# ONE HEALTH, MINOR

Requirements for a minor may be completed at any campus location offering the specified courses for the minor. Students may not change from a campus that offers their major to a campus that does not offer their major for the purpose of completing a minor.

## Careers Paths

The One Health minor offers a new perspective to approach your other fields of study. With this minor, you can build a career that supports the interdependent relationships between humans and animals. You can pursue jobs in fields such as animal science, biology, environmental studies, food science, nursing, nutrition, pandemic prevention and response, public health, toxicology, and veterinary and biomedical sciences.

### Opportunities for Graduate Study

The One Health approach is adopted throughout veterinary, human, and environmental graduate curricula. Many graduate opportunities exist: Biomedical and comparative medicine research, veterinary science and medicine, public health, emergency management, public health preparedness, sustainability, and global food security. In addition, Penn State has the One Health Microbiome Center which offers multiple graduate degrees. The Center fosters long-term working relationships while simultaneously providing infrastructure and resources to support transformative, interdisciplinary microbiome scholarship locally, nationally, and worldwide.
