## **BIOLOGICAL ENGINEERING,** B.S.

Begin Campus: Any Penn State Campus

End Campus: University Park

## **Program Educational Objectives**

Early career Biological Engineering graduates will be expected to:

- Demonstrate proficiency in basic and engineering sciences related to biological processing, natural resource, and agricultural engineering fields:
- Effectively identify, analyze and design sustainable solutions to address issues and opportunities throughout the world;
- Work in teams and effectively communicate within and outside the profession;
- 4. Demonstrate strong leadership skills, ethical integrity, and professional engagement

## **Student Outcomes**

Student outcomes describe what students are expected to know and be able to do by the time of graduation. The Biological Engineering program is designed to enable students to:

- 1. Identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
- 2. Apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
- 3. Communicate effectively with a range of audiences
- Recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts
- 5. Function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
- Develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
- Acquire and apply new knowledge as needed, using appropriate learning strategies.
