

CYBERSECURITY ANALYTICS AND OPERATIONS (CYBER)

CYBER 99: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CYBER 100: Computer Systems Literacy

3 Credits

This is an introductory university-level course in computer systems literacy. The history, architecture and operation of computing systems and underlying computing theory are covered. The intent of this course is to ensure that students with diverse backgrounds can gain the information technology fundamental skills and understanding to succeed with subsequent in-depth courses in the Cybersecurity Analytics and Operations curriculum. At the same time the general nature of the introduction may make it useful for other programs that involve education in concepts and skills relating to information and computing systems.

CYBER 100S: Computer Systems Literacy

3 Credits

This is an introductory university-level course in computer systems literacy. The history, architecture and operation of computing systems and underlying computing theory are covered. The intent of this course is to ensure that students with diverse backgrounds can gain the information technology fundamental skills and understanding to succeed with subsequent in-depth courses in the Cybersecurity Analytics and Operations curriculum. At the same time the general nature of the introduction may make it useful for other programs that involve education in concepts and skills relating to information and computing systems.

First-Year Seminar

CYBER 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CYBER 262: Cyber-Defense Studio

3 Credits

This studio course teaches four basic hands-on cyber-defense skills: configuring a firewall, implementing a host-based intrusion detection software tool, using the Metasploit tool to do penetration testing, and implementing a network intrusion detection tool. The first cyber-defense skill is on configuring an ACL (Access Control List) firewall. This module provides the students with a practical exercise applying their analytical skills to properly configure the ACL of a firewall and to verify the correctness of their firewall configurations. Through this exercise, the students also learn firewall oriented network security policies. The second cyber-defense skill is on implementing a host-based intrusion detection software tool which can detect suspicious user sessions on a

computer. This module provides the students with a practical exercise applying their programming skills to solve anomaly detection problems. The third cyber-defense skill is on using the Metasploit tool to do penetration testing. This module provides the students with a practical exercise applying their programming skills to do penetration testing. The fourth cyber-defense skill is on implementing a network intrusion detection software tool which can detect suspicious network flows. This module provides the students with a practical exercise applying their programming skills to solve signature-based intrusion detection problems

Enforced Prerequisite at Enrollment: (CYBER 100 or CYBER 100S) and (IST 140 or CMPSC 121 or CMPSC 131)

CYBER 294: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

CYBER 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

CYBER 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses offered infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CYBER 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CYBER 342W: Cyber Incident Handling and Response

3 Credits

Cyber Incident Handling and Response is an intermediate course appropriate for students who are majoring in Cybersecurity. This course provides the student with the background, experience and perspective that is required to document organizational preparation for cyber incidents, document cyber incident impact and resolution, document response strategies, as well as integrate business continuity planning into the organization. This is a writing intensive course, which requires each student to individually document cyber security incidents and communicate the impact of those incidents to the organization. Peer writing evaluation will help students to consider how effective their written communication skills are. Team writing assignments will provide students with the real-world experience of writing portions of organizational documents such as preparedness documentation, documenting the organization of computer incident response teams, documenting organizational disaster recovery plans, and documenting post-incident recovery plans. Students will receive peer feedback on their writing assignments, as well as direct feedback from the instructor with a goal of improving writing skills and conforming their writing styles to the expectations of organizations and industry.

Enforced Prerequisite at Enrollment: CYBER 262 and SRA 221 and SRA 231

Writing Across the Curriculum

CYBER 362: Cybersecurity Analytics Studio

3 Credits

Cyberattacks involve advanced and sophisticated techniques to infiltrate corporate computers, networks and enterprise systems and critical infrastructures. Types of attacks include advanced malware, zero day attacks and advanced persistent threats. Advance warning about attackers and intelligence about the threat landscape is considered by many security leaders to be essential features in cyber-defense. The massive increase in the rate of novel cyberattacks has made data-mining-based analytics techniques a critical component in detecting security threats. Big data analytics in security involves the ability to gather massive amounts of digital information to analyze, visualize and draw insights that can make it possible to predict and stop cyberattacks. This studio course teaches fundamental data-driven cybersecurity analytics skills using programming skills acquired in earlier courses. The course will be divided into three modules. The first module prepares students for security analytics, by refreshing or making them familiar with two popular data analytics programming languages (e.g., R and Python). The second module focuses on understanding the key cybersecurity analytics process including data exploration, data visualization and data preparation and examining popular data mining algorithms such as linear and logistic regression, decision trees, support vector machine, and neural networks and similar techniques for security analytics. In the third module, students use analytics process and methods for selected cybersecurity problems, such as security breaches, ZeroAccess Infection, Log Analytics, Access Analytics and Web Hacking Analytics. Through this studio course, the students will gain concrete understanding of security analytics processes, methodologies and how to apply these concepts and tools to real-world cybersecurity. A major component of the course will be several hands-on exercises and a final team-based project. Hands-on exercises provide students with knowledge, skills and hands-on experience of learning security analytics process and methodologies to address security problems. The team-based project allows students to apply what they have learned to address real world security threat. This course will incorporate collaborative and action-learning experiences wherever appropriate. Emphasis will be placed on developing and practicing writing and speaking skills through application of the concepts, theories and technologies that define the course.

Enforced Prerequisite at Enrollment: (STAT 200 or SCM 200) and (IST 256 or IST 261 or IST 361) and CYBER 262

CYBER 366: Malware Analytics

3 Credits

Malware Analytics is an intermediate course required for students who are majoring in Cybersecurity Analytics and Operations. It is a three-credit hands-on course that teaches principles and practice of malware detection, analysis, and defense. The course begins by introducing the foundations of malware, including history, vulnerability, types, analysis methods, and defenses. It then builds on this foundation by teaching students how to address malware issues using analysis techniques such as reverse engineering and static program analysis, as well as how to use analytic approaches such as automatic malware trace classification and clustering. The course relies extensively on hands-on laboratory activities to help students obtain practical experience in malware analysis and analytics. Through this course, the students will

gain concrete understandings on principles and practices of malware analysis and defense.

Enforced Prerequisite at Enrollment: (IST 256 or IST 261 or IST 311) and CYBER 262

CYBER 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CYBER 440: Cybersecurity Capstone

3 Credits

Cybersecurity Capstone is an advanced, culminating course for students who are majoring in Cybersecurity. This course provides the student with a practical exercise, designed by the instructor. The initial weeks of the semester provide the student with an overview of several analytic frameworks that are used in cybersecurity shops and organizations. Then, the student reviews specific technical analysis methods in malware, static and dynamic analysis, file system exploration, security log file analysis and network analysis. The findings from these analyses are then integrated into the analytic framework, gaps are identified, further analysis is conducted to fill the gaps. In the final weeks of the semester, students construct a high level briefing that supplies appropriate levels of technical detail to top level executives.

Enforced Prerequisite at Enrollment: CYBER 342W and (ENGL 202C or ENGL 202D or IST 489) and 7th semester standing

CYBER 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

CYBER 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

CYBER 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses offered infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CYBER 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.
