## **ENGINEERING SCIENCE, B.S.**

Begin Campus: Any Penn State Campus

End Campus: University Park

## **Program Educational Objectives**

The expected accomplishments of Engineering Science graduates in the first several years following graduation are:

- acquire and apply new knowledge through lifelong learning activities including, but not limited to, masters, doctorate, medical, and law degrees, continuing education, leadership development, management training, innovation/entrepreneurship, and global involvement/ awareness;
- engage in practice in a wide variety of fields including, but not limited to, electrical systems, electronics, mechanical systems, materials development, forensics, biomaterials, medicine, law, and business in industry, academia and government;
- research, develop, design and/or utilize new products, processes, materials, devices, systems, and/or tools;
- communicate findings and best practices, at conferences and meetings, and to the general public through presentations, technical publications (journals, reports, memoranda), patents, and other media;
- apply ethically and professionally the principles and latest tools of engineering, science, and mathematics for the benefit of society;
- participate in and promote the values of diversity and sustainability in society; and
- 7. encourage and foster future generations of engineers through mentoring, service, and outreach.

## **Student Outcomes**

Student outcomes describe what students are expected to know and be able to do by the time of graduation. The Engineering Science program is designed to enable students to:

- Identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
- Apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
- 3. Communicate effectively with a range of audiences
- Recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts
- 5. Function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
- Develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
- Acquire and apply new knowledge as needed, using appropriate learning strategies.
