classes under faculty supervision.

BMMB 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

BMMB 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999
No description.

BMMB 852: Applied Bioinformatics
2 Credits

This course provides a foundation for students with biology backgrounds in the computational analysis and interpretation of biological data. BMMB 852 Applied Bioinformatics (2) The purpose of this course is to provide students with a foundation in the various applications of high-throughput sequencing including: chip-Seq, RNA-Seq, SNP calling, metagenomics, de-novo assembly and others. The course material will concentrate on presenting complete data analysis scenarios for each of these domains of applications and will introduce students to a wide variety of existing tools and techniques. By the end of the course work students will understand common bioinformatics data formats and standards, become familiar with the practice of analyzing sequencing data from various instruments and will develop the computationally oriented thinking that is necessary to take on large-scale data analysis projects.

Bioengineering (BIOE)

BIOE 501: Bioengineering Transport Phenomena
3 Credits

Application of the equations of mass, energy, and momentum conservation to physiological phenomena and to the design of artificial organs.

Cross-listed with: CHE 501
BIOE 503: Fluid Mechanics of Bioengineering Systems

3 Credits

Cardiovascular system and blood flow, non-Newtonian fluid description, vessel flows, unsteady flows and wave motion, windkessel theory, transmission line theory.

Prerequisite: BME 409 (equivalent to CH E 330, M E 320, or AERESP 308)

Cross-listed with: CHE 503

BIOE 504: Numerical Methods in Bioengineering

3 Credits

Students study numerical methods applied to Bioengineering applications through computations. The course is designed to teach numerical methods and computational techniques for modeling physiological systems and medical devices. Topics include differentiation equations, finite difference methods and finite element methods. Finite element modeling software will be covered. Examples include physiological systems at the organ and cellular levels, physio-chemical analysis of biological systems, and transport phenomena in engineered devices. Computing programming experience is required to be successful in this course.

BIOE 505: Bioengineering Mechanics

3 Credits

Passive and active mechanical properties of tissues, rheological materials, models of muscle contraction, pulmonary mechanics, forces in muscular-skeletal system.

BIOE 506: Medical Imaging

3 Credits

Medical diagnostic imaging techniques, including generation and detection of ultrasound, x-ray, and nuclear radiation; instrumentation and biological effects.

Prerequisite: PHYS 202

BIOE 507: Technical Foundations in Functional Magnetic Resonance Imaging

3 Credits

Theory and applications of functional magnetic resonance imaging. The advent of new neuroimaging techniques such as functional magnetic resonance imaging (fMRI) has symbolized a new era of neuroscience. A large amount of neuroscience research today involves utilizing fMRI given its high spatial resolution and whole-brain coverage. In order to gain an in-depth understanding of these research findings, it is important to know the principles of fMRI. In this class we will address questions such as: What signal do different fMRI methods measure? How to interpret the results from different fMRI techniques? How to apply these methods to solving real neuroscience problems?

BIOE 508: Biomedical Materials

3 Credits

Properties and methods of producing metallic, ceramic, and polymeric materials used for biomedical applications. BIOE 508 BIOE (MATSC) 508 Biomedical Materials (3) The topical content of this course will be grouped into 4 areas. A general introduction to selected aspects of physiology will be presented. This will provide the background necessary to appreciate the factors which govern the selection of biomedical materials. Specific emphases will be placed on the polymerization of biopolymers (polypeptides and polysaccharides) and the general relationships between conformation and biological function, the biochemistry of blood and blood surface interactions, the formation of teeth and bone and the relationships between microstructure, composition and function, the immune responses to implanted materials, the resorption of bone (osteoporosis), and the development of caries. The perspective placed on these topics will be that of materials science. The selection of ceramics for hard tissue prosthesis will be described. Orthopaedic and dental applications for ceramics will be discussed. Specific ceramic materials to be treated include dental porcelain, alumina- and zirconia-based ceramics, and bioglasses. Various classes of inorganic cements, gypsum, zinc phosphates, zinc carboxylates, silicates, and glass-ionomer cements will also be considered as ceramics. Hydroxyapatite, HAp-based composites and HAp-metal interactions will be discussed in particular. Relationships among physical properties, mechanical properties, and chemical interactions with biological fluids will be described. Dental and orthopaedic applications of metals will be described. The fracture toughness of metals, their electrochemical responses in vivo, and the nature of the interfacial interactions with hard tissues will be treated. Dental amalgams and the noble metals for dental applications will be considered. Metals and alloys, such as Ti, Co-Cr, and stainless steel used in prosthetic applications will be described and their properties and limitations discussed. The phenomenon of stress shielding and the immune responses associated with the accumulation of metallic and polymeric particulate debris in the vicinity of an implant will be discussed in particular. Polymeric materials are important in a broad range of biomedical applications. Among these are soft tissue prostheses, hemostatic agents, dental restoratives, bone replacement materials, and surgical adhesives. In some applications, it is desirable that a polymeric material biodegrade while in others property retention is desirable. Because of the spectrum of applications for polymers, the topics to be covered will be limited with the intent to concentrate on hemocompatible polymers, acrylics used as bone cements, polyethylene used as bearing surfaces in prostheses, and dental resins and bonding materials. Other relevant polymers and their applications will be discussed.

Cross-listed with: MATSE 508

BIOE 509: Mechatronics

3 Credits

This course explores the molecular bases of cell mechanics and the role of mechanics in cell biology

Prerequisite: BIOE 512 and BIOE 505

BIOE 510: Biomedical Applications of Microelectromechanical Systems (BioMEMS) and Bionanotechnology

3 Credits

Introduction to BioMEMS and Bionanotechnology. Topics include: electromechanical and chemical biosensors, microfluidics microscale separations, and surface patterning for cellular engineering. BIOE 510/BIOE 510 Biomedical Applications of Microelectromechanical Systems (BioMEMS) and Bionanotechnology (3) Microelectromechanical systems (MEMS) have been developed for a wide range of applications from automotive to medical devices. Nanoscale devices within MEMS
have a particular usefulness in biological applications due to their small volumes, low energy sensing, and minimal force actuators. Increased efficacy of instruments and new areas of application are also emerging from specific and successful biomedical applications of MEMS (bioMEMS). Advanced development of nanotechnology and bioMEMS for biomedical and biotechnological applications requires basic foundations from biophysics, biochemistry, solid state devices, and polymer engineering. The objectives of this course are: to build a basic foundation for understanding of mechanisms on electrical, mechanical, chemical, and optical transducers in the context of biomedical applications; and, to teach critical thinking considering microengineering design and fabrication, material compatibility with biological systems, and cellular interaction at the interface. Finally current MEMS engineering will be reviewed with emphasis on the examination of the viability of nanoscale devices and bioMEMS technology in particular biomedical applications.

**Prerequisite:** E E 441, BME 201

**BIOE 512: Cell and Molecular Bioengineering**

3 Credits

Graduate level cell and molecular biology course for engineers emphasizing molecular mechanisms. BIOE 512 BIOE 512 Cell and Molecular Bioengineering (3) This course investigates the molecules and mechanisms underlying cellular function from an engineering perspective, utilizing physical, chemical and quantitative approaches. Material covered includes the structure and chemistry of biological molecules, enzyme kinetics, DNA replication and repair, gene expression, recombinant DNA technology, subcellular organization, cell motility, signaling and cell division. Applications in medicine, biotechnology, bionanotechnology and tissue engineering are addressed. This is a lecture course graded by means of exams, homework assignments, and a final paper. A general knowledge of physics, chemistry, and some physiology is required; the analytical approach of the course will also require an ability to work with mathematical equations and simple models. It is geared towards engineering students and is also suitable for physics, chemistry, and materials science graduate students. Previous molecular and cell biology knowledge is not required. Three credits, generally offered each fall semester. No formal prerequisites.

**BIOE 513: Bioengineering Laboratory Techniques**

3 Credits

Laboratory techniques in cell molecular biology, protein biochemistry and cell culture with an emphasis on engineering analysis and quantification. BIOE 513 BIOE 513 Bioengineering Laboratory Techniques (3) BIOE 513 is a three-credit laboratory course for engineering graduate students designed to introduce laboratory techniques used in bioengineering/biomedical research. The course objectives are to build a basic foundation for understanding biological assays in the context of biomedical engineering applications and to introduce the student to the integration of biology with design and fabrication of devices. Consideration is also given to compatibility between biological systems and medical devices, and cellular interactions at the interface between biology and engineering. Emphasis is placed on cell and molecular biology, protein biochemistry, bacterial transformations, and mammalian cell culture with particular attention to engineering analysis and quantification. This course requires a substantial amount of laboratory work outside of designated meeting periods.

**Prerequisite:** BIOE 512

**BIOE 514: Quantitative Microscopy**

3 Credits

Application of advanced microscopy to quantification of cellular and molecular function.

**BIOE 515: Cell Mechanics and Biophysics**

3 Credits

Advanced topics and recent developments in cellular engineering; applications of engineering science to cell biology.

**Prerequisite:** BIOE 505

**BIOE 517: Biomaterials Surface Science**

3 Credits

Special properties of surfaces as an important causative and mediating agent in the biological response to materials. BIOE 517 BIOE 517. (MATSC 517) Biomaterials Surface Science (3) This course will factor the classical picture of the biological response to materials into spatial and temporal components, identifying the special properties of surfaces as an important causative and mediating agent. Emphasis will be on biophysical mechanisms and the biological response to materials. Contact activation of blood plasma coagulation cascade, bioadhesion, and protein adsorption will be repeatedly used as example biological response to materials surfaces to illustrate concepts and principles. Leading theories attempting to correlate both kinds of intensity of biological responses to surface and interfacial energetics will be compared and contrasted through a process that will quantify important surface thermodynamic properties of materials. The hydrophobic effect and related phenomena, especially as this pertains to water solvent effects in biology, will receive special emphasis. A general background in chemistry and/or biology is required, but prerequisites are purposefully limited, reflecting the interdisciplinary aspects of the subject and to draw students from different specializations.

Cross-listed with: MATSE 507

**BIOE 519: Artificial Organs Design**

3 Credits

Basic techniques and principles of a multidiscipline approach to artificial organs design.

**BIOE 552: Mechanics of the Musculoskeletal System**

3 Credits

Structure and biomechanics of bone, cartilage, and skeletal muscle; dynamics and control of musculoskeletal system models. BIOE 552 BIOE 552 Mechanics of the Musculoskeletal System (3) The course focuses on the upper limbs and its musculoskeletal components, including mechanical properties and models; work-related musculoskeletal injuries, techniques, models, and instruments to measure and quantify the risks for developing such injuries. Specific topics covered in the first third of the course include an introduction to basic biomechanical principles, the anatomical structure of the musculoskeletal system including soft tissue, neuromuscular physiology, and motor control including muscle receptors. The second third covers various muscle models starting from basic mass/spring/dashpot viscoelastic models as in Hill’s 3-element model and continuing on to Hatze’s multi-element model, frequency
analysis, control theory approaches. More complex models include static
and dynamic aspects of tendon-pulley models and multiple muscle-
tendon systems. The final third covers basic epidemiology as applied to
musculoskeletal disorders and risk factors including instrumentation to
measure them and various analysis tools (e.g., the PSU CTD Risk Index)
to assess the not only the overall risk for injury but the reliability and
validity of such assessments. Time permitting applications to hand tools
and office environment with computer work stations are examined. Two
exams and a modeling project are given. The course is typically offered
Spring Semester.

Prerequisite: Consent of program. Prerequisite or concurrent: BIOL 472
Cross-listed with: IE 552

BIOE 553: Engineering of Human Work
3 Credits

Physics and physiology of humans at work; models of muscle strength,
dynamic movements; neural control; physical work capacity; rest
allocation.

Prerequisite: BIOL 141 or BIOL 472
Cross-listed with: IE 553

BIOE 576: Bioengineering of the Cardiovascular System
3 Credits

Experimental and analytical studies of network branching patterns,
regional blood flow, rheology and mechanics of blood cells and vessels.

Prerequisite: BIOL 472

BIOE 590: Colloquium
1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by
faculty, students, or outside speakers.

Prerequisite: BME 590

BIOE 591: Bioengineering Ethics and Professional Development
1 Credits/Maximum of 999

Problem solving methods in ethical decision making, best practices in
research communication, and strategies for professional development.
This course will cover the main philosophical underpinnings of
bioengineering ethics. It will then assist in developing methods for
ethical decision making in the main areas of bioengineering professional
practice. These areas include data collection, management and
presentation, animal and human experimentation, peer review and
authorship, and social implications of bioengineering research. The
course will then assist in the professional development of students
by instruction in tools for effective acquisition of discipline-specific
conceptual knowledge, research skill development, communication,
management, leadership.

BIOE 596: Individual Studies
1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on
an individual basis and which fall outside the scope of formal courses.

BIOE 597: Special Topics
1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may
be offered infrequently; several different topics may be taught in one year
or term.

BIOE 597A: **SPECIAL TOPICS**
3 Credits/Maximum of 3

BIOE 600: Thesis Research
1-15 Credits/Maximum of 999

No description.

BIOE 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999

No description.

BIOE 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999

No description.

Bioethics (BIOET)

BIOET 501: Perspectives and Methods in Bioethics
3 Credits

This course explores a variety of theories and methods in bioethics and
applies them to a selection of current topics.

Cross-listed with: PHIL 571

BIOET 502: Perspectives in Macro-Bioethics
3 Credits

This course explores systemic and structural issues in bioethics, and the
theories and methodologies required to address them.

Cross-Listed

BIOET 504: Research Integrity in Science and Engineering
2 Credits

This course will examine the complex ways ethical issues are a
component of research in science and engineering. BIOET 504 Research
Integrity in Science and Engineering (2) Research Integrity in Science
and Engineering provides a foundation for understanding an expanded
conception of research ethics that includes traditional responsible
conduct of research (RCR) issues, but encompasses two additional
domains in which ethical issues are relevant to the conduct of science,
namely, the broader impacts of science and ethical issues that are
embedded in scientific practice. Students in this course will develop
a robust understanding of ethical responsibility and ethics spotting in
their professional work as well as pedagogical training to support their
becoming research integrity leaders in their home disciplines. In this
course, students will: understand and identify instances of embedded
ethics, broader impacts, and research integrity as they apply to work
within their profession; develop the ability to apply ethical reasoning skills to examples of each domain of research ethics through case-based analyses; and acquire pedagogical skills in research ethics through developing, delivering, and assessing curricular materials on relevant research ethics topics drawn from their home disciplines. Students will also develop a research ethics teaching portfolio and will be encouraged to work with their departments to identify ways to develop peer mentoring on these important topics.

**BIOET 533: Ethical Dimensions of Renewable Energy and Sustainability Systems**

2 Credits

Examination of ethical issues relevant to research procedure, professional conduct, social and environmental impacts, and embedded values in research and practice.

**BIOET 540: Bioethics, Biopower, Biopolitics**

3 Credits/Maximum of 999

This course will examine in a bioethical context a variety of ways relations of power and values intersect. Bioethics, Biopower, and Biopolitics will develop an understanding of bioethics by considering the ways people's lives interconnect and the relations of power that infuse and often control these interconnections. The goal is to expand the use of the term "bioethics" beyond the scope of medical practice and institutions and to bring it to bear on a much wider scope of life. We will consider options for understanding the meaning of "bioethics" by reference to the interplay of values and relations of power that more or less enhance human lives by the practices and policies that form, control, or liberate them.

**BIOET 590: Bioethics Colloquium**

1-3 Credits/Maximum of 36

Continuing seminars in bioethics that consist of a series of individual presentations by faculty, students, or outside speakers.

**BIOET 596: Individual Studies**

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

**BIOET 597: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore a topic or topics in bioethics in depth.

**BIOET 597A: **SPECIAL TOPICS**

3 Credits

**BIOET 600: Thesis Research**

1-15 Credits/Maximum of 999

Thesis Research in Bioethics.

**BIOET 602: Supervised Experience in College Teaching**

1-3 Credits/Maximum of 6

Students will teach lower-level undergraduate courses in bioethics, including courses on the undergraduate minor in bioethics and medical humanities.

**Biological Chemistry - MD (BCHEM)**

**BCHEM 510: Carcinogenesis and Chemoprevention**

2 Credits

Mechanisms of cancer induction by environmental carcinogens and chemoprevention by natural and synthetic agents. BCHEM 510 BCHEM 510 Carcinogenesis and Chemoprevention (2) The etiology of most human cancer remains obscure even though a vast body of literature describes risk factors for certain cancers and proposes various hypotheses for cancer etiologies on the basis of epidemiological and experimental studies. Tobacco smoking is an established cause of several cancers, with lung cancer remaining the first target on the list. International studies have repeatedly confirmed that people (Chinese, Japanese) migrate from their country of origin to the U.S., adopt the pattern of certain cancers within a few generations (e.g., breast and prostate) of the latter country, which is indicative of the presence of chemical carcinogens in the environment and/or changes in lifestyles. Consequently, the search for carcinogens that exist in the human environment challenges both scientists and regulatory agencies. Chronic exposure to traces of chemical carcinogens in the diet, in polluted air, or in tobacco smoke can be important in the etiology of several human cancers in the presence of host factors that favor the multistep process of carcinogenesis. Bioassays in laboratory animals can provide important information on the role of environmental agents in the induction of particular types of cancer. Biochemical studies can lead to insights into the nature of interactions of these environmental agents with macromolecules such as DNA that are necessary, but not always sufficient for carcinogenesis. The search for optimal diets and for naturally occurring agents in routinely consumed foods that may inhibit cancer development, although challenging, constitutes a valuable and plausible approach to finding ways to control and prevent cancer. The prevention of cancer is the longstanding goal for most cancer researchers. There has been enormous gain in our understanding of carcinogenesis and cancer progression; such knowledge has provided new and promising opportunities to prevent cancer, e.g., to treat precancer or inhibit carcinogenesis (a process often involving 20-30 years in human epithelial cancers), rather than waiting to treat cancer. In the early 1980's, the U.S. National Cancer Institute recognized the promise of chemoprevention research. In summary, this course will provide a better understanding of the potential contribution of environmental carcinogens in the development of certain human cancers and will provide important information on cancer chemoprevention intervention strategies. The course will cover topics that include exposure, metabolic activation, detoxification, and biomonitoring of chemical carcinogens in the human environment, carcinogen-induced DNA damage, mutagenesis and DNA repair, carcinogen-induced cellular and molecular alternations, tumorigenesis and organ specificity in laboratory animals, and factors modulating individual susceptibility to the deleterious effects on chemical carcinogens. Furthermore, this course will provide knowledge on various classes of cancer chemopreventive agents, their efficacy, safety, and mechanisms of action in preclinical studies. Course Objectives: Upon completion of this course, the students will be able to: 1. Understand the potential risk associated with human
of recombinant DNA technologies used in the analysis of DNA sequences. This course contains three major sections. Section I includes principles of genetic inheritance in normal and disease models and affects genome stability. Section II covers genetic interactions and macromolecular assembly and provides links between the studies of molecular interactions and equilibrium with in vivo and genetic approaches. Section III covers genome stability, epigenetics, and medical applications involving mis-regulation of the molecular mechanisms involved in these processes. This part builds on material presented in the BMS 503 course of the core curriculum and provides students an in-depth understanding of the molecular mechanisms of genome alterations and their biomedical significance.

Prerequisite: BMS 501, BMS 502, BMS 503

BCHEM 581: Enzyology: Structure, Energetics, and Function-A. Structural Biology
1 Credits

Structural biology. NMR spectroscopy and X-ray crystallography.

BCHEM 581 BCHEM 581 Enzyology. Structure, Energetics, and Function-A. Structural Biology (1) The objectives of this course are to provide students with a solid background to critically interpret X-ray crystallographic and NMR experiments. Topics will will be covered in the X-ray crystallography lectures will include crystal growth, diffraction, phasing and refinement to determine the structure. Topics in NMR spectroscopy will include basic principles, multidimensional experiments, and assignments of atoms to resonances, structure determination and dynamics of ligand binding to proteins. The students will learn the basic principles of protein structure determination by NMR and X-ray crystallography.

BCHEM 582: Enzyology. Structure, Energetics, and Function-B. Practical Enzyology
1 Credits

Practical aspects to study protein-ligand binding and substrate-enzyme reaction. BCHEM 582 BCHEM 582 Enzyology. Structure, Energetics, and Function-B. Practical Enzyology (1) The objectives of this course are to provide students with a solid background in practical enzymology.

BCHEM 583: Enzyology. Structure, Energetics, and Function-C. Mechanisms of Enzyme Reactions
1 Credits

Molecular basis for enzyme specificity and catalysis. BCHEM 583

BCHEM 583 Enzyology. Structure, Energetics, and Function-C. Mechanisms of Enzyme Reactions (1) The objectives of this course are to provide students with the wherewithal to interpret and design experiments aimed at elucidating the mechanisms of enzyme catalyzed reactions. Selected mechanisms of enzyme catalyzed reactions will be surveyed using primary literature. The rationale for the chemical, kinetic, molecular biological, spectrophotometric, thermodynamic tools that are used to investigate these reactions will be discussed. Topics that will be discussed include (a) principles of enzyme catalysis, (b) electrostatic catalysis (c) acid/base catalysis, (d) phosphates (e) Schiff base formation. Cofactors that will be discussed include pyridyl pyrophosphate, thiamine, biotin, tetrahydrofolate, NAD, FAD, S-adenosyl methionine, and vitamin K and B12.
BCHEM 584: Glycobiology A: Carbohydrate Chemistry

1 Credits

Graduate course for students interested in carbohydrates. BCHEM 584 Glycobiology A: Carbohydrate Chemistry (1) The proposed course is designed to give graduate students interested in studying carbohydrates the basics about their chemistry. Because of their structure and the ability of just two sugars to form a number of different bonds with each other, carbohydrate chemistry is significantly more complex than that of any of the other building blocks found in the body. With the development of new approaches for studying these compounds, the science of glycomics is coming into its own.

Prerequisite: BMS 501, BMS 502, BMS 503 or permission of program

BCHEM 585: Glycobiology B: Glycoconjugates

1 Credits

Graduate course for students interested in carbohydrates. BCHEM 585 Glycobiology B: Glycoconjugates (1) The proposed course is designed to give graduate students interested in studying glycoconjugates the basics about their structure, functions that they serve, exposure to papers pertinent to the field, and the opportunity to integrate what they learn in class with what they read in assigned papers through class discussion.

Prerequisite: BMS 501, BMS 502, BMS 503 or permission of program

BCHEM 586: Glycobiology C: Glycans in Health and Disease

1 Credits

Graduate course for students interested in carbohydrates. BCHEM 586 Glycobiology C: Glycans in Health and Disease (1) Students will learn about the possible role(s) of glycans in health and disease and how that knowledge might be used to ameliorate certain diseases. Students will be expected to read papers and to integrate what they have learned in lecture with what they read when papers are discussed in class.

Prerequisite: BMS 501, BMS 502, and BMS 503 or permission of program

BCHEM 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

BCHEM 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

BCHEM 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

BCHEM 597B: **SPECIAL TOPICS**

6.00 Credits

BCHEM 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

BCHEM 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

BCHEM 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

Biology (BIOL)

BIOL 503: Critical Elements of Genetics and Molecular and Cellular Biology

4 Credits

Foundational topics and critical analysis in evolution, genetics, molecular and cellular biology and cell differentiation. BIOL (/BMMB/MCIBS/VB SC) 503 Critical Elements of Genetics and Molecular and Cellular Biology (4) Central elements in genetics, genomics and molecular and cell biology will be covered. The course will focus on foundational principles and concepts that will allow students to understand the behavior of proteins and organelles within cells, and to appreciate how intracellular events influence interactions of cells with one another in multicellular systems and during development. Another major focus will be genome architecture, both in the context of evolution and gene expression. Students will also learn how genetic approaches can be used to understand cell and molecular biology, and will develop critical thinking skills through the analysis of the primary scientific literature. The course will include lecture and discussion sessions.

Cross-listed with: BMMB 503, MCIBS 503, VBSC 503

BIOL 505: Statistical Methods in Evolutionary Genetics

3 Credits

Statistical methods that are used for analyzing and interpreting genetic data in molecular evolution will be discussed.

Prerequisite: BIOL 222, STAT 250

BIOL 514: Topics in Systematics and Evolution

2 Credits

Discussion of pertinent current literature in systematic biology and evolution.

BIOL 519: Ecological and Environmental Problem Solving

4 Credits

Overview of processes involved in solving environmental problems. Provides students with toolkit for understanding ecological and
The course in Cellular and Integrative Mammalian Physiology II covers all major aspects of endocrine physiology. A special emphasis will be placed on how cellular aspects of physiology are integrated with organ and systems physiology. This course is designed for graduate students in the Physiology or Animal Science graduate programs, or students who are interested in integrating physiology concepts into their work in another program. Although there are no prerequisites for the course, prior courses in physiology, endocrinology, and/or biochemistry are beneficial. The course will include the following topics: gastrointestinal physiology, pancreatic hormones and integrated metabolism, hypothalamic pituitary function, thyroid, parathyroid and bone, as well as physiology of growth and lactation. Additional topics will encompass adrenal function, sexual differentiation, male and female reproduction, embryo and adult derived stem cells, aging, obesity, and metabolic syndrome.

Cross-listed with: PHSIO 572

BIOL 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

Cross-Listed

BIOL 591: Molecular Evolutionary Biology Seminar

1 Credits

Continuing seminars in Molecular Evolutionary Biology consisting of individual lectures by faculty, students, or outside speakers.

BIOL 592: Critical Evaluation of Literature in Biology

1 Credits

Weekly readings and critiques of recent papers from primary literature are used to teach independent thinking and effective scientific communication. BIOL 592/BIOL 592 Critical Evaluation of Literature in Biology (1)This course teaches beginning graduate students how to evaluate new findings reported in primary literature in the biological sciences. Each week, a recently published paper is evaluated according to 8 basic criteria as follows: 1. Does the author adequately establish a context for the issues addressed in the paper? Are the issues addressed in the paper important in the field? Why or why not? 2. What is the hypothesis? Is it clearly stated? Is it operational (i.e. “falsifiable”? 3. Are the methods adequate to test the hypothesis? Why or why not? What are the controls? Are they adequate? 4. Are the data clearly presented? Are the results properly analyzed? Are statistical inferences stated appropriately? Do the data meet the assumptions of the statistical tests? 5. What conclusions are drawn from the results? Do the conclusions follow from the data? Have some conclusions been overlooked? Are there reasonable alternative interpretations of the data? Did the authors consider alternative hypotheses? 6. What could be done to improve the paper? Consider written format as well as the overall experimental design. For example, is the title appropriate? Does the abstract accurately summarize the results and conclusions? Does the paper use recent and appropriate references? 7. What is your overall opinion of the size of...
contribution that the paper makes to the body of knowledge in its field? Is this work creative? Does it provide new insights or a framework to understand previously disparate data? Defend your position. 8. What would be the next set of tests of the hypothesis or the next hypotheses to test? How should these hypotheses be examined experimentally? To what extent do you think this paper will stimulate further studies? The goal of the course is to provide students with opportunities to sharpen their thinking in regard to what constitutes meaningful scientific experimentation, interpretation of results, and effective presentation of information in text, figures, and tables. Near the end of the course each student prepares a written critique of a paper, and meets individually with the faculty to discuss their critique. The course follows a format very similar to the Ph.D. candidacy exam for Biology, thus providing formal preparation for that exam. Faculty: James Marden

**Prerequisite:** Departmentally controlled

**BIOL 596: Individual Studies**

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on and individual basis and which fall outside the scope of formal courses.

**BIOL 597: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

**BIOL 597A: **SPECIAL TOPICS**

1-9 Credits

**BIOL 598: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

**BIOL 598B: **SPECIAL TOPICS**

1-3 Credits

**BIOL 600: Thesis Research**

1-15 Credits/Maximum of 999

No description.

**BIOL 601: Ph.D. Dissertation Full-Time**

0 Credits/Maximum of 999

No description.

**BIOL 602: Supervised Experience in College Teaching**

1-3 Credits/Maximum of 3

Supervised experience in teaching and orientation to other selected aspects of the profession at The Pennsylvania State University.

**BIOL 610: Thesis Research Off Campus**

1-15 Credits/Maximum of 999

No description.

**BIOL 611: Ph.D. Dissertation Part-Time**

0 Credits/Maximum of 999

No description.

**Biomedical Engineering (BME)**

**BME 504: Numerical Methods in Bioengineering**

3 Credits

Students study numerical methods applied to Bioengineering applications through computations. The course is designed to teach numerical methods and computational techniques for modeling physiological systems and medical devices. Topics include differentiation equations, finite difference methods and finite element methods. Finite element modeling software will be covered. Examples include physiological systems at the organ and cellular levels, physio-chemical analysis of biological systems, and transport phenomena in engineered devices. Computing programming experience is required to be successful in this course.

**BME 590: Colloquium**

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

**Prerequisite:** BME 590

**BME 591: Bioengineering Ethics and Professional Development**

1 Credits/Maximum of 999

Problem solving methods in ethical decision making, best practices in research communication, and strategies for professional development. This course will cover the main philosophical underpinnings of bioengineering ethics. It will then assist in developing methods for ethical decision making in the main areas of bioengineering professional practice. These areas include data collection, management and presentation, animal and human experimentation, peer review and authorship, and social implications of bioengineering research. The course will then assist in the professional development of students by instruction in tools for effective acquisition of discipline-specific conceptual knowledge, research skill development, communication, management, leadership.

**BME 594: Research Topics**

1-2 Credits/Maximum of 6

Supervised student activities on research projects identified on an individual or small-group basis.
Biomedical Sciences - MD (BMS)

BMS 500: Foundations of Biomedical Research
4 Credits/Maximum of 999

This hands-on course teaches students a variety of fundamental skills required to successfully conduct independent biomedical research. The goals of this course include early exposure to important basic biomedical laboratory techniques and developing both written and oral scientific communication skills, with the broader goals of creating a sustainable peer group and fostering rapport with faculty members. The course will be 4 weeks in duration and consist of hands-on laboratory time, daily literature discussions, a final written report documenting experimental results and data interpretation, and a journal club-style oral presentation. The first week of the course is spent on fundamentals such as searching the literature, using citation indexes, notebooking and basic analytical techniques, as well as exposure to databases manipulating nucleic acid and protein sequences with the goal of enhancing understanding of the experimentation performed in the following 3 weeks of the course. Weeks 2-4 are designed to include an authentic research experience. Rather than having all reagents ready for the students, it is more valuable to perform experiments in “real time.” The experimental design consists of the following: 1. Students will purify and identify unknown plasmids by restriction digestion based on plasmid maps created with available software. 2. Students will design and execute a transient transfection with proper controls, and assess the expression of both the plasmids of interest by PCR and their protein products by Western blot analysis. 3. Students will predict which downstream pathways will be altered based on their reading of the primary literature, and assess expression of proteins of interest. Each day will consist of lab assignments and presentations/discussion based on the current scientific literature. This will allow students to develop their own hypotheses that they can then test in a laboratory setting. The course will culminate in an independent report describing the experimental strategies, outcomes, interpretations, and alternative/subsequent hypotheses derived from the lab experience. Students will also give an oral presentation of an article reflecting their own research interests, which will be chosen and prepared in consultation with a faculty advisor.

BMS 501: Regulation of Cellular & Systemic Energy Metabolism
3 Credits

Teaches biochemical and signal transduction concepts while exploring the control of bioenergetic processes. BMS 501 BMS 501 Regulations of Cellular Systemic Energy Metabolism (3) Energy is fundamental to life. The production, storage and utilization of energy by organisms are highly regulated processes that provide excellent examples of the principals that govern the control of cellular metabolism and hormonal signaling. In addition, future biomedical scientists must be prepared to study diseases associated with aberrant energy metabolism, such as diabetes, obesity, and malnutrition. Regulation of Cellular Systemic Energy Metabolism is one of three thematic courses that comprise the fall semester. The course explores how energy is obtained, stored and utilized by cells, tissues and organisms. The biochemistry of energy metabolism is studied with a focus on mechanisms by which these pathways are controlled in order to maintain health and energy homeostasis. Principles of hormonal signaling and cellular signal transduction pathways are studied in the context of energy metabolism. In addition, knowledge of these subjects is applied to the study of pathologies involving abnormal energy metabolism, including diabetes, obesity and starvation. Course objectives include developing an understanding of metabolic pathways and the mechanisms by which they are regulated; understanding principals of receptor theory, signal transduction and hormonal control of cellular processes; and gaining an understanding and appreciation of diseases that involve abnormal energy metabolism. The course is taught in approximately four blocks, with review sessions and examinations following each block. Exams are designed to determine mastery of the subject matter and to evaluate the ability to solve problems and logically address research questions. The principles and

BMS 502: Cell and Systems Biology
3 Credits

Explores the cellular and intracellular organization of biology, assembly of cells into tissues, and further integration into biological systems. BMS 502 BMS 502 Cell and Systems Biology (3) This course will cover the cellular basis of physiological processes from a systemic perspective. The major emphasis will focus on the cellular, molecular, and biochemical basis of normal and abnormal (pathological) tissue function. A special emphasis will be placed on common themes applicable to all tissue and the integration of molecular, cellular, tissue and organ systems. Introductory lectures will be followed by discussion of the primary literature that complements the lecture material. The course is designed to give students an appreciation of the cell and molecular mechanism underlying physiological processes as well as cell and molecular biology research techniques.

BMS 503: Flow of Cellular Information
3 Credits

Teaches concepts underlying the inheritance, transmission and translation of genetic information. BMS 503 BMS 503 Flow of Cellular Information (3) Medicine in the 21st century must incorporate an understanding of the genetic information that underlies all biological processes in every cell, tissue, and organism together with an appreciation of how genetic differences impact complex cellular pathways and individual traits or disorders. Further, with the culmination of the human genome project and high-throughput analysis this information can now be considered in the context of whole genomes and proteomes. This course provides students with a fundamental understanding of the basic processes that covert this genetic DNA information to produce RNA and proteins and the genetic principals that underlie transmission of this information at each cell division and to subsequent generations. This topic is of importance for all biomedical disciplines. The course explores how DNA is inherited, replicated, transcribed, translated, mutated, repaired, and manipulated, and how this information is utilized by cells, tissues and organisms and in the context of genomes and populations. Central dogma (DNA to protein) is studied with a focus on mechanisms by which these processes are controlled. Other topics include non-coding RNAs and protein degradation. Course objectives include understanding the mechanisms of how these processes occur and how they are regulated; developing an appreciation for the genetic and molecular biology approaches that have allowed insight into these processes. The flow of cellular information is one of three thematic courses that comprise the fall semester. The course is taught in approximately three blocks, with review sessions and examinations following each block. Exams are designed to determine mastery of the subject matter and to evaluate the ability to solve problems and logically address research questions. The principles and
skills learned through successful completion of the course help prepare students for advanced graduate courses and graduate research careers.

**BMS 504: Art of Scientific Communication I**

1 Credits

Introduction to scientific analysis, writing, and oral presentation using primary literature sources. BMS 504 Art of Scientific Communication I (1) The overall goal of BMS 504, and the sequential course BMS505 taken in the Spring semester, is to develop the students into scientific communicators who, in written and oral formats, can convey scientific concepts and the experimental support for these concepts. This includes the development of the knowledge base and communication skills required for effective scientific exchange and engagement. BMS 504 meets 90 minutes, once a week for 11 weeks from the first week of class until the Thanksgiving recess, and focuses on reading and analyzing articles from the primary literature with brief presentations by students. The intent of this schedule is to support the students in developing the skills necessary to analyze the primary literature, begin to present components of scientific articles in a group setting, and complete these goals in a time frame that does not compete with end-of-semester examinations. The first meeting is a presentation by a course director on Effective PowerPoint Presentations. The following 10 meetings allow two weeks to cover each of five topics. Each topic focuses on a high quality article selected from a portfolio created by the instructors of the Fall first-year Core Curriculum for the Biomedical Sciences (BMS) Graduate Program (BMS 501, 502, and 503). Topics vary from year to year. The first week of each topic examines the components of the chosen article (purpose and significance) and is led by one of the course directors. The second week includes short presentations by students on experimental design and data analysis from the articles and is facilitated by a content expert from one of the Core BMS Courses.

Concurrent: BMS 501, BMS 502, BMS 503

**BMS 505: Art of Scientific Communication II**

1 Credits

Advanced topics in scientific analysis, writing, and oral presentation using primary literature sources. BMS 505 Art of Scientific Communication II (1) The overall goal of BMS505 is to further the development of students as scientific communicators that began in BMS 504. This includes enhancement of the knowledge base and communication skills, in written and oral presentations, required for effective scientific exchange and engagement. BMS 505 meets 90 minutes, once a week for 10 weeks from the first week of class until the end of April, and focuses on reading and analyzing articles from primary literature with extended oral and written presentations by students. Topics vary from year to year and focus on research or curricular interests of students enrolled in the course.

Prerequisite: BMS 504

**BMS 506A: Biological Basis of Human Health and Disease A**

2 Credits

Cellular, molecular, genetic, and biochemical basis of organ function pathology.

Prerequisite: BMS 501 and BMS 502 and BMS 503

**BMS 506B: Biological Basis of Human Health and Disease B**

2 Credits

Cellular, molecular, genetic, and biochemical basis of organ function pathology.

Prerequisite: BMS 501 and BMS 502 and BMS 503

**BMS 512: Data Analysis For The Biomedical Laboratory Scientist, A Practical Approach**

2 Credits

Biology is becoming increasingly computational as new technologies are producing massive amounts of data. The quantitative data need to be organized, graphed, and interpreted. This course will teach students the theoretical and practical aspects of experimental design, hypothesis testing, statistical analysis, and linear and non-linear curve fitting. This course will pair lectures describing theory with applications involving problem solving. Students will learn to program so they can analyze complex data sets. The students will increase their understanding of statistics and have the wherewithal to analyze big data sets. The course will end with a final project involving image analysis in which the students will create scripts and functions to analyze the colocalization of fluorescent proteins in cells.

**BMS 520: Human Integrative Physiology**

3 Credits

This course explores whole organ physiology emphasizing skeletal muscle and exercise physiology, cardiovascular, renal and urinary, respiratory, gastrointestinal, and endocrine. BMS 520 Human Integrative Physiology (3) Human Integrative Physiology considers the function of the mammalian organism with an emphasis on system physiology. This course builds upon the strong foundation of cellular processes, molecular interactions, and genetic regulation provided in BMS 501, 502, 503 and allows students to develop an appreciation of the integration of biological function. The course is organized into multiple sections that focus on different organ systems. Initially, the course reviews principles of excitable cells and discuss sensory transduction, the autonomic nervous system, and motor system physiology. Next, students learn the structure and function of skeletal muscle physiology including muscle contraction, force generation, and movement. The course then focuses on the structure and regulation of the cardiovascular, renal, and respiratory systems. Subsequent sections cover gastrointestinal and endocrine systems by building upon the cellular and molecular processes covered in BMS 501, 502, and 503. Each section teaches the basic design of the system, explores the physiological principles of function, and examines how each system contributes to homeostasis and pathophysiological disease. Class material is covered through lectures and primary literature.

Prerequisite: BMS 501, BMS 502, BMS 503

**BMS 562: Principles of Immunology C: Dysfunction and Manipulation of the Immune System**

1 Credits

Investigation of diseases associated with immune system dysfunction and the manipulation of this system to prevent and treat disease. This course will investigate the basis for human diseases that are associated with deficiencies or dysregulation of the immune system. The content builds on foundational knowledge of the immune system.
to demonstrate the interplay of immune components during disease processes. Students will be able to recognize the types of immune deficiencies and mechanisms of immune dysregulation that contribute to disease. In addition, students will apply this knowledge toward an understanding of how manipulation of the immune system can be used both to prevent and treat disease.

BMS 564: Concepts in Virology

Prerequisite: MICRO 550

Cross-Listed

BMS 566: Viral Oncogenesis

Prerequisite: BMS 501, BMS 502, and BMS 503

3 Credits

This course will provide an understanding of the role of viruses in the development of cancer in humans and the molecular mechanisms involved. The course will build on an understanding of normal growth control of cellular proliferation to determine the molecular mechanism through which oncogenic viruses exert their effects on cellular proliferation and survival. Students will gain an understanding of the contribution of an underlying human immunodeficiency virus infection and will be able to apply this knowledge to an understanding of the cooperative effect of HIV and other viruses.

BMS 567: Viral Pathogenesis

Prerequisite: BMS 501, BMS 502, and BMS 503

3 Credits

This course addresses methodologies used to study viral pathogenesis and recent advances in the field.

The Viral Pathogenesis course will cover multiple aspects of the study and implications of viral/host interactions at the extracellular or organismal level. The course will give introductions to each major virus, as well as some of the key primary literature. The aim of the course is to provide students with foundational knowledge of experimental questions, knowledge of recent experimental techniques, and the ability to analyze experimental data and develop firm conclusions from these data. The course will examine both the host response to the virus and the ability of the virus to evade mechanisms deployed by the host to enhance viral replication and subsequent transmission.

BMS 568: Current Topics in Translational Cancer Research

3 Credits

The course covers current topics in cancer research, with a focus on translation to the clinic.
approach used to test specific hypotheses related to disease mechanism. At the end of the 3-week period, the students use team-based learning to develop experimental approaches to study novel aspects of the disease pathology or therapeutic development.

**Prerequisite:** BMS 501, BMS 502, BMS 503

**BMS 590: Colloquium**
1 Credits/Maximum of 6
Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

**BMS 591: Biomedical Research Ethics**
1 Credits
Education in research ethics for biomedical scientists. Meets U.S. Public Health standards for education in responsible conduct of research.

**BMS 595: Internship**
1-12 Credits/Maximum of 12
Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

**BMS 596: Individual Studies**
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

**BMS 597: Special Topics**
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

**BMS 597B: **SPECIAL TOPICS**
3 Credits

**BMS 597I: Special Topics**
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

**BMS 610: Thesis Research Off Campus**
1-15 Credits/Maximum of 999
Off-campus laboratory work on thesis project.

**BMS 801: Writing Grant Proposals for Biomedical Research**
1 Credits
This course will give students experience with the preparation of and submission process for grant proposals. BMS 801 Writing Grant Proposals for Biomedical Research (1) This course provides students with a hands-on learning approach to the process of submitting competitive grant proposals. It will inform students of the types of grants that exist, including training fellowships for which they may be eligible. Students will learn of the many different types of organizations, both public and private, that offer biomedical research funding. A majority of the course will focus on the proposal sections pertaining to the research plan emphasizing the purpose of each section along with strategies to create an effective, successful proposal. The proposal sections to be covered in detail are: specific aims, significance, innovation and approach. In-class discussions and team-based learning activities will be used to highlight the teaching objectives for each session. Using these in-class experiences as a guide, students will apply the key aspects of proposal writing by completing a proposal as part of a grant-writing team. The proposal review process will be discussed and a demonstration of the review process will allow students to understand who reviews proposals and how proposals are reviewed as well as to allow them to participate in the review process. In addition to these writing and review experiences, strategies for the oral presentation and defense of a proposal will be covered. By the end of the course, a student will be able to write an effective grant proposal and have the knowledge of how to present and defend that proposal orally — all skills required for a successful career in the biomedical sciences.

**Biorenewable Systems (BRS)**

**BRS 500: Research Methods**
3 Credits
Foundation in research philosophies, methodologies, issues and policies; measures of research quality; critical thinking and discourse; research report writing; professional development; research ethics. A B E (BRS) 500 Research Methods (3) A B E/BRS 500 is a course designed to assist students entering and advancing in their research career to: better investigate and practice the art of scientific investigation; openly explore and discuss what it means to be a part of the scientific and research enterprise at a major academic setting; gain skills and experiences in critical evaluation and discourse; learn the process of developing and preparing a research proposal from initial concept to near-final written product; better understand the expectations for responsible and ethical conduct as a scientist/student/individual; and further develop their philosophies and capabilities as future scientists and professionals. During this course students will continually read, think, discuss, write, critique, re-read, re-think, re-write, and communicate with other students, faculty, and professionals. The course will provide a setting to allow them to further develop their personal, professional, academic, and scientific goals and capabilities.

Cross-listed with: ABE 500
BRS 501: Biobased Polymers
3 Credits
The chemistry, structure-property relationships, and industrial applications of biobased polymers from plant and agricultural feedstocks.

BRS 502: Human Behavior and ethics in Management and Technology
3 Credits
Ethical leadership continues to be a key issue in our society and is a topic of growing interest to the public and researchers alike. Our world more than ever needs ethical leadership to address critical sociotechnological problems such as climate change, sustainable energy and materials, quality food and water, population growth, prejudice, and global conflict to name just a few. This course will provide students with an improved mechanistic understanding of basic human behavior foundational to ethical leadership and decision making. Specifically, a series of important psychological studies will be examined which provide insights into human needs, personality, individual and social behavior, and leader-follower dynamics which are needed to identify new approaches for developing and managing leadership. Students will explore the literature themselves and share their findings and insights with the larger group. Students will apply what they learn by proposing new management processes for ensuring ethical leadership and decision making and share those with their peers.

BRS 511: Structural BioComposites
3 Credits
Manufacture and practices related to the production of engineered biocomposites processed from lignocellulosic materials.

BRS 550: Applied Bioproducts Marketing
3 Credits
Bioproduct marketing applications for solid and engineered wood products and biorefinery value chain output including environmental services, energy, fuels, and co-products.

BRS 551: Sustainable Business Strategies
2 Credits
Coverage of business strategies that relate to sustainability and environmental issues.

BRS 590: Colloquium
1-6 Credits/Maximum of 12
Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

BRS 595: Internship
1-9 Credits/Maximum of 12
Supervised, research-oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

BRS 596: Individual Studies
1-9 Credits
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

BRS 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

BRS 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

BRS 602: Supervised Experiences in College Teaching
1-3 Credits/Maximum of 6
Provides an opportunity for supervised and graded teaching experience in undergraduate biorenewable systems courses.

Business - CA (BUS)

BUS 500: Negotiation, Communication, Teamwork
2 Credits
Experience-based learning approach to developing effective teams and work organizations; emphasis on developing reflective thinking and interpersonal skill sets. BUS 500BUS 500 Negotiation, Communication, Teamwork (2) This course provides students with an enhanced understanding of their own behavior, the behavior of others, and the capability to deal more effectively with people and groups in organizations. Primary emphasis is placed upon application of experiential learning theory in developing the ability to perform well as a member of a team, and also in facilitating team effectiveness. As adult learners, students are empowered to become active creators of their own learning, and working with the

Prerequisite: admission to the MBA or MSIS program

BUS 502: Business Research Applications
3 Credits
Critical evaluative techniques of business research.

BUS 505: Data Analysis for Business Decisions
3 Credits/Maximum of 999
Selection and application of statistical methods and use of business databases to support managerial decision-making, interpretation and presentation.

BUS 510: Business Analytics and Decision Modeling
3 Credits
Methods for solving problems that include both time evolution and uncertainty. Focus on regression analysis, simulation and advanced data analytics. This course discusses concepts and tools to make informed managerial decisions through interpretation and analysis of data. The
aim is to (1) familiarize students with the concepts of data interpretation; (2) provide students with language, insights, and tools used to analyze data and model operations; (3) provide students with the opportunity to use these tools, to understand their various applications, and to interpret analyses done by others. The course will focus on regression analysis, non-linear regression analysis, mathematical and simulation modeling, and advanced data analysis techniques. When students successfully complete this course, they will be able to demonstrate use of analytical tools for modeling and optimizing business decisions and also analyze the results.

**Prerequisite:** BUS 505

**BUS 515: Business Ethics and Corporate Governance**

3 Credits/Maximum of 999

Legal aspects of managing for-profit corporations including (i) corporate governance, (ii) ethical decision-making, and (iii) public policy and legislation regarding business decisions. BUS 515 Business Ethics, Governance, and Law; covers a wide range of important topics regarding how firms are governed. The first part of the course grounds students in the inner workings of corporate boards of directors (BODs). Topics in this section include: - The need for governance and BODs; - The types of people that sit on publicly traded BODs; - The role of committees within BODs; - The voting process in corporations; - The types of decisions that BODs are involved in; and - The role of shareholders and activist investors. The course then delves into the setting and execution of ethics policy within firms, often either initiated or approved by the BOD. Students read a number of "Codes of Conduct" from firms that they are familiar with (i.e. Dell, Apple, etc) and then perform research that allows them to see if the firms match their actions with their words. Analysis is done through measuring the negative externalities that flow from certain decisions. Specific topics in the ethics section include: - The larger purpose of corporations in society; - Corporate political activity; - Decision-making and anti-trust violations; and - Bankruptcy filing and a BOD's ethical and fiduciary duty to shareholders. Finally, the course considers general business law that managers must be cognizant of during the decision-making process. Topics include: - Federalism in the U.S.: The difference between state and federal law; - Incorporation and Bylaws; - Criminal vs. Civil Law; and - Consumers and the Law.

**BUS 580: Business and Sustainability**

3 Credits

An inter-disciplinary and global perspective on the business case for social responsibility, environmental stewardship, and transparency in corporate governance. This course provides an overview of principles and practices from the natural and social sciences, arts, humanities, and professional disciplines that contribute to understanding and responding to increasing concerns over the consequences of world population growth (now in excess of eight billion people), climate change, energy, natural resource use, environmental degradation, and calls for a more fair distribution of limited and diminishing resources. Issues of corporate sustainability and social responsibility are examined particularly as they pertain to the development and application of business strategy and practices that build social equity, and restore environmental quality while maintaining long-term profitability and enhanced competitive advantage. While the concept of sustainability has existed for some time, it is relatively recently that managers have started to explore its applications to organizations and managerial behavior beyond the basic ideas of corporate social responsibility and recycling. This course moves beyond these basic ideas to place sustainability in its historical and conceptual context by examining the history and definitions of sustainability in organizational management, the role of current drivers and stakeholders, and the advantages and disadvantages of various frameworks and methods for integrating and managing sustainability within organizations, and in their environments. Selected examples of contemporary research and organizational cases will be analyzed to gain a sense of effective and ineffective approaches to sustainability, as well as addressing issues of standards, measurement, and transparent reporting.

**Prerequisite:** BUSEC 502 and MNGMT 511

**BUS 588: Strategic Management**

3 Credits

Analyzing external and internal environments of firms to develop sustainable competitive advantages. Strategic Management is the MBA capstone course designed for students to integrate analytical skills learned in functional courses with core principles of strategy formulation, implementation, and performance review. Students will analyze internal and external factors and make recommendations for how firms can create sustainable competitive advantage in the global market environment.

**BUS 589: Strategic Venture Planning and Innovation**

2 Credits

Development and presentation of a venture plan including product development; market research; competitive analysis; financing and capitalization; organizational structure. BUS 589 BUS 589 Strategic Venture Planning and Innovation (2) The purpose of BUS 589 is to have the business student apply strategic management theories and practices acquired in BUS 588 to a specific, practical project in order to further the understanding of the process of creating and managing a strategy based on innovation (an entrepreneur strategy). This course is a direct extension of BUS 588 and should be taken immediately following it. The process of innovation is analyzed in detail together with the influences on it. The effects of various contexts on entrepreneurial strategy will be considered. Finally, issues related to the implementation and management of a strategy based on innovation will be discussed. Students are required to develop a comprehensive new venture plan for an actual business organization to demonstrate knowledge of organizational design from a strategic perspective. Students will have to apply management, marketing, finance, information systems, and accounting knowledge in the new venture proposal. They must also demonstrate their knowledge of the influence of external (environmental) contexts on strategy formulation and implementation through the use of appropriate analytic frameworks. Finally, they must demonstrate a grasp of what constitutes competitive advantage within the strategic context that they have chosen for their project.

**Prerequisite:** BUS 588

**BUS 595: Internship**

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practicums, or internships. Written and oral critique of activity required.

**Prerequisite:** prior approval of proposed assignment by instructor
BUS 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

BUS 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

BUS 890: Colloquium
1-3 Credits/Maximum of 9
Continuing, professionally oriented seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

BUS 897: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject with a professional orientation that may be offered infrequently.

Business Administration (BA)

BA 512: Quantitative Analysis for Managerial Decision Making
2 Credits
Construction and use of quantitative methods in business decision-making.

BA 513: Advanced Microeconomic Analysis for Business
3 Credits
This course discusses topics in advanced microeconomic analysis with an emphasis on applications to applied research areas in business and other related disciplines. Topics include (but are not limited to) general equilibrium, choice under uncertainty, game theory, mechanism design, and behavioral economics. An area of particular focus is how incomplete and asymmetric information impacts competitive and strategic behavior by individuals and firms in a variety of applied settings. The materials emphasize theoretical models prevalent in microeconomic research, and students are expected to develop a familiarity with the use of mathematical modeling in economics. Whenever possible applications to related applied disciplines such as those in finance, supply chain management, accounting, and agricultural economics will be highlighted and discussed. Experimental methods will be used at times to motivate and discuss various economic principles.

BA 523: IT Strategy
2 Credits
An introduction to information technologies critical to business organizations.

BA 528: Business Simulation
1-3 Credits
A team-based course during which students will manage a simulated firm. BA 528 Business Simulation (1-3)

BA 533: Economics for Managers
2 Credits
An introduction to the tools of economic decision making and a consideration of firm, industry, and global economic influences on economic decision making.

BA 545: Business, Government and International Economics
2 Credits
Understand how macroeconomic events and policies affect the global economy and business decisions. BA 545 Business, Government and International Economics (2)

BA 565: Strategic Leadership
1-3 Credits
Presents a senior executive perspective on key opportunities and challenges faced by business leaders. BA 565 Strategic Leadership (1-3)

BA 571: Strategic Management
1-3 Credits
Analysis and application of concepts and techniques aimed at successfully developing and implementing competitive strategy in a complex business environment. BA 571 BA 571 Strategic Management for Converging Economies (3)

BA 572: IT Strategy
2 Credits
An introduction to information technologies critical to business organizations.
BA 575: Capstone Business Case

4 Credits

A team-based project course that requires students to analyze an actual business problem from a firm or nonprofit organization. This course is designed to allow second-year MBA students the chance to integrate the knowledge they have gained to date in the program. True business problems are not narrow, functional area problems; rather they require teams of people to come together to jointly solve a problem that extends across many areas. For example, to assess the commercial viability for a new product requires contributions from economics, marketing, supply chain, finance, strategy, and corporate innovation. The more opportunities students have to work on real cross-functional problems, the better prepared they will be to solve them once they are actually on the job. In addition, working on a team and having to present the results gives students the ability to practice communication, teamwork, and leadership skills that are vital to success on the job.

BA 578: Entrepreneurship

3 Credits

Study of the development or acquisition of a business appropriate to the objectives and resources of the individual entrepreneur.

BA 591: Applied Communications

1 Credits

Develop oral and written communication strategies to succeed in professional and academic contexts. This course is designed to equip doctoral students in business with skills and knowledge that will assist them in successfully completing their doctoral studies and moving on to a successful career as a business academic. These skills fall into three broad categories: 1) communication skills, 2) research skills, and 3) interpersonal skills (which include ethical behavior). The course is designed to cover many crucial skills and career issues that may be overlooked during a doctoral student’s normal course of study.

Prerequisite: admission to the doctoral program in Business Administration

BA 595: Internship

1-12 Credits/Maximum of 12

Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

BA 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

BA 596A: **SPECIAL TOPICS**

1-6 Credits

BA 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

BA 597C: **SPECIAL TOPICS**

1-9 Credits

BA 599: Foreign Study–Business Administration

1-12 Credits/Maximum of 12

Full-time graduate-level foreign study at an overseas institution with whom linkages have been established.

Prerequisite: acceptance in established exchange program

International Cultures (IL)

BA 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

BA 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

BA 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

BA 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

BA 800: Marketing Management

1-3 Credits

An examination of the role of the market place in company management.

BA 801: Management

2 Credits

This course is concerned with understanding and managing the behavior of people in organizations. The course will provide exposure to many of the concepts and skills that will help students become more effective manager and organizational leader. This course includes tools that help students diagnose, understand, and develop solutions to management problems. The course will draw upon both the academic and practitioner literature to understand many facets of organizations and of the thoughts, feelings, and actions of people who work in them. It will focus on: 1) developing students’ conceptual understanding of issues involved in managing people; 2) providing opportunities for direct
or vicarious learning of managerial skills that have been identified by practicing managers as being most important to their performance; 3) giving students insight into their own attitudes, beliefs, and management philosophy; 4) creating a forum for discussing management issues with colleagues.

BA 802: Team Process and Performance
1-3 Credits
This course provides students with basic knowledge about predictable team dynamics and how to constructively deal with issues that arise in the first year M.B.A. teams. The course focuses on observation, diagnosis, and intervention skills for developing effective teams. Topics include diagnosing group dynamics, giving and receiving feedback to teammates, cross-cultural communication, and conflict management techniques. The course provides a real-time practicum for diagnosing team issues and addressing team problems and conflicts. Students apply team process concepts and techniques as they work to complete team projects in their other core M.B.A. classes. Students leave the course with an understanding of how to successfully lead a team and how to diagnose and correct dysfunctional team behaviors.

BA 803: BUSINESS ETHICS
1 Credits/Maximum of 999
A study of ethical conduct in organizations and how cultural differences and personal conduct impact business decisions. This course focuses on developing the ability to understand ethical conduct in business organizations. Understanding how to think about and manage personal ethical conduct is a key learning objective along with a review of how an organization fosters a culture that supports ethical behavior. Students will also learn how cultural differences impact business decisions in a global environment.

BA 804: Ethical Leadership
2 Credits
The objective of the ethical leadership course is to raise awareness of the key role played as a manager and leader in creating and maintaining responsible business conduct in work groups and organizations. The course is also intended to enhance the student’s ability to deal with the complexities of ethical decision making in today’s dynamic business environment by clarifying and applying personal values.

**Prerequisite:** BA 801, BA 802

BA 805: Negotiation Theory and Skills
1-3 Credits
The ability to effectively negotiate is an essential skill for managers. Negotiations not only occur with customers or clients, but also between bosses and subordinates, among teammates and across departments. Being able to craft a successful deal, especially in difficult circumstances, requires knowledge of yourself, as well as the substantive material that you are negotiating. Effective negotiators know their own limitations as well as their strengths. They also listen well and have good analytical skills. And, they can craft agreements that garner gains for themselves as well as for other if such gains are possible. Successful negotiating is also closely allied with successful teamwork since both processes require listening, persuasion, influence skills, and creativity. This course will give students an overview of the difference between traditional (distributive) bargaining and interest-based (or integrative) negotiations. Students will learn the rudiments of interest-based negotiating and practice it in several negotiation simulations. They will learn how to identify their own and others’ interests, to create and claim value and to craft constructive agreements for all parties. The course will concentrate on two person and small group negotiations as well as to deal with difficult opponents.

BA 809: Strategic Business Architecture
3 Credits
BA 809 focuses on the development and application of business architecture as a holistic discipline that produces a common understanding of the organization that is used to align strategic objectives and tactical initiatives. Business architecture bridges the gap between a company’s strategy and its successful execution. A business architecture approach that delivers business value to the enterprise produces several things: 1. An articulation of the strategic requirements of the enterprise 2. Models of the future state which illustrate what the enterprise should look like across multiple business viewpoints in support of the business strategy 3. A road map of the change initiatives required to reach that future state 4. The requirements, principles, standards, and guidelines that will steer the implementation of change initiatives The primary purpose of describing the business architecture of an enterprise is to improve the effectiveness or efficiency of the business itself. This includes innovations in the structure of an organization, the centralization or federation of business processes, the quality and timeliness of business information, and ensuring that money spent at the project level is in support of the strategic objectives of the larger enterprise. The course also develops additional capabilities for communicating, explaining, and justifying decisions relating to business architecture.

BA 810: Supply Chain and Operations Management
1-3 Credits
This course is designed to provide students with an overview of the role of operations in the organization, the kinds of decisions operations and supply chain managers make, and the impact of these decisions on the strategic and tactical position of the firm. Supply chain management is a particular focus in the course. The interaction of production, distribution and information resources plays a critical role in developing and sustaining a firm’s competitive advantage.

BA 811: Financial Accounting
1-3 Credits
Business enterprises convey information to their present and potential investors and creditors through financial reports. This course focuses on these financial reports, the data they contain, how users should read and interpret financial statements, and how users can incorporate this information into their investment decision making. It also examines how managers attempt to window dress these financial statements and how the numbers might affect managerial behavior.

BA 815: Business Statistics for Contemporary Decision Making
2 Credits
This course is designed to meet the entry statistical requirements for any course in the Smeal M.B.A. Program, as well as to provide job applicable skills across the entire business portfolio.
One of the most important skills M.B.A.s develop in business school is the ability to demonstrate the value of their experiences. This course provides students with targeted opportunities to develop this skill as they clearly, forcefully, and professionally represent ideas, opinions, and solutions. Students will participate in various oral, written, and graphic projects during the course. After completing this class, students will have proficiency in representing their skills, expertise, and views to business partners (clients, colleagues, employers, and shareholders). This course is spread over two semesters (2 semesters, 4 M.B.A. modules). Residential M.B.A. students must complete all 4 credits (1 credit each in mods 1,2,3,4 for a total of 4 credits). The material builds on each prior module and applies communications skills to various applications.

BA 821: Foundation in Managerial Accounting

2 Credits

Foundations in Management Accounting has two broad aims. First, it is designed to help students grasp the technical aspects of accounting for activities and processes within and between firms. Therefore, students will study methods of a) cost classification estimation; b) cost measurement allocation; c) profit planning; and d) evaluation and control of behavior. Second, the course emphasizes the context of managerial accounting. The firm suspends market prices that regulate behavior impersonally. Students will study how economic arrangements are organized in such non-market settings. Unlike financial accounting, the field of management accounting integrates notions from diverse fields including economics and sociology. Crucially, management accounting is situational and therefore requires and hones students' facility in both quantitative analyses and qualitative judgments.

BA 831: Foundations in Finance

1-3 Credits

This course provides a foundation in finance from the perspective of the firm. The objective is to show students that basic financial principles can be useful no matter the type of job taken. The two main topics of the course are: (1) how managers can use financial techniques to help them do their jobs and (2) how firms can use financial markets to solve financial problems. Topics discussed include the time value of money, criteria for asset selection, capital budgeting, the operation of security markets, portfolio theory and asset pricing, and the firm's cost of capital.

BA 832: Global Business Environment

1 Credits

Changes in interest rates, swings in the business cycle, new international trade agreements: all are macroeconomic events, and all can dramatically impact business. Institutional constraints, as well as theory, and history guide present day macroeconomic analysis and policy. Accordingly, the class is a synthesis of institutional, theoretical, and historical perspectives. A wealth of macroeconomic information and data is now available on the web for those who know how to access and interpret it.

BA 835: Global Perspectives

1-3 Credits

This course starts with the reality that the United States is less influential in global trade, finance, economics, and business than it was in previous decades. Consequently, M.B.A. students need to be aware of the business environments of other countries, the influence of these countries in the global political economy, and new competitors emanating from other parts of the world. About two-thirds of the course is focused on understanding macroeconomic concepts, and analyzing the challenges and opportunities posed by some of the most important countries and regions and the companies headquartered there. Approximately one-third of the course examines global themes that affect virtually all companies, regardless of nationality. Companies that respond creatively to the challenges posed by technology, sustainability, demographic change, urbanization, civil society, and related issues are likely to be more successful than those that do not. The course uses an interdisciplinary approach to explore the dynamics of international business, globalization, and country/political risk. After reviewing important features of the international business landscape, we will examine the business environments of the world’s major regions and select countries, particularly those where students will be going for Global Immersion, while surveying macroeconomic terms and concepts along the way. The course concludes by examining how transnational themes may affect international business in the coming years.

BA 836: Global Immersion

1-3 Credits

Global Immersion is designed around a visit to another economic region. In the past, MBA students have visited such countries as Belgium, Brazil, Chile, China, Czech Republic, France, Ireland, Turkey, and Singapore. In each country, students visit both local and multinational businesses to understand how a business gets established and run in another country; students also meet with industry and government officials to get their perspectives on the economic policies of the country. Each Immersion is coordinated by a faculty leader who plans the visit so as to appeal to a wide range of student interests.

BA 840: Business Data Management

3 Credits

Business Data Management will enable students to use various database designs to acquire the information needed to make effective business decisions. Successful students will be able to design, create, and implement a relational database and be able to write SQL statements to obtain information from a database. In addition, students will investigate the next generation approaches for storing, manipulating, and managing web data in unstructured formats. Students will gain an understanding of the advantages and disadvantages among XML, NoSQL, NewSQL, and Relational databases. After successfully completing this course, students will have the knowledge, skills, and abilities to: 1. structure a database, configure it, perform analysis within it, and report from it; 2. have adequate understanding of SQL to retrieve data from a database using SQL query language; 3. design a database system including an ER Model and a UML class diagram, and implement the design in an enterprise database application; 4. understand NoSQL databases, XML native databases, NewSQL databases, and the advantages and disadvantages of these databases.

RECOMMENDED PREPARATIONS: three credits of data analytics
Business Administration (BADM)

BA 841: Business Intelligence
3 Credits

Business intelligence encompasses the IT tools for exploring, analyzing, integrating, and reporting business data for fact-based, intelligent decision making. This course primarily investigates methods and tools for exploring and analyzing large amounts of business data, also called "Big Data". Learning methods emphasize active learning in the application of methods and tools to real data and the presentation of the results. Students will be exposed to a variety of methods for analyzing both structured and unstructured data and they will work with business data sets to understand the value that can be extracted from large data sets. They will also learn how to classify and associate data to discover business rules that can be used to support decision making. The course will also cover methods to analyze social media information and tools that can facilitate such analysis and discovery. Students will work with data from real social networks to gain an appreciation of how value can be obtained from such networks. Finally, they will learn about techniques for visualizing, presenting, and communicating information in a useful way, e.g., through dashboards and with other technologies on various platforms. Upon successful completion of this course, students will have: acquired the tools and techniques of data cleaning and preparation, data mining, and data visualization; become competent in analyzing both structured and unstructured data; developed an understanding of, and an appreciation for, the complexities of mining unstructured data such as text data including documents, web pages, emails, etc.; developed an understanding of social networks as well as mobile and location-based analytics.

COREQUISITE: BA 840 RECOMMENDED PREPARATIONS: three credits of data analytics

BA 850: Sustainability Driven Innovation
3 Credits

This course explores sustainability as a business opportunity for developing innovative products and services. It will focus on consumer needs related to sustainability, willingness to pay for these needs, and the innovative processes necessary to create sustainable solutions.

BA 880: Leadership Immersion
2 Credits

This course will provide practical and hands-on exposure to leadership training and exercises that can be applied in a diverse range of professional environments and business settings. Students will assess their own leadership strengths and development areas, develop an individual leadership development plan, apply that plan in a Leadership Immersion experience, and complete a reflection paper upon return. The course provides an opportunity to apply and integrate the knowledge and skills they developed throughout their education and their careers. The course will include an individual leadership style multi-rater assessment. Students will self-assess and receive feedback from others on their leadership behaviors, and will develop a plan for individual leadership development. The course will also include opportunities for students to focus on self-awareness as a leader and building leadership skills (e.g., active listening, giving/receiving feedback, mindfulness).

BA 888: Strategic Leading and Identity
3 Credits

The course takes a unique approach to strategic leadership that emphasizes identity issues that are critical to understanding individual and collective processes in organizational life. Students will learn about their own leadership as it relates to their identity and others' identities. It will provide practical and experiential exposure to classic and contemporary leadership frameworks that can be applied in a diverse range of professional environments and business settings. Students will assess their own leadership strengths and development areas, create an individual leadership development plan, apply that plan as part of the course, and complete a reflection paper upon executing the plan. The course provides an opportunity to apply and integrate the knowledge and skills they developed throughout their education and their careers. The course will include an individual leadership style multi-rater assessment. Students will self-assess and receive feedback from others on their leadership behaviors, and will develop a plan for individual leadership development. The course will also include opportunities for students to focus on self-awareness as a leader and building leadership skills (e.g., active listening, giving/receiving feedback, mindfulness).

BADM 501: Costs, Competition, and Marketing Performance
6 Credits

A project-oriented investigation into the critical principles of accounting, economics, and finance.

BADM 502: Demand, Operations, and Firm Performance
6 Credits

A project-oriented investigation into the critical principles of management, marketing, and operations.

BADM 503: Integrated Business Analysis
3 Credits

Overview of the statistical analyses of a variety of business problems.

Prerequisite: B ADM501 and B ADM502

BADM 510: Cost Management for Decision Making and Control
3 Credits

The study and use of accounting information for cost management, product costing, planning and controlling operations, and managerial decision making.

Prerequisite: B ADM501

BADM 511: Information Systems Management and Strategy
3 Credits

Fundamental uses of IS/T and guiding principles associated with the development and management of IS/T as a strategic organizational asset.
BADM 512: Managing Effective Organizations  
3 Credits  
Understanding the critical and changing role of management in contemporary organizations. B ADM 512 Managing Effective Organizations (3) The objective of this course is to provide MBA students with an understanding of the challenges confronting managers of contemporary organizations and a knowledge of the tools and techniques available to help them confront those challenges in dynamic workplace settings. The course will be structured around the POLC framework, a system that emphasizes the four essential functions of management -- Planning, Organizing, Leading, and Controlling -- as an ongoing process of interrelated activities.  
**Prerequisite:** B ADM502  

BADM 513: Quantitative Methods for Business  
3 Credits  
This course is designed to provide a systematic understanding of design, operation, and control of business processes that transform inputs into outputs. B ADM 513 Quantitative Methods for Business (3) This course is designed to provide a systematic understanding of design, operation and control of business processes that transform inputs into outputs. The course encompasses both manufacturing and services. The focus is managerial decision-making with an emphasis on quantitative methods of analysis. Topics include operations planning and strategy, systems design, inventory management, capacity and materials planning, JIT and lean operations, quality control and management, scheduling, and project management. Quantitative methods include linear programming, decision analysis, inventory models, forecasting, simulation and queuing models.  
**Prerequisite:** B ADM501 and B ADM502  

BADM 514: Strategic Planning and Business Policy  
3 Credits  
Formulation of objectives and the implementation of programs to promote long- range success of the organization in a changing environment. B ADM 514 Strategic Planning and Business Policy (3) Drawing from concepts in competitive strategy, organizational economics, financial economics, and industrial organization, this course will describe the skills that managers must command to create economic value through firm strategy. These skills include the ability to apply analytical tools to assess industry structure and competitor strengths; strategies, the ability to assess the optimal scope and boundaries of the firm, and the ability to design administrative structures, systems, and processes that facilitate the development and deployment of corporate resources. Even though the course incorporates various theoretical perspectives, it ultimately is designed to focus on the essential issues and problems of competitive strategy as experienced by managers.  
**Prerequisite:** B ADM510 , B ADM512 , B ADM513 , and B ADM554  

BADM 523: International Business  
3 Credits  
Survey of the theory and practice of international business.  
**Prerequisite:** B ADM501 and B ADM502  

BADM 525: Innovation and Change Management  
3 Credits  
Analysis of innovation sources, effects on industry structure and firm resources, and how firms can manage adoption and implementation process.  
**Prerequisite:** B ADM501 , B ADM502 , B ADM503  

BADM 526: Leadership and Ethics  
3 Credits  
A multiperspective review of leadership theory and research with special emphasis given to the ethical dimensions of leadership. B ADM 526 Leadership and Ethics (3) The objectives of this course are to: a) increase moral awareness of ethical issues in organizations, b) consider the interrelationships between organizations and their stakeholders, c) analyze the ethical impacts of managerial decision-making, d) understand how to manage the ethical performance of people and organizations, e) develop an understanding of the ethical dimensions of leadership theory and research, f) explore the relationship between the concepts of leadership effectiveness and ethical leadership. Ethical conduct is an important issue for managers in all functional areas of business organizations. Long-term "success" in business depends not only on mastery of the immediate technical environment and competitive domain, but also consideration of and attention to the broader social and ethical environments in which all organizations and institutions are embedded. Leaders have an important role to play in managing the financial and ethical performance of individuals and organizations. Even though leadership is one of the most researched topics in management, most reviews of the leadership literature rarely mention the ethical dimensions of leadership. Understanding what ethical leadership is and why it is important can provide a more comprehensive view of what it means to be an effective leader.  
**Prerequisite:** B ADM502  

BADM 532: Corporate Finance  
3 Credits  
Application of modern corporate finance theory to corporate practice.  
**Prerequisite:** B ADM501 and B ADM503  

BADM 554: Marketing Strategy  
3 Credits  
An application of marketing theoretical principles from popular press publications. B ADM 554 B ADM 554 Marketing Strategy (3) This course is an investigation into current popular press publications and their application of marketing theoretical principles to actual business situations. It includes analytical processes and an emphasis on critical thinking skills useful to upper level marketing managers.  
**Prerequisite:** B ADM502  

BADM 555: New Product Development and Management  
3 Credits/Maximum of 999  
This course will cover the concepts of new product/service development and brand management strategies for competition intensive firms. Identifying opportunities, developing strategies, and designing processes
for the creation of new products are key responsibilities for both entrepreneurs and managers in established firms. But developing new products is also fraught with risk: an overwhelming majority fail when introduced to the market. This course is about improving the odds of placing winning bets on new products. This course is especially recommended to students who expect to (i) launch their own businesses, (ii) work as brand or product managers, or (iii) have responsibilities requiring knowledge of product strategies and management of new product initiatives. Consultants who advise clients on product strategies may also benefit from taking the course. Strategies and processes for new product development will be the core of the course. Strategy provides the context for product development — without it, each product development project is a separate and disjointed effort that has a much lower chance of success. This is one major reason why so many new products fail. Strategy for new products requires aligning new product development with market opportunities (for example in emerging markets, or by exploiting new inventions and technologies); selecting business models; and choosing effective marketing and manufacturing strategies. Process includes choosing a sequence of activities that is both rational and effective for converting ideas into compelling new products. These activities include concept development, design, prototyping, demand estimation, costing and pricing, branding, packaging, product testing, and market testing. However, not all products use the same development processes, and it is important to understand when to use which processes. It is expected that students enrolling in BADM 555 will be familiar with fundamental marketing concepts and practices. These are generally addressed in an undergraduate marketing course or equivalent professional training.

BADM 597: Special Topics
1-9 Credits/Maximum of 9

Formal courses given on a topic or special interest subject which may be offered infrequently.

BADM 597C: **SPECIAL TOPICS**
1-6 Credits

BADM 828: Negotiations
3 Credits

Negotiating is an essential task of management. Successful managers bargain, negotiate, and resolve disputes with bosses, co-workers, subordinates, suppliers, customers, competitors, and other stakeholders. Effective negotiation can improve an individual's own outcomes as well as those of the other parties involved. Ineffective negotiation not only hurts the negotiator's ability to get "things done" but can also lead to poorly constructed or failed agreements in which everybody loses. The goals of this course are to improve students' negotiation skills. In this course, students will learn the theory and practice of negotiation. Course readings, discussions, and exams are designed to develop the theoretical foundation that is needed to understand the principles of effective (and ineffective) approaches to negotiations. Students will practice what they have learned by taking part in negotiation exercises and simulations.

BADM 834: Portfolio Management
3 Credits

The course is designed to expand the student's knowledge of the broad field of financial and investment analysis. The student will examine the basic tools of asset valuation and inputs for portfolio management. Security Analysis requires a thorough understanding of financial statement analysis, quantitative techniques, and economics. The major objectives of this course are to gain a working knowledge of the fundamentals of portfolio management - including creating an investment policy statement, asset allocation, optimal portfolio selection, and analyzing equity, debt, and alternative assets. The student will also have the opportunity to apply those to the management of their own (virtual) $100,000 investment portfolio. This course expects students to be familiar with the fundamental finance concepts and practices, either through successful completion of an undergraduate finance course or equivalent professional training.

BADM 841: Principles of Applied Project Management
3 Credits

This course is a problem-based course in the application of project management processes, methods, techniques, and tools needed to manage projects in a modern business environment. The course covers the fundamental project management principles associated with initiating, planning, executing, controlling, and closing projects. Project charts, schedules, resource assignment matrices, and communication, risk, and quality control plans are all tools that can enhance effective project management and which are covered in the course. This course assumes that project management in the modern organization is a complex team-based activity, where application of effective leadership and team management principles are critical and where various types of technologies (including project management software as well as software to support group collaboration) are an inherent part of the project management process. This course also acknowledges that project management involves both the use of resources from within the firm, as well as contracted from outside the organization.

BADM 871: Business Analytics
3 Credits/Maximum of 999

This course provides a broad understanding of business analytics and managerial best practices for leveraging analytics. Advances in computational technologies, coupled with the massive amounts of data available through business activities as well as the surrounding ecosystems, have created an amazing potential for managers to leverage analytics in order to gain organizational and competitive advantages. This course takes a two-fold approach to address Analytics Methodologies. The first section of the course provides a broad understanding of business analytics and the second section demonstrates the managerial best practices for leveraging analytics. The course covers concepts such as analytics problem framing, data understanding and preparation, as well as descriptive and predictive modeling. The course incorporates applications and real-world datasets from marketing and other business disciplines for a hands-on learning experience. Best practices derived from cases are also incorporated into the course structure in order to learn the strategies required to implement and manage analytics initiatives in businesses. Students are initially introduced to business analytics through a series of examples, use cases, and applications. Next, descriptive analytics through the use of dashboard and business reporting techniques is presented as a means for business performance management. Following this, the overall predictive analytics process is explained with emphasis on framing the analytics problem from an understanding business context. Additionally, fundamental predictive modeling concepts are covered concurrently with the introduction of exemplary modeling techniques. Students then receive an opportunity to apply these techniques through the use of
different problem scenarios and real world datasets. Related topics including overfitting and visualizing model performance are covered as well. Students are presented an expected value framework to assist approaching business problems with a decision-analytic perspective. The course also covers managerial aspects of integrating business analytics within the enterprise by linking business strategy to business analytics initiatives. Approaches to initiate, manage, and sustain analytics initiatives to gain a competitive advantage are discussed with cases. At the end of the course, students are expected to have the competencies required to analyze possible opportunities for leveraging analytics across the boundaries of functional business domains, as well as apply key analytic techniques and interpret results for decision-making.

BADM 895: Internship

1-6 Credits/Maximum of 6

Supervised, professionally-oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor

Business Administration (BUSAD)

BUSAD 501: Statistical Analysis for Managerial Decision Making
3 Credits/Maximum of 3

Use of statistical methods for managerial decision making, with emphasis on problem formulation, data analysis and interpretation, and business applications.

BUSAD 511: New Ventures 1
3 Credits

Introduction to the issues involved in the development of new ventures within existing business organizations or from start-up. BUSAD 511 BUSAD 511 New Ventures 1 (3) This course deals with the process of finding, evaluating and developing new ventures, from both the perspective of the start-up as well as the larger existing organization, which has different opportunities, resources and barriers. Students will develop an appreciation of the many legal, financial, operational, HR, and technical challenges posed by venturing. Course activities include discussion of readings, case analyses, developing components of business plans, and teamwork. These activities encourage students to develop the critical thinking, communication and managerial skills necessary to further their understanding of corporate venturing. This course prepares students for future coursework in the New Ventures and Entrepreneurial Studies Option within the MBA program. It is also relevant to students engaged in the general MBA program who are involved in new product development and RD. This course is followed by New Ventures 2, which provides an in-depth view of the legal and financial issues facing managers of new ventures. The course is a graduate elective primarily for MBA students and could also be taken by MSIS students. It is intended to be the introductory course in the New Ventures and Entrepreneurial Studies option within the MBA program.

Prerequisite: 6 graduate credits in business

BUSAD 519: Developing Creative High Performance Organizations
3 Credits

This course focuses on how to create high performing organizations based on models provided by business, science and the arts. BUSAD 519 BUSAD (LEAD) 519 Developing Creative High Performance Organizations (3) Overview: This course focuses on how to create high performing organizations based on models provided by business, science and the arts. We will examine the key assets that these disciplines bring and show how to apply them to business activities. For example, it has been shown that improvisational models from music are highly relevant to new product development. Course activities will include a discussion of the readings from relevant academic research in the business field. We will discuss the philosophy of aesthetics, analyze cases, and review original works. We will also listen to short lectures by practicing artists, musicians, actors, scientists, and writers. Together, these activities will help students to develop strategies to help their organizations attain higher levels of performance. This course is a graduate elective for MBA students and could also be taken by other students (such as Leadership students) if it meets their degree requirements. The way the course will run: This course will be run as a graduate seminar designed to maximize the learning of the members of the group including the instructor’s. We will learn about each of the topics noted above through a variety of means. Our interaction will include general discussions, lectures, case discussions, exercises, small group meetings, and online chats. We will have invited speakers for the class representing the arts, music, science and business.

Prerequisite: 6 graduate credits in business

Cross-listed with: LEAD 519

BUSAD 522: New Ventures 2

3 Credits

Examines the financial and legal issues that are critical in the formation, development, and management of new ventures. BUSAD 522 BUSAD 522 New Ventures 2 (3) The focus of the course is on the methods of funding and cash flow management for the new enterprise, as well as the underlying legal issues that impact new ventures. Evaluation will be on case study analyses, exams, and a written and oral report on the legal and financial aspects of new venture. All students in the MBA program are required to take an introductory finance course. This course builds on that foundation and introduces the various legal issues that are critical to new venture development. Designed especially for students taking the New Ventures and Entrepreneurial Studies option within the MBA program. This course builds on the work in Entrepreneurship or New Ventures 1, which are required for all New Ventures majors. This will be an elective course for students taking the New Ventures option in the MBA program. Students in the other options would not usually take this course. However, they could take it as an elective, since it has little overlap with the required courses in the business option. It would also be an elective for students in the MSIS (Info Science) program who have an entrepreneurial orientation.

Prerequisite: BUSAD511 or by permission

BUSAD 523: Prices and Markets

3 Credits

A survey of analytical concepts and techniques essential to an understanding of the business environment.
Prerequisite: MGMT 501

**BUSAD 525: Quantitative Methods in Finance**

3 Credits

Study of quantitative methods used in financial and investment analysis and modeling. BUSAD 525 BUSAD 525 Quantitative Methods in Finance (3) BUSAD 525 studies statistical and econometric methods to provide a quantitative foundation in financial and investment analysis. Students will be introduced to the statistical and econometric methods necessary in quantitative financial modeling. Students will acquire practical knowledge, skills and abilities in financial modeling, including sampling, estimation, and hypothesis testing, regression analysis and its application in finance, portfolio analysis methods, and time-series analysis and forecasting. Spreadsheet programs such as the Microsoft Excel program will be used extensively throughout the course.

**BUSAD 526: Current Issues in Corporate Finance**

3 Credits

Finance topics involving strategic financial decisions, including capital structure and cost of capital, financial forecasting, valuation, and corporate control. BUSAD 526 BUSAD 526 Current Issues in Corporate Finance (3) BUSAD 526 focuses on current issues in corporate finance involving strategic financial decisions, including capital structure policy and cost of capital, payout policy, financial planning and forecasting, valuation methods including real option, venture capital and IPO, and topics on corporate control. Students will develop an ability to analyze and solve complex financial decision problems by applying financial theories and tools discussed in this course.

Prerequisite: FIN 531 and BUSAD 525

**BUSAD 527: Fixed Income Securities**

3 Credits

Analysis and valuation of fixed income securities and interest rate derivatives. BUSAD 527 BUSAD 527 Fixed Income Securities (3) BUSAD 527 focuses on the various fixed income securities including bonds (treasury, corporate, municipal bonds), mortgage-backed securities, asset-backed securities, interest rate derivatives, and credit risks. Valuation and risk management of fixed income securities will be discussed using market data on securities. Fixed income is technically demanding subject and the course will use relatively advanced techniques and concepts. Basic statistics and spreadsheet modeling will be used extensively throughout the course. The students will gain a working knowledge in fixed income securities.

Prerequisite: FINANS518 , BUSAD 525

**BUSAD 537: Management Information Systems**

3 Credits

Information system theories and methods applied to administrative structures and management decisions in organizations.

Prerequisite: MGMT 501

**BUSAD 542: Global Intercultural Management**

3 Credits

This course develops students’ global cross-cultural competencies and cultural intelligence to enhance ability to manage global organizations and work interculturally.

Prerequisite: MGMT 501 or equivalent graduate-level preparation on organizational behavior or a closely related social science area of inquiry

**BUSAD 545: Negotiation Strategies**

3 Credits

This course covers strategies and tactics for understanding conflicts, for negotiating effectively, and for dealing successfully with power in organizations. BUSAD 545BUSAD 545 Negotiation Strategies (3) Although situations involving international incidents, corporate acquisitions, or national collective bargaining contracts demonstrate the dramatic effects of the need for negotiation, it is something that most people do every day. Negotiation is not a process reserved for skilled diplomats, top salespeople, or leaders of labor unions. The structure and processes of negotiation at the interpersonal level are fundamentally the same as at the corporate or international level. For this reason, knowledge about and skill in negotiating is essential to anyone who works with and through other people to accomplish objectives. It is part of the normal “give and take” of any business situation, such as negotiating salaries, arranging deals with vendors, or allocating resources for a project. Unfortunately the ability to simply recognize conflict and the need for bargaining does not insure successful negotiating situations. Negotiation is a complex human activity, involving a dynamic interpersonal process. The skilled negotiator possesses a number of skills including: the intellectual ability to understand the key facts that shape and characterize different negotiation situations; the skills to diagnose problems and select appropriate strategies and approaches to address them; and the understanding of one’s own personality and value system, which affect the perception of a situation and the choice of tactics and strategy. Negotiation is a learnable process. In this course students will learn how to recognize and resolve conflict through bargaining, what the bargaining process involves, and how to plan and carry out a successful negotiation.

Prerequisite: MGMT 501

**BUSAD 551: Business, Ethics, and Society**

2-3 Credits/Maximum of 3

The course focuses upon the exploration and analysis of the ethical, political, technological, social, legal and regulatory environments of business. BUSAD 551 Business, Ethics, and Society (2-3) Students will explore and analyze the challenging issues that lie at the intersection of business, government, and society through a lens of business ethics. Topics covered include the importance of ethics in the business decision process and the types of ethical issues business practitioners face in the business environment; consequentialist and nonconsequentialist ethics principles and their application to business decision-making; the role of personal and organizational values in business decision-making and the impact that organizational culture has on the ethical dimension of decision making. Students will evaluate and analyze the ethical dimension of decision-making; become familiar with the stakeholder concept and utilize it in the business decision-making process; identify the constraints societal values place upon the firm; examine the role
government plays in the marketplace; explore the social and ethical dilemmas that arise from the globalization of business; and understand and explain the process through which corporations attempt to influence societal and government institutions.

Prerequisite: B A 517, MGMT 501

BUSAD 555: Full Range Leadership Development

3 Credits

Development of behavioral skills associated with outstanding leadership of individuals, teams, and organizations through advanced information technology, experimental exercises, and case analysis. BUSAD 555BUSAD (LEAD) 555 Full Range Leadership Development (3) Leadership is one of the world’s oldest preoccupations. Since the beginning of civilization, prophets, kings, rulers and managers have struggled to find answers to an important question: Why do most leaders or managers elicit merely competent performance from their followers, while a select few inspire extraordinary achievement? Given increased globalization, diversity, restructuring, e-business and innovation in today’s business environment, finding answers to this question is important for maintaining organizational competitiveness. The purpose of this course is to provide answers to this question by identifying traits and behaviors associated with outstanding leaders, explaining how they get results, and why their leadership often exceeds all expectable limits. This course is designed to introduce students to a) behaviors associated with outstanding leadership, b) social learning and cognition in organizations as a context to promote outstanding leadership, and c) leadership development as a strategic intervention to enhance individual, group, and organizational motivation and performance. The course will be run as a graduate seminar. We will interact through Web site technology, general group discussions, team projects, lecturettes, case discussions, exercises and videos. Class sessions will focus on issues raised by the readings, cases, and issues relevant to students’ organizational experiences. A portion of the class time may be set aside for the coordination of team projects.

Prerequisite: MGMT 501 or LEAD 501
Cross-listed with: LEAD 555

BUSAD 556: Diversity Leadership

3 Credits

Analysis and application of models, theories, and strategies for managing an increasingly diverse workforce and customer base. BUSAD 556 (LEAD 556) Diversity Leadership (3) In this course students will explore the theory and practice of diversity leadership through experiential exercises, video and didactic presentations, small group and class discussions, and the analysis and application of models, theories, and strategies for managing an increasingly diverse workforce and customer base.

Prerequisite: LEAD 501 or MGMT 501
Cross-listed with: LEAD 556

BUSAD 558: Knowledge Management

3 Credits

This course examines the strategic value of knowledge and how organizations can manage their knowledge assets for competitive advantage. BUSAD 558 Knowledge Management (3) This course is designed to explore the topic of knowledge management (KM), which differs from information management in critical ways. Knowledge pertains to the subset of all information that embodies experience, experimentation, organizational learning, best practices, and technoscientific knowledge. Knowledge thus differentiates average firms from great ones; e.g., Google vs Alta Vista. KM is now on the short list of strategic objectives for firms large and small. Future managers thus need to better understand the issues and challenges posed by knowledge management. Students taking the course will learn about KM as a human social process as is evident in Communities of Practice. We will examine the processes of knowledge creation, acquisition, retention and utilization. To understand how knowledge-based systems and practices are implemented in the “real world” (e.g., Merck, Lockheed Martin, Vanguard) we will review various case examples that highlight the unique problems posed by KM to business organizations. Experts from industry will be invited to speak to the class and students are invited to attend the Knowledge Management Group of Philadelphia (www.kmgphila.org) meetings that meet once a month. The course will be run as a graduate seminar designed to maximize the learning of the members of the group including the instructor’s. We will learn about each of the topics noted above through a variety of means. Our interaction will include general group discussions, lectures, case discussions, exercises, small group meetings, and on-line chats.

Prerequisite: MGMT 501 and ACCTG512

BUSAD 559: Career Management

3 Credits

Provides students with a conceptual understanding of careers/career design making through an examination/discussion of the literature in career management.

Prerequisite: MGMT 501

BUSAD 577: Management of Information Technology

3 Credits

This course focuses upon the challenges of aligning IT strategy with organizational goals. BUSAD 577 Management of Information Technology (3) This course identifies the challenges facing managers of information technology resources and addresses the methods of managing them. These resources include hardware, software, networking, data, information, and personnel. The course takes the approach of high-level management of what has become an important strategic resource in almost every organization. Therefore, it focuses on strategies rather than project management of individual efforts. The course focuses on decision making at the level of chief information officers and their immediate underlings. Its premise is that to succeed, an organization must align its IT strategy with the general organizational and business goals.

Prerequisite: MGMT 501

BUSAD 578: Managing Business Processes

3 Credits

Develop and evaluate process models, performance metrics, and information flow to facilitate cross-functional business processes for 21st century organizations. BUSAD 578 Managing Business Processes (3) Twenty-first century executives cross-functional business processes rather than managing their organizations as independent functional silos. Consequently, the ability to design and implement process oriented
organizations has considerably evolved over the past decades. More importantly, initiatives related to Service Oriented Architectures (SOA) and Business Process Management (BPM) systems are predicated on the existence of well-designed business processes. However, the task of designing processes has become harder due to the disappearance of boundaries both within and across enterprises. Managing Business Processes provides students with an understanding of the key aspects of business processes such as collaboration, information flow, people, and business rules. The main objective is to provide an overview of various techniques and tools for analyzing, improving, and implementing business processes and information system controls. The course will utilize cases, process modeling methodologies, and simulations to strengthen the students' understanding of business processes and their contribution to business performance.

**Prerequisite: BUSAD 530**

BUSAD 583: Future of the Biotechnology and Health Industry: Strategic Implications

3 Credits

Strategy in biotechnology, pharmaceutical, and health industries; impact of technological innovation and economic, social, political trends, and events. BUSAD 583 BUSAD 583. Future of the Biotechnology and Health Industry: Strategic Implications (3) BUSAD 583 explores and analyzes future trends in the biotechnology, pharmaceutical, and health industries. An analysis of trends in technology, administration and control, advances in research methods, emerging products and services, and preparing for the future will be undertaken. The strategic management impact of these trends will be explored from the perspective of suppliers of goods and services, professional care providers, payors and governmental and regulatory activities. Teaching methods include facilitator led didactic presentations, class discussions/classroom exercises, small group activities centered on case studies, team project/group presentations, and papers. The course will be offered twice annually by the Penn State Great Valley School of Graduate Professional Studies’ MBA program and is a required course in the Penn State Great Valley MBA program option in biotechnology and health industry management.

**Prerequisite: BUSAD530**

BUSAD 585: Research in Security Valuation

3 Credits

Analysis and valuation of equity investments. BUSAD 585 BUSAD 585 Research in Security Valuation (3) BUSAD 585 focuses on the analysis and valuation of a firm's equity securities in the financial market using a fundamental analysis. Students will learn how to use different valuation techniques for different types of companies (e.g., companies in financial distress/bankruptcy, private companies, start-up companies with no earnings). The course integrates topics discussed in various finance courses to help students to develop their analytical ability to identify strategies that enhance value creation. The philosophical basis for this topical integration is that valuation of a firm's securities requires one to know not only the accounting issues involved in the preparation of financial statements and how to analyze financial statements, but also to understand the impact of monetary policy, the operation and regulation of financial markets on the value of the firm's equity securities. Moreover, because firm value depends on how well the company is managed, a good understanding of its operations in the global markets, its internal control and risk management strategy is also essential. Finally, because valuation is also based on quantitative models, knowledge of quantitative methods is paramount.

**Prerequisite:** completion of all core courses in the Master of Finance program

BUSAD 802: Cornerstone of Sustainability

3 Credits

In-depth exploration of the social, environmental, and organizational sustainability challenges facing business leaders in the 21st Century. BUSAD 802 Cornerstones of Sustainability (3) BUSAD 802 provides students with an overview of the social, environmental, and organizational sustainability challenges facing 21st Century business leaders. The course seeks to develop students' critical capacities for reflection and action based upon a systems thinking framework. Topics to be explored include the history of the sustainability movement, an overview of pressing environmental and social issues, and alternative perspectives on the local and global economy. The course addresses local and global issues surrounding sustainable management and reviews the major frameworks of sustainability that provide the scientific foundations and economic principles of how sustainability can help organizational leaders to achieve natural competitive advantage. Students will apply theoretical and practitioner frameworks to real world cases.

BUSAD 809: Triple Bottom Line Accounting

3 Credits

In-depth exploration of the issues related to implementing measurement, reward and reporting systems for economic, social, and environmental impacts. BUSAD 809 Triple Bottom Line Accounting (3) BUSAD809 expands the traditional financial and managerial accounting topics to encompass economic, social, and environmental impacts. Students will investigate the strategic linkages between sustainability and the value of the organization, define true costs and become familiar with alternative cost measurement systems, and assess the impact of social risk. Other topics include the design and implementation of management performance evaluation and reward systems that align with social and
environmental as well as economic goals, and global reporting standards
and best practices.

BUSD 824: Finance and Investment for Sustainable Growth
3 Credits
In-depth exploration of the methods of financing available for sustainable
growth in developed and emerging markets. BUSD 824 Finance and
Investment for Sustainable Growth (3) BUSD 824 provides
students an in-depth exploration of the theories and the applications
that financial professionals can leverage to simultaneously earn a
profit and have a positive impact on society. The specific financial
sectors students will examine are: Capital Markets (to address
environmental issues), Commercial Banking (to create sustainable
economic development), Project Finance (to reduce poverty and create
infrastructure development), and Investment Management (to understand
and employ socially responsible investing).

BUSD 828: Mergers and Acquisitions
3 Credits
The mission of this course is to survey the drivers of success in mergers
and acquisitions (MA) and develop students’ skills in the design and
evaluation of these transactions. The course will combine a survey of
mergers and acquisitions, an investment banking product-training class
for associates, and a case study. We will focus on the type of merger
most class participants will potentially be involved with - the acquisition
of a modest-sized private company by a larger private company, or by a
mid-size public company. At the same time, due to the availability of date,
much of the case material relates to larger public-to-public transactions.
We will use these cases to illustrate major points applicable across a
range of transactions.
Prerequisite: ACCTG512 and BUSAD526

BUSD 830: Biotechnology and Health Industry Overview
3 Credits
The course explores current issues and trends in the biotechnology,
pharmaceutical, medical device, and health care industries. The classic
cost, quality, and access paradigm is applied from the perspective of
multiple stakeholders. Organization of care, financing, policy, regulatory,
and ethical problems and issues are emphasized.

BUSD 834: Ethical Dimensions of Management in the Biotechnology and
Health Industry
3 Credits
This course provides an overview of various ethical decision-making
frameworks, which are then applied to critically examine issues within the
biotechnology and health industries. Ethical decision-making frameworks
include utilitarian principles, rights and justice theories, virtue ethics,
feminist ethics, and various medical ethics models. Applications to cases involving genetic testing, stem cell research, euthanasia, organ retrieval
and transplantation, and pharmaceutical development are among those
to be explored. Teaching methods include faculty lectures, case study
analysis, small group and class discussions, and industry guest speaker
presentations. Students will be evaluated on the quality of individual
and team writing assignments as well as a team oral presentation. The
course will be offered twice annually by the Penn State Great Valley
School of Graduate Professional Studies’ MBA program and is a required
course in the Penn State Great Valley MBA program option biotechnology
and health industry management.
Prerequisite: BUSAD530

BUSD 835: Commercialization of Biopharmaceuticals
3 Credits
Review organizational processes, regulatory, and environmental issues
in the development and commercialization of biopharmaceuticals
in the United States and globally. BUSD 835 Commercialization
of Biopharmaceuticals (3) This course reviews organizational
processes, regulatory, and environmental issues in the development
and commercialization of biopharmaceutical products in the United
States and globally. Business development strategies and tactics that
encourage innovation and enable biopharmaceutical organizations
to prosper in changing business environments are emphasized. The
regulatory environment globally and nationally is reviewed for its impact
on biopharmaceutical discovery and commercialization, including the IND
(investigational new drug) and NDA (new drug application) process and
quality control/assurance. Organizational dynamics including culture,
structure, ethical dimensions of management, and special considerations
in global marketing are explored. Marketing and brand management,
financial forecasting, and structuring sales and marketing are examined
for their impact on successful commercialization of biopharmaceutical
products.
Prerequisite: BUSAD530

BUSD 876: Ethical Issues in Information Technology
3 Credits
Computers are the technological foundation of the information age. Well
over half of workers in the U.S. and around the globe make their living
by collecting, storing, and manipulating data. Technology has improved
our lives, but has also created some unpleasant situations that raise
serious ethical questions. The course explores important ethical issues
that are affected by information technology, such as privacy, free speech,
computer crime, intellectual property, IT professionalism, and software
product liability.
Prerequisite: MGMT 501

BUSD 879: Sustainable Supply Chain Management
3 Credits
In-depth exploration of sustainability of manufacturing and supply
chain operations. BUSD 879 Sustainable Supply Chain Management
(3) BUSD879 provides students a set of tools and skills to identify,
evaluate, and improve the sustainability of manufacturing and supply
chain operations. This course enables students to understand the core
concepts related to both supply chain and sustainability. After taking
this course, students will be able to design sustainable manufacturing,
transportation and supply chain operations. The emphasis in this course is on the design and operations of supply chains to minimize their environmental footprint. Students will also learn how to evaluate suppliers’ sustainability to assign purchasing contracts to minimize the environmental impact. Other important concepts such as product remanufacturability design and techniques to reduce energy usage and raw materials will also be discussed.

**Prerequisite:** OPMGT510

### Business Analytics (BAN)

**BAN 530: Business Strategies for Data Analytics**

3 Credits

Data analytics problem-solving strategies applied to a real-world business context. BAN 530 Business Strategies for Data Analytics (3) BAN 530 integrates the descriptive/prescriptive/predictive framework for business analytics courses and sets analytics problem solving in a real-world business context. The objective is to provide students with experience with noisy data sets, potential compliance issues, non-standard measures across business units, and other real-world considerations in using data to drive decisions. The course will examine the entire life cycle of a data analytics project, from data origination through collection, filtering, tool selection, calculation, and communication. Particular emphasis will be placed on problem formulation: identifying what the business issue is at hand, what data might be useful in understanding that issue, and what tools can be most usefully applied in a particular context. In addition, communication skills will be emphasized: how data informs the decision-making process when the audience likely lacks the specialized quantitative literacy of the project team. Other important considerations include many facets of information privacy: students will consider the ethical and legal implications of de-anonymization, of deep insight into individual behavior, and of opt-in versus opt-out models of participation.

**BAN 540: Marketing Analytics**

3 Credits

Systematic and analytical approaches to marketing decision-making within modern day enterprises. BAN 540 Marketing Analytics (3) The course objectives are to demonstrate the benefits of using a systematic and analytical approach to marketing decision-making, and to build the skills and confidence of students for undertaking such analyses and decision-making in a modern enterprise. The analytical approaches covered in the course will enable students to identify alternative marketing options and actions that enhance business performance, predict the expected market and consumer reactions associated with potential marketing actions undertaken by a business, calibrate the opportunity costs associated with each action, and choose one or more actions that have the highest likelihood of achieving established business goals. The course will help students to develop skills that will enable them to propose and justify marketing expenditures using a Return on Investment (ROI) logic that businesses are increasingly asking of their executives. This course builds on the basic business analytics concepts and methods that business students are expected to have. The ldquo;hands-onrdquo; learning approaches used in the course (e.g., exercises and cases using real-world data) will enable students to apply course concepts and methods to develop integrated marketing programs that can be deployed across online and offline media and channels. The topics will include traditional marketing analytics such as segmentation, targeting, positioning, product design, and marketing resource allocation as well as emerging analytics such as search engine analytics, social influence measurement, and attribution analysis.

**BAN 550: Prescriptive Analytics for Business**

3 Credits

Development of methods for prescriptive analytics with a focus on business supply side decisions and risk mitigation. BAN 550 Prescriptive Analytics for Business (3) Analytics, defined as the scientific process of using data and quantitative techniques to make better decisions, has permeated virtually all aspects of business. The widespread availability of large amounts of detailed data combined with analytics methods permits an extensive examination of the tradeoffs that inform business decision making, with the ultimate goal of choosing ldquo;bestrdquo; courses of action. BAN 550 explores the use of prescriptive analytics methods in a variety of business contexts. In the early part of the course, the focus is on the tools and methods of prescriptive analytics. As the course progresses the emphasis shifts to the effective integration and implementation of prescriptive analytics in supply-side decision making processes such as supply chain management, service management, operations, logistics and transportation. The applications areas within business will reflect the interests of the instructors and will evolve as new areas of theory and practice develop.

**Prerequisite:** BAN 540

**BAN 888: Implementing Analytics for Business**

3 Credits

Sets business analytics in real-world context. Explores project life cycle from business problem framing to model lifecycle management. BAN 888 Implementing Analytics for Business (3) The capstone course for the Business Analytics option in the Data Analytics MPS degree program, this course sets analytics problem solving in a real-world context, including communication to non-statistically trained executives. Key topical areas are derived from the common activities of the business analyst and include business problem framing, analytics problem framing, data sourcing, cleaning and integration, analysis methodology selection, model building, model deployment and model lifecycle management including benefit assessment. Topics align with the body of knowledge in the Institute for Operations Research and the Management Sciences (INFORMS) Certified Analytics Professional Study Guide. Students explore each topic in a real world context, by developing solutions to cases in a team setting. Each team selects a case and works through all elements of the analytics body of knowledge, with group presentations on problem framing, analytics model selection and development, and model lifecycle management in a business setting.

**Prerequisite:** BAN 530 and BAN 550

### Business Economics (BUSEC)

**BUSEC 502: Economics for Managers**

3 Credits/Maximum of 999

Demand supply; price and output determination in different markets; determination of income, employment, interest rates, and inflation; stabilization policy. The course consists of two main segments: Microeconomics and Macroeconomics. The course begins with basic economic principles of price and output determination in markets.
Students will get an understanding of cost structures of firms in the short and long run, and how firms choose to operate. With this foundation, students will proceed to examine market structure, which is the nature of competition among firms, ranging from perfect competition (many non-dominant suppliers) to monopoly (one dominant market supplier). While studying firms in different market structures, most of the focus will be on business firms which have some market power: monopolistic competition and oligopolies (a small number of inter-dependent suppliers). Strategic behaviors of firms and different oligopoly models will be studied in detail. Business firms operate within an economic environment that provides opportunities, constraints, and threats. The second part of the course focuses on the economic environment over time, generally described as the business cycle. The course will begin considering business cycles by looking first at main indicators such as growth of real GDP (Gross Domestic Product), unemployment rates, and inflation rates. Students will employ simple models of the business cycle to explain recessions, inflation, and other environmental conditions. Financial markets are important in determining economic conditions. Students will learn about the role of financial markets in determining availability and costs of funds. Economic policy is the effort of government to change the economic environment. An important part of the course is the study of these policies. Fiscal policy consists of the use of taxation and government spending to shape the environment. Monetary policy is the effort to influence credit conditions and interest rates for the purpose of achieving a specific environmental change. Domestic economic conditions are increasingly shaped by global conditions. Therefore, a significant part of the course is devoted to analysis of foreign exchange rates, interest rates, and monetary policies of other nations. In addition, students will analyze the impacts of barriers to international trade (primarily quotas and tariffs and foreign exchange controls) and investment. The course concludes with examination of government regulation and its effect on business. Many regulations are designed to counter-act negative external effects of decisions made by private profit-pursuing firms, especially with regard to pollution of the natural environment. Anti-trust policies, patent and copyright laws. These regulations provide constraints and opportunities for business managers. Students demonstrate achievement through completion of short cases, class discussions, and an examination.

Prerequisite: admission to the MBA program or the MSIS program

Business Law (BLAW)

BLAW 525: Business Law for Innovation and Competition

2 Credits

Nature of intellectual property rights, as well as process for obtaining and enforcing them. B LAW 525 Business Law for Innovation Competition (2)Primary areas of focus include intellectual property ("IP") law (patents, trademarks, copyrights and trade secrets) and antitrust law, as well as basic principles of U.S. law and the legal rules for related industry practices such as licensing. Students will also learn the legal rules designed to encourage competition (and punish anticompetitive behavior). Finally, the course will help students to better appreciate when professional legal counsel is necessary, and how to manage those interactions more cost effectively. Although the course will impart advanced legal concepts, prior coursework in business law is not required.

BLAW 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

Cell and Molecular Biology - MD (CMBIO)

CMBIO 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

CMBIO 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

Prerequisite: ANAT 505

CMBIO 600: Thesis Research

1-15 Credits/Maximum of 999

No description.
CMBIO 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

Chemical Engineering (CHE)
CHE 501: Bioengineering Transport Phenomena
3 Credits
Application of the equations of mass, energy, and momentum conservation to physiological phenomena and to the design of artificial organs.
Cross-listed with: BIOE 501
CHE 503: Fluid Mechanics of Bioengineering Systems
3 Credits
Cardiovascular system and blood flow, non-Newtonian fluid description, vessel flows, unsteady flows and wave motion, windkessel theory, transmission line theory.
Prerequisite: BME 409 (equivalent to CH E 330, M E 320, or AERSP 308)
Cross-listed with: BIOE 503
CHE 510: Surface Characterization of Materials
3 Credits
Physical and chemical principles of characterization techniques widely used in materials science, chemistry and engineering. CH E (MATSE) 510 Surface Characterization of Materials (3) Surface and interface characterization is an important subject in nanotechnology, heterogeneous catalysis, semiconductor processing, advanced functional materials, biomaterials, corrosion, environmental science, and tribology. This course will study the physical and chemical principles of representative characterization techniques widely used in these research areas. Topics covered in this course include surface chemistry and physics fundamentals, x-ray and electron-based spectroscopy, vibration spectroscopy, ellipsometry, microscopy with physical probes, and multivariate data analysis. Physical principles and practical applications will be studied through theoretical calculations, data analysis, and literature reviews.
Cross-listed with: MATSE 510
CHE 512: Optimization and Biological Networks
3 Credits
Mathematical optimization, formulation and solution techniques for linear, nonlinear, and mixed-integer problems; optimization-based tools for reconstruction, analysis, and redesign of biological networks. CH E 512 Optimization and Biological Networks (3) This course focuses on the principles and applications of mathematical optimization in biological systems. The first part of the course addresses optimization theory, solution algorithms, and implementation software. Topics include nonlinear optimization, linear programming, mixed-integer linear and nonlinear optimization, and bi-level optimization. Emphasis will be placed on understanding the logic of the methodology, underlying key assumptions, comparative merits and shortcomings, and applications for solving engineering problems. Valuable hands-on experience will be provided on coding optimization models using GAMS (General Algebraic Modeling System) and specialized optimization solvers. The latter part of the course concentrates on applying the tools necessary to address the challenges arising in biological networks. Specifically, the use of optimization in reconstructing and analyzing genome-scale models of metabolism, protein library design strategies, regulatory network elucidation, and synthetic circuits design as well as optimal modifications in metabolic networks for various bioengineering tasks will be studied.
CHE 524: Chemical Engineering, Application of Thermodynamics
3 Credits
Elements of thermochemistry and thermodynamics of greatest importance in chemical engineering.
CHE 528: Colloidal Forces and Thermodynamics
3 Credits
Unified treatment of formation, growth and stability of colloids based on principles of intermolecular and colloidal forces and thermodynamics.
Prerequisite: CHEM 450, CH E 320 or an equivalent background in chemical thermodynamics
CHE 535: Chemical Reaction Engineering
3 Credits
Optimal design of batch and continuous chemical reactors and reactor batteries; effect of mixing on reactor operation.
CHE 536: Heterogeneous Catalysis
3 Credits
Thermodynamics and kinetics of adsorption and reactions on solid surfaces, heat and mass transfer effects, theory and correlations in catalysis.
Prerequisite: CHEM 450, CHEM 452
CHE 544: General Transport Phenomena
3 Credits
Formulation and solution of transport problems involving momentum, heat, and mass transfer, with chemical engineering applications.
Prerequisite: CH E 330, CH E 350, CH E 410
CHE 546: Transport Phenomena II
3 Credits
Heat and mass transfer, steady and unsteady state, coupling, molecular diffusion, moving boundaries, transfer coefficients, chemical engineering applications.
CHE 576: Environmental Transport Processes
3 Credits
Fundamentals of chemical transport in engineered environments, such as biofilm reactors, and natural systems including aquifers and rivers. C E 576C E 576 Environmental Transport Processes (3) Environmental Transport Processes covers the fundamental of mass transport of
Chemicals between air, water, soil, and biota. Material is divided into three subject areas: mass transfer theory, transport processes related to engineered reactors, and transport in the natural environment. The focus of the course is on chemical calculations particular to dilute systems, with emphasis on quantifying chemical transport rates and distributions in natural and engineered environments. Special topics of interest to environmental engineers include biofilm models, bioreactors, chemical partitioning in thin fluid film bioreactors, and fate of anthropogenic chemicals from spills and discharges into the environment (i.e., rivers, lakes, and groundwater). Faculty: Bruce E. Logan

**Prerequisite:** C E 475

Cross-listed with: CE 576

CHE 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

CHE 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

CHE 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

CHE 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

CHE 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

CHE 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

Opportunity for supervised and graded teaching experience for graduate students in chemical engineering.

**Prerequisite:** At least one year of graduate study in chemical engineering.

CHE 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

CHE 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

---

**Chemistry (CHEM)**

**CHEM 500: Seminar in Chemistry**

1 Credits/Maximum of 99

No description. CHEM 500 Seminar in Chemistry (1)CHEM 500 is a course in which 1st and 2nd year Chemistry graduate students write about and present a seminar on current chemical research. During their first year of graduate study students are asked to write 6 or more brief reports summarizing and critiquing designated seminars in one of the department’s five regular seminar series. These reports are graded for both their scientific content and writing quality. During their second year of graduate study students are asked to write a more lengthy report and give an oral presentation on a topic of current interest in chemistry, but one not closely related to research being done at Penn State. The written and oral portions of this exercise are also graded. Faculty: Andrew Ewing and Mark Maroncelli

**CHEM 511: Chemical Nanoscience**

3 Credits

Chemical aspects of matter at the nanoscale. CHEM 511 Chemical Nanoscience (3) This course covers chemical aspects of nanoscience. Topics to be covered include how nanoscale matter differs from bulk material; strategies for synthesis, characterization, purification, and chemical functionalization of nanostructures; forces involved in nanoparticle stabilization and assembly. Emphasis will be placed on wet chemical methods of nanostructure syntheses rather than traditional top-down nanofabrication. Properties of the resulting nanomaterials of interest for uses including biology and medicine, environmental remediation, electronics, optics, catalysis and solar energy conversion will be discussed. The course will emphasize both the primary scientific literature and review articles, and assumes prior knowledge of organic and physical chemistry.

**Prerequisite:** CHEM 452 and either CHEM 450 or CHEM 466

**CHEM 516: Inorganic Chemistry**

3 Credits

Overview of systematic inorganic chemistry including main group, transition metal, lanthanide, and actinide chemistry. CHEM 516 Inorganic Chemistry (3) The purpose of this course is to provide a graduate level foundation in the field of inorganic chemistry and its relationship to other areas of science and technology. The emphasis will be on atomic and molecular structure, synthesis methods, and structure-property relationships in a way that will prepare students for studies in more specialized areas such as environmental chemistry, catalysis, materials science, and the biological fields. Opportunities will be provided to integrate the learning experience with the organization of information through writing assignments and class discussions.

**CHEM 517: Organometallic Chemistry**

3 Credits

Organometallic compounds and their use in catalysis and organic synthesis. CHEM 517 Organometallic Chemistry (3) CHEM 517 provides a graduate-level foundation to a broad range of topics in organotransition metal chemistry with a particular emphasis on catalytic applications in polymer chemistry and organic synthesis. The course assumes a B.S.-level understanding of inorganic and organic chemistry. Topics
to be covered include the following: basic principles of bonding and structure, elementary reaction mechanisms, and catalytic applications including olefin insertion reactions, cyclosimerization reactions, carbene chemistry including olefin metathesis, carbynylations, reactivity of metal allyl complexes, cross coupling and related Cn-dash;C bond formations, oxidations, reductions and alkylations. Upon successful completion of this course, students can expect to: 1) understand basic concepts in bonding and molecular structure of organometallic compounds, 2) be able to connect electronic and molecular structure with chemical reactivity, 3) describe organometallic reactivity in a mechanistically rigorous fashion, 4) be familiar with common catalytic paradigms that rely on organometallic catalysts, 5) be equipped to critically evaluate the modern primary literature in this field.

CHEM 518: Symmetry and Spectroscopy in Inorganic Chemistry
3 Credits/Maximum of 99

Group theoretical methods and spectroscopies of importance in modern inorganic chemistry. CHEM 518 Symmetry and Spectroscopy in Inorganic Chemistry (3 per semester) CHEM 518 provides a graduate-level foundation in molecular group theory and its use in understanding the molecular orbital structure of organic and inorganic molecules. EPR, NMR, rotational, vibrational, and electronic spectra of molecules are considered with an eye towards using symmetry to simplify analysis. Other spectroscopies of interest to the modern inorganic chemist, such as XPS, PES, and x-ray crystallography are also discussed.

Prerequisite: CHEM 452

CHEM 519: Materials Chemistry
3 Credits

An overview of the role played by chemistry in the field of materials science. CHEM 519 Materials Chemistry (3) The goal of this course is to provide students with an understanding of the ways in which fundamental chemical principles are utilized in the field of materials science. The approach is to illustrate the crucial importance of synthesis and structure-property chemical relationships in the development of new materials and their utilization in devices. Topics include glasses, oxides and non-ceramics, polymers, metals, semiconductors, superconductors, hybrid materials, and nanomaterials together with the broad range of energy-related, electronic, biomedical, and optical devices on which modern civilization depends. Most of the different types of materials will be discussed, together with approaches to overcome their limitations.

Prerequisite: CHEM 410 , CHEM 412 , or CHEM 413 , CHEM 432 , CHEM 474 , CHEM 516 , CHEM 517 , CHEM 518 , CHEM 535 , or CHEM 537

CHEM 524: Electroanalytical Chemistry
3 Credits

Electrochemical principles, techniques, and analytical applications. CHEM 524 Electroanalytical Chemistry (3) CHEM 524 covers the fundamental background and applications of electroanalytical methods. Potentiometric methods are discussed in the context of the basic principles of electrochemical equilibrium. Amperometric methods - chronocoulometry, chronocoulometry, stripping voltammetry, cyclic voltammetry, pulse and hydrodynamic techniques - are also discussed in the context of mathematical models for mass transport and electrode kinetics. Applications including spectrelectrochemistry, photoelectrochemistry, ultramicroelectrodes, corrosion, and scanning electrochemical microscopy are covered. The course involves solving differential equations relevant to electrochemical problems by analytical methods as well as by means of digital simulations, so prior knowledge of a programming language is recommended.

CHEM 525: Analytical Separations
3 Credits

Fundamentals and applications of modern chromatographic separations. Cross-listed with: BMB 525

CHEM 526: Spectroscopic Analysis
3 Credits

An overview of modern instrumental techniques including FTIR, optical spectroscopy, mass spectrometry, and electron spectroscopies.

CHEM 535: Physical Organic Chemistry
3 Credits

Reactive intermediates, reaction kinetics and thermodynamics, solvent effects, conformational analysis, reaction mechanisms, noncovalent interactions in synthesis, and stereochemistry.

Prerequisite: CHEM 212

CHEM 536: Medicinal Chemistry and Chemical Biology
3 Credits

The goal of this course is to provide a foundation in development and application of chemical technologies to the understanding and manipulation of biological systems. Chemical biology is a relatively new field that spans the traditional fields of chemistry and biology by applying chemical technologies to the understanding and manipulation of biological systems. As such, this course should be accessible and provide benefit to students working in both chemical and biological areas. Lectures include higher-level biological chemistry (assuming prior knowledge of biological chemistry at an undergraduate level, such as CHEM 476 or BMB 401) and synthetic chemistry and biology principles along with current literature in the field of chemical biology.

Prerequisite: CHEM 476 or B M 401

CHEM 537: Organic Synthesis
3 Credits

Organic synthesis including both classical and modern synthetic methodology as well as applications to construction of complex molecules.

Prerequisite: CHEM 535

CHEM 538: Spectroscopic Methods in Bioinorganic Chemistry
3 Credits

Foundations in spectroscopic methods employed for the determination of the geometric and electronic structure of transition metal clusters in nature.

Cross-listed with: BMB 538
CHEM 539: Biochemical Reaction Mechanisms
3 Credits
Mechanisms of the most important biochemical reactions, with emphasis on enzyme catalysis.
Prerequisite: CHEM 476 or B M B401
Cross-listed with: BMMB 539

CHEM 540: Biophysical Chemistry
3 Credits
Structure of biomacromolecules, physical techniques for the study of structure and function, thermodynamic and kinetic studies of biomacromolecules in solution.
Prerequisite: CHEM 450

CHEM 543: Polymer Chemistry
3 Credits
This graduate course discusses the new advances in polymer chemistry that leads to new polymeric materials with interesting structures and properties. CHEM (MATSE) 543CHEM (MATSE) 543 Polymer Chemistry (3) This course provides advance level of polymer chemistry and materials taught in MATSE 441 - Polymeric Materials. Students are able to know the versatility that is inherent in polymer chemistry and the new research results and activities, especially controlling polymerization, polymer structures, designing polymers with desirable properties, etc. Students shall also understand the major economic and environmental concerns and solutions in producing commercial-scale polymers. This polymer chemistry course provides important links between chemistry and polymeric materials. The course will focus on recent advances in polymer chemistry that affords new polymer materials with controlled polymer structures, compositions, and properties, as well as economic and "green" processes. This course is designed for graduate students having basic knowledge in organic, inorganic, and organometallic principles. For Chemistry major, this course offers students with the knowledge to apply chemical principles and methods to design and prepare the desirable polymers (no prerequisite for Chemistry graduate students). For Material Science and other majors, this course provides advance level of polymer chemistry and materials taught in MATSE 441 (a prerequisite course). In addition, each student will be required to review (presentation and term-paper) a contemporary subject relative to polymer chemistry, which will help student self-education, and presentation and writing skills. Students will be evaluated by quizzes and examinations, a term-paper and presentation, and class participation.
Prerequisite: MATSE441 or approval of program
Cross-listed with: MATSE 543

CHEM 545: Statistical Thermodynamics
3 Credits
Basic principles of statistical mechanics with application to the calculation of thermodynamic properties of gases and condensed phases.
Prerequisite: CHEM 450, CHEM 452

CHEM 556: Quantum Chemistry I
3 Credits
A foundation in the principles of quantum mechanics and their applications to chemistry
Prerequisite: CHEM 452

CHEM 556: Quantum Chemistry II
3 Credits
Additional techniques in quantum mechanics, with applications to problems in molecular structure and light-matter interactions.
Prerequisite: CHEM 565

CHEM 567: Molecular Spectroscopy
3 Credits
Principles and applications of classical and modern spectroscopic methods.
Prerequisite: CHEM 565

CHEM 572: Nucleic Acids Chemistry
3 Credits
Biophysical and biochemical approaches for studying structure-function relationships in nucleic acids. BMMB (CHEM) 572 Nucleic Acids Chemistry (3) The goal of this course is to provide a foundation in biophysical approaches for studying the quantitative and structure-function relationships in nucleic acids systems, including DNA, RNA, and their interactions with proteins, salt, and water. Lectures include basic physical chemistry and statistical mechanics principles along with current literature in the biochemical sciences. At the end of the course, you should be able to meaningfully dissect molecular biological papers at the level of the physical chemistry of these processes. Current topics are introduced through reading and presenting papers from the literature.
Prerequisite: CHEM 212, CHEM 450
Cross-listed with: BMMB 572

CHEM 573: NMR Spectroscopy for Synthetic and Biological Chemistry
3 Credits
Nuclear magnetic resonance approaches for characterizing the structure and dynamics of synthetic compounds, natural products, and biological macromolecules.
Prerequisite: CHEM 452
Cross-listed with: BMMB 573

CHEM 589: Studies in Chemistry
1-9 Credits/Maximum of 9
Theoretical research, experimental research, or a critical survey of the literature in an area of chemistry.
CHEM 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently.

CHEM 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

CHEM 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

CHEM 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
Teaching of chemistry undergraduate laboratory and recitation classes with senior faculty instruction supervision.

CHEM 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

CHEM 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999
No description.

CHEM 810: Liquid Chromatography I
1 Credits
The course specifically caters to the needs of the analytical chemical industry and individuals newly hired into entry-level sample management/ preparation and quality assurance/quality control positions within companies using liquid chromatographic techniques. The course material is designed to increase student understanding of both the liquid chromatography instrument used in the laboratory and the principles underlying the measurements.

Prerequisite: CHEM 811

CHEM 811: Liquid Chromatography II
1 Credits
The course specifically caters to the needs of the analytical chemical industry and individuals hired into, or transitioning into, technician level positions within companies using liquid chromatographic techniques. The course material is designed to increase student understanding of both the liquid chromatography instrument used in the laboratory and the principles underlying the measurements.

Prerequisite: CHEM 810

CHEM 812: Liquid Chromatography III
1 Credits
The course specifically caters to the needs of the analytical chemical industry and individuals hired into, or transitioning into, development- level, or senior-level, chemist positions within companies using liquid chromatographic techniques. The course material is designed to increase student understanding of both the liquid chromatography instrument used in the laboratory and the principles underlying the measurements.

Prerequisite: CHEM 811

Chinese (CHNS)

CHNS 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

Civil Engineering (CE)

CE 511: Engineering Soil Characteristics
3 Credits
Applications of physico-chemical principles in soil engineering; soil composition; factors influencing engineering soil properties.

Prerequisite: C E 335

CE 512: Soil Mechanics II
2-5 Credits/Maximum of 5
Evaluation of strength parameters and compressibility of soils; elastic analysis of stress and strain; techniques of forecasting foundation settlement; slope stability analysis.

CE 513: Advanced Foundation Engineering
3 Credits
Practical applications of soil mechanics principles to geotechnical engineering problems; dewatering techniques; design of deep foundations and retaining structures.

Prerequisite: C E 335

CE 521: Transportation Networks and Systems Analysis
3 Credits
Techniques of transportation network, user, stochastic user, and variable demand equilibrium; transportation activity system; computer simulation techniques and forecasting methods.

Prerequisite: 3 credits of computer science

CE 523: Analysis of Transportation Demand
3 Credits
Theories of travel behavior, least squares and maximum likelihood, estimation methods, continuous dependent variable models, utility maximization, discrete econometric techniques.

Prerequisite: 3 credits of probability and statistics
CE 525: Transportation Operations
3 Credits
Tools for analyzing transportation operations, including: properties of traffic streams, queueing, traffic dynamics, networks, probability and estimation of traffic properties. C E 525 Transportation Operations (3) This course presents the concepts of traffic and transportation operations necessary for students pursuing an advanced degree in transportation engineering. While the course focuses on surface traffic and related systems, the tools and methods discussed can be used in other sub-disciplines (e.g., public transportation, aviation, and bicycle/pedestrian movement) to analyze operations. Logic and methods are emphasized as opposed to recipes that are specific to certain modes.
Prerequisite: C E 423

CE 526: Highway and Street Design
3 Credits
Technical analysis of the design elements of roadways, alinement, cross-section features, and intersection and interchange design considerations.
Prerequisite: C E 421

CE 527: Roadside Design and Management
3 Credits
Roadside safety and design, safety management, pavement management, lighting, signs, signals, and markings, clear zone, guiderail, impact attenuators.
Prerequisite: C E 421W

CE 528: Transportation Safety Analysis
3 Credits
Issues and methods in transportation safety analysis; factors contributing to crashes; crash causation; modeling accident occurrence; identifying sites for treatment. C E 528C E 528 Transportation Safety Analysis (3) This course introduces students to issues and methods in transportation safety analysis; factors contributing to crashes; methods of analysis for determining crash causation; modeling accident occurrence; identifying crash sites for treatment. Students will be evaluated using periodic homework assignments, a mid-term exam, and a class project. Students are expected to learn fundamental aspects of highway accident occurrence and modeling. They will be introduced to modeling techniques and methods used to assess causality in crashes. The course is offered annually in the fall semester.
Prerequisite: STAT 401

CE 531: Legal Aspects of Engineering and Construction
3 Credits
Basic legal doctrines, contractual relationships between parties, analysis of construction contract clauses, contract performance, and professional practice problems.
Prerequisite: C E 431W
Cross-listed with: AE 531

CE 533: Construction Productivity Analysis and Performance Evaluation
3 Credits
Construction productivity concepts and models; productivity measurement, control, and forecasting; analysis of factors affecting productivity; methods improvement techniques.
Prerequisite: STAT 401; C E 431 or A E 474

CE 535: Integrated Project Management for Civil Engineers
3 Credits
This course will present the project management process to students pursuing a graduate degree in Civil Engineering. The course will utilize a project/group-based learning process to teach project management's value, methodology, and application to civil and environmental engineering projects in the student's particular emphasis area (Infrastructure, Transportation Systems, or Water and Environment). Students will learn how to initiate, plan, organize, staff, direct, control, and closeout a project. Key topics to be discussed include: the role of the project manager, civil engineering project procurement/proposal development, importance and skills of communications, project team development and leadership, team conflict resolution, design management, scope management, work breakdown structure (WBS), scheduling/time management, budgeting/cost management, risk management, resource management, crisis management, earned value, project evaluation and control, and project closeout and termination.

CE 536: Topics in Biogeochemistry
2 Credits/Maximum of 999
This seminar addresses chemical interactions between the biosphere and the physical environment over Earth's history and as impacted by humans. This course will provide a broad survey of biogeochemical principles, and offer a community-building experience for students with biogeochemical interests from diverse departments. Students will complete the course with a synthetic knowledge of the key topics in the field of biogeochemistry. Each week we will focus on a topic within the broad field of biogeochemistry such as: origins of the elements, reactions in the atmosphere, soil development, the distribution of redox reactions and microbial metabolic pathways, and the global cycles of carbon, water, nitrogen, phosphorus, sulfur, mercury, and perhaps other elements. For each topic, we will focus on the questions: What is known or can be observed? How is this information used to understand biogeochemical phenomena and process? How are these processes scaled over time and space? What are emerging and important questions in the subspecialties of biogeochemistry?
Cross-listed with: GEOSC 536, SOILS 536

CE 538: Earthquake Resistant Design of Buildings
3 Credits
Introductory engineering seismology, basic principles of structural dynamics, application of earthquake design provisions of model building codes to design of buildings. A E (C E) 538 Earthquake Resistant Design of Buildings (3) The main objective of this course is to familiarize students with basic principles of design of buildings to resist earthquake effects. Since building design is governed by the Building Code, currently, International Building Code that adopts American Society of Civil Engineers (ASCE) document ASCE-7 for load determination, the
seismic provisions of ASCE-7 will be used as the basis for design. The course starts by introducing earthquake phenomenon and engineering seismology concepts. The basic principles of structural dynamics are then covered for single degree of freedom systems starting from free vibration to random loading so that students learn how a ground acceleration time-history subjected to the base of a building can be converted to a time varying effective seismic load on the mass. After introduction of response spectrum, introductory material on multi-degree of freedom systems is introduced so that students can determine natural frequencies and mode shapes for multi-story buildings and perform modal superposition analysis to determine displacement and force responses. Next, the principles of earthquake resisting design related to energy dissipation, ductility, over-strength, and redundancy followed by seismic provision of the building code are discussed. The main design principles related to the two main materials for building construction consisting of reinforced concrete and structural steel are next discussed. The focus will be to illustrate how lateral load resisting systems such as shear walls, moment resisting frames, or braced frames made with such materials as appropriate are designed to resist earthquake effects based on respective material code provisions, that is, American Concrete Institute (ACI) for concrete and American Institute of Steel Construction (AISC) for steel. The last part of the course will introduce seismic retrofit, base isolation systems and the concept of performance based design.

**Prerequisite:** A E 401, A E 402, A E 430

Cross-listed with: AE 538

CE 539: Approximate Methods of Structural Analysis

3 Credits

Structural analysis through the application of initial-value methods, Newmark’s method, Fourier series, finite difference techniques, and work and energy procedures.

**Prerequisite:** C E 340

CE 540: Statically Indeterminate Structures

3 Credits

Analysis of statically indeterminate straight/curved beams, grids, 2D/3D frames, arches, cables, and shells using classical and modern techniques. C E 540C E 540 Statically Indeterminate Structures (3) This course introduces students to various methods for analyzing statically indeterminate structural systems, including: straight and curved beams, grids, 2D and 3D frames, arches, cables, and shells. Both classical hand calculation approaches and more modern computer based approaches that utilize force and displacement based methods are discussed. Additional analysis topics, such as plastic analysis and the examination of beams on elastic foundations are presented. The procedures are introduced to the students so that their ability to analyze statically indeterminate structural systems is enhanced. In addition, practical applications for the methods that are discussed are presented.

**Prerequisite:** C E 447

CE 541: Structural Analysis

3 Credits

Theory of various finite elements as applied to civil engineering structures. Term paper required.

**Prerequisite:** C E 447

CE 542: Building Enclosure Science and Design

3 Credits

The building enclosure: nature, importance, loadings; building science: control of heat, moisture, air, hygrothermal analysis; design: walls, windows, roofs, joints. A E 542 A E (C E) 542 Building Enclosure Science and Design (3) The building enclosure, or envelope, is the environmental separator in any building and is, like the superstructure and the service systems, one of the major physical components of the building. The primary objective of this course is to develop an understanding of the nature, importance, functions, and performance of the building envelope in general. The necessary building science—concerning primarily heat, moisture, and air—is covered, and hygrothermal analysis procedures are developed. A generalized categorization system for enclosure elements, i.e., walls (both above- and below-grade), roofs, and other enclosure sub-assemblies is proposed. General design strategies are developed. The design of specific wall systems (both above- and below-grade), roof systems, base floors, windows, and their joints is then addressed in some detail. The integration of structures (composite action, restraints, etc.), service systems (especially energy consumption), and finish (exterior and interior) is considered in sonic detail. Evaluation is based on an equal combination of assignments (6) and examinations (2). This course complements courses in architecture, civil engineering, architectural engineering, and mechanical engineering.

Cross-listed with: AE 542

CE 543: Prestressed Concrete Behavior and Design

3 Credits

Design and behavior of prestressed concrete structures: materials and systems losses, flexure, shear, bond, deflections, partial prestressing, continuous beams.

**Prerequisite:** C E 341, A E 402, or approved equivalent

CE 544: Design of Reinforced Concrete Structures

3 Credits

Advanced topics in design of reinforced concrete structures. Torsion and shear; beam moment-curvature; two-way slab systems; slender columns; strut- and-tie methodology. C E 544 C E 544 Design of Reinforced Concrete Structures (3) This course explores advanced topics in the design of reinforced concrete structures in conformance with standardized building codes. Topics covered include load combinations, principles of structural modeling, torsion and shear in reinforced concrete members, two-way slab systems, moment-curvature of beams, slender columns, and strut-and-tie models. Students enrolled in this course should have prior knowledge of the design of reinforced concrete beams, one-way slabs, and short columns. Due to the course content, students must be familiar with the American Concrete Institute (ACI) Building Code Requirements for Reinforced Concrete This course will generally be offered each fall, with an anticipated enrollment of 10. Grades will be based on two examinations, assignments, and a comprehensive final examination.

CE 545: Metal Structure Behavior and Design

3 Credits

Design philosophies and basis; seismic loading; fatigue; bending, column, plate, and beam-column stability; tapered members; torsion; connections;
CE 545: Metal Structure Behavior and Design (3) This course presents advanced topics in elastic and inelastic structural metal member behavior and the theoretical basis of modern design codes and procedures. Philosophies of design, fatigue, bending stability and tapered members, torsion, stability of plates, stability of columns, stability of beam-columns and bi-axial bending, connections, and frame stability are covered in depth in addition to other topics relating to advanced behavior and design of metal structures. Students interested in this course must be familiar with the American Institute of Steel Construction (AISC) Manual of Steel Construction. This course will generally be offered each fall, with an anticipated enrollment of 12. Grades will be based on homework assignments, a semester project, two examinations, and a comprehensive final examination.

CE 546: Reinforced Concrete Slabs
3 Credits
Behavior, analysis, and design of floor systems; elastic, ACI Code method, yield line theory; two-way, flat slab, flat plate.

Prerequisite: C E 341

CE 548: Structural Design for Dynamic Loads
3 Credits
Dynamic behavior of structural systems of one and more degrees of freedom; earthquake, blast-resistant analysis, and design of structures.

Prerequisite: MCH212, C E 340

CE 549: Bridge Engineering I
3 Credits
Engineering of modern steel and concrete bridge structures; loading; analysis; design.

Prerequisite: C E 448W

CE 550: Engineering Construction Management
3 Credits
Management fundamentals for construction contracting; organization, project planning, scheduling and control, bonding and insurance, labor legislation and regulation, cost and control.

Prerequisite: C E 431

CE 552: Coastal and Nearshore Processes
3 Credits
Hydrodynamics of the near-shore environment, including waves, currents, and storm surges. Coastal response, sediment transport, engineering structures.

CE 555: Groundwater Hydrology: Analysis and Modeling
3 Credits
Introduction to groundwater resource analysis, model formulation, simulation, and design of water resource systems using symbolic and numerical methods.

Prerequisite: MATH 251

CE 556: Surface Hydrology
3 Credits
Quantification of the processes that govern the movement and storage of water near the land-surface including precipitation, evapotranspiration, and runoff. C E 561 C E 561 Surface Hydrology (3) Water is an important factor in numerous engineering and scientific problems. It can be both a hazard and a resource. Knowledge of the movements and storage of water in the terrestrial, oceanic, and atmospheric environments is fundamental in many such applications. This course provides a graduate level introduction to surface hydrology, which focuses on the quantification of water pathways near the land-surface. It presents basic properties of the terrestrial, oceanic, and atmospheric environments and develops water and energy budget equations for different settings and scales. The course also provides detailed quantitative descriptions of the main processes responsible for the movement of water in the environment including precipitation, evapotranspiration, snowmelt, infiltration, surface runoff, groundwater recharge, subsurface runoff, and streamflow.

CE 553: Systems Optimization Using Evolutionary Algorithms
3 Credits
Comprehensive introduction to genetic and evolutionary computation: genetic algorithms, evolutionary strategies, multi-objective optimization, parallelization approaches, and fitness approximation. C E 563 C E 563 Systems Optimization Using Evolutionary Algorithms (3) A comprehensive introduction to the field of genetic and evolutionary computation. The course emphasizes state-of-the-art methods for designing and implementing evolutionary algorithms for computationally intensive engineering and science problems. Course concepts are demonstrated using case studies drawn from the disciplines of the students enrolled. The course is offered every spring semester.

CE 554: Sediment Transport in Alluvial Streams
3 Credits
River flow, river channel formation, the physical characteristics of rivers, responses of rivers to natural and human-made changes. C E 564 C E 564 Sediment Transport in Alluvial Streams (3) A comprehensive presentation of river processes and engineering must be built upon the foundations of fluvial geomorphology, hydraulics of river flow, and sediment transport. The course is organized into the following five principal parts: Part I. Fluvial Geomorphology Part II. Foundations of Fluvial Process Part III.
Regime Rivers and Processes Part IV. Mathematical Modeling of River Channel Changes Part V. River Engineering

**Prerequisite:** C E 462

CE 566: Uncertainty and Reliability in Civil Engineering

3 Credits

Introduction to probabilistic modeling, simulation, uncertainty analysis, and reliability estimates applied to civil engineering. C E 566C E 566 Uncertainty and Reliability in Civil Engineering (3) The objective of this course is to develop understanding of the uncertainty in Civil Engineering analyses, design, and construction and to introduce reliability-based methods of analysis. The course covers review of probability and statistics, uncertainty analysis, probabilistic models of load and resistance, and the application of reliability analysis to problems in Civil Engineering.

CE 567: River Engineering

3 Credits

Introduction to river mechanics and fluvial geomorphology applied to problems of sediment transport and channel morphology. C E 567C E 567 River Engineering (3) River Engineering will introduce students to the concepts of flow and sediment transport in canals and alluvial rivers. This course covers: river morphology and hydraulic geometry; hydraulics of flow in river channels; measurement of velocity; rating curves; properties of sediment; scour-related problems; stream stability and classification; sediment movement in rivers; channel design; software for erodible channels; stream bank, bridge pier, and bridge abutment protection; environmental considerations; and stream restoration. During the semester, the students will visit local streams for the purpose of making various observations and measurements. Faculty: Peggy A. Johnson

CE 570: Environmental Aquatic Chemistry

3 Credits

Speciation, reactivity, and distribution of contaminants in water, with emphasis in inorganic chemicals.

**Prerequisite:** C E 475

CE 571: Physical-Chemical Treatment Processes

3 Credits

The theory of physical-chemical processes used in the treatment of potable water and municipal and industrial wastewaters.

**Prerequisite:** C E 472, C E 475

CE 572: Biological Treatment Processes

3 Credits

The theory and application of biological processes to treat organic wastes, including wastewater, solid residuals, and toxic priority pollutants.

**Prerequisite:** or concurrent: C E 475

CE 573: Environmental Organic Chemistry

3 Credits

Theory, measurement, and estimation of the characteristics and environmental transformations of hazardous materials.

**Prerequisite:** C E 475

CE 574: Reactive Transport Processes in Porous Media

3 Credits

Recommended Preparations: It is recommended that the students have taken courses on principles of water chemistry, biogeochemistry, or water-rock interactions. This course teaches principles and modeling of flow, transport, and reaction processes in the natural and built environment. The course targets students from a range of disciplines where water-mineral-microbe interactions play a key role. This includes, but not limited to, environmental engineering, water resources, geosciences, petroleum and natural gas engineering, agricultural engineering, civil engineering, chemical engineering, and applied mathematics. The course teaches fundamental concepts, mathematical formulation, and quantitative representation, and applications of multi-component reactive transport processes. The learning outcomes are to 1) understand fundamental concepts of biogeochemical reactions, flow, and solute transport; 2) understand reactive transport equations and concepts of numerical solution; 3) develop computational skills using a reactive transport modeling code. The students will grasp reactive transport concepts, as well as skills to set up reactive transport models, interpret data, and predict subsurface physical flow and geochemical and microbiological process coupling.

CE 575: Industrial Waste Management

3 Credits

Surveys and analysis, pollution prevention, regulatory requirements, treatment and disposal of liquid, gaseous and solid residues.

**Prerequisite:** C E 472

CE 576: Environmental Transport Processes

3 Credits

Fundamentals of chemical transport in engineered environments, such as biofilm reactors, and natural systems including aquifers and rivers. C E 576C E 576 Environmental Transport Processes (3) Environmental Transport Processes covers the fundamental of mass transport of chemicals between air, water, soil, and biota. Material is divided into three subject areas: mass transfer theory, transport processes related to engineered reactors, and transport in the natural environment. The focus of the course is on chemical calculations particular to dilute systems, with emphasis on quantifying chemical transport rates and distributions in natural and engineered environments. Special topics of interest to environmental engineers include biofilm models, bioreactors, chemical partitioning in thin fluid film bioreactors, and fate of anthropogenic chemicals from spills and discharges into the environment (i.e., rivers, lakes, and groundwaters). Faculty: Bruce E. Logan

**Prerequisite:** C E 475

Cross-listed with: CHE 576
CE 577: Treatment Plant Design
3-6 Credits/Maximum of 6
Design of works for the treatment of water and wastewater for municipalities and industries.
Prerequisite: CE 472; 3 credits in hydraulics

CE 578: Groundwater Remediation
3 Credits
Application of fundamental physical/chemical/biological processes in natural and engineered systems for remediation of contaminated soil and groundwater.
Prerequisite: CE 475

CE 579: Environmental Pollution Microbiology
3 Credits
Fundamentals of microorganisms in water and wastewater treatment; indicators of pollution; activities of microorganisms in polluted waters, including biogeochemical cycles.

Cross-Listed

CE 580: Hydrodynamic Mixing Processes
3 Credits
Physical mixing processes in rivers, estuaries, lakes, and oceans. Analytic methods and computational modeling. C E 580C E 580 Surface Water Quality Models (3) Hydrodynamic Mixing Processes is concerned with the transport and dispersal of tracers in natural water and air environments. It straddles the boundary between traditional civil engineering fluid mechanics (concerned with water quantity) and environmental engineering (concerned with water quality). Emphasis is placed on understanding the physical hydrodynamic processes responsible for tracer dispersal and application to practical problems through use of freely-available numerical models.

CE 581: Pavement Management and Rehabilitation
3 Credits
Techniques of network and project level pavement management, field evaluation methods and equipment, maintenance and rehabilitation strategies, overlay design procedures.
Prerequisite: CE 421

CE 582: Pavement Design and Analysis
3 Credits
Viscoelastic analysis; non-linear analysis; fatigue and permanent deformation; back-calculation of layer moduli; mechanistic-empirical design methods.

CE 583: Bituminous Materials and Mixtures
3 Credits
Composition, physical behavior, production, and performance of bituminous materials and mixtures.

CE 584: Concrete Materials and Properties
3 Credits
Study of concrete properties and associated variables, prediction models, testing, preventative measures, pozzolans, admixtures.
Prerequisite: AE 221 or CE 336

CE 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

CE 591: Environmental Engineering Seminar
1 Credits
Seminar topics selected by faculty and students based on research interests on topics related to environmental engineering and science. C E 591C E 591 Environmental Engineering Seminar (1) This is a seminar course offered primarily for graduate students in Environmental Engineering, although other graduate students with interests in environmental research take this course. Graduate students may receive only 1 credit of this seminar towards a degree in Environmental Engineering, however, they are encouraged to register and attend every semester during their graduate career. This course is offered for 1 credit for both fall and spring semesters. Students making presentations receive letter grades, while others receive a satisfactory/unsatisfactory grade. Seminar topics are selected by faculty and students based on research interests on topics related to environmental engineering and science. Most of the talks will be by environmental engineering graduate students. However, during the semester there will typically be three outside speakers that will be invited to give talks. Students in this class are expected to meet with these outside speakers in the laboratory to discuss their own research projects. Students in this class give short presentations on their research topics. Each presentation should be about 20 minutes in length, allowing for 10 minutes of questions concerning the technical content of the presentation. The rest of the class is used for general discussion. Students are encouraged to give a seminar even though they have not completed all of their research (i.e. prior to their defense). Feedback from faculty and other students in this informal setting can be used to help improve research ideas and stimulate new ideas and research directions during the course of their research work.

CE 592: Environmental Engineering & Science Topics
1 Credits
Current topics in environmental engineering and science. C E 592C E 592 Environmental Engineering Science Topics (1) This is a literature review course for graduate students interested in topics related to environmental engineering. The subject of this seminar changes each semester. Examples of topics include: membrane bioreactors; biological hydrogen production; metal reduction by soil bacteria; anaerobic respiratory pathways used by bacteria for pollutant degradation. This class is highly participation-oriented. Each week we review a single paper selected by the instructor or by a student in the class. The first two papers are selected by the instructor. Thereafter, students choose the paper. The paper must be selected one week in advance, and sufficient copies will either be brought to class or a pdf file will be provided by email to all participants one week prior to the class. The student choosing the
paper will be expected to lead the discussion by: prompting others to provide a summary of the paper or of key items; suggesting areas that require closer inspection; stimulating a critical evaluation of the paper. No background is needed on this topic other than general environmental engineering courses typical of an M.S. program in Environmental Engineering.

CE 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

CE 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

CE 597G: **SPECIAL TOPICS**
1-3 Credits

CE 598: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

CE 599: Foreign Studies
1-2 Credits/Maximum of 4
Courses offered in foreign countries by individual or group instruction.

CE 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

CE 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

CE 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
Supervised experience in college teaching.

CE 603: Foreign Academic Experience
1-9 Credits/Maximum of 18
Foreign study and/or research constituting progress towards the degree at a foreign university.

CE 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

Classics and Ancient Mediterranean Studies (CAMS)

CAMS 521: Advanced Akkadian
3 Credits
Advanced study of Akkadian grammar and the cuneiform script through the reading of texts in various dialects.

CAMS 592: Proseminar
3 Credits
Introduction to the history, research methods, historiography of modern scholarship on ancient Mediterranean studies. CAMS 592 Proseminar (3)The specific aim of this proseminar is to provide a foundation for scholarly work in the disciplines included within Classics and Ancient Mediterranean Studies. This proseminar will therefore introduce the student to the scope and nature of the ancient evidence (literary, documentary, material [archaeological], the history and historiography of modern study of that evidence and the ways in which research methodologies and techniques have evolved. In addition, the proseminar will introduce students to the nature of contemporary academic presentation and publishing, thereby to assist them in preparing research papers for scholarly dissemination.

CAMS 593: Research Seminar
3-6 Credits
Significant research experience in the fields represented by CAMS; guided supervision in the preparation of a scholarly article. CAMS 593 Research Seminar (3-6)The specific aim of this seminar is to provide a research experience in one of the disciplines included within Classics and Ancient Mediterranean Studies. This seminar will therefore introduce the student to the scope and nature of the ancient evidence (literary, documentary, material [archaeological], the history and historiography of modern study of that evidence and the ways in which research methodologies and techniques have evolved in a specific discipline of CAMS. In addition, the seminar will require students to present their own research topic in the form of a seminar presentation and a written paper suitable for submission for publication in a refereed journal.

Prerequisite: CAMS 592

CAMS 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.
Clinical and Translational Sciences (CTS)

CTS 590: Colloquium
1 Credits/Maximum of 3
Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

CTS 595A: Clinical Science Internship
3-6 Credits/Maximum of 999
Supervised, research-oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required. Students enrolling in this course must 1) be at least a 2nd year graduate student; 2) have completed the online CITI Program course in Human Subjects Research; and 3) have identified an available mentor in a clinical setting.

Prerequisite: CTS 590

CTS 595B: Translational Science Internship
3-6 Credits/Maximum of 6
Supervised, research-oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required. Students enrolling in this course must 1) be at least a 2nd year graduate student; 2) have completed the online CITI Program course in Human Subjects Research; and 3) have identified an available mentor in an industry setting.

Prerequisite: CTS 590

CTS 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

CTS 596B: IBD Nutr Clin Rota
3 Credits
IBD Nutr Clin Rota

CTS 596C: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

CTS 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently.

College Student Affairs (CSA)

Communication Arts and Sciences (CAS)

CAS 500: Historical Public Address
3 Credits/Maximum of 9
Special topics in American public address, 1765-1900; emphasis on rhetoric of revolution, reform, and reaction. CAS 500 CAS 500 Historical Public Address (3 per semester/maximum of 9) This is a graduate seminar focusing on special topics in the history of American public address, 1765-1900. It is designed to strengthen students' knowledge of the historical foundations of the American rhetorical tradition. Special attention is paid to key texts, debates, and movements shaping the origins and development of American nationhood. Emphasis is placed on the language of revolution, reform, and reaction. Special topics through which this course is to be taught may include: The Rhetoric of the American Revolution, Rhetoric of Abolitionism and Civil Rights, The Rhetoric of the Women's Suffrage Movement, Great Debates in American History, and Rhetoric and the American Presidency, 1789-1900. Students should consult with the instructor prior to enrolling to ascertain that the course topic is not the same as in prior enrollments.

Prerequisite: CAS 411

CAS 504: Contemporary Public Address
3-9 Credits/Maximum of 9
Special topics in recent history of American public address, including speeches, debates, persuasive campaigns, and social movements in America 1900-present. CAS 504 CAS 504 Contemporary Public Address (3 per semester/maximum of 9) This course is a graduate seminar focusing on special topics in the history of American public address since 1900. Through intensive study of great speeches and other rhetorical texts, important national debates and controversies, and significant persuasive campaigns and social movements, it cultivates specialized understanding of the distinctively American tradition of public advocacy and deliberation and illuminates how that tradition has evolved in response to political and social developments and new communication technologies. Special topics reflecting the research interests of current faculty who might be expected to teach the course include: "The Rhetoric of the Progressive Era," "The Rhetoric of the New Deal," "The Manifesto
Students will review philosophical and interpretive works, as well as institutions that feed into the overall system of public discourse in a society. These ideas fold into grander theories of deliberative democracy, which considers how everything from cultural practices to large-scale political problems, including polarization and incivility, and to generate more robust and reflective public policy solutions to complex problems. Further, deliberative ideals as toward them, and such movement can undermine a system's democratic legitimacy. This problem has inspired the study of political communication and media.

**CAS 505: Historical Development of Rhetorical Theory**
3 Credits/Maximum of 9

Study of one or more periods of rhetorical theory from Greek antiquity to 1900.

**Prerequisite:** CAS 420

**CAS 506: Contemporary Rhetorical Theory**
3 Credits/Maximum of 6

A study of rhetorical theory from 1930 to the present, focusing on semantic, political, sociological, symbolic, and philosophical perspectives.

**Prerequisite:** CAS 411, CAS 505

**CAS 507: Issues in Rhetorical Theory**
3 Credits/Maximum of 6

Theoretical, analytical, philosophical, and critical problems in human communication, with application of humanistic and social scientific research framework. CAS 507 CAS 507 Issues in Rhetorical Theory (3 per semester/maximum of 6) The seminar is available to members of the faculty who wish to explore specialized problems of a theoretical, analytical, philosophical, or critical nature in human communication research. Its content varies by instructor. Such subject areas of language and meaning, epistemology, ethics and moral philosophy, metaphysics and ontology, the functions of myth, cognition, child development, and brain function may be considered for the contributions they make to our understanding of rhetorical behavior. Special topics reflecting the research interests of current faculty who might be expected to teach the course include: "Rhetoric, Myth, and Cosmology," "Rhetoric and Ethics," "The Rhetorical Construction of Social Identity," and "Rhetoric and Public Deliberation." Students should consult with the instructor prior to enrolling to ascertain that the course topic is not the same as in prior enrollments.

**Prerequisite:** CAS 420

**CAS 509: Democratic Deliberation**
3 Credits

Modern political systems are as likely to move further away from deliberative ideals as toward them, and such movement can undermine a system's democratic legitimacy. This problem has inspired the development of deliberative democratic theory and research, which provides a powerful critique of contemporary politics. The study of deliberation dates back to ancient Greece, which gave us forms of speech that endure to the present day. Current conceptions stress public deliberation and dialogue's potential to ameliorate social and political problems, including polarization and incivility, and to generate more robust and reflective public policy solutions to complex problems. These ideas fold into grander theories of deliberative democracy, which considers how everything from cultural practices to large-scale institutions feed into the overall system of public discourse in a society. Students will review philosophical and interpretive works, as well as empirical research on deliberation utilizing case studies, surveys, and experiments. This seminar also helps students plan and execute their own contributions to this growing body of scholarship.

**CAS 515: Rhetoric and Media**
3 Credits/Maximum of 9

Seminar in the application of rhetorical theory and criticism to television, film, and other media. CAS 515 CAS 515 Rhetoric and Media (3 per semester/maximum of 9) Seminar in the application of rhetorical theory and criticism to television, film, and other media. In a recent offering of the seminar, we studied the films of Alfred Hitchcock from the point of view of The Rhetoric of the Thriller. The Films of Alfred Hitchcock as Art, Entertainment, and Social Text. This course offered an intensive examination of the art of Alfred Hitchcock, one of the great film artists of the twentieth century. Each week, the class screened one or more of Hitchcock's classic films. The class then met in small discussion sections for intensive analysis of the films and a series of related readings. Our discussions and readings explored Hitchcock as one of Hollywood's most successful popular entertainers, the "master of suspense," as one of the great artists of the medium; as a critic of American culture; and as a persona whose reputation is a construction of his own efforts, and the product of reviewers and academic critics. Students should consult with the instructor prior to enrolling to ascertain that the course topic is not the same as in prior enrollments.

**CAS 530: Political Communication and Media**
3 Credits

Study of rhetorical and communicative dimensions of contemporary political communication with particular attention to electronic media. CAS 530 CAS 530: Political Communication and Media (3) This seminar explores the rhetoric of electronically mediated political discourse, including broadcast speeches, news coverage of politics and political campaigns, campaign debates, political advertising, talk radio, and political websites. Addressing key problems and issues in democratic theory and practical politics, the seminar explores questions frequently raised by both scholars and political pundits: How has the character of political discourse changed in the age of electronic media? How have new communicative technologies affected political discourse? Is it possible to have an engaged, informed, and responsible electorate in the age of 30-second Aspot@ ads and journalistic Asound bites@? What might be done to improve the quality of political discourse and to enhance public deliberation? How might new media technologies be used to combat political alienation and promote civic engagement? The specific focus of the seminar varies by semester. Recent seminars have focused on the rhetoric of presidential campaigns, conceptions of American culture; and as a persona whose reputation is a construction of his own efforts, and the product of reviewers and academic critics. Students in CAS 530 will read scholarly works on mass media and politics from a variety of disciplines, as well as more popular writings that have developed influential critiques of contemporary political communication or have advocated reforms in the laws and regulations governing mass media. Given the subject matter, the seminar is necessarily interdisciplinary in approach, and students will be encouraged to take interdisciplinary approaches to their own research and writing for the seminar.
CAS 550: Social Influence

3 Credits/Maximum of 6

Theory and devices of persuasion; analysis of persuasive discourse. CAS 550 CAS 550 Social Influence (3 per semester/maximum of 6) This is a graduate-level seminar designed to provide students with social scientific theoretical principles for explanation, prediction, and practice in social influence contexts and situations. CAS 550 emphasizes the positive and negative outcomes likely to be associated with specific messages designed to influence others in social and societal settings. It emphasizes the importance of audience analysis and goal selection in guiding message design, and source and channel selection to communicate in ways that are intended to form, change, or reinforce and maintain others’ beliefs, attitudes, values, and behaviors. It affords significant opportunities to address the gaps between theory and measurement in social scientific research pursuits. These attempts may employ a highly active cognitive approach or a more passive strategy. Both approaches are examined in this course. The course content and setting reflects the above aims. The course begins by defining social influence, provides an overview of its history, and introduces the major theories associated with social influence formation, change, and reinforcement objectives. The course devotes significant time to the evaluation of existing social influence attempts, including review of the channel(s) and source(s) used to deliver particular messages. Students will also practice known strategies for designing influence messages. These activities will take place within the framework of knowledge generated by research findings associated with the influence theories examined in the class. Evaluation will include participation in class, exams that include application in the form of a social influence case study, and a research proposal associated with the application of social influence theories to message design and evaluation. The course complements graduate students’ interests in pursuing academic, business, health, management, public relations, advertising, sales, and other career ambitions where communication is associated with the desire to influence others. The course will increase students’ critical thinking and informed decision-making skills associated with others’ efforts to influence them. It also frames discussion about the ethics of and ethical decision-making associated with persuasion. CAS 550 will be offered every other year with 15 seats per offering.

**Prerequisite:** 6 credits in Communication Arts and Sciences

CAS 553: Disaster Communication

3 Credits

This seminar provides students with a comprehensive understanding of the multifaceted nature of disaster communication across phases of a disaster.

**Cross-Listed**

CAS 554: Small Group Communication

3 Credits/Maximum of 6

Communication variables in small groups. Experimental research and innovations in communication in vocational, therapeutic, and educational groups. CAS 554 CAS 554 Small Group Communication (3 per semester/maximum of 6) Group communication is a specialized area of study that has ties to the related areas of interpersonal and organizational communication. These ties reflect the fact that groups typically are part of some larger organizational structure and that it is the interaction among the members of groups that drive their performance. The major objectives of the course, which is presently offered once every two academic years, are to provide students with (1) an in-depth examination of what social scientific research has revealed about the functions communication among the members of groups in various interpersonal and organizational contexts and (2) the opportunity to engage in an even deeper examination of a specific issue relating to a specific function of communication in one of the types of groups included, that is, decision-making and problem-solving groups, familial groups, educational groups, work groups, and support groups, by means of an original research project. The first three weeks of the course acquaint students with the general domain of group communication as a specialized area of study, as well as the dominant theoretical and methodological approaches in evidence. In the fourth and fifth weeks, students come to understand how communication in groups functions generally to socialize the members and thereby shape their respective cultures, as well as influence the ways in which they characteristically fulfill the purposes for which they have been created. During the remaining ten weeks of the course, the accent is on particular types of group contexts and the unique ways in which communication is manifested in each. Finally, each student identifies and executes an original research project, the results of which he or she shares with other members of the class in the form of a scholarly paper which, if warranted, he or she subsequently modifies for presentation at a professional conference and possibly publication. Determination of overall mastery of the course content derives from a student’s performance on a comprehensive final examination held during the regularly scheduled final examination period. The grade for the research project and the final examination combined provide basis for the recorded grade for the course. The course requires no special facilities other than a classroom. Students should consult with the instructor prior to enrolling to ascertain that the course topic is not the same as in prior enrollments.

CAS 555: Interpersonal Communication

3 Credits/Maximum of 6

Investigation of the communicative management of ongoing relationships; examination of how communication both creates and responds to exigencies of friendship. CAS 555 CAS 555 Interpersonal Communication (3 per semester/maximum of 6) This course is intended for graduate students who want an in-depth understanding of interpersonal communication across contexts. It is a graduate-level course, so the reading is heavy, the expectations for the level of discussion are high, and the instructor will assume that students have a serious interest in studying research and theory focused on understanding communication processes. Structurally, the course begins with a review of definitional and philosophical issues underlying research and theory in interpersonal communication, then covers the major frameworks and theories that make up knowledge in the area. In addition, some of the primary issues debated in the literature will be discussed. Evaluation methods will include presentations and research paper(s), but may also include exams and participation. Students should consult with the instructor prior to enrolling to ascertain that the course topic is not the same as in prior enrollments.

**Prerequisite:** CAS 403

CAS 556: Relational Communication

3 Credits

Examines theories and research focused on understanding communication in intimate (or potentially intimate) relationships. CAS
Prerequisite: CAS 403

CAS 557: Health Communication

3 Credits

Provides experience in making decisions about planning, implementing, and evaluating communication in community-based health campaigns to achieve health promotion/education. CAS 557 CAS 557 Health Communication (3) This is a graduate seminar designed to provide students with a comprehensive overview of health communication in community-based health campaigns. Health messages are a pervasive feature of contemporary American life. The study of health communication for community-based campaigns overview strategies for informing, motivating, and selling ideas and behaviors based on health and health care. Students will select a target community and topic to use as a focal point for applying course readings. Students will prepare an evaluation plan for assessing policymakers' involvement in your health topic. This should include projection of the need for policymakers' involvement, using as many archival materials as possible to conduct a formative evaluation of the need and a plan to obtain the additional information needed to identify the gaps between current and projected levels of involvement. Students will also assess previous efforts to involve lay and expert communities in health promotion efforts associated with their topic, and summarize findings, preparing an organizational membership roster for both Expert Advisory Board and Community Steering Committee, and providing a mission statement to be used in recruitment. Provide a draft of a commitment contract to be signed by board and committee members. Students will also examine previous efforts to involve educational institutions, and lay and expert providers in promotion efforts, summarizing findings and developing a vision of how these audiences should be and could be involved. Previous efforts to involve businesses, retailers, and family in promotion efforts will also be assessed, with development of a vision of how these audiences should be and could be involved included. The health communication seminar complements students’ interests in pursuing academic, political, counseling, pastoral, business, health, management, public relations, advertising, sales, and other career ambitions where community-based campaigns comprise an important focus.

Prerequisite: CAS 453

CAS 558: Family Communication

3 Credits

Examines theories and research focused on understanding communication in family contexts. CAS 558 CAS 558 Family Communication (3) This course is intended for students who want an in-depth understanding of communication in family relationships. It is a graduate-level course, so the expectations for the level of discussion are high and the instructor will assume that students have a serious interest in studying research and theory focused on understanding communication processes in family contexts. The focus will be on interpersonal relationships within family settings. As part of this move, the course will address communication in parent-child, intergenerational, marital, and sibling relationships, and will include general topics such as affection and intimacy, conflict, power and control, and strengthening and repairing relationships. Throughout, the course will discuss communication processes within the larger cultural, interpersonal, and communication contexts in which family relationships are situated. Evaluation methods will primarily include exams, paper(s), research projects, and critical thinking reaction papers.

Prerequisite: CAS 403

CAS 559: Lifespan Communication

3 Credits

How various communication processes such as language skills, interpersonal relationship definition and management, social support change across the lifespan. CAS 559 CAS 559 Lifespan Communication (3) Lifespan Communication is a graduate seminar that emphasizes how communication processes (e.g., language skills, interpersonal conflict management, socialization and support, etc.) are developed, maintained, and change across the lifespan. The seminar concentrates upon numerous communicative processes from infancy through childhood, adolescence into middle age, and beyond middle age into later life. Numerous theoretical perspectives that incorporate lifespan principles will guide this seminar. The most recent research that investigates communication across the lifespan will be read and critiqued. This course is grounded in the assumption that multiple disciplines have investigated and continue to investigate human interaction at all points in the lifespan. Therefore, sociological, psychological and anthropological research will complement the research in the discipline of communication that will be discussed in the seminar.

Prerequisite: CAS 403 or equivalent
CAS 560: Communication Theory

3 Credits

This course introduces graduate students to the philosophical underpinnings of communication research and develops skills in theory construction. CAS 560 CAS 560 Communication Theory (3) The first Department of Communication was established in the 1950s, and most departments of communication are less than 30 years old. This course is intended for graduate students who want an in-depth understanding of the philosophical issues underlying research and theory in human communication. It is a graduate-level course that emphasizes theory development in the area of human communication behavior. The readings covered are extensive, contributing to an expectation for abstract and integrative thought and discussion. Students should have a serious interest in studying theory construction and related philosophical underpinnings. Structurally, the course begins with a review of definitional issues underlying research and theory in human communication, moves to a focused discussion of various epistemological and ontological positions in the social sciences and humanities, then shifts to issues of theory construction and development. In addition, some of the primary issues debated in the related literatures will be discussed. Evaluation methods will include presentations and paper(s), but may also include exams and participation. As a result, students will examine where knowledge about communication comes from while defining social science, metatheory, theory, and levels of theorizing; acquire familiarity with the breadth, scope, and range of communication theory as a domain of study; comprehend major issues confronting researchers and theoreticians in communication; and acquire a vocabulary suitable for understanding the discussion that takes place in the field’s journals and at communication conferences. The course is planned as a foundational course for all graduate students entering the graduate program with interests in non-rhetorical methods of inquiry. This course will be offered once a year with 15 seats per offering.

Prerequisite: CAS 403

CAS 561: Quantitative Research Methods

3 Credits

Introduces graduate students to principles, issues, and design considerations underlying social scientific methodology; material is applied to communication research. CAS 561 CAS 561 Quantitative Research Methods (3) This course is intended for graduate students who want an understanding of the quantitative methodology and research design. It is a graduate-level course, so the reading is heavy, the expectations for the level of discussion are high, and the instructor will assume that students have a serious interest in becoming critical consumers of quantitative research methods. Structurally, the course begins with a review of definitional issues, moves to a thorough discussion of sampling, reliability, and validity in research designs, then shifts to an understanding of quasi-experimental and experimental designs. In addition, some of the primary issues debated in the literature on quantitative methodologies will be discussed. Evaluation methods will include presentations and paper(s), but may also include exams and participation. The course is planned as a foundational course for all graduate students entering the graduate program with interests in non-rhetorical methods of inquiry, and it is strongly recommended for all students entering the graduate program with interests in non-rhetorical methods of inquiry. This course will be offered once a year with 15 seats per offering.

Prerequisite: CAS 403

CAS 562: Qualitative Research Methods

3 Credits

Qualitative approaches to investigating human experience using tools such as interviewing and observation. CAS 562 CAS 562 Qualitative Research Methods (3) This course provides students with an understanding of both qualitative research methods and the theoretical frameworks that inform qualitative inquiry. Additionally, this course focuses on tools for data collection such as individual and group interviewing and observing and recording interaction. This course provides practical experience for students in collecting and analyzing qualitative data with and without the use of technology and examines particular difficulties in the interpretation and reporting of qualitative findings. Qualitative Research Methods course disciplinary boundaries and is useful to any graduate student who will be investigating human interaction.

CAS 563: Pairs & Pairings: Quantitative Methods for Interdependent Data

3 Credits

Foundational course exploring methods for addressing interdependent data: dyadic analysis and social network analysis. CAS 563 Pairs Pairings: Quantitative Methods for Interdependent Data (3) This graduate seminar is a foundational course exposing students to two quantitative perspectives that are increasingly encountered in the communication research: dyadic analysis and social network analysis. Dyadic analysis and social network analysis attempt to analyze non-independent data, and test concepts such as interpersonal influence, position, role, or social distance and segregation. By the end of the semester students should have an understanding of these perspectives, be able to conduct basic dyadic and social network analyses competently, and be ready to anticipate various boundaries, caveats, and necessary conditions. The ultimate objective of this seminar is to produce informed users and consumers of quantitative research using quantitative methods for handling interdependent data.

Prerequisite: CAS 561

CAS 564: Measurement in Communication Science

3 Credits

This course is concerned with the theory and technology of measuring variables relevant to the study of communication. In a phrase, the course is about construct validity. It consists of three major sections. The first focuses on how to devise and evaluate a conceptual definition, then create a corresponding operational definition. This section lays the groundwork for the subsequent sections that present data-analytic procedures for evaluating the correspondence between concept and operation. Part two of the course addresses measures in which the symbols reflective of the phenomenon are ordered. Specific topics include consistency indices of reliability, exploratory factor analysis, and confirmatory factor analysis. Part three emphasizes measurement of phenomena for which the symbols are not ordered, that is, the measurement of categories. It covers the creation and evaluation of coding schemes as they are used in verbal protocols, content analysis, and social interaction analysis as well as agreement indices of reliability.
The overarching goal of the course is to impart some of the conceptual and practical skills necessary for conducting social scientific research.

CAS 567: Health Campaigns: Design and Evaluation
3 Credits

Theory and methods of message design, audience analysis, evaluation, and ethics in health communication research. CAS 567 Health Campaigns: Design and Evaluation (3) This graduate course explores theories of health communication and approaches to designing and evaluating effective communication campaigns that attempt to address real-world health issues. The real-world health issues may vary from pandemic conditions involving global coordination to specific ones appearing within a smaller, cohesive network in a particular neighborhood. Students will consider theory-driven campaigns targeting audiences who represent a variety of languages as well as co-cultural orientations and identities, in domestic and international settings. Students will learn theories and methods related to audience analysis, campaign design, and program evaluation. This course will cover issues of inference, ethics, and sources of bias in health campaign design and evaluation.

CAS 581: Discourse Analysis
3 Credits

Overview of theories and approaches to the analysis of spoken and/or written discourse. APLNG 581 APLNG (CAS) 581 Discourse Analysis (3) This course is designed to provide an overview of the various theories of and approaches to the analysis of spoken and written discourse, e.g., speech act theory, conversation analysis, pragmatics, contextual analysis, functional/cognitive grammar, grammar and interaction. These and other approaches are intended to serve as analytic tools and frameworks for students to ultimately design and carry out their own research projects within the course of the semester. Research projects may focus on any aspect of language use, such as language and grammar, language and interaction, language and culture, language socialization, language and cognition; projects may center on some phenomenon of English or may involve other languages, as long as the student is capable of conducting an in-depth analysis of the particular phenomenon under investigation in that language.

Cross-listed with: APLNG 581

CAS 590: Colloquium
1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers. CAS 590CAS 590 Colloquium (1-3) The CAS Colloquium provides a forum for the presentation of graduate student and faculty research, as well as for discussion of professional issues, such as preparing a curriculum vitae or teaching portfolio, publishing scholarly work, applying for grants, and interviewing for academic positions. All first-year graduate students register for the colloquium, and graduate students at all stages of their career are strongly encouraged to attend.

CAS 594: Research Topics
1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small group basis.

Prerequisite: prior approval of proposed assignment by instructor

CAS 595: Internship
1-9 Credits/Maximum of 9

Supervised off-campus, nongroup instruction.

Prerequisite: prior approval of proposed assignment by instructor

CAS 596: Individual Studies
1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

CAS 597: Special Topics
1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

CAS 600: Thesis Research
1-15 Credits/Maximum of 999

No description.

CAS 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999

No description.

CAS 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6

Students enrolled will, under supervision, teach SPCOM 100--introduction to speech communication: formal speaking, group discussion, analysis and evaluation of messages.

CAS 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999

No description.

CAS 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999

No description.

Communication Sciences and Disorders (CSD)

CSD 500: Research Methods in Communication Sciences and Disorders
3 Credits

Methodology necessary for understanding and conducting research in communication disorders.

Prerequisite: 15 credits in communication sciences and disorders
CSD 520: Physiologic and Acoustic Issues in Speech Science

3 Credits

Seminar in the physiologic and acoustic aspect of normal and disordered speech production. CSD 520CSD 520 Physiologic and Acoustic Issues in Speech Science (3) CSD 520, Physiologic and Acoustic Issues in Speech Science (PHSIO-ACS SPCH SCI), is a 3-credit course offered every Fall semester. The course is required of all CSD graduate students working towards a masters degree in Communication Sciences and Disorders. The educational objectives of the course are to provide information on acoustical and some physiological aspects of normal speech production, along with some applications to disordered speech production, particularly neurogenic speech disorders, stuttering, and voice disorders. The goal of the course is to provide the graduate student with experience using the most common methods of speech analysis in the research laboratory and the clinic. Because of the frequent use of audio recording equipment in the field, the emphasis is on acoustical analyses for measurement of vowel and consonant properties. Considerable emphasis is placed on coarticulation. Assessment is based on student projects including vocal fundamental frequency analysis, electroglottographic analysis, acoustic analysis of articulation, analysis of vowels of typical speakers as well as vowels of speakers who stutter, and acoustical analysis of consonants.

Prerequisite: 12 credits in communication sciences and disorders

CSD 540: Phonological Disabilities

3 Credits

Speech-sound production disorders in children and adults; methods of examination, diagnosis, and treatment. CSD 540CSD 540 Phonological Disabilities (3) CSD 540, Phonological Disability (PHONOL DISABLITY), is a 3-credit graduate course typically offered every spring semester. The course is required of all graduate students pursuing a masters degree in Communication Sciences and Disorders. The course has two prerequisites, CDS 442, Introduction to Disorders of Articulation and Phonology and CSD 495A, special topics in phonetics. The objectives of the course are to develop an attitude of critical thinking in the areas of phonological disorders. Class discussions, tests, and projects promote synthesis of ideas. In addition, the course integrates research and practice and a portion of class meetings is spent relating research findings to clinical practice in the treatment of phonological disorders. Original articles focusing on treatment of phonological disorders are required reading. Class sessions and independent and group projects emphasize the assessment and analysis of speech produced by children with disordered phonological systems and assist students to utilize clinically efficient speech sample collection and transcription procedures that optimize the reliability, validity, and potential informativeness of obtained data. Activities involving treatment planning are utilized to assist graduate clinicians in designing efficacious treatment, predicting outcomes, and determining effectiveness of intervention. Student performance is evaluated through tests, take-home projects, critique writing, and inclass projects and quizzes.

Prerequisite: CSD 442

CSD 541: The Voice and Its Disorders

3 Credits

in voice improvement. CSD 541CSD 541 The Voice and Its Disorders (3) This course presents information on vocal function for speech and the disorders that are common to the human vocal folds. During the first section of the course, the physical, physiological, and psychological bases of voice production are discussed along with the causes, nature, and symptoms of voice disorders. Voice disorders are difficult to understand without adequate demonstrations; therefore, the class uses videotapes and voice samples to help foster understanding of the course material. The first portion of the course also includes a review of the anatomy and physiology of the voice and vocal acoustics and extensive coverage of various laryngeal pathologies. Second, voice evaluation and diagnosis are examined including VisiPitch training, electroglottography, endoscopy and stroboscopy. Third, specific clinical management techniques are examined including treatment for vocal abuse and laryngeal muscle tension reduction. Alaryngeal voice disorders are examined including pre- and post-operative counseling and tracheosphyagael speech and voice prosthetics. Finally, neurological disorders of the voice and resonances disorders are examined.

Prerequisite: CSD 444

CSD 542: Stuttering

3 Credits

Modern theories of causes of disorders of rhythm; methods of examination, diagnosis, and treatment. CSD 542CSD 542 Stuttering (3) Fluency disorders are difficult to understand without adequate demonstrations. Therefore, this class makes use of numerous videotapes to foster understanding and assist with explanation of difficult concepts. Topics covered include facts about stuttering and its core behaviors, the etiology of stuttering, the development of stuttering. Furthermore, students learn to evaluate stuttering behaviors and to work as part of an interdisciplinary team. Students will learn to evaluate and treat preschool children, school-age children and adults who stutter. In addition, other types of fluency disorders are introduced. Course activities include exams, a stuttering assessment project, team observation of videotapes of individuals with fluency disorders, and modeling stuttering behaviors in order to fully understand the disorder.

Prerequisite: CSD 442 , CSD 495A

CSD 543: Craniofacial Anomalies: Cleft Lip and Cleft Palate

1 Credits

This course enhances graduate students¿ understanding of the following topics: 1) velopharyngeal mechanism and function for speech production in individuals with and without cleft palate and craniofacial anomalies; 2) basic embryological development related to the lip and palate fusion process; 3) common genetic syndromes that involve cleft palate; 4) in-depth understanding of resonance disorders; and 5) assessment and treatment of resonance disorders.

CSD 545: Neuromotor Disorders of Speech

3 Credits

Etiology and symptomatology of dysarthric and apraxic speech: diagnosis, treatment, and the team rehabilitative program approach to these disorders. CSD 545CSD 545 Neuromotor Disorders of Speech (3) In this course, students gain basic knowledge of neurological bases for speech-motor control. Students learn to identify and describe diseases/ conditions that result in acquired and developmental motor speech disorders. Students learn to identify and describe the dysarthrias in
CSD 548: Dysphagia

3 Credits

Understanding the process of the swallowing mechanism and the management and treatment of swallowing disorders. CSD 548 CSD 548 Dysphagia (3) This course is designed to provide graduate students with basic knowledge of the swallowing process/mechanism. A brief overview of normal swallowing from birth to the aging adult will be presented. The course will focus on assessment, management, and treatment of individuals who present with a swallowing disorder. Students will become familiar with both non-instrumental assessments of swallowing, and will interpret videofluoroscopic swallowing studies (VFSS). Students will also develop treatment plans for case study patients with dysphagia, Multicultural issues related to swallowing will be discussed.

Prerequisite: CSD 444 or equivalent
CSD 595E: Audiology Practicum
1-5 Credits/Maximum of 5

CSD 595ECSD 595E Audiology Practicum (1-5) This course provides speech-language pathology graduate students with a detailed and pragmatic understanding of hearing testing, normal and abnormal auditory systems, and common practices used to evaluate hearing ability. Students will gain experience in pure-tone audiometry, tympanometry, speech audiometry, central auditory processing disorders, and otoacoustic emissions. Students participate in hearing aid fittings, programming and repairs. Students learn to interpret the results of audiological evaluations and make appropriate recommendations based on results of audiological evaluations.

CSD 595J: Audiology Third Site
1-2 Credits/Maximum of 2
Internship course.

CSD 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

CSD 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently.

CSD 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

CSD 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 6
No description.

Prerequisite: 40 graduate credits in CMDIS

CSD 603: Foreign Academic Experience
1-12 Credits/Maximum of 12
For students who are enrolled in a foreign university, or foreign study and/or research and constituting progress towards the degree.

CSD 852: Lab in Augmentative and Alternative Communication Technology
3 Credits
This course provides in-depth, applied consideration of Augmentative and Alternative Communication and Assistive Technology. It builds knowledge and skills in the areas of system design and the interplay between person and technology; maximizing participation through understanding of barriers and supports at multiple levels; and training and supporting all stakeholders. Students will engage in (a) hands on learning of assistive and AAC technologies that support communication and participation across all environments; (b) discussions of research related to use of assistive and AAC technology to enhance communication and curriculum outcomes for individuals with disabilities; and (c) problem-based learning through case studies in order to apply their knowledge and skills

CSD 895A: Speech Therapy Practicum
1-3 Credits/Maximum of 8
This course introduces graduate students to clinical practice across the lifespan, with individuals with a variety of communication disabilities. It includes a weekly class lecture, providing instruction in and application of therapy procedures. Topics covered include clinical teaching, and activities to enhance teaching and learning. Students also learn appropriate methods of data collection and writing clinical objectives and intervention plans. This course is the in-house means of developing clinical knowledge and skills and accruing practicum hours. The number of clinical hours assigned each semester depends on the number of credits being taken as well as the number and types of hours that need to be accrued to meet certification requirements. The graduate student will attend one weekly meeting with each supervisor with whom a client is assigned. This course is designed to develop clinical knowledge and skills in these areas of intervention: a.

CSD 895C: Speech/Language Therapy Externship
7-15 Credits/Maximum of 15
This course is a full-time externship experience in the assessment and treatment of communication disorders and is completed at an off-campus site. Graduate students in Communication Sciences and Disorders participate in an active learning clinical practicum with working professionals to enhance their academic and clinical competencies and skills. Students will accrue required clinical practice hours in an off-campus clinical and/or educational setting including hospitals, rehabilitation centers, nursing homes, early intervention programs, and public schools including pre-school programs.

Prerequisite: 45 credits in communication sciences and disorders and accrual of >200 clinical hours

CSD 895G: Speech Diagnostics Practicum
1-3 Credits/Maximum of 3

CSD 895I: Speech Pathology Mini-Placement
1-9 Credits/Maximum of 9
Graduate students in Communication Sciences and Disorders participate in an active learning clinical practicum with working professionals to
Communications (COMM) enhance their academic and clinical competencies and skills. Students will accrue these required clinical practice hours by completing this mini-placement in an off-campus clinical and/or educational setting including hospitals, rehabilitation centers, nursing homes, early intervention programs, and public schools including pre-school programs.

Communications (COMM)

COMM 501: Proseminar in Mass Communications

3 Credits/Maximum of 3

Overview of paradigms in mass communications research

Prerequisite: admission to doctoral program

Cross-Listed

COMM 502: Pedagogy in Communications

3 Credits

The purpose of this seminar is to train doctoral students to teach in the communications discipline at the college/university level. COMM 502 Pedagogy in Communications (3)This seminar is proposed as a dimension of the emphases on TA training and teacher preparation for doctoral students in Mass Communications in the College of Communications. The course is one aspect of the College’s Graduate Teaching Academy. The seminar provides a foundation in pedagogical research, theory and classroom practice for mass communications doctoral students. The Graduate Teaching Academy demonstrates our faculty’s commitment to the integration of training in research and teaching. The work of the seminar focuses on the unique characteristics of undergraduate and graduate education in the communications discipline. The principles and practices covered in the seminar have applications for teaching communications in a number of venues including the academic, business and government professional settings. The course involves students in collaborative learning, assessment skills, powerful pedagogies, practical workshops and substantive reviews and applications of curricular and pedagogical research in the communications discipline. The Graduate Teaching Academy demonstrates our faculty’s commitment to the integration in research and teaching. This seminar is one of those activities. Graduate Teaching Academy participants: 1. Take coursework in communications curriculum and pedagogical development that stresses a teaching scholarship of learning theory and a pedagogy of active and engaged learning practices. 2. Study the scholarship of learning within a disciplinary context in order to understand the system of organized knowledge in the communications discipline within which our teaching takes place. This orientation encourages a critical review of the comparative costs/benefits of a disciplinary - versus interdisciplinary-based communications pedagogy. 3. Eligible doctoral students become Teaching Associates, under faculty supervision, for selected College of Communications courses 4. Teach an undergraduate course in the College as an instructor. 5. Develop a teaching portfolio. 6. Attend College colloquia.7. Have access to College resources like the Academic Services Center, the Office of Multicultural Affairs, and University resources such as the Center for Excellence in Learning and Teaching at Penn State’s Schreyer Institute.8. Complete the Teaching with Technology certification.

COMM 503: Seminar in the History of Mass Communication

3 Credits

No description.

COMM 504: International Communication Problems

3 Credits

Legal and communications problems of the international flow of news and opinion; international press codes.

COMM 505: Introduction to Mass Communications Research (3)

COMM 506 provides an overview of and foundation in research. Students are exposed to the nature of scientific inquiry, the process of concept explication, operationalization, measurement, and sampling. They also learn how to ask a research question. Research ethics, the logic and mechanics of experimental methods, fundamentals of survey design, and content analysis are also discussed. Students demonstrate the concepts learned in class by completing their own research project. Students are also exposed to statistical logic and practice in the context of their own project.

COMM 507: News Media and Public Opinion

3 Credits

Problems in the function, techniques, and responsibilities of press, radio, and television in forming and interpreting opinion.

COMM 508: The Literature of Journalism

3 Credits

No description.

COMM 510: Comparative Theories of Press Systems

3 Credits

Institutional structure and normative functions of press systems in modern societies, as shaped by prevailing world view and social organization.

COMM 511: Mass Communications Research Methods II

3 Credits

Problems of bibliographical research; evaluation of sources and materials in mass communications history, biography, structure, ethics, and other areas.

Prerequisite: COMM 506

COMM 512: Government and Mass Communications

3 Credits

Problems of freedom of information; governmental efforts to control mass communication agencies; government news coverage; public information agencies.
COMM 513: Constitutional Problems of the News Media
3 Credits
Problems involving conflict between guarantees of press freedom in the First and Fourteenth Amendments and rights and privileges of others.

COMM 514: Political Economy of Communications
3 Credits
Structure and functions of United States and global media systems and their relationship to political and economic systems.

COMM 515: MA Proseminar in Mass Communications
3 Credits
An introduction to graduate studies for MA students in Media Studies and Telecommunications Studies.
Prerequisite: First semester enrollment in MEDIA or TELEC M.A. programs

COMM 516: Introduction to Data Analysis in Communications
3 Credits
To understand and be able to use data analysis techniques common to research in communications. COMM 516 Introduction to Data Analysis in Communications (3) This class serves as an introduction to data analysis techniques commonly employed in the field of communications and in related disciplines. The course will employ a commonly-used statistical package to illustrate concepts (e.g., Statistical Package for the Social Sciences, SPSS), and instruction will be provided on how to employ statistical software to conduct a variety of specific analysis techniques. These techniques will include descriptive statistics, analysis of variance, correlation and regression, and exploratory factor analysis. Examples of research from the communications discipline and related fields will be used throughout the semester to illustrate concepts. Emphasis will be placed on decisions involved in the data analyses process, interpretation of data, and effective presentation of results in journal-article format. Evaluation will be based on short take-home assignments, exams, and a final paper.
Prerequisite: COMM 506 or consent of program

COMM 517: Psychological Aspects of Communication Technology
3 Credits
Investigation of psychological aspects of human-computer interaction (HCI) and computer-mediated communication (CMC). COMM 517 Psychological Aspects of Communication (3) This graduate seminar is devoted to the investigation of psychological aspects of human-computer interaction (HCI) and computer-mediated communication (CMC). Theories and empirical research from communication, psychology, and human-computer studies will be used to explore social responses to communication technologies; uses and effects of unique technological features such as interactivity and navigability upon individual users’ thoughts, emotions, and behaviors; nature and dynamics of interpersonal and group interaction when mediated by technology; how issues of “source” and “self” are altered by computer-based media; and psychological consequences of Internet use, such as addiction and depression. A primary goal of the seminar is to draw out, through readings, discussion and empirical exploration, fundamental theoretical and practical implications of these lines of research for interface design, psychological processing of mediated form and content, human-web site interaction, and Internet-based mass, group and interpersonal communication.
Prerequisite: COMM 304 or COMM 506

COMM 518: Media Effects
3 Credits
Advanced study of the effects of media messages and technologies via theories and empirical evidence pertaining to processes of effects.
Prerequisite: COMM 506 or permission of instructor

COMM 520: Seminar in Advertising Problems
3 Credits
No description.

COMM 521: Advertising Perspectives
3 Credits
An overview of advertising in industrial societies including institutional issues; socio-demographic issues; public policy issues; and ethical issues.

COMM 522: Social and Cultural Aspects of Advertising
3 Credits
Analysis of advertising from a cultural/literary perspective; emphasis on semiotic and hermeneutic analysis; advertising as social communication.

COMM 530: Research Methods in Strategic Communications
3 Credits
The purpose of this course is to provide students with an understanding of the methods and practices used to conduct effective research in examining practical and theoretical questions in strategic communications. Successful strategic communications campaigns are informed by research conducted before (planning), during (monitoring), and after (evaluation) the implementation of the campaign. Further, research based on theoretical models can help understand and explain the effects of strategic communications on consumers, individuals, and society. This course will be organized so that students will (1) gain exposure to a breadth of methods used by industry and academic researchers; (2) understand the role of theory in informing strategic communications research and its applications; (3) gain depth and experience in several research methods and techniques; and (4) conduct research and obtain research-writing experience, in either academic or professional venues. Students also will learn how to use databases employed by strategic communications researchers to conduct audience/consumer analysis and media research. A range of specific research methods will be discussed, with emphasis placed on trends or contemporary developments in research. In addition to examining the principles, methods, and techniques of strategic communications research, the course will address issues such as when research should or should not be conducted, analyzing data sets, forming meaningful research questions, determining the proper means to answer the questions, and presenting the results and solutions in a clear and compelling manner.
COMM 531: Strategic Communications: Theory and Implementation

3 Credits

This course provides students with a comprehensive understanding of professional strategic communications via examining key theoretical and conceptual fundamentals of persuasive communication, attitude formation and change, and mass communication, while examining applied implications that affect the strategic communications industry. Students in this course will be: 1) exposed to academic research that analyzes and explains how and why the implementation of strategic communication works, and 2) shown how this information can be tested, extended, and applied to goal-oriented communication campaigns. Through comprehending both the theoretical underpinnings of strategic communications practices and their proper application, students will gain valuable knowledge that applies to both scholarly pursuits – which help to develop theory and knowledge – and professional pursuits, in which theoretical advancements can provide real-world solutions. Strategic communications professionals need to comprehend a wide range of theoretical frameworks to understand how theory and research can inform the implementation of communications plans and decision-making. Students in this course will gain knowledge in traditional and contemporary academic research that examines the mechanisms of persuasive and mass communication in affecting consumers’ beliefs, attitudes, and behaviors. Students will examine the interplay of these theories and identify key gaps in the literature and/or untested potential relationships that could help better explain how strategic communications plans work or should work. Based on this insight, students will apply their theoretical knowledge to realistic industry situations and will be able to offer specific suggestions and communication strategies to solve actual problems. Students will learn how the implementation, testing, and extension of relevant theory can guide precise strategic-communications decisions and strategies that lead to specific outcomes among varied target audiences and consumers. The material covered in this course forms the foundation of understanding how the field of strategic communications functions and how this knowledge can be advanced and applied to achieve desired, communication-based results for any entity.

COMM 550: Film Theory and Criticism

3 Credits

Studies in traditional and contemporary film theory and criticism. COMM 550 Film Theory and Criticism (3) COMM 550 seeks to introduce students to a variety of theoretical approaches to the critical analysis of film. The course devotes attention to aesthetic as well as social, cultural, political, and economic issues, assuming that they are, in fact, inseparable. It involves viewing films closely, and researching the contexts of their production and reception. It stresses critical thinking, reading, viewing and writing skills. COMM 550 assumes that films can reveal, both directly and indirectly, something about the experiences, identity, and culture of the people who produce and consume them. That is, movies can be analyzed—even psychoanalyzed—to reveal something about the cultural conditions that produced them and attracted audiences to them. The course seeks both to familiarize students with works they probably haven’t seen, and to “defamiliarize,” through critical and historical analysis, works they very well may have seen. Films are examined as formal constructs, market commodities, and cultural artifacts. Individual instructors may emphasize film authorship, styles, genres, systems or cycles. They may focus on the context, text or reception of a film, filmmaker, or group of films. The emphasis of COMM 550 is always on the self-conscious, theoretically informed analysis of cinematic texts.

COMM 553: Special Problems in Film and TV

1-3 Credits/Maximum of 99

No description.

COMM 555: Media and Culture

3 Credits

An overview and history of critical theories that aim to explain the relationship between media and culture. COMM 555 Media and Culture (3) This course will provide an overview of the major theorists of mass media whose work offers critical appraisals of the impact of mass media on cultures and the people within those cultures. It will give students an understanding of the major theorists and their conceptions of the relationship between media, communication and culture. Each section is designed to interrogate a particular epistemological or methodological challenge to the social and cultural understanding of mass media, from the seminal thinking of the Frankfurt School - the first thinkers to engage this important field of research - through the theorists of the so-called post-modern turn. Special attention will be paid to examining the ways in which mass media constructs ideological foundations for society’s understanding of democracy, identity and everyday life.

COMM 556: Reading Film

3 Credits/Maximum of 12

A practical and historical approach to film theory and analysis. This seminar develops critical visual literacy by examining a range of practices in cinema study, with emphases on the relation of film to literature and the analysis of film meaning. The course asks how to read a film, and considers the multiple ways that films combine framing, movement, editing, narrative, character, and genre toward the production of culture, ideology, identity, desire, poetic imagery, and community. Students will explore a wide range of critical methods, and will view one to two films per week. Readings will range from novels to classic film theory, cultural studies, belles-lettres, film criticism, radical poetics, apparatus theory, media theory, and contemporary philosophy.

Cross-listed with: ENGL 556, VSTUD 556

COMM 580: Seminar in Telecommunications

3 Credits

Study of the historical and contemporary issues and problems in telecommunications.

COMM 582: Ethics and Emerging Communications Technology

3 Credits

Identification and analysis of ethical issues raised by electronic communications technologies.

COMM 584: International Telecommunications and Trade Policy

3 Credits

An interdisciplinary perspective that investigates contemporary debates and ongoing or anticipated conflicts in international telecommunications and trade policy. COMM 584 International Telecommunications and Trade
Policy (3) The study of international telecommunications policy requires an interdisciplinary perspective. Students should understand the past and present technological, business, philosophical, geopolitical and legal environment. Success in either the public or private sectors may depend on one's ability to anticipate and react to future trends and upheavals. The course presents, investigates and debates ongoing or anticipated conflicts in international telecommunications and trade policy. The resulting confrontations may stem from technological innovation, real or perceived changes in the marketplace, or the imperatives of prevailing regulatory, political or economic philosophies. Conflict resolution often results from persuasive advocacy, coalition building, and accommodation of outsiders with new perspectives or entrepreneurial visions, rather than applying legal precedent or treaty interpretations. The course also will examine how various nations have organized and reorganized the telecommunications sector. We will consider such developments as privatization, liberalization, deregulation and globalization. Faculty: Rob Frieden

COMM 585: Media & Telecommunications Industries
3 Credits

Study the structure and performance of media, telecommunications and information industries applying principles and ideas from microeconomics, finance and communications. COMM 585 COMM 585 Media Telecommunications Industries (3) The objective of this graduate seminar is twofold. First, the course provides exposure to the applications of selected concepts, principles and topics in microeconomics to the analysis of the media, telecommunication and information markets. This course is not intended as a general introduction to microeconomic theory and practice - however, students will have the opportunity to begin their study of selected applications of microeconomic principles at a fundamental level and advance their understanding to a high level of complexity worthy of graduate coursework. The second objective of the course is to connect ideas and principles from microeconomics to a body of communications theories, demonstrating possible complements and conflicts across the two disciplines. Discussion of both theoretical and empirical scholarship is emphasized. This in turn gives students a framework for further research on the structure of information industries and the conduct and performance of communications firms. Course covers international markets but focus is on North America. Topics may include selected industries such as wired and wireless telephony, satellite communications, broadband/cable, broadcasting, film, advertising, publishing, computing and Internet; industrial organization; competition and competitive advantage, growth and the economic causes of innovation; economics of intellectual property protection; electronic markets, hierarchies and transactions cost economics; the economic justification and effects of regulation; natural monopoly economics; cost modeling, demand forecasting and pricing in regulated monopoly and competitive industries; telecommunications deregulation and privatization.

COMM 590: Colloquium
1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

COMM 594: Research Topics
1-15 Credits/Maximum of 15

Supervised student activities on research projects identified on an individual or small-group basis.

COMM 595: Internship
1-18 Credits/Maximum of 18

Supervised off-campus, non-group instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

Full-Time Equivalent Course

COMM 596: Individual Studies
1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

COMM 597: Special Topics
1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

COMM 597B: **SPECIAL TOPICS**
3 Credits

COMM 600: Thesis Research
1-15 Credits/Maximum of 999

No description.

COMM 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999

No description.

COMM 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 3

Teaching or assisting in School of Communication courses by graduate students with previous news-editorial, advertising, and broadcasting experience.

COMM 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999

No description.

COMM 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999

No description.
COMM 830: Strategic Communications Industry

3 Credits

Technology is transforming the strategic communications industry. COMM 830 provides students with an overview of the merging of the advertising, public relations, and corporate communications industries. Students will learn how digital technology has transformed paid, earned, and owned media. Students will explore the transformation of audiences from passive users to active and interactive media-savvy consumers. Special emphasis will include the global and ethical impacts of evolving strategic communication. Students will explore the industry structure as it has evolved from traditional media to the development of the digital media landscape from the internet, Web 2.0, and the post-PC era. The course also provides an overview of strategic communications as it applies to agency, firm, government, corporate, and nonprofit organizations. Students will gain an understanding of the analog and new media landscape and will develop an understanding of the economic and financial indicators that drive the present industry. The course will explore how traditional media practices are impacted by technology as well as the impact of technology on entrepreneurial opportunities for industry practices from broadcast and digital to print, advertising, journalism, and public relations. The course will examine the roles and characteristics of content providers, carriers, and the ever-changing traits and needs of digital media consumers with a focus on emerging technologies on the evolution of interactivity. The course will provide insight into content creation, management, networking, online communities, and content consumption, and the role of evaluation and metrics in understanding the digital landscape. In addition, the course will provide an overview of the social issues facing the digital industry and insights into best practices.

COMM 831: Digital Media Analytics I

3 Credits

This course provides an overview of the methods for collecting, analyzing, and utilizing audience data for digital media. The class will cover the fundamentals of traditional media audience measurement and web metrics, with an emphasis on "first-party" data. Students will learn the methods of data collection, analysis, and use for traditional broadcast media, and the transformation of these practices in the newly digitized and converged multiplatform, multiscreen environment. The course will also cover the basics of data capture for new media and the use of this data for the design of metrics appropriate for various purposes such as monitoring traffic, conversions, and revenue generation. The use of metrics in pricing models for advertising, sales generation, and content distribution will also be covered.

Prerequisite: COMM 530, COMM 830

COMM 832: Multimedia Content Development and Delivery

3 Credits

This course is designed to provide students with a background in the intellectual and practical skills involved with the development, execution, and delivery of strategic messages and content. Students will learn conceptual strategies that lead to the creative process and the resulting message executions that are delivered to targeted audiences on behalf of companies, brands, and organizations through numerous media formats. This course will explore how the role of branded content is evolving in the modern strategic communications landscape and how to apply different types of content generation to new and traditional communications channels. Students will evaluate the pros and cons of numerous modes of content delivery, and will learn the processes and tactics needed to create and implement numerous communication strategies across the major traditional and contemporary media platforms currently used in the industry. Students also will apply the necessary processes and steps to develop an effective multimedia content plan for any client.

Prerequisite: COMM 531 COMM 830

COMM 833: Ethics and Decision Making in Strategic Communications

3 Credits

This course provides a broad exploration of ethical topics in the practices of strategic communications, public relations and advertising. In particular, it investigates transparency, digital ethics, diversity, and mass-communication ethics as they apply to the development and application of communications strategy and content. Students will learn how ethical tenets are examined and incorporated into current theory and research within the fields of general ethical philosophy, public relations, corporate social responsibility, crisis communications, persuasion, and cultural-communication studies. By subsequently applying these principles to industry examples and professional codes of conduct, students will better understand the importance of ethical decision making in the field of strategic communications. Building on insights from the class, students will engage in online discussions and will apply topics learned in the class to identify and analyze contemporary ethical issues and problems affecting the strategic communications industry.

Prerequisite: COMM 830

COMM 834: Strategic Communications Campaigns

3 Credits

This capstone course requires students to apply the knowledge they have acquired in all the other foundation courses to develop a strategic communications campaign on behalf of a professional client. Students will conduct both primary and secondary research first, and then analyze the competitive environment surrounding the client's service/brand. Based on the research, they will then design the messages, media, and other communication tools as part of a comprehensive communications campaign for the client.

Prerequisite: COMM 530, COMM 531, COMM 830, COMM 831, COMM 832, COMM 833

COMM 835: Social Media Communications

3 Credits

Social media is profoundly transforming human society in almost every aspect, in particular, communication and business. As social media has become an integral part of human life, it is crucial to understand the underlying mechanisms of social media before making best use of it. A profound knowledge of social media and how to use it productively is not only something "nice to know," but a capability people must have to survive and excel in this new media age. This course focuses on two areas: 1) an in-depth understanding of the social media impact on strategic communications; and 2) how to make best use of social media tools. The impact of social media on cognition, knowledge collaboration, media industry, and strategic communications strategies will be covered. A solid knowledge of social media mechanisms serves as a foundation for making the best use of social media, no matter how current media evolves or what new media platforms emerge in the future.
Prerequisite: COMM 830

COMM 836: Strategic Communications Leadership

3 Credits

The rise of digital media and the public's demand for transparency in business have elevated the importance of strategic communication. Long gone are the days where communicators were viewed as tacticians in organizations. Instead, today strategic communicators often hold top positions in companies. This course will provide students with the essential business knowledge they need to navigate as successful communicators. This will include a focus on the business essentials needed such as: terminology, reputation drivers, and leadership roles. It also builds awareness of key stakeholders such as investors, analysts, and communities. Building on these insights, students will be able to conduct communications audits for a company and understand how and why strong communicators are critical to successful companies.

Prerequisite: COMM 830

COMM 837: Reaching Multicultural Populations in Strategic Communications

3 Credits

There is an increased demand for professional communicators who understand how to reach culturally and ethnically specific market segments using strategic communications strategies. The focus of this course will be on how to effectively and strategically communicate with multicultural populations using mass communication to develop an inclusive environment where diversity is embraced, respected, and valued. The course will explore the economic, political, and social impact of culture and race in our society, socio-economic differences, trends within various multicultural communities and groups, and how traditional and new media communities are reaching these communities. The content of this course will be useful to understand the multicultural market segment. The goal of the course is to understand culture-based communication strategies and market research, multicultural communication research and theories, and apply this understanding to strategic communication decisions.

Prerequisite: COMM 830

COMM 838: Strategic Communications Law

3 Credits

This course provides a broad exploration of strategic communications law. In particular, it examines how the First Amendment applies to strategic communications, the basic tenets of advertising regulation, privacy issues including the collection and use of personal and geolocation information, intellectual property issues including the use of trademarks and copyrights, and the role of self-regulation in a global communications environment. Students will learn to recognize and anticipate key legal issues that they will face as strategic communications practitioners and how to find answers to relevant legal questions.

Prerequisite: COMM 830

COMM 839: Digital Media Analytics II

3 Credits

This course will prepare students to demonstrate their competency and ability to navigate the digital media ecosystem and to develop, implement, administer, and evaluate digital marketing campaigns. Toward this end, students will learn to match digital solutions to clients’ marketing objectives through critical analysis and understanding of the tools and processes of the industry. Students will differentiate between digital and traditional media by identifying the strengths and weaknesses of each and understanding how digital complements and extends traditional campaigns. Specifically, students will become familiar with the targeting advantages of digital as related to programmatic buying and re-marketing, as well as behavioral and contextual targeting. Digital advertising formats and platforms will be explored, and students will learn to differentiate between them and to evaluate which formats are best based on client needs and objectives. Digital ad format standards and creative guidelines will be reviewed. Technologies and tools specific to the industry will be summarized, including buy-side and sell-side ad servers, verification systems, and audience segmentation tools. Concepts of statistical analysis will be applied to digital analysis, specifically in the context of A/B testing. Students will apply statistical tests to establish confidence intervals when evaluating alternative marketing approaches and opportunities.

Prerequisite: COMM 530, COMM 830, COMM 831

Communications - CA (COMMS)

COMMS 500: Communications and Cultural Theory

3 Credits

This course is designed to provide students a broad background in communications and cultural theory. COMMS 500 Communications and Cultural Theory (3) This course is an advanced study of various interpretive approaches and methodological tools that are central to the analysis of media artifacts, including newspaper articles, magazines, films, advertising, and television programs. It begins with an overview of various interpretive traditions, including culturalism, psychoanalytic theory, structuralism, ethnic and racial critiques, poststructuralism, postmodernism, feminism, postcolonial studies, and queer theory. It prepares students to critically examine philosophical assumptions regarding the relationship between the nature of knowledge, expression, writing and creative production on one hand, and conceptions of personhood, community, social structures and authority, on the other. Students are required to do significant reading and writing in this course, and to propose and conduct analyses of communication artifacts.

COMMS 503: Research Methods in Communications

3 Credits

This course prepares students to conduct research in communications using both qualitative and quantitative research methods. COMMS 503 Research Methods in Communications (3) This course prepares students to conduct research in communications. It begins with an overview of the different strategies and philosophies of research methodology including scientific method, inference, skepticism, hypothetico-deductive reasoning, critical, humanistic, and naturalistic inquiry. The course focuses on four major types of communications research methodology: experimental, survey, textual analysis and naturalistic inquiry. Students are required to do significant reading and writing in this course, as well as propose
and conduct a research project of their own design. This course is a fundamental element of the masters program curriculum in that it prepares students to conduct their thesis projects.

COMMS 519: Communication Technology and Culture in History

3 Credits

An advanced study of various interpretive approaches and methodological tools that are central to the analysis of cultural artifacts. COMMS 519 Communication Technology and Culture in History (3) This course is an advanced study of various theoretical approaches that are central to the analysis of communication technology and culture in historical context. It begins with an overview of various communication historiographies, including the works of Harold Innis, Walter Ong, Umberto Eco, Elizabeth Eisenstein, James M. Carey, Marshall McLuhan, Lewis Mumford, and others. It engages students in the critical examination of such critical issues as communication and public memory, discourse in historical context and the historical basis of identity. Students are required to do significant reading and writing in this course, and to propose and conduct historical research employing one of the theories discussed in this course.

COMMS 525: Advanced Writer’s Seminar

3-9 Credits/Maximum of 9

This course supports the development of advanced writing projects in a range of different genres. COMMS 525 Media Writer’s Seminar (3-9 per semester/maximum of 9) This course is an advanced study of narrative styles and research techniques used in various forms of writing, including journalism and creative non-fiction, memoir, opinion pieces, cultural criticism, copy writing, writing for interactive media, and writing for performance media. Offerings in different semesters will focus on different topics in these writing genres. The course prepares students to create original material in a variety of writing genres, and for a variety of media. It is well-suited for the development of creative master’s projects, and for extending the student’s graduate research into a professional portfolio. The first portion of the course defines the elements of the genre through textual analysis and establishes a theoretical framework. Students will then submit for peer review a project proposal that addresses the appropriateness of the subject to the genre, outlines research methods, defines the intended audience, and provides examples of potential outlets. Students will then submit a first draft for peer review, and finally a finished draft for peer review and evaluation.

COMMS 555: Media Discourse Analysis

3 Credits

This course provides students with advanced theoretical approaches and methodological tools to analyze a variety of media discourses. COMMS 555 Media Discourse Analysis (3) This course provides students with both theoretical approaches and methodological tools to analyze a variety of media discourses. It begins with an overview of linguistic theories, including structuralism, poststructuralism, semiotics, and critical discourse analysis. The course highlights the philosophical relationship between language, culture, identities, politics, and intercultural communications. It also prepares students to examine discourses from multiple angles, such as textually oriented analysis, critical analysis, linguistic analysis, ethnographic analysis, etc. The course then leads into a discussion of several common discursive models in media: ritual, myth, and social drama. It ends with case studies of discourse in films, television, news, advertisement, the Internet, and politics. Students are required to do significant reading and writing in this course, and to propose and conduct a project of discourse analysis of their own design.

COMMS 560: Seminar on Global Culture and Communication

3 Credits

This course explores the globalization of communication and communication technologies within a broad political, economic and cultural context. COMMS 560 Seminar on Global Culture and Communication (3) Developments in technology have led to new levels of interaction and interdependency of human groups and processes across the boundaries that historically separated them - geography, national identity, state borders, and local community. In such a context, we must re-examine many of our assumptions about space, place, identity, and belonging, and about human social organization and human agency - the potential to purposefully transform ourselves and our surroundings. Globalization calls into question our assumptions about politics, economics, culture, and communication. In this course, students will consider the challenges and opportunities that globalization creates for human community and agency - that is, for the multiple ways in which human activity becomes socially organized and purposeful. They will survey the dominant theories of globalization and regionalization and examine the current trends in regionalization and globalization of politics, culture, communication, economic processes, and regulatory structures. They will focus on the challenges communication globalization poses to past forms of identity, the transformation of traditional understandings of space and place, and the opportunities for new forms of identity, community, and action.

COMMS 568: Media Production Workshop

3-9 Credits/Maximum of 9

This course prepares students for the creation of advanced media projects in traditional and digital media. COMMS 568 Media Production Workshop (3-9 per semester/maximum of 9) This course is a workshop for the creation of advanced media projects in traditional and digital media. Workshop topics will alternate coverage of different media, and will include photography, graphic design, interactive media, video, audio, and other media to reflect the needs of the graduate program. Students will submit proposals that address their project objectives, production plans, and intended audiences. After submitting proposals for peer review and faculty evaluation, students will begin a three-stage process of pre-production, production, and post-production in the creation of their work. This process will require the organization of production elements, the acquisition of media, and the creation of the finished project. This seminar is intended for graduate students who wish to gain experience with new media technologies, pursue creative outlets for their research interests, or develop their professional portfolios. It is an intensive workshop with demanding writing and technology requirements.

COMMS 580: Communications Master’s Project

3-6 Credits/Maximum of 6

An original master’s paper or creative production with critical paper. COMMS 580 Communications Master’s Project (3-6 per semester/maximum of 6) This course may be a scholarly master’s paper or it might instead be by a creative production supplemented by a descriptive and analytical paper. The production should display integration in skills and knowledge gained in the program as well as depth within an area of concentration. A committee of Communications faculty, supplemented
Community and Economic Development (CEDEV)

CEDEV 500: Community and Economic Development: Theory and Practice

3 Credits

Understanding theories, concepts, and frameworks of community and economic development and community decision-making models in application to community development practice and issues. CEDEV 500 Principles of Community and Economic Development and Leadership (3) What factors affect the quality of life of American communities? How can citizens and leaders affect change in their community? This course provides an overview of principles of community and economic development and an introduction to approaches to organizing, planning and managing change in communities. Students gain an understanding of principles and strategies of community and economic development in relation to general systems theory, community decision making, and leadership strategies in group and community settings. Students who complete the course should be able to discuss theories and models of development, to apply general systems theory to development issues, and to understand approaches and techniques for community leadership. They will gain an appreciation of conflict and consensus approaches to decision making and change, and understand action strategies for community development and change. This is a required introductory course for all incoming students in the New Community and Economic Development graduate program. The course will also be of interest to graduate students in other programs who have an interest in community and economic development.

CEDEV 505: Leadership Development

3 Credits

Exploration, understanding, and application of leadership roles, strategies, and principles in group and community settings.

Cross-listed with: AEE 505

CEDEV 509: Population, Land Use, and Municipal Finance

3 Credits

Understanding the interaction of population characteristics, land use, municipal funds, and taxation in a locality and how they impact the operation and management of government jurisdictions. CEDEV 509 Population, Land Use and Municipal Finance (3) How do people approach the task of providing and funding the infrastructure and services in American communities? What effect does different population characteristics and demographic mix have on local governance? Should land use be tied to the changing character of community populations? Where does funding originate for providing municipal goods and services and how do communities manage municipal budgets? This course provides a multidimensional overview of three key aspects of community and economic development. Population - the people. Land Use - the place. Municipal finance - the things they do there. Students will gain an understanding of how to analyze population and demographic issues in communities. They will learn about planning and land use laws, regulations and issues. They will come to understand the elements and dynamics of municipal finance. The course is designed to integrate the above aspects of community into an overall understanding of key interactions in American communities.

Prerequisite: graduate standing

CEDEV 516: Change in Rural Society

3 Credits

Social change in rural society, emphasizing prediction and control of the change process. Even years. R SOC (CEDEV) 516 Change in Rural Society (3) Rural America has experienced change throughout its history, but the most rapid have occurred in the past three decades. Forces of urbanization, industrialization, technological change and globalization of the economy drive change in rural America, and the effects of these forces differ across the United States. Some rural areas benefit from the changes that occur while others are devastated. Some rural people and places are able to adapt and view change as an opportunity, while others are unable to respond to the forces that threaten them. Individuals, families and communities have changed in response to these broad forces. This becomes manifest in new patterns of inequality, family life, educational attainment, migration, age and racial patterns, health and well-being, and local service availability. Questions examined in this course include: What are the theories that explain or describe the social change that has been affecting rural people and places? What industrial restructuring and economic change has occurred in rural areas, how has it affected rural areas, and what drives this restructuring? What other social change has taken place, and can we determine potential sources of that change? What are the options available to rural people and communities as they adapt to forces of change, and how much can they influence their own futures? Underlying each of these questions is the issue of whether the well-being of rural people, families, and communities has improved or is threatened by these changes, and which rural areas are most likely to benefit and which are threatened. Students will leave the class with a broad understanding of the forces affecting rural America, and how and why those forces influence some people and places differently. Grades are assigned in this class based on a term paper on a topic related to rural social change, reaction papers written about each set of reading assignments, serving as discussion leader, and class participation.

Cross-listed with: RSOC 516

CEDEV 517: International Rural Social Change

3 Credits

Implications of planned change for international rural societies, considering basic structural constraints, known institutional linkages, and potential synergetic consequences. R SOC (CEDEV) 517 International Rural Social Change (3) Three-quarters of the world’s population live in developing countries where problems of hunger, malnutrition, underemployment, high morbidity and mortality, overurbanization, and inadequate housing, (to name just a few) are often severe. This seminar covers the sociology of economic change in developing countries. Through an extensive list of readings, a series of topical videos, and in-depth class discussions, seminar participants should come away with a
firm grounding in the ways development has been defined, the social and economic problems facing developing countries today, the basic ways in which economic development has been approached theoretically and empirically, the implications for developing countries of being embedded in a larger world economy, the influence of multinational corporations, the policies that developing countries have followed in fostering economic growth, the nature of foreign aid, the causes and consequences of Third World debt, the nature of the informal economy, rural development and land reform, world hunger and the Green Revolution, and other topics.

Cross-listed with: RSOC 517
CEDEV 533: Rural Development Research Methods and Topics
3 Credits
Advanced theories and methods for rural economic development research.
Prerequisite: ECON 521
Cross-listed with: AEREC 533
CEDEV 560: Regional Development: Principles, Policy, and Practice
3 Credits
Regional growth and development, focusing on challenges to theory, policy, and practice, emphasizing change in metropolitan, micropolitan, and rural areas. CEDEV 560 Regional Development: Principles, Policy, and Practice (3) Effective regional development requires that history, theory, and policy are reflected in practice. Globalization impacts the development of regions and places in the United States and around the world. In this context, the development of regions impacts and is impacted by the pace and level of development elsewhere. Regional development addresses issues of how growth and disparity are spatially distributed and differentiated, and what causes these patterns to occur. The challenge is twofold. The first challenge is defining exactly what a region is and identifying who ultimately decides the policies and practices that determine its fate. The second is determining who benefits and who bares the costs of particular local and regional development approaches. The purpose of this course is to introduce students to concepts and frameworks of regional development. The first part of the course focuses on definitions and theories of regional growth and development, and begins to uncover ambiguities in pre-existing definitions and theories of regional development associated with topics such as growth and development theory, the new geography, cluster economics, and sustainability. It then delves into various policy approaches and issues including regional, environmental, and rural issues. The course culminates with a discussion of putting regional theory and policy into practice through case studies. Issues and topics addressed in this course include identifying a region and defining ‘place; understanding the relationship between economic efficiency and sustainability; sustainable development and place-based development; the use of policy and its framing to allow regions and places to build on their assets. Additionally, the course will address how regions become interdependent and how relationships can be optimized in this context, and determining the best way and available sources to garner capital to fund development projects. Students will learn how to identify the assets of a region and the impact of interregional collaboration. The course will provide students with the opportunity to analyze the politics of regional development and the important considerations in regional development planning and practice.

Prerequisite: CEDEV430 and CEDEV500
CEDEV 567: Resilient Communities and Environments
3 Credits
Understanding connections between communities and surrounding ecosystems; exploration of management techniques for building adaptive, resilient, and sustainable communities and environments. CEDEV 567 Resilient Communities and Environments (3) This course provides students with a foundation in concepts which can be used to explore the interconnections of communities and environments, particularly as they apply to community and economic development. The focus of this course is applying concepts from resilience thinking to sustainable community and economic development. In this course, students will explore how communities, whether rural or urban, are linked to their environment, and how this, in turn, can affect the success of community development projects. The class explores the social, political, economic, and ecological barriers guiding these relationships. Topics covered in this context include environmental law and regulation; environmental and land use planning; risk and risk management; the rhetoric of sustainability; natural resource dependency; and interconnections between social and environmental justice. The last portion of the course discusses possible management techniques for building adaptive, resilient, and sustainable communities.

Prerequisite: CEDEV509 and CEDEV452
CEDEV 575: Methods and Techniques for Community and Economic Development
3 Credits
Understanding and applying methods and hands-on experience with techniques used in community and economic development. Lab. CEDEV 575 Methods and Techniques for Community and Economic Development (3) How do I find out what is happening in my community? The economy? The environment? What methods and techniques should I use? I need a toolbox for change! This is a hands-on course designed to provide students with an understanding of community and economic development methods and techniques, and experience in applying them to a variety of problems that they might expect to encounter in the field. The course is based on modules developed and offered by faculty in the Community and Economic Development graduate program. The specific content varies from year to year depending on the needs of each cohort of students. Typical topics include several methods and techniques from each of the following three areas: General Community Assessment Techniques, including identifying power structures, industry structure and employment, natural resources and amenities, human and social capital, local government and services, and land use patterns. Specialized Techniques for Community and Economic Development, including retail trade area analysis, use of GIS, program evaluation, IMPLAN, Input/Output modeling, location quotient, shift-share analysis, survey design and implementation, and the use of social and economic indicators. Leadership and Process Skills, including visioning, goal setting, and strategic planning; grant writing; small group dynamics; conflict management, negotiation, principled bargaining, and deliberation; public speaking and working with the mass media; coalition building, project management; and use of the Internet, design and implementation of Web pages. This is a required course for all students in the MS in Community and Economic Development.

Prerequisite: graduate standing and approval of the instructor
CEDEV 576: Applications and Practices for Community and Economic Development
1-6 Credits/Maximum of 6

Consideration of community and economic development applications in communities and practices of public and private organizations and agencies.

Prerequisite: graduate standing and approval of the instructor

CEDEV 580: Community and Economic Development Research Application and Practice
3 Credits

Course outlines the steps for students to apply CEDEV theories and methods to a topic in writing their Master’s paper.

CEDEV 595: Internship
1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

CEDEV 596: Individual Studies
1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

CEDEV 597: Special Topics
1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

CEDEV 597C: **SPECIAL TOPICS**
3 Credits

**Community Psychology (CMPSY)**

CMPSY 500: Theories and Issues in Community Psychology
3 Credits

Contemporary issues in community psychology will be discussed within the framework of its development from clinical and social psychology.

CMPSY 510: Change Processes
3 Credits

Social change as it takes place within institutions and communities.

CMPSY 511: Social Impacts on Psychological Functioning
3 Credits

Psychological functioning, as it is affected by social contexts.

Prerequisite: CMPSY500, permission of program

CMPSY 519: Research Methods I
3 Credits

In-depth examination of research methods utilized by community psychologists and social change activists; course followed by CMPSY 520. CMPSY 519CMPSY 519 Research Methods I (3)This course, along with CMPSY 520-Research Methods II, will examine the key research methods available to community psychologists and social change activists. The course will emphasize a hands-on experience for students so that they can understand all the components of conducting program assessments. All students will develop pilot projects under the guidance of the instructor that will give the students experience in developing action research/program evaluation questions, completing research literature reviews, developing specific methodologies appropriate to their action research/program evaluation questions, data base design, data analysis, and report writing. There will be a balance between action research, program evaluation, quantitative and qualitative approaches. A final report and presentation of the findings of the pilot project are required. This course is the research methods course required of all community psychology and social change graduate students. This course assumes a basic understanding of introductory statistics and the use of statistical software will be undertaken in the course. The course is the introductory research methods course and will be offered in a sequence with CMPSY 520-Research Methods II. Both CMPSY 519 and CMPSY 520 must be taken in order to complete the Community Psychology and Social Change research methods requirement for graduation. This course is for 3 credits. Faculty: Richard Fiene and Robert Colman

Prerequisite: a C or better in an introductory statistics course within the past two years or a passing grade on the Community Psychology competency examination in introductory statistics; status as graduate student in CMPSY program

CMPSY 520: Research Methods II
3 Credits

In-depth examination of research methods utilized by community psychologists and social change activists. (Continuation of CMPSY 519). CMPSY 520CMPSY 520 Techniques in Action Research (3)This course is the second of two research methods courses required of all Community Psychology and Social Change graduate students, emphasizing action research, program evaluation, and both qualitative and quantitative measurement. Faculty: Richard Fiene and Robert Colman

Prerequisite: CMPSY519

CMPSY 521: Roles and Methods in Community Psychology
3 Credits

Advanced course entailing the development of Master’s Projects with both fieldwork and research; each student writes a formal proposal.

Prerequisite: permission of program, for degree candidates only.

CMPSY 522: Practicum
3-6 Credits/Maximum of 6

Fieldwork implementing planned change.
Prerequisite: CMPSY500, CMPSY510, CMPSY511, CMPSY520, CMPSY521, for degree candidates only.

CMPSY 594: Research
3-6 Credits/Maximum of 6
Supervised research on a master’s paper.
Prerequisite: for degree candidates only

CMPSY 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

Comparative and International Education (CIED)

CIED 500: Comparative Education Proseminar I
3 Credits
Methods of comparative education and case studies of governance and administration; first of two part sequence.

CIED 503: Ethnicity, National Identity, and Education
3 Credits
Surveys group-oriented education policies internationally, especially comparing those of Britain, Taiwan, India.
Cross-listed with: EDPH 507, HIED 503

CIED 504: Perspectives in African Education
3 Credits
Educational systems in selected african countries are examined with respect to colonial history, social, political, and cultural factors.
Cross-Listed

CIED 508: Globalization and Lifelong Learning
3 Credits
Examination of globalization discourses and their relationships, implications and impacts on lifelong learning processes and contexts. ADTED 508/ADTED (CIED) 508 Globalization and Lifelong Learning (3) This course is designed to help students to critically examine the nature and impacts of globalization on lifelong learning. The main goal is to enhance the students’ ability to learn and work in a globalizing world and to challenge traditional perspectives about globalization and lifelong learning. As such, the course will adopt a critical perspective on globalization while helping the students to develop a reflective stance on the theory and practice of lifelong learning. A central focus of the course will be to develop a critical analysis that contributes to the building of a more active and socially responsible adult learner. Students will be evaluated using a number of assignments/projects. The major research paper, class presentation, two critiques of theories of lifelong learning, country profile of lifelong and a short reaction paper will count for 90% of the course grade. Class participation will be awarded 10%.
Cross-listed with: ADTED 508

CIED 509: Language, Literacy, Identity, and Culture in a Global Context
3 Credits
Examines the relationship between issues of language, identity and culture for adult learners in an increasingly global context. ADTED 509 ADTED (CIED) 509 Language, Literacy, Identity, and Culture in a Global Context (3) This core required course provides graduate students in the ADTED Ph.D. program a critical overview of the literature, theories, and scholarship examining the complexities inherent in an increasingly diverse global and post-colonial sphere. Explorations of historical, theoretical, postcolonial perspectives will be the focus, as will the daily portrayals of diverse peoples by the media. Participants in the course will be expected to familiarize themselves with the readings portraying the complexities of ethnicity, indigeneity, race, gender, and social class. Evaluation will focus primarily on writing a scholarly paper, preparing video materials that illustrate the issues, writing their personal educational histories, and participating in class.
Prerequisite: ADTED 508
Cross-listed with: ADTED 509

CIED 511: Educational Ethnography: History, Theory, and Methods
3 Credits
This seminar shows students how to use ethnographic methods for education research to inform classroom practice and education policy. The course is centered around the idea that school communities serve as key sites for students of all ages to learn to become members of their culture(s). Course readings include historical to contemporary works of researchers who have shaped educational ethnography. We will also read about education in various settings and discuss anthropological explanations of inequities experienced by minority culture communities or marginalized groups. Students will carry out a mini-ethnographic study based on their area of research interest. The course is especially designed for students to be able to conduct ethnographic studies or make use of ethnographic techniques in future research projects.
Prerequisite: CIED 502; ADTED 550; EDPH 586;

CIED 513: Video Ethnography in Education
3 Credits
Recommended Preparations: A graduate course in educational ethnography This seminar will show students how to use video ethnography in education research. The course is rooted in what is popularly known as the Preschool in Three Cultures method (also known as video-cued multivocal ethnography). We will learn about and watch films using video-based ethnographic research methods. Students will also carry out mini-video ethnographies in a local classroom.
Prerequisite: CIED 502; ADTED 550; EDPH 586; LDT 574
Cross-listed with: CI 513
CIED 516: Education and Demographic Change in the United States and Abroad

3 Credits

Interrelationship between schooling and employment, marriage, fertility, and migration. Focus comparatively on the United States and developing countries.

Cross-listed with: EDTHP 516

CIED 534: Childhood and Education in Sociological and International Comparative Perspective

3 Credits

The course objective is to use an international comparative lens and sociological perspective to examine the social, cultural, political and economic forces that shape childhood and the role education plays in this process.

Cross-listed with: EDLDR 538

CIED 538: East Asian Education, Leadership, and Reform

3 Credits

The social and organizational characteristics of East Asian schooling, including understandings of authority, power, and leadership, and systemic school reform.

Cross-listed with: EDTHP 534, SOC 534

CIED 541: Contemporary Philosophies of Education

3 Credits

Educational theory and practice in relation to contemporary movements in philosophy. CI ED 541 CI ED (EDTHP) 541 Contemporary Philosophies of Education (3) This graduate seminar explores a range of contemporary philosophies of education viewed from the perspective of different varieties of postmodernism. The study of modern and postmodern western thought is combined with explorations of eastern thought including viewpoints that are emerging today in both the northern and southern hemispheres. While focusing on contemporary educational ideas, it traces their roots in classical and non-modern philosophical sources. This look at the present in terms of the past reveals the paradigm shift presented by contemporary postmodern educational thought. In doing so, considerations for the issues of race, class, gender, ecology, multiculturalism and the regeneration of diverse incommensurable cosmovisions, severed or overlooked by some educational philosophers, are explored in their reintegration by contemporary postmodern philosophers of education.

Cross-listed with: EDTHP 541

CIED 542: Issues in Literacy Education

3 Credits

Discussion of philosophical, sociological, historical, and curricular issues in literacy education.

Cross-listed with: LLED 542

CIED 543: Comparative and International Trends in Adult Literacy Education

3 Credits

This course critically examines the broad contemporary issues and interdisciplinary trends of literacy education with an international and comparative framework. CI ED (ADTED/AFR) 543 Comparative and International Trends in Adult Literacy Education (3) This course provides a comparative synthesis of what is known about literacy education and adult learning and what it will mean for the 21st century; the context in which literacy takes place; who participates; what they learn and why; the nature of the learning processes; new approaches to adult learning; social media and mobile devices; development theory in adult learning; and other issues relevant to understanding literacy education and adult learning in sociocultural, political, and international contexts. It also examines the newer approaches to adult learning: embodied, spiritual and narrative learning; learning and knowing in non-western perspectives; and cultural theory, poststructural and feminist perspectives. This course investigates questions such as: What does it mean to be literate in the 21st century? Why are teachers experiencing difficulty teaching students skills needed to understand and produce written work? Can schools in the 21st century inundated with digital technologies help students navigate the new literacies? How should adult literacy participants deal with the reality of new media and new literacies? What is the role of non-governmental organizations in this crisis? Overall, this course challenges graduate students to engage other international and non-western frameworks of learning and knowing to think about the purpose of education and learning as well as question the nature of knowledge production itself.

Cross-listed with: ADTED 543, AFR 543

CIED 550: Comparative Education Policy Seminar

3 Credits

Examines the educational policy process world-wide and the influence on schooling of children, youth, and adults in national education systems. CI ED (EDTHP) 550 Comparative Education Policy Seminar (3) In this course students will learn how educational policy is made around the world and what influence this policy has on the schooling of children, youth, and adults in national systems of education. Students will examine recent trends in educational policy that have originated at the international level. Methods of policy research and evaluation will also be examined. The main goal of the course is to give students an understanding of international processes in policy formation and detailed knowledge of current education policy trends worldwide.

Cross-listed with: EDTHP 550

CIED 553: Educational Mobility in Comparative Perspective

3 Credits

Role of education in social mobility, using quantitative, qualitative, and historical methods; focuses comparatively on Britain, East Asia, and South America. CI ED 553/SOC 553/EDTHP 553/HI ED 553 CI ED 553. (SOC 553, EDTHP 553, HI ED 553) Educational Mobility in Comparative Perspective (3) Sociologists interested in higher education have attended to the relationships between postsecondary institutions and other institutions, as well as the impact on higher education of general social and demographic processes. Many of the classical ideas in sociological theory, including those of Max Weber and Emile Durkheim, have surfaced...
in recent debates over the nature of higher education. Sociologists in the U.S. have explored such questions as: the gatekeeping function of higher education; the impact of universities on stratification; and the socializing environment for women and minorities. This seminar introduces some of the classical theorists and contemporary researchers of the sociology of higher education. All seminar participants will be required to write a sample research proposal, based on the readings from the seminar.

Cross-listed with: EDTHP 553, HIED 553, SOC 553

CIED 555: Validity of Assessment Results

3 Credits

Concepts, issues, and methods of validation of educational and psychological assessment including models and approaches to validation, bias, and utility. EDPSY (CI ED) 555 Validity of Assessment Results (3) The goal of this course is to enable the student to acquire a broad perspective on issues and considerations in the process of validating interpretation and uses of tests, scales, assessment procedures, or protocols. Issues of validity are examined from many perspectives including a review of current dominant and alternative validity theories, of known threats to validity, of some advanced specialized statistical techniques; and of test bias, legal issues, psychological/behavioral issues, social/consequential considerations, and philosophical considerations. Additionally, applications are provided through in-depth cross-cultural and historical studies, technical reviews of published commercial tests, and in-depth examinations of controversies.

Prerequisite: EDPSY406, EDPSY450
Cross-listed with: EDPSY 555

CIED 562: Politics, Language and Pedagogy: Applying Paulo Freire today

3 Credits

Examines the work of Paulo Freire as it applies to community action projects. ADTED 562 / CIED 562 Politics, Languages and Pedagogy: Applying Paulo Freire Today (3) The life and work of Paulo Freire will be the focus of this advanced graduate seminar. Freire was one of the foremost adult educators of our time. Graduate students participating in the course will read and reflect on his vision and how it evolved over time, critiques of Freire, the ways in which his ideas have been applied in diverse geographic and practice settings (e.g., education, community development), and implications for research, policy, and practice. Students will explore how elements related to Freire's work, such as conscientization, transformative action, and pedagogy for liberation, influence pedagogy and community action projects. Readings will include Freire's books, scholarship on Freire, and case studies of Freirean projects, among others.

Cross-listed with: ADTED 562

CIED 570: Comparative and International Adult Education

3 Credits

Critical and comparative analysis of adult education theory and practice outside North America, including international agency involvement.

Prerequisite: ADTED460
Cross-listed with: ADTED 570

CIED 571: Comparative Higher Education

3 Credits

Comparative methods of studying structural variations in systems of higher education in principal industrialized nations and other selected countries.

Cross-listed with: HIED 571

CIED 587: Curriculum, Culture, and Child Development

3 Credits

Examines human development and cultural factors in planning, designing, and implementing curriculum and instruction in early childhood and childhood education.

Prerequisite: HD FS429
Cross-listed with: ECE 587

CIED 594: Research Topics

1-18 Credits/Maximum of 18

Supervised student activities on research projects identified on an individual or small-group basis.

CIED 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

CIED 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

CIED 597C: **SPECIAL TOPICS**

3 Credits

Cross-Listed

CIED 845: Intergenerational Programs and Practices

3 Credits

Background, intervention strategies, and issues related to developing intergenerational programs and practices aimed at addressing vital social and community issues.

Cross-listed with: AYFCE 845

Comparative Literature (CMLIT)

CMLIT 501: Comparative Method in Literary Studies

1-6 Credits/Maximum of 6

Bibliography, research methods, and studies in comparative literature.
CMLIT 502: Comparative Criticism I: Classical to Neoclassical  
1-3 Credits/Maximum of 3  
Issues in literary criticism from Plato and Aristotle to the mid-eighteenth century.

CMLIT 503: Comparative Criticism II: Romantic to Contemporary  
1-3 Credits/Maximum of 3  
Principles and theories of literary criticism from eighteenth- and nineteenth- century beginnings to twentieth-century expansion and application.

CMLIT 504: Studies in Literary Genres  
3-6 Credits/Maximum of 6  
The concept of genre and the evolution of genre theory; application to a specific genre, e.g., the lyric or the novel.

CMLIT 505: Studies in Literary Periods and Movements  
3-6 Credits/Maximum of 6  
Comparative approaches to cohesive units within literary history, e.g., the Renaissance, the Enlightenment, Romanticism, Surrealism.

CMLIT 506: Studies in Literary Themes and Motifs  
3-6 Credits/Maximum of 6  
Comparative approaches to recurrent literary themes and motifs; application to a specific example, e.g., literary Utopias or the Faust theme.

CMLIT 507: Comparative Poetics  
3 Credits  
Theoretical and practical concepts in the comparative, global history of poetry and/or poetics. CMLIT 507 Comparative Poetics (3 per semester/maximum of 6) This course explores theoretical and practical concepts in the history of poetry and/or poetics. Like all comparative literature courses, it pursues its task through discussions of texts from a wide variety of national or linguistic origins and ranges widely across historical period, medium, and social form, where appropriate. Students will develop a broad array of interpretive skills appropriate to poetry and poetics; they will acquire a knowledge of a wide variety of poetic forms; they will undertake comparative analyses of poems and poetic structures; they will learn how to think about poetics outside poetry.

CMLIT 508: Global Visual Culture  
3-6 Credits/Maximum of 6  
Comparative study of transnational forms of visual cultural production; e.g. new media, cinema, television, public culture.

CMLIT 509: Comparative Modernisms  
3-6 Credits/Maximum of 6  
Aesthetic and historical development of Modernism in diverse cultures.

CMLIT 510: Theory and Practice of Translation  
3 Credits  
Theories of translation and interpretation; importance of translation in literary transmission; application of theoretical concepts to individual translation projects.

**Prerequisite:** 24 credits in a foreign language

CMLIT 521: Comparative Seminar in Inter-American Literatures  
1-12 Credits/Maximum of 12  
Comparative topics presenting literary works of the Americas—North America, South America, and the Caribbean—from early to present times. CMLIT 521 CMLIT 521 Comparative Seminar in Inter-American Literatures (1-12)This course forms one series of three new-course proposals for seminars in comparative literature with a focus on various parts of the world. While existing seminars focus on comparative studies organized according to concepts such as literary theory, period, theme, or genre, through the proposed new seminars the Department of Comparative Literature seeks to provide visibility for the full complement of courses that reflect the department’s global perspective. These proposals also respond to the College’s policy to avoid repeated use of the 597 number for similar subject-matter. Thus we are proposing three separate comparative courses on Asian, African, and Inter-American literatures. All represent subject-matter previously taught as CMLIT 597 or other less clearly defined CMLIT numbers. Comparative study of Inter-American literatures is an important part of the curriculum of our Comparative Literature Department. It is a field of study identified as one of our specialties in our recent strategic plans. Joining existing graduate seminars in European literatures, and supplementing proposed seminars in African and Asian literatures, this course and the other two new graduate courses now being proposed will make visible the ways in which the departmental curriculum to covers the diverse geographic areas relevant to comparative literary study. Our department has long taught 100-level and 400-level courses on Inter-American Literature. We believe that we were the first U.S. university to have created such courses some twenty-five years ago. Many of our graduate students possess appropriate languages (such as Spanish, Portuguese, and French) necessary for study in this field. The Americas as two joined continents have produced thousands of writers and a highly diverse literature written in English, Spanish, French, Portuguese, and other languages, including Native American languages. A comparative approach to the study of these literatures provides an appropriately internationalized context for understanding the relations among various literatures of the Americas and for seeing them in the purview of world literature as a whole. In sum, we have long had separate numbers for our undergraduate Inter-American Literature courses and we have previously offered graduate Inter-American courses under general numbers. In addition to complying with College policy and not continuing to use 597 repeatedly, we wish to make this field more visible within our curriculum by giving it a course number of its own.

CMLIT 522: Comparative Seminar in Asian Literatures  
1-12 Credits/Maximum of 12  
Comparative topics presenting literary works of Asia, from the origins of literature in Asia to the present time. CMLIT 522 CMLIT 522 Comparative Seminar in Asian Literatures (1-12)This course forms one of a series of three new-course proposals for seminars in comparative literature with a focus on various parts of the world. While existing seminars focus on
comparative studies organized according to concepts such as literary theory, period, theme, or genre, through the proposed new seminars the Department of Comparative Literature seeks to provide visibility for the full complement of courses that reflect the department's global perspective. These proposals also respond to the College's policy to avoid repeated use of the 597 number for similar subject-matter. Thus we are proposing three separate comparative seminars on Asian, African, and Inter-American literatures. All represent subject-matter previously taught as CMLIT 597 or other less clearly defined CMLIT numbers. Comparative study of African literatures is an important part of the curriculum of our Comparative Literature Department. It is a field of study identified as one of our specialties in our recent strategic plans. Joining existing graduate seminars in European literatures, this course and the other two new graduate courses now being proposed will make visible the ways in which the departmental curriculum to covers the diverse geographic areas relevant to comparative literary study. Our Department offers instruction in three Asian languages (Chinese, Japanese, and Korean), has long taught 100- and 400-level courses in Asian literatures (Comp Lit 004 and Comp Lit 404), has linkages with universities in China and Japan, and has attracted a steady stream of graduate students who work in Asian literatures and languages. Interest in the literatures of Asia is strong. As a further indication of our Department's globalization, we are establishing a new undergraduate major in Japanese (this proposal is presently in the Senate). In sum, we have long had separate numbers for our undergraduate Asian language and literature courses and we have previously offered graduate Asian literature courses under general numbers. In addition to complying with College policy and not continuing to use 597 repeatedly, we wish to make this field more visible within our curriculum by giving it a course number of its own.

CMLIT 523: Comparative Seminar in African Literatures

1-12 Credits/Maximum of 12

Comparative topics presenting literary works of Africa, from the origins of literature in Africa to the present time. CMLIT 523 CMLIT 523 Comparative Seminar in African Literature (1-12) This course forms one of a series of three new-course proposals for seminars in comparative literature with a focus on various parts of the world. While existing seminars focus on comparative studies organized according to concepts such as literary theory, period, theme, or genre, through the proposed new seminars the Department of Comparative Literature seeks to provide visibility for the full complement of courses that reflect the department's global perspective. These proposals also respond to the College's policy to avoid repeated use of the 597 number for similar subject-matter. Thus we are proposing three separate comparative courses on Asian, African, and Inter-American literatures. All represent subject-matter previously taught as CMLIT 597 or other less clearly defined CMLIT numbers. Comparative study of African literatures is an increasingly important part of the curriculum of our Comparative Literature Department. It is a field of study identified as one of our specialties in our recent strategic plans. Joining existing graduate seminars in European literatures, this course and the other two new graduate courses now being proposed (on Asian and Inter-American literatures) will make visible the ways in which the departmental curriculum covers the diverse geographical areas relevant to comparative literary study. Our Department offers language instruction in Swahili and Arabic, has long taught 100-level and 400-level courses in African literature, has developed linkages with several African universities, and has attracted a steady stream of graduate students to work in African literature during the last two decades. Interest in the literatures of Africa is strong. Africa as a continent has produced thousands of writers and a highly diverse body of literature written in English, French, Arabic, Portuguese and over 50 African languages. It is also a rich source of literature recorded from oral traditions maintained in the more than 1,000 languages spoken on the continent. A comparative approach to the study of these literatures provides an appropriately internationalized context for understanding African literatures and for seeing them in the purview of world literature as a whole. In sum, we have long had separate numbers for our undergraduate African languages and literature courses and we have previously offered graduate courses on African literatures under general numbers. In addition to complying with College policy and not continuing to use 597 repeatedly, we wish to make this field more visible within our curriculum by giving it a course number of its own.

CMLIT 524: Comparative Arab/ic Literature and Criticism

3 Credits

This course provides students with a comprehensive overview of modern Arab/ic literature, in dialogue with critical approaches that illuminate these texts within a comparative framework. By examining the critical interventions and debates that have shaped Arabic literature up until our present moment, this course invites students to attend to the manifold ways that this literature engages the major theoretical paradigms of global literary studies. It subsequently de-provincializes these debates beyond the limited purview of ethno-linguistic, philological, or geopolitical divisions of the field. It instead situates this literature as an active agent within world literary debates and criticism both past and present. In this regard, the course will invite students to critically reframe the (neo)colonial or (neo)orientalist categories of the 'Middle East', and 'Near East', and to consider other supra- and transnational exchanges staged across Asia, Africa, and the Mediterranean, as well as in the diaspora. In so doing, the course aims to look beyond the exclusive lens of the (post)colonial, or binary models of center/periphery, that dominate discussions of 'third-world' literature. In moving away from the siloing of these traditions within Area Studies, the course considers the repercussions of these debates for narrative, aesthetic, geopolitical, theoretical, and pedagogical concerns across the study of Comparative Literature. Students will read a wide variety of literary texts in English translation, spanning a range of genres (prose, poetry, drama, film). Alongside these works, they will engage with critical and philosophical writings from the Arab/ic context, on topics such as aesthetics and the sublime, affects and embodiment, futurity and dystopia, ecocriticism and the Anthropocene, language, modernity/postmodernism, globalization, trauma, and more. After having taken this class, students will have gained a sound grasp of the field, as well as its literary and historical dimensions. They will also have developed a critical understanding of the current challenges and directions of the study of modern Arab/ic literature.

CMLIT 543: Literary Relations

3-6 Credits/Maximum of 6

Mutual influences among specific literatures and cultures; for example, German-American, French-American, Inter-American, or East-West literary relations.

CMLIT 570: Forces in Contemporary Literature

3-6 Credits/Maximum of 6

Intellectual currents and experimental forms in contemporary world literature.
CMLIT 577: Critical Perspectives on Modern Chinese Literature
3 Credits

This course provides students with an overview of the core texts and main critical paradigms of modern Chinese literary studies. This course provides students with a comprehensive overview of the main critical approaches to modern Chinese literature, by placing these paradigms into historical perspective and linking them with key texts that illuminate the authors’ arguments and demonstrate exemplary readings that have proven influential in the field, past and present. The particular focus of the course may vary according to the instructor (e.g. themes, genres, regions etc.), but the course will generally cover critical interventions and debates, helping students to understand the emergence of the field in its present form; they will also scrutinize major trends that are providing new directions for the study of modern Chinese literature. In addition to the critical literature, students will read a range of key literary texts, from the late Qing to the twenty-first century, that provide insights into the forces (aesthetic and intellectual, as well as social and historical) that have shaped the canon of modern Chinese literature. Critical analyses and literary texts are chosen in a way so as to illuminate each other. At the end of the class, students will have gained a sound grasp of the field and its literary and historical dimensions, and develop a critical understanding of the current challenges and directions of the study of modern Chinese literature. Cross Listings: CMLIT 577 will be added as a cross-listed course.

Cross-listed with: ASIA 577

CMLIT 580: Contemporary Literary Theory
3 Credits

Major issues in contemporary literary theory and their significance for criticism, with emphasis on continental European theorists and their influence.

CMLIT 589: Technology in Foreign Language Education: An Overview
3 Credits

Approaches to the uses and research applications of multimedia and other educational technologies applied to the teaching of foreign languages. (also crosslisted with SPAN 589)

Cross-listed with: APLNG 589, FR 589, GER 589, SPAN 589

CMLIT 596: Individual Studies
1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

CMLIT 597: Special Topics
1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

CMLIT 600: Thesis Research
1-15 Credits/Maximum of 999

No description.

CMLIT 601: Ph.D. Dissertation Full Time
0 Credits/Maximum of 999

No description.

CMLIT 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 3

Supervision of teaching; consideration of instructional aims and objectives, methods of lecturing and leading discussions, evaluation of student work.

CMLIT 603: Foreign Academic Experience
1-12 Credits/Maximum of 12

Foreign study and/or research constituting progress toward the degree at a foreign university.

CMLIT 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999

No description.

Comparative Medicine - MD (CMED)

CMED 501: Biology and Care of Laboratory Animals
3 Credits

Presentation of the anatomic and physiologic characteristics of the commonly used laboratory animal species and their relation to biomedical research.

CMED 503: Laboratory Animal Genetics
3 Credits

Genetic principles applied to laboratory animals used for investigations of diseases that may be controlled or influenced by genetic factors.

CMED 507: Techniques of Laboratory Animal Experimentation
3 Credits

Techniques of drug administration, infusion, and collection of body fluids and materials; gnotobiology; use of radioisotopes and bioinstrumentation.

CMED 515: Experimental Surgery of Laboratory Animals
3 Credits

Surgical techniques, including nephrectomy and Goldblatt clamp, bladder and gastric pouches, bile duct cannulation, intraventricular operation, cardiac and cerebrovascular catheterization.

CMED 530: Diseases of Laboratory Animals I
3 Credits

Physiological and pathological expressions of both infectious and metabolic-degenerative diseases of rodents, with emphasis on diagnostic and control methods.
CMED 531: Diseases of Laboratory Animals II
3 Credits
Physiological and pathological expressions of both infectious and metabolig- degenerative diseases of nonhuman primates and other species of animals.
CMED 535: Comparative Pathology
3 Credits
Comparative pathologic characteristics of infectious and metabolic diseases of animals and man.
CMED 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.
CMED 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.
CMED 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.
CMED 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

Computer Science (CMPSC)

CMPSC 598: Special Topics
1-9 Credits/Maximum of 9
Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest; several different topics may be taught in one year or semester.

Computer Science - CA (COMP)

COMP 505: Theory of Computation
3 Credits
Topics in discrete mathematics, discrete probability, first order logic and models of computation.
Prerequisite: CMPSC463

COMP 511: Design and Analysis of Algorithms
3 Credits
Amortized analysis, graph algorithms, NP-complete problems, approximation algorithms, parallel algorithms.
Prerequisite: CMPSC463

COMP 512: Advanced Operating Systems
3 Credits
A study of the principles and practice of distributed system design, including communication, synchronization, processes, file systems, and memory management.
Prerequisite: CMPSC472

COMP 513: Formal Methods for Software Engineering
3 Credits
Object-oriented software development, formal specification techniques and related CASE tools, software re-use, verification and validation, transformational development.
Prerequisite: CMPSC487W, COMP 511, or permission of the program

COMP 516: Advanced Programming Languages
3 Credits
Programming paradigms and styles, object-oriented programming, formal semantics, programming language design.
Prerequisite: CMPSC460

COMP 517: Computer Security
3 Credits
Introduction to the area of computer security and current issues associated with computer security.
Prerequisite: MATH 315

COMP 519: Advanced Topics in Database Management Systems
3 Credits
Concurrency control, crash recovery, query processing, semantic data models, advanced file access, distributed database systems, performance, case studies, advanced applications.
Prerequisite: CMPSC430, MATH 315

COMP 520: Artificial Intelligence
3 Credits
Problem solving, knowledge representation, language understanding, perception, learning, artificial neural networks.
Prerequisite: CMPSC463
COMP 524: Evolutionary Computation

3 Credits
Topics in evolutionary algorithms and genetic algorithms.

Prerequisite: COMP 511 or permission of the program

COMP 545: Computer Architecture

3 Credits
Cache, pipelining, memory design, interconnection networks, multiprocessor systems.

Prerequisite: CMPSC312

COMP 580: Master’s Project

3 Credits/Maximum of 6
Research into a specific computer science problem, development of a scholarly written paper, and oral defense of the work.

Prerequisite: permission of the program

COMP 594: Master’s Studies

3 Credits/Maximum of 3
Presentation of various research techniques, in-depth study of a specific computer science problem, development of a written paper or project, and an oral defense.

Prerequisite: A minimum of 2 of the 500-level computer science required courses or permission of the program.

COMP 596: Individual Studies

1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

COMP 597: Special Topics

1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

COMP 600: Thesis Research

1-15 Credits/Maximum of 999
Research into a specific computer science problem, development of a scholarly written paper, and an oral defense.

Prerequisite: A minimum of 2 of the 500-level computer science required courses or permission of the program.

---

Computer Science and Engineering (CSE)

CSE 511: Operating Systems Design

3 Credits
Concurrent programming; design of I/O subsystem, memory management, and user interface; kernel design; deadlocks, protection and security, case studies.

Prerequisite: CMPSC473

CSE 513: Distributed Systems

3 Credits
Protocol hierarchies; routing and flow control algorithms; distributed operating systems; communication and synchronization mechanisms; resource allocation problems.

Prerequisite: CSE 411

CSE 514: Computer Networks

3 Credits
Network subsystems, ARPA N, SNA, DECNET, network protocols (physical databank, network, transport, sessions, presentation, application), routing and congestion control, network optimization.

Prerequisite: CMPEN362 ; E E 353 or E E 350

CSE 515: Reliable Data Communications

3 Credits
Discussion of problems and solutions for ensuring reliable and efficient communication over wired and wireless links and data networks.

Prerequisite: CMPEN362 ; E E 353 or E E 350

CSE 516: Mobile Networking

3 Credits
Algorithms, systems and design of mobile telecommunication voice and data networks. CSE 516 Mobile Networking (3) This course presents the fundamentals of mobile networking and provides simple analytical tools for designing and evaluating these networks. The course is divided into three parts. First, the architecture and algorithms for mobility
management and service control in classic circuit-switched cellular networks is presented. Using simple queuing models, students analyze the performance of these networks and examine design trade-offs. GSM is used as a case study. Second, the architecture and algorithms for mobility management is packet-based mobile telecommunications networks are presented. Finally, protocols, algorithms, and performance consideration for the mobile Internet are presented. This course focuses on the practical applications of these concepts, using real systems to illustrate architecture and protocol trade-offs. The course provides students with a venue in which to pursue research in mobile networking that complements several core areas of the graduate CSE curriculum (e.g., networks, architectures, algorithms, and formal analysis). Following the course in networking, this course enables students to learn the skills and obtain the background knowledge necessary to generate publishable research in the area of mobile networks. This course will serve as an elective for students interested in mobile networking and telecommunications.

CSE 517: Performance Evaluation
3 Credits
Tools and techniques for PE, Analytical and Simulation models, evaluation of multiprocessors, multicomputer and LANs, scheduling policies, case studies.

CSE 520: Science of Computer Programming
4 Credits
Weakest preconditions, nondeterminism, terminating constructs, formal derivation of some often used algorithms, correctness of programs, formal specification of large systems.

Prerequisite: CMPSC461

CSE 521: Compiler Construction
3 Credits
Design and implementation of compilers.

CSE 530: Fundamentals of Computer Architecture
3 Credits
Advances in computer architecture, Pipelining, parallelism, and multiprocessing.

Prerequisite: CMPEN431

CSE 531: Parallel Processors and Processing
3 Credits
Parallel processor organization; basic algorithms suitable for such systems; parallel sorting and interconnection networks; applications and discussion of specific processors.

Prerequisite: CSE 530

CSE 532: Multiprocessor Architecture
3 Credits
Fundamental structures of multiprocessors; interprocess communications, system deadlocks and protection, scheduling strategies, and parallel algorithms; example multiprocessor systems.

Prerequisite: CSE 530

CSE 536: Fault Tolerant Systems
3 Credits
Attributes of fault-tolerant systems and their definitions; realability and availability techniques; maintainability and testing techniques; practice of reliable system design.

Prerequisite: CSE 530

CSE 537: Interconnection Networks in Highly Parallel Computers
3 Credits
Study and comparative analysis of various classes of interconnection networks; routing problem; fault tolerance issue; performance evaluation; VLSI implementation.

Prerequisite: CSE 530

CSE 539: Topics in Computer Architecture
3 Credits
Study of current advanced issues in design, implementation and applications of complex computer systems.

Prerequisite: CSE 530

CSE 541: Database Systems I
3 Credits
Data models and relational database design; database integrity and concurrency control; distributed database design and concurrency control; query optimization.

Prerequisite: CMPSC431W

CSE 543: Computer Security
3 Credits
Specification and design of secure systems; security models, architectural issues, verification and validation, and applications in secure database management systems.

Prerequisite: CMPSC461

CSE 544: System Security
3 Credits
Review current research in computer and operating system security. CSE 544 System Security (3)This course is built around the problem of authorization (access control). After a discussion of threats of systems security, we will examine the fundamental mechanism for access control, the reference monitor. We will define the principle of the reference monitor and review how it is used to implement access control. The
The present course will cover topics in network security, the management and vulnerabilities of current networks. This will include a discussion of how these topics relate to the operating system. We begin with a discussion of the basic problems, architectures and devices in current and next generation networks. We will discuss the implementation of MAC in Linux via the Linux Security Modules (LSM) framework. This part of the class relies heavily on a case study of the SELinux system to illustrate how MAC can be implemented and how security goals can be enforced by using MAC. The third major topic focuses on how network security functions are implemented in the operating system. Such functions include authentication, firewalls, and secure communication via IPsec. The implementations of such functions in the Linux operating system will be the focus of this particular section of the course. The third major topic examines system security architectures for distributed systems. The main topic is mechanisms based on public key systems, such as trust management, integrity measurement, and web-based operating systems. We will investigate research results in these areas and hypothesize where this emerging space may evolve. The fourth major topic focuses on lower level features of operating systems and their impact on security. We will first review virtual machine systems and recent research results that indicate an emergence of virtual machine mechanisms as a practical basis for achieving strong system security guarantees. We will then explore working on protecting access to data on systems that is resident in traditional (file systems) and unexpected (other temporary) storage locations. The final two sections, Special Topics and Wrap-Up, will cover a number of areas of importance to system security, not really falling into the traditional system areas. This includes emerging topics such as language-based security, the use of source code analysis for achieving system security goals, host intrusion detection, and emerging areas of recent interest. These topics will change over time as interests and technology develop. We will conclude with a discussion of the major challenges and state of system security, and make predictions about the future of system security.

**Prerequisite:** CSE 458, CSE 411, CSE 543

CSE 545: Network Security

3 Credits

Advanced methods and technologies for network security. CSE 545 Network Security (3)CSE 545 covers the major topics and emerging trends in network security. We begin with a discussion of the basic problems, architectures and devices in current and next generation networks. This will include a discussion of how these topics relate to popular articles and the press. This part of the class relies heavily on case studies to illustrate how security impacts the social and technical aspects of the Internet and computing systems. The second major topic focuses on the use of applied cryptography supporting network protocols. This will provide a deeper view of the basics of cryptographic constructions and consider formal methods for proving their correctness. The realities and limitations of the current use of cryptography will be considered. Students will spend a considerable amount of time developing and analyzing their own security protocols. The third section of this course will focus on the management and vulnerabilities of current network environments. This will begin with a discussion of emerging authentication systems (federated authentication, graphical passwords, biometrics), and then turn to the security problems of large-scale network management. The class will then review major threats in network security: the management and vulnerabilities of wireless systems. The course concludes with a discussion of topical areas in network security. This is the most flexible part of the class, and will reflect the needs and desires of the instructors and students on a semester-to-semester basis.

**Prerequisite:** CSE 543

CSE 546: Cryptography

3 Credits

Introduction to the theory and techniques of modern cryptography, with emphasis on rigorous analysis and mathematical foundations. CSE 546 Cryptography (3)This course provides an introduction to the theory and techniques of modern cryptography. The course begins by reviewing relevant mathematical tools and moves on to develop definitions and examples of secure protocols for important cryptographic tasks such as symmetric- and private-key encryption, authentication, and digital signatures. Students will be evaluated primarily on weekly problem sets designed to verify and improve their understanding of the materials. Grades will be based on problem sets, a mid-semester examination, a final examination, and class participation/lecture notes. With regard to "lecture notes," students (in teams) must prepare a written summary of one lecture during the course. The goal of this exercise is to practice technical writing and exposition. This course will serve as an elective for graduate students in Computer Science Engineering and the Post-Baccalaureate Credit Certificate Program in Computer Network Security (under development).

**Prerequisite:** CSE 465

CSE 550: Numerical Linear Algebra

3 Credits

Solution of linear systems, sparse matrix techniques, linear least squares, singular value decomposition, numerical computation of eigenvalues and eigenvectors.

**Prerequisite:** MATH 441 or MATH 456

Cross-listed with: MATH 550

CSE 551: Numerical Solution of Ordinary Differential Equations

3 Credits

Methods for initial value and boundary value problems; convergence and stability analysis, automatic error control, stiff systems, boundary value problems.

**Prerequisite:** MATH 451 or MATH 456

Cross-listed with: MATH 551

CSE 552: Numerical Solution of Partial Differential Equations

3 Credits

Finite difference methods for elliptic, parabolic, and hyperbolic differential equations; solutions techniques for discretized systems; finite element methods for elliptic problems.

**Prerequisite:** MATH 402 or MATH 404; MATH 451 or MATH 456

Cross-listed with: MATH 552

CSE 553: Introduction to Approximation Theory

3 Credits

Interpolation; remainder theory; approximation of functions; error analysis; orthogonal polynomials; approximation of linear functionals; functional analysis applied to numerical analysis.

**Prerequisite:** MATH 401, 3 credits in Computer Science and Engineering

Penn State University 2757
Cross-listed with: MATH 553

CSE 554: Error Correcting Codes for Computers and Communication
3 Credits

Block, cyclic, and convolutional codes. Circuits and algorithms for decoding. Application to reliable communication and fault-tolerant computing.

Prerequisite: Communication Networks
Cross-listed with: EE 564

CSE 555: Numerical Optimization Techniques
3 Credits

Unconstrained and constrained optimization methods, linear and quadratic programming, software issues, ellipsoid and Karmarkar’s algorithm, global optimization, parallelism in optimization.

Prerequisite: CMPSC456
Cross-listed with: EE 564

CSE 556: Finite Element Methods
3 Credits

Sobolev spaces, variational formulations of boundary value problems; piecewise polynomial approximation theory, convergence and stability, special methods and applications.

Prerequisite: MATH 502, MATH 552
Cross-listed with: MATH 556

CSE 557: Concurrent Matrix Computation
3 Credits

This course discusses matrix computations on architectures that exploit concurrency. It will draw upon recent research in the field.

Prerequisite: CMPSC451, CMPSC455, CMPSC450, MATH 451, or MATH 455

CSE 562: Probabilistic Algorithms
3 Credits

Design and analysis of probabilistic algorithms, reliability problems, probabilistic complexity classes, lower bounds.

Prerequisite: CSE 565

CSE 564: Complexity of Combinatorial Problems
3 Credits

NP-completeness theory; approximation and heuristic techniques; discrete scheduling; additional complexity classes.

Prerequisite: CSE 565

CSE 565: Algorithm Design and Analysis
3 Credits

An introduction to algorithmic design and analysis.

Prerequisite: CMPSC456; Concurrent: CMPSC464

CSE 566: Algorithms and Data Structures in Bioinformatics
3 Credits

This course covers elegant algorithmic and data structure techniques that underpin modern biological data analysis. Bioinformatics is a growing field with immediate implications for our understanding of biology and treatment of disease. This course covers elegant algorithmic and data structure techniques and their use in bioinformatics. The emphasis is on recurrent ideas that underpin modern biological data analysis, presented in conjunction with their biological applications. The course is suitable both for students interested in doing bioinformatics research and those interested in applications of algorithms to the natural sciences. Some of the algorithms/data-structures that may be covered include exact string matching, suffix trees, suffix arrays, de Bruijn graphs, hidden Markov models, breakpoint graphs, succinct data structures, the Burrows-Wheeler transform, the FM-index, network flow, and bidirected graphs. Some of the biological applications will include sequence alignment and assembly, cancer genomics, phylogeny, gene finding, and variation detection. No prior biological or bioinformatics knowledge is required. A basic understanding of data structures and algorithms (equivalent to CMPSC465) is a prerequisite; however, exceptionally motivated students can contact the instructor to discuss their options. This course is complementary to existing bioinformatics courses offered through other programs on campus. These courses may be taken concurrently but are not prerequisites. Prerequisites: CMPSC465 Cross Listings: BMMB 566 will be added as a cross-listed course.

Prerequisite: CMPSC465
Cross-listed with: BMMB 566

CSE 575: Architecture of Arithmetic Processors
3 Credits

Algorithms and techniques for designing arithmetic processors; conventional algorithms and processor design; high-speed algorithms and resulting architectural structures.

Prerequisite: CMPEN411

CSE 577: VLSI Systems Design
3 Credits

Engineering design of large-scale integrated circuits, systems, and applications; study of advanced design techniques, architectures, and CAD methodologies.

Prerequisite: CMPEN411

CSE 578: VLSI Computer-Aided Design Tools
3 Credits

VLSI circuit design tools: placement, routing, extraction, design rule checking, graphic editors, simulation, verification, minimization, silicon compilation, test pattern generation.

Prerequisite: CMPEN411
CSE 583: Pattern Recognition--Principles and Applications
3 Credits
Decision-theoretic classification, discriminant functions, pattern processing and feature selection, syntactic pattern recognition, shape analysis and recognition.
Cross-listed with: EE 552

CSE 584: Machine Learning: Tools and Algorithms
3 Credits
Computational methods for modern machine learning models, including applications to big data and non-differentiable objective functions.
Cross-Listed

CSE 585: Digital Image Processing II
3 Credits
Advanced treatment of image processing techniques; image restoration, image segmentation, texture, and mathematical morphology.
Prerequisite: CMPEN455 or E E 455
Cross-listed with: EE 555

CSE 586: Topics in Computer Vision
3 Credits
Discussion of recent advances and current research trends in computer vision theory, algorithms, and their applications.
Prerequisite: CMPEN454 or E E 454
Cross-listed with: EE 554

CSE 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

CSE 591: Research Experience in Computer Science and Engineering
1 Credits
Research experience for new doctoral students in computer science and engineering. Research is performed in conjunction with another 500-level CSE course.
Concurrent: enrollment in another 500-level CSE course

CSE 594: Research Topics
1-15 Credits/Maximum of 15
Supervised student activities on research projects identified on an individual or small-group basis.

CSE 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

CSE 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

CSE 597G: **SPECIAL TOPICS**
1-9 Credits

CSE 598: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

CSE 598C: **SPECIAL TOPICS**
1-3 Credits

CSE 600: Thesis Research
1-15 Credits/Maximum of 999
No description.

CSE 601: Ph.d. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

CSE 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 3
Supervised experience in teaching and orientation to other selected aspects of the profession at The Pennsylvania State University.

CSE 610: Thesis Research Off-Campus
1-15 Credits/Maximum of 999
No description.

CSE 820: Software & Hardware Project Management
3 Credits
Students study the theory and practice of hardware and software project management. CSE 820 Software Hardware Project Management (3) This course provides a broad exploration of the field of software, hardware, and integrated software/hardware project management. In particular, it investigates the fundamentals of risk, scope, time and cost management, quality assurance, scheduling, and human resource functions. It considers the nuances of software, hardware, and integrated hardware/software project management, as distinct from the management of projects in, say, building construction or manufacturing. Building on these insights, the student will learn how to apply these techniques to a real-world project of his or her choosing. Students will learn to recognize, identify, and apply the functions of project management to the types of projects which they will encounter in industry. This course supports the professional nature of the MEng degree.
Counseling Psychology (CNPSY)

CNPSY 502: Advanced Counseling Theory and Method
3 Credits

Assessment, intervention, and evaluation procedures for counseling problems frequently encountered in school, college, and rehabilitation settings. CN ED 502/CN ED (CNPSY) 502 Advanced Counseling Theory and Method (3) This course is concerned with the exploration of ideas that are of theoretical and applied importance to thinking about counseling and psychotherapy. The course is not a skills course, per se, although many of the readings have clear implications for enhancing your therapeutic skills. Nor is the course meant to be a review of theories of personality or counseling typically covered in earlier courses. This course is open to CN ED and CNPSY students. The prerequisite is CN ED 501.

Prerequisite: CN ED 501 course open only to CN ED and CNPSY doctoral students.
Cross-listed with: CNED 502

CNPSY 515: Family Systems Theory, Research and Practice
3 Credits

Examines theory, research, and interventions grounded in family systems framework (e.g., Bowenian, Structural Strategic, etc.) from a psychological perspective. CNPSY 515 CNPSY 515 Family Systems Theory, Research, and Practice (3) This seminar will (a) familiarize students with the history of family therapy approaches and their contributions to the field of mental health service, (b) provide students with an opportunity to learn about the major approaches in family therapy, (c) introduce students to family therapy research, and (d) encourage students to reflect on the patterns in their own family of origin and family of choice. During this introductory seminar in family systems theory, students will gain exposure to the field of family therapy through: a variety of readings, including original articles written by theorists and journal articles discussing the research findings; experiential exercises and videotapes of family therapy and consultation sessions conducted by expert family therapists. The course is offered once a year and is open to graduate students in developmental, social and behavioral sciences and related fields.

Prerequisite: graduate standing; 6 credits in psychological development (e.g., HD FS 429 or equivalent), and/or counseling theory (e.g., CN ED 503 or equivalent).

CNPSY 554: Cross-Cultural Counseling
3 Credits

Examines theory, research, and models of counseling relationships between counselors and clients of different racial and sociocultural backgrounds. CNPSY 554CNPSY (CN ED) 554 Multicultural Counseling (3) This course is an advanced multicultural counseling course designed to help doctoral students: (a) develop mastery of the multicultural counseling literature, (b) promote self-awareness and self-knowledge, (c) facilitate the construction of cultural knowledge to increase awareness and sensitivity to issues affecting multicultural populations, (d) identify intervention strategies applicable to multicultural clients, and (e) promote development of a personal philosophy of multicultural counseling toward becoming a multiculturally competent counselor. The course is open to CN ED and CNPSY doctoral students who have successfully completed CN ED 507, CN ED 595A or CNPSY 595A, or equivalent courses.

Prerequisite: CN ED 507, CN ED 595A, or CNPSY 595A
Cross-listed with: CNED 554

CNPSY 555: Career Counseling
3 Credits

The examination of historical, legislative, and current models of career counseling and the development of pertinent individual and group techniques. CN ED 555CN ED (CNPSY) 555 Career Counseling (3) This course is an advanced extension of CN ED 505, Foundations of Counseling Information or its equivalent. In CN ED 501, students acquire a theoretical understanding of models of career development, decision-making, career education, information systems and information resources. In CN ED/CNPSY 555, students will have an opportunity to related such learning to the place of work in human behavior, models of career counseling, the role-play of such models, the practice of career appraisal and the broad economic, social, and legislative contexts, including the global economy, stimulating current emphases on career counseling. This course is open to CN ED and CNPSY students. The prerequisite is CN ED 501.

Prerequisite: CN ED 505
Cross-listed with: CNED 555

CNPSY 582: Advanced Group Psychotherapy
3 Credits

Study of group psychotherapy and interventions, with an experiential component. Available only to majors in CN ED and CNPSY.
Cross-listed with: CNED 582

CNPSY 589: Seminar on Counseling Supervision
1 Credits

Study of research about and theoretical models of clinical supervision of counselors; includes preparation for a practicum in counseling supervision.
Prerequisite: available only to doctoral-level majors in CN ED and CNPSY.
Cross-Listed

CNPSY 594: Research in Counseling
2-6 Credits/Maximum of 6

The design, implementation, and evaluation of counseling research projects.

CNPSY 595: **SPECIAL TOPICS**
1-6 Credits/Maximum of 6

CNPSY 595D: Supervision of Counselors
1-9 Credits/Maximum of 9

Practical experience in supervising and evaluating work of counselors.

Prerequisite: CN ED 595A or CN ED 595B; available only to majors in CN ED and CNPSY
Cross-listed with: CNED 595D

CNPSY 596: Individual Studies
1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

CNPSY 600: Thesis Research
1-15 Credits/Maximum of 999

NO DESCRIPTION.

CNPSY 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999

No description.

CNPSY 602: Supervised Experience in College Teaching
1-3 Credits/Maximum of 3

No description available.

CNPSY 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999

No description.

**Counselor Education (CNED)**

CNED 500: Introduction to Counseling and Development
3 Credits

Introduces students to the profession of counseling and to the major models of human growth and development. CN ED 500

Introduction to Counseling and Development (3) This course provides an introduction to the profession and practice of counseling and to major models of human growth and development. As such, a primary goal of this course is for students to begin the process of professionalization. Thus the course will address the history and current trends, professional standards, associations, areas of specialization, and major approaches to the field of counseling. It will also address major theories of human growth and development, as well as major developmental periods that might have pertinence for counselors. In addition, students will be expected to begin the process of their own development as professional counselors.

CNED 501: Counseling Theory and Method
3 Credits

Survey of psychodynamic, humanistic, behavioral and cognitive-behavioral approaches to counseling individuals.

CNED 502: Advanced Counseling Theory and Method
3 Credits

Assessment, intervention, and evaluation procedures for counseling problems frequently encountered in school, college, and rehabilitation settings. CN ED 502CN ED (CNPSY) 502 Advanced Counseling Theory and Method (3)This course is concerned with the exploration of ideas that are of theoretical and applied importance to thinking about counseling and psychotherapy. The course is not a skills course, per se, although many of the readings have clear implications for enhancing your therapeutic skills. Nor is the course meant to be a review of theories of personality or counseling typically covered in earlier courses. This course is open to CN ED and CNPSY students. The prerequisite is CN ED 501.

**Prerequisite:** CN ED501 course open only to CN ED and CNPSY doctoral students.

Cross-listed with: CNPSY 502

CNED 504: Foundations and Practices of School Counseling
3 Credits

This course in school counseling is a broad survey of the foundations, contextual dimensions, and practices of contemporary school counseling in Pre K-12 schools. Students develop knowledge of the roles of school counselors in addressing the developmental, personal-social, academic, and college-career needs of students in Pre K-12 schools. Students gain an understanding of the practices and interventions necessary for establishing and managing a comprehensive school counseling program. Students learn how current education reform and school contexts shape school counselors' roles. This course will provide the foundational knowledge necessary for additional school counseling courses.

CNED 505: Foundations of Career Development and Counseling Information
3 Credits

Accelerating change in economic, psychological, social, educational influences upon counselees. Utilization of information systems in effecting counselee change.

CNED 506: Individual Counseling Procedures
3 Credits

Training in listening, responding, challenging skills, and action-oriented techniques for individual counseling.

**Prerequisite:** or concurrent: CN ED501 ; available only to majors in CN ED and CNPSY

CNED 507: Multicultural Counseling: Foundations
3 Credits

Provide foundational information that controverts, complements and extends traditional psychology and counseling theory and practice.

CNED 508: Organization and Administration of Pupil Services
3 Credits

Principles, organization, personnel, functions, integration with school programs, evaluation.

**Prerequisite:** A G.P.A. of 3.00 or better in 27 credits of previous course work covering any three of the following five areas: economics, sociology, psychology, education, and anatomy and physiology.
CNED 509: Introduction to Rehabilitation Counseling
3 Credits
Provides information about rehabilitation history, legislation, philosophy, and agencies, as well as an overview of a variety of disabling conditions.

CNED 510: Foundations of Clinical Mental Health Counseling in Schools and Communities
3 Credits
Foundational content for the profession of clinical mental health counseling. CN ED 510 Foundations of Clinical Mental Health Counseling in Schools and Communities (3) This course provides a foundation for students in the clinical mental health counseling in schools and communities emphasis in the Counselor Education program. Course topics address professional identity, clinical mental health settings and services, public mental health policy, and related client advocacy strategies, as well as current trends and issues affecting clinical mental health counseling practice. Outside readings grounded in current research, in-class discussions, interactive activities, lectures, and films will be critical to integrating, synthesizing, and understanding clinical mental health counseling content. Specific emphasis will be placed on case-based approaches to instruction and learning.

CNED 516: Helping Skills for Student Affairs Professionals
3 Credits
Develop beginning content knowledge and skills related to practice of active listening, attending, and referral necessary for student affairs work.

Prerequisite: CN ED501

CNED 523: Counseling Children
3 Credits
Provides school and clinic approaches for school counselors and others mental health professionals to help children with developmental problems. CN ED 523 Counseling Children (3) Counseling children includes a range of school and clinic approaches used by school counselors and others to help children. The course combines theory and research findings with practical application of techniques so that students can develop a wide range of knowledge and skills for integration into their individual counseling model and professional situation. Classroom work will include lecture, discussion, videos, and presentations of techniques that include role-play and case studies. The combination of these activities is designed to create a sound basis of understanding and supervised opportunities to apply techniques in school and agency settings.

CNED 524: Counseling Adolescents
3 Credits
Provides approaches for school counselors and others working with a variety of adolescent obstacles and developmental needs.

CNED 525: Applied Testing in Counseling
3 Credits
Using counseling assessments effectively and ethically in applied settings, with an emphasis on test analysis and evaluation of psychometric properties.

Prerequisite: 3 credits of upper-level statistics

CNED 526: Research in Counselor Education
3 Credits
Evaluating counselor education research from scientist-practitioner perspective; emphasis on how to develop and use research with an applied focus.

CNED 530: Family Counseling: Theory and Practice
3 Credits
Conceptualization and application of family counseling frameworks to EC-12 school settings are learned in this course. CN ED 530CN ED 530 Family Counseling: Theory and Practice (3) Family functioning is paramount in the educational, personal/social, and career development of children and adolescents. This course prepares school counselors and other counselors for helping children and adolescents in the context of family. Several theories and models of family counseling are presented, focusing on application of these frameworks to work in EC-12 schools. Through experiential activities connected to the course, counselor-trainees are encouraged to relate experiences in their own families to their functioning as counselors. The course is required for a master's degree in elementary or secondary school counseling. Evaluation includes multiple-choice tests and a self-reflection project. The course objectives follow: Students will: 1. know the terminology and basic concepts associated with systems thinking and family counseling. 2. adopt a family systems frame of reference and understand the family counseling perspective. 3. know the history and development of family counseling. 4. conceptualize the social constructionist perspective of family counseling and human functioning, including perspectives on substance use and abuse, gender, lifestyle, socioeconomic conditions, sociopolitical conditions, relations among diverse groups, and culture and identity. 5. understand and apply various frameworks of family counseling to the school counseling and school context, including Bowenian theory, attachment theory, experiential/humanistic approaches, structural and strategic approaches, cognitive-behavioral approaches, solution-focused therapy, narrative therapy, and integrative models. 6. grow in their own self-awareness with regard to their families of origin. 7. understand the use of self in counseling and learn and apply this knowledge in experiential activities and personal and professional functioning. 8. understand the wounded healer concept and attachment theory implications for counselor functioning. 9. comprehend and delineate the relationships among family systems, schools, and community systems. 10. understand racial-ethnic, gender, cultural, socioeconomic, and lifestyle issues in the context of family, school, and community and institutional systems. 11. know how families, schools, and communities interact to influence students’ development. 12. understand strategies used to promote effective teamwork among counselors, educational professionals, students, parents, schools, and communities. 13. understand communication, collaboration, and consultation with parents, educational and mental health professionals, guardians, and community members for promoting students educational, career, and personal development. 14. know and understand the structure
of parenting styles and outcomes associated with each parenting style. 15. understand research on parenting styles and contrast the traditional view of adolescent development with the contemporary view. 16. apply parenting styles for various prevention and intervention strategies. 17. know research support for various prevention and intervention strategies, understand measurement associated with various theories and models, and understand research traditions and methods associated with various theories and models.

Prerequisite: CN ED501

CNED 531: Grief and Loss Counseling
3 Credits
Course focus is on counseling people with a variety of grief and loss issues.

CNED 532: Diagnosis Counseling
3 Credits
Course examines elements of counseling diagnosis, including identification and assessment of symptoms and behaviors in determining appropriate diagnoses.

CNED 554: Cross-Cultural Counseling
3 Credits
Examines theory, research, and models of counseling relationships between counselors and clients of different racial and sociocultural backgrounds. CNPSY 554CNPSY (CN ED) 554 Multicultural Counseling (3) This course is an advanced multicultural counseling course designed to help doctoral students: (a) develop mastery of the multicultural counseling literature, (b) promote self-awareness and self-knowledge, (c) facilitate the construction of cultural knowledge to increase awareness and sensitivity to issues affecting multicultural populations, (d) identify intervention strategies applicable to multicultural clients, and (e) promote development of a personal philosophy of multicultural counseling toward becoming a multiculturally competent counselor. The course is open to CN ED and CNPSY doctoral students who have successfully completed CN ED 507, CN ED 595A or CNPSY 595A, or equivalent courses.

Prerequisite: CN ED507 , CN ED595A , or CNPSY595A
Cross-listed with: CNPSY 554

CNED 555: Career Counseling
3 Credits
The examination of historical, legislative, and current models of career counseling and the development of pertinent individual and group techniques. CN ED 555CN ED (CNPSY) 555 Career Counseling (3) This course is an advanced extension of CN ED 505, Foundations of Counseling Infom-nation or its equivalent. In CN ED 501, students acquire a theoretical understanding of models of career development, decision-making, career education, information systems and information resources. In CN ED/CNPSY 555, students will have an opportunity to related such learning to the place of work in human behavior, models of career counseling, the role-play of such models, the practice of career appraisal and the broad economic, social, and legislative contexts, including the global economy, stimulating current emphases on career counseling. This course is open to CN ED and CNTSY students. The prerequisite is CN ED 501.

Prerequisite: CN ED505
Cross-listed with: CNPSY 555

CNED 560: Psychosocial Aspects of Disability
3 Credits
Psychological models of reaction to disability and social consequences in adulthood; generalizations to other life crises; implications for counselor interventions.

Prerequisite: 9 credits in counselor education or related area

CNED 561: Job Development and Employment of Persons with Disabilities
3 Credits
Assessing client readiness for work, job-seeking skills training, job placement strategies, modifications to the worksite, methods for employer development.

Prerequisite: CN ED509 , CN ED525

CNED 556: Psychosocial Aspects of Disability
3 Credits

CNED 580: Foundations: History and Trends in Counselor Education
3 Credits
Overview of the foundations and issues relevant to the counseling profession and counselor education. Course available only to majors in CN ED.

CNED 581: Professional Issues in Counselor Education
3 Credits
Forum for doctoral students to examine and analyze issues relevant for counselor educators. Available only to majors in CN ED.

Prerequisite: CN ED580

CNED 582: Advanced Group Psychotherapy
3 Credits
Study of group psychotherapy and interventions, with an experiential component. Available only to majors in CN ED and CNPSY.

Cross-listed with: CNPSY 582

CNED 589: Seminar on Counseling Supervision
3 Credits
Study research and theoretical models of clinical supervision of counselors. Includes experiential supervision component as preparation for counseling supervision practicum.

Cross-Listed

CNED 593: Management of College and University Career Centers
3 Credits
The course focuses on the design, management, implementation, and promotion of Career Services in higher education.

Prerequisite: 9 credits in counselor education
CNED 594: **SPECIAL TOPICS**
3 Credits
CNED 594A: Research Topics
3 Credits
The design, implementation, and evaluation of counseling research projects.

CNED 595: **SPECIAL TOPICS**
1-6 Credits/Maximum of 6
CNED 595A: Counseling Practicum
1-6 Credits/Maximum of 6
Practice in the application of guidance principles and methods to cases counseled under supervision; case conferences; seminar in guidance techniques
**Prerequisite:** CN ED505, CN ED506, CN ED525; available only to majors in CN ED and CNPSY

CNED 595D: Supervision of Counselors
1-9 Credits/Maximum of 9
Practical experience in supervising and evaluating work of counselors.
**Prerequisite:** CN ED595A or CN ED595B; available only to majors in CN ED and CNPSY
Cross-listed with: CNPSY 595D

CNED 595E: School Counseling Internship and Seminar
3-6 Credits/Maximum of 9
The School Counseling Internship provides a closely supervised field experience in involving the full range of duties involved with professional school counseling in Pre-K-12 schools. Students are expected to utilize every opportunity to become familiar with and participate in the services provided by the schools and related organizations with which they are associated. The expectation is that the Internship student should be providing the same range of services for the school district that the other school counselors provide. In this course, you are expected to engage in various counselor roles at your site, including (a) program development and evaluation: program assessment, planning, design, implementation, and evaluation; (b) counseling: individual, group, group guidance; (c) program administration and leadership; (c) collaboration, coordination, and consultation: work with parents, teachers, administrators, community members, and other appropriate stakeholders; and (d) assessment, career development, program coordination, and other important and appropriate roles.
**CONCURRENT:** CNED 504

CNED 595G: Counseling Internship and Integrative Seminar
1-6 Credits/Maximum of 12
CN ED 595G Counseling Internship and Integrative Seminar (3-6 per semester/maximum of 12) This course will provide students with opportunities to apply principles and techniques that facilitate the counseling process by completing a supervised 600-hour counseling internship experience. Students must have successfully passed CN ED 595A (Practicum) and gain permission from the Emphasis Coordinator before they can begin their counseling internship. Students are also required to have professional liability insurance as a prerequisite for the counseling internship.

**Prerequisite:** CN ED595A

CNED 595I: Counselor Education Doctoral Internship
3-6 Credits/Maximum of 9
Practical experience in professional counseling higher education teaching under supervision available only to CN ED doctoral students. This course provides Counselor Education doctoral students with opportunities to apply principles and techniques that expand their counseling and higher education teaching experiences by completing an individual and group supervised internship. A minimum number of total hours required by accreditation must be acquired to meet the program required total 6 credit hours. This is a culmination course that provides for professional demonstration of information and skills developed in preceding courses in the doctoral program. Students in the course will meet the following objectives: a. Demonstrate a personal theoretical counseling orientation that is based on a critical review of existing counseling and teaching theories. b. Demonstrate effective application of theory and professional best practices. c. Demonstrate an understanding of counseling case conceptualization and effective interventions across diverse populations and settings. d. Develop and demonstrate a personal philosophy of teaching and learning. e. Demonstrate course design, delivery, and evaluation methods appropriate to course objectives. f. Demonstrate the ability to assess the needs of counselors in training and develop techniques to help students develop into competent counselors.

CNED 595K: Counselor Education Doctoral Counseling Internship
3 Credits
Supervised internship, with responsibility for a regular counseling caseload. Available only to CN ED doctoral Students.

**Prerequisite:** CN ED595P

CNED 595P: Counselor Education Doctoral Counseling Practicum
3 Credits
Practice in the application of counselor education principles and methods to cases counseled under supervision; case conferences. Available only to CN ED doctoral students.

CNED 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

CNED 600: Thesis Research
1-15 Credits/Maximum of 999
No description.
in both technical research reports and in academic journals. Further, students should be able to plan, implement, and assess the outcomes of studies that they might initiate.

**CRIMJ 502: Public Policy and the Criminal Justice System**

3 Credits

This course studies the concepts and methods of political and legal activity within the criminal justice system and their impact on society. CRIMJ 502 CRIMJ 502 Public Policy and The Criminal Justice System (3) The purpose of this course is to focus on crime policies in terms of effectiveness, efficiency, resource allocation, and societal impact. This course forms a nexus between the legal reasoning of criminal law with the theoretical and research foundations of the discipline. Crime control appears to be centered within the political community often without adequate, fair, or pertinent analysis of policy design or implementation. This course will use legal precedent to discuss the past and apply such a precedent to current issues. Students will examine how political assessments of crime is no guarantee that the resulting policy will deter the behavior. The nexus between research, criminal law, and the expectation of justice often come from disparate views about the goal of the criminal justice system. This course will also examine the goal of justice amid diverse populations. How has racial disparity in sentencing, legal representation, the death penalty, judicial representation, and political careers persisted? Students will also study comparative issues of national and international law. Finally, students will address a policy issue by submitting a policy analysis research proposal followed by a policy analysis paper.

**Prerequisite:** a baccalaureate in Criminal Justice or Behavioral related Sciences and admission to graduate study

**CRIMJ 503: Advanced Statistics in Criminal Justice**

3 Credits

Advanced statistics in criminal justice and criminology. The purpose of this course is to teach the student the theory behind a particular statistical technique and its appropriate use. As such, it focuses on: (1) the theory of statistical procedures; and (2) the analysis of computer-generated output. Through classroom discussions, reading assignments, and out-of-class exercises, the student will learn which statistical technique is appropriate with regard to the research hypothesis and the level of measurement of the variables included in the analysis. Further, through data analysis using SPSS, the student will learn how to interpret the output from that analysis.

**Concurrent:** CRIMJ501

**CRIMJ 504: Criminal Justice Organization and Management**

3 Credits

The course will be a broad overview of the structure and management of criminal justice organizations. CRIMJ 504 CRIMJ 504 Criminal Justice Organization and Management (3) The purpose of this course is to provide students with the ability to assess substantive policy issues regarding the organization and management of criminal justice agencies, to explain the rudiments of the day-to-day functioning of criminal justice organizations, and, most important, to get students actively engaged in discussing and thinking critically about what they consider to be good organization and management principles and policies. In addition to the text, students will be instructed to consult criminal justice and public administration journals for the most up-to-date ideas
and concepts in organizational management. In particular, students should (1) understand the nature of criminal justice organizations; (2) understand the importance of effective communication and motivation of rank-and-file employees; (3) comprehend the necessity of the use of power and decision making; and (4) the necessity of change and research in criminal justice organizations. This course will be offered once every other semester, and it should be a first-semester requirement.

**Prerequisite:** admission to graduate study and permission of program

**CRIMJ 563: Concepts and Practices in Police Administration**

3 Credits

Discusses application of police research and management principles to the contemporary policing context. CRIMJ 563 CRIMJ 563 Concepts and Practices in Police Administration (3) This course examines the multitude of factors involved in the delivery of protective services to a diverse community. The evolution of policing from its English, quasi-militaristic heritage will be analyzed in order to gain foundational knowledge for understanding its current problem-solving, community orientation. Method for attaining a community partnership will be explored. Means for attaining accountability within the new organizational philosophy will be identified. Important issues such as use of force, cultural awareness, integrity, and ethics will be extensively reviewed.

**Prerequisite:** permission of program

**CRIMJ 564: Administrative and Legal Aspects of Corrections**

3 Credits

This course addresses historical and contemporary correctional policy, accountability, and possible remedial alternatives. CRIMJ 564 CRIMJ 564 Administrative and Legal Aspects of Corrections (3) CRIMJ 564 is the historical, administrative, and legal inquiry into the development of institutional and community criminal punishment. Currently, corrections has nearly a 70% recidivism rate. Corrections is the measure of the cost of doing crime and cultural changes which redefine that cost. CRIMJ 564 will provide a macro-perspective into the mechanics of designing and reforming the process of capital punishment.

**Prerequisite:** permission of program

**CRIMJ 565: Courts in the Criminal Justice System**

3 Credits

An analysis of the function and role of the courts and the personnel involved in the American criminal justice system. CRIMJ 565 CRIMJ 565 Courts in the Criminal Justice System (3) The course will deal with the nature and function of the courts and their personnel within the American criminal justice system. In relation to the structure and organization of the courts, the differences in court systems and functions will be examined, as well as proposals for reform of these structures and organization in light of concerns over increasing caseloads, other docket pressures, and a variety of other issues. The course additionally examines the personnel involved in the court processes of the criminal justice system in their function, education and training, selection, role orientations and examines the implications of these factors in how they exercise decision-making power. Proposals for reform of decision-making functions of prosecutors, defense attorneys, and judges will be examined in light of the interrelated functioning of personnel within the courts.

**Prerequisite:** permission of program

**CRIMJ 567: Juvenile Justice: Issues and Practice**

3 Credits

The systematic application of the juvenile justice system and issues related to juvenile delinquency and constitutional law. CRIMJ 567 CRIMJ 567 Juvenile Justice: Issues and Practice (3) This course introduces the juvenile justice system and issues associated with processing youth through that system for graduate study. The course first addresses how there came to be a separate system for juveniles in this country and explores the major philosophical foundation for that separate system. Further, the course encourages the student to think about how delinquency is defined and the challenges those definitions have faced. In addition to exploring how youth are processed through the juvenile justice system (from arrest to disposition of the case), the course also provides the student with an exploration into issues associated with minorities and females. Critical issues of importance to juvenile justice administrators will be covered in this course as well since many CRIMJ graduates will go on to serve as administrators in the criminal justice field. Students will be asked to think critically about the future of the juvenile justice system as the system moves beyond the original intent of its framers. This course should provide the student with a better understanding not only of how the juvenile justice works, but also of how the system has dealt with challenges that it has faced since its first inception in 1899. This course will be offered once a year.

**Prerequisite:** permission of program

**CRIMJ 568: Qualitative Methods for Criminal Justice**

3 Credits

This course examines the many facets of qualitative research methodology. CRIMJ 568 CRIMJ 568 Qualitative Methods for Criminal Justice (3) The purpose of this course is to train the student how to conduct a good qualitative study. This will be achieved by introducing the students to various methods of data collection used in qualitative research. Specifically, the student will study qualitative methods such as, case study analysis, observer as participant, covert participation, as well as effective interviewing. The student will examine examples of notable qualitative studies to increase their understanding of the various concepts associated with qualitative research.

**Prerequisite:** Admission to a graduate program or permission of program.

**CRIMJ 590: Colloquium**

1-3 Credits/Maximum of 3

Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers. CRIMJ 590 CRIMJ 590. Colloquium (1-3) This common course will focus on specific issues within each colloquia. Issues to be covered will be research, resources allocation, legal issues, and impact on crime control. This course will direct students to study the design and implementation of policies to address specific issues. The course will add to the diversity offerings within the Master of Arts in Criminal Justice. This course will be offered in the summer and the spring with an enrollment of 20. Repeatable credit is possible. It will be offered more if enrollment patterns warrant such an increase.

**Prerequisite:** permission of program
Criminology 501: Research Topics

1-15 Credits/Maximum of 15

Supervised student activities on research projects identified on an individual or small-group basis. CRIMJ 504 CRIMJ 594. Research Topics (1-12) This common course will focus on specific research issues. Issues to be covered will be resources allocation, legal issues, and impact on crime control. Students will study the design and implementation of topical issues as they address specific issues. The course will add to the diversity offerings within the Master of Arts in Criminal Justice. This course will be offered every third semester.

CRIMJ 595: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, non-group instruction, including field experiences, practicums, or internships. Written and oral critique of activity required. CRIMJ 595 CRIMJ 595. Internship (1-18) The purpose of this course is to introduce students to the ethics, operations, and standards of working within a criminal justice environment. This course is individualized for each placement and student. It is offered in cooperation with the program, the internship site, and the goals of the student. An overall objective is to familiarize students with the legal and professional standards associated with working with people as colleagues, program participants, or clients. Students will be expected to comprehend the guidelines associated with legal and social service agencies. The internship will enable students to apply these guidelines under novel and unique situations. This course will be offered each semester with an enrollment of ten students. It will be offered more if enrollment patterns warrant such an increase.

Prerequisite: The applicant must have completed CRIMJ 500, CRIMJ 502, CRIMJ 504 plus three other Masters credits. The applicant also must have a GPA of at least 3.25

CRIMJ 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including non-thesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

CRIMJ 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

Criminal Justice Policy and Administration (CJPA)

CJPA 501: Criminal Justice Institutions

3 Credits

This course provides a broad understanding of the social science study of criminal justice institutions and their decision-making processes. Criminal Justice Institutions focuses on the social scientific study of criminal justice institutions and their decision-making processes. The course presents an overview of key issues in theory and research on each major sector of the criminal justice system: policing, prosecution, criminal defense, courts, and corrections. The course also discusses the societal impact of these criminal justice sectors, and the relationship between research and criminal justice policy.

CJPA 502: Theories of Crime

3 Credits

This course provides a survey of social science theories of criminal behavior at the individual and group levels. Theories of Crime provides an advanced survey of social science theories of criminal behavior at the individual and group levels. The course begins with an examination of the empirical study of crime, with an emphasis on crime data and its sources. The course progresses through biosocial, psychological, and sociological theories. The overarching emphasis of the course is to understand explanations of criminal behavior at the individual level and variations in crime rates at the group level.

CJPA 803: Applied Research Methods

3 Credits

This course provides a survey of social research methods tailored to the field of criminal justice. This course provides a survey of social science research methods, applied to the study of criminal justice topics and the evaluation of criminal justice policies. The course discusses different sources of crime and justice data, survey research methods, experimental and quasi-experimental approaches, qualitative research approaches, and legal research. The course emphasizes the illustration of types of research methods with examples from criminal justice research and policy evaluation.

CJPA 808: Capstone Project in Criminal Justice and Policy Administration

3 Credits

This is a capstone course and a requirement for all students in the M.P.S. in Criminal Justice and Policy Administration. During their final semester the student will work closely with a faculty adviser (selected to match the student on substantive and/or methodological expertise) on a self-selected criminal justice and policy administration-related project. The student is expected to draw on data and methods encountered during their prior course work. At the end of the semester the student will be required to make a formal peer presentation to other enrolled students and all their faculty advisors. The student also will be required to submit a final report/paper to their faculty adviser by the end of the semester.

Prerequisite: CJPA 501, CJPA 502, CJPA 803, CJPA 820, CJPA 865, CRIMJ 503

CJPA 820: Criminal Procedure

3 Credits

This course provides a survey of criminal procedure and related constitutional law. Section 1 of the course explores the origins and evolution of criminal procedure, from its ancient roots through colonial times, the due process revolution, and modern law. Section 2 examines sources of modern criminal procedure, including statutory law, Supreme Court opinions, other case law, rules, regulations, and organizations’ rules and regulations. Section 3 examines the Fourth Amendment and the evolution of search and seizure laws, including arrests, proper use of force, search warrants, and searches of places and things. This section presents older and more recent psychological conceptions of crime. Section 4 examines the Fifth Amendment, the federal due process clause, and the right to be free from forced self-incrimination;
the Confrontation Clause; and the rights and responsibilities of all related
criminal justice stakeholders in relation to these issues, including victims
and defendants. Section 5 examines the Sixth Amendment, the right
to counsel, evidence procurement and development, and criminal trial
procedures. Section 6 examines the Eighth Amendment, the relationship
between the Eighth and Fourteenth Amendments, pretrial versus post-
conviction procedures, sentencing and correctional procedures, and the
cruel and unusual punishment clause. Section 7 examines the Fourteenth
Amendment, substantive due process clause, the equal protection clause,
civil rights litigation, and the role of the writ of habeas corpus in criminal
procedure. Section 8 allows students to demonstrate that they have
mastered the above through a case study of a criminal case that has
occurred within the past twelve months, or is ongoing.

CJPA 865: Criminal Justice Ethics in a Diverse Society

3 Credits

This course provides a survey of ethical systems and theories. Section
1 provides an overview of the study of ethics, with definitions and a
discussion of the parameters of ethical analysis. Section 2 presents
the major ethical systems (utilitarianism, ethical formalism, religion,
ethics of care, virtue ethics). Section 3 examines the origins of the
concept of justice, distributive justice, corrective justice, substantive
justice, procedural justice, immoral laws and the moral person, and
restorative justice. Section 4 explains the theories of moral development,
biological factors, learning theory, Kohlberg's moral stage theory, teaching
ethics, and avoiding cynicism and burnout. Section 5 discusses the role
of police in society as a crime fighter or public servant, police power
and discretion, and the police subculture. Section 6 examines police
discretion and discrimination, discretion in criminal investigations, and
discretion and the use of force. Section 7 examines police misconduct
and corruption as a worldwide problem, including international measures
of corruption, on-duty use of drugs and alcohol, sexual misconduct, and
criminal behavior by police. Section 8 examines the role of law, the law
and legal behavior, justifications for law, and the various paradigms of
law. Section 9 presents issues of discretion and dilemmas for the defense
and the prosecution. Section 10 discusses ethical misconduct in the
courts and the explanations and methods of response to the misconduct.
Section 11 describes the issues involving discretion of correctional
officers, treatment staff, and probation and parole officers.

Criminology (CRIM)

CRIM 500: Overview of Graduate Studies in Criminology

1 Credits

An overview of professional activities of scholars of criminology and
Penn State's program in this field. CRIM 500 Overview of Graduate
Studies in Criminology (1) This course is intended for new students in the
Criminology graduate program. Its purpose is to speed their transition
to graduate study and to provide a good start for their professional
socialization. The course offers an overview of many of the professional
activities of scholars of criminology and of Penn State's program in this
field. This includes writing, publishing, teaching, and seeking funding. A
major goal of the course is to help students see beyond the immediate
priority of success at course work to the longer term priorities of success
in these other arenas. The course is organized around a series of guest
speakers from the program faculty who will discuss a range of activities
that are a part of the professional life of research scholars. It also
provides a forum for graduate students to get to know the faculty. The
tone of the discussion is conversational. Speakers welcome questions
both about the particular topic of the week and about the speaker's
professional/research activities.

CRIM 501: Criminal Justice Organizations and Institutions

3 Credits

Organizations and institutions involved in the formulation and
implementation of criminal justice policy in complex social and
organizational environments. CRIM 501 Criminal Justice Organizations
and Institutions (3) Organizations and institutions involved in the
formulation and implementation of criminal justice policy in complex
social and organizational environments.

CRIM 512: Criminological Theories

3 Credits

Survey of theoretical and substantive issues in deviance and criminology,
with emphasis on critical review of theories. SOC (CRIM) 512
Criminological Theories (3) This graduate course in Criminological
Theories is designed to provide students with a broad understanding of
the major theories that have animated the field of criminology since its
inception. The course traces the development of criminological theories
from the early 20th century to the present and provides students with a
targeted exposure to empirical studies that have tested these theories.

Cross-listed with: SOC 512

CRIM 515: Research Methods in Criminology and Deviance

3 Credits

Review of methodological issues; design and conduct of research;
analysis and interpretation of findings; ethical and policy issues. SOC
(CRIM) 515 Research Methods in Criminology and Deviance (3) Review
of methodological issues; design and conduct of research; analysis and
interpretation of findings; ethical and policy issues.

Cross-listed with: SOC 515

CRIM 591: Teaching Sociology/Criminology

1 Credits

Preparation for teaching sociology and/or criminology at the college
level. CRIM (SOC) 591 Teaching Sociology/Criminology (1) Preparation
for teaching sociology and/or criminology at the college level.

Cross-listed with: SOC 591

CRIM 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nontthesis research, which are supervised on
an individual basis and which fall outside the scope of formal courses.

CRIM 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may
be offered infrequently.
CRIM 597E: Networks & Crime

3 Credits

A seminar on the study of social networks and crime, including research on interpersonal influence, co-offending, and illicit commerce.

CRIM 597F: CRIME & HEALTH

3 Credits

Topics include overlapping theories in criminology and epidemiology, bio-social explanations of crime/deviance, and collateral health consequences of crime and punishment.

CRIM 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

CRIM 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

CRIM 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

Curriculum and Instruction (CI)

CI 500: Multiple and Mixed Methods in Curriculum Inquiry

3 Credits

Multiple and mixed methods of inquiry to investigate problems in the practice of curriculum and instruction. CI 500 CI 500 Multiple and Mixed Methods in Curriculum Inquiry (3) This course focuses on practice-embedded curriculum inquiry and surveys an array of approaches and methods that are quantitative, qualitative or both. The course is intended as a gateway seminar to other CI disciplined inquiry courses (i.e., CI 501, 502, 503) in which curriculum and instruction students can discuss and participate in learning activities related to the readings and in which guest speakers can inform CI graduate students about current issues and topics related to systematic inquiry with application to curriculum and instruction.

CI 501: Teaching as Inquiry

3 Credits

Course guides teachers to develop systematic inquiries into effective teaching and learning.

CI 502: Qualitative Research in Curriculum and Instruction I

3 Credits

Presentation of theoretical and practical issues related to designing and proposing qualitative research concerning curriculum, teaching and/or learning.

Prerequisite: admission to a doctoral program

CI 503: Qualitative Research in Curriculum and Instruction II

3 Credits

Considers forms of qualitative data, data analyses, procedures to generate data relationships, interpretation, and presentation of data.

Prerequisite: CI 502

CI 511: Educational Ethnography: History, Theory, and Methods

3 Credits

This seminar shows students how to use ethnographic methods for education research to inform classroom practice and education policy. The course is centered around the idea that school communities serve as key sites for students of all ages to learn to become members of their culture(s). Course readings include historical to contemporary works of researchers who have shaped educational ethnography. We will also read about education in various settings and discuss anthropological explanations of inequities experienced by minority culture communities or marginalized groups. Students will carry out a mini-ethnographic study based on their area of research interest. The course is especially designed for students to be able to conduct ethnographic studies or make use of ethnographic techniques in future research projects.

Prerequisite: ( CI 502; ADTED 550; EDTHP 586; )

CI 512: Contemporary Educational Ethnography

3 Credits

Recommended Preparations: Qualitative Research course or permission of instructor. This seminar shows students how to use contemporary ethnographic theories and methods for education research to inform educational practice and policy. The contemporary movement might arguably be situated in the controversies of the 1980s and 90s, exemplified in Clifford and Marcus's book, Writing Culture, in which they identified the epistemological and political predicaments and controversies pertaining to "the crisis of representation" in the field of anthropology. CI 512 addresses methodological and theoretical approaches informed though literary, reflexive, postmodern, poststructural, feminist, multisensory, multimodal, multivocal, and postcolonial turns and the ways in which they inform educational ethnography. The course focuses on a comprehensive view of education-schools, cultural and community centers, home life- as sites for all ages to learn to become members of their culture(s). A significant and regularly occurring aspect of the class involves students engaging in contemporary ethnographic practices such as cartographic, photographic/videographic, arts-based, alternative writing, walking/movement, sensory, performative, and multimodal. The course will intersperse readings of ethnography with readings about ethnography, largely within the contemporary sphere. The focus will be on contemporary movements that are likely to affect students as they consider ethnographic approaches for their dissertation topics (e.g., science education, musical training, literacy practice, critical race pedagogy).

CI 513: Video Ethnography in Education

3 Credits

Recommended Preparations: A graduate course in educational ethnography This seminar will show students how to use video ethnography in education research. The course is rooted in what is
popularly known as the Preschool in Three Cultures method (also known as video-cued multivocal ethnography). We will learn about and watch films using video-based ethnographic research methods. Students will also carry out mini-video ethnographies in a local classroom.

**Prerequisite:** CI 502; ADTED 550; EDTHP 586; LDT 574

Cross-listed with: CIED 513

CI 515: Foundations of Educational Research

3 Credits/Maximum of 999

Students read the philosophical foundations of education research, study how philosophies influence methodologies, and analyze current educational problems. This course is designed for students entering doctoral programs in the College of Education. Our students are studying to become education researchers within a highly politicized environment. For example, particular definitions of education research and government policies that favor some types of research practices over others provide opportunities for and set limits upon the work of education researchers.

Public controversies likewise contribute to challenges faced by education researchers who find their work affirmed or discounted by particular definitions and policies. In order to explore these controversies and to allow students to begin identifying their own “positionality” with regard to research, this course begins with a reading of the history and philosophies of education research (primarily focusing on the United States). The course goals are: - to identify underlying assumptions of competing forms of social inquiry, each determined to uncover new knowledge; - to bring those assumptions to bear on education research in chosen fields of study; and - to begin to develop one’s own positions in order to direct further study and research. Specifically, through instructor facilitation and group discussions, students will come to understand major philosophical perspectives that permeate and drive research methodologies in education: positivism, postpositivism, interpretivism, critical theory, poststructuralism, and pragmatism. These understandings allow students to recognize the methodological assumptions that inform published research studies and to discover how methodologies might inform the research they wish to conduct as students and practitioners. Although the course is not required by any particular doctoral program in the College of Education, it is suggested for students who consider research important to their future careers and who see benefits in exploring the methodological options available.

Cross-listed with: ADTED 515, EDPSY 515, HIED 515

CI 528: Theories of Identity

3 Credits

Survey of 20th century theories of identity from post-colonial, critical race, psychoanalytic, Marxist, and post-structural feminist and queer perspectives.

CI 529: Foucault in Education

3 Credits

Reading major works in Michel Foucault and applications of his work in the field of Education. CI 529 Foucault in Education (3) The purposes of this course are twofold: 1) to read and discuss in depth the work of Michel Foucault and 2) to consider how Foucault's ideas may inform and be informed by theories and practices in education. Foucault is arguably one of the pre-eminent Western social theorists of the 20th century. Researchers and theorists working from post-structural, critical and socio-cultural perspectives frequently turn to Foucault’s concepts of power, discipline, and subjectivity as powerful analytic lenses for analyzing the daily lives and practices of students and teachers in classrooms as well as more generally the field of Education, educational politics and policies, and educational institutions. Additionally, given the tremendous impact of Foucault’s work in multiple disciplines throughout the academe, the ability to read and apply the theories of Foucault can facilitate broader reading and discussion across a variety of disciplines. In the class, students will devote approximately 2/3 of the time to reading original works by Foucault and brief commentaries on these works, and 1/3 of the time reading applications of Foucault’s work by education researchers and theorists. The primary work load of the class is reading. Reading Foucault is not an easy task. Students can expect careful scaffolding of their learning through classroom discussions, a required on-line discussion forum, and frequent feedback from the instructor. Preparation for and participation in class discussions and in the building of a vibrant learning environment are required components of the class.

CI 541: Place(s) in Education

0 Credits

In an essay about place, the anthropologist Clifford Geertz notes that "something that is a dimension of everyone’s existence, the intensity of where we are, passes by anonymously and unremarked. It goes without saying.” The purpose of this course is to foreground the concept of place and real places in our daily lives and academic work, particularly with respect to education (including schooling), to make sure that it does not go without saying. What is (a) place? How is it formed, bounded, made meaningful? How is it personal and social? What are its relationships with time and space? What are its relationships with experience, culture, citizenship, margins, diversity, and so many other topics? How does it shape living, especially learning and teaching in schools, and how is it shaped by these things? How do I and we fit in? And, following the feminist educational philosopher Nel Noddings, “should schools teach for an understanding and love of place or should they now offer curricula designed to transcend place? Through a seminar format focused specifically on educational contexts, we will study place from a range of interdisciplinary perspectives and consider what these landscapes of place mean for teaching, learning, and educational research. Readings will draw from the fields of anthropology, art/s, curriculum, ecology, geography, indigenous thought, literature, philosophy, and sociology, all intersecting with education. Assignments will include citizenship in the community of this course, personal reflection about lived place(s) inside of schools and out, critical analyses of the literature on the intersections of education and place(s), and a final project focused on one aspect of how education and place(s) intersect that is of particular interest to the student. In dialogue, collaboration, the reading of each other’s writings, and other activities such as a walking tour of students’ most-meaningful places on campus, participants in this course will be and become citizens of the place (and its many physical, digital, and relational places) of the course. Students will exit the course with a broad understanding of the complexity of place(s) in education, including in the work of teachers and researchers.

CI 542: Girls’ Cultures and Popular Cultures

3 Credits

This seminar explores educational implications in popular texts created for and by girls across time and cultures. CI (WMNST) 542 Girls’ Cultures and Popular Cultures (3) The study of girls and their relationship with popular culture lies within the interdisciplinary field of
Girlhood Studies which draws on established areas of Women’s Studies, Childhood Studies, Cultural Studies and Educational Studies. This seminar explores girls’ cultures in different textual and material forms including books, toys, magazines, and new media. Students will employ feminist cultural theories to compare historical and contemporary girls’ cultures in relation to educational research and practice. This will provide a framework to locate girls at the center of research and action in order for graduate students to engage in methodologies that are not simply about girls but about girls’ race, class, gender, and gendered practices. Key topics include the misperception of girls’ (popular) culture as only a contemporary phenomenon, the role of girls as consumers plus producers of culture, and recurrent issues in girls’ cultures such as sexualization and hyperfemininity.

Cross-listed with: WMNST 542
CI 550: Overview of Contemporary School Curriculum
3 Credits/Maximum of 999

Current school programs and options and their impact on pupils; problems in introducing new content into the curriculum.

Prerequisite: 12 credits in education and psychology or teaching experience

CI 552: The Methods Course in Teacher Education: Challenges and Opportunities
3 Credits

This course will focus on the methods course in teacher education. A common feature of teacher education programs in almost any setting, methods courses are those courses teacher candidates take that address how to teach. Of course, how to teach is nowhere near as simple as that would sound, and even less simple is how to teach how to teach, in a way that will actually influence how candidates will teach. Students in this course will read research on methods courses, analyze many examples at Penn State and elsewhere, and inquire together about methods course design. Students will explore: Why have methods courses at all? Are there things to learn about how to teach that can’t be learned through field experience alone? What shall the content of methods be? Are there such things as general methods or must methods courses always be content-area-specific? What shall students read and come to know in a methods course? Who shall teach methods courses, and who shall teach them? What happens when practitioners teach methods, as opposed to university faculty? Or when we co-teach? When shall methods courses occur in the timespan of a teacher preparation program? Must they be concurrent with field experience, or should they precede it? What prerequisite knowledge or experiences matter for the success of a methods course? Where shall methods courses be taught? On site in a school? At the university? Somewhere else? What about online? How shall methods be taught? What course activities actually help teacher candidates learn to teach? What are appropriate uses of readings? Peer teaching? Classroom inquiry? By the end of the course, students will have articulated research-based answers to these questions. In addition, students will be able to apply the available research to existing methods courses in their own current and/or future contexts.

RECOMMENDED PREPARATIONS: This course is recommended for doctoral students whose future plans include teaching in teacher-preparation programs

CI 560: Theories of Childhood
3 Credits

The study of childhood from cultural, historical, psychological and philosophical perspectives. CI 560 Theories of Childhood (3) In this course, participants will explore the highly variable ways that childhood has been constructed and enacted across multiple cultures and throughout history. Participants will begin by considering how notions of the nature of childhood might, for example, children as innocent, as primitive, or as blank slates have functioned across history and in their members and sense of nostalgia about childhood. Participants will expand their understanding of historic and contemporary childhoods through comparative studies of children. Participants will examine and critique normative theories of child development and will finish with an examination of contemporary child culture, including play and how changes in global culture affect children’s lives. The course instructor will provide the readings for the course, as well as background information and organizing topics. The instructor creates and assigns activities and provides or oversees discussion questions to organize student thinking for a productive discussion. It is the instructor’s responsibility to create an environment conducive to students’ development of an open, vibrant learning community; to establish and oversee course standards; and to assist students to achieve both the course objectives and their own. There are no prerequisites for this course. Given that all participants have had a childhood and some may be parents, the memories and experiences each participant brings may be both a help and a hindrance. That is, insofar as their own childhoods or those of their children cause them to believe that they already know what childhood is, class participants need to recognize the limitations of their memories and experiences. The diversity of childhoods that will be represented across the members of the course is a considerable resource for participants to develop an ever-broader understanding of the cultural and historical nature of childhood.

CI 565: Writing Research Articles in Curriculum and Instruction
3 Credits

Graduate course on revising a written product for publication in a peer-reviewed research journal in curriculum and instruction or related fields. CI 565 Writing Research Articles in Curriculum and Instruction (3) In this course, students will prepare a research article for publication. Beginning with a course paper, conference paper, comp paper, thesis, dissertation, or another pre-existing draft, writers will learn to frame, revise, and edit a scholarly article for submission to a journal. To do this, students will spend time addressing the genres and conventions of writing about education research for an academic audience, focusing on particular subfields in curriculum and instruction. Students will read and analyze published research in curriculum and instruction, study principles of rhetoric and style, practice collaboration and peer review, and engage in intensive revision and editing. Students will gain skill in dealing with the emotions of writing, work habits, giving and receiving feedback, and motivation. They will also work through concerns like organization, exposition and elaboration, and argument as well as matters of correctness and grammar. Students will consider the variations in epistemology, genre, and conventions of argument and of style for the wide range of subfields in curriculum and instruction as well as across education subfields. This includes attention to historical
and contemporary divergences between fields and ways of bridging those as needed for dissemination research. Major assignments include analyses of target journals and representative articles, experiments in scheduling and writing habits, and weekly challenges in revising. In addition, students will work in intensive writing groups across the length of the term. Each student will receive extensive feedback on a draft in progress toward the goal of having a manuscript suitable for submission by course's end.

CI 580: Media Literacy, Language, and Literacy in Schools
3 Credits
Theories of media literacy, issues of non-print technology in language and literacy.

Prerequisite: LL ED480
Cross-listed with: LLED 580

CI 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

CI 595: Internship in Curriculum, Supervision, or Instruction
1-6 Credits/Maximum of 6
Internship in schools or other educational settings under supervision of graduate faculty in student's area of specialization.

Prerequisite: admission to C&I doctoral program and program head permission

CI 596: Individually Designed Internship: Off Campus
1-15 Credits/Maximum of 999
No description.

CI 597: Internship
1-18 Credits/Maximum of 18
Supervised, professionally oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

Curriculum and Supervision (C-S)

C-S 551: Curriculum Design: Theory and Practice
3 Credits
The analysis and use of the foundations which underlie models of curriculum design. EDLDR 551 Curriculum Design: Theory and Practice (3) This course looks at the analysis and use of foundations that underlie models of curriculum design. The investigation into such models is designed to be a critical review of previous and current design models that reflects the specific, preferential vantage point of teachers as leaders and significant participants in this form of curriculum work.

Prerequisite: CI 550
Cross-listed with: EDLDR 551

C-S 553: Issues in Curriculum
3 Credits/Maximum of 6
In-depth study of issues and trends in the understanding and practice of curriculum. C S 553 Issues in Curriculum (3 per semester/maximum of 6) This course provides for in-depth study of issues and trends in the understanding and practices of curriculum. Readings and class activities provide students with the opportunity to examine theoretical implications for the world of practice and life in schools.

Prerequisite: formal acceptance as a doctoral student in the Curriculum and Supervision option area
Cross-Listed

C-S 555: Development of Teacher Education Programs
3 Credits
Study of the components and design of teacher education programs within the constraints of institutional, professional, and legal contexts. C S (EDLDR) 555 Development of Teacher Education Programs (3) Enrollees study various models of teacher preparation such as professional development schools and fifth year programs. Participants also discuss various aspects of teacher education such as field experiences teaching and learning ("methods") courses, and content knowledge courses
and review research in each of these areas as it relates to the initial continuing education of teachers.

**Prerequisite:** C I 550 or EDLDR551

**Cross-Listed**

C-S 557: Seminar in Curriculum Research

3 Credits

Analysis of particular curriculum studies, methods and paradigms, and the general status of current research in the general curriculum field. C S 557 Seminar in Curriculum Research (3) This course is a foundational course that supports the diverse inquiries undertaken by doctoral students within the Department of Curriculum Instruction and throughout the broader university community. Readings and class activities provide students with the opportunity to learn about different research epistemologies and to explore taken-for-granted assumptions about educational research in general and research design and methodology in particular.

**Prerequisite:** C I 400, C I 550

**Cross-Listed**

C-S 560: Principles of Instructional Supervision

3 Credits

Social and institutional settings for instructional supervision; functions, activities, and practices of supervision; supervisory case studies. EDLDR 560 C-S 560 Principles of Instructional Supervision (3) This course explores themes, trends, and key ideas that influence current supervisory practices. Course content gives specific attention to supervisory practice in relation to teaching practices and to life in schools.

**Prerequisite:** teaching or school administrative experience; 18 credits in education, at least 5 of which are methods of teaching

Cross-listed with: EDLDR 560

C-S 562: Methods of Classroom Supervision and Coaching

3 Credits

Strategies and techniques for supervision/coaching of instruction intended to enhance teacher reflection, self-direction, and autonomy. EDLDR 562 Methods of Classroom Supervision and Coaching (3) This course has been designed to equip students with the knowledge, skills, and dispositions necessary to engage in a variety of supervisory processes aimed at teacher growth and renewal as well as enhanced student learning. The outcome of these supervisory activities should be the development of teachers who are more analytical about their practice and its impact on learners, are more adept at solving the complex problems of teaching practice, and are more reflective about their teaching capabilities.

**Prerequisite:** EDLDR 560, teaching administrative, or other professional education work experience

Cross-Listed

C-S 563: Designing Staff Development Programs

3 Credits

Designing, implementing, and evaluating effective staff development programs for personnel in educational settings. EDLDR 563 Designing Staff Development Programs (3) This course has been designed to provide students with the opportunity to develop a deep understanding of the process of professional development in education at the theoretical and practical levels as well as the ability to apply this understanding to the design, evaluation, and analysis of professional development activities and programs.

**Prerequisite:** EDLDR560

**Cross-listed with:** EDLDR 563

C-S 564: Supervision Theory

3 Credits

Critical analysis of alternative theories of instructional supervision and in-depth examination of trends and issues in supervision. C S (EDLDR) 564 Supervision Theory (3) This course entails critical analysis of alternative theories of instructional supervision and in-depth examination of trends and issues in supervision. Students critique and contrast existing models of instruction, identify and analyze issues in supervision and conceptualize and articulate their own supervisory model.

**Prerequisite:** EDLDR560

**Cross-Listed**

C-S 576: Research Methods in Teacher Education

3 Credits

A basis in theory, findings from research, research design, and methodologies related to teacher education.

Cross-listed with: EDPSY 576

C-S 590: Colloquium

1-3 Credits/Maximum of 4

Recommended Preparation: This course is ONLY for students admitted to the doctoral program in Curriculum and Instruction specializing in Curriculum and Supervision. Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

C-S 597A: **SPECIAL TOPICS**

1-9 Credits

Cross-Listed

**Data Analytics (DAAN)**

DAAN 501: Analytics Research and Problem Framing

3 Credits

Students in this course will explore the elements of the research process within quantitative, qualitative, and mixed methods approaches as it applies to research into data analytics and its use. The ethical principles and challenges of research will be covered including human-subject research guidelines and the Institutional Review Board approval process. Students will use these theoretical underpinnings to begin to critically review literature in the analytics domain, determine how research findings are useful in forming their understanding of their work, and place their own research within the context of the extant literature.

**Prerequisite:** STAT 500
DAAN 600: Thesis Research

1-15 Credits/Maximum of 15

Thesis Research

Prerequisite: DANN 501

DAAN 822: Data Collection and Cleaning

3 Credits

Tools and techniques required for data collection and computational procedures to automatically or semi-automatically identify and eliminate errors in large datasets. DAAN 822 Data Collection and Cleaning (3) This course focuses on the tools and techniques required for collecting data and preparing them for further analysis. The presence of incorrect and inconsistent data can significantly distort the results of the analysis often negating the potential benefits of information-driven approaches. As a result a variety of research over the last decades has focused on data cleansing: computational procedures to automatically or semi-automatically identify ndash; and, when possible, correct ndash; errors in large data sets. The goal of this course is to explore and discuss different data collection tools and techniques in addition to learning skills for retrieving data from existing databases. To further enforce data quality and reliability this course will introduce techniques for error detection and data cleaning on large databases. Students will learn the available tools and techniques for data collection including automated data collection for databases, retrieving data from available databases, data preparation and cleansing techniques, data quality and reliability and finally learn techniques to identify issues in data collection and how to clean the data.

Prerequisite: STAT 500 and IN SC521

DAAN 825: Large-Scale Database and Warehouse

3 Credits

Examination of large-scale data storage technologies including NoSQL database systems for loosely-structured data, and warehouses for dimensional data. DSCAN 825 Large-Scale Databases and Warehouses (3) This course provides a broad exploration of current and emerging practices for handling large quantities of data using large-scale database systems. Data is being generated at an exponential rate and handling and analyzing such data needs highly customized tools and processes to handle data-intensive tasks. In particular, this course investigates methods to effectively design, develop, and implement the two dominant types of large-scale databases: data warehouses for dimensional data and NoSQL databases for loosely-structured data. Students will learn to design a wide variety of large database solutions, apply extract-transform-load (ETL) strategies, maintain and evolve large-scale databases, explore the fundamentals of NoSQL systems, and understand the properties of different database technologies against atomicity, consistency, isolation, and durability (ACID) properties.

Prerequisite: IN SC521

DAAN 826: LARGE SCALE DATABASES FOR REAL-TIME ANALYTICS

3 Credits

This course provides an exploration of current and emerging big data solutions for handling large quantities of data in real-time. In particular, this course investigates methods to design, develop, and implement several systems used for real-time data analysis and storage such as document databases, column-based databases, queueing systems, and real-time processing systems. Students will learn to design a wide variety of large database solutions, and how to interconnect those systems to create a lambda architecture. Using this platform, students will collect, process, store, and report real-time data.

Prerequisite: DAAN 825

DAAN 862: Analytics Programming in Python

3 Credits

This course will explore the development of analytics systems and the application of best practices and established software design principles using the Python programming language and its several toolkits. Students will manipulate, analyze and visualize complex data sets and implement statistical, machine learning, information visualization, text analysis, and social network analysis techniques through popular Python toolkits to gain insight into their data.

DAAN 871: Data Visualization

3 Credits

This course provides a foundation in the principles, concepts, techniques and tools for visualizing large data sets. DAAN 871 Data Visualization (3) The course provides a foundation in the principles, concepts, techniques and tools for visualizing information in large complex data sets. Unlike scientific visualization, which focuses on the presentation of data that has a spatial or physical correspondence, data visualization focuses on mapping complex, abstract information to a physical representation. The development of effective visualization strategies is crucial for not only facilitating an understanding of large complex data sets but also for driving knowledge discovery and the decision making processes in a given domain. In this course, students will learn the key principles involved in data visualization and will explore a wide range of visualization approaches that can be applied for understanding complex data across different data types. Specifically, techniques for visualizing one-dimensional data (e.g., temporal data); two-dimensional data (e.g., geospatial data); multidimensional data (e.g., mapping relational data in n-dimensional space); hierarchies and graphs (e.g., tree structures); networks (e.g., social networks) and text (e.g., mining text and hypertext from Web) will be discussed. Emphasis will be placed on the identification of patterns, trends and differences in visualizations of data from variety of domains (e.g., science, business, engineering, social media, etc.). In addition, students will gain hands-on experience with a variety of visualization tools including: Gephi, ManyEyes, Excel, Science of Science (Sci2), Pajek, Lattix, R, Cfinder, MapEquation, NodeXL, and/or Gapminder.

DAAN 881: Data-Driven Decision Making

3 Credits

Application interpretation of analytics for real-life decision making. DAAN 881 Data-Driven Decision Making (3) The theory and application of several quantitative decision-making tools will be studied. The usefulness of these tools will be illustrated using projects and case studies throughout the course. Emphasis will be placed on the application of the tools and techniques and the results they generate. Finding patterns in data and appropriately grouping them are essential in the extraction of information in large datasets. This course will use Principal Component Analyses to transform highly correlated sets of data by means of orthogonal transformation. Cluster analysis will be used to properly group data when working with large datasets. When the outcomes involve
categorical variables, Logistic regression techniques will be used to
estimate the probabilistic values of the output. The decision space
will be divided into smaller regions using Regression tree analyses.
When factors are too numerous and highly collinear, Partial Least
Square Regression methods will be performed. Public access datasets
in the healthcare, transportation, and finance industries will be used to
demonstrate the applications and the limitations of these techniques.

Prerequisite: STAT 500 and DAAN 501

DAAN 888: Design and Implementation of Analytics Systems
3 Credits

Design and implement data science and analytics systems using
contemporary tools and techniques.

Prerequisite: IN SC521 and DAAN 825 and DAAN 881

DAAN 897: Special Topics
1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may
be offered infrequently.

Demography (DEMOG)

DEMOG 590: Colloquium
1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by
faculty, students, or outside speakers.

DEMOG 596: Individual Studies
1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on
an individual basis and which fall outside the scope of formal courses.

E-Business (EBIZ)

EBIZ 543: e-Marketing
2 Credits

Using the Internet and related technologies to enhance and transform
marketing functions and processes.

Cross-listed with: MKTG 543

Early Childhood Education (ECE)

ECE 572: Issues and Trends in Early Childhood Education
3 Credits/Maximum of 9

Research, experimental programs, and emerging trends in early childhood
education; relationships between educational experiences and later
intellectual and emotional development.

Prerequisite: E C E452 , EDPSY400

ECE 587: Curriculum, Culture, and Child Development
3 Credits

Examines human development and cultural factors in planning,
designing, and implementing curriculum and instruction in early
childhood and childhood education.

Prerequisite: HD FS429

ECE 588: Educational Role of the Family
3 Credits

Parent-child-teacher relationships, cognitive socialization, and academic
attainments; proximal/distal variables: family structure, history,
processes, content, community, culture.

Prerequisite: E C E453 , HD FS418 , or SOC 315

ECE 589: Play and Early Childhood Education
3 Credits

Developmental significance of play, processes, and development; role of
the adult in child’s play; educational practices.

Prerequisite: HD FS429 or PSYCH415

ECE 590: Colloquium
1-3 Credits/Maximum of 3

Continuing seminars that consist of a series of individual lectures by
faculty, students, or outside speakers.

ECE 596: Individual Studies
1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an
individual basis and which fall outside the scope of formal courses.

ECE 597: Special Topics
1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may
be offered infrequently.

Earth Sciences (EARTH)

EARTH 501: Contemporary Controversies in the Earth Sciences
3 Credits

Exploration of current areas of research in the Earth Sciences.
EARTH 501 Contemporary Controversies in the Earth Sciences (3)
Students will be introduced to a variety of topics from different
disciplines within the Earth sciences with the aim of piquing their interest
in topics of current research beyond the level found in typical secondary
school or introductory college textbooks. The current topics will include
subjects in which a consensus has recently been reached as well as
scientific questions that are so far unanswered. Students will learn the
appropriate state of the art scientific content relevant to each topic by
performing basic data in order to complete the activities in each lesson.
They will finally construct a plan to teach a selected topic to the audience
of their choice. This course provides an entry into the other courses in the Master's Degree Program in Earth Science Education. Students will learn scientific content by completing activities in each of six lessons that will span either the 12-week or 15-week semester. These activities will be in the form of background reading and discussion that outlines a current scientific problem or debate, the collection and manipulation of appropriate data, and the assessment of the results of this work. By doing this, students will simultaneously become familiar with the content as well as the practice of science. Students will also participate in online discussions about how to teach this content to specific secondary school audiences. They will complete a capstone project in which they will construct a teaching plan based on the topic of their choice.

EARTH 520: Plate Tectonics and People: Foundations of Solid Earth Science
3 Credits

Solid Earth geophysics and geological hazards presented within the grand unifying theory of plate tectonics. EARTH 520 Plate Tectonics and People: Foundations of Solid Earth Science (3) This course will cover current areas of research in solid Earth geophysics, especially focusing on the human population’s interaction with the solid Earth system. Students will be introduced to a variety of current topics of active research within the field of solid Earth geophysics. They will learn the appropriate state of the art scientific content relevant to each topic by performing basic data analysis (e.g. collection, interpretation and assessment) using publicly available data in order to complete the activities in each lesson. They will finally construct a plan to teach a selected topic to the audience of their choice. Students will learn scientific content by completing activities in each of nine lessons that will span either the 12-week or 15-week semester. These activities will be in the form of background reading that outlines a current scientific problem or debate, the collection and manipulation of appropriate data, and the assessment of the results of this work. By doing this, students will simultaneously become familiar with the content as well as the practice of science. Students will also participate in online discussions about how to teach this content to specific secondary school audiences. They will complete a capstone project in which they will construct a teaching plan based on the topic of their choice.

EARTH 530: Earth Surface Processes in the Critical Zone
3 Credits

Introduction to Earth surface processes including weathering and soils, geomorphology, erosion and sedimentation, hydrogeology, low-temperature geochemistry and Earth systems. EARTH 530 Earth Surface Processes in the Critical Zone (3) Rapid changes in Earth’s surface largely in response to human activity have led to the realization that fundamental questions remain to be answered regarding natural functioning of the Critical Zone, the thin veneer at Earth’s surface where the atmosphere, lithosphere, hydrosphere and biosphere interact. To understand these processes requires a broad array of scientific expertise spanning: geology, soil science, biology, ecology, geochemistry, geomorphology and hydrology. EARTH 530 will introduce students to the basic information necessary for understanding Earth surface processes in the Critical Zone through an integration of various scientific disciplines. Those who successfully complete EARTH 530 will be able to apply their knowledge of fundamental concepts of Earth surface processes to understanding outstanding fundamental questions in Critical Zone science and how their lives are intimately linked to Critical Zone health. EARTH 530 will combine digital video, audio, simulation models, virtual field trips to on-line data resources, text, and interactive quizzes that provide instantaneous feedback. The overarching goal of the course is to help secondary science teachers understand Earth surface processes at a level they can communicate to their students. These processes will be presented in a Critical Zone framework - the teachers and subsequent students will leave with a better knowledge of how their daily lives are impacted by natural processes, and conversely how their daily activities impact Earth’s surface and the Critical Zone. Students will be required to complete weekly assignments. There are 12 lessons divided into 7 units in EARTH 530. Each unit will contain interactive exercises, links, animations, movies, and novel explanations of the basic scientific principles of Critical Zone science. Students will also be assigned four unit projects throughout the semester (Units 2-6). Projects require students to apply the principles they have learned to various scientific inquiries of Earth surface processes in the Critical Zone. A capstone Semester Project will require students to use the skills and knowledge they develop in the course to produce a learning module that they, in turn, will be able to use to teach course concepts to their own secondary school students.

EARTH 540: Essentials of Oceanography for Educators
3 Credits

Chemical and physical principles of the oceans and their interaction with the biosphere, atmosphere and the solid Earth. EARTH 540 Essentials of Oceanography for Educators (3) EARTH 540 introduces knowledge and broadens understanding of the oceans and their role in climate, coastal processes, and life within the fluid Earth. Students will gain insight into the physical and chemical processes that determine properties of the ocean and govern interactions between the ocean, atmosphere, groundwater, and the fluid/solid Earth. Topics will reinforce fundamental scientific principles such as heat transfer, chemical equilibrium, and conservation of energy. EARTH 540 will combine digital video, audio, simulation models, virtual field trips to on-line data resources, text, and interactive quizzes that provide instantaneous feedback.

EARTH 591: Individual Studies: Research Project
3 Credits

Development of a capstone project, supervised on an individual basis outside the scope of formal courses. EARTH 591 Individual Studies: Research Project (3) EARTH 591 broadens the content knowledge of students in the program, while deepening their understanding of a specific topic of their choosing. Students will gain insight into the essence and process of current scientific research by working with an academic advisor who is a member of the graduate faculty. They will practice transforming the results of their own investigations into modules that can then be taught to others. Students will design, develop, and conduct a project in consultation with an advisor. Appropriate projects are expected to combine basic scientific research and pedagogical techniques. Examples of projects could include (but of course are not limited to): development of a new curriculum appropriate for grades 7-12 based on a specific discipline in the Earth Sciences, such as meteorology; or an independent research project in a specific scientific subfield, such as a recent climate change, the results of which may then be taught to students.

Prerequisite: 24 credits in the Master’s Degree program in Earth Science Education
EARTH 597: Special Topics
1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

EARTH 801: Computation and Visualization in the Earth Sciences
3 Credits/Maximum of 999

Students practice data visualization and analysis using computational methods for Earth science data to build content knowledge and interpretation skills. EARTH 801 helps students to develop procedural programming skills in a programming language designed for visual artists and visualization while exploring Earth science topics. In particular, students learn and practice digital graphics capabilities in order to render Earth science concepts that are otherwise difficult to visualize due to complicated space and time scales. Both spatial and object visualization skills are key to success in the Earth sciences; students in this course will build an awareness of these skills and practice them with an eye to being able to teach them to their own secondary school students. In this course, students will interact with large, open, freely-available Earth science data sets by collecting, plotting, analyzing them using a variety of computational methods. Students will therefore be ready to teach their own secondary school students a range of Next Generation Science Standards skills involving data collecting, manipulation, analysis, and plotting. EARTH 801 students will also read and discuss current research regarding the teaching, learning, and evaluation of visualization skills in the Earth sciences, as well as exploring the theory of "multiple external representations" as applied to Earth science concepts and data sets.

Ecology (ECLGY)

ECLGY 510: Classical Ecology
2 Credits

Classical Ecology.

ECLGY 515: Advances in Ecology
3 Credits

Advances in Ecology.

ECLGY 590: Colloquium
1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

Cross-Listed

ECLGY 597: Special Topics
1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

ECON 500: Introduction to Mathematical Economics
3 Credits

Mathematical Economics: Applications of Mathematical Techniques to Economics.

ECON 501: Econometrics
3 Credits

Econometrics: Applications of Statistical Techniques to Economics

ECON 502: Microeconomic Analysis
3 Credits

Economic behavior under pure and imperfect competition; price and output determination in product markets; prices and employment in factor markets.

ECON 503: Macroeconomic Analysis
3 Credits

National income accounts; determination of income, employment, interest rates, and the price level; stabilization policy.

ECON 507: International Trade
3-6 Credits/Maximum of 6

Theory of international trade and investment; effect of commercial policy on trade and income distribution; multinational corporations and international trade.
ECON 510: Econometrics I  
3 Credits  
General linear model, multicolinearity, specification error, autocorrelation, heteroskedasticity, restricted least squares, functional form, dummy variables, limited dependent variables.  
**Prerequisite:** ECON 501 or STAT 462 or STAT 501  
Cross-Listed  

ECON 512A: Empirical Methods in Economics I  
1 Credits  
The course will provide a foundation for students in the computational methods used to numerically solve and simulate economic models and program econometric estimators.  
**Prerequisite:** ECON 510  

ECON 512B: Empirical Methods in Economics II  
2 Credits  
The course will provide continued exposure to the computational methods used to numerically solve and simulate economic models and program econometric estimators.  
**Prerequisite:** ECON 512A  

ECON 517: Open Economy Macroeconomics and International Finance  
3-6 Credits/Maximum of 6  
The balance of payments, portfolio allocation, monetary and fiscal policy in an open economy, exchange rate regimes, selected policy issues.  

ECON 521: Advanced Microeconomic Theory  
3-6 Credits  
Theory of consumer behavior; theory of the firm; price determination in product and factor markets; introduction to welfare economics.  

ECON 522: Advanced Macroeconomic Theory  
3-6 Credits  
Measurement of income; theories of consumption, investment, and money holdings; static determination of income and employment; introduction to dynamic analysis.  

ECON 534: Game Theory  
3 Credits  
Foundations of current research in game theory. ECON 534 Game Theory (3) This is an advanced graduate course in game theory and its applications to economics. The course content is mathematical in nature and emphasizes formal statements of key propositions and their proofs. It begins by presenting two alternative ways in which a game may be represented: the extensive (or tree) form and the strategic (or normal) form. The relationship between these two representations is studied and the key idea of a strategy is introduced. Pre-equilibrium notions of dominance, iterated dominance and rationalizability are studied. Nash's fundamental theorem on the existence of equilibrium in finite games is proved. Strategic form based refinements of Nash equilibrium, including perfect, proper and stable equilibria are considered. Extensive form based refinements, including subgame perfection and sequential equilibrium are also considered and compared. Harsanyi's conception of a game of incomplete information is introduced. Other subjects covered include repeated games and the folk theorem, bargaining, common knowledge. Additional topics of current interests may also be covered.  
**Prerequisite:** ECON 521 or permission of program  

ECON 543: Industrial Organization and Public Policy  
3-6 Credits  
The structure of American industry; performance and behavior; public policies toward business.  

ECON 558: Development of Monetary Theory  
3 Credits  
Classical and neoclassical quantity theories of money and contemporary criticism; Keynesian monetary theory and its critics.  

ECON 559: Current Monetary Theory and Policy  
3 Credits  
Post-Keynesian reformulation of quantity and Keynesian theories of money; liquidity and general equilibrium approaches; current issues in theory and policy.  

ECON 570: Development Economics  
3-6 Credits/Maximum of 6  
Resources and institutions; quantitative measures; theories of economic growth in developing areas; developmental policies.  

ECON 589: Seminar in Econometric Theory  
3 Credits  
Theories and methods relevant to the application of statistical methods to economics.  
**Prerequisite:** ECON 510  

ECON 596: Individual Studies  
1-9 Credits/Maximum of 9  
Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.  

ECON 597: Special Topics  
1-9 Credits/Maximum of 9  
Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.  

ECON 600: Thesis Research  
1-15 Credits/Maximum of 999  
No description.
ECON 601: Ph.D. Dissertation Full-Time
0 Credits/Maximum of 999
No description.

ECON 610: Thesis Research Off Campus
1-15 Credits/Maximum of 999
No description.

ECON 611: Ph.D. Dissertation Part-Time
0 Credits/Maximum of 999
No description.

**Education (EDUC)**

**EDUC 500: Professional Learning Communities**
3 Credits

Defines elements of effective learning communities and explores educators’ roles as consumers and creators of research, theory, and best practices. EDUC 500 Professional Learning Communities (3) This course is intended to help teachers' understanding of and skills in assuming leadership roles and responsibilities in the learning community. Elements of effective learning communities are defined and educators’ roles are explored. Teachers will analyze the learning community as consumers and creators of research, theory, and best practices. Particular attention will be paid to the relationship among teacher leadership, school effectiveness, and site-based accountability.

**Prerequisite:** admission to program

**EDUC 505: Curriculum Foundations**
3 Credits

Provides a comprehensive overview of the philosophical, historical, psychological, and social foundations that affect the school curriculum. EDUC 505 Curriculum Foundations (3) This course provides a comprehensive overview of the philosophical, historical, psychological, and social foundations that affect the school curriculum. The course calls attention to the global and multicultural perspective in education. It involves the study of the implications and applications of these curricular foundations in the form of issues and theoretical trends that shape the field of curriculum. Participation in the course activities allows candidates to identify and analyze their personal values, beliefs, and perspectives, as well as theories and research which shape their own professional practice as educators within diverse educational settings with children. By the end of the course, participants will be able to 1) develop and demonstrate understanding of how major foundations (disciplines) shape the curriculum of schooling, including philosophy, history, politics/policy, social psychology, and cultural studies; 2) consider and critique selected educational issues, both past and present, examining how they are anchored in and influenced by the foundations of curriculum; 3) investigate how social, economic, cultural, and political/policy debates and representations in the public sphere help to shape the foundations of curriculum; 4) engage in critical inquiry regarding the future roles of teachers, students, and other stakeholders in the learning community and society at large, and exercise the faculty of imagination as a means of thinking "outside the box" for educational purposes; 5) continue to develop professional scholarly attitudes, skills, and dispositions, including critical analysis and constructive use of questioning; scholarly use of research; dedication to continuous learning; positive group interaction and participatory collaboration; and reflective envisioning and enacting of curricular reform; 6) examine issues of race/ethnicity, linguistic variation, social class, gender, and sexual orientation and their relationships to the curriculum and schooling; and 7) continue to develop a professional scholarly writing style with a practical focus sharpened by theoretical awareness, using the APA Writing Manual as a style guide. The key assessment in the course is a critical analysis paper in which participants apply aspects of curriculum theory to their personal philosophies of education and how both impact practical applications in the schools. Other assessments include midterm or final examinations, quizzes, class presentations, online activities, discussion forums (Message Board), collaborative class activities, research papers, journal reflections, cultural learning process activities, application papers, or class participation.

**Prerequisite:** EDUC 520

**EDUC 506: Curriculum Development and Instructional Design**
3 Credits

Examination of theory, issues, problems, organization, and application of instructional design in planning and developing a curriculum. EDUC 506 Curriculum Development and Instructional Design (3) This course is an examination of theory, issues, problems, organization, and application of instructional design for teachers in planning and developing a curriculum. The course also presents examples of effective strategies including concept-based curricula, backward design, interdisciplinary approaches, integrated curricula (curriculum mapping), assessment, and reporting techniques. At the conclusion of the course, participants will be able to 1) describe scientific and non-scientific approaches to curriculum development, design, and implementation; 2) define the universal elements of curriculum development and implementation cycle, including knowing the learner, identifying aims and objectives, selecting content, organizing learning experiences and evaluating; 3) discuss the history, philosophy, and scope and sequence of various models of curriculum; 4) describe the contributions of numerous educators to the development of curriculum, including Tyler, Tabba, Eisner, Doll, Combleth, and McDonald; 5) analyze the complexity of curricular design, articulation, continuity and balance, and their relationships to materializing an educational vision and philosophy; 6) describe the importance of community resources and their relationship to the curriculum; 7) examine governments’ roles (federal, state, and local) in curriculum, including Pennsylvania Chapter 4; 8) discuss approaches to and methodological issues involved in curriculum evaluation; and 9) examine the problems, prospects, and future trends and challenges of implementing innovative curricula and school reform. The key assessment for the course is a curriculum development outline in which participants develop a curriculum for 15-16 weeks in their areas of interest and present the curriculum to the class. Other assessments include midterm or final examinations, class presentations, online activities, group reports, research papers, journal reflections, application papers, or class participation.

**Prerequisite:** EDUC 505

**EDUC 520: Learning Theory for the Classroom**
3 Credits

An application of learning theories from psychological, sociological, and physiological disciplines to educational settings for children and adolescents. EDUC 520 Learning Theory for the Classroom (3) This course
is an application of learning theories from psychological, sociological, and physiological disciplines to educational settings for children and adolescents. At the conclusion of the course, participants will be able to 1) analyze the educational implications of cognitive, language, personal and social/emotional development; 2) describe and distinguish among major learning theories from biological, psychological, and sociological disciplines; 3) employ knowledge of learning theories to analyze learning strategies, strengths, and needs; 4) apply learning theories to optimize learning for all students, that complements their cultural background, race, gender, ethnicity, socioeconomic status or special needs; and 5) analyze through a theoretical lens the impact on student learning of current educational issues and trends. The key assessment of the course is a case study analysis of a student whose learning is not optimized, based on biological, behavioral, cognitive, and sociological learning theories. Other assessments include examinations, research papers, class presentations, classroom inquiry projects and/or performance assessments.

**Prerequisite:** admission to program

EDUC 539: Educational Assessment

3 Credits

This course will prepare students with the knowledge and skills necessary to monitor, assess, and report student achievement. EDUC 539 Educational Assessment (3)This course will prepare students with the knowledge and skills necessary to monitor, assess, and report student achievement.

**Prerequisite:** EDUC 520

EDUC 560: Classroom Management

3 Credits

Analysis of teaching styles, classroom behavior and interaction, organization and correlation of classroom activities and subject areas. (Requires practical application in an actual teaching situation.)

EDUC 561: Psychology of Reading

3 Credits

Examination of the theoretical bases for reading which have direct practical implication for teaching reading. EDUC 561 Psychology of Reading (3)This is a required course in the reading specialist certification program. The primary goals for this course are to 1) examine the foundations that affect the fields of literacy and reading education, including philosophical, historical, psychological, and social foundations, and (2) to assist students in becoming more aware of race/ethnicity, linguistic variation, social class, gender, and sexual identity in relationship to literacy and schooling. Throughout the course, the graduate students will examine the complexity of literacy to become aware of how to situate one's own literacy practice and experience in multiple contexts. Students become reacquainted with mainstream theories and are introduced to those of critical theorists who challenge traditional perspectives that have often marginalized race, class, and linguistic variety in learning and in literacy development. At the conclusion of the course, students will be able to utilize traditional and critical theories in thinking about literacy/reading research, theory and practice. Assessments and evaluation of course requirements occur through instructor observations of demonstrations of mastery during a variety of discussion and presentation modes, observation and analysis of children's language use, reflective and reflexive analysis of one's own practice, and development of perspectives and a philosophy of literacy demonstrated through scholarly writing.

**Prerequisite:** EDUC 471, EDUC 425, EDUC 477

EDUC 562: Diagnostic Evaluation of Reading Problems

3 Credits

Utilization of formal and informal instruments and techniques appropriate in analyzing reading disabilities, grade K through 12; includes practicum. EDUC 562 Diagnostic Evaluation of Reading Problems (3)This course is required in the graduate Reading Specialist Certification Program. It is designed to develop students’ understanding of (1) the factors related to reading disability; (2) assessment bias in relation to race/ethnicity, class, linguistic variety, and gender; (3) appropriate selection, use, and interpretation of formal and informal inventories; (4) basic measurement concepts, e.g., reliability, validity; (5) procedures for preparing and writing a diagnostic case study report in order to communicate effectively the findings of reading assessment data with all stakeholders. Emphasis is placed on developing analytical thinking abilities related to reading assessment as well as developing skill in professional writing. Methods of evaluation include written reviews of professional journal articles, the presentation of a formal assessment instrument to the class, and an in-depth written diagnostic case study report of a school-aged student having reading difficulties.

**Prerequisite:** EDUC 561

EDUC 563: Methods in Teaching Reading

3 Credits

Development of advanced diagnostic and instructional techniques for teaching reading, with emphasis on individual and small group instruction. EDUC 563 Methods in Teaching Reading (3)This course is required in the graduate Reading Specialist Certification Program and is designed to familiarize graduate students with a wide range of traditional and current instructional strategies and resources for meeting the literacy/reading needs of students across the lifespan. Opportunities will be provided to re-examine connections between theory and assessment and to develop an awareness of how instruction in literacy/reading is informed by social and political forces. As they become familiar with the sub-texts and inter-texts of literacy and schooling, candidates also examine race as a foreground for literacy instructional practices. After successful completion of the course, students will be able to utilize all the language arts in planning and implementing instruction, coaching classroom teachers, and advising others about "best practices" in literacy/reading instruction. The requirements for the course allow candidates to gain additional experience administering standardized and informal assessment instruments; analyze assessment data and write a case study report; develop, present and critique lessons in reading and other language arts; reflect on their own instruction; and discuss "racialized" beliefs about student's abilities. Assessment and evaluation of course requirements occurs through instructor observation of demonstrations of mastery during roundtable discussion, peer-conferencing, and through completion of assignment-specific rubrics for lesson plans and the case study.

**Prerequisite:** EDUC 562
EDUC 564: Reading Clinic

3-6 Credits

This capstone course for the Master of Education in Literacy Education with the Reading Specialist certification is designed to address the major theories and empirical research that addresses the cognitive, linguistic, motivational, and sociocultural foundations of literacy development, processes, and components, including word recognition, language comprehension, strategic knowledge, and reading-writing connections. To demonstrate mastery of these concepts, participants engage in an action research case study project in which they design, develop, and implement curriculum to meet the needs of K-12 students who are struggling with literacy. Through this case study, participants demonstrate and apply pedagogical and professional knowledge, skills, and dispositions. Participants select a variety of appropriate texts, engage students’ backgrounds and interests, and administer appropriate assessments to evaluate and monitor progress. Participants also have the opportunity to further enhance their ability to collaborate with professional colleagues, interact with students’ families, and demonstrate leadership in literacy education. EDUC 564 Reading Clinic (6) This is the capstone or final course in the graduate level Reading Specialist Program. All other required courses for the degree program and for certification as a reading specialist must be completed prior to enrollment in this course. The major goal of the course is to provide a supervised clinical setting where candidates may gain practical experience in assessing and evaluating literacy difficulties, implementing effective instruction, and reporting those findings to various stakeholders (e.g., students, parents, school personnel). More specific objectives include demonstration of the following: knowledge of the major components of reading and writing and how they are integrated; the use of a wide range of instructional methods, materials, and assessment tools; how to motivate learners to be life-long readers; the ability to collaborate effectively with colleagues, and the understanding of how to promote positive and effective literacy connections with the home. Candidates conduct interviews, administer formal and informal assessments, provide instruction to students with reading problems, participate in collaborative groups and roundtable discussions, maintain a reflective journal, communicate regularly with parents or guardians, and prepare an extensive case study of each student tutored.

Prerequisite: EDUC 563

EDUC 565: Literacy and Leadership

3 Credits

Principles of supervision, organization, management, and evaluation of literacy programs will be presented. EDUC 565 Literacy and Leadership (3) This course is required in the graduate Reading Specialist Certification Program and is designed to prepare graduate students to assume the role of literacy leader or literacy coach within a school or school district. This role includes the planning, implementation, management, and evaluation of the literacy/reading program. Objectives for the course allow candidates to connect theory to the development of effective literacy/reading programs and intervention frameworks, to understand the elements of literacy coaching as critical to teacher and staff development, and to understand the interrelated nature of literacy policy, curriculum, assessment, and instruction. Throughout the course, candidates develop dispositions that allow them to work collaboratively alongside classroom teachers, district officials, and other professionals as advisors and coaches developing curriculum, determining appropriate assessments, conducting professional development training, and evaluating program effectiveness. Course requirements include (1) analyzing journal articles and/or case studies articulating the theories related to the connections among professional dispositions, motivation and achievement; (2) providing assistance to a classroom teacher in creating a professional development plan; (3) working with colleagues to observe, evaluate, and provide feedback on each other’s practice; (4) planning; implementing, and evaluating a professional development plan for an elementary or secondary building; (5) working with linguistically diverse learners, parents, paraprofessionals, and teachers.

Prerequisite: EDUC 466, EDUC 563

EDUC 572: Comparative Education: World Perspectives

3 Credits

An evaluative comparison of American education with Western and non-Western educational systems.

EDUC 582: Spirituality and Culture in Health and Education Professions

3 Credits

This course focuses on the cultural aspects of spirituality and its place in the health and education professions. EDUC (HLHED) 582 Spirituality and Culture in Health and Education Professions (3) This course will focus on the examination of the place of the cultural aspects of spirituality and its place in the education and health professions and its implications for culturally responsive education and/or health care in a multicultural society. In particular, the goals of the course are as follows: 1) To clarify the difference between spirituality and religion and to understand how spirituality is currently being examined in the fields of adult education, medical education and the health professions. 2) To examine how culture informs spirituality generally, and more specifically, to examine how culture relates to one’s own spiritual development and overall health in the world. 3) To develop a sense of how people construct knowledge through image and symbol, which for many people, maps to their spirituality and culture, as they make new and deeper meaning of their own lives. 4) To begin to consider WHEN and HOW one might appropriately draw on one’s own spirituality and that of participants in adult and higher educational practices and health care settings to increase cultural understanding and/or responsiveness to patient needs and when such discussion might seem to impose a spiritual or religious agenda. 5) To examine the connections among spirituality, culture, some complementary and alternative medicine modalities and overall holistic health and education.

Cross-listed with: HLHED 582

EDUC 586: Educational Research Designs

3 Credits

Focuses on methods of research in educational settings to help participants become informed consumers of the educational research literature. EDUC 586 Educational Research Designs (3) This course focuses on methods of research appropriate in educational settings to help participants become informed consumers of the educational research literature. Throughout the course participants will 1) identify an appropriate research problem and justify the importance for investigation; 2) identify and classify the types of variables used in research; 3) utilize electronic search and communication tools; 4) critically examine various research designs and their practical applications; 5) interpret analysis of data using statistical treatments; 6) describe strengths and weaknesses in research designs; 7) critique
research studies; 8) describe PSU requirements for conducting research
with human subjects; and 9) develop a writing style consistent with
scientific/research work with emphasis on objectivity and utilizing
appropriate APA style. The key assessment for the course is a critique of
a published research article. Instructors will also include assessments
such as: midterm or final examinations, quizzes, class presentations,
online activities or discussions, research projects, research proposals,
dialogue journals, research problem descriptions, article analyses, or
class participation.

Prerequisite: EDUC 539 ; or TRDEV460

EDUC 587: Master's Project
3 Credits
The development of an original master's project (paper, essay, production,
practicum) supervised and judged by an appropriate faculty committee.

EDUC 589: Problems in Urban Education
3 Credits
Independent study of selected topics related to urban education.

EDUC 590: Colloquium
1-3 Credits/Maximum of 3
Continuing seminars which consist of a series of individual lectures by
faculty, students, or outside speakers.

EDUC 591: Education Seminar
1-6 Credits/Maximum of 6
The capstone seminar course for the M.Ed. degree requiring an
appropriate scholarly term paper. EDUC 591 Education Seminar (6)This
performance-based course is intended to serve as a culminating or
capstone experience for students enrolled in the Master of Education
degree program in Teaching and Curriculum. A constructivist seminar
format, augmented by significant readings, will be used to facilitate
in-depth discussions of important, timely, and controversial issues in
education. Students will be asked to reflect upon all previous course
work toward the degree as a foundation for analyzing the past, evaluating
the present, and speculating about the likely future of the numerous
issues that collectively constitute the education arena. Students will be
expected to demonstrate their ability to analyze and synthesize material
through the guiding of, and participation in, class discussions of the
readings, through satisfactory completion of in-class assignments, and
through the completion of a major scholarly paper and a corresponding
class presentation that both focus on the same aspect of an educational
theme.

Prerequisite: EDUC 506 , EDUC 586 , and completion of 27 credits in the
Teaching and Curriculum program or approval of program

EDUC 596: Individual Studies
1-9 Credits/Maximum of 9
Creative projects, including nonthesis research, that are supervised on an
individual basis and which fall outside the scope of formal courses.

EDUC 597: Special Topics
1-9 Credits/Maximum of 9
Formal courses given on a topical or special interest subject which may
be offered infrequently.

Educational Leadership Program
(EDLDR)

EDLDR 520: Sociology of Rural Schools and Communities
3 Credits/Maximum of 999
This course examines the interrelationships between rural communities
and their schools. In the United States schools are the backbone of
rural communities. Rural schools help to shape the local boundaries of
communities and the identity of community members in a variety of
both formal and informal ways. Drawing heavily from published
empirical research, this course provides a solid theoretical foundation
in community sociology in order to investigate the interrelationships
between rural communities and rural schools. Orienting questions
include: In what ways might we consider "rural" as a meaningful category
in understanding both community and education? In what ways do
schools shape (or reshape) the structure of communities? How do
communities shape (or reshape) the structure of education? What
are the challenges that confront the vitality of both rural schools and
communities? How have these challenges changed over time, and what
are the implications for educators, residents, and public policy makers?
The course is strongly interdisciplinary, with material drawing from
education, sociology and rural sociology, economics, anthropology,
and geography and demography.

EDLDR 528: Educational Politics in the United States
3 Credits
Social and institutional forces which shape the public school system
and determine national, state, and local educational policy and politics.
EDLDR 528 Educational Politics in the United States (3) "Educational
Politics in the United States" focuses on the social and institutional
forces that shape the public school system and determine national, state,
and local educational policy and politics. The rationale underlying this
course is that citizens and educators, particularly those in administrative
roles, need to understand the social forces that influence educational
policy and politics. Until the late 1960's there was a pervasive myth that
school affairs could and should be separated from the world of politics.
Few people now believe that schooling can be entirely separated from
politics, but many people lack an understanding of the broad, recurrent
forces and competing values that ensure that schooling in pluralistic
societies will be affected by political factors. This course is intended to
provide a sophisticated understanding of this subject, with emphasis on
the acquisition of conceptual and analytical skills that will be useful for
leaders in education. Student performance is assessed through group
and individual activities and projects, students' contributions to class
discussions, and exams.

EDLDR 530: Leadership for Inclusive Education
3 Credits
In-depth analysis and discussion of the school leader's role in creating
and sustaining an inclusive learning enviroment for all.
EDLDR 531: Leadership and Diversity

This course examines what it means to lead educational organizations in an increasingly diverse society. EDLDR 531 Leadership and Diversity (3) This course examines what it means to lead educational organizations in an increasingly diverse society. Specifically, this course will focus on policy, theory and practice as they relate to school leadership and diversity. Students from culturally, linguistically, socially, and economically diverse backgrounds account for an increasing percentage of the school-age population in the United States. Unfortunately, many of these students are not successful in school. This presents a number of challenges for school leaders as they work to facilitate the teaching and learning process. This is a seminar type course aimed at facilitating discussion and exploration around issues related to education and diversity. Discussions and reflective inquiry will be facilitated by assigned readings and case studies as well as the personal experiences of both the instructor and the students in this course. This course will assist students in developing a better understanding of the knowledge and skills needed to effectively lead increasingly diverse educational organizations.

EDLDR 532: Educational Leadership Doctoral Pro-seminar

3 Credits

Preparation for doctoral studies in Educational Leadership. This course is designed as a preparation for Ph.D. studies in Educational Leadership (EDLDR). The primary purposes of this course are: to familiarize first-year Ph.D. students with graduate studies at Penn State; to identify topics, problems, and policies of importance or interest to the field of educational leadership/administration; to introduce students to EDLDR faculty members and their research; and to ensure students are aware of the programmatic requirements for successfully completing the Ph.D. degree in Educational Leadership. This course is also designed to meet the University’s Scholarship and Research Integrity requirements (SARI) for all first-year graduate students.

EDLDR 533: The Politics of Local School Districts

3 Credits

Theory and practice of the politics and governance of local school districts; issues and methods in studying political decision making. EDLDR 533 The Politics of Local School Districts (3) "The Politics of Local School Districts" focuses on the theory and practice of politics in local school districts, with attention to the study of political decision-making and influence. The rationale underlying the course is that citizens and educators need to understand the social and political factors affecting school-community relations and the factors affecting the Reliahood school-community conflict. Although communities vary greatly, rural, urban, and suburban communities each tend to have some distinctive features that influence the character of school-community relations and politics. At the same time, communities in general vary in the extent to which they possess characteristics that promote or inhibit the incidence and intensity of community conflict. The governance of education in local communities is heavily influenced by such factors. Consequently, educational leaders need to be knowledgeable and perceptive in this area. This course is intended to provide the knowledge and analytical skills needed for effective leadership in local school districts. Student performance is assessed through group and individual activities and projects, students’ contributions to class discussions, and exams.

EDLDR 536: Federal Role in Education

3 Credits

This course examines the Federal role in education, emphasizing relationships between the Federal government and states, tribes and schools.

EDLDR 538: East Asian Education, Leadership, and Reform

3 Credits

The social and organizational characteristics of East Asian schooling, including understandings of authority, power, and leadership, and systemic school reform.

Cross-listed with: CIED 538

EDLDR 540: Technology Applications in Educational Leadership

3 Credits

Development and use of information technology applications to analyze common problems faced by educational administrators. EDLDR 540 Technology Applications in Educational Leadership (3) EDLDR 540 teaches the development and use of electronic spreadsheet models to analyze common problems faced by educational administrators. The format of the course is a computer laboratory in which students work through a series of assignments designed to introduce them to the basics of spreadsheets and then to teach a broadening range of modeling and analytical skills using progressively more complex problems. Applications are stressed through the creation of models that emphasize the organization, analysis, and presentation of data concerning such topics as salary schedules, budget preparation and analysis, expenditure control, cost projections, and data development. In conjunction with model building, a variety of analytical techniques are used, such as graphing, frequency distributions, regression, what-if tables, pivot tables, and database applications. The work in the course is individual and students move at their own pace through the assignments. New concepts and techniques are introduced and demonstrated periodically by the instructor and are then used by the students in succeeding assignments. The course accommodates widely differing ranges of abilities possessed by students taking the course. No prior computer experience is necessary. Satisfactory completion of all assignments is required for the passing R grade. The course emphasizes the development of useful information for administrative decision-making. Students should finish the course with a new or renewed confidence in their ability to deal with a problem in which some quantitative analysis is necessary, to be able to organize the available data in a logical and helpful fashion, and to use an electronic spreadsheet to develop a serviceable model to aid in the analysis.

EDLDR 542: Civil Rights and Education

3 Credits

Examination of civil rights policies and educational equity in the U.S. from the perspectives of law, social science, accountability policy. Civil Rights and Education will examine civil rights policies and educational equity in the United States from the perspectives of social science, education policy, and law. The aims of the course are to build students’ understanding of the key principles of civil rights policies and the sources of contention in civil rights, and to enhance students’ capacity for participating in issues of civil rights and education through project-based work. We will begin by considering what it means to have an opportunity...
To learn and how it has been defined. The course will then consider legal and policy developments since the "Brown" decision that have both expanded and constrained the opportunity for certain groups of students. The course is primarily focused on national developments, but does include a focus specifically on educational opportunity in Pennsylvania. The course concludes by considering recent civil rights developments and prospects for the future. Cross Listings: EDLDR 542 will be added as a cross-listed course.

Cross-listed with: EDTHP 542

EDLDR 549: School District Improvement and Systemic Change
3 Credits
This course focuses on understanding and leading systemic district improvement efforts.

**Prerequisite:** EDLDR559 or EDLDR578

EDLDR 551: Curriculum Design: Theory and Practice
3 Credits
The analysis and use of the foundations which underlie models of curriculum design. EDLDR 551 Curriculum Design: Theory and Practice (3) This course looks at the analysis and use of foundations that underlie models of curriculum design. The investigation into such models is designed to be a critical review of previous and current design models that reflects the specific, preferential vantage point of teachers as leaders and significant participants in this form of curriculum work.

**Prerequisite:** C I 550
Cross-listed with: C-S 551

EDLDR 559: School Improvement
3 Credits
The course examines how educational leaders at all levels can determine, promote, support, and achieve successful school improvement. EDLDR 559 School Improvement (3) The last 20 years have witnessed unparalleled efforts to improve schools and raise student achievement. These initiatives include but are not limited to: (1) new content standards for mathematics, science, English, and social studies (2) increased requirements for high school graduation, (3) reduced class sizes, especially in the early grades, (4) new high-stakes state testing and assessment programs, and (5) the performance-based accountability requirements set by No Child Left Behind. Yet, despite all this activity and attention, significant changes in student achievement and in basic school practices have been slow at best. While there has been some improvement, success has been largely scant and spotty. The reasons for slow progress are many and complex. However, one that is receiving growing attention is the need for stronger school leaders (including teachers, principals, superintendents, and other educators) who can direct and implement changes in curriculum, instruction, and school organization. There is growing consensus in the research literature that school improvement and school leadership are largely inseparable - that leadership is a critical element in order for schools to improve. While focusing on leadership without attending to the many other conditions that affect school effectiveness is not productive, it is clear that leadership is an important ingredient in the mix of strategies for improving schools. The course addresses three major questions: (1) What is school improvement? (2) What does it involve? (3) How do we do it? To accomplish this, the course first focuses on several general models developed for school improvement purposes. After this the focus shifts to an examination of the component pieces of school improvement, including leadership, professional development/professional learning communities, and a focus on teaching and learning (including standards, instruction, and assessments). All these are connected the larger discussion of what education leaders need to know and be able to do to strengthen instruction and raise student achievement. If leaders are to nurture better teaching and learning, they will need greater familiarity with promising instructional approaches, new curricular materials, and ways to adapt them to a particular school's circumstances.

EDLDR 560: Principles of Instructional Supervision
3 Credits
Social and institutional settings for instructional supervision; functions, activities, and practices of supervision; supervisory case studies. EDLDR 560 C-S 560 Principles of Instructional Supervision (3) This course explores themes, trends, and key ideas that influence current supervisory practices. Course content gives specific attention to supervisory practice in relation to teaching practices and to life in schools.

**Prerequisite:** teaching or school administrative experience; 18 credits in education, at least 5 of which are methods of teaching
Cross-listed with: C-S 560

EDLDR 562: Methods of Classroom Supervision and Coaching
3 Credits
Strategies and techniques for supervision/coaching of instruction intended to enhance teacher reflection, self-direction, and autonomy. C S (EDLDR) 562 Methods of Classroom Supervision and Coaching (3) This course has been designed to equip students with the knowledge, skills, and dispositions necessary to engage in a variety of supervisory processes aimed at teacher growth and renewal as well as enhanced student learning. The outcome of these supervisory activities should be the development of teachers who are more analytical about their practice and its impact on learners, are more adept at solving the complex problems of teaching practice, and are more reflective about their teaching capabilities.

**Prerequisite:** EDLDR 560, teaching administrative, or other professional education work experience
Cross-Listed

EDLDR 563: Designing Staff Development Programs
3 Credits
Designing, implementing, and evaluating effective staff development programs for personnel in educational settings. EDLDR 563 Designing Staff Development Programs (3) This course has been designed to provide students with the opportunity to develop a deep understanding of the process of professional development in education at the theoretical and practical levels as well as the ability to apply this understanding to the design, evaluation, and analysis of professional development activities and programs.

**Prerequisite:** EDLDR560
Cross-listed with: C-S 563
Principals and practices of supervision at the central office and
development, including contract administration and grievance handling.
EDLDR 565 Personnel Management and Contact Administration (3)
This course will provide an overview of major issues in the practice
and theory of personnel management and contract administration. An
approach focusing on legal requirements, ethical dimensions, and what
constitutes "good" administrative practice will be used to assist students
in better understanding pertinent concerns. Topics to be covered include
recruitment, hiring, an professional development of faculty/staff, contract
negotiations, teacher/staff rights under the 1st and 4th Amendments
to the U.S. Constitution, and issues associated with equal educational
opportunities for various groups including racial and linguistic minorities,
individuals with disabilities, women, older employees, and gays/lesbians.
The class will be a combination of lectures and discussions on particular
topics related to personnel management. From time to time, the class will
break up into small groups to work on in-class dilemmas.
Prerequisite: 18 credits in education and three years' teaching experience

EDLDR 567: Organizational Supervision
3 Credits

Principles and practices of supervision in schools related to instructional
and support personnel. EDLDR 567 Organizational Supervision (3)
"Organizational Supervision" focuses on principles and practices of
supervision in schools related to instructional and support personnel.
The rationale for this course is that organizational supervision is
that aspect of administration that demands that the administrator
focus on the instructional and non-instructional program as he/she
facilitates the learning process. While the major topic in this course is
the role of the administrator in the supervision of the organization,
other considerations in this course are how to relate leadership, change,
management, and evaluation to organizational supervision. Other
topics include the nature of supervision and its place in the schools;
the organizational environment for supervision; leadership behavior and
effectiveness; a contingency approach to supervision; power,
authority, and conflict in supervision; teacher motivation and supervisory
effectiveness; and supervision and group effectiveness.
Prerequisite: EDLDR 480

EDLDR 568: The Principalship
3 Credits/Maximum of 3

Principles and practices of administration of elementary and secondary
schools. EDLDR 568 The Principalship (3) The course is intended to help
students gain theoretical and practical insight into what it means to
be an effective principal. EDLDR 568 is not a "how to" course; that is, it
makes no effort to explicitly lay out rules, procedures, "best practices,
or techniques associated with being a principal. Rather, the course
calls on students to read, think, write about, and discuss: What do we
mean by management? By leadership? What's the difference? What
social and political factors help shape the principal's organizational
role and behavior? How can principals acquire and maintain power and
authority? And what is the difference between these two concepts? How
do different school social contexts influence principal effectiveness?
What do we mean by school culture and climate? How do these relate to
effectiveness? How do principals become "instructional leaders?" When
should they? How should student performance be evaluated? Teacher
performance? What legal issues do principals need to be aware of?

EDLDR 569: Decision Making in Educational Organizations
3 Credits/Maximum of 3

Decision making in organizational and environmental contexts; case
studies of administrative problems; application of decision making
models. EDLDR 569 Decision Making in Educational Organizations (3)
Decision making is one of the central processes in the leadership of
educational organizations. The effective decision maker is one who can
define a problem, establish criteria for its successful solution, identify
and evaluate alternative problem solutions and their consequences, and
choose an appropriate plan of action. The course utilizes a case study
approach to examine and practice decision making in an educational
context. Emphasis is placed on a systematic approach to making
decisions, based on theory, research, and best practice knowledge.
Various models of decision making are introduced and their usefulness
and appropriateness in different types of situations are examined.
Working in teams, students analyze increasingly complex cases and
prepare both verbal and written presentations, which are tested in general
class discussion. Through active learning experiences provided by the
method, students will study significant problems of practice while
developing teamwork skills in collaborative work groups.
Prerequisite: EDLDR 480, or teaching, supervisory, or administrative
experience or permission of program.

EDLDR 573: Public School Finance
3 Credits/Maximum of 3

Financing of public education, including values underlying system,
revenue sources and taxation, school funding formulas, equity, and
school finance reform. EDLDR 573 Public School Finance (3) This course
analyzes the systems and mechanisms for financing public elementary
and secondary schools in the United States. It provides an overview
of basic school finance concepts and issues and an examination of
Pennsylvania's system of financing schools. Throughout the course
there is a continuing effort to blend the theoretical foundations of
school finance with their practical applications at state and local levels.
Microcomputer models are used to explore the applications of concepts
to policy and practice.
Prerequisite: EDLDR 480 or teaching, administrative or supervisory
experience

EDLDR 575: Ethics in Educational Leadership
3 Credits

Course explores the moral and ethical dimensions of the work of
educational leaders. EDLDR 575 Ethics in Educational Leadership (3) This
course will: 1) examine traditional ethics as well as alternative forms
of moral development (critical theory applied to justice and feminist
ethics); 2) compare and contrast one's own code of ethics with that
of a professional code of ethics; 3) explore approaches to moral and
ethical reasoning and to use these approaches to work through ethical
dilemmas related to the practice of educational administration; and 4)
have students design and present authentic ethical dilemmas providing
theoretical background, appropriate questions, solutions, and reflection.
EDLDR 576: The Law and Education

3 Credits

Legal bases for education; rights and responsibilities of school board members, administrators, teachers, students, and parents; due process. EDLDR 576 The Law and Education (3) This course will provide an overview of major issues in school law. The course will focus primarily on case law including U.S. Supreme Court decisions as well as relevant state and federal lower court opinions. State legislation and administrative laws will also be considered. Topics to be covered include church/state issues, teacher and student rights, and law associated with equal educational opportunities for various groups including racial and linguistic minorities, individuals with disabilities, and women. The class will be a combination of lectures and discussions on particular legal topics based on the text and selected handouts. From time to time, the class will break up into small groups to work on in-class school law dilemmas.

Prerequisite: EDLDR480 or teaching or administrative or supervisory experience

EDLDR 577: Law and Ethics in Education

3 Credits

Course focuses on legal and ethical dimensions issues for educational leaders and their impact on best interests of the students. EDLDR 577 Law and Ethics in Education The instructor will present various paradigms of ethical decision making: justice, care, critique, community, and the ethics of the profession as well as historical and philosophical perspectives on the rights of students. Participants will then apply what they have learned to authentic legal cases involving issues such as students’ free speech rights, corporal punishment, strip searching, assessment, and the right to an education. Analyses will consider questions such as: Even if an action is legal, is it ethical? and What is the “best interests of the student”?

EDLDR 578: Schools as Organizations

3 Credits

Intraorganizational relationships; administration and the school in its organizational and environmental contexts. EDLDR 578 Schools as Organizations (3) This course is planned to provide students with an orderly introduction into organizational theory and administrative leadership concepts. A primary objective behind the organization and design of this course is to firmly link theory to practice by addressing the question of what does organizational theory and research have to say that is generally important and useful to the educational practitioner/scholar. This objective is addressed through the belief that practitioners must be self-conscious about what they are doing so organizational action becomes enlightened action; that is, action that has to do with understanding and using multiple perspectives of reality. What are needed are purposeful attempts to construct or reconstitute knowledge so that events, situations and problems are confronted or engaged from multiple points of view. Decision-making and problem-solving activities thus become acts of deliberate, conscious thoughtfulness (reflective thinking, if you will) designed to reconstruct holistic knowledge in order to facilitate enlightened action. Specifically, the objectives of the course are to assist students: (1) to acquire a foundational knowledge or organizational and administrative theory; (2) to use multiple organizational theories in understanding school organizations and leadership roles in these organizations; (3) to develop a framework or schema from which to reflectively think about and develop an understanding of school organizations and problems of practice; (4) to develop a concept of leadership within school organization; (5) to develop an understanding of organizational change processes and attending issues of school change; and (6) to become familiar with organizational perspectives on schools and schooling issues and problems.

Prerequisite: EDLDR480 or teaching or administrative or supervisory experience

EDLDR 579: Financial Management for Schools

3 Credits

Financial management concepts and techniques for educators: district and school level budgeting process, hands-on budget preparation workshop, and budget management. EDLDR 579 Financial Management for Schools (3) Public schools are funded almost exclusively from revenues received from local, state, and federal taxes-public funds-and school administrators are accountable for the proper usage and stewardship of these funds. This course examines the fiscal management concepts and techniques needed by educational leaders in order to plan, control, and evaluate their operations effectively. The primary means for managing the fiscal resources of the district is through the annual budget. Administrators and other educators use the budgeting process to plan educational programs for the upcoming year, to allocate the available funds among competing programs, and to control expenditures in order not to exceed allowable limits. The primary purpose of the course is to acquaint students with the central importance of budgeting in management of schools and districts and to show how mastery of budgeting will make them more effective educational leaders. Procedures for identifying the necessary budgetary activities, as well as constraints, are discussed to provide a management context for the process. Emphasis is placed on the critical, and often neglected, step of formulating expenditure and revenue estimates to teach students how budget numbers are created. Budget modification and analysis techniques are reviewed to provide skills for changing and explaining budget amounts. Monitoring procedures that prevent overexpenditure of budgeted funds are also discussed.

Prerequisite: EDLDR480 or teaching, administrative, or supervisory experience

EDLDR 580: The Use of Theory in Educational Administration

3 Credits

Critical analysis of current theories; problem finding and hypothesis formulation. EDLDR 580 The Use of Theory in Educational Administration (3) This course provides an introduction to problem finding in educational leadership and the development of research problems and hypotheses for conducting systematic inquiries in educational leadership. The focus will first be on the major research paradigms-the structural-functionalist, phenomenological-symbolic interactionist, and critical-constructivist-and on an overview of the kinds of approaches, questions, and problems posed in each. The emphasis will be on developing an understanding and appreciation of the different as well as complementary aspects of each of these research paradigms and the appropriate uses of each for inquiry in support of improved understanding of and practice in education. An integrated agenda of readings, lecture, group discussions and presentations, and completion of a research project will explore and emphasize the relationship and interdependence of all elements of systematic research. Activities are designed to integrate conceptual knowledge and understanding with active and collaborative
participation. This course is designed to provide students with an orderly introduction to and apprenticeship in educational research. Specifically, the objectives of this course, inclusive of both semesters, are: (1) to become familiar with the major research paradigms pertinent to inquiry in educational leadership; (2) to understand the basic tenants, philosophical foundations, and epistemological beliefs of the major research paradigms; (3) to develop an understanding of the different elements involved in the educational research process; (4) to read as widely as possible in relevant literature; and, (5) to explore the research development process by identifying and developing a researchable problem statement and supporting conceptual framework.

**Prerequisite:** EDLDR480 , 6 credits in educational leadership

**EDLDR 581: Field Research in Educational Leadership**

3 Credits

Field study and qualitative methods in research on educational organizations. EDLDR 581 Field Research in Educational Leadership (3) This course provides an introduction to the various research methodologies available for conducting inquiry in educational leadership across the three paradigms - structural-functionalist, phenomenological-symbolic interactionist, and critical-constructivist. Specifically, this course will focus on relationships between research questions, the theoretical/conceptual framework, and research methods but focus specifically on the methods for data collection and analysis. Part of the course will focus developing understanding and appreciation of the different as well as complementary aspects of qualitative and quantitative research methods and the appropriate uses of each for inquiry in support of improved understanding of and practice in education. However, the majority of the course will center on the development of an understanding of the qualitative research skills needed to conduct field research. An integrated agenda of readings, lecture, group discussions and presentations, and completion of a research project will explore and emphasize the relationship and interdependence of all elements of systematic research. Activities are designed to integrate conceptual knowledge and understanding with active and collaborative participation. This course is designed to provide students with an orderly introduction to and apprenticeship in educational research. Specifically, the objectives of this course are: (1) to become familiar with specific research designs and methods used in qualitative research; (2) to read as widely as possible in the relevant qualitative research literature; (3) to become familiar with appropriate field-based research skills for data collection; (4) to conduct field-based research investigating a specific problem related to educational practice; (5) to develop the skills necessary for qualitative data analysis; and, (6) to develop the skills needed for writing qualitative research.

**Prerequisite:** EDLDR480 , 6 credits in educational leadership

**EDLDR 584: Evaluation in Educational Organizations**

3 Credits

Naturalistic and empirical evaluation methods and procedures for educational organizations. EDLDR 584 Evaluation in Educational Organizations (3) "Evaluation in Educational Organizations" examines methods and procedures for conducting effective evaluations of educational programs. It reviews naturalistic and empirical evaluation methods and procedures for educational organizations. Government demands for educational accountability, and political and social requirements for educational improvement, have increased the need for scientific and systematic evaluation of the effectiveness and efficiency of educational programs. This course provides an introduction to both qualitative and quantitative methods of program evaluation, and examines the strengths and weaknesses of alternative models and approaches for program evaluation.

**Prerequisite:** a course in educational administration; a course in basic statistics.

**EDLDR 585: Research Design: Implications for Decisions in Higher Education**

3 Credits

A capstone course on research design and analytical approaches to support decision-making in administration and policy-making. EDLDR 585 / EDTHP 585 / HIED 585 Research Design: Implications for Decisions in Higher Education (3) By the end of this course you should be able to: (1) Define and explain the following concepts/tools of social science research: The scientific method-Theory and its role, Constructs and variables, Hypotheses and relations, Experimental designs, Quasi-experimental designs and Ex post facto designs. Sampling theory and designs-Survey designs and methods, Approaches to data collection, Measurement reliability and validity, Quantitative analytical designs, and Ethical practices. (2) Apply these concepts/tools in designing a study relating to educational research.
